MOTION CONTROL DRIVES

SINAMICS S120, SINAMICS S220 and SIMOTICS

[siemens.com/d21-4](https://www.siemens.com/d21-4)

Dear Customer,

We are pleased to present you with the new Catalog D 21.4 · 2023. The catalog provides a comprehensive overview of the SINAMICS S120 drive system including the SINAMICS S220 Smart Line Modules in booksize format, the associated SIMOTICS motors, the MOTION-CONNECT connection systems and other components. The new edition of the catalog mainly contains updates and technical adjustments.

The products listed in this catalog are also included in SiePortal.

Please contact your local Siemens office for additional information.

Up-to-date information about SINAMICS S120 and SINAMICS S220 is available on the internet at

www.siemens.com/sinamics-s120

www.siemens.com/sinamics-s220

You can access SiePortal on the internet at

<https://sieportal.siemens.com>

Your personal contact will be happy to receive your suggestions and recommendations for improvement.

You can find your representative in our Personal Contact database at

www.siemens.com/automation-contact

We hope that you will often enjoy using Catalog D 21.4 · 2023 as a selection and ordering reference document and wish you every success with our products and solutions.

With kind regards,

Frank Golüke
Vice President
General Motion Control

SINAMICS S120, SINAMICS S220 and SIMOTICS

Digitalization in drive technology

From the digital world to the real world

[siemens.com/digital-drives](https://www.siemens.com/digital-drives)

Increase your transparency and productivity by digitalizing your drive technology

Many drives are used in the manufacturing and process industries. They produce lots of data anyway – why not use them to increase the availability and productivity of machines and plants?

Drive technology offers the ideal entry point into the world of digitalization – for plant and machine builders as well as for users.

The digitalization portfolio for the drive train spans over the complete life cycle – from the design phase to realization and optimization – in the digital and the real world.

Our portfolio contains drive simulation solutions and efficient engineering tools, comprehensive connectivity that allows drives to be easily linked to the relevant platforms as well as smart analytics (e.g. cloud and edge apps) and drive system services.

These solutions enable you to gain a better understanding of processes, states and utilization. The health status of the drive train can be monitored and analyzing drive data enables an early detection of anomalies and reduces downtimes. This way, availability and productivity of machines and plants can be increased and the actual maintenance demand can be identified. Furthermore, data-based business models and service offerings are facilitated.

Our digitalization portfolio covers all phases of the life cycle: from the design phase to realization and optimization. It covers the digital and the real drive train.

Design: By creating a digital twin of the drives, machine builders can shorten their time-to-market since they can design, simulate and optimize their machine before ordering any material or products. Together with other tools from the engineering box, simulation can also speed up the engineering phase of drives and entire machines, for example by virtual commissioning of the PLC.

Realize: Once the machine is in operation, the drives can be connected to other platforms, for example to the cloud and Industrial Edge. This creates transparency in terms of what is going on inside the drive train, e.g. with regard to the actual current, torque and speed.

Optimize: To understand the collected data, our drive train analytics portfolio provides algorithms and analysis tools to unlock the potential of the data and turn the gained transparency into insights and valuable knowledge. These insights can then again be used in the design phase of the next life cycle, thus closing the loop.

Benefits of drive train digitalization

Machine builders

Availability

Increase the availability of your machines

Speed

Shorten time-to-market

Business models

Develop new service and business models

Machine operators

Productivity

Increase the productivity of your production

Flexibility

Increase the flexibility of your production

Efficiency

Identify potential for optimization

Benefits for machine and plant builders

- Increased availability of machines and plants – thanks to digital options for checking and implementing design improvements and comprehensive monitoring of drive systems
- Shorter time-to-market and faster development times – thanks to practical software tools and a continuous database for concurrent development processes as well as virtual simulations, tests, and commissioning of machines and plants
- New options for future service and business models – ranging from customized application solutions and digital services to contractually guaranteed availabilities of machines and plants

Benefits for machine and plant operators

- Increased availability and productivity of production, fewer unscheduled downtimes – through the early detection of deviations and emerging risks thanks to digital drive monitoring
- More flexible production down to batch size 1 – through more effective use of knowledge from existing production lines thanks to transparent utilization, states, locations, and capacities down to the drive level
- Identification of potential for optimization to make production faster, better, and more efficient thanks to data-based transparency – for example, for faster modifications, simpler quality control, and the early prediction of maintenance demand as well as demand-oriented maintenance

TIA Selection Tool – quick, easy, smart configuration

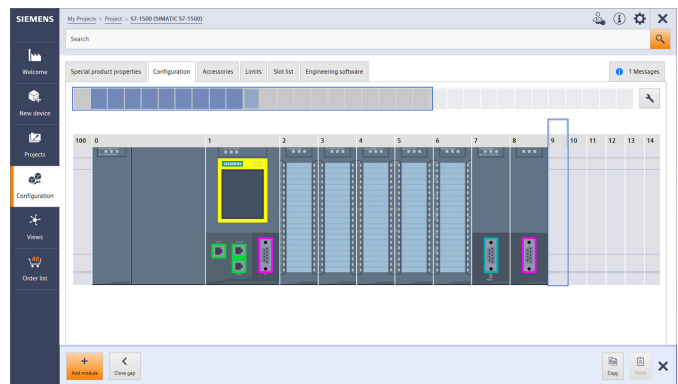

For you to get the most out of our portfolio quickly and easily.

Do you always need the optimum configuration for planning your project?

For your application we offer the TIA Selection Tool to support all project planners, beginners and experts alike.

No detailed portfolio knowledge is necessary.

TIA Selection Tool is available for download as a free desktop version or a cloud variant.

Your Advantages

Quick

- Configure a complete project with just a few entries – without a manual, without special knowledge
- Import and export of hardware configuration to TIA Portal or other systems
- Ideal visualization of the projects to be configured

Easy

- Tool download either as desktop version or web-based cloud version
- Technically always up-to-date about product portfolio and innovative approaches
- Highly flexible, secure, cross-team work in the cloud
- Direct ordering in SiePortal

Smart

- Smart selection wizard for error-free configuration and ordering
- Configuration options can be tested and simulated in advance
- Library for archiving sample configurations

The TIA Selection Tool is a completely paperless solution.

Sustainability @Siemens

Transforming the everyday to create a better tomorrow.

For more information, see www.siemens.com/sustainability-figures

As a company, Siemens considers environmental, social and governance (ESG) criteria from all angles with its DEGREE framework (decarbonization, ethics, governance, resource efficiency, equity and employability). We are not only committed to reducing the carbon footprint in our own operations to net zero by 2030, but also helping our customers achieve their decarbonization and sustainability goals.

Mission & strategy

As a focused technology company, Siemens is committed to addressing the world's most profound challenges by leveraging the synergies between digitalization and sustainability.

Technology with aim and purpose

We develop technologies that connect the real and digital worlds and enable our customers to positively transform the industries that form the backbone of our economy: industry, infrastructure, transportation and healthcare.

Our contribution

Siemens makes an impact every day by providing innovative solutions in response to challenges relating to environmental protection, decarbonization, health and safety. Innovative solutions that have a clear goal: to make the world more sustainable, more integrative and a better place to live.

Sustainability facts

For almost 175 years, Siemens has been driven by the desire to improve the lives of people around the world with our technologies.

Overview

Motion Control Solutions "Made by Siemens"

Thanks to our strong innovation capacity, sector know-how and outstanding customer benefits of our automation solutions for machine tools and production machines, Siemens is one of the leading suppliers of Motion Control Systems worldwide. For this reason, we can supply many references in different areas.

Innovative products, systems, solutions and services for each sector

Siemens Motion Control Systems satisfy very high requirements: All products stand out through the use of the latest technologies, high functionality and quality. In addition, the individual systems and products are optimally matched to one another so that they can be easily and consistently combined into an economic machine solution.

Examples of this are the SIMOTION Motion Control System, the SINAMICS drive system and the SIMOTICS motors. These products constitute an innovative system platform with which you can optimize the design of your machine to meet your own requirements. They provide you with optimized, economic and future-oriented motion control solutions for different sectors such as the packaging, plastics and glass, wood and metalworking, textile and printing industries, which can be easily expanded for increased requirements.

By offering you Mechatronic Support, Siemens is providing you with an intelligent alternative to developing expensive prototypes. Using virtual prototyping, it is possible to model and optimize all the mechanical, electronic and information technology systems for their functionality while they are still at the design stage. You don't then need to implement a prototype for real, but can immediately build the finished machine.

Application consulting: The safe path to top solutions

Our technical and application consultants accompany the projects on site from planning to commissioning, from the idea to the functioning machine. You will receive support from a number of different application centers, some of which are sited in Germany, Italy, the USA and China.

Application consulting includes:

- Planning and implementation of projects
- Technical verification with test configuration and simulation
- Development of requirements and functional specifications
- Application workshops and customer-specific training courses

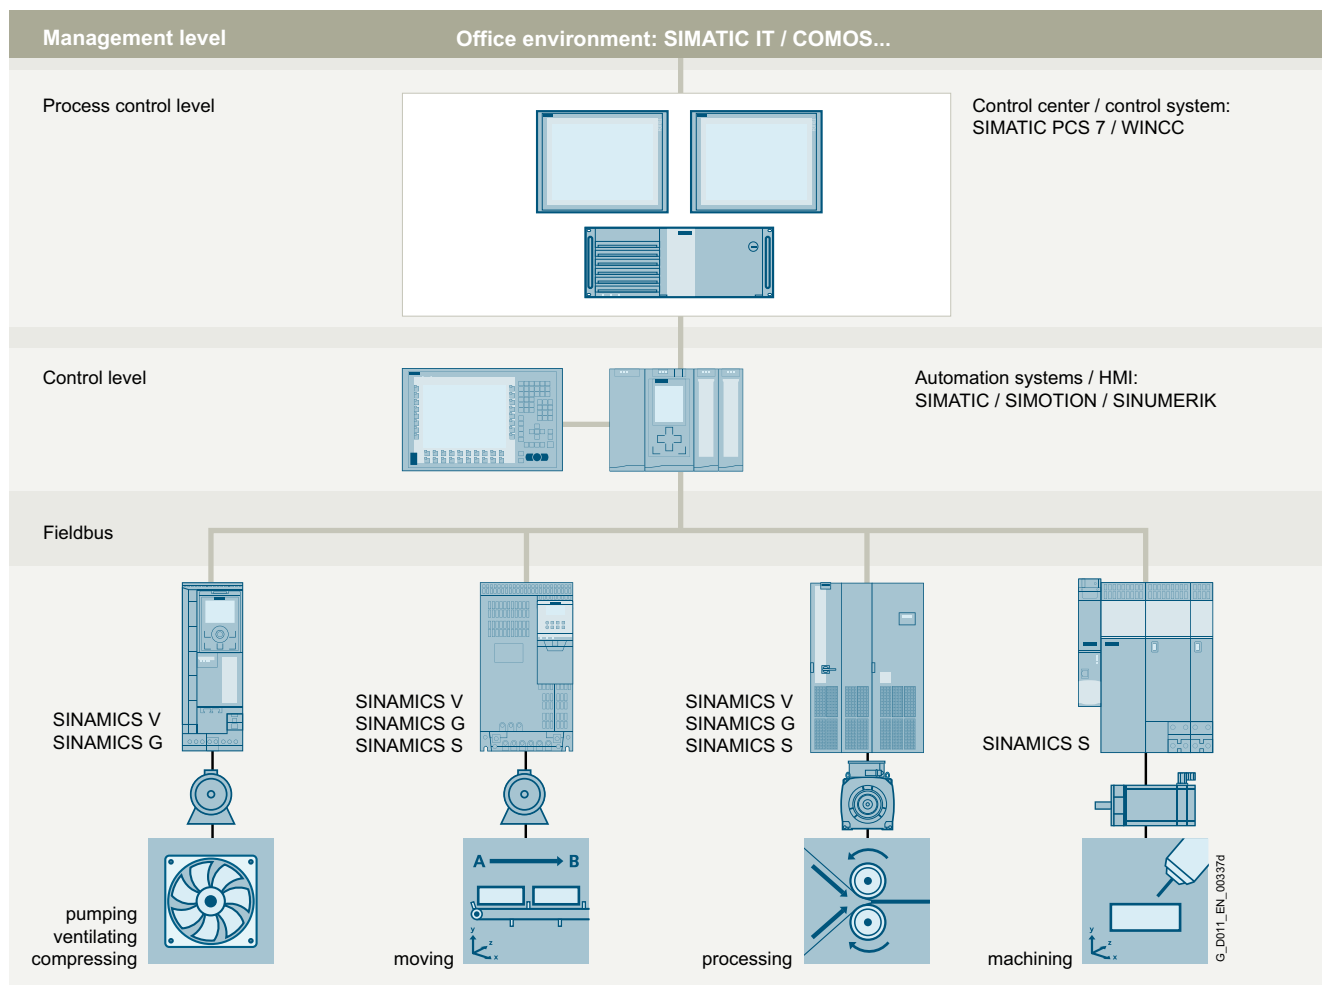

Partnership for joint success

During this cooperation Siemens not only supports its customers, but also includes them as technology partners in the development process of systems and components which results in practical and future-oriented automation solutions.

In this way Siemens helps its customers increase their productivity, competitiveness and profitability over the long term.

Overview

Integration in automation

Totally Integrated Automation and communication

SINAMICS is an integral component of the Siemens "Totally Integrated Automation" concept. Integrated SINAMICS systems covering configuration, data storage, and communication at automation level ensure low-maintenance solutions with the SIMATIC, SIMOTION and SINUMERIK control systems.

Depending on the application, the appropriate variable frequency drives can be selected and incorporated in the automation concept. With this in mind, the drives are clearly subdivided into their different applications. A wide range of communication options (depending on the drive type) are available for establishing a communication link to the automation system:

- PROFINET
- PROFIBUS
- EtherNet/IP
- Modbus TCP
- Modbus RTU
- AS-Interface
- BACnet MS/TP

Applications

SINAMICS is the comprehensive converter family from Siemens designed for machine and plant engineering applications. SINAMICS offers solutions for all drive tasks:

- Simple pump and fan applications in the process industry
- Demanding single drives in centrifuges, presses, extruders, elevators, as well as conveyor and transport systems
- Drive line-ups in textile, plastic film, and paper machines as well as in rolling mill plants
- Highly dynamic servo drives for machine tools, as well as packaging and printing machines

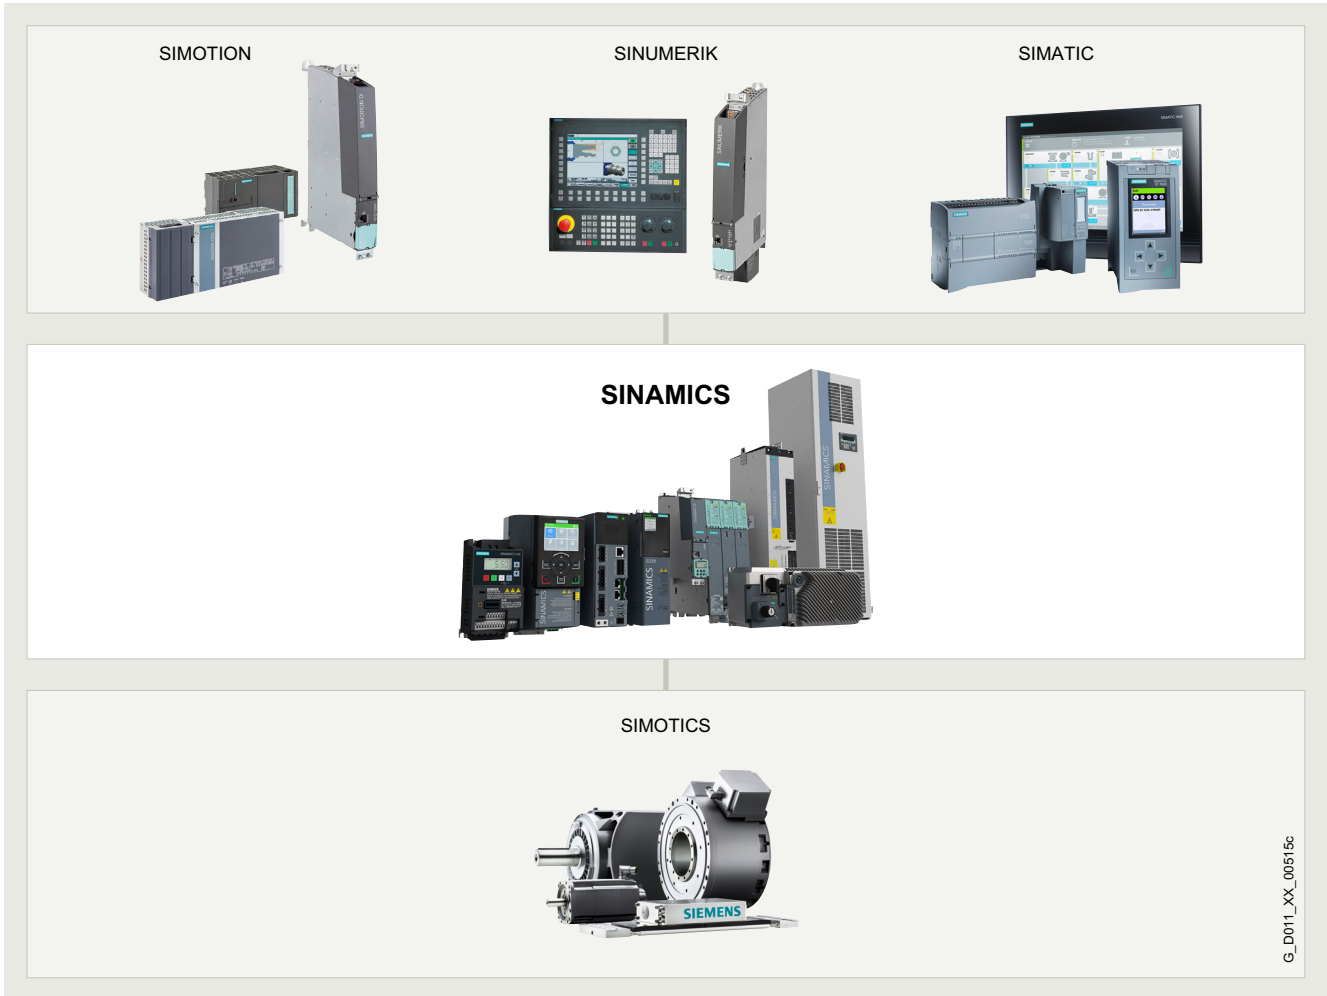

System overview

The SINAMICS converter family

1

Overview

SINAMICS as part of the Siemens modular automation system

G_D011_XX_00515c

Innovative, energy-efficient and reliable drive systems and applications as well as services for the entire drive train

The solutions for drive technology place great emphasis on the highest productivity, energy efficiency and reliability for all torque ranges, performance and voltage classes.

Siemens offers not only the right innovative variable frequency drive for every drive application, but also a wide range of energy-efficient motors for combination with SINAMICS.

Furthermore, Siemens supports its customers with global pre-sales and after-sales services, with over 295 service points in 130 countries – and with special services e.g. application consulting or motion control solutions.

Energy efficiency

Energy management process

Efficient energy management consultancy identifies the energy flows, determines the potential for making savings and implements them with focused activities.

Almost two thirds of the industrial power requirement is from electric motors. This makes it all the more important to use drive technology permitting energy consumption to be reduced effectively even in the configuration phase, and consequently to optimize plant availability and process stability. With SINAMICS, Siemens offers powerful energy efficient solutions which, depending on the application, enable a significant reduction in electricity costs.

Overview

Up to 70 % potential for savings using variable-speed operation

SINAMICS enables great potential for savings to be realized by controlling the motor speed. In particular, huge potential savings can be recovered from pumps, fans and compressors which are operated with mechanical throttle and valves. Here, changing to variable-speed drives brings enormous economic advantages. In contrast to mechanical control systems, the power consumption at partial load operation is always immediately adjusted to the demand at that time. So energy is no longer wasted, permitting savings of up to 60 % – in exceptional cases even up to 70 %. Variable-speed drives also offer clear advantages over mechanical control systems when it comes to maintenance and repair. Current spikes when starting up the motor and strong torque surges become things of the past – and the same goes for pressure waves in pipelines, cavitation or vibrations which cause sustainable damage to the plant. Smooth starting and ramp-down relieve the load on the mechanical system, ensuring a significantly longer service life of the entire drive train.

Variants

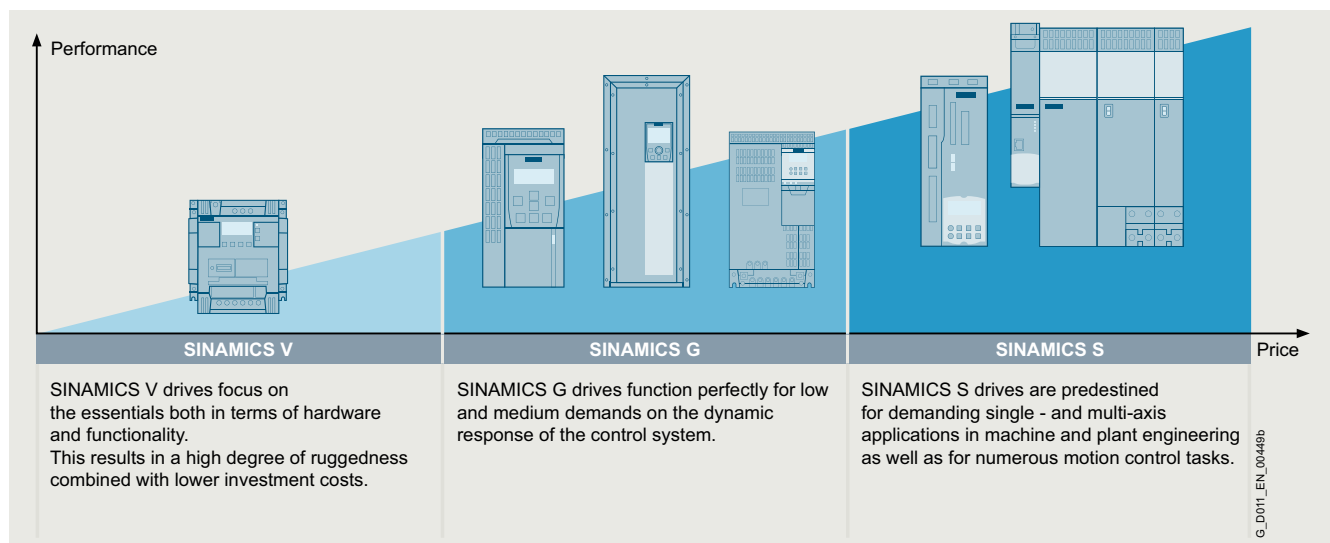

Depending on the application, the SINAMICS converter family offers the ideal variant for any drive task.

Regenerative feedback of braking energy

In conventional drive systems, the energy produced during braking is converted to heat using braking resistors. Energy produced during braking is efficiently recovered to the supply system by versions of SINAMICS G and SINAMICS S drives with regenerative feedback capability and these devices do not therefore need a braking resistor. This permits up to 60 % of the energy requirement to be saved, e.g. in lifting applications. Energy which can be reused at other locations on a machine. Furthermore, this reduced power loss simplifies the cooling of the system, enabling a more compact design.

SINAMICS in combination with energy-saving motors

Engineering integration stretches beyond the SINAMICS converter family to higher-level automation systems, and to a broad spectrum of energy-efficient motors with a wide range of performance classes, which, compared to previous motors, are able to demonstrate up to 10 % greater efficiency.

System overview

The SINAMICS converter family

1

Overview

Platform concept

All SINAMICS variants are based on a platform concept. Joint hardware and software components, as well as standardized tools for dimensioning, configuration, and commissioning tasks ensure high-level integration across all components. SINAMICS handles a wide variety of drive tasks with no system gaps. The different SINAMICS variants can be easily combined with each other.

Quality management according to EN ISO 9001

SINAMICS conforms to the most exacting quality requirements. Comprehensive quality assurance measures in all development and production processes ensure a consistently high level of quality.

Of course, our quality management system is certified by an independent authority in accordance with EN ISO 9001.

Industry Online Support app

With the Industry Online Support app, you can access more than 300000 documents for Siemens Industry products – any time and from anywhere.

Main functions at a glance:

- Scanning of product codes and EAN codes to directly display all of the technical and graphical data (e.g. CAX data) of the product
- Sending of product information or entries via e-mail to further process the information at the workstation
- Conveniently send inquiries to Technical Support. Detailed information can be conveniently completed using the scan or photo function
- Save the favorites on the device using the offline cache function. These articles, products and conferences can then be called even without network access.
- Transfer of PDF documents to an external library
- The contents and interfaces are available in six languages (German, English, French, Italian, Spanish and Chinese) - including a temporary switchover to English.

You can find additional information on the internet at:

www.siemens.com/sinamics-assistant

DRIVE-CLiQ – the digital interface between all components

All SINAMICS S120 components, including the motors and encoders, are interconnected by a shared serial interface called DRIVE-CLiQ. The standardized cables and connectors reduce the variety of different parts and cut storage costs. Converter boards (Sensor Modules) for converting standard encoder signals to DRIVE-CLiQ are available for third-party motors or retrofit applications.

Swift and automatic: The electronic rating plate

An important digital linkage element of the SINAMICS S120 drive system are the electronic rating plates integrated in every component. They allow all drive components to be detected automatically via a DRIVE-CLiQ link. As a result, data do not need to be entered manually during commissioning or component replacement – helping to ensure that drives are commissioned successfully! The electronic rating plates of the motors contain, for example, the parameters of the electrical equivalent circuit diagram and the characteristic data of the built-in motor encoder in addition to information such as order and identification numbers.

Integrated system configuration

Siemens offers perfectly matched drive components with which you can meet your requirements. The drive components reveal their true strengths over the full range from engineering and commissioning through to operation:

Integrated system configuration is performed using the Siemens Product Configurator: Just select a motor and a converter and design them with the SIZER for Siemens Drives (integrated in TIA Selection Tool) engineering tool. The STARTER and SINAMICS Startdrive commissioning tools integrate the motor data and at the same time simplify efficient commissioning.

All drive components are incorporated in the TIA Portal – this simplifies engineering, commissioning and diagnostics.

Using the SINAMICS selection guide

The varying range of demands on modern variable frequency drives requires a large number of different types. Selecting the optimum drive has become a significantly more complex process. The application matrix shown simplifies this selection process considerably, by suggesting the ideal SINAMICS drive for examples of typical applications and requirements.

- The application type is selected from the vertical column
 - Pumping, ventilating, compressing
 - Moving
 - Processing
 - Machining
- The quality of the motion type is selected from the horizontal row
 - Basic
 - Medium
 - High

Overview

**Flexibility for successful machine concepts**

As part of the SINAMICS converter family, the SINAMICS S120 drive is a modular system for high-performance applications in machine and plant engineering. SINAMICS S120 offers high-performance single-axis and multi-axis drives for a very broad range of industrial applications. By virtue of its scalability and flexibility, SINAMICS S120 is the ideal system for satisfying the ever increasing demand for more axes and better performance. SINAMICS S120 supports flexible machine designs and speedy implementation of customized drive solutions.

The response to ever increasing demands

Modern machines must be built at ever lower cost, but deliver ever greater productivity. The SINAMICS S120 drive concept meets both these challenges! It is easy to configure and thus helps reduce project completion times. Its excellent dynamic response and accuracy permit higher cycle rates for maximum productivity.

Applications in machine and plant engineering

Regardless of whether the application involves continuous material webs or cyclic, highly dynamic processes – SINAMICS S120 means increased machine performance in many industries:

- Packaging machines
- Plastics processing machines
- Textile machines
- Printing machines
- Paper machines
- Woodworking machines
- Hoists and cranes
- Handling and assembly systems
- Machine tools
- Rolling mills
- Test stands
- Machinery associated with renewable energy applications

Modularity for mechanical engineering

SINAMICS S120 is designed to allow free combination of power and control performance. Multi-axis drives with higher-level motion control can be implemented with the SINAMICS S120 modular system as easily as single-drive solutions.

Greater flexibility with central control intelligence

On the SINAMICS S120, the drive intelligence is combined with closed-loop control functions into Control Units.

These units are capable of controlling drives in Vector, Servo and V/f modes. They also perform the speed and torque control functions plus other intelligent drive functions for all axes on the drive.

Free performance selection for Vector and Servo control modes

The use of a SINAMICS S120 Vector control is recommended for drive solutions with continuous material webs, for example, wire-drawing machines, film and paper machines, as well as for hoisting gear, centrifuges and marine drives with harmonic, circular motion.

Servo control with SINAMICS S120 is employed for cyclic processes with precise, highly dynamic position control and servo motors, e.g. in textile, packaging, printing machines and machine tools.

SINAMICS S120 – functions for better efficiency

- Basic functions: Speed control, torque control, positioning functions
- Intelligent starting functions for independent restart after power supply interruption
- BICO technology with interconnection of drive-related I/Os for easy adaptation of the drive system to its operating environment
- Integrated safety functions for rational implementation of safety concepts
- Regulated infeed/regenerative feedback functions for preventing undesirable reactions on the supply, allowing recovery of braking energy and ensuring greater stability against line fluctuations.

DRIVE-CLiQ – the digital interface between all components

All SINAMICS S120 components, including the motors and encoders, are interconnected by a shared serial interface called DRIVE-CLiQ. The standardized cables and connectors reduce the variety of different parts and cut storage costs. Converter boards (Sensor Modules) for converting standard encoder signals to DRIVE-CLiQ are available for third-party motors or retrofit applications.

Swift and automatic: The electronic rating plate

An important digital linkage element of the SINAMICS S120 drive system are the electronic type plates integrated in every component. They allow all drive components to be detected automatically via a DRIVE-CLiQ link. As a result, data do not need to be entered manually during commissioning or component replacement – helping to ensure that drives are commissioned successfully! The electronic rating plates of the motors contain, for example, the parameters of the electrical equivalent circuit diagram and the characteristic data of the built-in motor encoder in addition to information such as order and identification numbers.

System overview

SINAMICS S120 drive system

1

Overview

Modular design ensures flexibility and scalability

DC/AC units (Motor Modules) – available in compact booksize, booksize and chassis formats – are characterized by their modular design. All the drive intelligence is organized into Control Units. The Control Units perform all the closed-loop control functions for the drive line-up. They also handle all other drive functions such as the interconnection of drive-related I/Os, positioning functions, and feature PROFIBUS DP or PROFINET as the central interface for linking to higher-level automation systems.

Line Modules function as the central energy supply to the voltage-source DC link. Line Modules are optionally available

with regulated infeed/regenerative feedback to provide a constant DC link voltage and high level of supply compatibility. Motor Modules supply the motors with energy from the DC link.

On AC/AC units, the infeed and motor power supply functions are combined in one device, the Power Module – available in blocksize and chassis formats. For single-axis applications, drive control functions are performed by a special Control Unit (CU310-2) mounted on the Power Module and for multi-axis applications, by a Control Unit (e.g. CU320-2) connected by a DRIVE-CLiQ link. In this case, a Control Unit Adapter is mounted on the Power Module in place of the Control Unit.

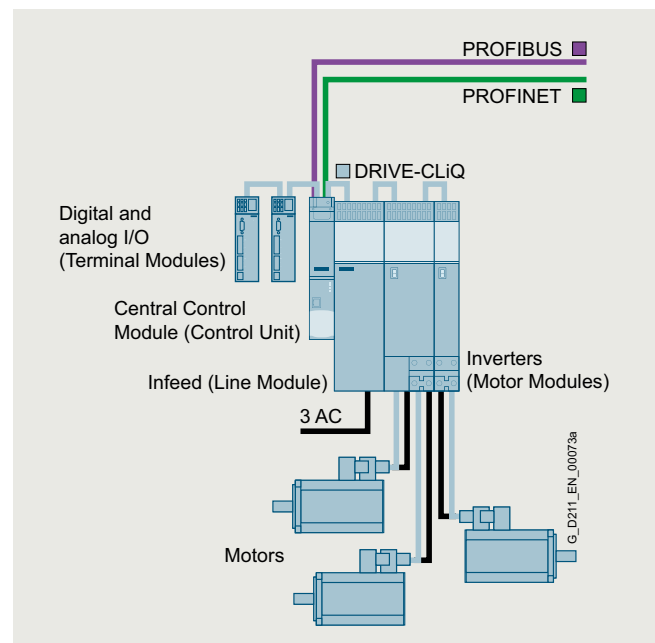

SINAMICS S120 blocksize, booksize compact, booksize and chassis formats

All formats can be combined as required

The different SINAMICS S120 formats can be combined freely thanks to their DRIVE-CLiQ interfaces, e.g. Line Modules in chassis format can be freely combined with Motor Modules in booksize format for multi-axis applications with high total output.

System overview

SINAMICS S120 drive system

1

Overview

SINAMICS S120 can be scaled with respect to performance and technology. In the case of more exacting technological requirements, for example, the SINAMICS S120 Control Unit can be replaced by a drive-based controller for motion control. This is the SINUMERIK 840D sl for machine tools, or the SIMOTION D for production machinery and plant engineering. It is also easy to couple the SINAMICS S120 to a higher-level SIMATIC S7 with integral technology functions.

Scalable motion control functions

Totally Integrated Automation – the unique automation platform

With Totally Integrated Automation (TIA), Siemens is the only single-source provider to offer an integrated spectrum of products and systems for all industries. Tailored to meet individual customer requirements, industry-specific automation solutions can be implemented efficiently on the basis of TIA. Lower life-cycle costs for plant operation and a significant reduction in time to market result in a marked improvement in productivity and greater investment security.

Easy – Totally Integrated Automation with SINAMICS S120

Apart from SIMATIC, SIMOTION and SINUMERIK, SINAMICS is also one of the core components of TIA. The STARTER commissioning tool is therefore an integral element of the TIA platform. It is thus possible to parameterize, program and commission all components in the automation system using a standardized engineering platform and without any gaps. The system-wide data management functions ensure consistent data and simplify archiving of the entire plant project.

PROFINET – for enhanced performance and open IT communication

PROFINET, the standard fieldbus of the TIA system, is supported by all SINAMICS S120 variants. This Ethernet-based bus enables control data to be exchanged at high speed via PROFINET IO with IRT or RT and makes SINAMICS S120 a suitable choice for integration in top-performance multi-axis applications.

At the same time, PROFINET also uses standard IT mechanisms (TCP/IP) to transport information, e.g. operating and diagnostic data, to higher-level systems. A SINAMICS S120 with this interface can thus easily be integrated into factory IT networks.

PROFIBUS

SINAMICS S120 supports PROFIBUS DP. It provides a high-performance, system-wide communication network which links all automation components: HMI, controls, drives and I/O devices.

SIMOTICS motors

1

Overview

SIMOTICS stands for

- 150 years of experience in building electric motors
- The most comprehensive range of motors for motion control applications
- Optimum solutions in all industries, regions and power/performance classes
- Innovative motor technologies of the highest quality and reliability
- Highest dynamic performance, precision and efficiency together with the optimum degree of compactness
- Our motors can be integrated into the drive train as part of the overall system
- A global network of skill sets and worldwide service around the clock

A clearly structured portfolio

The entire SIMOTICS product portfolio is transparently organized according to application-specific criteria in order to help users select the optimum motor for their application.

Whatever it is that you want to move – we can supply the right motor for the task.

www.siemens.com/simotics

An outstanding performance for any job

A key characteristic of all SIMOTICS motors is their quality. They are robust, reliable, dynamic and precise to assure the requisite performance level for any process and deliver exactly the capabilities demanded by the application in hand. Thanks to their compact design, they can be integrated as space-saving units into installations. Furthermore, their impressive energy efficiency makes them effective as a means of reducing operating costs and protecting the environment.

A dense network of skill sets and servicing expertise around the world

SIMOTICS offers not only a wealth of sound experience gleaned from a development history which stretches back over around 150 years, but also the know-how of hundreds of engineers. This knowledge and our worldwide presence form the basis for a unique proximity to industries which feeds through in tangible terms to the specific motor configuration which is tailored to suit your application.

Our specialists are available to answer all your queries regarding any aspect of motor technology. At any time – wherever you are in the world. When you choose SIMOTICS, therefore, you reap the benefits of a global service network which is continuously accessible, thereby helping to optimize response times and minimize downtimes.

Perfection of the complete drive train

SIMOTICS is perfectly coordinated with other Siemens product families. In combination with the SINAMICS integrated converter family and the SIRIUS complete portfolio of industrial controls, SIMOTICS fits seamlessly as part of the complete drive train into automation solutions which are based on the SIMATIC, SIMOTION and SINUMERIK control systems.

G_D011_EN_00492b

Whether it is a servomotor, a main motor, a torque motor or a linear motor – no other manufacturer anywhere in the world offers such an extensive portfolio of motors for motion control applications. Perfectly coordinated for operation with SINAMICS drives, all products in the portfolio impress with their compact dimensions, precision and dynamic response.

SIMOTICS S servomotors **Highly dynamic and extremely compact**

Whether they are used for positioning in pick and place applications, as cyclic drives in packaging machines or for path control in handling systems and machine tools: Our permanent-magnet, highly energy efficient SIMOTICS servomotors are the first choice for any application which demands highly dynamic and precise motional sequences. Depending on the application, they are available with various different built-in encoders – from the simple resolver to the high-resolution absolute encoder. The SIMOTICS S product range is rounded off by the SIMOTICS servo geared motors.

SIMOTICS M main motors **Exact rotation at up to 40000 r/min**

For applications where continuous, precise rotation of the axes is the primary concern. Thus they are ideally suited for the main drives for presses, as roller drives in printing and paper-making machines, textiles and plastics-processing machines. They can also be deployed as winder drives and in machine tool spindles and hoisting gear. With a power spectrum ranging from 2.8 kW

to 1340 kW (3.75 to 1797 hp), they cover virtually every application.

SIMOTICS L linear motors **Improved dynamic response all along the line**

The ideal solution for any application which requires linear movements to be performed with maximum dynamic response and precision. The reason: The effects of elasticity, backlash and friction as well as natural oscillation in the drive train are largely eliminated because no mechanical transmission elements such as ball screw, coupling and belt are needed when linear motors are used. This simplifies the machine design and reduces wear.

SIMOTICS T torque motors **Outstanding precision for rotary axes**

Optimized for high torques at low rated speeds. With their excellent precision, dynamic response and low wear (they have no mechanical transmission elements), these motors have all the right credentials for use as built-in motors in rotary indexing machines, rotary tables or swivel and rotary axes, e.g. on machine tools. The same also applies to complete torque motors which are typically used as a roller and winder drive in converting applications.

System overview

SIMOTICS motors for motion control applications

1

Overview

Individual solutions for special applications

There is sometimes no other option but to develop an application-specific solution. Based on our many years of experience, we are able to work with our customers to develop and implement application-specific motor solutions – with a design and performance that are perfectly tailored to meet individual requirements. These have the additional useful benefit that they are highly integrated into our converter and control system environment.

Optimally coordinated system solutions

SIMOTICS motors are perfectly coordinated with the drive systems of the SINAMICS family. They provide you with precisely tailored, state-of-the-art motion control solutions in all performance classes created using globally available standard components. Electronic rating plates and the ability to integrate the motors via the DRIVE-CLiQ system interface ensure quick commissioning as well as problem-free operation. Thanks to the integral encoders with redundant encoder tracks and safety functions which are integrated in the drive, modern safety concepts are easy to implement. As a result, external safety components are completely unnecessary. All components can be interconnected simply and reliably by means of pre-assembled MOTION-CONNECT signal and power cables.

Powerful tools and competent support

Siemens offers expert advice and efficient tools to help users select the right motor solution. Experienced specialists are always ready to lend a hand in designing mechanically integrated motor solutions.

Focused motor selection and dimensioning: SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool)

The SIZER for Siemens Drives (integrated in the TIA Selection Tool) engineering tool is designed to help you configure a complete drive system including options, accessories and connection systems. The engineering tool allows you to handle any kind of drive – from single drives to complex multi-axis drives. Starting from the type of application in question, the software guides the user step by step through the motor dimensioning process. The advantage: SIZER for Siemens Drives not only provides a full list of components with their order data, but also offers an import function for easy transfer of the motor data into the CAD CREATOR.

www.siemens.com/sizer

Selection and configuring with the Siemens Product Configurator

The Siemens Product Configurator helps you select the optimum products for an application – from the motors to the converters and the associated options. You can also generate comprehensive documentation including data sheets, operating instructions, 2D and 3D dimension drawings, and certificates. You can order the products directly by transferring the selected components to the shopping cart of SiePortal.

Catalog	D 21.4							

Motion control encoders are optoelectronic built-on encoders that detect the traversing distances, angles of rotation, speeds or positions of machine axes. Motion control encoders are direct measuring systems that are built-on to shafts, axes or motors. They can be used in conjunction with numerical and programmable logic controllers, drives and position displays. Motion control encoders are system-tested, certified components that have been harmonized for use with the following systems:

- SINUMERIK CNC controls
- SIMOTION Motion Control Systems
- SIMATIC programmable logic controllers
- SINAMICS drive systems

Motion control encoders are used with machine tools and production machines as additional external measuring systems. They are available as incremental or absolute encoders.

- In the case of incremental encoders, the machine must travel to a reference point after each power-off state, as the position is not usually stored in the controller, and movements of the machine while the power is off are not recorded.
- Absolute encoders, on the other hand, also record movements while the power is off and return the actual position after power on. Travel to a reference point is not necessary.

All motion control encoders are available as Synchro flange and clamp flange versions. The absolute encoders are also available with a hollow shaft and torque arm.

The motion control encoders are driven via a plug-in coupling or spring disk coupling. Alternatively, pulleys can also be used.

The motor control encoder supply voltage is 5 V DC or alternatively 10 V to 30 V DC. The 10 V to 30 V DC version supports longer cable lengths. Most control systems supply the voltage directly at the measuring circuit connector. With SINAMICS, the measuring systems are provided with power via the converters or the Sensor Modules.

For motion control encoders with cables, the cable length including the connector is 1 m.

The following bending radii must be observed for the cable to the built-on encoder:

- One-time bending: ≥ 20 mm
- Continuous bending: ≥ 75 mm

System overview

MOTION-CONNECT connection systems

1

Overview

MOTION-CONNECT includes connection systems and components which are optimally tailored to individual areas of application. MOTION-CONNECT cables feature state-of-the-art connection systems to ensure fast, reliable connection of different components, and offer maximum quality as well as system-tested reliability.

MOTION-CONNECT power cable and signal cable

MOTION-CONNECT cables are available as fully-assembled power and signal cables or sold by the meter. The pre-assembled cables can be ordered in length units of 10 cm (3.94 in) and can be extended, if necessary.

Whatever your machine requirements, MOTION-CONNECT offers the solution.

- **Robust, high-performance and easy to use**
thanks to pre-assembled cables with a rugged metal connector in degree of protection IP67 and reliable SPEED-CONNECT quick-release lock
- **Outstanding and proven quality**
achieved by consistent quality management and system-tested cables

Cables are available in two different qualities – MOTION-CONNECT 500 and MOTION-CONNECT 800PLUS.

MOTION-CONNECT 500	MOTION-CONNECT 800PLUS
<ul style="list-style-type: none"> • Cost-effective solution for predominantly fixed installation • Tested for travel distances up to 5 m (16.4 ft) 	<ul style="list-style-type: none"> • Meets requirements for use in cable carriers • Oil-resistant • Tested for travel distances of up to 50 m (164 ft)

Further information about firmware functionality can be found on the internet at www.siemens.com/sinamics-firmware

Firmware functionality

Firmware functionality

Overview

The major part of the functionality of SINAMICS drives is implemented in software. This "embedded" **software** delivers the function of the product and is therefore a significant component of the overall product. The embedded software is also known as **firmware**, because it is firmly connected to specific hardware.

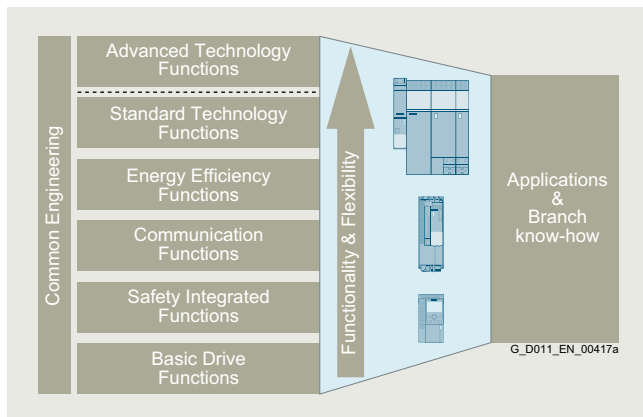

In the case of SINAMICS drives, the firmware is subdivided into the **operating system (OS)** with drivers for the hardware and the converter functions, which are also referred to as the **runtime (RT) functions**.

Introduction

The available firmware functions are so extensive that the overall functional scope has been structured into function groups corresponding to their main applications.

The 8 main groups are:

- Basic Drive Functions
- Standard Technology Functions
- Advanced Technology Functions
- Communication Functions
- Safety Integrated Functions
- Energy Efficiency Functions
- Common Engineering
- Applications & Branch know-how

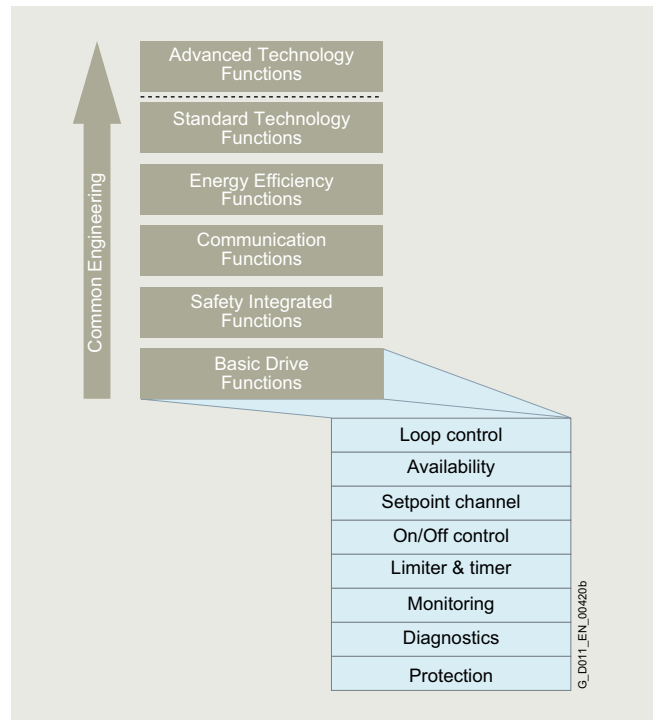

Functionality, including technology and configuration

Basic Drive Functions

The main groups, especially the "Basic Drive Functions", are divided up into further subgroups.

- Control modes
- Availability
- Setpoints and commands
- Limiters, timers and monitoring functions
- Diagnostics
- Protection

Basic Drive Functions - Control Functions

Control modes

The control methods are the core of the entire converter firmware. They are responsible for optimum movement of the connected motor and the attached machines. The better the control functions, the faster, better and more smoothly the machine operates, thereby significantly enhancing the quality of the production output.

A distinction is made between the following methods:

- V/f control (open-loop control)
- Vector control (closed-loop control)
- Servo control (closed-loop control)

Further classification refers to the control variables:

- Current control
- Speed control
- Torque control
- Position control
- Technological process control (pressure, flow rate, temperature, fill level, etc.)

Overview

Availability

Availability refers to the frequency ratio, namely how often or seldom a single device restricts the entire production process due to a problem. That is why it is important in terms of availability that a drive enters the faulty state only when it is essential for self-protection. Moreover, it is important that the cause of the pending problem is identified and eliminated as quickly as possible.

Features and measures to increase availability:

- Parallel connections, for example, to maintain emergency operation (possibly also at a lower rating), if a power unit fails
- Automatic restart
- Flying restart
- V_{dc} control with kinetic buffering
- Redundancy (hardware, communication, etc.)

Setpoints and commands

The setpoint channel is the link between the setpoint source and the motor control. The converter has a special feature that supports simultaneous input of two setpoints. Generation and subsequent modification of the total setpoint (influencing the direction, skip frequency, up/down ramp) take place in the setpoint channel.

Different sources of command usually result from the requirements to operate a drive from different places (on-site/remote), in different situations (standard/emergency mode) and/or different operating. The BICO binector connector technology allows SINAMICS to configure and combine the command and setpoint sources completely individually.

The following can be used for switching:

- Dataset switchover
- Switching elements among the Free Function Blocks (FFB)
- Fixed values

Limiters and monitoring functions

Limiters or limits are used to constrain input and/or output variables as appropriate to the connected machine; this means that not all positioning variables are used over their full range but are limited judiciously to enhance the safety and quality of the production process.

Timers/runtime counters are used to obtain information or make statements about the temporal course of a process.

- Recording application information for manufacturers
- Recording operating times for users
- Configurable timers for monitoring intervals
- Configurable timers for triggering activities at certain intervals (e.g. maintenance work)

Monitoring is used for early detection of conditions that may be detrimental or even dangerous to the connected machine, so that they can be counteracted expediently. If an appropriate countermeasure is not initiated, a protective response of the converter with probable fault shutdown will ultimately result.

Diagnostics

The "Diagnostics" subgroup comprises all those functions that provide assistance with determining the possible causes of a problem.

If problems occur in a process, or in the driven machine, further interpretation of the measured variables in the converter is required. To this end, different signals should be correlated with respect to time and then observed.

This includes:

- Error and alarm buffer
- Diagnostic buffer
- List of missing signals that interrupt operation
- Tracing for temporal assignment of signal profiles
- I/O simulation
- Telegram content diagnoses
- Terminal status

Protection

All protection functions counteract any possible damage to the converter and/or motor. This is why the shutdown thresholds cannot be parameterized but are factory-tuned and permanently set to match the built-in components. Alarm thresholds may be parameterized as a relative variable for shutdown threshold of some monitoring processes. Thus, a countermeasure that is sensitive to the process may still be initiated upon occurrence of the alarm.

Apart from protection of the hardware, protection of the parameterization and therefore protection of the intellectual expertise of the customer from unauthorized access and copying is also an important part of the protection functions.

- Write protection
- Know-how protection
- Copy protection

Firmware functionality

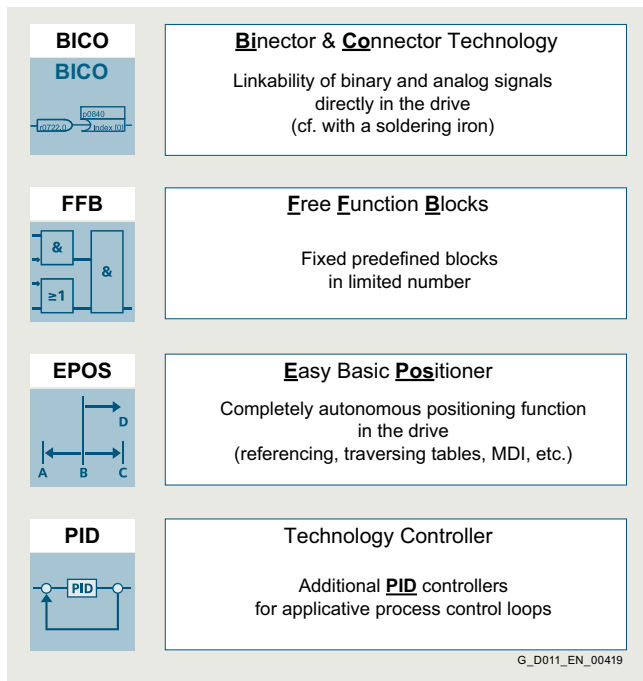

Firmware functionality

Overview

Standard Technology Functions

The Standard Technology Functions are not restricted to a specific SINAMICS product family, but they are available in full or at least partially in SINAMICS S120 as well as in SINAMICS G120.

- BICO technology
- Free function blocks (FFB)
- Basic positioner (EPOS)
- Technology controller (PID)

Standard Technology Functions

The Standard Technology Functions significantly expand the application spectrum of the SINAMICS drives because the functions are not permanently and unalterably interconnected; rather, they are interrupted at defined access points and can be connected or wired differently. The BICO technology makes it possible.

The FFBs enable additional, freely interpretable adaptations of the binary and analog signal flow to the given machine application. However, the FFBs are limited in terms of the absolute quantity and the computing intervals (sampling times) that can be selected. These blocks are NOT multi-instance capable.

With EPOS, comprehensive positioning tasks are autonomous in SINAMICS (i.e. their solution does not need a higher-level control). And moreover, this integrated functionality is also extremely flexible: It can be used for highly dynamic servo control as well as for simple applications with vector-controlled asynchronous motors. Up to 64 target positions, as well as the respective traversing speeds, can be permanently stored in the drive during commissioning. Axes can be positioned either absolutely or relatively.

It is, however, also possible to transfer these parameters as required from a higher-level controller. This means that target positions and velocities can even be changed on-the-fly during a positioning run.

The technology controller (PID controller) permits all types of simple process controls to be implemented. It can be used, for example, to control the line pressure, fill level, temperature, flow or also tension control or load balancing.

For more information, see [section Technology functions](#).

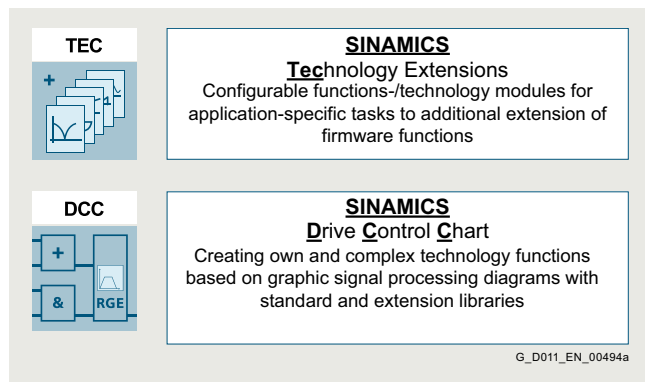

Overview

Advanced Technology Functions

The Advanced Technology Functions are the clear differentiating feature between the SINAMICS product families of SINAMICS G120 with the CU2xx-2 Control Units and SINAMICS S120 with the CU3x0-2 Control Units. The Advanced Technology Functions are only available for SINAMICS S120:

- SINAMICS Drive Control Chart (DCC)
- SINAMICS Technology Extensions (TEC)

The Advanced Technology Functions are characterized by maximum flexibility and performance whereby extremely individual and, at the same time, efficient solutions can be achieved.

Advanced Technology Functions

SINAMICS DCC comprises the block library, so-called DCB Drive Control Blocks and the DCC Editor for graphical interconnection of blocks. SINAMICS DCC is primarily employed to solve arithmetic and control-related tasks or logic functions associated with complex applications.

In addition to the DCB Standard library, the DCB Extension library can also be used to create applications. The DCB Extension library is comprised of freely programmable blocks which are created for specific applications using DCB Studio and are then graphically interconnected with the DCC Editor in a similar fashion to standard blocks.

SINAMICS Technology Extensions (TECs) are configurable firmware expansions that are specifically created for use in a customized application with special requirements. This functionality can therefore be subsequently installed as an add-on to the standard scope of firmware functions. One example of a SINAMICS TEC is the VIBX vibration extinction for storage and retrieval systems.

For more information, see section Technology functions.

The functional scope of Advanced Technology Functions is scalable and flexible. Depending on the task, you can choose between configurable solutions provided by Siemens or freely created proprietary solutions in the drive.

Communication Functions

See section [Communication](#)

Energy Efficiency Functions

See section [Energy efficiency](#)

Common Engineering

All functions of the converters are implemented to enable a common engineering approach to their handling no matter which type of drive is selected; i.e. if a function is used in drive x, it can be configured intuitively and commissioned in the same way in drive y. Knowledge gained can therefore be reused easily and efficiently. The configuration and commissioning tools in particular (such as SIZER for Siemens Drives (integrated in TIA Selection Tool), STARTER and SINAMICS Startdrive) reflect this approach..

For more information, see section [Engineering tools](#).

Applications & Branch know-how

Siemens has applied these technology functions (standard and/or advanced) to generate numerous application solutions. These applications can be downloaded from the Siemens application support website at www.siemens.com/sinamics-applications

The STARTER and SINAMICS Startdrive commissioning tools can then be used to activate and configure the applications and download them to the Control Units.

More information

Further information about firmware functionality can be found on the internet at www.siemens.com/sinamics-firmware

Applications & Branch know-how

Cascade control, bypass, multi-zone control, hibernation, essential service mode ESM, wobble generator

Line infeed functions, e.g. line transformer, dynamic grid support, ...

G_LD011_EN_00421a

Applications & Branch know-how

Depending on the technology function, a license may be required for the application.

In some branch-specific Control Units (e.g. CU230P-2) branch-specific functions are also an integral part of the firmware.

Safety Integrated

Safety Integrated

Overview

Legal framework

Machine manufacturers and plant construction companies must ensure that their machines or plants cannot cause danger due to malfunctions in addition to the general risks of electric shock, heat or radiation.

In Europe, for example, compliance with the Machinery Directive 2006/42/EC is legally stipulated by the EU framework directive for occupational safety. In order to ensure compliance with this directive, it is recommended that the corresponding harmonized European standards are applied. This triggers the "assumption of conformity" and gives manufacturers and operators the legal security in terms of compliance with both national regulations and EU directives. The machine manufacturer uses the CE marking to document compliance with all relevant directives and regulations in the free movement of goods.

Safety-related standards

Functional safety is specified in various standards. For example, ISO 12100 specifies standards pertaining to machine safety (risk assessment and risk reduction). IEC 61508 specifies basic requirements for electronic and programmable safety-related systems. IEC 62061 (only applicable for electrical and electronic control systems) and ISO 13849-1 define the functional and safety-related requirements of safety-oriented control systems.

The above-mentioned standards define different safety requirements that the machine has to satisfy in accordance with the risk, frequency of a dangerous situation, probability of occurrence and the opportunities for recognizing impending danger.

- ISO 13849-1:
Performance Level PL a ... e;
Category B, 1 ... 4
- IEC 62061:
Safety Integrity Level SIL 1 ... 3

Trend toward integrated safety systems

The trend toward greater complexity and higher modularity of machines has seen a shift in safety functions away from the classical central safety functions (for example, shutdown of the complete machine using a main disconnecting means) and into the machine control system and the drives. This is often accompanied by a significant increase in productivity because the setup times are shortened. Depending on the type of machine, it may even be possible to continue manufacturing other parts while the setup is in progress.

Safety Integrated Functions act much faster than those of a conventional design. The safety of a machine is increased further with Safety Integrated. Furthermore, thanks to the faster method of operation, safety measures controlled by integrated safety systems are perceived as less of a hindrance by the machine operator, therefore significantly reducing the motivation to consciously bypass safety functions.

Function

Safety functions integrated in SINAMICS drives

SINAMICS drives are characterized by a large number of Safety Integrated Functions. In combination with the sensors and safety control required for the safety functionality, they ensure that highly-effective protection for persons and machines is implemented in a practice-oriented manner.

They comply with the requirements of the following safety categories:

- PL d and Category 3 according to ISO 13849-1
- SIL 2 according to IEC 61508 and IEC 61800-5-2

Note:

The Safe Brake Test (SBT) diagnostic function meets the requirements for Category 2 according to ISO 13849-1.

The PM240-2 Power Modules, frame sizes FSD to FSG additionally offer STO acc. to IEC 61508 SIL 3 and ISO 13849-1 PL e and Category 3.

The Safety Integrated functions are generally certified by independent institutes. You can obtain the corresponding test certificates and manufacturer's declarations from your Siemens contacts.

The Safety Integrated Functions that are currently available are described below. Their functional safety satisfies the requirements defined in the international standard IEC 61800-5-2 for variable-speed drive systems.

The safety functions integrated into the SINAMICS drive system can be roughly divided into four categories:

- **Functions for safely stopping a drive**
 - Safe Torque Off (STO)
 - Safe Stop 1 (SS1)
 - Safe Stop 2 (SS2)
 - Safe Operating Stop (SOS)
- **Functions for safe brake management**
 - Safe Brake Control (SBC)
 - Safe Brake Test (SBT)
(this diagnostic function exceeds the scope of IEC 61800-5-2)
- **Functions for safely monitoring the motion of a drive**
 - Safely-Limited Speed (SLS)
 - Safe Speed Monitor (SSM)
 - Safe Direction (SDI)
 - Safely-Limited Acceleration (SLA)
- **Functions for safely monitoring the position of a drive**
 - Safely-Limited Position (SLP)
 - Safe Position (SP) (this function exceeds the scope of IEC 61800-5-2)
 - Safe Cam (SCA)

Safe Torque Off (STO)

The STO function is the most common and basic drive-integrated safety function. It ensures that no torque-generating energy can continue to affect a motor and prevents unintentional start-ups.

Effect

This function is a mechanism that prevents the drive from restarting unexpectedly, in accordance with EN 60204-1, Section 5.4. The STO function suppresses the drive pulses (corresponds to Stop Category 0 according to EN 60204-1). The drive is reliably torque-free. This state is monitored internally in the drive.

Application

STO has the immediate effect that the drive cannot supply any torque-generating energy. STO can be used wherever the drive will naturally reach a standstill due to load torque or friction in a sufficiently short time or when "coasting down" of the drive will not have any relevance for safety.

STO makes it possible for persons to work safely when the protective door is open (restart interlock) and is used on machines/installations with moving axes, e.g. on handling or conveyor systems.

Customer benefits

Some of the advantages of the Safety Integrated Function STO over conventional safety technology with electromechanical switchgear include the elimination of separate components as well as of the work that would be required to wire and service them, i.e. no wearing parts as a result of the electronic shutdown. Because of the fast electronic switching times, the function provides a shorter reaction time than the conventional solution comprising electromechanical components. When STO is triggered, the converter remains connected to the network and can be fully diagnosed.

Safety Integrated

Safety Integrated

Function

Safe Stop 1 (SS1)

The SS1 function causes a motor to stop rapidly and safely and switches the motor to torque-free mode after coming to a standstill by activating STO.

Effect

The SS1 function can safely stop the drive in accordance with EN 60204-1, Stop Category 1. When the SS1 function is selected, the drive brakes autonomously along a quick-stop ramp and automatically activates the Safe Torque Off and Safe Brake Control functions (if configured) when the parameterized safety delay time expires.

If the variant "SS1 with external stop (SS1E)" is parameterized, the drive does not brake autonomously when the function is selected. In this case, the higher-level control must bring the drive to a standstill within a parameterized STO transition time. The SBR (Safe Brake Ramp) and SAM (Safe Acceleration Monitor) functions are not active. SS1E is a useful function for drives that need to be stopped as a group by the Motion Control system in order to prevent potential damage to the machine or product.

Application

The SS1 function is used when, in the event of a safety-relevant incident, the drive must stop as quickly as possible with a subsequent transition into the STO state (e.g. EMERGENCY STOP). It is thus used to bring large centrifugal masses to a stop as quickly as possible for the safety of the operating personnel, or to brake motors at high speeds as quickly as possible. Examples of typical applications are saws, grinding machine spindles, centrifuges, winders and storage and retrieval machines.

Customer benefits

The targeted stopping of a drive by means of SS1 reduces the risk of danger, increases the productivity of a machine, and allows the safety clearances in a machine to be reduced. The principle is to bring the drive actively to a standstill, compared with just using the STO function. Complex mechanical brakes that are susceptible to wear are normally not required to brake the motor.

Safe Stop 2 (SS2)

The SS2 function brings the motor to a standstill quickly and safely and then activates the SOS function once the motor has stopped.

Effect

The Safe Stop 2 function can safely stop the drive in accordance with EN 60204-1, Stop Category 2. When the SS2 function is selected, the drive brakes autonomously along a quick stop ramp. In contrast to SS1, the drive control remains operational afterwards, i.e. the motor can supply the full torque required to maintain zero speed. Standstill is safely monitored (Safe Operating Stop function).

If the variant "SS2 with external stop (SS2E)" is parameterized, the drive does not brake autonomously when the function is selected. In this case, the higher-level control must bring the drive to a standstill within a parameterized Safe Operating Stop transition time. The SBR (Safe Brake Ramp) and SAM (Safe Acceleration Monitor) functions are not active. SS2E is a useful function for drives that need to be stopped as a group by the Motion Control system in order to prevent potential damage to the machine or product.

Application

As with SS1, the SS2 function ensures the quickest possible deceleration of the motor. However, the motor power is not switched off. Instead, a control system prevents it from leaving the standstill position – even if it is affected by external forces. Typical applications for SS2 include machine tools, for example.

Customer benefits

The SS2 function ensures a rapid axis stop. Because the control remains active, after the safety function is deselected, productive operation can continue without referencing. This ensures short setup and standstill times and high productivity.

Function

Safe Operating Stop (SOS)

With the SOS function, the stopped motor is held in position by the drive control system and its position is monitored.

Effect

The SOS function constitutes safe standstill monitoring. The drive control remains in operation. The motor can therefore deliver the full torque to hold the current position. The actual position is reliably monitored. In contrast to safety functions SS1 and SS2, the speed setpoint is not influenced autonomously. After SOS has been activated, the higher-level control must bring the drive to a standstill within a parameterized time and then hold the position setpoint.

Application

SOS is an ideal solution for all those applications for which the machine or parts of the machine must be at a safe standstill for certain steps, but the drive must also supply a holding torque. It is ensured that despite counter torque the drive remains in its current position. In contrast to SS1 and SS2, the drive does not brake autonomously in this case. It expects the higher-level controller to ramp down the relevant axes as a coordinated group within an adjustable delay time. This can be used to prevent any damage to the machine or product. Typical applications for SOS include winders, converting and packaging machines and machine tools.

Customer benefits

No mechanical components are necessary to keep the axis in position despite any counterforce that may occur. Due to the short switching times and the fact that the drive control always remains active, setup and downtimes are reduced. Recalibration of the axis after exiting the SOS function is not necessary. The axis can immediately be moved again after deactivation of the SOS function.

Safe Brake Control (SBC)

The SBC function permits the safe control of a holding brake. SBC is always activated in parallel with STO.

Effect

A holding brake which is active in a de-energized state is controlled and monitored using safe two-channel technology. Due to the two-channel control, the brake may still be activated in the event of an insulation fault in the control cable. Errors of this kind are detected early by means of test pulses.

Note:

Safe Brake Control does not detect mechanical faults in the brake itself, such as worn brake linings. For Motor Modules in booksize format, the terminals for the motor brake are integrated. An additional Safe Brake Relay is required for Power Modules in blocksize format. An additional Safe Brake Adapter is necessary for Power Modules in chassis format.

Application

The SBC function is used in conjunction with the functions STO or SS1 to prevent the movement of an axis in the torque-free state, e.g. because of gravity.

Customer benefits

Again, the function saves the use of external hardware and the associated wiring.

Safety Integrated

Safety Integrated

Function

Safe Brake Test (SBT)

The SBT diagnostic function carries out a brake function test at regular intervals or before personnel enter the danger zone.

Effect

A good way to check the proper functioning of brakes that have become worn is to apply a torque to the closed brake. Drive systems that have two brakes, e.g. motor brake and external brake, can be tested with different torque values.

Application

The SBT diagnostic function is suitable for implementing a safe brake in combination with the SBC function.

Customer benefits

The function detects faults or wear in the brake mechanics. Automatically testing the effectiveness of brakes reduces maintenance costs and increases the safety and availability of the machine or plant.

Safely-Limited Speed (SLS)

The SLS function monitors the drive to ensure that it does not exceed a preset speed or velocity limit.

Effect

The SLS function monitors the drive against a parameterized speed limit. Four different limit values can be selected. As in the case of SOS, the speed setpoint is not influenced independently. After SLS has been selected, the higher-level control must bring the drive down below the selected speed limit within a parameterizable time. If the speed limit is exceeded, a customizable drive-integrated fault reaction occurs.

The SLS limit stage 1 can be multiplied by a factor that is transferred in 16-bit resolution via PROFIsafe. This allows an almost unlimited number of limits to be specified.

Application

The SLS function is used if people are in the danger zone of a machine and their safety can only be guaranteed by reduced speed. Typical application cases include those in which an operator must enter the danger zone of the machine for the purposes of maintenance or setting up, such as a winder in which the material is manually threaded by the operator. To prevent injury to the operator, the roller may only spin at a safely reduced speed. SLS is often also used as part of a two-stage safety concept. While a person is in a less critical zone, the SLS function is activated, and the drives are only stopped safely in a smaller area with higher potential risk. SLS can be used not only for operator protection, but also for machinery protection, e.g. if a maximum speed must not be exceeded.

Customer benefits

The SLS function can contribute to a significant reduction in downtime, or greatly simplify or even accelerate setup. The overall effect achieved is a higher availability of the machine. Moreover, external components such as speed monitors can be omitted.

Function

Safe Speed Monitor (SSM)

The SSM function warns when a drive is working below an adjustable speed limit. As long as it remains below the threshold, the function issues a safety-related signal.

Effect

If a speed value drops below a parameterized limit, a safety-related signal is generated. This can, for example, be processed in a safety control unit to respond to the event by programming, depending on the situation.

Application

With the SSM function, in the simplest case, a safety door can be unlocked if the speed drops below a non-critical level. Another typical example is that of a centrifuge that may be filled only when it is operating below a configured speed limit.

Customer benefits

Unlike SLS, there is no drive-integrated fault reaction when the speed limit is exceeded. The safe feedback can be evaluated in a safety control unit, allowing the user to respond appropriately to the situation.

Safe Direction (SDI)

The SDI function ensures that the drive can only move in the selected direction.

Effect

Deviation from the direction of motion currently being monitored is detected reliably and the configured drive-integrated fault reaction is initiated. It is possible to select which direction of rotation is to be monitored.

Application

The SDI function is used when the drive may only move in one direction. A typical application is to permit the operator access to a danger zone, as long as the machine is rotating in the safe direction, i.e. away from the operator. In this state, the operator can feed material into the work zone or remove material from the work zone without danger.

Customer benefits

The function saves the use of external components such as speed monitors and the associated wiring. The release of a danger zone while the machine is moving away from the operator increases productivity. Without the SDI function, the machine must be safely stopped during material loading and removal.

Safety Integrated

Safety Integrated

Function

Safely-Limited Acceleration (SLA)

The SLA function monitors that the drive does not exceed a pre-set acceleration limit value.

Effect

The SLA function monitors that the motor does not violate the defined acceleration limit (e.g. in setup mode). SLA detects early on whether the speed is increasing at an inadmissible rate (the drive accelerates uncontrollably) and initiates the stop response.

Application

The SLA function is used, e.g., for SIMATIC Safe Kinematics.

Customer benefits

The function monitors for maximum permissible acceleration in setup mode and safe monitoring of the tool center point with different kinematics.

Safely-Limited Position (SLP)

The SLP function monitors the axis to ensure that it remains within the permissible traversing range.

Effect

When SLP is activated, the traversing range limited by the configured software limit switches is safely monitored. If the permitted traversing range is exited, a configurable fault reaction occurs. It is possible to toggle between two traversing ranges, even when the machine is in operation.

Application

SLP is used for applications in which machine operators have to enter a protection area, e.g. for feeding in and removing material. Safe monitoring of the axis position ensures that the axis cannot move into the protection area released for operators and so place them in danger, for example, on storage and retrieval machines, gantry cranes or machining centers.

Customer benefits

SLP can be used for highly-effective protection area monitoring. The function does away with the use of external components such as hardware limit switches and the associated wiring expense. Due to the short reaction time following a limit overshoot, safety clearances can be reduced.

Function

Safe Position (SP)

The SP function transfers the actual position values determined safely in the drive over safe PROFIsafe communication to a safety control.

Effect

In contrast to the SLP function that monitors the current actual position value against a limit and, in the case of an overshoot, activates a drive-integrated fault reaction, SP transfers the current actual position values to the safety control. Position monitoring is implemented in the safety program of the control. Extended PROFIsafe telegrams are available for transferring the position values. The position values can be transferred in 16-bit or 32-bit resolution, as required. A time stamp is also transferred with the position values.

Application

Tailor-made safety concepts can be created using the SP function. It is ideal for use on machines that require flexible safety functions. It is extremely versatile and can be used, for example, to implement safe, axis-specific range detection by means of safe cams. The SP function can also be used to implement multi-axis safety concepts, multi-dimensional protection areas and zone concepts.

Customer benefits

Position monitoring or speed monitoring is implemented in the safety program of the control, so the user has the flexibility for implementing tailor-made safety functions. The reaction to a limit overshoot must also be specified in the safety program. This means a higher initial programming outlay, but it does offer the opportunity for initiating different fault reactions depending on the situation.

Safe Cam (SCA)

The SCA function enables safety-related monitoring of the position.

Effect

The SCA function outputs a safe signal if the drive is within a specified position range. It facilitates the realization of safe axis-specific range detection. Up to 30 safe cams can be parameterized per axis.

Application

It is only permissible that a protective door is opened if a drive is in a certain position range. The drive may only be traversed with reduced speed when it is located in a certain position range.

Customer benefits

The function enables safety-related switchover of safety functions. With SCA, safe electronic cam controllers can be implemented without additional hardware. With SCA, work and protection zone delimitations are reliably detected.

Safety Integrated

Safety Integrated

Function

Basic Functions, Extended Functions, and Advanced Functions

With SINAMICS G converters, the safety functions are basically implemented without encoders.

With SINAMICS S drives, the safety functions are implemented with encoders – individual safety functions can also be operated without encoders.

The Safety Integrated Functions are grouped into Basic Functions, Extended Functions, and Advanced Functions.

The Basic Functions are included in the standard scope of supply.

The Extended Functions must be activated by a license ¹⁾. The Advanced Functions for SINAMICS S120 must also be activated via a license.

The electronic Certificate of License is the paperless delivery form for runtime options for SINAMICS and contains information about the type of rights of use purchased for the software.

- Basic Functions
 - Safe Torque Off (STO)
 - Safe Brake Control (SBC)
 - Safe Stop 1 (SS1)
- Extended Functions
 - Safe Stop 1 (SS1) with SBR or SAM
 - Safe Stop 2 with external stop (SS2E)
 - Safe Stop 2 (SS2) with SBR or SAM
 - Safe Operating Stop (SOS)
 - Safely-Limited Speed (SLS)
 - Safe Speed Monitor (SSM)
 - Safe Direction (SDI)
 - Safely-Limited Acceleration (SLA)
 - Safe Brake Test (SBT) diagnostic function
- Advanced Functions
 - Safely-Limited Position (SLP)
 - Safe Position (SP)
 - Safe Cam (SCA)

The license for Safety Integrated Advanced Functions also includes the license for Safety Integrated Extended Functions.

For the Extended Functions SS1 and SS2 with SAM, Safe Acceleration Monitor (SAM) is performed during braking to identify any faults already during the braking phase.

With SS1 and SS2, a Safe Brake Ramp (SBR) can be configured as an alternative. SS1 can also be parameterized with an external stop (SS1E).

The Basic Functions – activated via on-board terminals on the device, TM54F Terminal Module (only for SINAMICS S) or via PROFIsafe – do not require an encoder.

Activation of the Safety Integrated Functions

The safety functions for SINAMICS drives can be activated via terminals, e.g. for use of a conventional safety circuit.

For standalone safety solutions for small to medium-sized applications, it is frequently sufficient that the various sensing components are directly hardwired to the drive.

For integrated safety solutions, the safety-relevant sequences are generally processed and coordinated in the fail-safe SIMATIC controller. Here, the system components communicate via the PROFINET or PROFIBUS fieldbus. The safety functions are controlled via the safe PROFIsafe communication protocol.

SINAMICS drives can be easily integrated into the plant or system topology.

PROFIsafe

SINAMICS drives support the PROFIsafe profile based on PROFINET as well as on PROFIBUS.

PROFIsafe is an open communications standard that supports standard and safety-related communication over the same communication path (wired or wireless). A second, separate bus system is therefore not necessary. The telegrams that are sent are continually monitored to ensure safety-relevant communication.

Possible errors such as telegrams that have been lost, repeated or received in the incorrect sequence are avoided. This is done by consecutively numbering the telegrams in a safety-relevant fashion, monitoring their reception within a defined time and transferring an ID for transmitter and receiver of a telegram. A CRC (cyclic redundancy check) data security mechanism is also used.

The operating principle of Safety Integrated

Two independent switch-off signal paths

Two independent switch-off signal paths are available. All switch-off signal paths are low active. This ensures that the system is always switched to a safe state if a component fails or in the event of cable breakage. If a fault is discovered in the switch-off signal paths, the STO or SS1 function (depending on parameter settings) is activated and a system restart inhibited.

Two-channel monitoring structure

All the main hardware and software functions for Safety Integrated are implemented in two independent monitoring channels (e.g. switch-off signal paths, data management, data comparison). A cyclic crosswise comparison of the safety-relevant data in the two monitoring channels is carried out.

The monitoring functions in each monitoring channel work on the principle that a defined state must prevail before each action is carried out and a specific acknowledgement must be made after each action. If these expectations of a monitoring channel are not fulfilled, the drive coasts to a standstill (two channel) and an appropriate message is output.

Forced dormant error detection using test stop

The functions and switch-off signal paths must be tested at least once within a defined time in order to meet requirements as per ISO 13849-1 and IEC 61508 in terms of timely fault detection. This must be implemented either in cyclic manual mode or the test stop must be automatically initiated as part of the process. The test stop cycle is monitored, and after a specific time has been exceeded, an alarm is output. A test stop does not require a POWER ON. The acknowledgment is set by canceling the test stop request.

Examples of when forced dormant error detection must be performed:

- When the drives are at a standstill after the system has been switched on
- Before the protective door is opened
- At defined intervals (e.g. every 8 hours)
- In automatic mode, time and event-driven

¹⁾ Only applies to SINAMICS G Control Unit CU250S-2 and SINAMICS S. Available for SINAMICS G via hardware versions "-F".

Function

Safe speed/position sensing without/with encoder

Safe actual value sensing without encoder

A drive monitor with encoder is necessary for operation of a series of safety functions.

For applications with encoderless mode or with encoders that have no safety capability, the safety functions can also be implemented without encoder. It is not possible to use all safety functions in this case.

In operation without encoder, the actual speed values are calculated from the measured electrical actual values. This means that speed monitoring is also possible during operation without an encoder.

Safe actual value sensing with encoder

Incremental encoders or absolute encoders can be used for safe sensing of the position values on a drive.

Safe actual value sensing relies on redundant evaluation of the incremental tracks A/B that supply sin/cos signals of $1 V_{pp}$. Only encoders of the type whose A/B track signals are created and processed using purely analog techniques can be used.

HTL/TTL incremental encoders may also be used. In this case, safe actual value sensing is achieved by using two independent encoders. The minimum possible speed resolution must also be taken into account.

The encoder signals are input via Sensor Modules.

As an alternative, motors with an integrated DRIVE-CLiQ interface can be used. The speed or position actual values are generated directly in the motor as safe values and are transferred to the Control Unit over safe communication via DRIVE-CLiQ.

Certified built-on rotary encoders with DRIVE-CLiQ interface may also be used (see <https://support.industry.siemens.com/cs/document/65402168>).

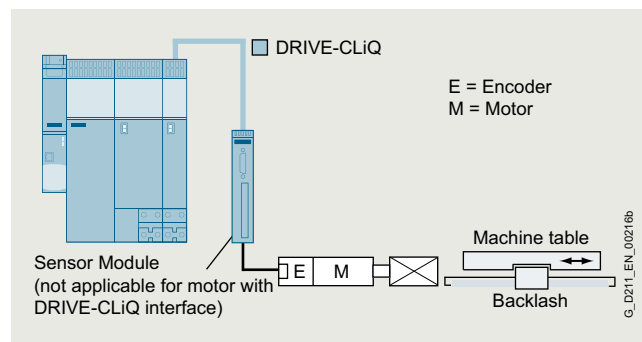

The encoder must be mechanically attached in such a manner that the encoder shaft is unable to unplug or slide off. For notes on this, see IEC 61800-5-2: 2016, Table D.16.

A list of Siemens motors that fulfill the electrical and mechanical requirements is available at: <https://support.industry.siemens.com/cs/document/33512621>

The following can be used for safe speed/position sensing:

- Single-encoder systems or
- Dual-encoder systems

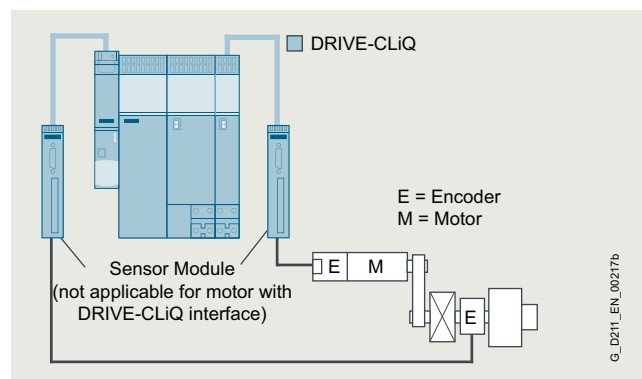

Single-encoder system

Example: Single-encoder system

In a single-encoder system, the motor encoder is used exclusively for safe actual value sensing.

Dual-encoder system

Example: Dual-encoder system

In the case of the dual-encoder system, the safe actual values for a drive are provided by two separate encoders. The actual values are transferred to the Control Unit over DRIVE-CLiQ. When motors without a DRIVE-CLiQ connection are used, a Sensor Module must be provided.

HTL/TTL incremental encoders can be used as an alternative with a dual-encoder system. Either two HTL/TTL encoders, one dual-HTL/TTL encoder or one HTL/TTL encoder and one sin/cos encoder can be used.

Safety Integrated

Safety Integrated

Function

The safety functions are listed below with criteria for actual value sensing:

	Functions	Abbreviation	With encoder	Without encoder	Description
Basic Functions	Safe Torque Off	STO	Yes	Yes	Safe Torque Off
	Safe Stop 1	SS1	Yes	Yes ¹⁾	Safe stopping process in accordance with stop category 1
	Safe Brake Control	SBC	Yes	Yes	Safe Brake Control
Extended Functions	Safe Torque Off	STO	Yes	Yes	Safe Torque Off
	Safe Stop 1	SS1	Yes	Yes ¹⁾	Safe stopping process in accordance with stop category 1
	Safe Brake Control	SBC	Yes	Yes	Safe Brake Control
	Safe Operating Stop	SOS	Yes	No	Safe monitoring of the standstill position
	Safe Stop 2	SS2	Yes	No	Safe stopping process in accordance with stop category 2
	Safely-Limited Speed	SLS	Yes	Yes ¹⁾	Safe monitoring of the maximum speed
	Safe Speed Monitor	SSM	Yes	Yes ¹⁾	Safe monitoring of the minimum speed
	Safe Direction	SDI	Yes	Yes ¹⁾	Safe monitoring of the direction of motion
	Safely-Limited Acceleration	SLA	Yes	No	Safely-Limited Acceleration
	Safe Brake Test	SBT	Yes	No	Diagnostic function for safe testing of the required holding torque of a brake
Advanced Functions	Safely-Limited Position	SLP	Yes	No	Safely-Limited Position
	Safe Position	SP	Yes	Yes ²⁾	Safe transfer of position values
	Safe Cam	SCA	Yes	No	Safe cams

¹⁾ The use of this safety function without encoder is permitted with asynchronous (induction) motors, synchronous motors from the SIEMOSYN series, or with SIMOTICS reluctance motors.

²⁾ Only for the transmission of relative position values. An encoder is required to transmit absolute position values.

More information

The Safety Integrated Function Manual contains detailed information about the safety functions
<https://support.industry.siemens.com/cs/document/109781722>

Further manuals pertaining to Safety Integrated in drive systems can be found on the internet at
<https://support.industry.siemens.com/cs/ww/en/ps/13206/man>

1) With fail-safe Control Unit.

2) With Safety Extended license.

3) With Safety Advanced license.

4) Safety Advanced license for cabinet modules on request.

5) Safety Advanced license on request.

6) Information on the SIMATIC ET 200pro FC-2 frequency converter – depending on the SIMATIC ET 200pro station – is available at:
www.siemens.com/et200pro-fc

More information about Safety Integrated in SINAMICS can be found on the internet at
www.siemens.com/safety-drives

7) With external safety relay.

8) Safe Stop 1 time controlled (SS1-t) is also included in the Safety Integrated Basic functions.

9) The Extended Functions require a Safety license. The functions SS1, SLS, SDI and SSM are available with firmware V6.1. Further functions will be added in a subsequent version.

Safety Integrated

Safety Integrated for SINAMICS S120 built-in units

Overview

The Safety Integrated functions of SINAMICS S120 provide highly effective application-oriented protection for personnel and machinery. They are suitable for machines and systems that require flexible safety functions and support the setup of tailored safety concepts.

SINAMICS S120 offers Extended Functions (SS1 with SBR/SAM, SS1E, SS2 with SBR/SAM, SS2E, SOS, SLS, SDI, SSM, SLA, SBT) as well as Advanced Functions (SLP, SP, SCA) in addition to Basic Functions (STO, SS1, SBC).

The SP function and the SBT diagnostic function go beyond the functional scope according to IEC 61800-5-2.

The Safety Integrated functions are completely integrated into the drive system. They can be activated as follows:

- Via safety-related inputs on the CU310-2 Control Unit
- Via safety-related inputs on the TM54F Terminal Module
- Via PROFIBUS or PROFINET with PROFIsafe

The Safety Integrated functions are implemented electronically and therefore offer short response times in comparison to solutions with externally implemented monitoring functions.

As an alternative to controlling via terminals and/or PROFIsafe, there is also the option to parameterize several Safety Integrated functions without selection. In this mode, after parameterization and a POWER ON, these functions are permanently selected.

Example:

"SLS without selection" can be used, for example, to monitor the maximum velocity to prevent the drive from exceeding a mechanical speed limit. For this purpose, using the "without selection" function, an F-DI does not have to be used; an F-CPU is also not required.

Safe speed/position sensing

Incremental encoders or absolute encoders can be used for safe sensing of the position values on a drive. Safe actual value sensing relies on redundant evaluation of the incremental tracks A/B that supply sin/cos signals of $1 V_{pp}$. Only encoders of the type whose A/B track signals are created and processed using purely analog techniques can be used. The encoder signals can be input via the Sensor Modules.

HTL/TTL encoders can be used in a dual-encoder system to achieve safe actual value sensing. The minimum possible speed resolution must also be taken into account. The encoder signals are input via the SMC30 Sensor Module.

As an alternative, motors with an integrated DRIVE-CLiQ interface can be used. The speed or position actual values are generated directly in the motor as safe values and are transferred to the Control Unit over safe communication via DRIVE-CLiQ.

The encoder must be mechanically attached in such a manner that the encoder shaft is unable to unplug or slide off. For notes on this, see IEC 61800-5-2: 2017, Table D.8..

A list of Siemens motors that fulfill the electrical and mechanical requirements is available at:

<https://support.industry.siemens.com/cs/document/33512621>

The following can be used for safe speed/position sensing:

- Single-encoder systems or
- Dual-encoder systems

Single-encoder systems

In a single-encoder system, the motor encoder is used exclusively for safe actual value sensing.

Dual-encoder systems

The safe actual values for a drive are provided by two separate encoders. The actual values are transferred to the Control Unit over DRIVE-CLiQ. When motors without a DRIVE-CLiQ connection are used, a Sensor Module must be provided.

Safe actual value sensing without encoder

The Extended Functions Safe Stop 1 (SS1) with SAM/SBR, Safely-Limited Speed (SLS), Safe Speed Monitor (SSM) and Safe Direction (SDI) are also available for use without encoders (in combination with asynchronous motors, synchronous motors of the SIEMOSYN series or with SIMOTICS reluctance motors). An encoder that is used for the purposes of motor control has no significance for the safety function here.

[The Safety Integrated Function Manual contains additional information about the encoderless safety functions.](#)

<https://support.industry.siemens.com/cs/document/109781722>

The Extended Functions Safe Stop 2 (SS2), Safe Operating Stop (SOS) and Safe Brake Test (SBT) and the Advanced Functions Safely-Limited Position (SLP), Safe Position (SP) always require a safe encoder system.

Licensing

No license is required for the Basic Functions.

The Extended Functions and Advanced Functions each require a license. The Extended Functions are included in the Advanced Functions license. It is of no consequence here which Safety Integrated functions are used and how many. The license can be ordered as an option with the memory card. Alternatively, a single-user license can also be purchased.

Overview

Safe Brake Control

The Safe Brake Control is integrated in power units in booksize format.

For the Safe Brake Control (SBC) function, a Safe Brake Relay is required for power units in blocksize format, and a Safe Brake Adapter for power units in chassis format.

The Safe Brake Relay/Safe Brake Adapter and the brake control that is integrated in the booksize/chassis format allows safe control of electro-mechanical motor brakes.

The Safe Brake Relay controls a 24 V DC brake; the Safe Brake Adapter controls a 230 V AC brake. When the STO function is active, the Safe Brake Relay/Safe Brake Adapter safely closes the connected brake. The SBC function monitors the control of the brake, however, not its mechanical functioning.

The converter controls the connected brake using the motor holding brake function.

External surge suppressors are not required. The cable harnesses for connection to the Power Module are supplied as standard with the Safe Brake Relay. A connecting cable is required to connect the Safe Brake Adapter.

With the Safe Brake Relay/Safe Brake Adapter functions, the brake is controlled in accordance with IEC 61508 SIL 2 and ISO 13849-1 PL d and Category 3.

Energy efficiency

Energy efficiency

Overview

G_D011_EN_00555

4

Success factor Energy Efficiency

Siemens helps you to optimize your energy demand, reduce your energy costs and increase your competitive advantage

Industry is facing enormous challenges: Production processes need to be highly productive, energy-efficient, and resource-saving. Siemens is offering an energy efficiency concept that continually and systematically reduces the power consumption of machines and equipment and thereby boosts the competitive advantage of industrial producers. When implementing energy-efficient solutions, Siemens not only assesses the production process as a whole, but also evaluates each individual production step.

1 Produkt Design

Improve your confidence in planning outcomes! It is important to know the costs associated with the operation of a production machine so that these can be taken into account in the machine design. For example, the SinaSave software application can help you to calculate how soon you will recoup your investment if you purchase an energy-efficient drive. The Mechatronic Support simulation package will also provide you with the means to test and optimize your machine concept, Helping you to save time, energy and operating expenses. See also the SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool).

SinaSave: www.siemens.com/sinasave

SIZER for Siemens Drives (integrated in the TIA Selection Tool): www.siemens.com/sizer

2 Production Planning

Make your plant more profitable! It is possible to carry out an on-screen simulation of individual machines and even the entire production process. By doing this, you can optimize the efficiency and productivity of production processes. For example, you can use the digital models and analysis functions provided by the Plant Simulation tool in order to optimize the motion sequences of your machines, prevent load peak overlaps, recover energy and optimize speeds.

Plant Simulation: www.siemens.com/tecnomatix

3 Production Engineering

Optimize the workflow! The SIMATIC Energy Manager PRO management tool helps you to achieve efficient control of energy and costs. But this requires perfectly coordinated communication and operation between hardware and software. Using the TIA Portal engineering framework, for example, it is easy to set up and optimize every single engineering process. You can then see at a glance the areas in your plant that can be made more productive and environmentally friendly. See also the STARTER commissioning tool and the SINAMICS Startdrive commissioning tool.

SIMATIC Energy Manager PRO:

www.siemens.com/energymanagerpro

TIA Portal: www.siemens.com/tia-portal

STARTER: www.siemens.com/starter

SINAMICS Startdrive: www.siemens.com/startdrive

4 Production Execution

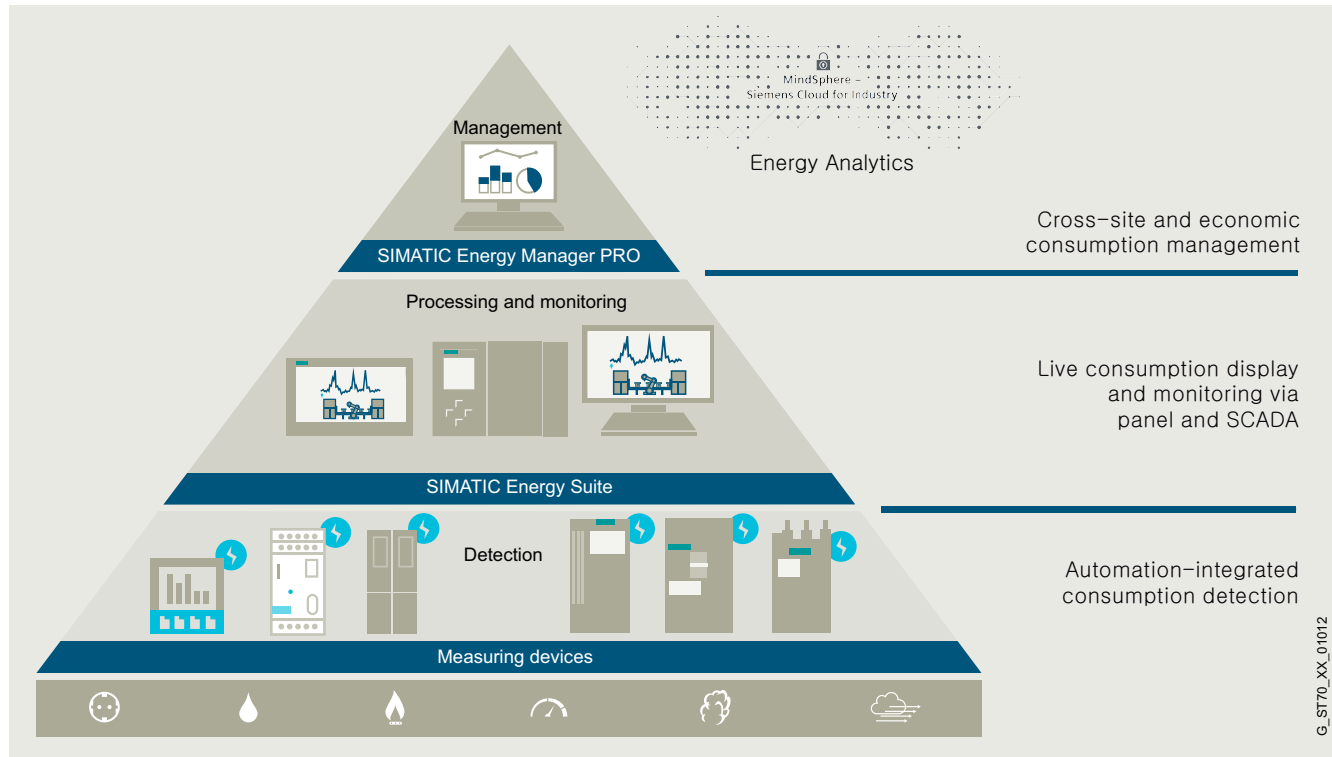

Use innovative drive technology to reduce your energy consumption! The energy-efficient components and systems developed by Siemens can cut the energy consumption of a plant. Important components in an energy-efficient plant are, for example, frequency converters with regenerative feedback functions for applications with variable speeds or soft starters for fixed-speed drives. With its PROFlenergy system, Siemens is also offering solutions that permit centralized shutdown of loads or entire production units during production breaks – a vendor- and device-neutral interface for flexible use over short or long production breaks.

5 Services

Improve your productivity and efficiency while reducing total costs! With its Energy & Environmental Services, Siemens is offering a tailored consultancy that will provide you with the necessary support in designing and implementing systematic energy and environmental management solutions. It will give you the satisfaction of achieving maximum energy efficiency throughout your company.

More information

Further information about energy efficiency including references from industrial production can be found at www.siemens.com/energy-efficiency
www.siemens.com/energysaving

A high energy consumption and automated production are typical for many industries.

If you want to keep your energy costs under control in the long term and you are already focusing on the digital future, you will equip your plant with integrated energy measuring technology, thus anchoring your energy management in the automation of your production processes – which is where most energy is consumed. SIMATIC Energy Suite as an integrated option for the TIA Portal efficiently links energy management with automation, thus creating energy transparency in production. The considerably simplified configuration of energy measuring components from the product families²⁾ SIMATIC, SENTRON, SINAMICS, SIRIUS and SIMOCODE significantly reduces the configuration costs. Thanks to the end-to-end connection to SIMATIC Energy Manager PRO¹⁾ or cloud-based Service Energy Analytics, you can seamlessly expand the recorded energy data to create a cross-site energy management system.

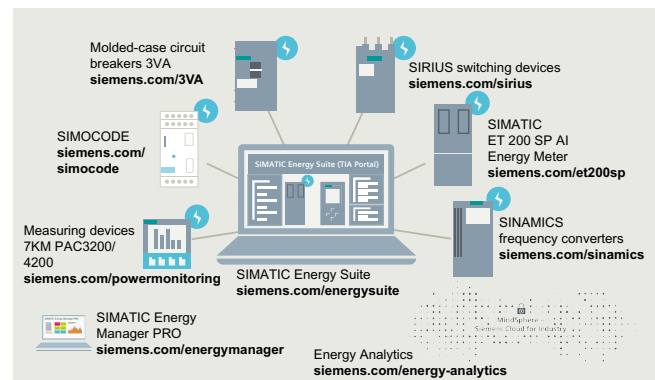

This additionally enables companies to satisfy all the required economic and energy management aspects – from the purchasing of energy and planning all the way to energy controlling.

The advantages at a glance:

- Automatic generation of energy management data
- Integration into TIA Portal and into automation
- Simple configuration

Highlights

- Simple and intuitive configuration instead of programming
- Automatic generation of the PLC energy program
- Convenient integration of measuring components from the Siemens portfolio and from the portfolio of other vendors
- Integrated into the TIA Portal and automation
- Archiving on WinCC Professional or PLC
- Seamless connection to Energy Manager PRO and Energy Analytics

¹⁾ SIMATIC Energy Manager PRO is the innovative successor to SIMATIC B.Data

²⁾ Products of the SIMATIC, SENTRON, SINAMICS, SIRIUS and SIMOCODE product families. You can find details on the currently supported devices here: www.siemens.com/energysuite-hardware

Energy efficiency

Energy-efficient drives

Overview

Energy-efficient SINAMICS drives save energy in an intelligent way

Exploit energy-saving potential and optimize energy consumption: You can - with intelligent SINAMICS drives. Depending on the application in question, energy consumption can be controlled by motor speed adjustment to suit the individual process and achieve the greatest possible energy savings. The energy consumption of drives for turbo machines can be cut by as much as 60 %. Regenerative feedback is also an option for many applications. Our portfolio of frequency converters is the most comprehensive and standardized range on the market and the first choice for anyone seeking an energy-efficient drive – at low-voltage or medium-voltage level.

Energy-efficient drives with intelligent functions

Depending on the application and load profile, the intelligent energy-saving functions of SINAMICS drives can cut energy consumption.

PROFenergy

Provides energy-related status data for the system components to create transparency for the energy management; energy savings by selective shut-down of plants or plant sections.

ECO-Modus

In ECO mode, the operating point of the motor in the partial-load range is automatically adjusted and optimized. This reduces motor losses, for example, in machines that do not need a high torque over the entire operating range.

Hibernation mode

Variable-speed drives that are not required to operate continuously are switched to standby or "Hibernation mode". The drive is restarted again as soon as it is needed.

Bypass mode

In bypass mode it is possible to "bypass" the converter electrically as soon as the motor is frequently operating close to its rated speed. This solution helps reduce converter losses and so increase overall efficiency.

Cascading

In pump, fan and compressor applications involving high outputs, the entire power demand is distributed among several motors. Phased connection and disconnection by means of partially or fully controlled cascades in combination with converters make a drive system more energy-efficient.

Energy balancing

Through the use of converters with coupled drives, energy is exchanged through the common DC link. Through the direct energy exchange from one converter to the next, it is possible to minimize power losses in the system.

Reactive power compensation

The use of SINAMICS converters with Active Line Modules reduces the capacitive and/or inductive reactive power in the machine. It is then possible to dispense with costly reactive power compensation systems.

Kinetic energy buffering

With dynamic reversing operations in single-axis and multi-axis systems, the kinetic energy available in the system is reused. A motor connected to the common DC link is used to buffer kinetic energy.

Electrical energy buffering

With dynamic reversing operations in single-axis and multi-axis systems, the kinetic energy available in the system is reused. A capacitor module connected to the common DC link is used to buffer electrical energy.

Optimized pulse patterns

Thanks to optimized clock frequency and pulse pattern, SINAMICS G and SINAMICS S are perfectly suited to SIMOTICS motors and SIMOGEAR geared motors. The benefits: Optimization of performance and system efficiency, reduced system losses as well as lower temperature and noise levels.

Energy usage counter/Energy saving counter

Actual energy usage can be displayed during operation. Furthermore, an energy saving counter can be installed to indicate the cumulative energy savings during machine operation as compared to a fixed-speed application.

Regenerative feedback

In conventional drive systems, the energy produced during braking is converted to heat using braking resistors. SINAMICS G and SINAMICSS converters with regenerative feedback capability need no braking resistor, and supply the resulting braking energy back into the line.

DC link coupling with SINAMICS V20

Applications with two SINAMICS V20 converters with the same power rating can share a common DC link in order to reuse regenerated energy.

Overview

Step by step to more efficiency

One of the core objectives of the European Union is a sustainable power industry. In industrial plants today, around 70 % of the power demand is from electrically driven systems. This high percentage contains huge potential for saving energy in electrical drives. For that reason, the European Union introduced minimum requirements for the energy efficiency of electric motors in the form of a statutory motor regulation as early as 2011.

These activities are extended by the 2019/1781 EU regulation dealing with stricter requirements for DOL (Direct On Line) motors and defining efficiency limits for frequency converters. The regulation provides a legal basis for technical content regarding the efficiency of specific products and services. Standardization, however, has played a leading role in determining the field and the available market technology.

Energy efficiency improvement is supported through a systematic selection of the most efficient converter and drive system technology via the IEC 61800-9 series of standards. Part 1 specifies the methodology to determine the energy efficiency index of an application based on the extended product approach (EPA) and semi analytical models (SAMs), while Part 2 provides indicators for assessing the energy efficiency performance and the classification of converters and drive systems. To take account of the different use cases, consideration of eight application-relevant operating points has been introduced as mandatory for the first time. Determination of loss values at these eight points and definition of efficiency classes are laid down by the standard in a uniform way. This enables data relevant to operation, such as application-specific load profiles, to now be taken into account more easily in the energy efficiency analysis.

The standard is especially important for variable-speed drives of the following types:

- for AC/AC converters without energy recovery functionality
- for motors with integrated converters
- for supply voltages of 100 V to 1000 V
- for power ratings of 0.12 kW to 1000 kW

To cover all applications of driven machines, the IEC 61800-9-2 standard defines operating points in full-load and partial-load operation, at which the losses of the motor and drive systems have to be determined. Based on the loss data at the operating points in partial-load operation, variable-speed drives can be explicitly considered in more detail. This makes their advantages especially clear.

Centrifugal pumps, fans

Hoisting gear, extruders, conveyor belts

Winders, coilers

Duty cycles for different driven machines

Moreover, frequency converters and motor systems are classified in efficiency classes, which permit an initial rough estimate of the potential saving. Definition of reference systems is a key aspect of this because they provide standard reference values. The positioning of these reference systems defines the efficiency class. The relative distance from the reference system can be used as an absolute measure of the efficiency at the operating point in question.

Energy efficiency

Energy efficiency classes in accordance with IEC 61800-9-2

Overview

Advantages of the detailed loss consideration of IEC 61800-9-2 over the previous consideration of efficiencies and maximum loss values

For motors, the efficiency consideration was previously only defined for operation without a converter at 50/60 Hz. It provides a good way of comparing the energy efficiency of motors from different manufacturers for this use case.

The more detailed loss analysis of IEC 61800-9-2, on the other hand, is aimed at speed-controlled operation and therefore now also includes motors especially designed for converter operation in the energy analysis. These were previously not covered by the applicable standards.

Moreover, a loss analysis over the entire setting and load range of the motor is possible. This is done in accordance with the standard IEC 61800-9-2 with typical values.

For holistic consideration, it is essential to include all the relevant components of a drive system. The IEC 61800-9-2 standard defines this in detail. The standardized expression of power loss data as a percentage makes comparison considerably easier and more transparent.

The method also makes it possible to consider a motor that produces a holding torque at speed zero, for example. In this case, the efficiency is zero, but a power loss from current producing magnetization and holding torque does occur. In summary, the key advantage of standard IEC 61800-9-2 is the ability to perform the energy analysis of an electrical drive system based on standardized load profiles in all operating ranges due to uniform general conditions. This provides the user with complete transparency irrespective of the manufacturer.

Establishing efficiency classes of frequency converters (Complete Drive Modules CDM)

To avoid overmodulation and to ensure comparability between makes, which cannot be achieved otherwise, the efficiency classes of CDMs refer to the 90/100 operating point (90 % motor stator frequency, 100 % torque current).

Standard IEC 61800-9-2 defines the relative losses of a CDM in efficiency classes IE0 to IE2. With reference to the value of a CDM of efficiency class IE1 (reference converter), a CDM of efficiency class IE2 has 25 % lower losses and a CDM of efficiency class IE0 has 25 % higher losses.

The publication of the 2019/1781 EU regulation has made mandatory the fulfillment of the ecodesign requirements for the declaration of product conformity.

AC/AC converters belonging to the aforementioned categories (specific voltage and power level without regenerative capability) have to fulfill efficiency class IE2 in order to be approved for installation/utilization within EU.

Operating points for CDMs

Complete Drive Module (CDM) – determining the efficiency class

Establishing the efficiency classes of drive systems (Power Drive Systems PDS)

What is possible for the individual systems, of course, also applies to the entire electrical PDS (frequency converter plus motor). Detailed comparisons are now possible at this level, too. The reference values for the reference system provide clear indications of the energy performance of the PDS.

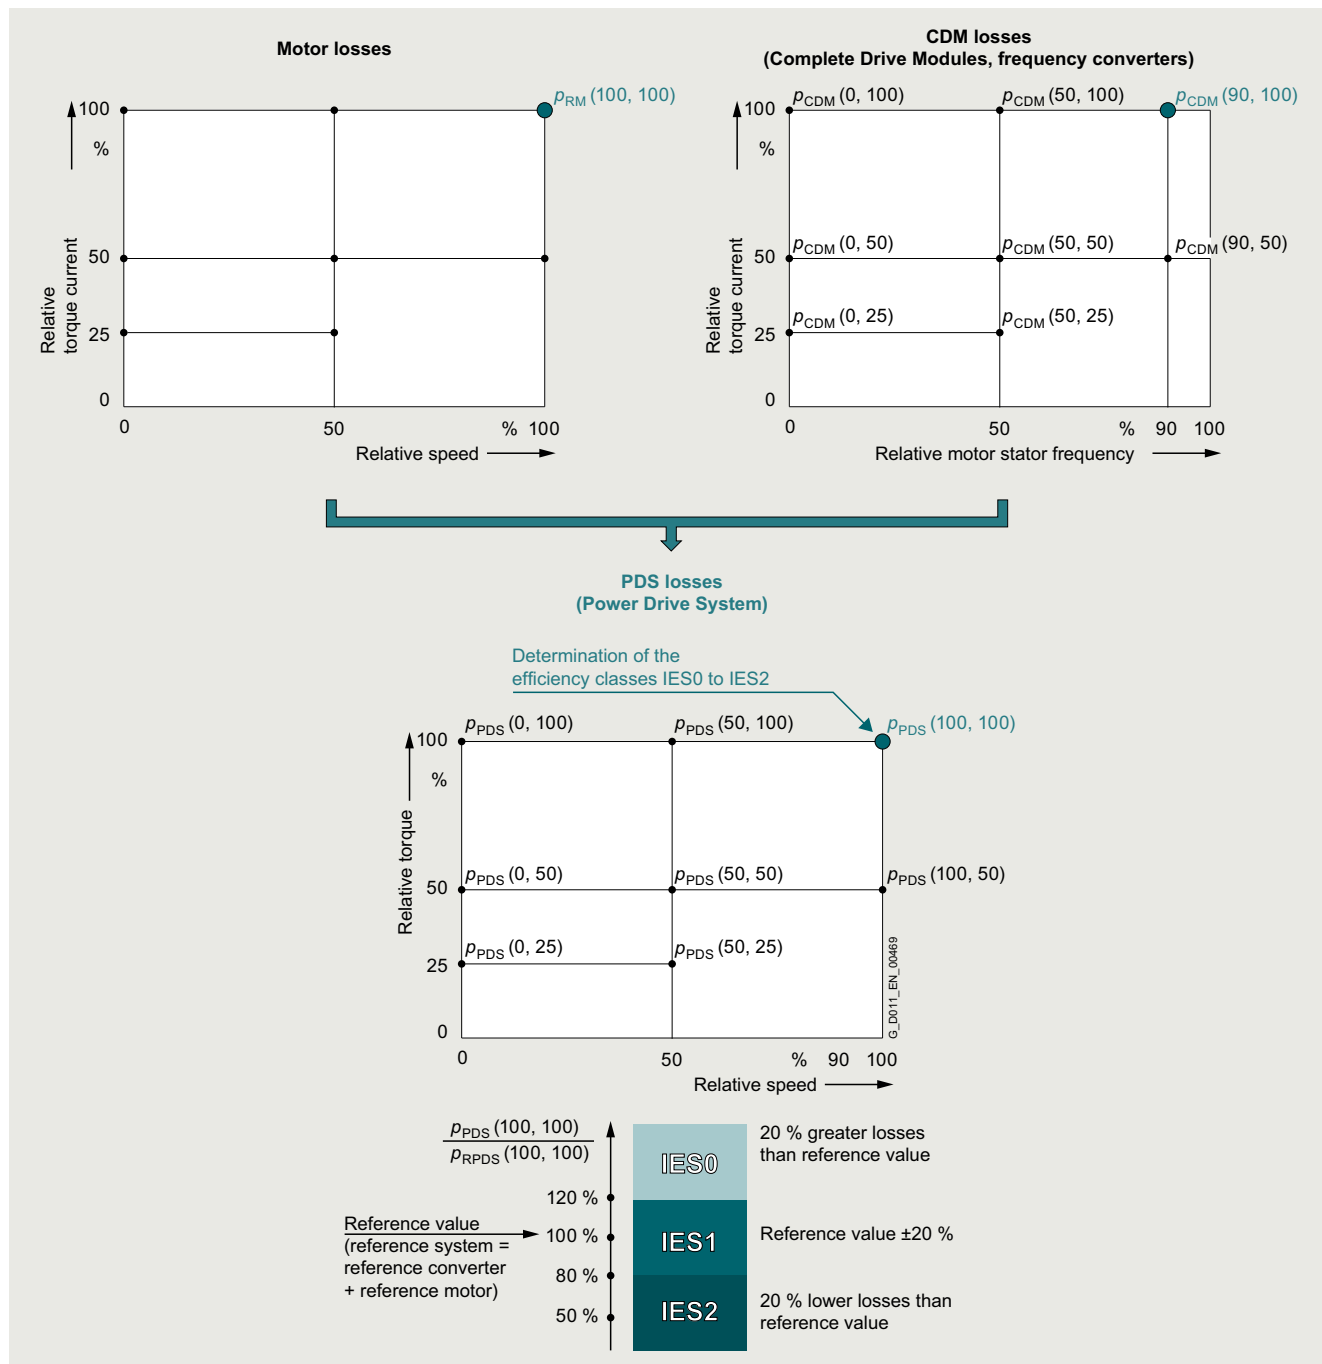

Because targeted matching of the motor and CDM provides additional potential for optimization in electrical drive systems, it is especially important for the user to consider the entire drive system.

For the efficiency class of a PDS, too, a specific load point is defined. In this case, the reference point used is the 100/100 operating point (100 % motor stator frequency, 100 % torque).

Standard IEC 61800-9-2 defines the relative losses of a PDS in efficiency classes IES0 to IES2. With reference to the value of a PDS of efficiency class IES1 (reference drive), a PDS of efficiency class IES2 has 20 % lower losses and a PDS of efficiency class IES0 has 20 % higher losses.

Communication

Communication

Overview

Communication overview

Digital bus systems are commonly used in industrial automation today. These handle communication between the control level, the machine control, the sensors and actuators. The SINAMICS product family offers integrated communication interfaces in all product groups – which can be used to connect the most important fieldbus systems in the simplest possible way.

The properties and special application areas of the various bus systems for SINAMICS converters incl. SIMATIC ET 200pro FC-2 frequency converters are briefly described in the following.

Protocol	Low voltage									
	Standard performance frequency converters						Distributed frequency converters

Communication

PROFINET

Overview

PROFINET – the Ethernet standard for automation

PROFINET is the world's leading Industrial Ethernet standard for automation with more than 40 million nodes installed worldwide.

PROFINET makes companies more successful, because it speeds up processes and raises both productivity and plant availability.

Your advantages at a glance

Flexibility

Tailor-made plant concepts

- ▶ Industrial Wireless LAN
- ▶ Safety
- ▶ Flexible topologies
- ▶ Open standard
- ▶ Web tools
- ▶ Expandability

Efficiency

Optimal use of resources

- ▶ One cable for everything
- ▶ Device/network diagnostics
- ▶ Energy efficiency
- ▶ Simple wiring
- ▶ Fast device replacement
- ▶ Ruggedness/stability

Performance

Increased productivity

- ▶ Speed
- ▶ High precision
- ▶ Large quantity structures
- ▶ High transmission rate
- ▶ Redundancy
- ▶ Fast start-up

G_IK10_XX_10304

Overview

Flexibility

Short response times and optimized processes are the basic requirements for competitiveness in global markets because the product lifecycles are becoming shorter and shorter.

PROFINET ensures maximum flexibility in plant structures and production processes, and it enables you to implement innovative machine and plant concepts. For example, mobile devices can also be integrated at locations that are difficult to access.

Flexible topologies

In addition to the linear structure characterized by the established fieldbuses, PROFINET also enables the use of star, tree and ring structures. This is made possible by switching technology via active network components, such as Industrial Ethernet switches and media converters, or by integrating switch functionality into the field devices. This results in increased flexibility in the planning of machines and plants, as well as savings in cabling.

The PROFINET network can be installed without any specialist knowledge at all and meets all requirements that are relevant to the industrial environment. The "PROFINET Installations Guidelines" assist manufacturers and users with network planning, installation and commissioning. Symmetrical copper cables or RFI-resistant fiber-optic cables are used, depending on the application. Devices from different manufacturers are easily connected via standardized and rugged plug-in connectors (up to IP65/IP67 degree of protection).

By integrating switch functionality into the devices, linear topologies can be created that are directly oriented toward an existing machine or plant structure. This reduces cabling overhead and cuts down on components such as external switches.

IWLAN

PROFINET also supports wireless communication with Industrial Wireless LAN, thus opening up new fields of application. For example, technologies subject to wear, such as trailing cables, can be replaced and automated guided vehicle systems and mobile operator panels can be used.

Safety

The PROFIsafe safety profile, which has been tried and tested with PROFIBUS and which permits the transmission of standard and safety-related data on a single bus cable, can also be used with PROFINET. No special network components are necessary for fail-safe communication, which means that standard switches and standard network transitions can continue to be used without any restrictions. In addition, fail-safe communication is equally possible via Industrial Wireless LAN (IWLAN).

Open standard

PROFINET, the open multi-vendor standard (IEC 61158/IEC 61784), is supported by PROFIBUS and PROFINET International (PI). It stands for maximum transparency, open IT communication, network security and simultaneous real-time communication.

Thanks to its openness, PROFINET provides the basis for a standardized automation network in the plant, to which all other machines and devices can be connected. Even the integration of existing plant components, for example using PROFIBUS, presents no problems due to the use of network transitions.

Use of web tools

Thanks to the unrestricted support of TCP/IP, PROFINET permits the use of standard web services such as web servers. Irrespective of the tool used, information from the automation level can be accessed from virtually any location using a commercially available internet browser. This considerably simplifies commissioning and diagnostics. Users can then decide for themselves how much openness to the IT world they want to allow for their machine or plant. This means that PROFINET can be used simply as an isolated plant network or connected via appropriate Security Modules, such as the SCALANCE S modules, to the office network or the internet. In this way, new remote maintenance concepts or the high-speed exchange of production data become possible.

Expandability

On the one hand, PROFINET facilitates the integration of existing systems and networks without any great effort. In this way, PROFINET safeguards investments in existing plant components that communicate via PROFIBUS and other fieldbuses such as AS-Interface. On the other hand, additional PROFINET nodes can be added at any time. By using additional network components, network infrastructures can be expanded using cabling or wireless methods – even while the plant is operating.

Communication

PROFINET

Overview

Efficiency

Greater global competition means that companies must use their resources economically and efficiently. This applies in particular to production. This is where PROFINET ensures greater efficiency. Simple engineering guarantees fast commissioning, while reliable devices ensure a high level of plant availability. Comprehensive diagnostic and maintenance concepts help to reduce plant downtimes and keep maintenance costs to a minimum.

One cable for everything

PROFINET permits simultaneous fieldbus communication with isochronous mode and standard IT communication (TCP/IP) on one cable. This real-time communication for the transmission of user/process data and diagnostic data takes place on a single cable. Specific profile communication (PROFIsafe, PROFIdrive and PROFlenergy) can be integrated without any additional cabling. This solution offers a wide scope of functions at a low level of complexity.

Device and network diagnostics

By retaining the tried and tested PROFIBUS device model, the same diagnostics information is available with PROFINET. In addition, module-specific and channel-specific data can also be read out from the devices during device diagnostics, enabling faults to be located quickly and easily. Apart from the availability of device information, the reliability of network operation has top priority in the network management.

In existing networks the Simple Network Management Protocol (SNMP) has established itself as the de facto standard for the maintenance and monitoring of the network components and their functions. PROFINET uses this standard and gives users the opportunity to maintain their networks with tools that are familiar to them, such as the SINEMA Server network management software.

For easier maintenance of PROFINET devices, both on-site and remotely via a secure VPN connection, application-specific websites can be set up on the web server of the field devices using the familiar HTML standard.

Energy efficiency

Moving toward the green factory: PROFlenergy is a profile that provides functions and mechanisms for PROFINET field devices that support energy-efficient production.

The profile, which is defined by the PNO and is independent of any manufacturers or devices, enables energy demand and costs to be significantly reduced: Using PROFlenergy, any specific loads that are not currently being used can be switched off. This achieves a noticeable reduction in energy costs during breaks in production. PROFlenergy permits the simple, automated activation and deactivation of technologically related plant components. It is coordinated centrally by means of a higher-level controller and is networked via PROFINET. This ensures that as much energy as possible is saved during long breaks. Temporarily switching off plant components contributes to the even distribution and most efficient use of energy.

The use of PROFlenergy is made easy for the machine builder by its integration into familiar series of products. In addition, PROFlenergy is defined in such a way that the necessary function blocks can easily be integrated into existing automation systems at a later stage.

Simple wiring

Particularly stringent demands are made on the installation of cables in the industrial environment. In addition, there is a requirement to set up industry-standard networks in the shortest possible time without any special knowledge.

With FastConnect, Siemens offers a high-speed installation system that meets all of these requirements. FastConnect is the standard-compliant, industry-standard cabling system consisting of cables, connectors and assembly tools for PROFINET networks. The time required for connecting terminals is minimized by the simple installation method using just a single tool, while installation errors are prevented by the practical color-coding. Both copper cables and glass fiber optic cables can be easily assembled on site in this way.

Fast device replacement

PROFINET devices are identified by means of a name assigned during configuration. When replacing a defective device, a new device can be recognized from its topology information by the IO controller and a new name can be assigned to it automatically. This means that no engineering tool is necessary for the replacement of equipment.

This mechanism can even be used for the initial commissioning of a complete system. This speeds up commissioning, particularly in the case of series machines.

Ruggedness

An automation network must be able to withstand most external sources of interference. The use of Switched Ethernet prevents faults in one section of the network from affecting the entire plant network. For areas that are particularly prone to radio frequency interference (RFI), PROFINET allows the use of fiber optic cables.

Performance

Productivity and product quality determine the level of success in the market. Precise motion control, dynamic drives, high-speed controllers and the deterministic synchronization of devices are therefore key factors in achieving superior production. They facilitate high production rates and optimum product quality at the same time.

Speed and precision

Fast motion control applications demand precise and deterministic exchange of data. This is implemented by means of drive controllers using isochronous real time (IRT).

With IRT and isochronous mode, PROFINET permits fast and deterministic communication. This synchronizes the various cycles of a system (input, network, CPU processing and output), even in the case of parallel TCP/IP traffic. The short cycle times of PROFINET make it possible to raise the productivity of machines and plants and to guarantee the product quality and high level of precision.

The standardized PROFIdrive profile permits vendor-independent communication between CPUs and drives.

Overview

Large quantity structures

The use of PROFINET makes it possible to overcome the existing restrictions regarding the scope of machines and systems that can be implemented. In one network, several different controllers can interact with their assigned field devices. The number of field devices per PROFINET network is virtually unlimited – the entire range of IP addresses is available.

High data rate

By using 100 Mbit/s in full duplex mode, PROFINET achieves a significantly higher data rate than previous fieldbuses. This means that other plant data can be transmitted over TCP/IP without any problems, in addition to the process data. PROFINET therefore meets the combined industrial demands for simultaneously transmitting high-speed IO data and large volumes of data for additional sections of the application. Even the transmission of large volumes of data, such as that from cameras, has no adverse effect on the speed and precision of the IO data transmission, thanks to PROFINET mechanisms.

Media redundancy

A higher plant availability can be achieved with a redundant installation (ring topology). The media redundancy can be implemented not only with the aid of external switches, but also by means of integrated PROFINET interfaces. Using the media redundancy protocol (MRPD), reconfiguration times of 200 ms can be achieved. If the communication is interrupted in just one part of the ring installation this means that a plant standstill is prevented and any necessary maintenance or repair work can be performed without any time pressure.

For motion control applications, PROFINET with IRT in ring topologies offers extended media redundancy for planned duplication (MRPD) which operates in a bumpless mode without any reconfiguration time. If communication is interrupted (e.g. a cable break) the process can continue operating without interruption.

Bumpless media redundancy illustrated by example of SINAMICS S120 with SIMOTION and SCALANCE X200IRT

Benefits

- PROFINET is the open Industrial Ethernet standard for automation
- PROFINET is based on Industrial Ethernet
- PROFINET uses TCP/IP and IT standards
- PROFINET is real-time Ethernet
- PROFINET enables seamless integration of fieldbus systems
- PROFINET supports fail-safe communication via PROFIsafe and also via IWLAN

Integration

PROFINET – Functions of the SINAMICS S120

SINAMICS S120	CU320-2 PN	CU320-2 DP (CBE20)	CU310-2 PN
PROFINET with IRT (isochronous mode)	✓	✓	✓
Number of ports	2	4	2
Min. send clock in ms	0.25	0.5	0.25
Shared Device	✓	✓	✓
Bumpless media redundancy (MRPD)	✓	✓	✓
Step-change media redundancy (MRP)	✓	✓	✓
System redundancy S2	✓	–	✓
PROFIsafe	✓	✓	✓
PROFIenergy	✓	✓	✓
PROFIdrive	✓	✓	✓

System redundancy

SINAMICS S120 supports the PROFINET function "system redundancy":

SINAMICS S120 can now be connected to high-availability systems such as SIMATIC S7-400H with two controllers. No additional hardware is required to make the connection. Complex automation tasks in the process industry, in particular, where plant availability and redundancy of the control system are essential, require reliable communication with a high-availability system. Both controllers of the high-availability system always have access to the SINAMICS S120.

In the event of a cable break or failure of a CPU, the other controller takes over, thus ensuring uninterrupted communication.

More information

More information is available on the internet at: www.siemens.com/profinet

Communication

PROFdrive

Overview

PROFdrive – the standardized drive interface for PROFINET and PROFIBUS

PROFdrive defines the device behavior and technique to access internal device data for electric drives connected to PROFINET and PROFIBUS – from basic frequency converters up to high-performance servo controllers.

It describes in detail the practical use of communication functions – device-to-device communication, equidistance and clock cycle synchronization (isochronous mode) in drive applications. In addition, it specifies all device characteristics which influence interfaces connected to a controller over PROFINET or PROFIBUS. This also includes the state machine (sequence control), the encoder interface, scaling of values, definition of standard telegrams, access to drive parameters, etc.

The PROFdrive profile supports both central as well as distributed motion control concepts.

What are profiles?

For devices and systems used in automation technology, profiles define properties and modes of behavior. This allows manufacturers and users to define common standards. Devices and systems that comply with such a cross-manufacturer profile, are interoperable on a fieldbus and, to a certain degree, can be interchanged.

Are there different types of profiles?

A distinction is made between what are known as application profiles (general or specific) and system profiles:

- Application profiles (also device profiles) predominantly refer to devices (e.g. drives) and include an agreed selection regarding bus communication as well as specific device applications.
- System profiles describe classes of systems, including master functionality, program interfaces and integration resources.

Is PROFdrive fit for the future?

PROFdrive has been specified by the PROFIBUS and PROFINET International (PI) user organization, and is specified as a standard that is fit for the future through standard IEC 61800-7.

The basic philosophy: Keep it simple

The PROFdrive profile tries to keep the drive interface as simple as possible and free from technology functions. As a result, referencing models as well as the functionality and performance of the PROFINET/PROFIBUS master have either no or only little influence on the drive interface.

One drive profile – different application classes

The integration of drives into automation solutions depends very strongly on the particular drive application. In order to be able to address the complete, huge bandwidth of drive applications – from basic frequency converters up to synchronized multi-axis systems with a high dynamic performance – using just one profile, PROFdrive defines six application classes, to which most drive applications can be assigned:

- Class 1 – standard drives (pumps, fans, agitators, etc.)
- Class 2 – standard drives with technological functions
- Class 3 – positioning drives
- Class 4 – motion control drives with central, higher-level motion control intelligence and the patented "Dynamic Servo Control" positioning concept
- Class 5 – motion control drives with central, higher-level motion control intelligence and position setpoint interface
- Class 6 – motion control drives with distributed motion control intelligence integrated in the drives

Design

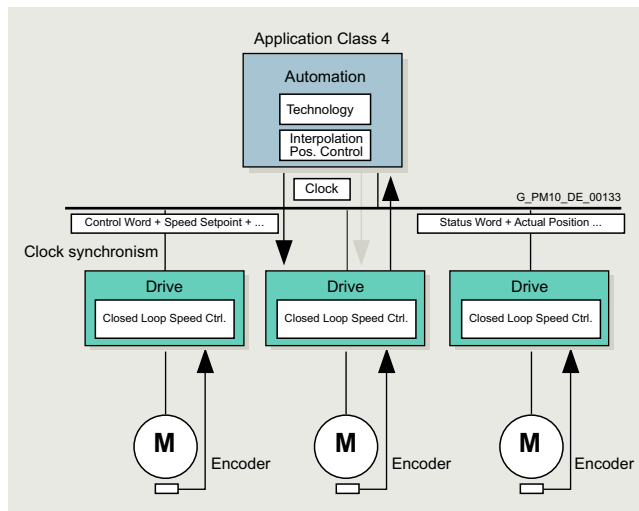

The device model of PROFdrive

PROFdrive defines a device model comprising function modules, which interoperate inside the device and which reflect the intelligence of the drive system. These modules have objects assigned to them which are described in the profile and are defined with respect to their functions. The overall functionality of a drive is therefore described through the sum of its parameters.

In contrast to other drive profiles, PROFdrive defines only the access mechanisms to the parameters as well as a subset of profile parameters (approx. 30) such as the fault buffer, drive control and device identification.

All other parameters are vendor-specific which gives drive manufacturers great flexibility with respect to implementing control functions. The elements of a parameter are accessed acyclically over data records.

As a communication protocol, PROFdrive uses DP-V0, DP-V1, and the DP-V2 expansions for PROFIBUS including the functions "Device-to-Device Communication" and "Isochronous Operation", or PROFINET IO with real-time classes RT and IRT.

More information

More information on PROFINET and PROFIBUS is available at: www.profibus.com

Overview

PROFIBUS – the proven, rugged bus system for automation engineering applications

The requirements of users for an open, non-proprietary communication system have resulted in the specification and standardization of the PROFIBUS protocol.

PROFIBUS defines the technical and functional features of a serial fieldbus system, with which the distributed field automation devices in the lower area (sensor/actuator level) can be networked up to the mid performance range (cell level).

Standardization according to IEC 61158/EN 50170 secures your investments for the future.

Using the conformity and interoperability test performed by the test laboratories authorized by PROFIBUS & PROFINET International (PI) and the certification of the devices by PI, users have the security of knowing that the quality and functionality is guaranteed, even in multi-vendor installations.

PROFIBUS versions

Two different PROFIBUS versions have been defined in order to comply with the widely varying requirements at field level:

- PROFIBUS PA (Process Automation) – the version for applications in process automation. PROFIBUS PA uses the intrinsically safe transmission technology specified in IEC 61158-2.
- PROFIBUS DP (Distributed Periphery) – this version, which is optimized for speed, is specifically tailored to the communication of automation systems with distributed I/O stations and drives. PROFIBUS DP sets itself apart as a result of very short response times and high noise immunity, and replaces cost-intensive, parallel signal transfer with 24 V and measured value transfer utilizing 0/4 ... 20 mA technology.

Design

Bus participants on PROFIBUS DP

PROFIBUS DP makes a distinction between two different master classes and one device class:

DP master class 1

For PROFIBUS DP, DP master class 1 is the central component. In a defined and continually repeating message cycle the central master station exchanges information with distributed stations (DP devices).

DP master class 2

Devices of this type (programming, configuring or operator control devices) are used during commissioning, for configuring the DP system, for diagnostics or for operating the active plant or system. A DP master class 2 can, for example, read input, output, diagnostic and configuration data of the devices.

DP device

A DP device is an I/O device which receives output information or setpoints from the DP master, and as response, returns input information, measured values and actual values to the DP master. A DP device never sends data automatically, but only when requested by the DP master.

The quantity of input and output information depends on the device, and for each DP device in each send direction can be a maximum of 244 bytes.

Function

Functional scope in DP masters and DP devices

The functional scope can differ between DP masters and DP devices. The different functional scopes are classified as DP-V0, DP-V1 and DP-V2.

DP-V0 communication functions

The DP-V0 master functions consist of "Configuration", "Parameter Assignment" and "Reading Diagnostics Data", as well as cyclic reading of input data/actual values and writing output data/setpoints.

DP-V1 communication functions

The DP-V1 function expansions make it possible to perform acyclic read and write functions as well as processing cyclic data communication. This type of device must be supplied with extensive parameterization data during start-up and during normal operation. These acyclically transferred parameterization data are only rarely changed in comparison to the cyclic setpoints, actual values, and measured values, and are transferred at lower priority in parallel with the cyclic high-speed user data transfer. Detailed diagnostic information can be transferred in the same way.

DP-V2 communication functions

The extended DP-V2 master functions mainly comprise functions for isochronous operation and device-to-device communication between DP devices.

- Isochronous mode:
Isochronous mode is implemented by means of an equidistant signal in the bus system. This cyclic, equidistant cycle is sent by the DP master to all bus nodes in the form of a Global Control Telegram. Master and devices can then synchronize their applications with this signal. The signal jitter between cycles is less than 1 μ s.
- Device-to-device communication:
The "publisher/subscriber" model is used to implement device-to-device communication. Devices declared as publishers make their input data/actual values and measured values available to other devices, the subscribers, for reading. This is performed by sending the response frame to the master as a broadcast. Device-to-device communication is therefore a cyclic process.

Integration

PROFIBUS with SINAMICS

SINAMICS uses the PROFIBUS DP protocol. SINAMICS drives can only be used as DP devices.

Communication

Industrial Ethernet

Overview

Ethernet is the basic internet technology for worldwide networking. The many possibilities of intranet and internet, which have been available for office applications for a long time, are now utilized for production automation with Industrial Ethernet.

Apart from the use of information technology, the deployment of distributed automation systems is also on the increase. This entails breaking up complex control tasks into smaller, manageable and drive-based control systems. This increases the demand for communication and consequently a comprehensive and powerful communication system.

Industrial Ethernet provides a powerful area and cell network for the industrial field, compliant with the IEEE 802.3 (ETHERNET) standard.

Benefits

Ethernet enables a very fast data transfer (10/100 Mbit/s, 1/10 Gbit/s) and at the same time has full-duplex capability. It therefore provides an ideal basis for communication tasks in the industrial field. With a share of over 90 %, Ethernet is the number one network worldwide and offers important features which have essential advantages:

- Fast commissioning thanks to the simplest connection method
- High availability since existing networks can be extended without any adverse effects
- Almost unlimited communication performance because scalable performance is available through switching technology and high data rates when required
- Networking of different application areas such as office and production areas
- Company-wide communication based on WAN (Wide Area Network) technology or the internet
- Investment protection due to continuous compatibility with further developments
- Wireless communication using Industrial Wireless LAN

In order to make Ethernet suitable for industrial applications, considerable expansions with respect to functionality and design are required:

- Network components for use in harsh industrial environments
- Fast assembly of the RJ45 connectors
- Fail-safety through redundancy
- Expanded diagnostics and message concept
- Use of future-oriented network components (e.g. switches)

SIMATIC NET offers corresponding network components and products.

Integration

Industrial Ethernet with SINAMICS

SINAMICS provides Control Units and Communication Boards with PROFINET interface based on 100 Mbit/s Ethernet. This means that process communication in real-time, as well as engineering and HMI via standard TCP/IP are simultaneously possible.

It is also possible to access the web server in SINAMICS at the same time that process communication is in progress.

The CU310-2 and CU320-2 Control Units have an additional Ethernet interface at the front so that service and engineering tasks can be performed very easily.

Communication with SINAMICS over Industrial Ethernet

PG/PC/HMI communication

PG/PC/HMI communication is performed using protocols which are based on the basic TCP/IP protocol.

- Engineering and diagnostics with STARTER and SINAMICS Startdrive

IT communication

IT communication is performed using protocols which are based on the basic TCP/IP protocol. The most important IT protocols are:

- HTTP/HTTPS: Hypertext Transfer Protocol (Secure)
Using a standard internet browser, it is possible to retrieve predefined web pages containing diagnostic information from the device. Furthermore, user-defined web pages containing information defined by the user can be stored in the device.
- SNMP: Simple Network Management Protocol

Overview

Ethernet Industrial Protocol (EtherNet/IP) is an open standard for industrial networks. EtherNet/IP is used to transmit cyclic I/O data and acyclic parameter data. EtherNet/IP was developed by the ODVA (Open DeviceNet Vendor Association) and belongs to the international standard series IEC 61158.

Overview

The Ethernet protocol Modbus TCP is an open standard for industrial networks. Modbus TCP is used to transmit acyclic register data. Modbus TCP has been standardized in the international series of standards IEC 61158 since 2007.

Overview

As a simple fieldbus protocol, USS (**U**niversal **S**erial **I**nterface protocol of Siemens AG, 1992) can be used both cyclically and acyclically. Based on RS485 physical bus characteristics, up to 32 nodes can be networked to one bus segment and connected to a higher-level controller. This protocol is generally used when there are limited demands on data throughput.

6/2 Function module basic positioner EPOS
6/3 Functionality of the EPOS basic positioner

6/4 **SINAMICS Technology Extensions (SINAMICS TEC)**

Technology functions

Basic positioner EPOS

Overview

Function module *basic positioner EPOS*

The basic positioner EPOS is available as a standard technology function for the following SINAMICS Control Units and can be called as a function module that can be activated additionally.

- SINAMICS S120 CU310-2 and CU320-2 Control Units
- SINAMICS S110 CU305 Control Units
- SINAMICS G120 CU250S-2 Control Units
- SINAMICS G120D CU250D-2 Control Units

The basic positioner can be used to resolve basic motion control tasks without additional external technological outlay from the drive itself.

Integrated functionality for absolute and relative positioning of linear and rotary axes with motor encoders or machine encoders.

The EPOS basic positioner in the SINAMICS drive system provides powerful and precise positioning functions. Due to its flexibility and adaptability, the basic positioner can be used for a wide range of positioning tasks.

The functions are easy to handle both during commissioning and during operation, and the comprehensive monitoring functions are outstanding.

Many applications can be carried out without external position controllers.

The EPOS basic positioner is used to position linear and rotary axes (modulo) in absolute/relative terms with rotary as well as linear motor encoder or machine encoder (indirect or direct measuring system).

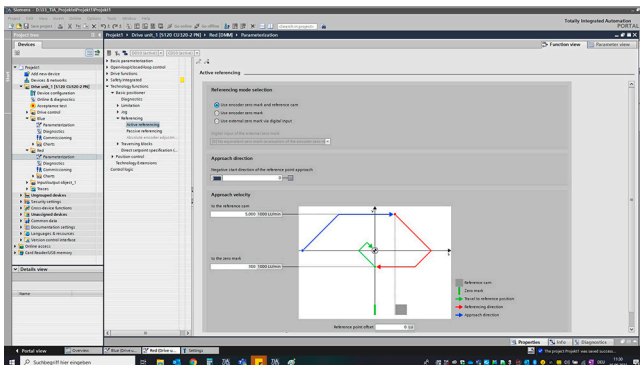

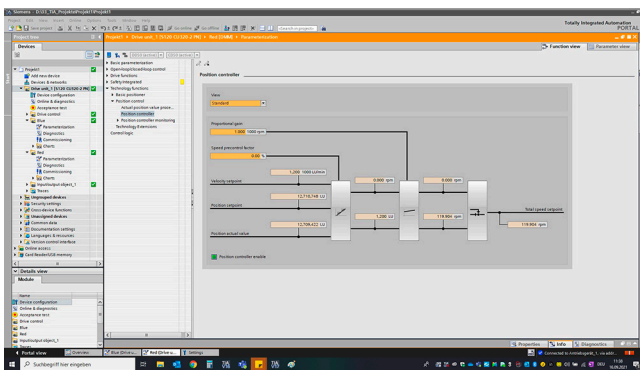

EPOS is a function module that can be activated additionally in Servo Control and in Vector Control.

User-friendly configuring and commissioning, including control panel (operation using PC) and diagnostics, are possible with the STARTER and SINAMICS Startdrive commissioning tools.

In addition to extremely flexible positioning functions, EPOS offers a high degree of user-friendliness and reliability thanks to integral monitoring and compensation functions.

Different operating modes and their functionality increase flexibility and plant productivity, for example, by means of "on-the-fly" and bumpless correction of the motion control.

Preconfigured PROFIdrive positioning frames are available which, when selected, automatically establish the internal "connection" to the basic positioner.

Overview

Functionality of the EPOS basic positioner

Lower-level closed-loop position control with the following essential components

- Position actual value sensing (including the lower-level measuring probe evaluation and reference mark search)
- Position controller (including limits, adaptation and pre-control calculation)
- Monitoring functions (standstill, positioning and dynamic following error monitoring, cam signals)

Mechanical system

- Backlash compensation
- Modulo offset

Limitations

- Speed/acceleration/delay/jerk limitation
- Software limit switches (traversing range limitation by means of position setpoint evaluation)
- Stop cams (traversing range limitation using hardware limit switch evaluation)

Referencing or adjustment

- Set reference point (for an axis at standstill)
- Search for reference (separate mode including reversing cam functionality, automatic reversal of direction, homing to "output cam and encoder zero mark" or only "encoder zero mark" or "external zero mark (BERO)")
- Flying referencing (seamless referencing possible during "normal" traversing with the aid of the measuring input evaluation; generally evaluation, e.g. of a BERO. Subordinate function for the modes "jog", "direct setpoint input/MDI" and "traversing blocks")
- Absolute encoder alignment

Traversing block mode

- 64 traversing blocks for
 - SINAMICS S120 CU310-2 and CU320-2 Control Units
- 16 traversing blocks for
 - SINAMICS S110 CU305 Control Units
 - SINAMICS G120 CU250S-2 Control Units
 - SINAMICS G120D CU250D-2 Control Units
- Positioning using traversing blocks that can be stored in the drive unit including continuation conditions and specific jobs for a previously homed axis.
- Configuring traversing blocks using the traversing block editor in the relevant commissioning tool of the SINAMICS converter family
- A traversing block contains the following information:
 - Job number and job (e.g. positioning, waiting, GOTO block jump, setting of binary outputs, travel to fixed stop)
 - Motion parameters (target position, velocity, override for acceleration and deceleration)
 - Mode (e.g.: hide block, continuation conditions such as "Continue_with_stop", "Continue_flying" and "Continue_externally using high-speed measuring inputs")
 - Job parameters (e.g. wait time, block step conditions)

Direct setpoint specification (MDI) mode

- Positioning (absolute, relative) and setting-up (endless closed-loop position control) using direct setpoint inputs (e.g. via the PLC using process data)
- It is always possible to influence the motion parameters during traversing (on-the-fly setpoint acceptance) as well as for on-the-fly changes between the setup and positioning modes.
- The direct setpoint specification mode (MDI) can also be used in the relative positioning or setup mode if the axis is not referenced. This means that on-the-fly synchronization and re-referencing can be carried out using "flying referencing".

Jog mode

- Closed-loop position controlled traversing of the axis with "endless position controlled" or "jog incremental" modes (traverse through a "step width"), which can be toggled between

Technology functions

SINAMICS Technology Extensions (SINAMICS TEC)

Overview

The SINAMICS Technology Extensions are configurable functions or Siemens technologies that can be added onto firmware functions. The extensions are designed to allow implementation of highly complex, targeted application-specific tasks for various sectors such as test stands, storage and retrieval machines, transportation systems based on linear motors or multi-winding motors in machine manufacture.

The SINAMICS Technology Extensions are part of the Advanced Technology Function and are added to the existing firmware as self-contained software packages. They are easy to install using the SINAMICS Startdrive and STARTER commissioning tools and expand the existing device functionality by the application-specific functions contained in the software. The software is parameterized and diagnosed using SINAMICS Startdrive and STARTER.

Installing these extended functions customizes the functionality of the SINAMICS S120 converter so that it meets the specific requirements of the user.

SINAMICS Technology Extensions can be used for the following drive systems (the way in which they are used depends on the individual Technology Extension):

- SINAMICS G130
- SINAMICS G150
- SINAMICS S120
- SINAMICS S150
- SINAMICS DCM
- SINAMICS DCP
- SINAMICS GM150
- SINAMICS SM150
- SINAMICS SM120CM
- SINAMICS GL150
- SINAMICS SL150
- SINAMICS GH150
- SIMOTION D (SINAMICS Integrated)
- SIMATIC Drive Controller (SINAMICS Integrated)
- SINUMERIK 840D sl (SINAMICS Integrated)
- SINUMERIK 828D (SINAMICS Integrated)
- SINUMERIK ONE (SINAMICS Integrated)

The following SINAMICS Technology Extensions are available to download

<https://support.industry.siemens.com>

Simply enter your Article No. in "Search for product information".

Coupling of SERVO Motor Modules with SINAMICS Technology Extension SERVCOU

The Technology Extension SERVCOU (Servo Coupling) is an extension for the SERVO drive object of SINAMICS. In the SERVO control mode, SERVCOU allows motors to be operated, which as a result of their size and/or design format, cannot be operated from a single SINAMICS S120 power unit. These motors are subdivided into several drive objects, each of which can be operated on a Motor Module, and can be coupled with one another. As a consequence, the individual drive objects can be considered as partial motors with their own winding and terminals.

Irrespective of the number of coupled drive objects, only one encoder is required for the operation of the motor because Technology Extension SERVCOU implements a digital encoder splitter in the Control Unit. In this way, the actual encoder values together with the setpoint specifications are passed on to all encoderless drive objects.

SERVCOU is generally released for the following SIMOTICS motors:

- 1FE2 (built-in spindle motor) as a built-in spindle drive for machine tools
- 1FN3 (linear motor) as milling centers with large rotary tables for machine tools or portal applications with linear motors
- 1FW4 (torque motor) for servo presses and test stands for high performances with superior dynamics
- 1FW6 (torque motor) for servo presses
- 1FW68 (segment motor) in milling centers with large rotary tables for machine tools

Fundamentally, operation is possible with the following motors:

- Segment motors (axial and radial)
- Direct drives (linear and rotary)
- Double and multi-winding motors (induction and synchronous)

Peak load management of the spindle for overload protection of the infeed of machine tools with SINAMICS Technology Extension DYNEGMA

The SINAMICS Technology Extension DYNEGMA (Dynamic Energy Management) from the Advanced Technology Functions is an extension for the infeed and SERVO drive objects of SINAMICS. The SINAMICS Technology Extensions are also known by the name SINAMICS Open Architecture. The Technology Extension DYNEGMA is a peak load management and overload protection function for machine tool infeeds. The task of DYNEGMA is to protect the infeed unit during power peaks; these can occur when several drives/spindles simultaneously accelerate or brake, e.g. during tool change. DYNEGMA only intervenes when actually required in order to guarantee not only safe and reliable operation, but also maximum dynamic performance. To protect the infeed unit against overload, and in turn resulting machine downtimes or tool, material, or machine damage, when required DYNEGMA also limits the torque of individual spindles/drives.

For example, the following applications can be used with DYNEGMA:

- Overload protection of the infeed and peak load management of spindles for milling and turning machines, even during a forced EMERGENCY STOP
- Dynamic tool change for optimal utilization of the maximum infeed power of machine tools

Overview

Vibration extinction for storage and retrieval machines with SINAMICS Technology Extension VIBX

The Technology Extension VIBX (Vibration Extinction) is an extension of the SINAMICS drive objects SERVO and VECTOR. A setpoint filter is implemented in VIBX. The objective of the setpoint filter is to change the setpoint of an axis so that there is as little vibration as possible caused in the natural frequency range of the moving mechanical components. This function is primarily deployed on storage and retrieval machines to significantly reduce mast vibrations caused by acceleration and braking. It has been demonstrated that reducing the mast vibrations will allow the mast to come to a standstill more quickly and so enable it to handle goods faster.

The SINAMICS Technology Extension Vibration Extinction implemented as setpoint filter can be used both in basic positioners (EPOS) and Dynamic Servo Controls (DSC) together with a controller in the drive. For this purpose, two modes of application are supported by the Technology Extension:

- EPOS and LR application mode
- DSC application mode

The filter characteristics can be set using frequency and damping (attenuation). The filter frequency can be linearly changed between two limit values via an input during operation. This means that the filter frequency can be tracked to follow the changing natural frequency of a mechanical system (e.g. as a result of different load states) (online frequency change).

The following applications can be implemented with VIBX:

- Sway control for storage and retrieval unit
- Vibration extinction of positioning applications with mechanical natural oscillations

Engineered DC-DC Converters with Standard Motor Modules with SINAMICS Technology Extension DCDCCONV

The SINAMICS Technology Extension DCDCCONV (DC-DC Converter) is an extension for the booksize and chassis formats of SINAMICS S120.

Using Technology Extension DCDCCONV, you can use the booksize or chassis design formats of the Motor Module - which normally control a 3-phase motor - as an engineered DC/DC converter. Additional components (e.g. energy storage reactor or smoothing capacitor) must be connected downstream from the Motor Module.

The following applications can be implemented with DCDCCONV:

- Integration of capacitors (Ultracapacitor Modules or electrolytic capacitors) as energy storage devices for the following applications:
 - Reduction of electrical connected power
 - Mains buffering
 - Storage for regenerated energy
- Integration of battery modules as energy storage devices for the following applications:
 - Reduction of electrical connected power
 - Mains buffering
 - Storage for regenerated energy
 - Provision of an island grid
 - Loading of connected battery modules with defined test cycles
- Supply of an electrolyzer for hydrogen production
 - Here, the DC-DC converter serves as the energy source for an electrolyzer to produce hydrogen.
- Supply of inverters:
 - Supply of a connected inverter with defined voltage level
 - Test stand for the complete vehicle drive system

In addition to the Function Manual for the SINAMICS Technology Extension DCDCCONV software, there are also application descriptions for the released applications available. The application descriptions include information on configuring an **engineered DC-DC converter** with the core element SINAMICS S120 Motor Module in conjunction with the DCDCCONV software in the respective applications. This application description should be observed in order to be able to reliably and safely configure the application.

The application description for DCDCCONV

- with capacitors is available at: <https://support.industry.siemens.com/cs/document/109748701>
- with battery modules is available at: <https://support.industry.siemens.com/cs/document/109751796>
- to supply an electrolyzer is available at: <https://support.industry.siemens.com/cs/document/109813658>
- to supply inverters is available at: <https://support.industry.siemens.com/cs/document/109771893>

Signal generator for test stands with SINAMICS Technology Extension POLYGON

The Technology Extension POLYGON (Polygonal Line) is an extension of the SINAMICS drive objects SERVO, VECTOR and HLA.

The polygonal line application makes it possible to create a master-value-dependent output signal based on a parameterized characteristic in the current controller sampling time (or an integer multiple of the current controller sampling time). The characteristic is defined by up to 10000 equidistantly distributed interpolation points between which linear interpolation is performed. The y values of the interpolation points can be taken from an Excel sheet using a script. By interconnecting the output signals to different connector inputs, it is possible to create various relationships via the characteristic functionality, e.g.:

- Position-position reference
- Position-speed reference
- Position-torque reference

Fast signal evaluation and processing with Technology Extension SIVALU (Signal Evaluation)

The SIVALU Technology Extension allows signals to be evaluated in the current controller sampling time of a drive object. Minimum value, maximum value, and mean value can be obtained, as well as arithmetic and logical evaluations executed. Evaluations are calculated in ascending order of indexes and can therefore be cascaded. In addition, additional fixed values for BICO interconnections are freely available.

The following applications can be implemented with SIVALU, for example:

- Applications with fast signal processing of logical and arithmetic functions, as well as conversions of signals up to the current controller cycle
- Logical and arithmetic functions for SINUMERIK ONE and SINUMERIK 840D sl in the drive
- Calculation of process torque using an arithmetic function

Technology functions

SINAMICS Technology Extensions (SINAMICS TEC)

Overview

Control of the Heat Exchanger Module for the dissipation of power loss of the converter with HEM Technology Extension (Heat Exchanger Module)

The HEM Technology Extension enables the control of the Heat Exchanger Module hardware and handles the following tasks:

- The Heat Exchanger Module is set up for the specific system using parameters
- Controlling the pumps
- Monitoring the motor circuit breaker, the pressure actual values and the temperature actual values
- Detecting leaks
- Controlling the intake temperature in the de-ionized water circuit using a control valve
- Displaying all system parameters
- Functionalities to avoid condensation

Quick recording of drive data together with Drive Connector SINAMICS and the Technology Extension TRCDATA (Trace Data)

The Technology Extension TRCDATA is necessary for the use of the Drive Connector SINAMICS with the High Speed adapter function (HS Adapter).

Together with the High Speed adapter (HS Adapter) in the Drive Connector SINAMICS, it is possible to continuously record drive data up to 8 kHz and provide the data to the Industrial Edge data bus.

The maximum sampling frequency of 8 kHz is dependent on the network and drive configuration.

Other properties of the Technology Extension TRCDATA in connection with the Drive Connector SINAMICS are available at: <https://sieportal.siemens.com/su/bjTFD>

Point-to-point connection between two CUs with SINAMICS Technology Extension OALINK

The Technology Extension OALINK (Open Application Link) is a SINAMICS extension for the CU320-2 Control Unit. The OALINK enables bidirectional communication between two Control Units based on DRIVE-CLiQ to facilitate the simple exchange of data. In this way, an additional Control Unit can be integrated as a technology extension for extensive drive-based technology with SINAMICS Drive Control Chart (DCC).

The following applications can be implemented with OALINK:

- Technology extension for the SINAMICS S120 (CU320-2 as replacement for the SIMATIC T400 technology module).
- Technology extension for the SINAMICS DCM (CU320-2 as replacement for the SIMATIC T400 technology module).
- Load distribution of physically coupled drives (leading/follower drive).
- General couplings between SINAMICS DCM and SINAMICS S120.
- General couplings between SINAMICS DCP and SINAMICS S120.
- General couplings between SINAMICS DCM and SINAMICS MV

Fast fault reaction of coupled axes with SINAMICS Technology Extension FASTBRK

The SINAMICS Technology Extension FASTBRK (Fast Brake Reaction for Coupled Axes) is a SINAMICS extension for SERVO drive objects.

Technology Extension FASTBRK is used on machines with coupled axes, such as gantry axes.

Previously, in cases of a drive-autonomous fault, braking was only applied to the affected axis. The coupled axes were only braked after the set gantry switch-off limit of the synchronism difference was exceeded, for example.

The FASTBRK Technology Extension on the other hand propagates the original fault reaction to the coupled axes. This means that in the event of a fault such as an encoder failure on a drive axis, the same fault reaction (e.g. encoderless braking) is initiated as quickly as possible on all mechanically coupled axes. In this way, the Technology Extension FASTBRK enables coupled drive objects to simultaneously and evenly brake to a standstill, thus minimizing the risk of damage to the machine.

The following applications can be implemented with FASTBRK:

- Fast fault reaction in the drive for SINUMERIK axis couplings, such as gantry and master/device axes.
- Propagation of the axis fault possible with a minimum reaction time from the current controller cycle (e.g. 125 µs)
- Grouping of up to three groups per Control Unit / NCU / NX

Using the SINAMICS selection guide

The varying range of demands on modern variable frequency drives requires a large number of different types. Selecting the optimum drive has become a significantly more complex process. The application matrix shown simplifies this selection process considerably, by suggesting the ideal SINAMICS drive for examples of typical applications and requirements.

- The application type is selected from the vertical column
 - Pumping, ventilating, compressing
 - Moving
 - Processing
 - Machining
- The quality of the motion type is selected from the horizontal row
 - Basic
 - Medium
 - High

SINAMICS S120 drive system

System overview

Overview

With its separate power unit and Control Unit, the SINAMICS S120 drive system can be perfectly adapted to a wide variety of different drive tasks.

The Control Unit is selected according to the number of drives to be controlled and the required performance level, while the power unit must be rated to meet the energy requirements of the system. The connection between the Control Unit and power unit is made very simply using the digital system interface DRIVE-CLiQ.

Control Units

CU310-2 PN Control Unit with BOP20 Basic Operator Panel

CU320-2 PN Control Unit with BOP20 Basic Operator Panel

CU310-2 DP and CU310-2 PN Control Units

The CU310-2 Control Unit is used to control a single drive. A PROFIBUS interface (CU310-2 DP) or a PROFINET interface (CU310-2 PN) and a TTL/HTL encoder evaluation circuit are standard features.

CU320-2 Control Unit

The CU320-2 Control Unit is designed to control several drives. In this case, the following can be operated on a CU320-2 Control Unit:

- Up to 12 drives in V/f control mode, or
- Up to 6 drives in Servo or Vector control mode.

The CU320-2 Control Unit can be used to establish links between individual drives and to implement simple technological functions.

Power Modules

The simplest version of a SINAMICS S120 drive system comprises a CU310-2 Control Unit and a Power Module. A line rectifier, a DC link and an inverter for supplying a motor are integrated in the Power Module.

Power Module in blocksize format with CU310-2 Control Unit and BOP20 Basic Operator Panel

Power Modules are designed for single drives which are not capable of regenerating energy to the supply. Generated energy produced during braking is converted to heat via braking resistors.

Power Modules can also be operated via a CU320-2 Control Unit, a SIMOTION D4x5-2 or a CX32-2 Controller Extension, for example, if a single drive is added to a multi-axis grouping. In this case, the Power Modules in blocksize format must be equipped with the CUA31/CUA32 Control Unit Adapter. This is connected via DRIVE-CLiQ to the CU320-2 Control Unit, the SIMOTION D4x5-2 or the CX32-2 Controller Extension. Power Modules in chassis format can be directly connected to the Control Unit using a DRIVE-CLiQ cable.

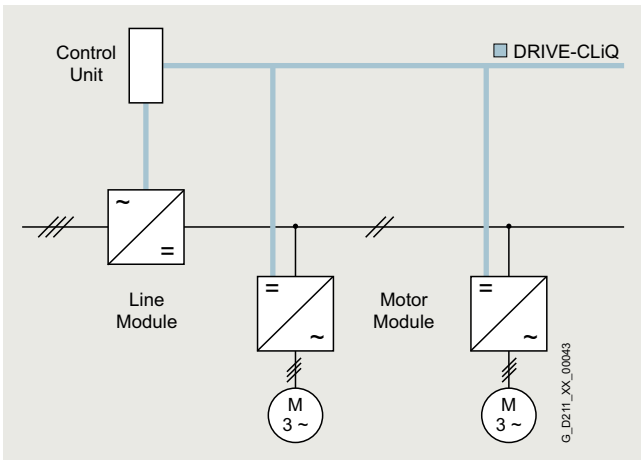

Overview

Motor Modules

A DC link and an inverter for supplying a motor are integrated in the Motor Module.

CU320-2 Control Unit, Line Module and three Motor Modules in booksize format

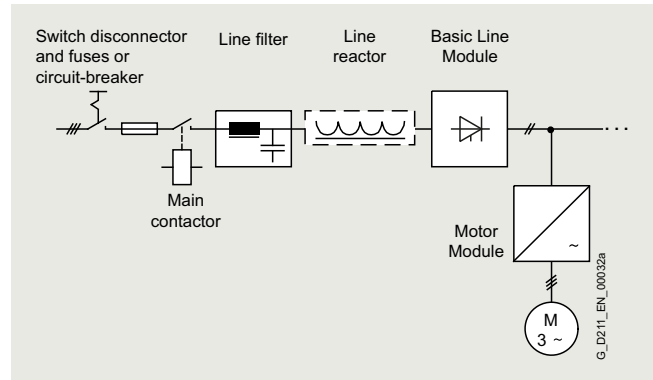

Motor Modules have been designed for multi-axis drives. Motor Modules are interconnected by means of a shared DC busbar. Since the Motor Modules share the same DC link, they can exchange energy with one another, i.e. if one Motor Module operating in the generator mode produces energy, the energy can be used by another Motor Module operating in the motor mode. The voltage-source DC link is supplied with mains voltage by a Line Module.

Line Modules

Line Modules generate a DC voltage from the line voltage and supply Motor Modules with energy via the voltage-source DC link.

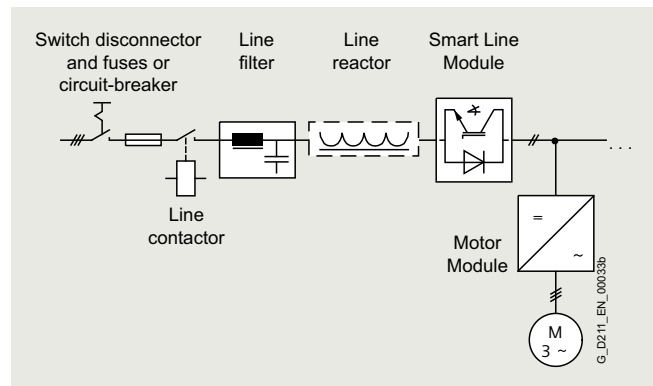

Basic Line Modules

Basic Line Modules are designed only for infeed operation, i.e. they are not capable of recovering energy to the line supply. If regenerative energy is produced, e.g. when drives brake, it must be converted to heat by means of a Braking Module and a braking resistor. When a Basic Line Module is used as the infeed, the matching line reactor must be installed. A line filter can be optionally installed in order to ensure compliance with the limits stipulated for Category C2 in EN 61800-3.

Smart Line Modules

Smart Line Modules can supply energy and return regenerative energy to the supply system. A Braking Module and braking resistor are required only if the drives need to be decelerated in a controlled manner after a power failure (i.e. when energy cannot be recovered to the supply). When a Smart Line Module is used as the infeed, the matching line reactor must be installed. A line filter can be optionally installed in order to ensure compliance with the limits stipulated for Category C2 in EN 61800-3.

SINAMICS S120 drive system

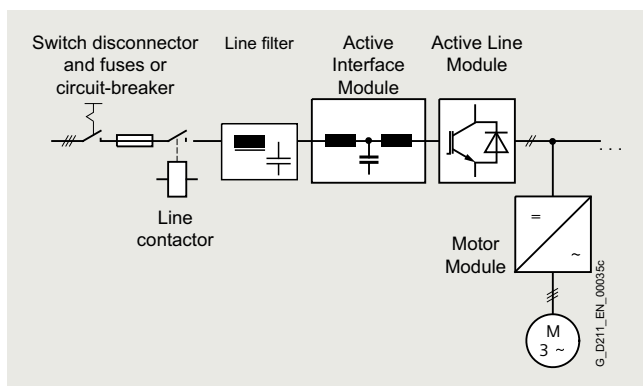

System overview

Overview

Active Line Modules

Active Line Modules can supply energy and return regenerative energy to the supply system. A Braking Module and braking resistor are required only if the drives need to be decelerated in a controlled manner after a power failure (i.e. when energy cannot be recovered to the supply). In contrast to Basic Line Modules and Smart Line Modules, however, Active Line Modules generate a regulated DC voltage which remains constant despite fluctuations in the line voltage. In this case, the line voltage must remain within the permissible tolerance range. Active Line Modules draw a virtually sinusoidal current from the supply which limits any harmful harmonics.

In order to operate an Active Line Module, an Active Interface Module with the appropriate rating must be used. A line filter can be optionally installed in order to ensure compliance with the limits stipulated for Category C2 in EN 61800-3.

For further information about configuring a drive system with SINAMICS S120, refer to section Configuration notes.

Power Modules, Motor Modules and Line Modules are available in booksize, booksize compact, blocksize and chassis format:

- Power Modules in blocksize and chassis formats,
- Motor Modules and Line Modules in booksize, booksize compact and chassis formats.

Cooling methods

There are two cooling options available for Chassis format:

Internal air cooling

In this standard solution, the power loss from the electronics and power units of the drive components is removed by natural cooling or by a forced-ventilation system and routed to the interior of the control cabinet.

Liquid cooling

For liquid-cooled devices in chassis format, the power semiconductors are mounted on a heat sink through which the cooling medium flows. Most of the heat produced by the unit is absorbed by the cooling medium and can be dissipated outside the control cabinet.

Customized application

The devices can be purchased in the different formats as a complete system solution. Users profit from the know-how of the drive experts and need not spend valuable time calculating the thermal design requirements of the application. Especially in applications involving devices with liquid cooling in chassis format, users are provided with a technically sound solution and can reduce their engineering costs. The system solution extends up to complete control cabinets with cooling system and temperature/condensation control.

Further information is available on request.

Energy efficiency

The SINAMICS S120 drive system saves energy by recovering energy from the axes and using it within the DC link group of a multi-axis configuration and by feeding it back into the supply system. Even at full infeed capacity, no unnecessary heat is generated in the control cabinet. Because the Active Line Modules prevent capacitive and inductive reactive currents, SINAMICS S120 also ensures that no unnecessary power losses occur in the power supply and that no current harmonics occur. This not only prevents detrimental effects on other loads, but it also reduces the heat generated in the control cabinet.

System components

System components are divided into the following categories:

- **DC link components**
e.g. Braking Modules and braking resistors
- **Load-side power components**
e.g. motor reactors
- **Supplementary system components**
e.g. Terminal Modules, Operator Panel and Communication Boards
- **Encoder system interface**
for connecting various encoder types to SINAMICS S120

Overview

Booksize format

Booksize format units are optimized for multi-axis applications and are mounted adjacent to one another. The connection for the common DC link is an integral feature. The units are cooled by an internal air cooling circuit.

Booksize compact format

Derived from the booksize format we developed the booksize compact format for machines with particularly high requirements for the compactness of their drives. The booksize compact format offers virtually all of the advantages of the booksize format but with a reduced overall height and greater overload capability. The units are cooled by an internal air cooling circuit.

Blocksize format

Blocksize format units are optimized for single-axis applications and are available only as Power Modules.

The CU310-2 can be directly snap-mounted. The units are cooled by an internal air cooling circuit.

Chassis format

Higher-output units (approximately 100 kW and above) are constructed in chassis format. These are available as Line Modules, Power Modules and Motor Modules. Chassis format units are cooled by an internal air cooling circuit. Liquid-cooled devices can be ordered for special applications such as extrusion processes, forming technology or marine engineering. The CU310-2 Control Unit can be integrated in the Power Modules.

Additional information on Chassis format is provided in Catalog D 21.3 at: www.siemens.com/d21-3

SINAMICS S120 drive system

System overview

Overview

Cabinet Modules

In addition to the converter chassis units listed in this catalog, SINAMICS S120 Cabinet Modules are available which are a modular cabinet system for multi-motor drives with a central supply infeed and a common DC busbar, for example, as used in paper machines, rolling mills, test bays, and hoisting gear. Cabinet Modules are available with a total power rating of up to 4500 kW in the air-cooled version and up to 5700 kW in the liquid-cooled version.

The main components of the system are as follows:

- Line Connection Modules
- Basic Line Modules
- Smart Line Modules
- Active Line Modules including Active Interface Modules
- Central Braking Modules
- Motor Modules
- Auxiliary Power Supply Modules

For additional information see Catalog D 21.3 at:
www.siemens.com/d21-3

Technical specifications

The most important directives and standards are listed below. These are used as the basis for the SINAMICS S120 built-in units and they must be carefully observed to achieve an EMC-compliant configuration that is safe both functionally and in operation.

European standards	
EN 61508-1	Functional safety of electrical/electronic/programmable electronic safety-related systems Part 1: General requirements
EN 60204-1	Electrical equipment of machines Part 1: General definitions
EN 61800-3	Adjustable speed electrical power drive systems Part 3: EMC product standard including specific test methods
IEC/EN 61800-5-1	Adjustable-speed electrical power drive systems Part 5: Safety requirements Main section 1: Electrical and thermal requirements
North American standards	
UL 508C	Power Conversion Equipment
UL 61800-5-1	Adjustable Speed Electrical Power Drive Systems
CSA C22.2 No. 14	Industrial Control Equipment
Certificates of suitability	
cULus	Testing by UL (Underwriters Laboratories, www.ul.com) according to UL and CSA standards

More information

For reliable operation of the drive system, original components of the SINAMICS drive system and the original Siemens accessories as described in this Catalog and the Configuration Manuals, in the functional descriptions or user manuals must be used.

The user must observe the configuring instructions.

Combinations that differ from the configuring instructions (also in conjunction with non-Siemens products) require a special agreement.

If no original components are used, for example, for repairs, approvals such as UL, EN and Safety Integrated can become invalid. This may also result in the operating authorization for the machine in which the non-Siemens components are installed becoming invalid.

All of the certificates of suitability, approvals, certificates, declarations of conformity, test certificates, e.g. CE, UL, Safety Integrated, have been performed with the associated system components as they are described in the Catalogs and Configuration Manuals. The certificates are only valid if the products are used with the described system components, are installed according to the Installation Guidelines and are used for their intended purpose. In other cases, the vendor of these products is responsible for arranging that new certificates are issued.

For further information about configuring a drive system with SINAMICS S120, refer to section Configuration notes.

SINAMICS S120 drive system

Control Units

Overview

System architecture with a central Control Unit

Electronically coordinated individual drives work together to perform your drive tasks. In multi-axis drives, the individual drives are controlled from the higher-level control systems in such a way as to achieve the desired coordinated movement. This requires cyclic data exchange between the controller and the drives. A central Control Unit controls the drives for all connected axes and also establishes the technological links between the drives and/or axes. Since all the required data is stored in the central Control Unit, it does not need to be transferred. Inter-axis connections can be established within a Control Unit and easily configured in the SINAMICS Startdrive or STARTER commissioning tool using a mouse.

- The SINAMICS Control Unit can handle simple technological tasks by itself
- The **CU310-2 DP** or **CU310-2 PN** Control Units are used in conjunction with Power Modules and single-motor drives.
- The **CU320-2 DP** or **CU320-2 PN** Control Units are used in conjunction with all Motor Modules or Line Modules for single or multi-motor drives.
- Sophisticated motion control tasks can be implemented with the support of the more powerful **D410-2**, **D425-2**, **D435-2**, and **D445-2** Control Units of **SIMOTION D** (graded according to performance).

You can obtain more information about SIMOTION in SiePortal and Catalog PM 21.

Each of these Control Units is based on an object-oriented SINAMICS standard firmware, which contains all common control modes and can be scaled to meet even the most advanced performance requirements.

Drive objects

A drive object is a self-contained software function with its own parameters and, where appropriate, its own fault messages and alarms.

The drive controls are supplied as ready-to-configure drive objects:

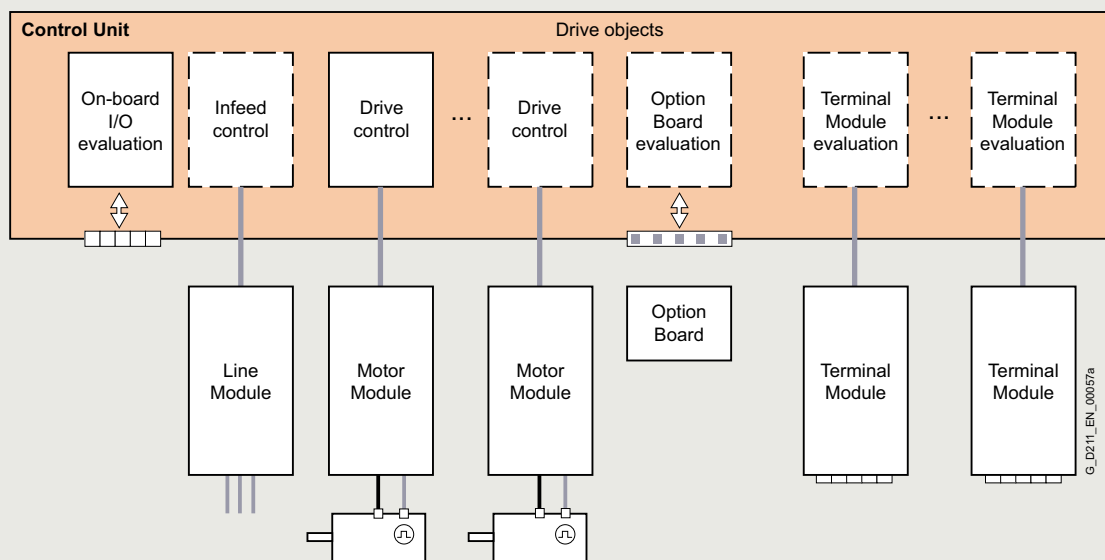

- Infeed Control for mains infeed
- Vector control
 - Speed-controlled drives with high speed and torque stability in general machine and plant construction
 - Particularly suitable for asynchronous motors
 - Optimized pulse patterns for efficient motor/converter systems
- Servo control
 - Drives with highly dynamic motion control
 - Angular-locked synchronism with isochronous PROFIBUS/PROFINET
 - For use in machine tools and clocked production machines

The most commonly used v/f control modes are stored in the "Vector control" drive object and are ideal for implementing even simple applications such as group drives with SIEMOSYN motors.

CompactFlash card

The functions of the drives are stored on a CompactFlash card. This card contains the firmware and parameter settings for all drives in the form of a project. The CompactFlash card can also hold additional projects, which means that the correct project can be accessed immediately when series machines of different types are commissioned. When the Control Unit has booted, the data on the CompactFlash card is read and loaded to the work memory.

The firmware is organized in objects. Drive objects are used to implement open-loop and closed-loop control functions for Line Modules, Motor Modules, Power Modules and other system components connected by DRIVE-CLiQ.

G_D211_EN_00057a

Overview

Comprehensive package of open-loop and closed-loop control functions

A wide variety of standard functions such as setpoint input, data set changeover, controller optimization, kinetic buffering, etc. ensure a high degree of functional reliability and excellent flexibility when addressing the application.

Overview of key open-loop and closed-loop control functions

	Closed-loop control types S120	Open-loop control types S120	Main functions S120 for booksize/chassis	Comment, note

SINAMICS S120 drive system

Control Units

Overview

Extended technology with SIMOTION

SIMOTION D Control Units support the coordinated motion control of multiple drives. Technology objects are implemented in addition to drive objects on these Control Units. These are grouped to form technology packages and make available extended Motion Control functions (e.g. synchronous operation, cam disk, path interpolation and others) or technological functions (e.g. a cam controller, a temperature or pressure control). The IEC 61131-3-compliant PLC integrated in SIMOTION D Control Units means that they are not just capable of controlling sequences of motions, but the entire machine including HMI and I/Os.

You can obtain more information about SIMOTION in SiePortal and Catalog PM 21.

BICO technology

Every drive object contains a large number of input and output variables which can be freely and independently interconnected using Binector Connector Technology (BICO). A binector is a logic signal which can assume the value 0 or 1. A connector is a numerical value, e.g. the actual speed or current setpoint.

Basic positioner (EPOS)

The EPOS basic positioner provides powerful and precise positioning functions. Due to its flexibility and adaptability, the EPOS basic positioner can be used for a wide range of positioning tasks. The functions are easy to use during both commissioning and operation, and the comprehensive monitoring functions are very powerful. Many applications can be implemented without external position control systems.

More information about the basic positioner (EPOS) is provided in the section Technology functions.

EPOS is only available for SINAMICS S120 booksize and booksize compact.

SINAMICS Drive Control Chart (SINAMICS DCC)

SINAMICS DCC expands the scope of device functions by means of freely available closed-loop control, arithmetic and logic blocks and offers a means by which proprietary technological functions can be graphically configured in the SINAMICS drive system. In addition, local data processing in the drive supports the implementation of modular machine concepts and results in an increase in the overall machine performance.

More information about the Drive Control Chart (DCC) is provided in section Engineering tools.

SINAMICS Technology Extensions (SINAMICS TEC)

The SINAMICS TEC are configurable functions or Siemens technologies that can be added to extend firmware functions. The extensions implement high-performance and targeted application-specific tasks for different areas, e.g. storage and retrieval machines.

More information about Technology Extensions (TEC) is provided in section Technology functions.

Integral safety functions (Safety Integrated)

The Control Units support comprehensive safety functions.

The integrated safety functions are the Safety Integrated Basic Functions

- STO = Safe Torque Off
- SBC = Safe Brake Control
- SS1 = Safe Stop 1 (Time controlled)

and the Safety Integrated Extended Functions that require a license

- STO = Safe Torque Off
- SS1 with SBR/SAM = Safe Stop 1 with Safe Brake Ramp/Safe Acceleration Monitor
- SS2 = Safe Stop 2
- SBC = Safe Brake Control
- SOS = Safe Operating Stop
- SLS = Safely-Limited Speed
- SSM = Safe Speed Monitor
- SDI = Safe Direction
- SLA = Safely-Limited Acceleration
- SBT = Safe Brake Test

and Safety Integrated Advanced Functions

- SLP = Safely-Limited Position
- SP = Safe Position transmission
- SCA = Safe Cam

(Abbreviations in accordance with IEC 61800-5-2)

If the integrated safety functions are used, licenses, supplementary system components such as TM54F Terminal Modules, or suitable safety controls will be necessary.

More information about the integrated safety functions is provided in section Safety Integrated.

Diagnostics optimally supported by trace function

The time characteristics of input and output variables associated with drive objects can be measured by the integrated trace function and displayed using the STARTER commissioning tool. Several signals can be simultaneously traced. A recording can be triggered dependent on freely selectable boundary conditions, e.g. the value of an input or output variable.

Overview

CU320-2 PN Control Unit with BOP20 Basic Operator Panel

CU320-2 DP Control Unit

The communication, open-loop and closed-loop control functions for one or more Line Modules and/or Motor Modules are executed in a CU320-2 Control Unit. The CU320-2 Control Unit is essentially designed for multi-axis operation. Communication with the higher-level control system is performed either via PROFINET (PN) or PROFIBUS (DP).

Design

CU320-2 Control Units feature the following interfaces as standard:

- Fieldbus interface:
 - CU320-2 PN: 1 PROFINET interface with 2 ports (RJ45 sockets) with PROFIdrive V4 profile
 - CU320-2 DP: 1 PROFIBUS interface with PROFIdrive V4 profile
- 4 x DRIVE-CLiQ sockets for communication with other DRIVE-CLiQ nodes, e.g. Motor Modules, Active Line Modules, Sensor Modules, Terminal Modules
- 12 parameterizable digital inputs (isolated)
- 8 parameterizable bidirectional digital inputs/digital output (not isolated)
- 1 serial RS232 interface (e.g. to connect the AOP30 Advanced Operator Panel)
- 1 interface for the BOP20 Basic Operator Panel
- 1 slot for the CompactFlash card on which firmware and parameters are stored
- 1 slot for mounting an option module (e.g. TB30 Terminal Board)
- CU320-2 DP: 2 rotary coding switches for manually setting the PROFIBUS address
- 1 Ethernet interface for commissioning and diagnostics
- 3 measuring sockets and one reference ground for commissioning support
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connector
- 1 ground connection

A shield connection for the signal cable shield of the option module is located on the CU320-2 Control Unit.

The available option slot is used to expand the interfaces, for example, to include additional terminals or for communication purposes.

The status of the CU320-2 Control Unit is indicated via multi-color LEDs.

As the firmware and parameter settings are stored on a plug-in CompactFlash card, the Control Unit can be changed without the need for software tools.

The CU320-2 Control Unit can be mounted on the side of the Line Module via brackets integrated in a Line Module. The CU320-2 Control Unit can also be fixed to the wall of the control cabinet using the integrated fixing lugs. As the CU320-2 Control Unit is not as deep as the booksize Line Modules, suitable spacers are available to increase the depth of the CU320-2 Control Unit to 270 mm.

For information on connectors and cables refer to the section MOTION-CONNECT connection system and in the internet at: www.siemens.com/motion-connect
<https://sieportal.siemens.com>

Integration

DRIVE-CLiQ components, for example, Motor Modules and Active Line Modules, can be connected to a CU320-2 Control Unit. The number of modules depends on the performance required, including duty type and additional functions.

The BOP20 Basic Operator Panel can also be snapped onto the CU320-2 Control Unit during operation for diagnostic purposes.

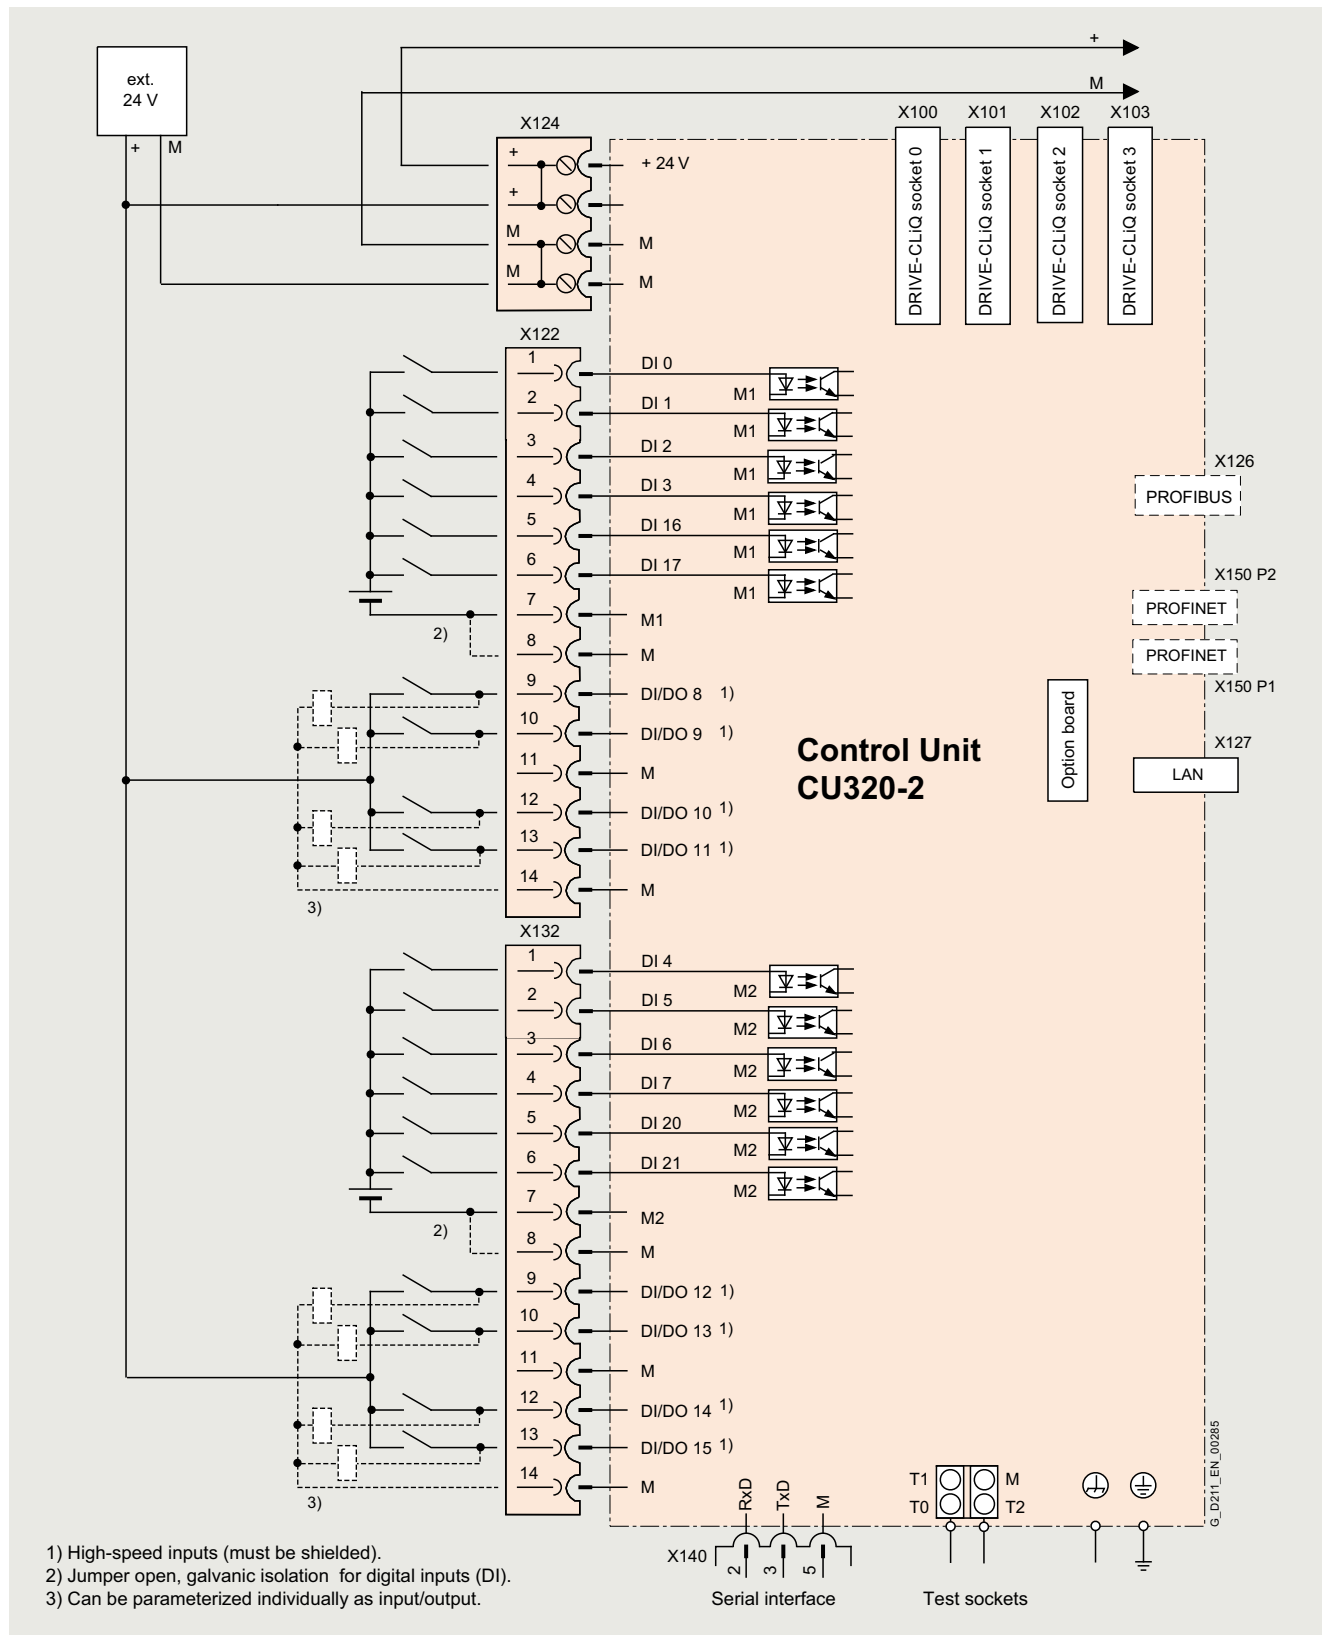

The CU320-2 Control Unit and other connected components are commissioned and diagnosed with the SINAMICS Startdrive or STARTER commissioning tool with the installed SINAMICS Support Package or the AOP30 Advanced Operator Panel.

To operate the CU320-2 PN Control Unit, a CompactFlash card with firmware V4.4 or higher is required.

To operate the CU320-2 DP Control Unit, a CompactFlash card with firmware V4.3 or higher is required.

¹⁾ For more information, see <https://support.industry.siemens.com/cs/document/104020669>

Overview

The CompactFlash card contains the firmware and set parameters. The CompactFlash card is inserted into the appropriate slot of the CU320-2 Control Unit.

Design

A CU320-2 Control Unit can perform the communication, open-loop and closed-loop control functions for several power units. The computing capacity requirement increases in proportion to the number of power units and system components and in relation to the dynamic response required. The computing capacity requirement and utilization of the CU320-2 Control Unit can be calculated with the SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool). The full computing capacity of the CU320-2 Control Unit is only available on systems with performance enhancement. For the CU320-2 Control Unit, the performance enhancement is necessary from the 4th axis.

In addition to the firmware, the CompactFlash card also contains licensing codes which are required to enable firmware options.

In addition to the Article No., the following firmware options can currently be ordered with or without performance enhancement:

- Safety Integrated Extended Functions, order code per axis **F01** to **F06**
- Safety Integrated Advanced Functions, order code per axis **A01** to **A06**
- High output frequency, order code **J01**
- DCB Extension, order code **U01**

Converter cabinets with a Control Unit already contain the CompactFlash card with the current firmware. The firmware options can be added as cabinet options.

The firmware options can also be enabled subsequently. You require the serial number of the CompactFlash card and the article number of the firmware option to be enabled. With this information, you can purchase the associated license code from a license database and enable the firmware option. The license code is only valid for the CompactFlash card declared and cannot be transferred to other CompactFlash cards.

Subsequent licensing is possible in the internet via the web license manager by generating a license key:
www.siemens.com/automation/license

More information

A firmware version as of V4.3 is required for the CU320-2 Control Unit.

The current firmware version at the time of publication of this catalog is Firmware V5.2 SP3.

The electronic Certificate of License is the paperless delivery form for runtime options for SINAMICS and contains information about the type of rights of use purchased for the software. The electronic Certificate of License is supplied as a PDF file via the Online Software Delivery Portal (OSD). This enables quick notification with a download link to the email address to be stated in the order.

The Web License Manager can also be called from the OSD to assign the runtime license to a memory card.

In this case, the data of the electronic Certificate of License are automatically transferred to the Web License Manager and do not have to be entered manually.

This ensures quick availability of the license key and simple and secure handling and management of the license certificates.

You will find information on the OSD at:

<https://support.industry.siemens.com/cs/ww/en/view/109759444>

The Certificates of License are stored in directory "KEYS".

¹⁾ For more information, see <https://support.industry.siemens.com/cs/document/104020669>

²⁾ For more information, see <https://support.industry.siemens.com/cs/document/109781647>

Overview

CU310-2 PN and CU310-2 DP Control Units

CU310-2 PN Control Unit with BOP20 Basic Operator Panel

The CU310-2 Control Unit for the communication and open-loop/closed-loop control functions of a Power Module is combined with the Power Module ¹⁾ to create a powerful single drive. A PROFINET (PN) variant and a PROFIBUS (DP) variant are available for fieldbus communication.

Design

CU310-2 Control Units feature the following interfaces as standard:

- Fieldbus interface
 - CU310-2 PN: 1 PROFINET interface with 2 ports (RJ45 sockets) with PROFIdrive V4 profile
 - CU310-2 DP: 1 PROFIBUS interface with PROFIdrive V4 profile
- 1 DRIVE-CLiQ socket to allow communication with other DRIVE-CLiQ nodes
- 1 encoder evaluation for evaluating the following encoder signals
 - Incremental encoder TTL/HTL
 - SSI encoders without incremental signals
- 6 parameterizable digital inputs (isolated) or alternatively 3 parameterizable, fail-safe digital inputs (isolated, can be used with firmware V4.5 and higher). The fail-safe digital inputs can be routed, i.e. they can be routed via PROFIsafe to a higher-level controller.
- 5 parameterizable digital inputs (isolated)
- 1 digital output (isolated) or alternatively 1 parameterizable, fail-safe digital output (isolated, can be used with firmware V4.5 or higher)
- 8 parameterizable bidirectional digital inputs/digital outputs (non-isolated) ²⁾
- 1 analog input, either ± 10 V (resolution 12 bits + sign) or ± 20 mA (11 bits + sign)
- 1 Ethernet interface (RJ45 socket) for commissioning and diagnostics
- 1 serial RS232 interface
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17 and higher)
- 3 measuring sockets and one reference ground for commissioning support
- 1 slot for the CompactFlash card on which firmware and parameters are stored
- 1 PM-IF interface for communication with Power Modules in blocksize format
- 1 interface to the BOP20 Basic Operator Panel
- 1 PE/protective conductor connection

The status of the CU310-2 Control Unit is indicated via multi-color LEDs.

A BOP20 Basic Operator Panel can also be snapped directly onto the CU310-2 Control Unit for diagnostic procedures.

As the firmware and parameter settings are stored on a plug-in CompactFlash card, the Control Unit can be changed without the need for software tools.

¹⁾ for PM240-2 Power Modules, usable with firmware V4.8 or later

²⁾ A 24-V supply voltage must be connected to terminal X124 for the digital outputs to be used.

<https://sieportal.siemens.com>

Integration

The CU310-2 Control Unit drives Power Modules in blocksize format via the PM-IF interface. DRIVE-CLiQ motors or Sensor Modules (SMC) can also be connected to the integrated DRIVE-CLiQ socket to permit the operation of motors without a DRIVE-CLiQ interface.

Power Modules in chassis format are controlled by the CU310-2 Control Unit directly via the DRIVE-CLiQ interface. Sensor Modules and Terminal Modules must be connected to the free DRIVE-CLiQ sockets of the Chassis Power Module.

With the BOP20 Basic Operator Panel, parameters can be changed directly on the device. The BOP20 Basic Operator Panel can also be snapped onto the CU310-2 Control Unit during operation to perform diagnostics.

The CU310-2 Control Unit and other connected components are commissioned and diagnosed with the SINAMICS Startdrive or STARTER commissioning tool.

A CU310-2 DP Control Unit communicates with the higher-level control system using PROFIBUS and the PROFIdrive V4 profile.

A CU310-2 PN Control Unit communicates with the higher-level control system using PROFINET IO and the PROFIdrive V4 profile.

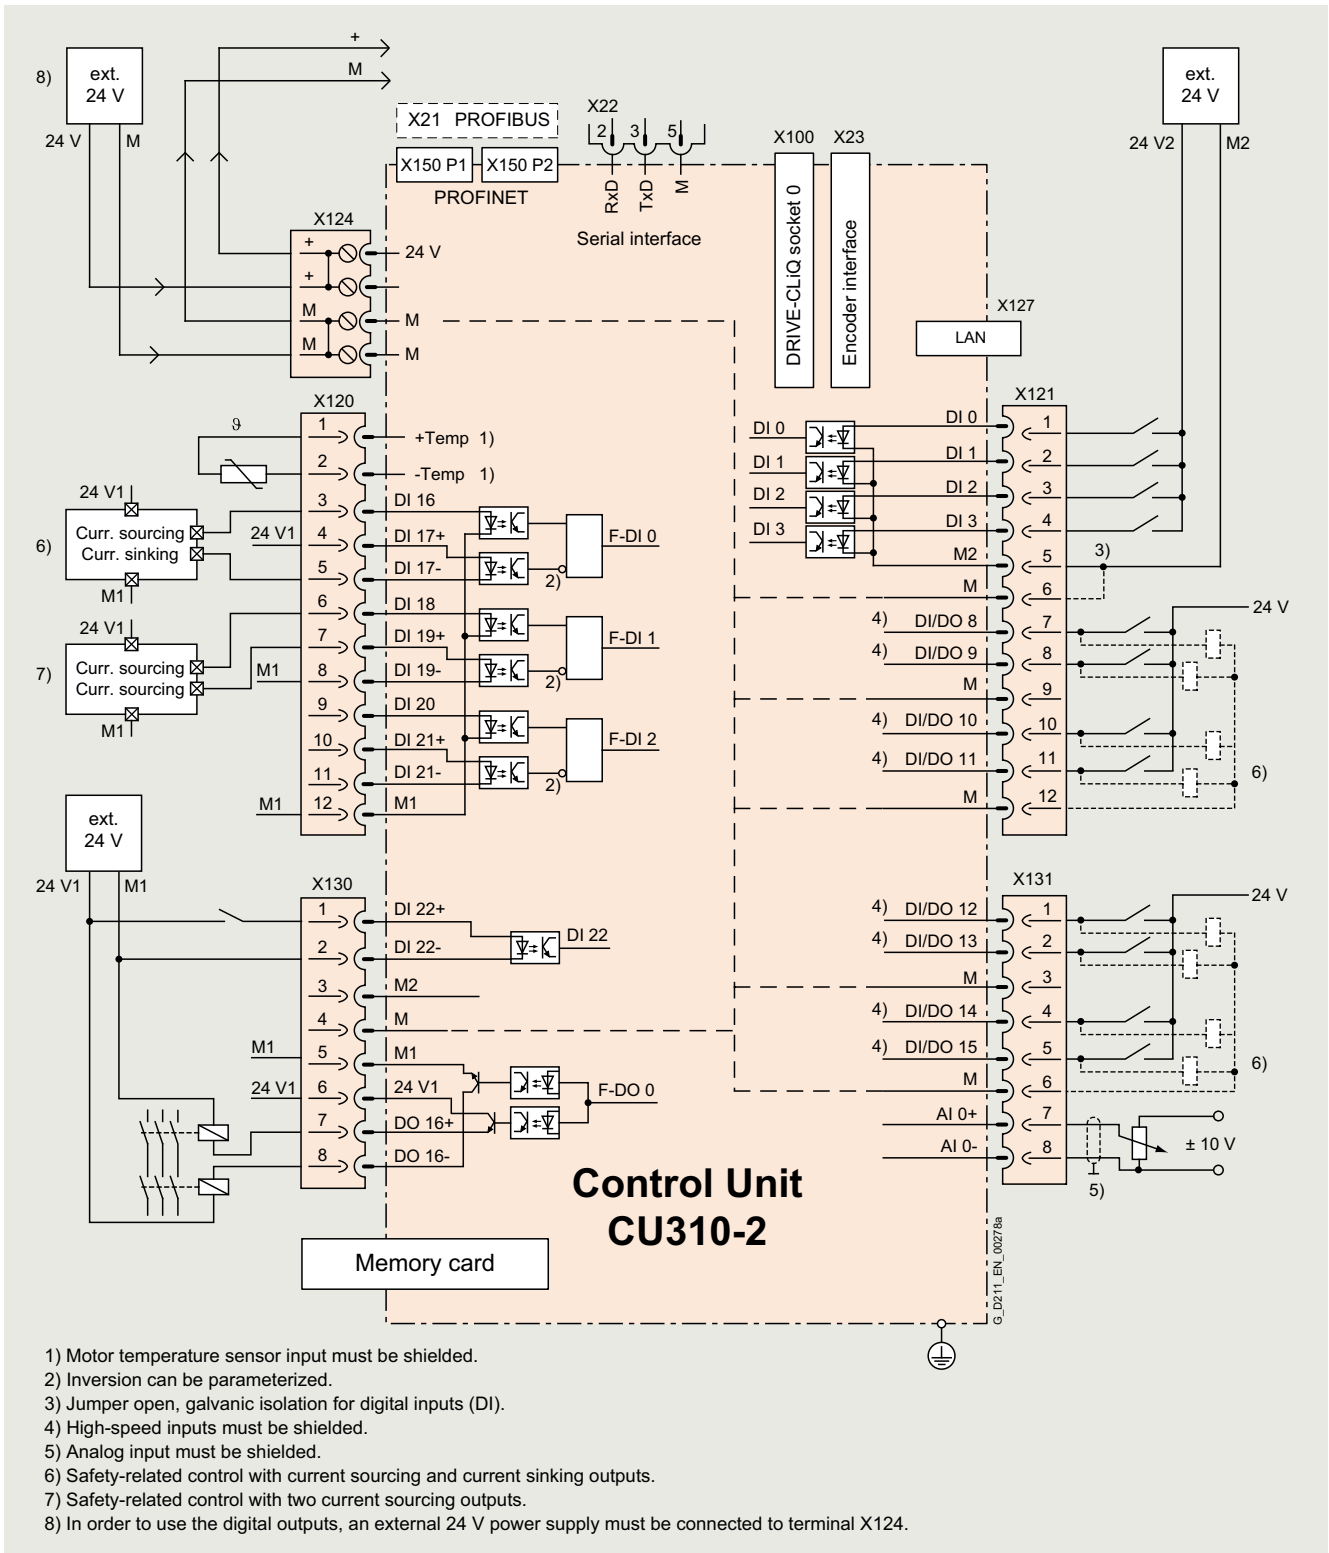

The SINAMICS S120 drive system with the CU310-2 PN Control Unit then assumes the function of a PROFINET IO device and can perform the following functions:

- PROFINET IO device
- 100 Mbps full duplex
- Supports real-time classes of PROFINET IO:
 - RT (Real-Time)
 - IRT (isochronous real-time), minimum send clock 250 µs
- Connects to controls as PROFINET IO devices using PROFIdrive compliant with Specification V4
- Standard TCP/IP communication for engineering with the SINAMICS Startdrive or STARTER commissioning tool
- Integrated 2-port switch with two RJ45 sockets based on the ERTEC ASIC. The optimum topology (line, star, tree) can therefore be configured without additional external switches.

A 24 V supply voltage must be connected to terminal X124 for the digital outputs to be used. To operate the CU310-2 Control Unit, a CompactFlash card with firmware V4.4 or higher is required.

¹⁾ For more information, see <https://support.industry.siemens.com/cs/document/104020669>

Integration

SINAMICS S120 drive system

Control Units

CU310-2 Control Unit

Technical specifications

	CU310-2 Control Unit
PROFINET	6SL3040-1LA01-0AA0
PROFIBUS	6SL3040-1LA00-0AA0
Power requirement, max. At 24 V DC, without taking into account the digital outputs and DRIVE-CLiQ supply	0.35 A for CU310-2 Control Unit + 0.5 A for Power Module
Conductor cross-section, max.	2.5 mm ²
Fuse protection, max.	20 A
Digital inputs	in accordance with IEC 61131-2 type 1
	5 isolated digital inputs
	8 bidirectional non-isolated digital inputs/digital outputs
	3 parameterizable, fail-safe digital inputs (isolated) or alternatively
	6 parameterizable digital inputs (isolated)
	-3 ... +30 V
• Voltage	-3 ... +5 V
• Low level (an open digital input is interpreted as "low")	15 ... 30 V
• High level	3.5 mA
• Current consumption at 24 V DC, typ.	
• Delay time of digital inputs ¹⁾ , approx.	
- L → H	50 μs
- H → L	150 μs
• Delay time of high-speed digital inputs ¹⁾ , approx. (high-speed digital inputs can be used for position detection)	
- L → H	5 μs
- H → L	50 μs
• Conductor cross-section, max.	1.5 mm ²
Digital outputs (continuously short-circuit proof)	8 bidirectional non-isolated digital inputs/digital outputs
• Voltage	24 V DC
• Load current per digital output ²⁾ , max.	500 mA
• Delay time ¹⁾ , typ./max.	
- L → H	150 μs/400 μs
- H → L	75 μs/100 μs
• Conductor cross-section, max.	1.5 mm ²
Analog input	1 analog input for current or voltage input, switchable
• Common mode range	±12 V
• As voltage input	-10 ... +10 V; $R_i > 100 \Omega$
	Resolution: 12 bits + sign (referred to the maximum range that can be resolved -11 ... +11 V)
	-20 ... +20 mA; $R_i > 250 \Omega$
	Resolution: 11 bits + sign (referred to -22 ... +22 mA)
	Max. range that can be resolved: -44 ... +44 mA
• As current input	
Encoder evaluation	• Incremental encoder TTL/HTL
	• SSI encoders without incremental signals
• Input current range TTL/HTL	2 ... 10 mA (typ. 5 mA)
• Encoder supply	24 V DC / 0.35 A or 5 V DC / 0.35 A
• Encoder frequency, max.	300 kHz
• SSI baud rate	100 ... 1000 kBaud
• Resolution absolute position SSI	30 bits
• Cable length, max.	
- TTL encoder	100 m / 328 ft (only bipolar signals permitted) ³⁾
- HTL encoder	100 m (328 ft) for unipolar signals 300 m (984 ft) for bipolar signals ³⁾
- SSI encoder	100 m (328 ft)
Power loss	<20 W
PE connection	M5 screw
Dimensions	
• Width	73 mm (2.87 in)
• Height	
- CU310-2 PN	191 mm (7.52 in)
- CU310-2 DP	187 mm (7.36 in)
• Depth	75 mm (2.95 in)
Weight, approx.	0.95 kg (2.09 lb)
Certificate of suitability	cULus

¹⁾ The specified delay times refer to the hardware. The actual reaction time depends on the time slice in which the digital input or output is processed.

²⁾ In order to use the digital outputs, an external 24 V power supply must be connected to terminal X124.

³⁾ Signal cables twisted in pairs and shielded.

Overview

The CompactFlash card contains the firmware and set parameters. The CompactFlash card is plugged into the appropriate slot on the CU310-2 Control Unit.

Design

A CU310-2 Control Unit can perform the communication, open-loop and closed-loop control functions for one Power Module. The performance enhancement is not required in this case.

In addition to the firmware, the CompactFlash card also contains licensing codes which are required to enable firmware options.

In addition to the Article No., the following firmware options can currently be ordered:

- Safety Integrated Extended Functions, order code **F01**
- Safety Integrated Advanced Functions, order code **A01**
- High output frequency, order code **J01**
- DCB Extension, order code **U01**

The firmware options can also be enabled subsequently. You will need the serial number of the CompactFlash card and the Article No. of the firmware option to be enabled. With this information, you can purchase the associated license code from a license database and enable the firmware option. The license code is only valid for the CompactFlash card declared and cannot be transferred to other CompactFlash cards.

Subsequent licensing is possible in the internet via the web license manager by generating a license key:
www.siemens.com/automation/license

The electronic Certificate of License is the paperless delivery form for runtime options for SINAMICS and contains information about the type of rights of use purchased for the software. The electronic Certificate of License is supplied as a PDF file via the Online Software Delivery Portal (OSD).

This enables quick notification with a download link to the email address to be stated in the order.

The Web License Manager can also be called from the OSD to assign the runtime license to a memory card.

In this case, the data of the electronic Certificate of License are automatically transferred to the Web License Manager and do not have to be entered manually.

This ensures quick availability of the license key and simple and secure handling and management of the license certificates.

You will find information on the OSD at:

<https://support.industry.siemens.com/cs/ww/en/view/109759444>

The Certificates of License are stored in directory "KEYS".

SINAMICS S120 drive system

Control Units

CUA31 Control Unit Adapter

Overview

CUA31 Control Unit Adapter

The CUA31 Control Unit Adapter converts the PM-IF interface to a DRIVE-CLiQ interface. The CUA31 Control Unit Adapter allows Power Modules in blocksize format to operate on a Control Unit, e.g. as a single axis next to a multi-axis drive. In this case, the CUA31 Control Unit Adapter should be the last device in the DRIVE-CLiQ link from the viewpoint of the Control Unit.

Design

The CUA31 Control Unit Adapter features the following connections and interfaces:

- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 3 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 Safe Stop input

The status of the CUA31 Control Unit Adapter is indicated via multi-color LEDs.

Selection and ordering data

Description	Article No.
CUA31 Control Unit Adapter Without DRIVE-CLiQ cable	6SL3040-0PA00-0AA1
Accessories for re-ordering	
Dust protection blanking plugs (50 units) For DRIVE-CLiQ port	6SL3066-4CA00-0AA0

Technical specifications

	CUA31 Control Unit Adapter 6SL3040-0PA00-0AA1
Current requirement, max. at 24 V DC without DRIVE-CLiQ supply • Conductor cross-section, max.	0.15 A for CUA31 + max. 0.5 A for PM240-2 Power Module 2.5 mm ²
Power loss, max.	2.4 W
PE connection	M4 screw
Dimensions • Width • Height • Depth	73 mm (2.87 in) 165.8 mm (6.53 in) 37.3 mm (1.47 in)
Weight, approx.	0.31 kg (0.68 lb)
Certificate of suitability	cULus

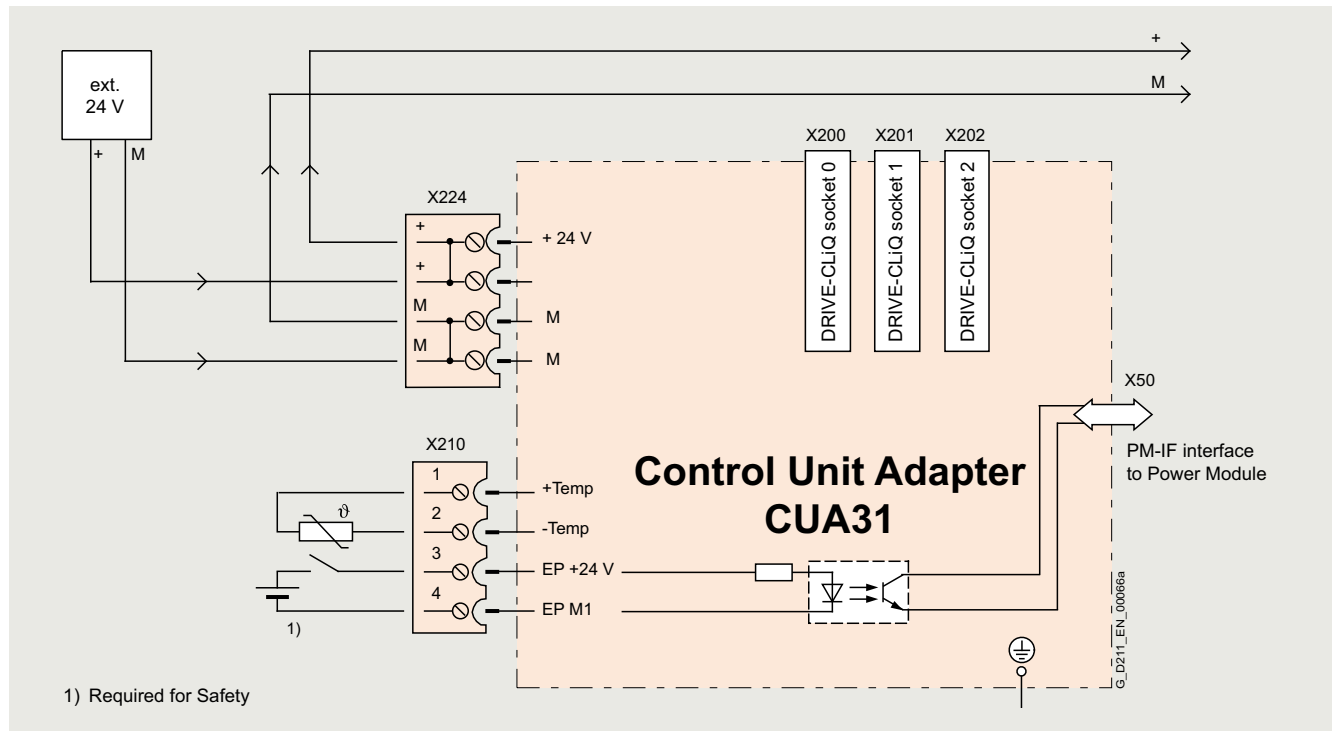

Integration

The CUA31 Control Unit Adapter is snapped onto the Power Module in blocksize format and communicates with a CU320-2 Control Unit, a SINUMERIK Control Unit or a SIMOTION D Control Unit via a DRIVE-CLiQ connection.

The CUA31 Control Unit Adapter's power is supplied by the Power Module via the PM-IF interface. If the CUA31 Control Unit

Adapter needs to communicate when the Power Module is switched off, it must be supplied with 24 V DC from an external source.

Other DRIVE-CLiQ devices such as Sensor Modules or Terminal Modules can be connected to the CUA31 Control Unit Adapter.

SINAMICS S120 drive system

Control Units

CUA32 Control Unit Adapter

Overview

CUA32 Control Unit Adapter

The CUA32 Control Unit Adapter converts the PM-IF interface to a DRIVE-CLiQ interface. The CUA32 Control Unit Adapter is also equipped with an integral encoder evaluation device which can be configured for an HTL/TTL or SSI encoder. The CUA32 Control Unit Adapter allows Power Modules in blocksize format to operate on a Control Unit, e.g. as a single axis next to a multi-axis drive. In this case, the CUA32 Control Unit Adapter should be the last device in the DRIVE-CLiQ link from the viewpoint of the Control Unit.

Design

The CUA32 Control Unit Adapter features the following connections and interfaces:

- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 3 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply via the 24 V DC power supply connector
- 1 Safe Stop input
- 1 encoder evaluator for
 - Incremental encoder TTL/HTL
 - SSI encoder without incremental signals

The status of the CUA32 Control Unit Adapter is indicated via multi-color LEDs.

Active Line Modules in booksize format

Overview

Active Line Module in booksize format

Active Line Modules are self-commutated infeed/regenerative feedback units (with IGBTs in the infeed and regenerative feedback directions) that generate a controlled DC link voltage. This means that the connected Motor Modules are decoupled from the line voltage. Line voltage fluctuations within the permissible supply tolerances have no effect on the motor voltage. Active Line Modules are designed for connection to grounded star (TN, TT) and non-grounded symmetrical (IT) supply systems.

The DC link is pre-charged via integrated precharging resistors.

In order to operate an Active Line Module, an associated Active Interface Module is required.

Design

The Active Line Modules in booksize format feature the following connections and interfaces as standard:

- 1 power connection via screw-type terminals
- 1 connection for the 24 V DC electronics power supply via the 24 V terminal adapter included in the scope of supply
- 1 DC link connection via integrated DC link busbars
- 3 DRIVE-CLiQ sockets
- 2 PE (protective earth) connections
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)

The status of the Active Line Modules is indicated via two multi-color LEDs.

For the Active Line Module with a width of 100 mm (3.94 in), the shield of the power connection cable can be connected to the integrated shield connection plate by means of a shield connection clamp or hose clip, e.g. Weidmüller type KLBÜ CO 4. The shield connection clamp must not be used as a strain relief mechanism. Shield connection sets are available for the 150 mm (5.91 in), 200 mm (7.87 in) and 300 mm (11.81 in) wide Active Line Modules.

The signal cable shield can be connected to the Active Line Module by means of a shield connection clamp, e.g. Weidmüller type KLBÜ 3-8 SC.

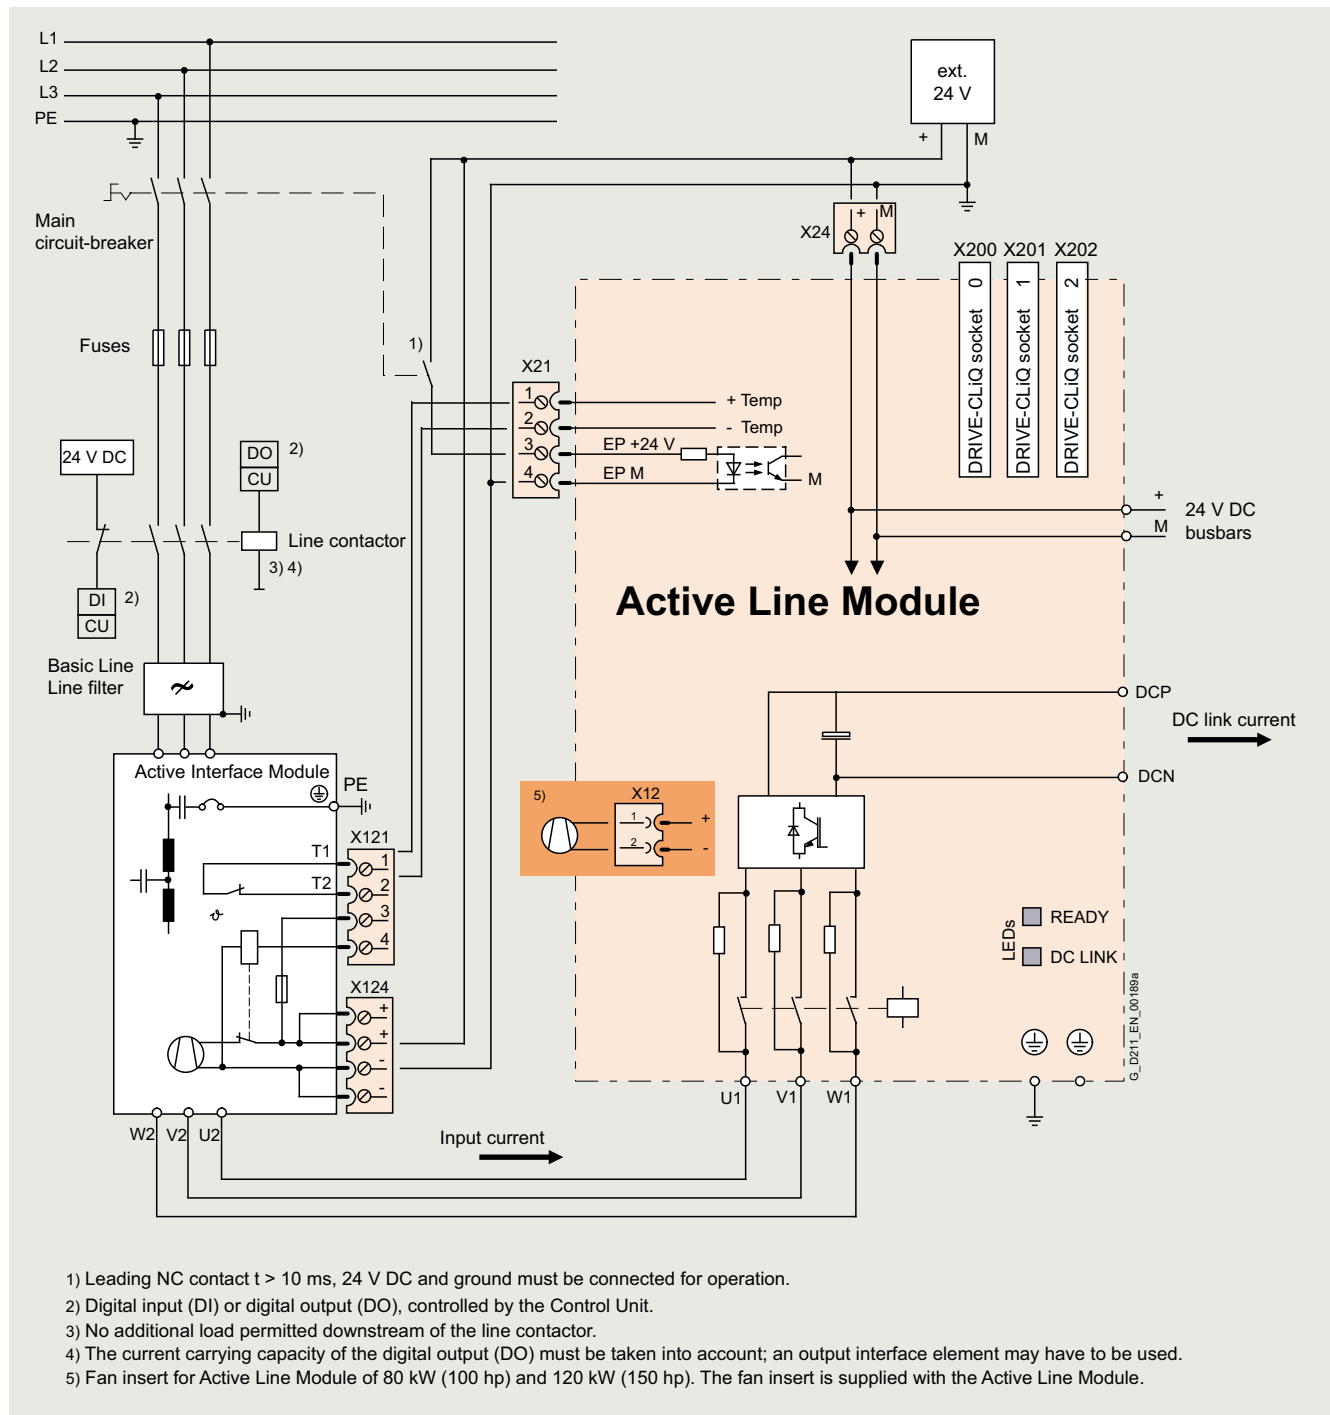

The scope of supply of the Active Line Modules includes:

- DRIVE-CLiQ cable for connection to the adjacent Control Unit on the left for drive control, length 0.11 m (4.33 in)
- DRIVE-CLiQ cable (length depends on Active Line Module width) for connection to the adjacent Motor Module, length = width of Active Line Module + 0.11 m (4.33 in)
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21 for digital inputs
- Fan insert for Active Line Modules of 80 kW (100 hp) and 120 kW (150 hp) (the voltage for the fan unit is supplied by the Active Line Module)
- 1 set of warning labels in 36 languages

Integration

The Active Line Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl
- SINUMERIK ONE
- SINUMERIK MC
- SIMOTION D

Overview

Active Interface Modules for 16 kW, 36 kW, 55 kW and 80 kW/120 kW

The Active Interface Modules combine with the Active Line Modules to form a functional unit and are required for operation of the associated Active Line Module. The Active Interface Modules contain a Clean Power Filter and basic interference suppression to ensure compliance with Category C3 in accordance with EN 61800-3 with respect to emitted interference.

The Clean Power Filter protects the mains connection from switching-frequency harmonics. The drive system therefore draws a sinusoidal current from the supply and causes almost no harmonics.

The Active Line Modules in combination with the Active Interface Module can also be operated with supply systems with an isolated star point (IT supply systems).

Design

The scope of supply of the Active Interface Modules includes:

- Connector X21 for temperature evaluation and fan control
- Connector X24 for connecting the 24 V supply for the integrated fan
- DRIVE-CLiQ cable for connecting the Control Unit to the Active Line Module; length of the DRIVE-CLiQ cable = width of the Active Interface Module + 0.11 m (4.33 in)
- Shield connection plate for Active Interface Module 16 kW
- 1 set of warning signs in 36 languages

SINAMICS S120 drive system

Booksize format

Active Interface Modules in booksize format

Integration

Connection example for Active Interface Module

The Active Interface Module requires a 24 V DC supply for operation of the integral fan. The fan rotates after the 24 V DC supply is applied and can, if necessary (service life, noise), be disconnected from the Control Unit over the "Fan off" input. It is only permitted to switch off the fan when the infeed of the drive system is not operating, otherwise the Active Interface Module will overheat.

The thermostatic switch installed in the Active Interface Module is evaluated over the connected Active Line Module.

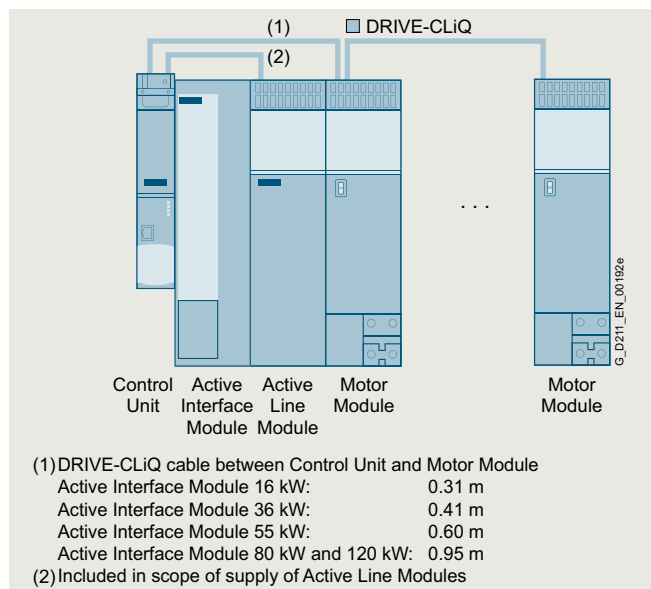

The power cables between the Active Interface Module and Active Line Module must be shielded if limit values for interference suppression are to be complied with. The cable shield can be routed over the shield connection plate (option) to the Active Interface Module or Active Line Module.

Depending on the position of the Active Interface Module in the drive system, additional DRIVE-CLiQ cables may be required. If it is separately installed next to the left side of the Control Unit and Active Line Module, no additional DRIVE-CLiQ cables are required. If the Active Interface Module is placed between the Control Unit and Active Line Module, the DRIVE-CLiQ cables supplied with the Active Line Modules are suitable for setting up a line topology, i.e. Active Line Module and all Motor Modules in series on one DRIVE-CLiQ line. If the Active Line Module is connected over a separate DRIVE-CLiQ line, the DRIVE-CLiQ cable marked with (1) must be ordered. A DRIVE-CLiQ cable suitable for connection (2) is included in the scope of supply of the Active Line Module.

For DRIVE-CLiQ cables for different configurations, see section MOTION-CONNECT connection systems.

Overview

In conjunction with Active Interface Modules and a logically consistent configuration of the plant or system, line filters limit the interference conducted by the power modules to the limit values of Category C2 acc. to EN 61800-3. Line filters are only suitable for direct connection to TN line systems.

Note:

According to product standard EN 61800-3, RFI suppression commensurate with the relevant rated conditions must be provided and is a legal requirement in the EU (EMC Directive). Line filters and line reactors are required for this purpose. The use of line filters of other makes can lead to limit value violations, resonance, overvoltages and irreparable damage to motors or other equipment. The machine manufacturer must provide verification that the machinery to be operated with the drive products and the installed suppression elements, e.g. line filters, are CE-EMC-compliant.

Optional Basic Line Filters that are coordinated with the power ranges in booksize format are available for the SINAMICS S120 drive system.

Basic Line Filter

Basic Line Filter

With the Basic Line Filters in combination with the Active Interface Modules, the limits for the interference voltages can be extended to Category C2 (EN 61800-3) or, retaining Category C3, longer total cable lengths are possible for the configuration.

Basic Line Filters are used on machines on which conducted interference emissions in the frequency range between 150 kHz and 30 MHz need to be damped in accordance with the requirements of CE-EMC legislation.

Recommended line-side components for Active Line Modules

Selection and ordering data

Suitable line-side power components are assigned depending on the power rating of the Active Line Modules.

The tables below list recommended components.

Additional information about the line-side power components can be found in Catalogs LV 10 and IC 10 as well as SiePortal.

Overview

Smart Line Module in booksize compact format

Smart Line Modules are stall-protected, line-commutated infeed/regenerative feedback units (diode bridge for incoming supply; stall-protected, line-commutated regenerative feedback via IGBTs) with 100 % continuous regenerative feedback power. The regenerative capability of the modules can be deactivated by means of parameterization. Smart Line Modules are designed for connection to grounded TN/TT systems and non-grounded IT systems.

The DC link is pre-charged via integrated precharging resistors.

The associated line reactor is required for operating a Smart Line Module.

Design

The Smart Line Modules in booksize compact format feature the following connections and interfaces as standard:

- 1 power connection via screw-type terminals
- 1 connection for the 24 V DC electronics power supply via the 24 V terminal adapter included in the scope of supply
- 1 DC link connection via integrated DC link busbars
- 2 PE (protective earth) connections
- 3 DRIVE-CLiQ sockets

The status of the Smart Line Modules is indicated via two multi-color LEDs.

The signal cable shield can be connected to the Line Module by means of a shield connection clamp, e.g. Weidmüller type KLBÜ 3-8 SC.

The scope of supply of the Smart Line Modules includes:

- DRIVE-CLiQ cable for connection to the adjacent Control Unit on the left for drive control, length 0.11 m (4.33 in)
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- DRIVE-CLiQ cable for connecting to the adjacent Motor Module, length 0.21 m (8.3 in)
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21 for digital inputs/outputs
- 1 set of warning signs in 36 languages
- 1 heat conducting foil

Smart Line Modules in booksize compact format

Integration

The Smart Line Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SIMOTION D

- 1) Digital input (DI) or digital output (DO), controlled via the Control Unit.
- 2) No additional load permitted downstream of the line contactor.
- 3) The current carrying capacity of the digital output (DO) must be observed; an output interface may have to be taken into account.

Overview

Smart Line Modules are stall-protected, line-commutated in-feed/regenerative feedback units (diode bridge for incoming supply; stall-protected, line-commutated regenerative feedback via IGBTs) with 100 % continuous regenerative feedback power. The regenerative feedback capability of the modules can be deactivated by means of a digital input (Smart Line Modules 5 kW and 10 kW) or by means of parameterization (Smart Line Modules 36 kW and 55 kW). Smart Line Modules are designed for connection to grounded TN/TT systems and non-grounded IT systems.

The DC link is pre-charged via integrated precharging resistors.

The associated line reactor is required for operating a Smart Line Module.

Design

The Smart Line Modules in booksize format feature the following connections and interfaces as standard:

- 1 power connection via screw-type terminals
- 1 connection for the 24 V DC electronics power supply via the 24 V terminal adapter included in the scope of supply
- 1 DC link connection via integrated DC link busbars
- 2 PE (protective earth) connections
- 2 digital inputs (only for Smart Line Modules 5 kW and 10 kW)
- 1 digital output (only for Smart Line Modules 5 kW and 10 kW)
- 3 DRIVE-CLiQ sockets (only for Smart Line Modules 36 kW and 55 kW)
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (only for Smart Line Modules 36 kW and 55 kW, Pt1000 can be used from firmware V4.7 HF17)

The status of the Smart Line Modules is indicated via two multi-color LEDs.

The signal cable shield can be connected to the Line Module by means of a shield connection terminal, e.g. Weidmüller type KLBÜ 3-8 SC.

The scope of supply of the Smart Line Modules includes:

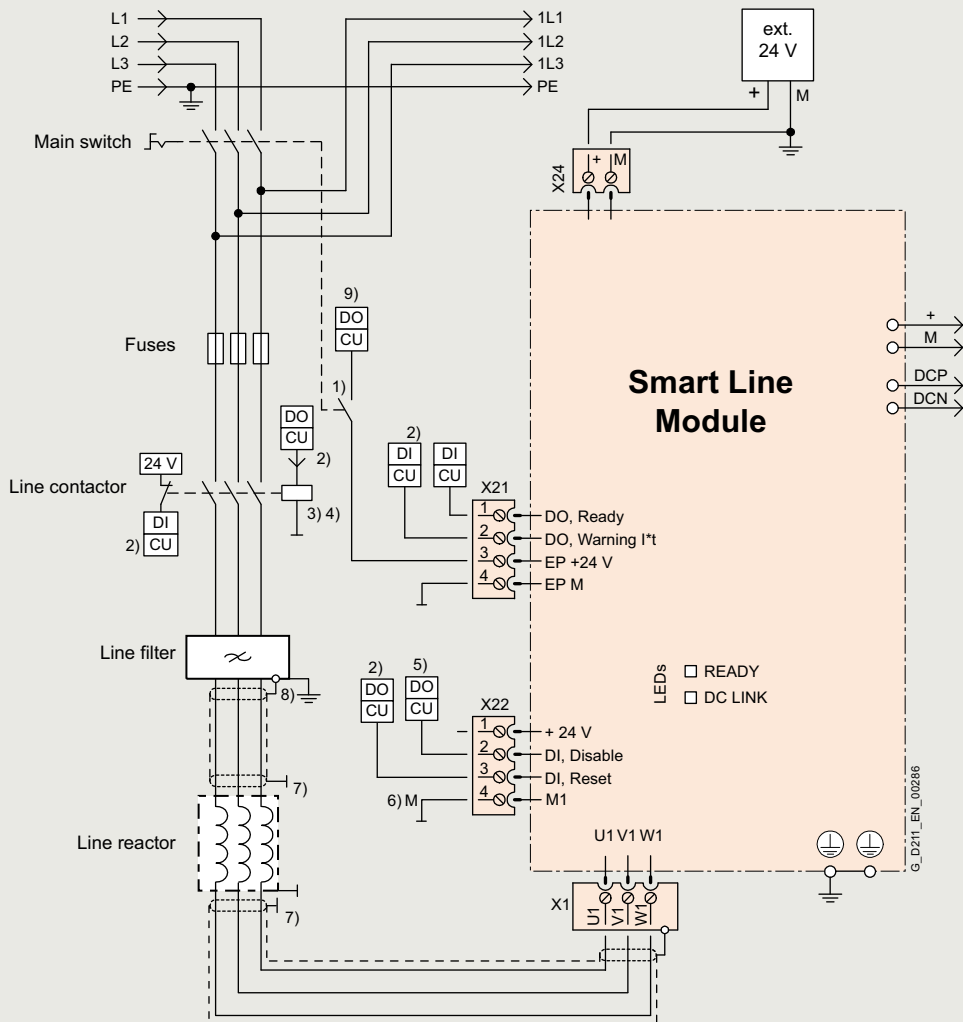

- DRIVE-CLiQ cable for connecting the module to the adjacent Control Unit on the left with the drive control, length 0.11 m (4.33 in) (only for Smart Line Modules 36 kW and 55 kW)
- 2 blanking plugs for closing unused DRIVE-CLiQ sockets (only for Smart Line Modules 36 kW and 55 kW)
- DRIVE-CLiQ cable (length depends on Smart Line Module width) for connection to the adjacent Motor Module, length = width of Smart Line Module + 0.11 m (4.33 in)
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21 for digital inputs and outputs
- Connector X22 for digital inputs and outputs (only for Smart Line Modules 5 kW and 10 kW)
- Connector X1 for line connection (only for Smart Line Modules 5 kW and 10 kW)
- 1 set of warning labels in 36 languages

SINAMICS S120 drive system

Booksize format

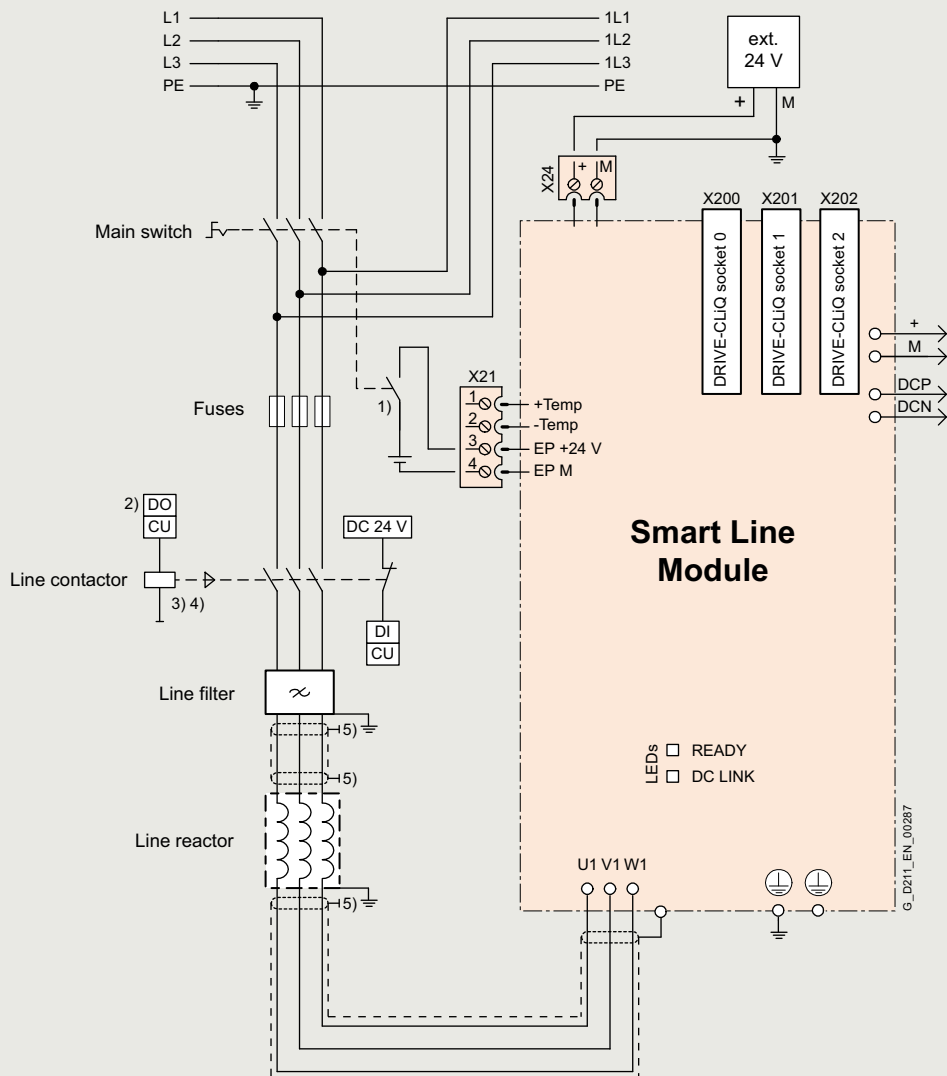

Smart Line Modules in booksize format

Integration

- 1) Leading NC contact $t > 10$ ms, 24 V DC and ground must be connected for operation.
- 2) DI/DO, controlled by the Control Unit.
- 3) No additional load permitted downstream of the line contactor.
- 4) The current carrying capacity of the digital output (DO) must be taken into account; an output interface element may have to be used.
- 5) Digital output (DO) = High means: feedback deactivated (a jumper can be inserted between X22 pins 1 and 2 for permanent deactivation).
- 6) X22 pin 4 must be connected to ground (ext. 24 V).
- 7) Contacting via mounting back panel or shield panels according to EMC Installation Guidelines.
- 8) 5 kW and 10 kW line filters via shield connection
- 9) Signal output to prevent backlash of the DC 24 V supply on the EP terminal.

Connection example of 5 kW and 10 kW Smart Line Modules in booksize format

Integration

- 1) Leading NC contact $t > 10$ ms.
- 2) DI/DO, controlled by the Control Unit.
- 3) No additional load permitted downstream of the line contactor.
- 4) The current carrying capacity of the digital output (DO) must be taken into account; an output interface element may have to be used.
- 5) Contacting via mounting back panel or shield panels according to EMC Installation Guidelines.

 - Reduction of the ambient temperature by 5 °C (9 °F) per 1000 m (3281 ft)
- >2000 ... 4000 m (6562 ... 13124 ft) above sea level
 - Operation on line supply systems with grounded neutral point, or
 - Operation with an isolating transformer with secondary grounded neutral point

Overview

Line reactors are required in order for the Smart Line Modules to function. The use of other makes of line reactor can lead to malfunctions or irreparable damage to equipment.

Line filters for Smart Line Modules

Overview

In plants with stringent EMC requirements, line filters work together with line reactors to restrict the conducted interference emanating from the Power Modules to the limit values of Class A1 as defined in EN 55011 and Category C2 as defined in EN 61800-3. Line filters are only suitable for direct connection to TN line systems.

Recommended line-side components for Smart Line Modules
Selection and ordering data

Suitable line-side power components are assigned depending on the power rating of the Smart Line Module.

The tables below list recommended components.

Additional information about the line-side power components can be found in Catalogs LV 10 and IC 10 as well as SiePortal.

Basic Line Modules in booksize format

Overview

Basic Line Modules in booksize format

Basic Line Modules are used for applications in which no energy is returned to the supply or where the energy exchange between motor and generator axes takes place in the DC link. Basic Line Modules can only feed energy from the supply system into the DC link, energy cannot be fed back into the supply system. The DC link voltage is directly derived from the 3-phase line voltage via a 6-pulse bridge circuit. Basic Line Modules are suitable for connection to grounded, star TN, TT and non-grounded symmetrical IT supply systems. The connected Motor Modules are pre-charged over the integrated pre-charging resistors (20 kW and 40 kW) or through activation of the thyristors (100 kW).

The 20 kW and 40 kW Basic Line Modules are equipped with an integrated brake chopper and can be directly used for applications in generating mode after connecting an external braking resistor.

A Braking Module is only required with a 100 kW Basic Line Module in generating mode.

Design

The Basic Line Modules in booksize format feature the following connections and interfaces as standard:

- 1 power connection
- 1 connection for the 24 V DC electronics power supply
- 1 DC link connection
- 3 DRIVE-CLiQ sockets
- 1 connection for braking resistor (20 kW (25 hp) and 40 kW (50 hp) Basic Line Modules only)
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)

The status of the Basic Line Modules is indicated via two multi-color LEDs.

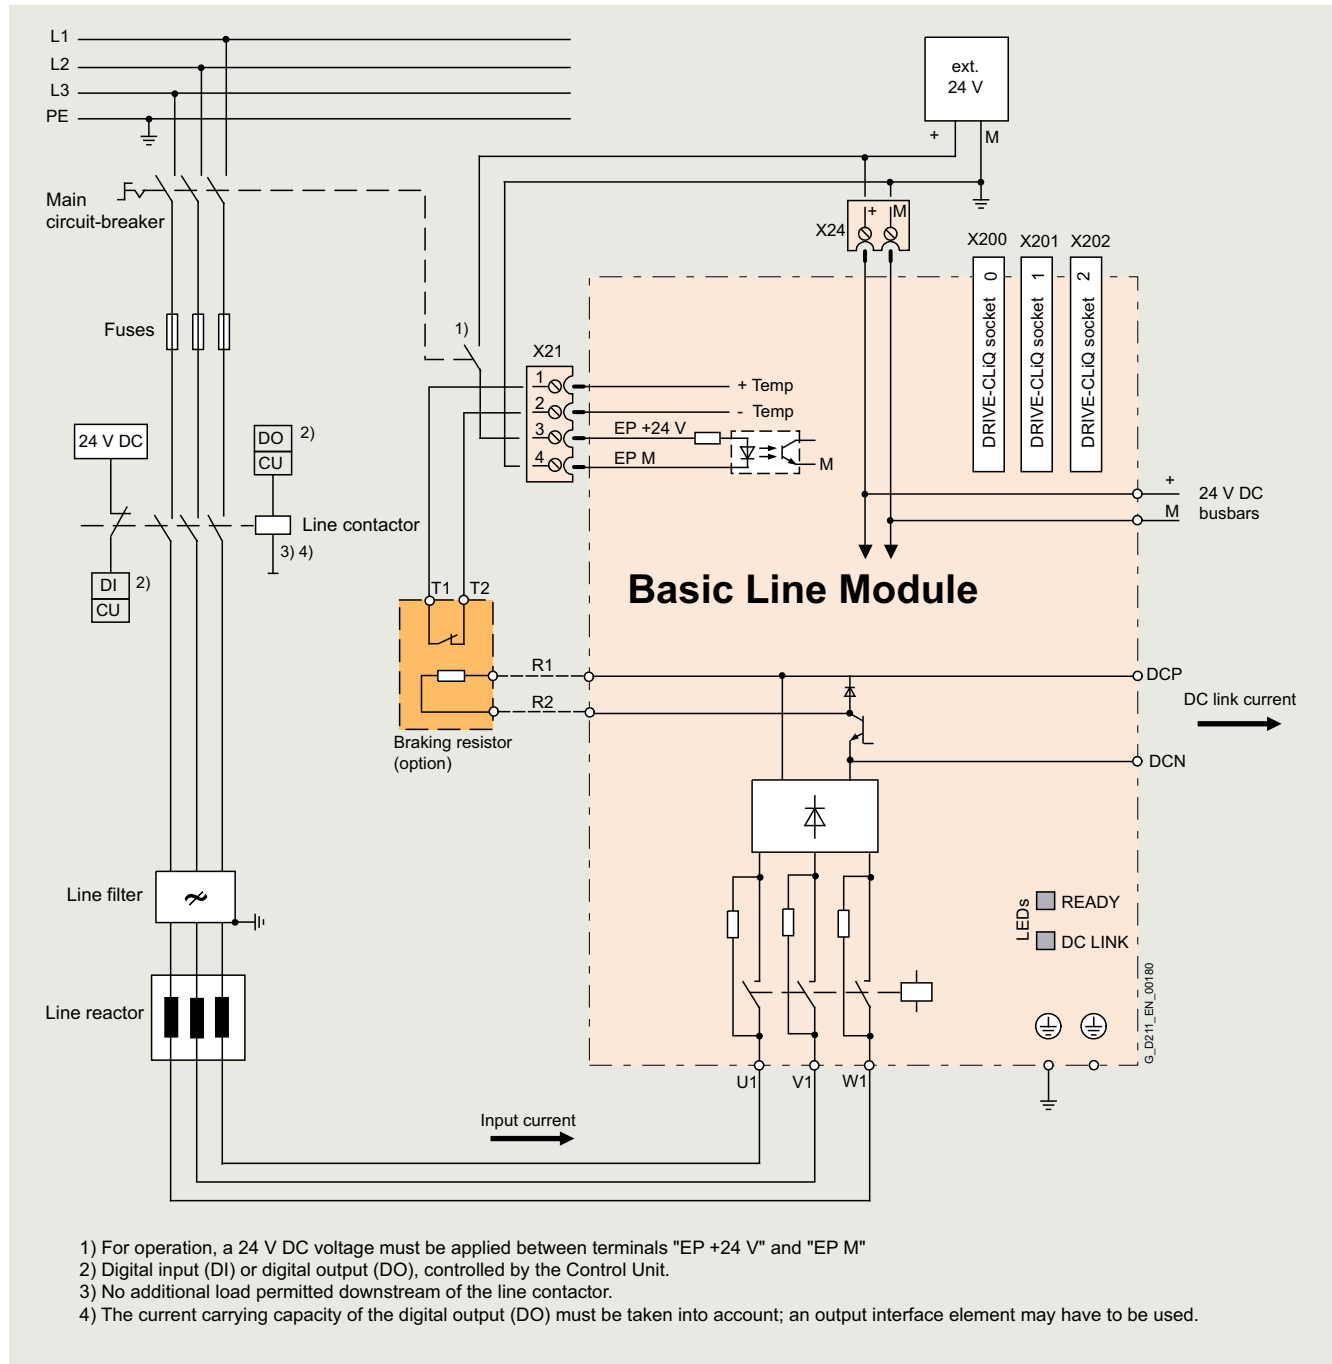

The scope of supply of the Basic Line Modules includes:

- DRIVE-CLiQ cable for connection to the adjacent Control Unit on the left for drive control, length 0.11 m (4.33 in)
- DRIVE-CLiQ cable (length depends on Basic Line Module width) for connection to the adjacent Motor Module, length = width of Basic Line Module + 0.11 m (4.33 in)
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- 1 set of warning labels in 36 languages

Integration

The Basic Line Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl
- SINUMERIK ONE
- SINUMERIK MC
- SIMOTION D

Connection example of 20 kW and 40 kW Basic Line Modules in booksize format

Note:

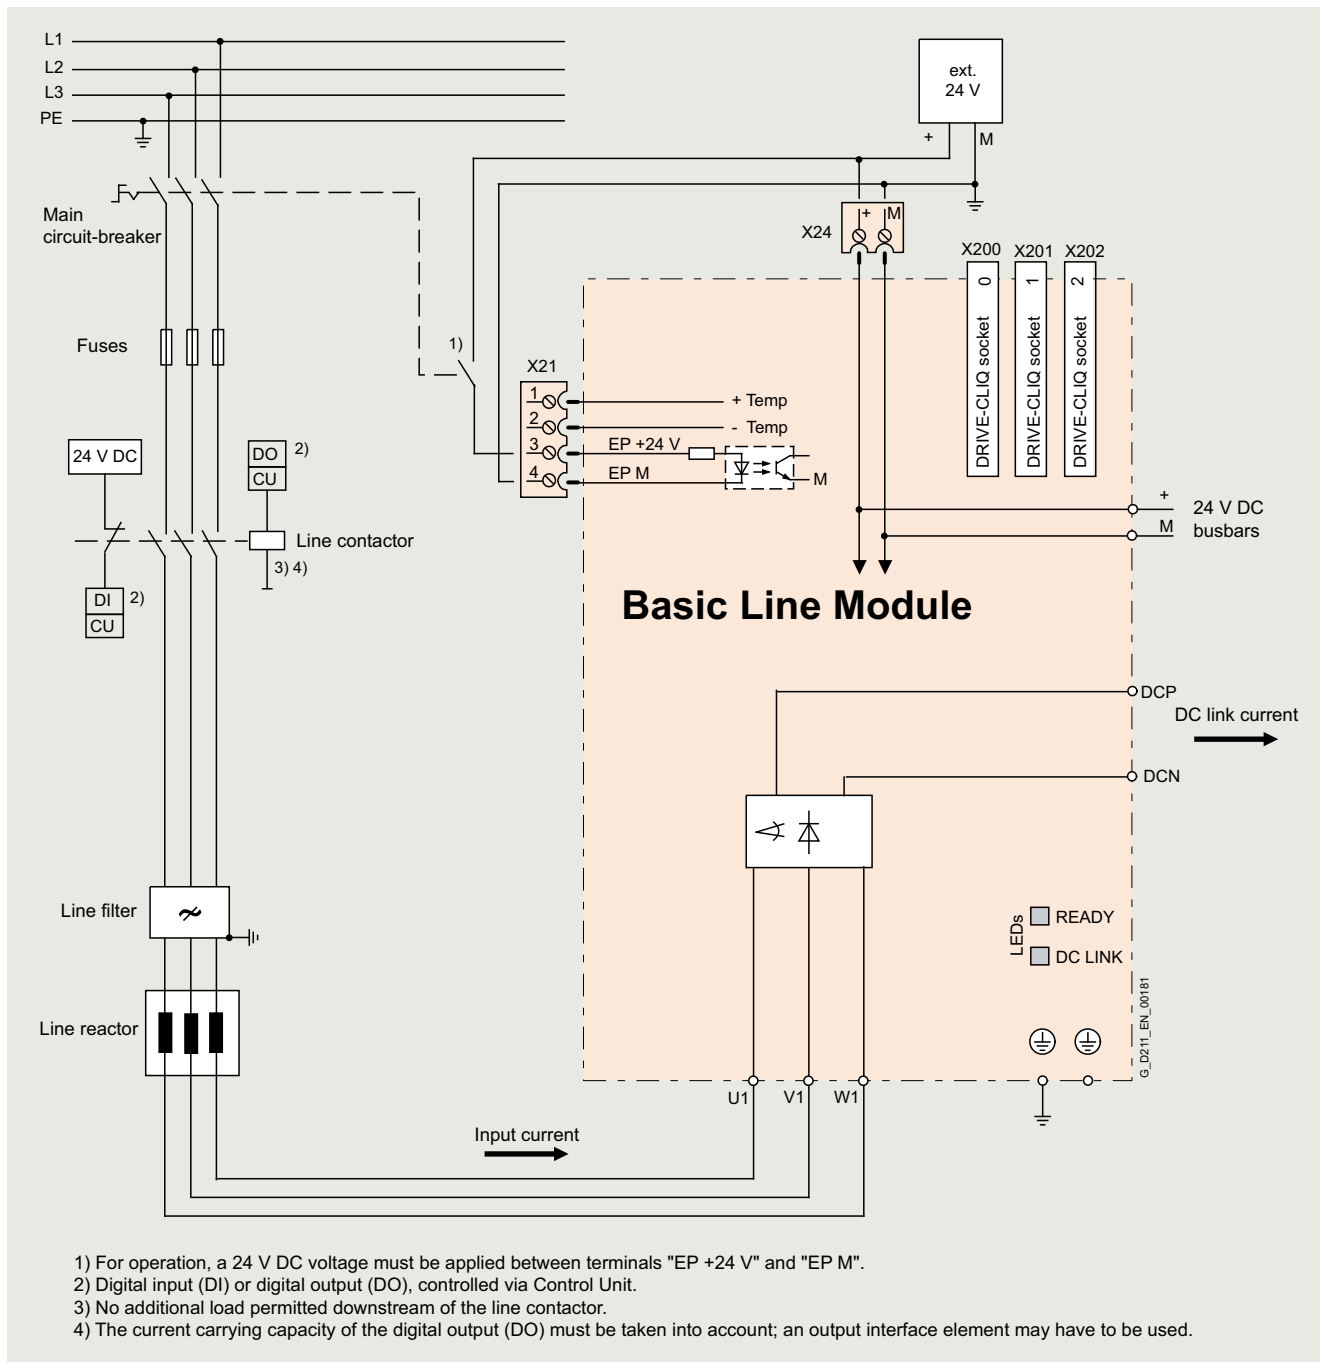

The thermostatic switch built into the braking resistor must be looped into the shutdown chain of the drive to prevent thermal overloading of the system in the event of a fault. If a braking resistor is not connected, a jumper must be connected between X21.1 and X21.2.

Basic Line Modules in booksize format

Characteristic curves

Braking power with external braking resistor

The following duty cycles are defined for the braking modules of the 20 kW and 40 kW Basic Line Modules:

The maximum possible braking power P_{max} is calculated using the following formula:

$$P_{\text{max}} = U^2/R$$

U = Activation threshold

R = Resistance value of the external braking resistor

The maximum braking power is achieved with the smallest permissible resistance value. The maximum possible braking power falls at larger resistance values.

Braking power of the 20 kW Basic Line Modules depending on the connected braking resistor

When the recommended braking resistor is used, the following values result for the maximum braking power or continuous braking power:

Braking resistor 6SE7023-2ES87-2DC0

Resistance value = 20 Ω → max. braking power = 30 kW;
continuous braking power = 5 kW

Braking power of the 40 kW Basic Line Modules depending on the connected braking resistor

When the recommended braking resistor is used, the following values result for the maximum braking power or continuous braking power:

Braking resistor 6SE7028-0ES87-2DC0

Resistance value = 8 Ω → max. braking power = 75 kW;
continuous braking power = 10 kW (limited by braking module)

Overview

20 kW (25 hp) and 100 kW (125 hp) line reactors

Line reactors reduce low-frequency line harmonic distortions and offload the semiconductors of the Basic Line Module.

Recommended line-side components for Basic Line Modules
Selection and ordering data

Suitable line-side power components are assigned depending on the power rating of the Basic Line Module.

The tables below list recommended components.

Additional information about the line-side power components can be found in Catalogs LV 10 and IC 10 as well as SiePortal.

Assignment of line-side power components to Basic Line Modules in booksize format

SINAMICS S120 drive system

Booksize format

Single Motor Modules in booksize compact format

Design

Single Motor Modules in booksize compact format

The Single Motor Modules in booksize compact format feature the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 1 electronics power supply connection via integrated 24 V DC bars
- 3 DRIVE-CLiQ sockets
- 1 motor connection via connector
- 1 safe standstill input
- 1 safe motor brake control
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 2 PE (protective earth) connections

The status of the Motor Modules is indicated via two multi-color LEDs.

The shield of the motor cable is routed over the connector to the motor connection.

The signal cable shield can be connected to the Motor Module by means of a shield connection clamp, e.g. Weidmüller type KLBÜ 3-8 SC.

The scope of supply of the Motor Modules includes:

- DRIVE-CLiQ cable appropriate to the width of the Motor Module for connection to the adjacent Motor Module, length 0.11 m (4.33 in) for Motor Modules with a width of 50 mm (1.97 in) or length 0.16 m (6.3 in) for Motor Modules with a width of 75 mm (2.95 in).
- 2 dust protection blanking plugs for sealing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connector X21
- Connector X11 for motor brake connection
- Connector X1 for motor connection
- 1 set of warning labels in 36 languages

DC link adapter (2 units)		6SL3162-2BM01-0AA0
For multi-tier configuration. Screw-type terminals 35 ... 95 mm ²		
For all Line Modules and Motor Modules in booksize format		
24 V terminal adapter		6SL3162-2AA00-0AA0
For all Line Modules and Motor Modules in booksize format		
Spacing bolt (4 units)		6SL3462-1CC00-0AA0
The mounting depth of modules in booksize compact format is increased when it is mounted on these spacing bolts by such an amount that it can be integrated into a drive line-up in booksize format. 2 spacing bolts are required to mount 50 mm (1.97 in) wide modules, and 4 spacing bolts for 75 mm (2.95 in) wide modules.		
Accessories for re-ordering		
24 V jumper		6SL3162-2AA01-0AA0
For connection of the 24 V busbars (for booksize format)		
Warning labels in 36 languages		6SL3166-3AB00-0AA0
This label set can be glued over the standard English or German labels to provide warnings in other languages. One set of labels is supplied with the devices.		
One sign in each of the following languages is provided in each set: BG, CZ, DE, DK, EE, ES, FI, FR, GB, GR, HU, IE, IS, IT, LT, LV, MT, NL, NO, PL, PT, RO, RU, SE, SI, SK, TR, CN, ID, IL, IR, JP, KR, SA, TH, TW		
Dust protection blanking plugs (50 units)		6SL3066-4CA00-0AA0
For DRIVE-CLiQ port		

¹⁾ Nominal hp ratings based on asynchronous (induction) motors. Match the motor nameplate current for specific sizing.

Integration

The Single Motor Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl
- SINUMERIK ONE
- SINUMERIK MC
- SIMOTION D

Single Motor Modules in booksize format

Design

Single Motor Module in booksize format C/D type, 3 A to 30 A

Single Motor Module in booksize format C type, 45 A and 60 A, with optional shield connection plate

The Single Motor Modules in booksize format feature the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 1 electronics power supply connection via integrated 24 V DC bars
- 3 DRIVE-CLiQ sockets
- 1 motor connection via connector X1 for C/D type 3 A to 30 A (not included in the scope of delivery)
- 1 safe standstill input
- 1 safe motor brake control
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 2 PE (protective earth) connections – a PE connection is integrated in the connector for C/D types 3 A to 30 A

The status of the Motor Modules is indicated via two multi-color LEDs.

Motor Modules 3 A to 30 A are supplied with a mounted shield connection plate. The associated shield connection clamp can be found in the Terminal Kit supplied. A shield connection plate is optionally available for Motor Modules 45 A to 200 A. On these modules, the motor cable shield can be connected using a shield connection clamp or a hose clip.

G_PM21_EN_00266a

Overview of available Single Motor Modules in booksize format C/D types

- C type: Optimized for continuous load with up to 200 % overload (continuous motion)
- D type: Optimized for highly dynamic, intermittent duty cycles with up to 300 % overload (discontinuous motion)

Devices in booksize format C/D types are optimized for multi-axis applications and are mounted next to one another. The connection for the common DC link is an integral feature. The device is internally air cooled.

The Motor Modules in booksize format C/D types have been developed to be fully compatible with the booksize series regarding spare parts and offer the following advantages:

- The portfolio is extended by Single Motor Modules 18 A (C type), 24 A (C/D types) and 30 A (D type), as well as by a Double Motor Module 18 A (D type).
- The width of Motor Modules 45 A and 60 A has been reduced from 150 mm to 100 mm, which makes a significant contribution toward saving space in the cabinet
- The amount of space required beneath the Motor Modules has been reduced thanks to improvements in the design and a new motor plug connector
- With the new motor plug connector design, the brake conductors and the PE connection are integrated directly in the plug connector
- The motor connections on the Double Motor Module are located side by side, resulting in a significantly improved level of accessibility
- The fan can be simply replaced without having to remove the Motor Module

The signal cable shield can be connected to the Motor Module by means of a shield connection clamp, e.g. Weidmüller type KLBLUE 3-8 SC.

The scope of delivery of the Motor Modules includes:

- DRIVE-CLiQ cable appropriate to the width of the Motor Module for connection to the adjacent Motor Module, length = width of Motor Module + 0.06 m (0.20 ft)
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connector X21
- Connector X11 for the motor brake connection (for Motor Modules 45 A to 200 A)
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- Fan insert for the 132 A and 200 A Motor Modules (the voltage for the fan insert is supplied by the Motor Module)
- 1 shield connection plate with shield connection clamp (for Motor Modules 3 A to 30 A)
- 1 set of warning labels in 36 languages

Design

Double Motor Module in booksize compact format

Double Motor Modules feature the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 electronics power supply connections via integrated 24 V DC busbars
- 4 DRIVE-CLiQ sockets
- 2 motor connections via connector
- 2 safe standstill inputs (1 input per axis)
- 2 safe motor brake controls
- 2 temperature sensor inputs for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 3 PE (protective earth) connections

The status of the Motor Modules is indicated via two multi-color LEDs.

The shield of the motor cables is routed over the connectors to the motor connection.

The signal cable shield can be connected to the Motor Module by means of a shield connection clamp, e.g. Weidmüller type KLBU 3-8 SC.

The scope of supply of the Motor Modules includes:

- DRIVE-CLiQ cable for connecting to the adjacent Motor Module, length 0.16 m (6.3 in)
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connectors X21 and X22
- Connectors X1 and X2 for motor connection
- 1 set of warning labels in 36 languages

Selection and ordering data

Rated output current	Type rating ¹⁾	Double Motor Module in booksize compact format
A	kW (hp)	Article No.
DC link voltage 510 ... 720 V DC		
2 × 1.7 A	2 × 0.9 kW (2 × 0.75 hp)	6SL3420-2TE11-7AA1
2 × 3 A	2 × 1.6 kW (2 × 1.5 hp)	6SL3420-2TE13-0AA1
2 × 5 A	2 × 2.7 kW (2 × 3 hp)	6SL3420-2TE15-0AA1
Description		Article No.
Accessories		
DC link rectifier adapter		6SL3162-2BD00-0AA0
For direct infeed of DC link voltage, Screw-type terminals 0.5 ... 10 mm ²		
For Line Modules and Motor Modules in booksize format with a width of 50 mm (1.97 in), 75 mm (2.95 in) and 100 mm (3.94 in)		
DC link adapter (2 units)		6SL3162-2BM01-0AA0
For multi-tier configuration Screw-type terminals 35 ... 95 mm ²		
For all Line Modules and Motor Modules in booksize format		
24 V terminal adapter		6SL3162-2AA00-0AA0
For all Line Modules and Motor Modules in booksize format		
Spacing bolt (4 units)		6SL3462-1CC00-0AA0
The mounting depth of modules in booksize compact format is increased when it is mounted on these spacing bolts by such an amount that it can be integrated into a drive line-up in booksize format. 2 spacing bolts are required to mount 50 mm (1.97 in) wide modules, and 4 spacing bolts for 75 mm (2.95 in) wide modules.		
Accessories for re-ordering		
24 V jumper		6SL3162-2AA01-0AA0
For connection of the 24 V busbars (for booksize format)		
Warning labels in 36 languages		6SL3166-3AB00-0AA0
This label set can be glued over the standard English or German labels to provide warnings in other languages. One set of labels is supplied with the devices.		
One sign in each of the following languages is provided in each set: BG, CZ, DE, DK, EE, ES, FI, FR, GB, GR, HU, IE, IS, IT, LT, LV, MT, NL, NO, PL, PT, RO, RU, SE, SI, SK, TR, CN, ID, IL, IR, JP, KR, SA, TH, TW		
Dust protection blanking plugs (50 units)		6SL3066-4CA00-0AA0
For DRIVE-CLiQ port		

¹⁾ Nominal hp ratings based on asynchronous (induction) motors. Match the motor nameplate current for specific sizing.

SINAMICS S120 drive system

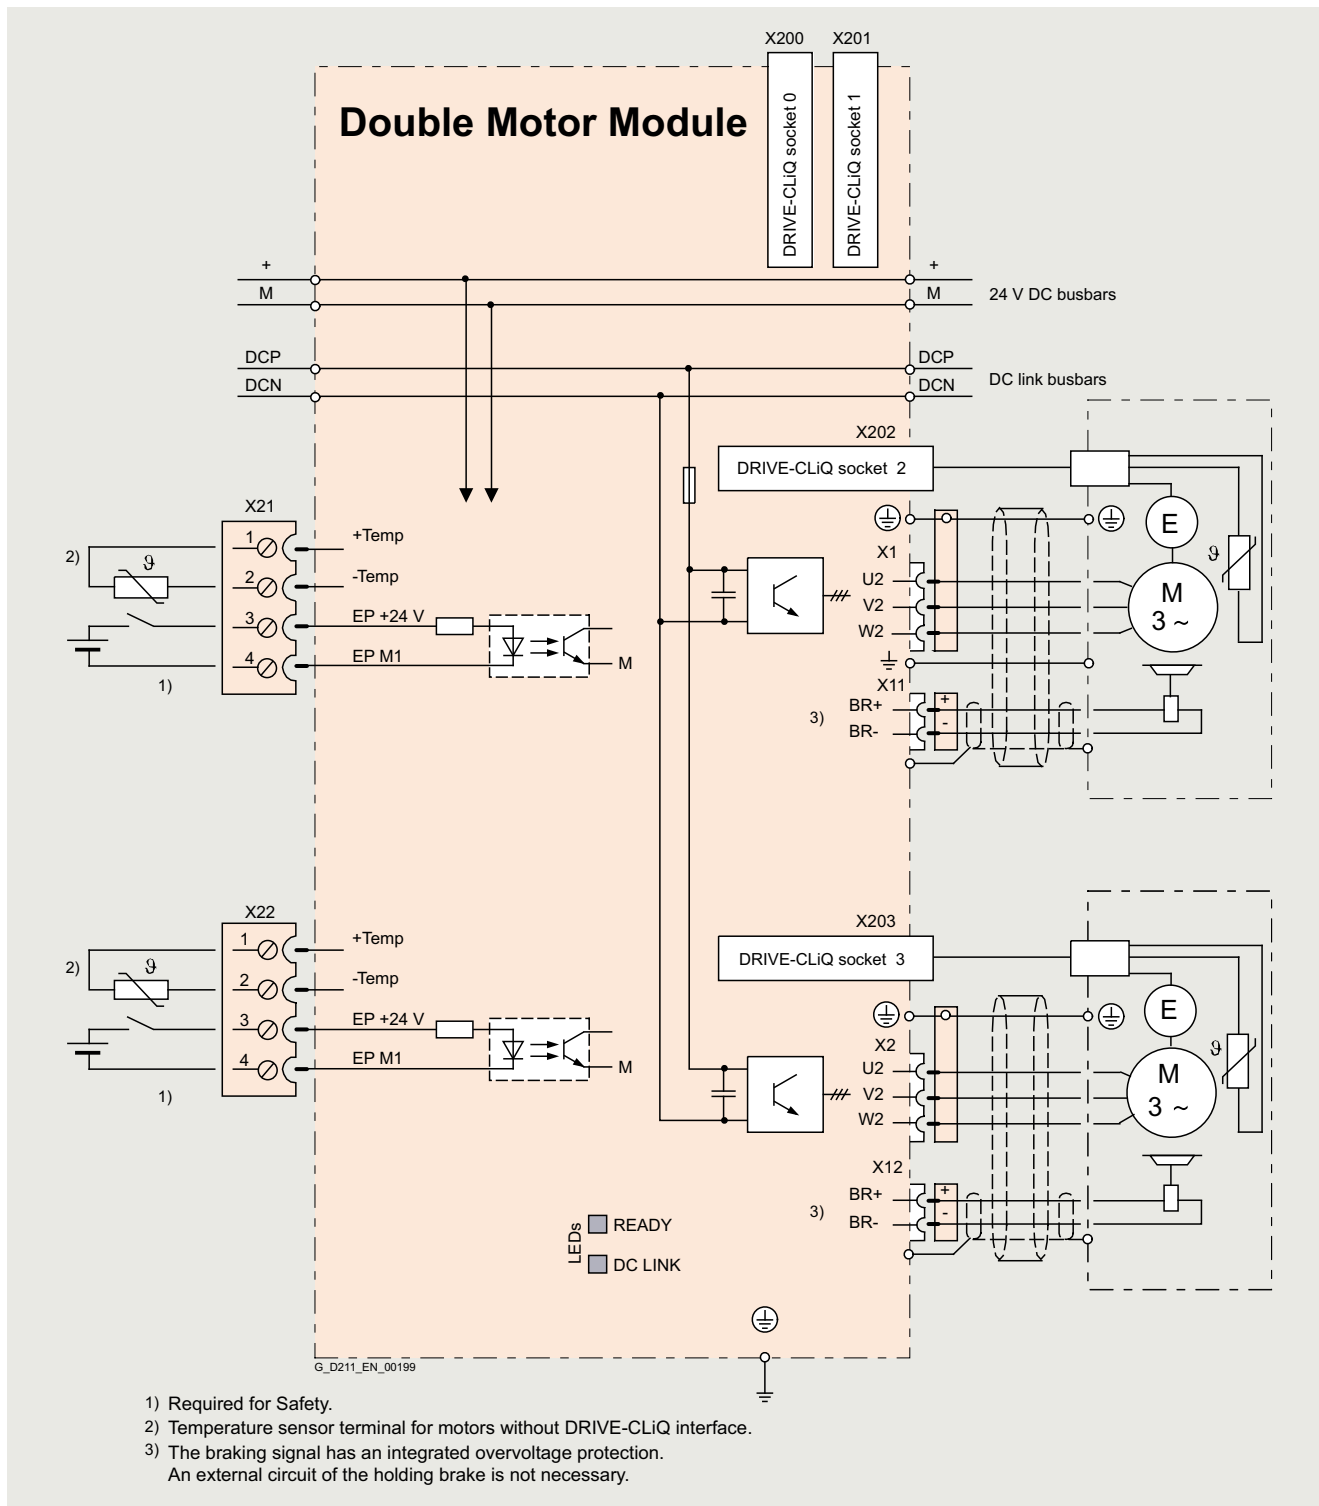

Booksize format

Double Motor Modules in booksize compact format

Integration

The Double Motor Module receives its control information via DRIVE-CLiQ from:

- CU320-2 Control Unit
- SINUMERIK 840D sl
- SINUMERIK ONE
- SINUMERIK MC
- SIMOTION D

Connection example of Double Motor Modules in booksize compact format 2 × 3 A to 2 × 18 A

¹⁾ Rated power of a typical standard asynchronous (induction) motor at 600 V DC link voltage.

²⁾ Rated DC link current for dimensioning an external DC connection.
For DC link current calculation for dimensioning the Line Module, see section Configuration notes.

³⁾ If, due to a number of Line Modules and Motor Modules being mounted side-by-side, the current carrying capacity exceeds 20 A, an additional 24 V DC connection using a 24 V terminal adapter is required (max. cross-section 6 mm², max. fuse protection 20 A).

⁴⁾ Power loss of Motor Module at rated power including losses of 24 V DC electronics power supply.

Characteristic curves

- >1000 ... 4000 m (3281 ... 13124 ft) above sea level
 - Reduction of the output current by 10 % per 1000 m (3281 ft), or
 - Reduction of the ambient temperature by 5 °C (9 °F) per 1000 m (3281 ft)
- >2000 ... 4000 m (6562 ... 13124 ft) above sea level
 - Operation on line supply systems with grounded neutral point, or
 - Operation with an isolating transformer with secondary grounded neutral point

Design

Double Motor Module in booksize format C/D type

Double Motor Modules feature the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 electronics power supply connections via integrated 24 V DC busbars
- 4 DRIVE-CLiQ sockets
- 2 motor connections via connectors X1 and X2 (not included in the scope of delivery)
- 2 safe standstill inputs (1 input per axis)
- 2 safe motor brake controls
- 2 temperature sensor inputs for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 1 PE (protective earth) connection

The status of the Motor Modules is indicated via two multi-color LEDs.

The Motor Modules are supplied with a mounted shield connection plate. The associated shield connection clamp can be found in the Terminal Kit supplied.

Overview of available Double Motor Modules in booksize format C/D types

- C type: Optimized for continuous load with up to 200 % overload (continuous motion)
- D type: Optimized for highly dynamic, intermittent duty cycles with up to 300 % overload (discontinuous motion)

Devices in booksize format C/D types are optimized for multi-axis applications and are mounted next to one another. The connection for the common DC link is an integral feature. The device is internally air cooled.

The Motor Modules in booksize format C/D types have been developed to be fully compatible with the booksize series regarding spare parts and offer the following advantages:

- The amount of space required beneath the Motor Modules has been reduced thanks to improvements in the design and a new motor plug connector
- With the new motor plug connector design, the brake conductors and the PE connection are integrated directly in the plug connector
- The motor connections on the Double Motor Module are located side by side, resulting in a significantly improved level of accessibility
- The fan can be simply replaced without having to remove the Motor Module
- The Double Motor Module 2 x 18 A is available with double and treble overload

The signal cable shield can be connected to the Motor Module by means of a shield connection clamp, e.g. Weidmüller type KLBUE 3-8 SC.

The scope of delivery of the Motor Modules includes:

- DRIVE-CLiQ cable appropriate to the width of the Motor Module for connection to the adjacent Motor Module, length = width of Motor Module + 0.06 m (0.20 ft)
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- Jumper for connecting the 24 V DC busbar to the adjacent Motor Module
- Connectors X21 and X22
- Device fans supplied from the internal voltage levels for cooling the power unit
- 1 shield connection plate with shield connection clamp
- 1 set of warning labels in 36 languages

Overview

Braking Module booksize compact format

A Braking Module and the matching external braking resistor are required to bring drives to a controlled standstill in the event of a power failure (e.g. emergency retraction or EMERGENCY OFF category 1) or limit the DC link voltage for brief periods of generator operation, e.g. when the regenerative feedback capability of the Line Module is deactivated. The Braking Module includes the power electronics and the associated control circuit. During operation, the DC link power is converted into heat loss in an external braking resistor. Braking Modules function autonomously. Several Braking Modules in booksize compact format can be operated in parallel. In this case, each Braking Module must have its own braking resistor. Braking Modules in booksize compact format can also be used for rapid discharge of the DC link.

Design

The Braking Modules in booksize compact format can be integrated in drive line-ups in booksize and booksize compact formats.

The Braking Module in booksize compact format features the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 electronics power supply connections via integrated 24 V DC busbars
- Connector X1 for connecting the braking resistor
- Connection for thermostatic switch for monitoring the braking resistor
- 4 DIP switches for setting the operating threshold, selecting the braking resistor and the cooling method for the Braking Module
- 2 digital inputs (disable Braking Module/acknowledge faults and rapid discharge of DC link)
- 3 digital outputs (Braking Module disabled, prewarning from $I \times t$ monitor and set activation threshold)
- 2 PE (protective earth) connections

The status of the Braking Module is indicated via two 2-color LEDs.

¹⁾ Connecting Braking Modules in the booksize format in parallel should be avoided, as it cannot be guaranteed that the power will be evenly divided between the modules.

SINAMICS S120 drive system

Booksize format

Braking Module in booksize format

Integration

Connection example of Braking Module in booksize format

Overview

The excess energy of the DC link is dissipated via the braking resistor.

The corresponding braking resistor is connected to a Braking Module or Basic Line Module. Mounting the braking resistor outside the control cabinet or switchgear room allows the power losses to be dissipated, thereby allowing a corresponding reduction in the level of air conditioning required.

Overview

Capacitor Module in booksize format

Capacitor Modules are used to increase the DC link capacitance to bridge momentary power losses.

Capacitor Modules are connected to the DC link voltage via the integrated DC link busbars. Capacitor Modules function autonomously.

Several Capacitor Modules can be operated in parallel.

Design

Capacitor Modules feature the following connections and interfaces as standard:

- 2 DC link connections via integrated DC link busbars
- 2 PE (protective earth) connections

Control Supply Module in booksize format

Overview

Control Supply Module in booksize format

The Control Supply Module in booksize format provides a 24 V to 28.8 V DC power supply that can be set using an integrated potentiometer via the line or DC link. The Control Supply Module can either be operated individually or in a parallel connection with a maximum of 10 devices. A DIP switch on the top of the module is used to change over in the de-energized state ([details of connection for parallel operation are given in the manual for booksize modules](#)).

Using the Control Supply Module, it is possible for example to make specific emergency retraction movements in the event of a power failure, provided that the DC link voltage is available.

Design

Control Supply Modules feature the following connections and interfaces as standard:

- 1 line connection
- 2 DC link connections via integrated DC link busbars
- 2 electronics power supply connections via integrated 24 V DC bars
- 1 connection for the electronics power supply for Control Units, Terminal Modules, Sensor Modules, etc., via the 24 V terminal adapter provided in the scope of supply (max. cross-section 6 mm², max. fuse protection 20 A)
- 1 integrated potentiometer for setting the output voltage
- 1 digital output to signal the error-free state
- 1 DIP switch to change over between single and parallel mode
- 2 PE (protective earth) connections

The status of the Control Supply Modules is indicated via two multi-color LEDs.

Booksize format

DC link adapters for booksize and booksize compact formats

Overview

DC link rectifier adapter

DC link rectifier adapter for unit widths of 50 mm (1.97 in) and 100 mm (3.94 in)

DC link rectifier adapter for unit widths of 150 mm ... 300 mm (5.91 in ... 11.81 in)

If the internal DC link busbars of the Motor Modules are not used, the DC link voltage must be supplied externally through a DC link rectifier adapter, e.g. when devices of booksize format are coupled with devices of chassis format via an external DC busbar. The DC link rectifier adapter is mounted on the DC link busbars of the Motor Module. The DC link cables are routed from above.

DC link adapter

DC link adapter (multi-tier) for all unit widths

If a multi-tier Motor Module configuration is used, a DC link adapter can be provided for linking the DC links of two drive line-ups. The DC link adapter is mounted sideways on the DC link busbars of the Motor Module. Installation is possible on the right or left side of the Motor Module. The marking of the poles (DCN and DCP) at the DC link adapter matches the side chosen for installation. The DC link cables are routed from behind. The DC link adapter (multi-tier) cannot be used in combination with the reinforced DC link busbars for Motor Modules ≤ 100 mm wide. DC link adapters are supplied in sets of 2 units.

Overview

Motor reactors reduce the voltage loading on the motor windings. At the same time, the capacitive charge/discharge currents that place an additional load on the power unit when long motor cables are used are reduced. The maximum permissible output frequency when a motor reactor is used is 120 Hz.

The motor reactors are designed for a pulse frequency of 4 kHz. Higher pulse frequencies are not permissible.

The motor reactor must be installed as close as possible to the Motor Module.

SINAMICS S120 drive system

Booksize format

SINAMICS S120M distributed servo drive

Overview

SINAMICS S120M

SINAMICS S120M is the distributed version of the modular SINAMICS S120 drive system. This drive is a compact and turnkey drive unit that comprises

- AM600 Adapter Module for supplying the distributed drive unit
- Distributed drive unit (synchronous servomotor with integrated power unit and encoder)
- Hybrid cable for power and communication

The power unit is not integrated in the control cabinet, as is normally the case, but in the motor for the driven axis. This brings advantages and freedoms for existing or new machine concepts.

Benefits

- Reduced heat losses in the control cabinet thanks to distributed configuration
- Reduced air conditioning in the control cabinet thanks to the power unit integrated into the motor
- Reduced control cabinet volume thanks to the power unit integrated into the motor
- Increased degree of flexibility for modernizations/retrofits thanks to specified control cabinet sizes
- Less time spent on cabling, because the pre-assembled hybrid cable contains all signal and power cables
- Reduction in overall cable length, because the pre-assembled hybrid cable contains all signal and power cables
- Up to 12 distributed drive units can be operated on one AM600 Adapter Module, depending on their power ratings
- Any number of AM600 Adapter Modules can be operated on one appropriately dimensioned infeed
- Drive-integrated DI/DOs for easy adaptation to the machine environment
- All safety variants and communication variants of the SINAMICS S120 system are also available in SINAMICS S120M
- With the Terminal Module (TM54F), all of the safety functions available in the SINAMICS S120 drive system are available
- Optimum integration into the SIMOTION and SINUMERIK system landscape

Application

Typical SINAMICS S120M applications include the packaging, printing, glass and textile industries.

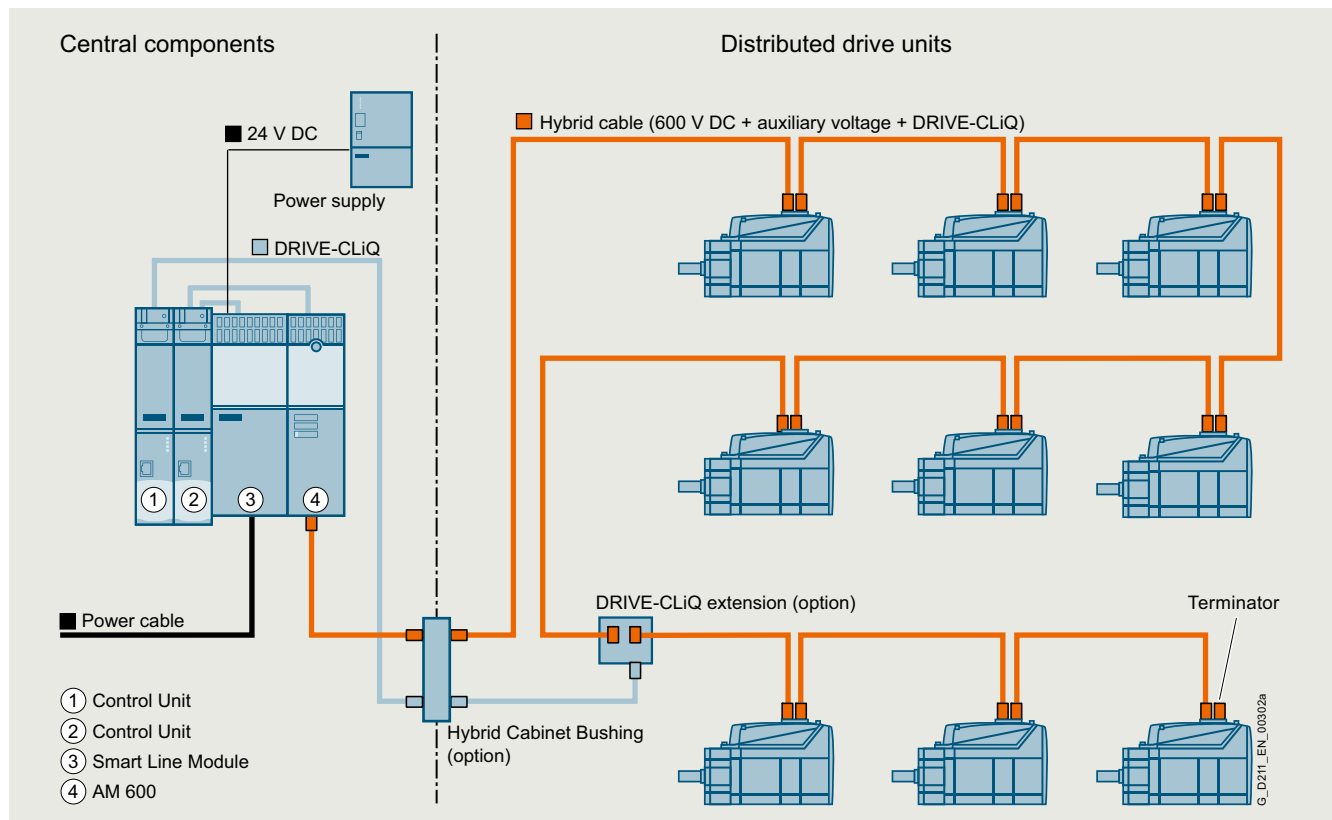

Design

The SINAMICS S120M distributed drive system comprises the following units:

- AM600 Adapter Module
- Distributed drive unit (1FK7 synchronous servomotor with integrated Motor Module and multi-turn absolute encoder)
- MOTION-CONNECT hybrid cable
[Additional information on cables is provided in Section, MOTION-CONNECT connection systems.](#)
- DRIVE-CLiQ Extension (necessary with more than 6 distributed drive units)
- Hybrid Cabinet Bushing, optional
- Terminating connector (essential for achieving the degree of protection; included in scope of supply of AM600 Adapter Module)

Function

- The 24 V electronics power supply is either provided from an external supply or from a Control Supply Module (CSM). The supply can also be taken from the central drive line-up using the 24 V terminal connector
- Use of Line Modules (Active Line Module, Basic Line Module and Smart Line Module) from the SINAMICS S120 product family
- The AM600 Adapter Module opens a line of distributed drive units. It feeds the DC link, auxiliary voltage, and DRIVE-CLiQ in a hybrid cable.
- If several drive units are to be operated, then the possible number depends on the central Control Unit. If an additional Control Unit is used, the closed-loop control signals are fed into the DRIVE-CLiQ line via a DRIVE-CLiQ Extension
- AM600 Adapter Module, DRIVE-CLiQ Extension and Hybrid Cabinet Bushing are not "visible" DRIVE-CLiQ nodes in the topology. The number of DRIVE-CLiQ Extensions is not restricted.
- As Control Unit or control, all multi-axis Control Units in the SINAMICS/SIMOTION/SINUMERIK range can generally be used (CU320-2, D4xx-2, CX32-2, NCUxx). The releases of SINAMICS S120M for the corresponding systems are published via SiePortal: <https://support.industry.siemens.com>

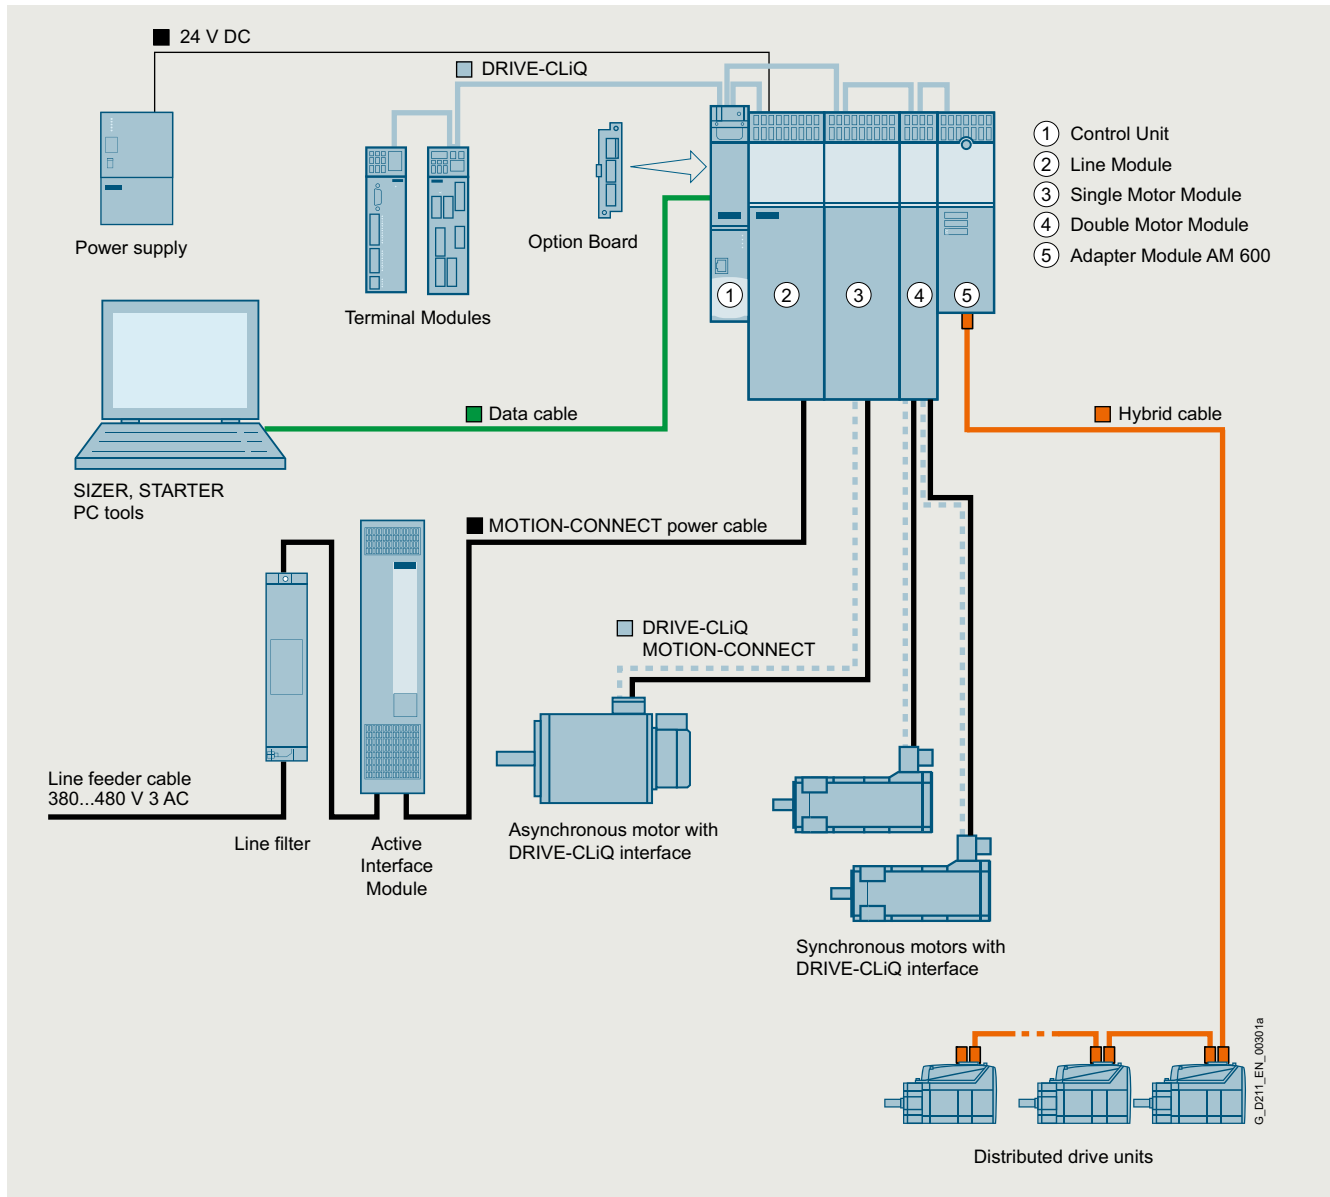

Principle of a SINAMICS S120M topology

SINAMICS S120 drive system

Booksize format

SINAMICS S120M distributed servo drive

Integration

Integration of SINAMICS S120M into the SINAMICS S120 drive system

Modular system for complex drive tasks

SINAMICS S120 solves complex drive tasks for a very wide range of industrial applications and is, therefore, designed as a modular system. Users can choose from many different harmonized components and functions to create a solution that best meets their requirements.

The powerful SIZER for Siemens Drives (integrated in the TIA Selection Tool) configuration tool makes it easier to choose and determine the optimum drive configuration.

SINAMICS S120 optimally supports:

- Synchronous and asynchronous motors
- Linear and torque motors
- SINAMICS S120M

System architecture with a central Control Unit:

On the SINAMICS S120, the drive intelligence is combined with closed-loop control functions into Control Units. These units are capable of controlling drives in the vector, servo and V/f modes. They also perform the speed and torque control functions plus other intelligent drive functions for all axes on the drive. Inter-axis connections can be established within a component and easily configured in the STARTER commissioning tool using a mouse.

Integration

Functions for higher efficiency

- Basic functions: Speed control, torque control, positioning functions
- Intelligent starting functions for independent restart after power supply interruption
- BICO technology with interconnection of drive-specific DI/DOs for easy adaptation of the drive system to its machine environment
- Integrated safety functions for rational implementation of safety concepts
- Regulated infeed/regenerative feedback functions for preventing undesirable reactions on the supply, allowing recovery of braking energy and ensuring greater stability against line fluctuations.

DRIVE-CLiQ – the digital interface between SINAMICS components

The SINAMICS S120 components, including the motors and encoders, are interconnected via a joint serial interface called DRIVE-CLiQ. The standardized cables and connectors reduce

the variety of different parts and cut storage costs. Encoder evaluations for converting standard encoder signals to DRIVE-CLiQ are available for third-party motors or retrofit applications.

Electronic rating plates in all components

An important digital linkage element of the SINAMICS S120 drive system are the electronic rating plates integrated in every component. They allow all drive components to be detected automatically via DRIVE-CLiQ wiring. As a result, data do not need to be entered manually during commissioning or component replacement – helping to ensure that drives are commissioned successfully!

The electronic rating plate contains all the relevant technical data about that particular component. In the motors, for example, this data includes the parameters of the electric equivalent circuit diagram and characteristic values for the built-in motor encoder. In addition to the technical data, the electronic rating plate includes logistical data (manufacturer ID, article number, and ID). Since this data can be called up electronically on site or remotely, all the components used in a machine can always be individually identified, which helps simplify servicing.

SINAMICS S120 drive system

Blocksize format

Air-cooled Power Modules in blocksize format

Overview

PM240-2 Power Modules – 0.55 kW to 250 kW (0.75 hp to 400 hp), IP20 degree of protection

PM240-2 Power Modules, frame sizes FSA to FSG, with CU310-2 PN Control Unit and BOP20 Basic Operator Panel

The PM240-2 Power Modules are based on a hardware platform, which permits an increase in power density.

Furthermore, the PM240-2 Power Module is also suitable for use in safety-oriented applications. In conjunction with a fail-safe Control Unit, the drive can be transformed into a Safety Integrated Drive.

The PM240-2 Power Modules in frame sizes FSA to FSF are available both with and without an integrated line filter class A of compact design for 200 V, 400 V and 690 V line voltages (except PM240-2 frame sizes FSD to FSF: 200 V). The PM240-2 Power Modules in frame size FSG are available with an integrated line filter Category C3 of compact design for 400 V and 690 V line voltages, also with integrated line filter Category C2 for a line voltage of 400 V. In addition, a DC link reactor is integrated in the PM240-2 Power Modules, frame sizes FSD to FSG, and therefore no line reactor is required.

The PM240-2 Power Modules with integrated line filter class A are suitable for connection to TN supply systems. Power Modules without integrated line filter can be connected to grounded TN/TT systems and non-grounded IT systems.

The PM240-2 Power Module has an integrated braking chopper. In generating mode, the excess energy of the DC link can be dissipated by means of an optional braking resistor.

The permissible cable lengths between converter and motor are limited. Longer cables can be used if output reactors are connected.

Shield plates and shield connection kits are available for use in the wiring installation of Power Modules to ensure that it complies with EMC guidelines.

[For more information, see shield connection kits for blocksize format.](#)

Additional options

Further selected accessories are available from "Siemens Product Partner for Drives Options":
www.siemens.com/drives-options-partner

Integration

All Power Modules have the following connections and interfaces:

- PM-IF interface to connect the Power Module to the Control Unit. The Power Module also supplies power to the Control Unit using an integrated power supply
- Motor connection using screw terminals or screw studs
- 2 PE/protective conductor connections
- Shield connection plate

The PM240-2 Power Modules together with the CU310-2 and CU320-2 Control Units, which are responsible for the communication and open-loop/closed-loop control functions, create powerful SINAMICS S120 drives.

PM240-2 Power Modules in blocksize format communicate via the PM-IF interface with:

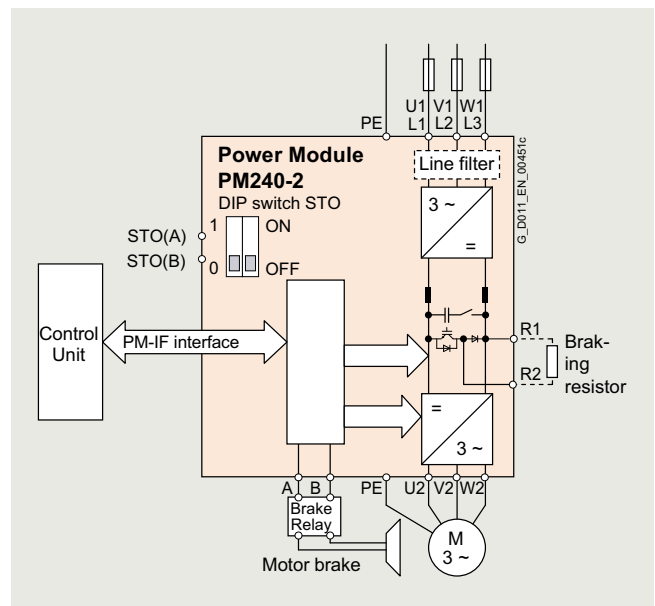

- the CU310-2 Control Unit
- the SIMOTION D410-2 Control Unit
- CUA31 or CUA32 Control Unit Adapter

With a CUA31/CUA32 Control Unit Adapter snapped on, the PM240-2 Power Module communicates via a DRIVE-CLiQ connection with:

- CU320-2 Control Unit
- SINUMERIK 840D sl
- SINUMERIK ONE
- SINUMERIK MC
- SIMOTION D4x5-2 Control Unit

Connection example for PM240-2 Power Modules, frame sizes FSA to FSC, with or without integrated line filter

Connection example for PM240-2 Power Modules, frame sizes FSD to FSG, with or without integrated line filter

U = Base component

S = Lateral mounting

I = Integrated

F = Power Modules available with and without integrated filter class A

– = Not possible

¹⁾ The 200 V versions of the PM240-2 Power Modules, frame sizes FSD to FSF, are only available without integrated line filter.

²⁾ The PM240-2 Power Modules frame size FSG with an integrated Category C3 filter can also be operated on TN systems with a grounded line conductor. To do so, the grounding screw must be removed. Then Category C3 can no longer be adhered to.

³⁾ With the appropriate wiring, the line reactors for 200 V 3 AC can be used for the 200 V versions for 200 V 1 AC. More information can be found on the internet at:
<https://support.industry.siemens.com/cs/document/109486005>
<https://support.industry.siemens.com/cs/document/109482011>

⁴⁾ For frame sizes FSA to FSC, for lines with $u_k < 1\%$, it is recommended that you use a line reactor or the next more powerful Power Module. More information can be found on the internet at:
<https://support.industry.siemens.com/cs/document/109482011>

⁵⁾ The 690 V versions of the PM240-2 Power Modules require motors with a suitable isolating system for 690 V converter operation (IVIC-C premium).

Integration

General design information

Converter comprising a Power Module (PM), a Control Unit (CU), and base components (side view)

- If at all possible, the line filter should be mounted directly below the converter.
- With lateral mounting, the line-side components have to be mounted on the left side of the converter, and the load-side components on the right side.
- Braking resistors have to be mounted directly on the control cabinet wall due to heating issues.

Recommended installation combinations of the converter and optional power and DC link components

Power Module Frame size	Base	Lateral mounting	
		Left of the converter (for line-side components)	Right of the converter (for load-side power components and DC link components)
FSA and FSB	Line filters, sine-wave filters	Line reactor	Output reactor and/or braking resistor
FSC	Line filters, sine-wave filters	Line reactor	Output reactor and/or braking resistor
FSD and FSE	–	Line filters, Line Harmonics Filters	Output reactor or sine-wave filter or dv/dt filter plus VPL and/or braking resistor
FSF and FSG	–	Line filters, Line Harmonics Filters	Output reactor or sine-wave filter or dv/dt filter plus VPL and/or braking resistor

SINAMICS S120 drive system

Blocksize format

Air-cooled Power Modules in blocksize format

Selection and ordering data

To ensure that a suitable Power Module is selected, the following currents should be used for applications:

- Rated output current for applications with low overload (LO)
- Base-load current for applications with high overload (HO)

With reference to the rated output current, the modules support at least 2-pole to 6-pole low-voltage motors. The rated power is merely a guide value. For a description of the overload performance, please refer to the general technical specifications of the Power Modules.

¹⁾ Rated power based on the rated output current I_N . The rated output current I_N is based on the duty cycle for low overload (LO).

²⁾ The rated output current I_N is based on the duty cycle for low overload (LO). These current values are valid for 200 V, 400 V or 690 V and are specified on the rating plate of the Power Module.

³⁾ The base-load current I_H is based on the duty cycle for high overload (HO).

⁴⁾ SIPLUS components for extreme requirements are available. More information is available on the internet at www.siemens.com/siplus-drives

Shield connection kit for Power Modules

The shield connection kit makes it easier to connect the shields of supply and control cables, provides mechanical strain relief and thus ensures optimum EMC performance.

A shield connection kit is supplied as standard with PM240-2 Power Modules in frame sizes FSA to FSC. A set of shield plates is included in the scope of delivery for the motor and signal cables corresponding to the frame size for the frame sizes FSD to FSG. For the electromagnetically compatible connection of an optionally connectable braking resistor, the corresponding shield connection kit is to be ordered for frame sizes FSD to FSG.

For more information, see shield connection kits for Power Modules in the section Supplementary system components.

¹⁾ Rated power based on the rated output current I_N . The rated output current I_N is based on the duty cycle for low overload (LO).

²⁾ The rated output current I_N is based on the duty cycle for low overload (LO). These current values are valid for 200 V, 400 V or 690 V and are specified on the rating plate of the Power Module.

³⁾ The base-load current I_H is based on the duty cycle for high overload (HO).

⁴⁾ The 690 V versions of the PM240-2 Power Modules frame size FSG are only available with an integrated Category C3 filter. To operate the converter also within TN systems with grounded outer conductor, you must remove the grounding screw. If the grounding screw is removed, the EMC property according to Category C3 is no longer given.

Technical specifications

General technical specifications

Note:

When engineering the complete SINAMICS S120 drive, the system data of the associated Control Units, supplementary system components, DC link components and Sensor Modules must be taken into consideration.

Power Modules	PM240-2
System operating voltage	FSA ... FSC: 200 ... 240 V 1 AC/3 AC ±10 % 380 ... 480 V 3 AC ±10 % FSD ... FSG: 200 ... 240 V 3 AC ±10 % (in operation -20 % < 1 min) 380 ... 480 V 3 AC ±10 % (in operation -20 %) 500 ... 690 V 3 AC ±10 % (in operation -20 % < 1 min)
Line supply requirements Short-circuit power ratio R_{SC}	200 V: >25 With $R_{SC} > 50$ it is advisable for FSA to FSC to install a line reactor, or alternatively, to select a Power Module with the next-higher power rating. 400 V: >25 With $R_{SC} > 100$ it is advisable for FSA to FSC to install a line reactor, or alternatively, to select a Power Module with the next-higher power rating. 690 V: No restriction
Input frequency	47 ... 63 Hz
Output frequency	0 ... 550 Hz • Control mode V/f 0 ... 240 Hz • Control mode Vector
Pulse frequency	200 V: 4 kHz 400 V: ≤90 kW: 4 kHz; >90 kW: 2 kHz 690 V: 2 kHz For higher pulse frequencies, see derating data
Power factor λ	FSA ... FSC: 0.7 ... 0.85 FSD ... FSG: - 200 V: >0.95 - 400 V and 690 V: >0.9
Offset factor $\cos \varphi$	FSA ... FSC: >0.96 FSD ... FSG: 0.98 ... 0.99
Converter efficiency According to IEC 61800-9-2	200 V: >96.2 ... 97.1 % 400 V: >96.0 ... 98.0 % 690 V: >97.3 ... 98.2 %
Efficiency class According to IEC 61800-9-2	IE2
Output voltage, max. as % of input voltage	95 %
Overload capability	• Low overload (LO) Note: No reduction in rated current I_N for use of overload. • High overload (HO) Note: No reduction in base-load current I_H for use of overload.
	1.5 × rated current I_N (i.e. 150 % overload) for 3 s plus 1.1 × rated current I_N (i.e. 110 % overload) for 57 s within a cycle time of 300 s 2 × base-load current I_H (i.e. 200 % overload) for 3 s plus 1.5 × base-load current I_H (i.e. 150 % overload) for 57 s within a cycle time of 300 s

For more information on overload capability, see in section characteristic curves.

Technical specifications

Power Modules	PM240-2
Possible braking methods	DC braking Compound braking Dynamic braking with integrated braking chopper
Degree of protection	IP20 (standard)
Operating temperature	
• Low overload (LO)	Frame sizes FSA ... FSC: -10 ... +40 °C (14 ... 104 °F) without derating >40 ... 60 °C (>104 ... 140 °F) see derating characteristics
• High overload (HO)	Frame sizes FSD ... FSG: -20 ... +40 °C (-4 ... +104 °F) without derating >40 ... 60 °C (>104 ... 140 °F) see derating characteristics
	Frame sizes FSA ... FSC: -10 ... +50 °C (14 ... 122 °F) without derating >50 ... 60 °C (>122 ... 140 °F) see derating characteristics

¹⁾ The rated output current I_N is based on the duty cycle for low overload (LO).

²⁾ The base-load current I_H is based on the duty cycle for high overload (HO).

³⁾ Typical values. You can find more information on the internet at:
<https://support.industry.siemens.com/cs/document/94059311>

⁴⁾ Values dependent on ambient temperature and utilization.

⁵⁾ The input current depends on the motor load and line impedance. The input currents apply for a load at rated power (based on I_N) for a line impedance corresponding to $u_K = 1\%$. The current values are specified on the rating plate of the Power Module.

¹⁾ The rated output current I_N is based on the duty cycle for low overload (LO).

²⁾ The base-load current I_H is based on the duty cycle for high overload (HO).

³⁾ Typical values. You can find more information on the internet at:
<https://support.industry.siemens.com/cs/document/94059311>

⁴⁾ Values dependent on ambient temperature and utilization.

⁵⁾ The input current depends on the motor load and line impedance. The input currents apply for a load at rated power (based on I_N) for a line impedance corresponding to $u_K = 1\%$. The current values are specified on the rating plate of the Power Module.

250	250	250	150	–	–	–	–	–	–

The permissible motor cable length depends on the cable type and the pulse frequency.

Ambient temperature

Permissible output current as a function of ambient temperature for low overload (LO) for PM240-2 Power Modules
FSD to FSF at 200 V and 400 V

Permissible output current as a function of ambient temperature for high overload (HO) for PM240-2 Power Modules
FSD to FSF at 200 V and 400 V

Permissible output current as a function of ambient temperature for low overload (LO) for PM240-2 Power Modules
FSD to FSF at 200 V and 400 V

Permissible output current as a function of ambient temperature for high overload (HO) for PM240-2 Power Modules
FSD to FSF at 200 V and 400 V

The operating temperature ranges of the Control Units should be taken into account. The temperature ranges are specified in the section [Technical specifications under Control Units](#).

¹⁾ Rated power based on the rated output current I_N . The rated output current I_N is based on the duty cycle for low overload (LO).

Characteristic curves
Derating data, PM240-2 Power Modules (continued)

Installation altitude

Permissible line supplies as a function of the installation altitude

- Installation altitude up to 2000 m (6562 ft) above sea level
 - Connection to every supply system permitted for the converter
- Installation altitudes between 2000 m (6562 ft) and 4000 m (13124 ft) above sea level
 - Connection only to a TN system with grounded neutral point
 - TN systems with grounded line conductor are not permitted
 - The TN line system with grounded neutral point can also be supplied using an isolation transformer
 - The phase against phase voltage does not have to be reduced

The connected motors, power elements and components must be considered separately.

Permissible output current as a function of the installation altitude for PM240-2 Power Modules at 40 °C for low overload (LO)

System operating voltage

The rated output current is constant within the respective supply voltage range.

More information on the derating data of the PM240-2 Power Modules is available in the Hardware Installation Manual on the internet at:

www.siemens.com/sinamics-g120/documentation

Overview

Using a Line Harmonics Filter (only for PM240-2 Power Modules, frame sizes FSD to FSG) makes for a substantial reduction in unwanted harmonics. In this way, a THD(I) value less than 5 % can be achieved and observance of the limit values according to IEC 61000-3-12, IEC 61000-2-2 and IEEE 519 is possible independently of the line impedance.

A line reactor is not required for a Line Harmonics Filter.

The permissible line voltage is 380 V to 415 V 3 AC.

For Line Harmonics Filters for higher line voltages up to 480 V see: www.schaffner.com

Overview

Line reactor for PM240-2 Power Modules, frame size FSA

Line reactors smooth the current drawn by the converter and thus reduce harmonic components in the line current. Through the reduction of the current harmonics, the thermal load on the power components in the rectifier and in the DC link capacitors is reduced as well as the harmonic effects on the supply. The use of a line reactor increases the service life of the converter.

Integration

A DC link reactor is integrated in the PM240-2 Power Modules, frame sizes FSD to FSG, and therefore no line reactor is required.

Line reactors that are optionally available depending on the Power Module used

<https://support.industry.siemens.com/cs/document/109482011>

SINAMICS S120 drive system

Blocksize format

Recommended line-side overcurrent protection devices for blocksize format

Selection and ordering data

Overcurrent protection devices are absolutely necessary for the operation of the converters. The following tables list recommendations for fuses.

- Siemens fuses of type 3NA3 and 3NE1 for use in the area of validity of IEC
- UL-listed fuses Class J or Siemens 3NE1 fuses for use in the USA and Canada

Recommendations on further overcurrent protection devices are available at:

www.siemens.com/sinamics-g120/ocpd

The Short-Circuit Current Rating (SCCR) according to UL for industrial control panel installations to NEC Article 409 or UL 508A/508C or UL 61800-5-1 is as follows for Class J fuses for

- PM240-2 Power Modules for SINAMICS S120 blocksize: 100 kA

SCCR and ICC values for combination with further overcurrent protection devices are available at:

www.siemens.com/sinamics-g120/ocpd

Notes for installations in Canada:

The converters are intended for line supply systems with overvoltage category III. Additional information is available in the technical documentation on the internet at:

<https://support.industry.siemens.com/cs/document/109771795>

Additional information about the listed Siemens fuses is available in Catalog LV 10 as well as in SiePortal.

SINAMICS S120 drive system

Blocksize format

Braking resistors for blocksize format

Overview

Braking resistor for PM240-2 Power Modules, frame size FSD

Braking resistor for PM240-2 Power Modules, frame size FSG

Excess energy in the DC link is dissipated in the braking resistor. The braking resistors are intended for use with PM240-2 Power Modules which feature an integrated braking chopper, but cannot regenerate energy to the supply system. For regenerative operation, e.g. the braking of a rotating mass with high moment of inertia, a braking resistor must be connected to convert the resulting energy into heat.

The braking resistors can be installed laterally next to the PM240-2 Power Modules. The braking resistors for the Power Modules, frame sizes FSD to FSG, should be placed outside the control cabinet or outside the switchgear room so that the heat is dissipated away from the Power Modules. The level of air conditioning required is therefore reduced.

Every braking resistor has a temperature switch (UL-listed). The temperature switch should be evaluated to prevent consequential damage if the braking resistor overheats.

Note:

For the electromagnetically compatible connection of an optionally connectable braking resistor, the corresponding shield connection kit is to be ordered for frame sizes FSD to FSG.

For more information, see [shield connection kits for blocksize format](#).

SINAMICS S120 drive system

Blocksize format

Output reactors for blocksize format

Overview

Output reactor for PM240-2 Power Modules, frame size FSG

Output reactors reduce the rate of voltage rise (dv/dt) and the height of the current peaks, and enable longer motor cables to be connected.

Owing to the high rates of voltage rise of the fast-switching IGBTs, the capacitance of long motor cables reverses polarity very quickly with every switching operation in the inverter. As a result, the inverter is loaded with additional current peaks of substantial magnitude.

Output reactors reduce the magnitude of these additional peaks because the cable capacitance reverses polarity more slowly across the reactor inductance, thereby attenuating the amplitudes of the current peaks.

When using output reactors, the following should be observed:

- Max. permissible output frequency 150 Hz
- Max. permissible pulse frequency 4 kHz
- The output reactor must be installed as close as possible to the Power Module

Integration

Output reactors that are optionally available depending on the Power Module used

Overview

Sine-wave filter

Sine-wave filters limit the rate of voltage rise (dv/dt) and the peak voltages on the motor winding. Similar to an output reactor, they enable the connection of longer motor cables.

Bearing currents are also reduced significantly. Using these filters therefore allows standard motors with standard insulation and without insulated bearings to be operated on SINAMICS. As a result, the voltage load on the motor winding is virtually identical to the load on windings of directly mains-fed motors.

Owing to the very low rates of voltage rise on the motor cable, the sine-wave filter also has a positive impact in terms of electro-magnetic compatibility which means that it is not absolutely essential to use shielded cables for short motor cables to achieve the required standard of EMC.

Since the voltage applied to the motor is not pulsed, the converter-related stray losses and additional noise in the motor are also reduced considerably and the noise level of the motor is similar to the level produced by directly mains-fed motors.

When using sine-wave filters, the following should be observed:

- Pulse frequencies of between 4 kHz and 8 kHz are permissible for rated outputs up to and including 90 kW
- The output frequency is limited to 150 Hz.
- Operation and commissioning may only be performed with the motor connected as the sine-wave filter is not no-load proof
- It must be ensured that the automatic pulse frequency reduction functions are also deactivated

SINAMICS S120 drive system

Blocksize format

dv/dt filters plus VPL for blocksize format

Overview

dv/dt filter plus VPL

dv/dt filters plus VPL (**V**oltage **P**eak **L**imiter) limit the voltage rate-of-rise dv/dt to values $< 500 \text{ V}/\mu\text{s}$ and the typical voltage peaks to the following values according to the limit value curve to IEC/TS 60034-17: 2006:

- $< 1350 \text{ V}$ phase/phase at the motor terminals with a nominal DC link voltage of 935 V
- $< 1100 \text{ V}$ phase/ground at the motor terminals with a nominal DC link voltage of 935 V

Standard motors with standard insulation and without insulated bearings can be used for converter operation if a dv/dt filter plus VPL is used.

JTA dv/dt filters can be operated with SINAMICS S120 blocksize firmware V4.7 SP10 or higher.

Design

In terms of function, the dv/dt filter plus VPL consists of two components:

- dv/dt reactor
- Voltage limiting network, which cuts off the voltage peaks and feeds the energy back into the DC link.

Integration

dv/dt filters plus VPL that are available depending on the Power Module used

SINAMICS S120 drive system

Blocksize format

Safe Brake Relay for blocksize format

Overview

Safe Brake Relay

With the Safe Brake Relay, the brake is controlled in accordance with IEC 61508 SIL 2 and ISO 13849-1 PL d and Category 3.

Design

The Safe Brake Relay can be installed below the Power Module on the shield connection plate.

The Safe Brake Relay has the following connections and interfaces:

- 1 two-channel transistor output stage to control the motor brake solenoid
- 1 connection for the cable harness (CTRL) to the Power Module in blocksize format
- 1 connection for the 24 V DC power supply

The connection between the 24 V DC power supply and the Safe Brake Relay must be kept as short as possible.

The scope of supply of a Safe Brake Relay includes the following:

- 4 cable harnesses for connecting to the CTRL socket of the Power Module
 - Length 0.32 m (1.05 ft) for frame sizes FSA to FSC
 - Length 0.55 m (1.80 ft) for frame sizes FSD and FSE
 - Length 0.8 m (2.62 ft) for frame size FSF
 - Length 1.1 m (3.61 ft) for frame size FSG

Integration

Connection example of a Safe Brake Relay

The 24 V DC solenoid of the motor brake is directly connected to the Safe Brake Relay. External overvoltage limiters are not required.

Overview

The shield connection kit

- makes it easier to connect the shields of supply and control cables
- provides mechanical strain relief
- ensures optimum EMC performance
- is used to attach the Brake Relay

The shield connection kit includes

- a shield connection plate for the required Power Module
- connection elements and clamps for mounting
- mounting device for Brake Relay, frame sizes FSD to FSG

A shield connection kit is supplied as standard with PM240-2 Power Modules in frame sizes FSA to FSC.

A set of shield plates is included in the scope of delivery for the motor and signal cables corresponding to the frame size for the frame sizes FSD to FSG. For the electromagnetically compatible connection of an optionally connectable braking resistor, the corresponding shield connection kit is to be ordered for frame sizes FSD to FSG.

SINAMICS S120 drive system

Supplementary system components

BOP20 Basic Operator Panel

Overview

BOP20 Basic Operator Panel

Parameters can be set, diagnostics information (e.g. alarm and fault messages) read out and faults acknowledged using the BOP20 Basic Operator Panel.

Design

The BOP20 Basic Operator Panel has a backlit two-line display area with six keys.

The integrated plug connector on the rear of the BOP20 Basic Operator Panel provides its power and establishes communication with the Control Unit.

Selection and ordering data

Description	Article No.
BOP20 Basic Operator Panel	6SL3055-0AA00-4BA0

Integration

The BOP20 Basic Operator Panel can be inserted on the following Control Units:

- SINAMICS S110
 - CU305
- SINAMICS S120
 - CU310-2
 - CU320-2

Control Unit CU305 with attached BOP20 Basic Operator Panel

CU310-2 PN Control Unit with inserted BOP20 Basic Operator Panel

CU320-2 PN Control Unit with inserted BOP20 Basic Operator Panel

Overview

CBE20 Communication Board

The CBE20 Communication Board can be used to connect to a PROFINET IO network via a CU320-2 Control Unit.

The SINAMICS S120 or SINAMICS S150 drive system then assumes the function of a PROFINET IO device and can perform the following functions:

- PROFINET IO device
- 100 Mbps full duplex
- Supports real-time classes of PROFINET IO:
 - RT (Real-Time)
 - IRT (Isochronous Real-Time), minimum send cycle 500 μ s
- Connection to control systems as PROFINET IO devices in accordance with PROFIdrive, Specification V4
- Standard TCP/IP communication for engineering processes using the Startdrive or STARTER commissioning tools
- Integrated 4-port switch with four RJ45 sockets based on the PROFINET ASIC ERTEC400. The optimum topology (line, star, tree) can therefore be configured without additional external switches
- Supports the functions "media redundancy" and "shared device"

The CBE20 Communication Board is required if:

- a SINAMICS S120 or SINAMICS S150 converter with a CU320-2 DP Control Unit (PROFIBUS) should be connected to a PROFINET-IO network
- SINAMICS Link is to be used to directly exchange data between several CU320-2 DP (PROFIBUS) or CU320-2 PN (PROFINET) Control Units without using a higher-level control system
- EtherNet/IP in a CU320-2 DP should be used
- Modbus TCP in a CU320-2 DP should be supported

Integration

The CBE20 Communication Board plugs into the option slot on the CU320-2 Control Unit.

SINAMICS Link

SINAMICS Link can be used to directly exchange data between several CU320-2 DP (PROFIBUS) or CU320-2 PN (PROFINET) Control Units without using a higher-level control system. In this case, the CBE20 Communication Board is required. Possible applications for the SINAMICS Link include:

- Torque distribution for several drives
- Setpoint cascading for several drives
- Load distribution for drives coupled through a material web
- Couplings between SINAMICS G or SINAMICS S with the CU320-2 Control Unit and SINAMICS DC Master with CUD Control Units.

Participants other than CU320-2 Control Units and/or CUD Control Units of the SINAMICS DC Master cannot be integrated into this communication.

SINAMICS Link is activated by appropriately parameterizing the Control Units of the participants.

Supplementary system components

DMC20 DRIVE-CLiQ Hub Module

Overview

DMC20 DRIVE-CLiQ Hub Module

The DMC20 DRIVE-CLiQ Hub Module is used to implement a star-shaped topology of a DRIVE-CLiQ line. Two DMC20 DRIVE-CLiQ Hub Modules can be connected in series (cascaded).

Design

The DMC20 DRIVE-CLiQ Hub Module in degree of protection IP20 is designed for mounting in control cabinets.

The following are located on the DMC20 DRIVE-CLiQ Hub Module:

- 6 DRIVE-CLiQ sockets for connecting 5 DRIVE-CLiQ devices
- 1 connection for the electronics power supply via the 24 V DC supply connector

The status of the DMC20 DRIVE-CLiQ Hub Module is indicated via a multi-color LED.

The DMC20 DRIVE-CLiQ Hub Module can be snapped onto a TH 35 standard mounting rail according to EN 60715 (IEC 60715).

Overview

TM15 Terminal Module

The number of available digital inputs and outputs within a drive system can be expanded with the TM15 Terminal Module.

Design

The TM15 Terminal Module is equipped with the following:

- 24 bidirectional digital inputs/outputs (galvanic isolation in 3 groups with 8 channels per group)
- 24 green status LEDs for indicating the logical signal state of the corresponding terminal
- 2 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the TM15 Terminal Module is indicated via a multi-color LED.

The TM15 Terminal Module can be snapped onto a TH 35 standard mounting rail in accordance with EN 60715 (IEC 60715).

The signal cable shield can be connected to the TM15 Terminal Module by means of a shield connection terminal, e.g. Phoenix Contact type SK8 or Weidmüller type KLBÜ CO 1. The shield connection terminal must not be used as a strain relief mechanism.

Overview

TM31 Terminal Module

With the TM31 Terminal Module, the number of available digital inputs and outputs and the number of analog input and outputs within a drive can be expanded.

The TM31 Terminal Module also features relay outputs with changeover contact and a temperature sensor input.

Design

The following are located on the TM31 Terminal Module:

- 8 digital inputs
- 4 bidirectional digital inputs/outputs
- 2 relay outputs with changeover contact
- 2 analog inputs
- 2 analog outputs
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17 and higher)
- 2 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the TM31 Terminal Module is indicated via a multi-color LED.

The TM31 Terminal Module can be snapped onto a TH 35 standard mounting rail in accordance with EN 60715 (IEC 60715).

The signal cable shield can be attached to the TM31 Terminal Module via a shield connection terminal, e.g. type SK8 supplied by Phoenix Contact or type KLBÜ CO 1 supplied by Weidmüller. The shield connection terminal must not be used as a strain relief mechanism.

SINAMICS S120 drive system

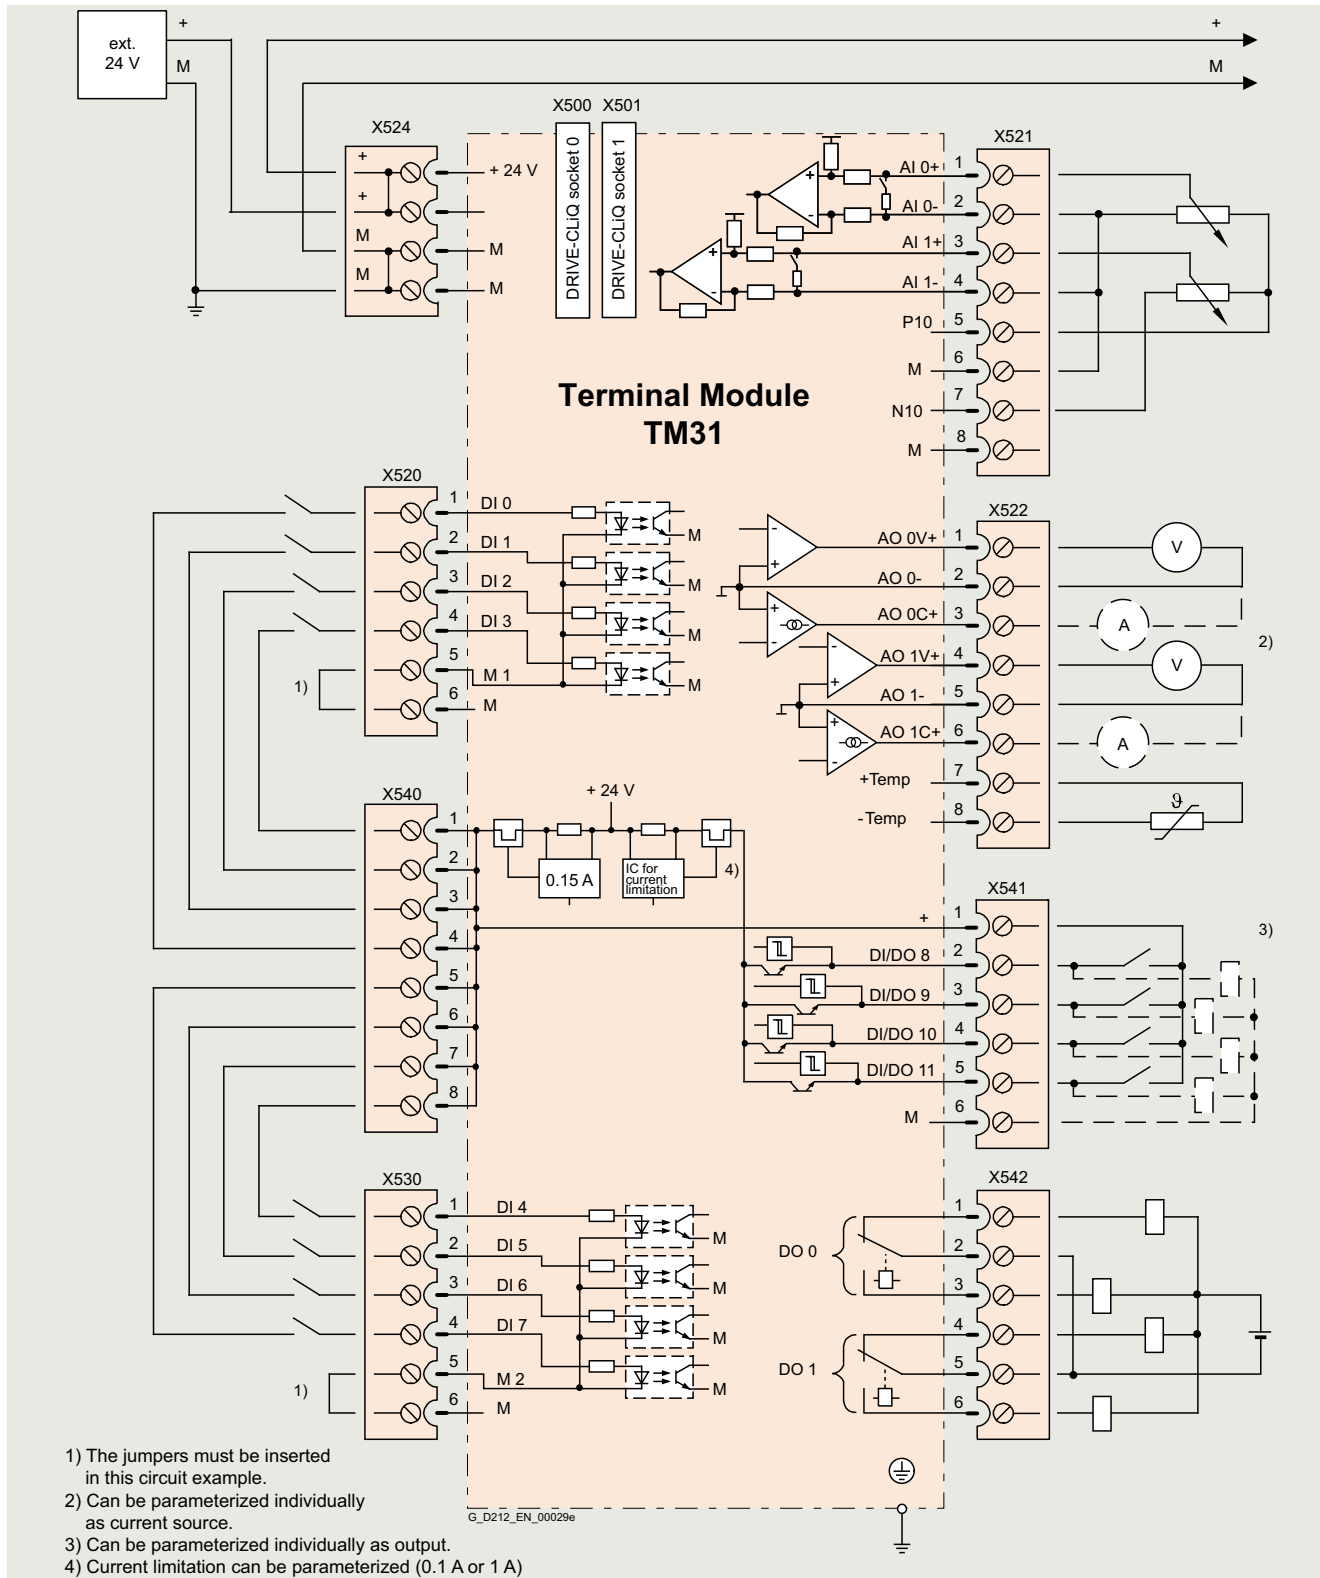

Supplementary system components

TM41 Terminal Module

Overview

TM41 Terminal Module

The TM41 Terminal Module supplies TTL signals which emulate an incremental encoder, e.g. to a higher-level control. The encoder interface (incremental encoder emulation) can be linked to an encoder signal from the Control Unit, e.g. incremental encoder sin/cos, by parameter assignment.

The TM41 Terminal Module increases the number of digital inputs/outputs and analog inputs that are available in the drive system.

Design

The following are located on the TM41 Terminal Module:

- 4 bidirectional digital inputs/outputs
- 4 digital inputs (with galvanic isolation)
- 1 analog input
- 1 interface for emulation of TTL incremental encoder (RS422)
- 1 LED for signaling zero mark detection for encoder interface
- 2 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply and to supply the digital outputs via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the TM41 Terminal Module is indicated via a multi-color LED.

An LED next to the interface for TTL pulse encoder emulation is illuminated as soon as a zero mark is detected.

The TM41 Terminal Module can be snapped onto a TH 35 standard mounting rail in accordance with EN 60715 (IEC 60715).

The signal cable shield can be attached to the TM41 Terminal Module via a shield connection terminal, e.g. type SK8 supplied by Phoenix Contact or type KLBÜ CO 1 supplied by Weidmüller. The shield connection terminal must not be used as a strain relief mechanism.

Overview

TM54F Terminal Module

The TM54F Terminal Module is a dual-processor I/O interface with four fail-safe digital outputs and ten fail-safe digital inputs for utilization of the Safety Integrated functions of the SINAMICS drive system via external actuators and sensors.

Every available safety function integrated in the drive can be controlled via the fail-safe digital inputs on the TM54F Terminal Module. In the event that the parameterized safety functions of several drives operated together on a Control Unit are to be executed together, then these drives can be grouped in the TM54F Terminal Module. The advantage of this approach is that only one fail-safe digital input needs to be connected for these drives.

The fail-safe digital inputs and outputs have two channels and are redundantly configured with an internal data cross-check using the two processors. A fail-safe digital output consists of one P-switching and one M-switching output as well as one digital input to read back the switching state. A fail-safe digital input consists of two digital inputs.

Safety sensors can be connected over two switchable 24 V sensor supplies and can be evaluated over the fail-safe digital inputs. The switchable 24 V sensor supply ensures that the fail-safe digital inputs can be dynamized to detect dormant errors (this dynamization is used to check the shutdown paths). An unswitchable 24 V sensor supply is additionally provided by the TM54F Terminal Module for connecting undynamizable safety sensors.

The TM54F Terminal Module must be directly connected to a Control Unit via a DRIVE-CLiQ cable. Only one TM54F Terminal Module can be assigned to each Control Unit. It is not permissible to make the TM54F connection via another DRIVE-CLiQ device, e.g. a Power Module, a Motor Module or a Line Module.

Design

The following are located on the TM54F Terminal Module:

- 4 fail-safe digital outputs
- 10 fail-safe digital inputs
- 4 LEDs, single color for indicating the status of the read back channel of the fail-safe digital outputs
- 4 LEDs, dual-color for indicating the status of the fail-safe digital outputs
- 20 LEDs, dual-color for indicating the status of the fail-safe digital inputs
- 3 LEDs, single color for indicating the status of the 24 V sensor supplies
- 2 DRIVE-CLiQ sockets
- 2 connections for 24 V sensor supply, switchable
- 1 connection for 24 V sensor supply, not switchable
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 connection for the 24 V power supply to digital outputs and sensors
- 1 PE/protective conductor connection

The status of the TM54F Terminal Module is indicated via a multi-color LED.

The TM54F Terminal Module can be snapped onto a TH 35 standard mounting rail in accordance with EN 60715 (IEC 60715).

The signal cable shield can be attached to the TM54F Terminal Module via a shield connection terminal, e.g. type SK8 supplied by Phoenix Contact or type KLBÜ CO 1 supplied by Weidmüller. The shield connection terminal must not be used as a strain relief mechanism.

Pins for connector coding are included in the TM54F Terminal Module scope of supply.

Safety Integrated	Acc. to IEC 61508 SIL 2 and ISO 13849-1 PL d and Category 3

¹⁾ The specified delay times refer to the hardware. The actual reaction time depends on the time slice in which the digital input/output is processed.

²⁾ The total current of all fail-safe digital outputs must not exceed 5.33 A.

SINAMICS S120 drive system

Supplementary system components

TM120 Terminal Module

Overview

TM120 Terminal Module

Four temperature sensors can be evaluated via the TM120 Terminal Module. The temperature sensor inputs are safely electrically isolated from the evaluation electronics in the TM120 Terminal Module and are suitable for evaluating the temperature of special motors, e.g. SIMOTICS L-1FN linear motors and SIMOTICS T-1FW6 built-in torque motors.

Design

The following are located on the TM120 Terminal Module:

- 4 temperature sensor inputs for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17 and higher)
- 2 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the TM120 Terminal Module is indicated using a multi-color LED.

The TM120 Terminal Module can be snapped onto a TH 35 standar mounting rail in accordance with EN 60715 (IEC 60715).

Selection and ordering data

TM120 Terminal Module Without DRIVE-CLiQ cable	6SL3055-0AA00-3KA0
Accessories for re-ordering	
Dust protection blanking plugs (50 units) For DRIVE-CLiQ port	6SL3066-4CA00-0AA0

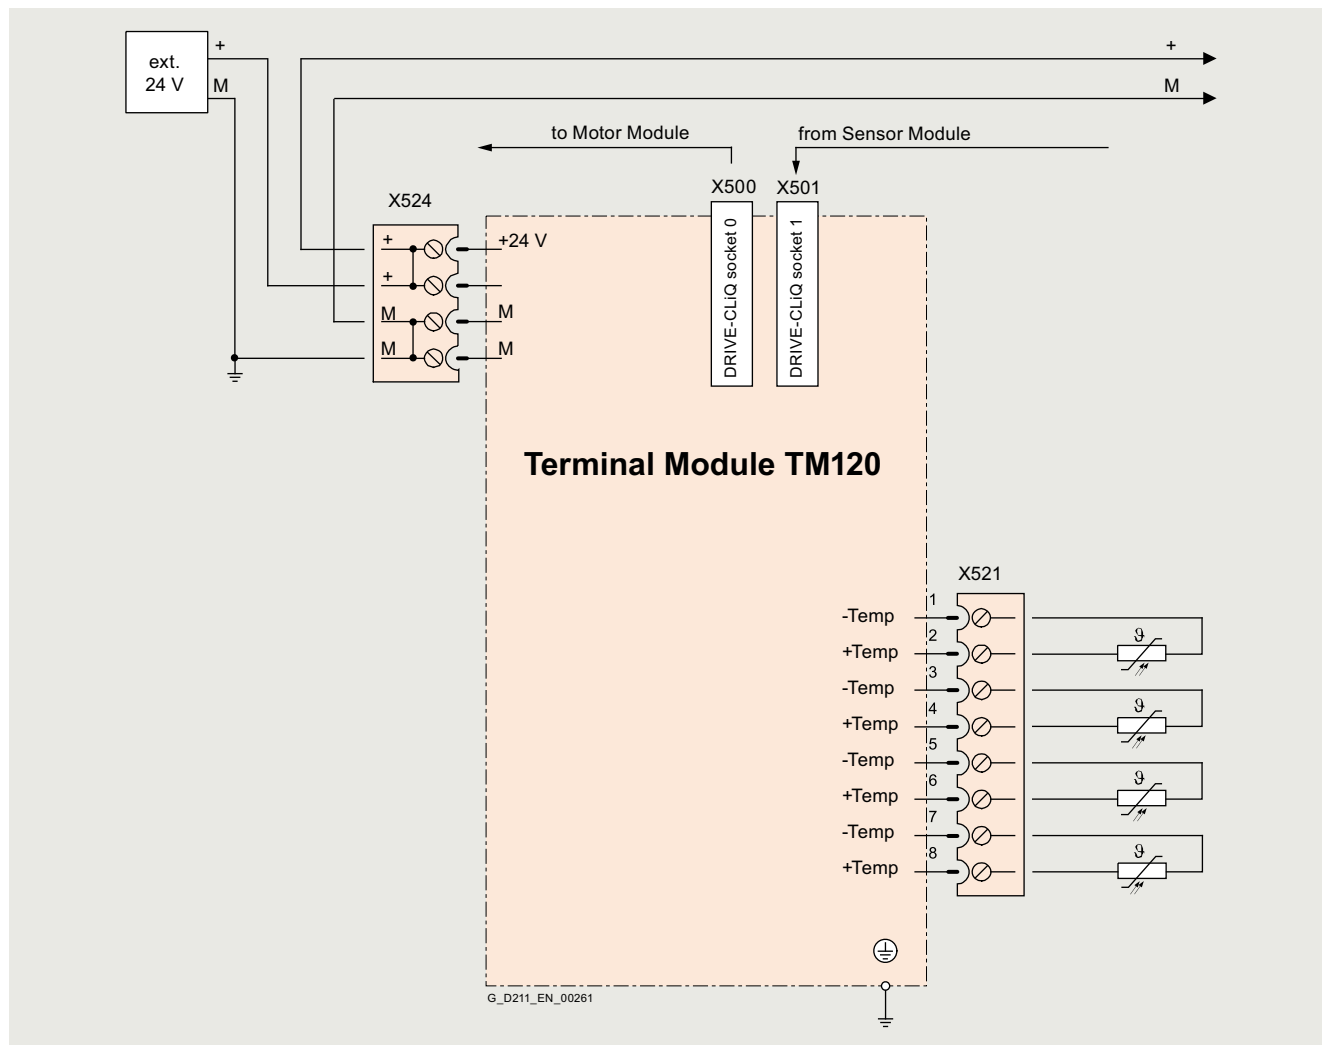

Technical specifications

	TM120 Terminal Module 6SL3055-0AA00-3KA0
Power requirement, max. at 24 V DC	0.5 A
• Conductor cross-section, max.	2.5 mm ²
• Fuse protection, max.	20 A
Temperature sensor inputs The inputs can be individually parameterized to evaluate sensors of type KTY84-130, Pt1000, PTC or temperature switches	
• Conductor cross-section	0.2 ... 6 mm ²
• Constant current per sensor, approx.	2 mA
• Safe electrical separation up to line voltage, max.	480 V AC
Power loss, typically	2.4 W
PE connection	M4 screw
Dimensions	
• Width	30 mm (1.18 in)
• Height	150 mm (5.91 in)
• Depth	111 mm (4.37 in)
Weight, approx.	0.41 kg (0.90 lb)

Integration

The TM120 Terminal Module can communicate via DRIVE-CLiQ with the following Control Units with SINAMICS firmware version V4.3 and higher:

- CU310-2 Control Unit
- CU320-2 Control Unit
- SINUMERIK Control Unit
- SIMOTION D Control Unit or Controller Extension

Example connection of a TM120 Terminal Module

SINAMICS S120 drive system

Supplementary system components

TM150 Terminal Module

Overview

TM150 Terminal Module

The TM150 Terminal Module is a DRIVE-CLiQ component for temperature evaluation. The temperature is measured in a temperature range from -99 °C to $+250\text{ °C}$ for the following temperature sensors:

- Pt100 (with monitoring for wire breaks and short-circuits)
- Pt1000 (with monitoring for wire breaks and short-circuits)
- KTY84 (with monitoring for wire breaks and short-circuits)
- PTC (with monitoring for short-circuit)
- Bimetallic NC contact (without monitoring)

For the temperature sensor inputs, for each terminal block the evaluation can be parameterized for 1×2-wire, 2×2-wire, 3-wire or 4-wire. There is no galvanic isolation in the TM150 Terminal Module.

The temperature channels of a TM150 can be subdivided into 3 groups and evaluated together.

Design

The following are located on the TM150 Terminal Module:

- 6 ... 12 temperature sensor inputs
- 2 DRIVE-CLiQ sockets
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the TM150 Terminal Module is indicated via a multi-color LED.

The TM150 Terminal Module can be snapped onto a TH 35 standard mounting rail in accordance with EN 60715 (IEC 60715).

VSM10 Voltage Sensing Module

Overview

VSM10 Voltage Sensing Module

The VSM10 Voltage Sensing Module is capable of measuring the line or motor voltage waveform precisely and helps Line Modules to continue functioning properly under difficult supply conditions, for example, in the case of extreme voltage fluctuations or brief supply interruptions.

The phase differential voltage can be measured, either grounded (in the delivery state with jumper plugged in) or isolated.

The VSM10 Voltage Sensing Module is integrated in Active Interface Modules in chassis format and Smart Line Modules in chassis format. It can be optionally deployed for all Active Line Modules in booksize format and for 16 kW, 24 kW, 36 kW and 55 kW Smart Line Modules in booksize format.

In addition, the VSM10 Voltage Sensing Module is used to connect to rotating synchronous motors – or for a "quick flying restart" of rotating induction motors.

Design

The VSM10 Voltage Sensing Module has the following connections and interfaces:

- 1 connection for direct voltage sensing up to 690 V
- 1 connection for voltage sensing via voltage transformers; maximum voltage 100 V
- 2 analog inputs (reserved for monitoring of resonance in the Active Interface Module in chassis format)
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)
- 1 DRIVE-CLiQ socket
- 1 connection for the electronics power supply via the 24 V DC power supply connector
- 1 plug-in jumper for either grounded (delivery state) or isolated measurement
- 1 PE (protective earth) connection

The status of the VSM10 Voltage Sensing Modules is indicated via a multi-color LED.

The VSM10 Voltage Sensing Module can be snapped onto a TH 35 standard mounting rail in accordance with EN 60715 (IEC 60715).

Selection and ordering data

For the SINAMICS G150, SINAMICS S150 and SINAMICS S120 Cabinet Modules, the VSM10 Voltage Sensing Module can be ordered as an option by specifying order code **K51** in order to implement the flying restart function.

Technical specifications

	VSM10 Voltage Sensing Module 6SL3053-0AA00-3AA1
Current requirement, max. at 24 V DC	0.2 A
• Conductor cross-section, max.	2.5 mm ²
Power loss, max.	10 W
Line voltage detection	
• Insulation resistance neutral point – ground when jumper is not inserted	>10 MΩ
• Input resistance - Terminal X521 - Terminal X522	>362 kΩ/phase >2.5 MΩ/phase
Analog inputs (reserved for monitoring an Active Interface Module in chassis format)	
• Internal resistance, approx. (between differential inputs)	100 kΩ
• Resolution	12 bits + sign
PE connection	M4 screw
Dimensions	
• Width	50 mm (1.97 in)
• Height	151 mm (5.94 in)
• Depth	110 mm (4.33 in)
Weight, approx.	1 kg (2.21 lb)
Certificate of suitability	cULus

Integration

The VSM10 Voltage Sensing Module can communicate with the following Control Units via DRIVE-CLiQ:

- CU310-2 Control Unit
- CU320-2 Control Unit
- SINUMERIK Control Unit
- SIMOTION D Control Unit or Controller Extension

On the SINAMICS S120 chassis format, the VSM10 Voltage Sensing Module is integrated in the Active Interface Modules and Smart Line Modules.

System components for SINAMICS S120 Chassis and Chassis-2 Units

Supplementary system components

SBA Safe Brake Adapter

Overview

SBA Safe Brake Adapter

The SBA Safe Brake Adapter is needed for the implementation of a safe brake control (Safety Integrated function SBC) in accordance with IEC 61800-5-2.

The Safe Brake Adapter is available for a 230 V AC brake control voltage.

Note:

The SBA is approved for the IEC area. Safe Brake Adapter with UL approval are available on request. The UL approval is valid for a maximum permissible current consumption of 1.5 A (inductive).

Design

The Safe Brake Adapter SBA has the following connections and interfaces:

- 1 connection for the connecting cable to the Power Module/Motor Module
- 1 connection for the external 230 V AC supply
- 1 connection for motor holding brake
- 1 connection for fast de-excitation

The SBA Safe Brake Adapter is designed for attachment to a support rail in accordance with EN 60715.

Selection and ordering data

• Height	111 mm (4.37 in)
• Depth	89 mm (3.50 in)
Weight, approx.	0.25 kg (0.55 lb)
Safety Integrated	According to IEC 61508 SIL2 and ISO 13849-1 PLd and Category 3

¹⁾ The UL approval is valid for a maximum permissible current consumption of 1.5 A (inductive).

System components for SINAMICS S120 Chassis and Chassis-2 Units

Supplementary system components

SBA Safe Brake Adapter

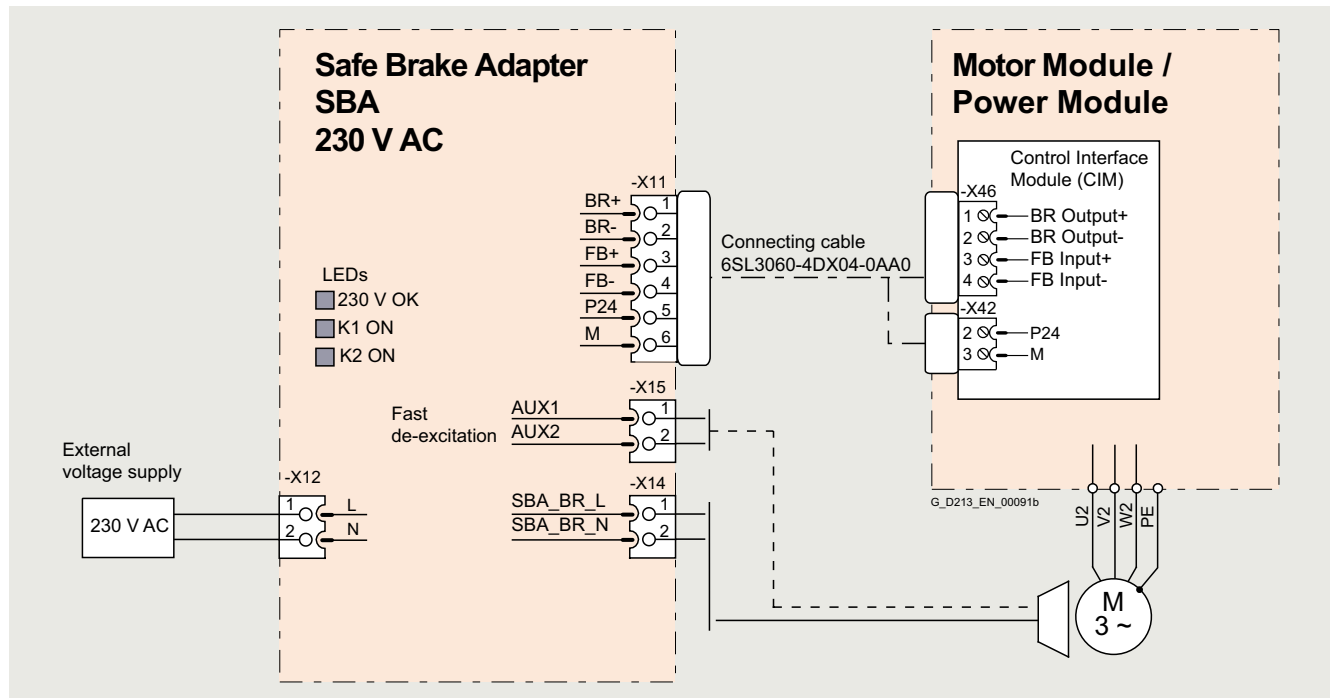

Integration

The control and feedback signal regarding the switching state of the SBA relay is realized via terminals of the Control Interface Module (CIM) in the Motor Module/Power Module. The excitation coil of the holding brake is connected directly at the SBA.

The SBA can be ordered as an additional component for SINAMICS S120 built-in units in chassis format.

It is available as option (**K88**) for SINAMICS S150 and S120 Cabinet Modules.

For the SINAMICS S120 units, chassis format, the brake supply voltage must be connected externally at the SBA.

Connection example for the SBA Safe Brake Adapter

SINAMICS S120 drive system

Supplementary system components

Encoder system connection

Overview

Motors with DRIVE-CLiQ interface

DRIVE-CLiQ is the preferred method for connecting the encoder systems to SINAMICS S110 or SINAMICS S120.

Motors with DRIVE-CLiQ interface are available for this purpose, e.g.

- SIMOTICS M-1PH8 and SIMOTICS S-1FT7/1FT2 synchronous motors
- SIMOTICS M-1PH8 asynchronous motors (induction motors)
- SIMOTICS T-1FW3 torque motors

Motors with a DRIVE-CLiQ interface can be directly connected to the SINAMICS S110 Control Unit CU305 or, in case of the SINAMICS S120 drive system, to the associated Motor Module using MOTION-CONNECT DRIVE-CLiQ cables. The MOTION-CONNECT DRIVE-CLiQ cable connection at the motor has degree of protection IP67.

The DRIVE-CLiQ interface supplies the motor encoder via the integrated 24 V DC supply and transfers the motor encoder and temperature signals and the electronic rating plate data, e.g. a unique identification number and rated data (voltage, current, torque) to the Control Unit. This means that for the various encoder types different encoder cables with varying permissible lengths are no longer required; just one cable type, MOTION-CONNECT DRIVE-CLiQ with varying permissible lengths, can be used for all encoders.

These motors simplify commissioning and diagnostics, as the motor and encoder type are identified automatically.

Motors without DRIVE-CLiQ interface

The encoder and temperature signals of motors without DRIVE-CLiQ interface, as well as those of external encoders, must be connected via Sensor Modules. Sensor Modules Cabinet-Mounted are available in degree of protection IP20 for control cabinet installation, as well as Sensor Modules External-Mounted in degree of protection IP67.

Only one encoder system can be connected to each Sensor Module.

More information

Motor encoder and temperature signals must be connected when possible to the corresponding Motor Module or Power Module and external encoders to the Control Unit. However, the DRIVE-CLiQ connections can also be bundled via DRIVE-CLiQ Hub Modules.

Safety Integrated

The Safety Integrated extended functions of the SINAMICS drive system require suitable encoders (see [SIMOTICS servomotors section](#)).

Motors driving a load via a belt

Unfavorable material combinations generate static electricity between the belt pulley and the belt. Electrostatic charging must be prevented, since this can discharge via the motor shaft and the encoder, thereby causing disturbances in the encoder signals. One countermeasure is to manufacture belts out of an antistatic material, for example.

Overview

SMC10 Sensor Module Cabinet-Mounted

The SMC10 Sensor Module Cabinet-Mounted is required to evaluate the encoder signals of motors without a DRIVE-CLiQ interface. External encoders can also be connected via the SMC10.

The following encoder signals can be evaluated:

- 2-pole resolver
- Multi-pole resolver

Design

The SMC10 Sensor Module Cabinet-Mounted features the following connections and interfaces as standard:

- 1 encoder connection including motor temperature sensing (KTY84-130, Pt1000¹⁾ or PTC) via SUB-D connector
- 1 DRIVE-CLiQ interface
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the SMC10 Sensor Module Cabinet-Mounted is indicated via a multi-color LED.

The SMC10 Sensor Module Cabinet-Mounted can be snapped onto a TH 35 standard mounting rail according to EN 60715 (IEC 60715).

The signal cable shield is connected via the encoder system connector and can also be connected to the SMC10 Sensor Module Cabinet-Mounted via a shield connection terminal, e.g. Phoenix Contact type SK8 or Weidmüller type KLBÜ CO 1. The shield connection terminal must not be used as a strain relief mechanism.

Integration

SMC10 Sensor Modules Cabinet-Mounted communicate with a Control Unit via DRIVE-CLiQ.

SINAMICS S120 drive system

Supplementary system components

Encoder system connection > SMC20 Sensor Module Cabinet-Mounted

Overview

SMC20 Sensor Module Cabinet-Mounted

The SMC20 Sensor Module Cabinet-Mounted is required to evaluate the encoder signals of motors without a DRIVE-CLiQ interface. External encoders can also be connected via the SMC20.

The following encoder signals can be evaluated:

- Incremental encoder sin/cos $1 V_{pp}$
- Absolute encoder EnDat 2.1
- SSI encoder with incremental signals sin/cos $1 V_{pp}$ (firmware version 2.4 and later)

The motor temperature can also be sensed using a PTC thermistor KTY84-130, Pt1000¹⁾ or PTC.

Design

The SMC20 Sensor Module Cabinet-Mounted features the following connections and interfaces as standard:

- 1 encoder connection including motor temperature sensing (KTY84-130, Pt1000¹⁾ or PTC) via SUB-D connector
- 1 DRIVE-CLiQ interface
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the SMC20 Sensor Module Cabinet-Mounted is indicated via a multi-color LED.

The SMC20 Sensor Module Cabinet-Mounted can be snapped onto a TH 35 standard mounting rail according to EN 60715 (IEC 60715).

The signal cable shield is connected via the encoder system connector and can also be connected to the SMC20 Sensor Module Cabinet-Mounted via a shield connection terminal, e.g. Phoenix Contact type SK8 or Weidmüller type KLBÜ CO 1. The shield connection terminal must not be used as a strain relief mechanism.

¹⁾ The Pt1000 sensor is not supported when combined with a Control Unit CU305.

Overview

SMC30 Sensor Module Cabinet-Mounted

The SMC30 Sensor Module Cabinet-Mounted is required to evaluate the encoder signals of motors without a DRIVE-CLiQ interface. External encoders can also be connected via the SMC30.

The following encoder signals can be evaluated:

- Incremental encoders TTL/HTL with/without open-circuit detection (open-circuit detection is only available with bipolar signals)
- SSI encoder with TTL/HTL incremental signals
- SSI encoder without incremental signals

The motor temperature can also be sensed using a PTC thermistor KTY84-130, Pt1000¹⁾ or PTC.

Design

The SMC30 Sensor Module Cabinet-Mounted features the following connections and interfaces as standard:

- 1 encoder connection including motor temperature sensing (KTY84-130, Pt1000¹⁾ or PTC) either via SUB-D connector or via terminals
- 1 DRIVE-CLiQ interface
- 1 connection for the electronics power supply via the 24 V DC supply connector
- 1 PE/protective conductor connection

The status of the SMC30 Sensor Module Cabinet-Mounted is indicated via a multi-color LED.

The SMC30 Sensor Module Cabinet-Mounted can be snapped onto a TH 35 standard mounting rail in according to EN 60715 (IEC 60715).

The maximum encoder cable length between SMC30 modules and encoders is 100 m. For HTL encoders, this length can be increased to 300 m if the A+/A- and B+/B- signals are evaluated and the power supply cable has a minimum cross-section of 0.5 mm².

The signal cable shield can be connected to the SMC30 Sensor Module Cabinet-Mounted via a shield connection terminal, e.g., Phoenix Contact type SK8 or Weidmüller type KLBU CO 1. The shield connection terminal must not be used as a strain relief mechanism.

Integration

SMC30 Sensor Modules Cabinet-Mounted communicate with a Control Unit via DRIVE-CLiQ.

Selection and ordering data

SINAMICS S120 drive system

Supplementary system components

Encoder system connection > SME20/SME25 Sensor Modules External

Overview

SME20/SME25 Sensor Module External

SME20/SME25 Sensor Modules External are encoder evaluation units for machine encoders (direct measuring systems). The devices are designed with IP67 degree of protection. This means that the units can be installed outside the control cabinet near the machine encoder.

The following encoder signals can be evaluated:

- Incremental encoder sin/cos $1 V_{pp}$ without rotor position track (C and D tracks)
- Absolute encoder EnDat 2.1
- SSI absolute encoder ¹⁾ with incremental signals sin/cos $1 V_{pp}$ (firmware V2.4 and later)

Using adapter cable 6FX8002-2CA88-..., it is possible to connect a motor with a 17-pole circular encoder connector to the 12-pole circular connector of the SME20.

- KTY/Pt1000/PTC temperature sensors can be used to evaluate the motor temperature (only possible with SME20).
- The Sensor Module is only suitable for motors without absolute track signals (C and D tracks), e.g.:
 - Synchronous motors with pole position identification (SIMOTICS L-1FN/T-1FW/M-1FE)
 - Asynchronous motors (induction motors) (SIMOTICS M-1PH)

SME20/SME25 Sensor Modules External evaluate the encoder signals and convert the information obtained to DRIVE-CLiQ. Neither motor nor encoder data are saved in the SME20/SME25.

Design

SME20/SME25 Sensor Modules External feature the following connections and interfaces as standard:

- 1 encoder connector via circular plug
- 1 DRIVE-CLiQ interface with integrated 24 V DC electronics power supply from the Control Unit or Motor Module
- 1 PE (protective earth) connection

Integration

SME20/SME25 Sensor Modules External communicate with a Control Unit via DRIVE-CLiQ.

¹⁾ The maximum cable length at the encoder system interface depends on the current drawn by the encoder system and the cross-section of the supply conductors in the cable, however, a maximum of 30 m (98.4 ft) (for detailed information, see Manual SINAMICS S120 Control Units).

SINAMICS S120 drive system

Supplementary system components

Encoder system connection > SME120/SME125 Sensor Modules External

Overview

SME120/SME125 Sensor Module External

The SME120/SME125 Sensor Modules External are encoder evaluation units with degree of protection IP67, especially suitable for use in linear and torque motor applications. They can be installed close to the motor systems and encoders in the machine.

Sensor Modules External evaluate the encoder signals and motor temperature sensors specifically and convert the information obtained for DRIVE-CLiQ. The motor temperature signals are safely electrically separated.

Neither motor nor encoder data are saved in the SME120/SME125.

The SME120 and SME125 can be operated on Control Units with firmware release V2.4 and later.

The following encoder signals can be evaluated depending on the type of Sensor Module:

- Incremental encoder $\sin/\cos 1 V_{pp}$
- Absolute encoder EnDat 2.1
- SSI absolute encoder ¹⁾ with $\sin/\cos 1 V_{pp}$ incremental signals, but without reference signal

The motor temperature can also be sensed using a PTC thermistor KTY84-130, Pt1000 or PTC.

Design

SME120/SME125 Sensor Modules External feature the following connections and interfaces as standard:

- 1 encoder connection via circular connector
- 1 temperature sensor connection via circular connector
- 1 Hall-effect sensor connection via circular connector (SME120 only)
- 1 DRIVE-CLiQ interface with integrated 24 V DC electronics power supply from the Control Unit or Motor Module
- 1 PE (protective earth) connection

System overview

Overview

SINAMICS S220 Smart Line Module between Control Unit CU320-2 and SINAMICS S120 Motor Modules, in booksize format

With SINAMICS S120 in booksize format, Siemens is one of the world's leading suppliers of drive solutions for machine tools/production machines and General Motion Control applications. Used in a wide variety of areas, industries and applications, Siemens delivers outstanding customer benefits and industry know-how with SINAMICS S120.

The requirements that drive solutions need to meet are continually changing and increasing. Machine solutions need to be perfectly tailored to one another, offer the highest level of functionality and quality, while being economic and simple to implement across the board.

With SINAMICS S220 in booksize format, Siemens is innovating the proven SINAMICS S120 series with considerably more powerful functions and is providing answers to future requirements. SINAMICS S220 is the reliable, robust, and innovative high-performance solution that meets all the requirements for IoT and industrial security.

SINAMICS S220 Smart Line Modules are the first steps in innovating the proven SINAMICS S120 range. Smart Line Modules are an integral part of the SINAMICS S220 in booksize format series and are characterized by the highest level of performance, maximum flexibility, high degree of user-friendliness and being fit for digitalization. Available in two versions (C and D type), thanks to their higher power density, greater overload capability and precise dimensioning, economical machine solutions can be implemented while also requiring less space in the control cabinet. Thanks to their innovative mechanical design, Smart Line Modules are also simple and reliable to install and extremely robust.

Operation of SINAMICS S220 Smart Line Modules is possible with a CU320-2 Control Unit (SINAMICS firmware V5.2 SP3 HF10).

Smart Line Modules can supply energy and return regenerative energy to the supply system. A Braking Module and braking resistor are required only if the drives need to be decelerated in a controlled manner after a power failure (i.e. when energy cannot be recovered to the supply). When a Smart Line Module is used as the infeed, the matching line reactor must be installed. A line filter can be optionally installed in order to ensure compliance with the limits stipulated for Category C2 in EN 61800-3.

Drive dimensioning in the TIA Selection Tool

Application-specific requirements can be determined using drive technology dimensioning in the TIA Selection Tool. This can include motors, gearboxes and converters. The tool supports the configuration and dimensioning of control functions with an open and closed control loop. The technical documentation with features of the technical drive system, as well as a product list for ordering via SiePortal can also be compiled.

You can find more information about the TIA Selection Tool at www.siemens.com/tia-selection-tool

Virtualization

The DriveSim Designer virtualization solution makes it possible to simulate all SINAMICS S220 device types in a realistic manner, with minimum work for parameter setting and simple handling.

Overview

SINAMICS S220 Smart Line Module, in booksize format

Smart Line Modules are stall-protected, line-commutated in-feed/regenerative feedback units (diode bridge for incoming supply; stall-protected, line-commutated regenerative feedback via IGBTs) with 100 % continuous regenerative feedback power. The regenerative capability of the modules can be deactivated by means of parameterization. Smart Line Modules are designed for connection to grounded TN/TT and non-grounded IT supply systems.

- C type: Optimized for continuous load with up to 200 % overload (continuous motion)
- D type: Optimized for highly dynamic, intermittent duty cycles with up to 300 % overload (discontinuous motion)

The DC link is pre-charged via integrated precharging resistors.

The associated line reactor is required for operating a Smart Line Module.

Design

The Smart Line Modules in booksize format feature the following connections and interfaces as standard:

- 1 power connection via screw-type or push-in terminals (not included in the scope of supply)
- 1 connection for the 24 V DC electronics power supply via the 24 V terminal adapter included in the scope of supply
- 1 DC link connection via integrated DC link busbars
- 2 PE (protective earth) connections
- 3 DRIVE-CLiQ sockets
- 1 temperature sensor input for KTY84-130, Pt1000 or PTC (Pt1000 can be used from firmware V4.7 HF17)

The status of the Smart Line Modules is indicated via two multi-color LEDs.

The signal cable shield can be connected to the Line Module by means of a shield terminal, e.g. Weidmüller type KLBÜ 3-8 SC.

The scope of supply of the Smart Line Modules includes:

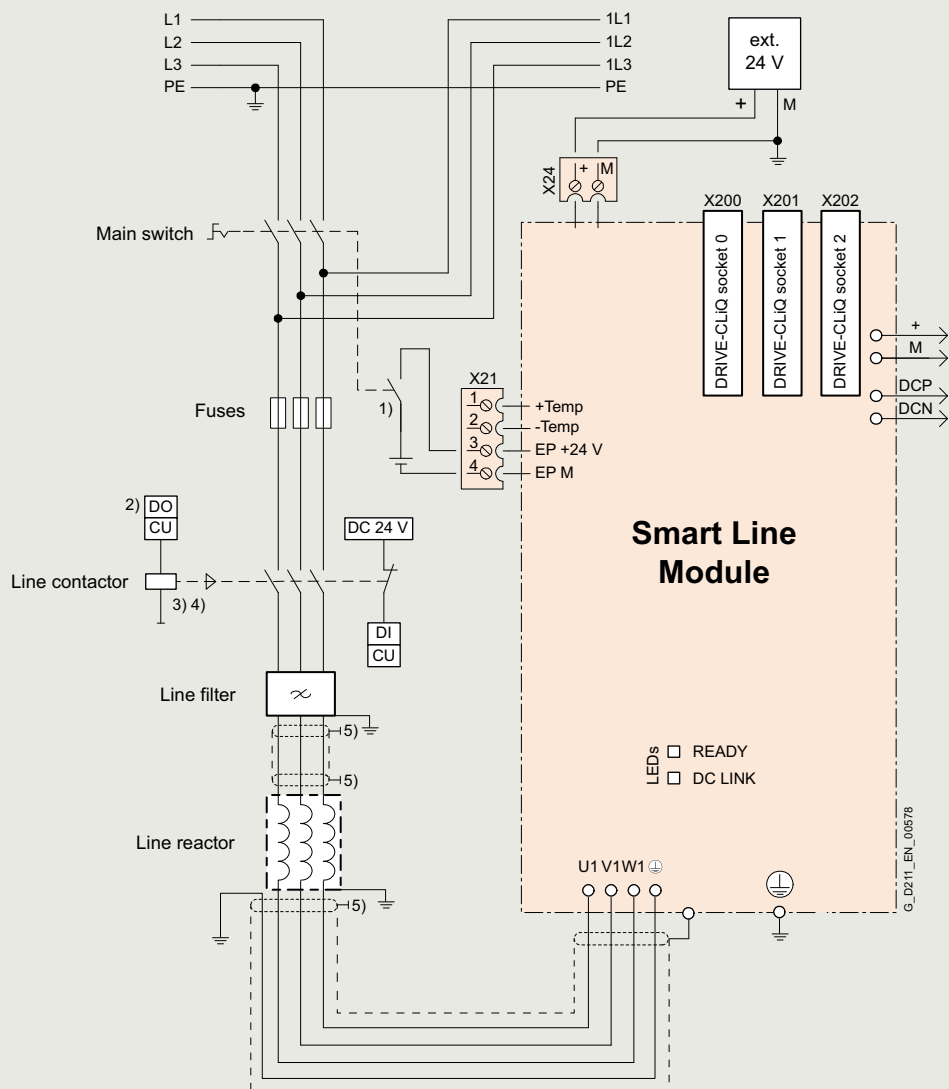

- DRIVE-CLiQ cable for connection to the adjacent Control Unit on the left for drive control, length 0.11 m
- 2 blanking plugs for sealing unused DRIVE-CLiQ sockets
- DRIVE-CLiQ cable (length depends on Smart Line Module width) for connection to the adjacent Motor Module, length = width of Smart Line Module + 0.11 m
- Jumper plug for connecting the 24 V DC busbar to the adjacent Motor Module
- 24 V terminal adapter (X24)
- Connector X21 for digital inputs and outputs
- 1 set of warning labels in 36 languages

SINAMICS S220 drive system

Booksize format

Smart Line Modules in booksize format

Integration

- 1) Leading NC contact $t > 10$ ms. When using a VSM10, the leading NC contact can be omitted.
- 2) DI/DO, controlled by the Control Unit.
- 3) No additional load permitted downstream of the line contactor.
- 4) The current carrying capacity of the digital output must be taken into account. An output interface element may have to be used.
- 5) Contacting via rear panel or shield panels according to EMC Installation Guidelines.

More information

Identification link according to IEC 61406 for SINAMICS S220

The ID link contains the article and serial number of the product. As a QR code, it replaces the previous data matrix code on the nameplate and takes you with the URL directly to a product information page on the internet with access to the technical documentation, data sheet, certificates, FAQs, product notifications, and catalogs. Paper package inserts become superfluous since the information is available electronically directly via the QR code, even years later. In this way, we are making a valuable contribution to the preservation of our environment. You don't need an additional app. Simply scan the QR code with your smartphone or tablet. According to IEC 61406, the QR code of an ID link is marked with a frame and a triangle at the bottom right.

With their globally unique identifiers, Siemens products are ready for Industry 4.0.

The ID serves as a connection to the administration shell with which modules of the digital twin can be provided.

The latest technical documentation as well as further technical specifications are available on the internet at:

www.siemens.com/sinamics-s220/documentation

and in the Siemens Product Configurator:

www.siemens.com/sinamics-s220/configuration

Overview

Line reactors are always to be provided for operation of Smart Line Modules, as line harmonics can occur on converters that damage/disturb other loads connected to the same line supply. Line reactors limit the line harmonics to permissible values. Line reactors that are not permissible can damage the Smart Line Modules.

Line filters for Smart Line Modules

Overview

In conjunction with line reactors and a consistent EMC-compliant system design, line filters limit the conducted electromagnetic emissions generated by the Smart Line Modules to the limit values according to IEC 61800-3. Line filters are only suitable for direct connection to TN line systems.

SIMOTICS motors

Overview

Motor type	Features	Degree of protection	Cooling method
SIMOTICS S servomotors			
 <p>SIMOTICS S-1FT7 Compact</p>	Very high power density	IP64 ¹⁾ (optional IP65, IP67)	Natural cooling
			Forced ventilation
			Water cooling
 <p>SIMOTICS S-1FT7 High Dynamic</p>	Very low rotor moment of inertia	IP64 (optional IP65, IP67)	Forced ventilation
			Water cooling
 <p>SIMOTICS S-1FT2 Compact</p>	High power density	IP64 (optional IP65, IP67)	Natural cooling
			Forced ventilation
 <p>SIMOTICS S-1FT2 High Dynamic</p>	Very low rotor moment of inertia	IP64 (optional IP65, IP67)	Natural cooling
			Forced ventilation

Servomotors

SIMOTICS S-1FT7/S-1FT2 motors can be used in a wide range of applications.

In machine tools, they are mainly referred to and used as feed motors.

On production machines, e.g. printing, packaging and textile machines, they are designated as synchronous servomotors.

In addition, servomotors are used in a wide variety of industrial applications where a high dynamic response and precise motion control are required, e.g. in printing, packaging, textile and handling machines.

The selection and ordering data for SINAMICS S120 Motor Modules are based on the booksize format by way of example. Other formats are also possible. The TIA Selection Tool is available for detailed configuration.

Main motors

SIMOTICS M-1PH8/M-1FE1/M-1FE2 motors can be used in a wide range of applications.

In machine tools, they are usually designated and used as main spindle motors.

In production machines, such as printing, packaging, and re-forming machines, they are used as high-output main motors.

The selection and ordering data for SINAMICS S120 Motor Modules are based on the booksize format by way of example. Blocksize and chassis formats are also possible. The TIA Selection Tool is used to carry out detailed configuration.

Linear and torque motors

SIMOTICS L-1FN3/T-1FW6/T-1FW3 motors can be used in a wide range of applications.

On machine tools, they are designated and used as feed motors.

On production machines, e.g. printing, packaging and textile machines, they are designated as synchronous servomotors.

The selection and ordering data for SINAMICS S120 Motor Modules are based on the booksize format by way of example. Other formats are also possible. The TIA Selection Tool is available for detailed configuration.

¹⁾ The final degree of protection (minimum degree of protection is IP54) for the installed motor is determined by the machine manufacturer.

Primary section width mm	Feedrate force F_N N						Velocity v_{max} at F_N	Selection and ordering data
	0.1	1	10	100	1000	10000

More information:

When a plant or system is down, some motor types can be delivered as replacement motors through a quick delivery service, which has the advantage that replacement parts are supplied faster.

Siemens provides comprehensive support when selecting the optimum motor solution. If you have any questions relating to SIMOTICS linear and torque motors, contact us by email at the following address:

motor.support.motioncontrol@siemens.com

SIMOTICS motors

Technical information for main, linear and torque motors

Technical specifications

Regulations, standards, and specifications

SIMOTICS M-1PH8 motors (without brake), SIMOTICS M-1FE, SIMOTICS L-1FN3 and SIMOTICS T-1FW3 conform with the relevant standards and regulations.

For technical explanations of servomotors, see Section SIMOTICS S servomotors.

As a result of the fact that in many countries the national regulations have been completely harmonized with the international IEC 60034-1 recommendation, there are no longer any differences with respect to coolant temperatures, temperature classes and temperature rise limits.

General specifications for rotating electrical machines	IEC 60034-1
Terminal designations and direction of rotation for electrical machines	IEC 60034-8
Types of construction of rotating electrical machines	IEC 60034-7
Noise limit values for rotating electrical machines	IEC 60034-9
Cooling methods of rotating electrical machines	IEC 60034-6
Sound pressure level	EN ISO1680
Degrees of protection of rotating electrical machines	IEC 60034-5
Vibration severity of rotating electrical machines	IEC 60034-14
Thermal motor protection	DIN 44081/DIN 44082
Temperature monitoring or thermal motor protection	EN 60034-111 EN 60034-11 (IEC 60034-11)
Shaft and flange accuracy	DIN 42955 (IEC 60072-1)
Cylindrical shaft ends for electrical machines	DIN 748 Part 3/ DIN IEC 60072

The guidelines relevant for SIMOTICS motors can be found in the individual Configuration Manuals. Certificates for SIMOTICS motors are available in SiePortal Support under Certificates:

<https://sieportal.siemens.com/en-ww/support>

The marking is made on the nameplate or on a second nameplate.

Degrees of protection for three-phase motors

A suitable degree of protection must be selected depending on the operating and environmental conditions to protect the machine against:

- Ingress of water, dust, and solid foreign objects
- Contact with rotating parts inside a motor
- Contact with live parts

Degrees of protection of electric motors are specified by a code. This comprises two identification letters, two digits and, if required, an additional identification letter.

IP (International Protection)

Identification letter designating the degree of protection against contact and the ingress of foreign bodies and water

0 to 6

1st digit designating the degree of touch protection and protection against ingress of solid foreign objects

0 to 8

2nd digit designating the degree of protection against the ingress of water (no oil protection)

¹⁾ DIN VDE 0530 Part 5 or EN 60034 Part 5 specifies that there are only 5 degrees of protection for the first digit code and 8 degrees of protection for the second digit code in relation to rotating electrical machinery. However, IP6 is included in DIN 40050, which generally applies to electrical equipment.

W, S and M

Additional identification letters for special degrees of protection

Most motors are supplied with the following degrees of protection:				
Motor	Degree of protection	1st digit: touch protection	Protection against foreign objects	2nd digit: protection against water
Internally cooled	IP23	Protection against finger contact	Protection against medium-sized, solid foreign objects with diameter above 12 mm (0.47 in)	Protection against spray water up to 60° from the vertical
Surface-cooled	IP54	Complete protection against accidental contact	Protection against damaging dust deposits	Splash water from any direction
	IP55			Jet water from any direction
	IP64	Complete protection against accidental contact	Protection against dust ingress	Splash water from any direction
	IP65 ¹⁾			Jet water from any direction
	IP67 ¹⁾			Motor under specified pressure and time conditions under water

Recommended degrees of protection for three-phase motors

When cooling lubricants are used, protection against water alone is inadequate. The IP rating should only be considered as a guideline in this case. The motors may have to be protected by suitable covers. When selecting the motor degree of protection, the motor shaft must be equipped with a suitable seal.

The table can serve as a decision aid for selecting the required degree of protection for motors. It must be avoided that liquid accumulates on the flange when the motor is mounted with the shaft end facing upwards IM V3/IM V19/IM V6/IM V35.

Effect	Liquids General workshop environment	Water; gen. cooling lubricant (95 % water, 5 % oil)
Dry	IP64	–
Humid/moist environment	–	IP64
Mist	–	IP65
Spray	–	IP65
Jet	–	IP67
Splash/ brief immersion/ constant immersion	–	IP67

Vibration severity grades and vibration severity grade A according to IEC 60034-14 for SIMOTICS M-1PH8 main motors

SIMOTICS M-1PH8 motors comply with vibration severity grade A according to EN 60034-14 (IEC 60034-14) as standard. The specified values refer only to the motor. The system vibration response depends on the conditions at the installation location and can result in higher vibration values at the motor.

As a general rule, high radial force load capacity is not compatible with high speed and high vibration quality. The reason for this is that the different applications require different bearings.

For SIMOTICS M-1PH8 motors, an acceptance test certificate with the actual measured vibration velocities can be ordered by specifying option B35.

Vibration severity limit values for shaft heights 20 to 132

The motors maintain vibration severity grade A up to rated speed.

Vibration severity limit values for shaft heights 160 to 355

Technical specifications

Balancing according to ISO 8821 for SIMOTICS M-1PH8 main motors

In addition to the balance quality of the motor, the vibration quality of motors with mounted belt pulleys and coupling is essentially determined by the balance quality of the mounted component.

If the motor and the mounted component are balanced separately before being assembled together, the balancing process of the belt pulley should be adapted to the balancing type of the motor. The following different balancing methods are used on motors of types SIMOTICS M-1PH8:

- Half-key balancing (an H is stamped on the shaft face)
- Full-key balancing (an F is stamped on the shaft face)
- Plain shaft end

In general, motors with a plain shaft are recommended for systems with the most stringent vibrational quality requirements. For full-key balanced motors, we recommend belt pulleys with two opposite keyways, but only one feather key in the shaft end.

Vibration stress, imitted vibration values for SIMOTICS M-1PH8 main motors and SIMOTICS T-1FW3 complete torque motors

The following maximum permissible limit value for vibration stress, but still retaining full functionality only applies to SIMOTICS T complete torque motors.

Vibration stress according to ISO 10816:

Vibration velocity V_{rms} in accordance with ISO 10816 max. 4.5 mm/s (0.18 in/s)

Vibration acceleration a_{peak} axial ¹⁾ 25 m/s² (82 ft/s²)

Vibration acceleration a_{peak} radial ¹⁾ 50 m/s² (164 ft/s²)

The following limits apply to all SIMOTICS M-1PH8 main motors for (imitted) vibration values introduced into the motor from outside:

Vibration frequency	Vibration values for shaft height 80 to shaft height 160	
< 6.3 Hz	Vibration displacement s	≤0.16 mm (0.006 in)
6.3 ... 250 Hz	Vibration velocity V_{rms}	≤4.5 mm/s (0.18 in/s)
> 250 Hz	Vibration acceleration a	≤10 m/s ² (32.8 ft/s ²)

Vibration frequency	Vibration values for shaft height 180 to shaft height 280	
< 6.3 Hz	Vibration displacement s	≤0.25 mm (0.099 in)
6.3 ... 63 Hz	Vibration velocity V_{rms}	≤7.1 mm/s (0.28 in/s)
> 63 Hz	Vibration acceleration a	≤4.0 m/s ² (13.1 ft/s ²)

The following maximum permissible radial vibration values apply to the SIMOTICS T-1FW3 torque motors in accordance with ISO 10816 ²⁾

Vibration frequency	Vibration values for 1FW3	
< 6.3 Hz	Vibration displacement s	≤0.16 mm (0.006 in)
6.3 ... 250 Hz	Vibration velocity V_{rms}	≤4.5 mm/s (0.18 in/s)
> 250 Hz	Vibration acceleration a	≤10 m/s ² (32.8 ft/s ²)

In addition, the following maximum permissible axial vibration values apply ²⁾

Vibration velocity	Vibration acceleration
$V_{rms} = 4.5 \text{ mm/s (0.18 in/s)}$	$a_{peak} = 2.25 \text{ m/s}^2 (7.42 \text{ ft/s}^2)$

¹⁾ For motors with forced ventilation, the limit values for axial and radial acceleration are limited to 10 m/s² (32.8 ft/s²).

²⁾ Both values (vibration velocity and vibration acceleration) must be maintained at the same time.

³⁾ As a result of the design/version, the following motors have temperature class 155 (F): 1PH8107-1.F2/1PH8138-2/1PH8107-1.M2/1PH8164/1PH8166/1PH8168

⁴⁾ Only permissible when the flows from NDE → DE.

Environmental conditions and installation height for naturally cooled and force-ventilated SIMOTICS M-1PH8 main motors

Operation without restriction: -15 °C to +40 °C (5 to 104 °F)

The rated power (rated torque) is applicable to continuous duty (S1) in accordance with EN 60034-1 at rated frequency, a coolant temperature of 40 °C (104 °F) and an installation altitude of up to 1000 m (3281 ft) above sea level.

SIMOTICS M-1FE./L-1FN3/T-1FW. motors have temperature class 155 (F) and are utilized to temperature class 155 (F).

SIMOTICS M-1PH8 motors are designed for temperature class 180 (H). ³⁾

For deviating conditions (ambient temperature > 40 °C (104 °F) or installation altitude > 1000 m (3281 ft) above sea level), you must define the permissible torque/power reduction from the following table.

Ambient temperature and installation altitude are rounded off to 5 °C and/or 500 m.

Coolant temperature for naturally cooled motors SIMOTICS T-1FW6 from -5 °C to +35 °C (23 °F to 95 °F).

Installation altitude above sea level m (ft)	Coolant temperature (ambient temperature in °C)			
	30 ... 40 °C (86 ... 104 °F)	45 °C (113 °F)	50 °C (122 °F)	55 °C ⁴⁾ (131 °F)
1000 (3281)	1.00	0.96	0.92	0.87
1500 (4922)	0.97	0.93	0.89	0.84
2000 (6562)	0.94	0.90	0.86	0.82
2500 (8203)	0.90	0.86	0.83	0.78
3000 (9843)	0.86	0.82	0.79	0.75
3500 (11484)	0.82	0.79	0.75	0.71
4000 (13124)	0.77	0.74	0.71	0.67

SIMOTICS motors

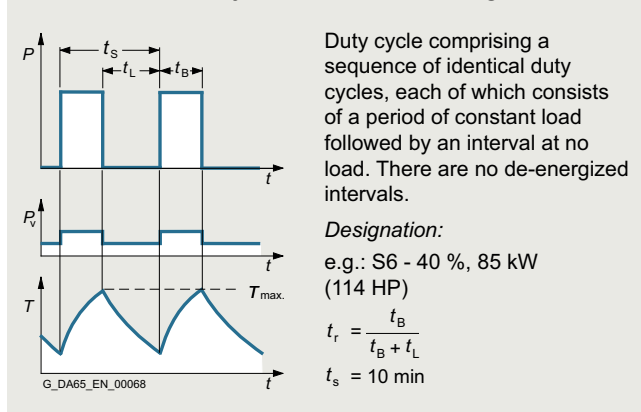

Technical information for main, linear and torque motors

Technical specifications

Duty types S1 and S6 in accordance with EN 60034-1

S6: Continuous duty with intermittent loading

Rated torque

The torque supplied on the shaft is indicated in Nm (lb_F-ft) in the selection and ordering data.

$$M_N = 9.55 \times P_N \times \frac{1000}{n_N}$$

P_N Rated power in kW
 n_N Rated speed in r/min
 M_N Rated torque in Nm

$$M_N = P_N \times \frac{5250}{n_N}$$

P_N Rated power in hp
 n_N Rated speed in r/min
 M_N Rated torque in lb_F-ft

DURIGNIT IR 2000 insulation

The DURIGNIT IR 2000 insulation system consists of high-quality enamel wires and insulating materials in conjunction with solvent-free resin impregnation.

The insulating material system ensures that these motors will have a high mechanical and electrical stability, high service value, and a long service life.

The insulation system protects the winding to a large degree against aggressive gases, vapors, dust, oil, and increased air humidity. It can withstand the usual vibration stressing.

Characteristic curves

Torque characteristic of a synchronous motor operating on a converter with field weakening (example)

	Explanations
n_N	Rated speed
$n_{\max \text{ Inv}}$	Maximum permissible electric speed limit
$n_{\max \text{ mech}}$	Maximum permissible mechanical speed limit
M_0	Static torque
M_N	Rated torque at rated speed
$M_{\max \text{ Inv}}$	Achievable maximum torque with the recommended Motor Module
M_{\max}	Maximum permissible torque

Technical specifications

Motor protection

Motor protection for Pt1000 temperature sensor

The motor temperature is monitored using a Pt1000 temperature sensor integrated in the stator winding.

The Pt1000 has a linear thermal resistance characteristic. In addition, the Pt1000 has a low thermal capacity and good thermal contact with the motor winding (see characteristic).

Siemens converters calculate the motor temperature from the resistance of the temperature sensor.

The temperatures required for alarm and shutdown can be parameterized.

As standard, temperature sensors are evaluated in the SINAMICS S120 drive system.

Sensor Modules are used to evaluate the signals for SIMOTICS L-1FN3 and SIMOTICS T-1FW3: SME120/SME125/TM120 (see SINAMICS S120 Equipment Manual).

If the motors are operated with converters that do not have a temperature sensor evaluation function, then the temperature can be evaluated using the external 3RS2600 temperature monitoring relay.

More information is provided in SiePortal: www.siemens.com/sieportal

Paint finish for SIMOTICS M-1PH8 main motors

Motors without a paint finish have an impregnated resin coating. Motors with primer have corrosion protection.

All motors can be painted over with commercially available paints. Up to 2 additional paint coats are permissible.

SIMOTICS L-1FN3/T-1FW6 motors have no paint finish, no coating and should also not be painted over.

Version	Suitability of paint finish for climate group according to IEC 60721, Part2-1	
Paint finish	Moderate (expanded) for indoor and outdoor installation with roof protection	
	briefly	up to 150 °C (302 °F)
	continuously	up to 120 °C (248 °F)
Special paint finish	Worldwide (expanded) for outdoor installation	
	briefly	up to 150 °C (302 °F)
	continuously	up to 120 °C (248 °F)
	also	up to 1 % acid and alkali concentration in aggressive atmospheres or permanent wetness in protected rooms

Built-in encoder

The encoder system is not included in the scope of supply of the SIMOTICS motor series M-1FE, M-1PH2, L-1FN and T-1FW6.

SIMOTICS M-1PH8 main motors and T-1FW3 complete torque motors can be ordered without encoders or with built-in encoders. For integrated encoder systems, a distinction can be made between an encoder with and without a DRIVE-CLiQ interface.

Built-in encoder systems without DRIVE-CLiQ interface

For motors without an integrated DRIVE-CLiQ interface, the analog encoder signal in the drive system is converted into a digital signal. For these motors and external encoders, the encoder signals must be connected to SINAMICS S120 via Sensor Modules.

Built-in encoder systems with DRIVE-CLiQ interface

For motors with integrated DRIVE-CLiQ interface, the analog encoder signal is internally converted into a digital signal. No further conversion of the encoder signal in the drive system is required. The motor-internal encoders are the same encoders that are used for motors without a DRIVE-CLiQ interface. Motors with a DRIVE-CLiQ interface simplify commissioning and diagnostics, for example, as the encoder system is identified automatically.

The different encoder types, incremental, absolute or resolver, are uniformly connected with one type of MOTION-CONNECT DRIVE-CLiQ cable.

SIMOTICS motors

Technical information for main, linear and torque motors

Technical specifications

Short designations for the encoder systems

The first letters of the short designation define the encoder type. This is followed by the resolution in signals per revolution if S/R is specified (for encoders without DRIVE-CLiQ interface) or in bits if DQ or DQI is specified (for encoders with DRIVE-CLiQ interface).

Type	Resolution/interface
AM AS IC IN HTL	xxxxS/R Encoder <u>without</u> DRIVE-CLiQ interface Resolution = xxxx signals per revolution
AM AS IC IN R	xxDQ, xxDQI or xxDQC Encoder <u>with</u> DRIVE-CLiQ interface Resolution = xx bits
AM	Multi-turn absolute encoder
AS	Single-turn absolute encoder
IC	Incremental encoder sin/cos with commutation position C and D tracks
IN	Incremental encoder sin/cos without commutation position
HTL	Incremental encoder with HTL signal
R	Resolver

Technical specifications

Multi-turn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. An internal measuring gearbox enables it to differentiate 4096 revolutions.

For a ball screw, for example, the absolute position of the slide can be determined over a longer distance.

Multi-turn absolute encoder

Single-turn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. In contrast to the multi-turn absolute encoder, it has no measuring gearbox and can therefore only supply the position value within one revolution. It does not have a traversing range.

Absolute encoders without DRIVE-CLiQ interface

AM2048S/R encoder	Absolute encoder 2048 S/R, 4096 revolutions, multi-turn, with EnDat interface
AS2048S/R encoder	Absolute encoder 2048 S/R, single-turn

Absolute encoders with DRIVE-CLiQ interface

AM22DQ encoder	Absolute encoder, 22-bit (resolution 4194304, encoder-internal 2048 S/R) + 12-bit multi-turn (traversing range 4096 revolutions)
AS22DQ encoder	Absolute encoder 22-bit single-turn (resolution 4194304)

Absolute encoders without DRIVE-CLiQ interface

Incremental signals (sinusoidal, 1 V _{pp})	
• Signals per revolution	2048/512/32/16

Absolute encoders with DRIVE-CLiQ interface

Supply voltage	24 V
Absolute position via DRIVE-CLiQ	
• Resolution within one revolution	$2^{24}/2^{22}/2^{20}/2^{16}/2^{15}$ bit
• Traversing range (multi-turn) ¹⁾	4096 revolutions

¹⁾ Not for absolute encoder, single-turn AS.

SIMOTICS motors

Technical information for main, linear and torque motors

Technical specifications

Incremental encoder

This encoder senses relative movements and does not supply absolute position information. In combination with evaluation logic, a zero point can be determined using the integrated reference mark, which can be used to calculate the absolute position.

IC/IN incremental encoder (sin/cos)

The encoder outputs sine and cosine signals. These can be interpolated using evaluation logic (usually 2048 points) and the direction of rotation can be determined.

In the version with DRIVE-CLiQ interface, this evaluation logic is already integrated in the encoder.

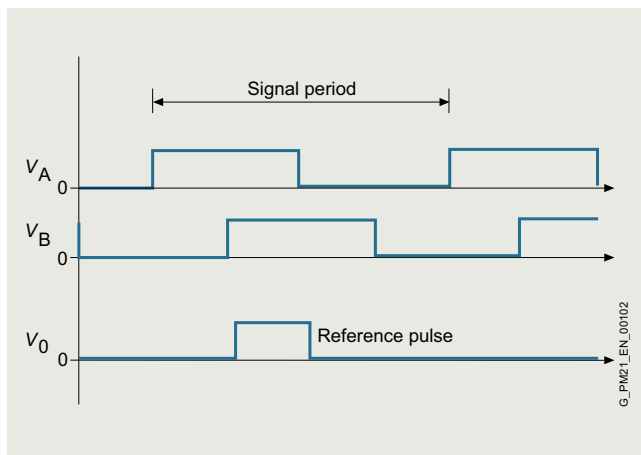

Commutation position

The position of the rotor is required for commutation of a synchronous motor. Encoders with commutation position (also called C and D tracks) detect the angular position of the rotor.

IC/IN incremental encoder (sin/cos), commutation position only for IC

HTL incremental encoder

HTL incremental encoder

Incremental encoders without DRIVE-CLiQ interface

IC2048S/R encoder	Incremental encoder sin/cos 1 V _{pp} 2048 S/R with C and D tracks
IN512S/R encoder	Incremental encoder sin/cos 1 V _{pp} 512 S/R without C and D tracks
IN256S/R encoder	Incremental encoder sin/cos 1 V _{pp} 256 S/R without C and D tracks
HTL IC2048S/R encoder	HTL 2048 S/R incremental encoder

¹⁾ Instead of the IC22DQ incremental encoder, the SIMOTICS S-1FT7 is equipped with the single-turn AS24DQ1 absolute encoder.

Technical specifications

Resolver

The number of sine and cosine periods per revolution corresponds to the number of pole pairs of the resolver. In the case of a 2-pole resolver, the evaluation electronics may output an additional zero pulse per encoder revolution. This zero pulse ensures a unique assignment of the position information in relation to an encoder revolution. A 2-pole resolver can therefore be used as a single-turn encoder.

2-pole resolvers can be used for motors with any number of poles. For multi-pole resolvers, the number of motor pole pairs and the resolver are always identical, so that the resolution is correspondingly higher than with 2-pole resolvers.

Resolvers without DRIVE-CLiQ interface ¹⁾

Resolver p = 1	2-pole resolver
Resolver p = 3	6-pole resolver
Resolver p = 4	8-pole resolver

Resolvers with DRIVE-CLiQ interface

R15DQ	Resolver 15-bit (resolution 32768, internal, multi-pole)
-------	---

Resolvers without DRIVE-CLiQ interface

Excitation voltage, rms	2 ... 8 V
Excitation frequency	5 ... 10 kHz
Output signals	$U_{\text{sine track}} = r \times U_{\text{excitation}} \times \sin \alpha$ $U_{\text{cosine track}} = r \times U_{\text{excitation}} \times \cos \alpha$ $\alpha = \arctan (U_{\text{sine track}} / U_{\text{cosine track}})$
Transmission ratio	$r = 0.5 \pm 5\%$

Resolvers with DRIVE-CLiQ interface

Supply voltage	24 V
• Resolution	$2^{15}/2^{14}$ bit

¹⁾ Output signals:
 2-pole resolver: 1 sin/cos signal per revolution
 6-pole resolver: 3 sin/cos signals per revolution
 8-pole resolver: 4 sin/cos signals per revolution

SIMOTICS S servomotors

Technical information

Technical specifications

Regulations, standards, and specifications

The motors comply with the appropriate standards and regulations, see table below.

As a result of the fact that in many countries the national regulations have been completely harmonized with the international IEC 60034-1 recommendation, there are no longer any differences with respect to coolant temperatures, temperature classes and temperature rise limits.

General specifications for rotating electrical machines	IEC 60034-1
Terminal designations and direction of rotation for electrical machines	IEC 60034-8
Types of construction of rotating electrical machines	IEC 60034-7
Cooling methods of rotating electrical machines	IEC 60034-6
Degrees of protection of rotating electrical machines	IEC 60034-5
Vibration severity of rotating electrical machines	IEC 60034-14
Noise limit values for rotating electrical machines	IEC 60034-9
Cylindrical shaft ends for electrical machines	DIN 748-3/IEC 60072-1

 SIMOTICS S motors are UL approved by Underwriters Laboratories Inc. and have the "UL Recognized Component" test mark. This is used for components that are part of a larger product or system. This confirms compliance with the corresponding American and Canadian regulations, and allows the North American market to be accessed.

 SIMOTICS S motors are certified to comply with the relevant EC guidelines 2006/95/EC and 2014/35/EU as well as the relevant standards EN 60034-1:2010, EN 60204-1:2006. By applying the CE mark to the product, Siemens AG confirms this for the product, and secures the free movement of goods within the European Union.

The SIMOTICS S servomotors are usually identified using a second nameplate.

Degree of protection acc. to IEC 60034-5

A suitable degree of protection must be selected according to the operating and environmental conditions to protect the motor against damage caused by the ingress of liquids, as well as dust and foreign bodies.

The protection class designation according to IEC 60034-5 is derived from the abbreviation IP (for International Protection) and two code numbers:

First code number

6: Protection against dust ingress and complete protection against touching

Second code number

4: Protection against splashwater from any direction

5: Protection against jet water from any direction

7: Protection against short-term immersion in water

Recommended degrees of protection for three-phase motors

When cooling lubricants are used, protection against water alone is inadequate. The IP rating should only be considered as a guideline in this case. The motors may have to be protected by suitable covers. When selecting the motor degree of protection, the motor shaft must be equipped with a suitable seal. It must be avoided that liquid accumulates on the flange when the motor is mounted with the shaft end facing upwards (IM V3).

The following table provides support when selecting the appropriate degree of protection for motors.

Effect	General workshop environment	Water/ general cooling lubricant (95 % water, 5 % oil)
Dry	IP64	–
Humid/moist environment	–	IP64
Mist	–	IP65
Spray	–	IP65
Jet	–	IP67
Splash/ brief immersion/ constant immersion	–	IP67

Technical specifications

Type of construction, installation position acc. to IEC 60034-7

The SIMOTICS S-1FT2 motors have an IM B5 type of construction. They may also be used in mounting positions IM V1 and IM V3.

Code 1	IM B5	IM V1	IM V3
Code 2	IM 3001	IM 3011	IM 3031
			
	Horizontal flange mounting	Flange mounting, output shaft pointing vertically downwards	Flange mounting, output shaft pointing vertically upwards

Shaft and flange accuracy acc. to IEC 60072-1 or DIN 429955

Radial eccentricity tolerance of shaft in relation to housing axis (referred to cylindrical shaft ends)

Shaft end ØD × L	acc. to IEC 60072-1 or Tolerance "N" acc. to DIN 429955	Tolerance "R" acc. to DIN 429955

Test: radial eccentricity

Test: concentricity

Test: perpendicularity

SIMOTICS S servomotors

Technical information

Technical specifications

Vibration severity grades and vibration severity grades A and B according to EN 60034-14

The vibration severity is the root-mean square value (rms value) of the vibration velocity (frequency range from 10 Hz to 1000 Hz). The vibration severity is measured using electrical measuring devices according to DIN 45666.

The specified values refer only to the motor. The system vibration behavior as a result of the installation can increase these values.

Vibration severity limit values

The speeds of 1800 r/min and 3600 r/min and the corresponding limits are specified in accordance with IEC 60034-14. The speeds of 4500 r/min and 6000 r/min and the specified values have been determined by the motor manufacturer.

The motors maintain vibration severity grade A up to the rated speed.

Balancing in accordance with ISO 21940-32

Apart from the balance quality of the motor, the vibrational quality of motors with attached belt pulleys is mainly determined by the balance state of the mounted component. If the motor and the mounted component are balanced separately before being assembled together, the balancing process of the belt pulley should be adapted to the balancing type of the motor.

The motors with feather key are always half-key balanced. In general, motors with a plain shaft are recommended for systems with the most stringent vibrational quality requirements.

Vibration stress, immitted vibration values

To function correctly and to ensure the bearing lifetime, the requirements of environmental class 3M8 (according to EN 60721-3-3 Table 6) must be complied with. The following limits are valid for (immitted) vibration values introduced into the motor from outside:

- Vibration velocity V_{rms} in accordance with ISO 10816, max. 4.5 mm/s (0.18 in/s)
- Vibration acceleration a_{peak} :

Vibration acceleration a_{peak} :		
	1F□7	1F□2
Axial	25 m/s ² (82 ft/s ²)	50 m/s ² (164 ft/s ²)
Radial	50 m/s ² (164 ft/s ²)	50 m/s ² (164 ft/s ²)

During transport, the motors withstand single shocks (6 ms) of up to 250 m/s². Different values may apply to motors with mounted planetary gearboxes. More information is provided in the Configuration Manual of the particular product.

Ambient temperature and installation altitude

Operating range without restrictions:

Temperature range from -15 °C to +40 °C (5.0 °F to 104 °F), installation altitude up to 1000 m (3281 ft).

If deviating conditions are encountered, the S1 characteristic of the motor must be adapted with regard to speed and torque.

The reduced S1 characteristic should be calculated according to the following formula:

$$S1_{red}(n) = x_D \cdot S1_{40°C; 1000m} \cdot (n / x_D)$$

Factors x_D for derating depending on installation altitude and ambient temperature. (intermediate values should be interpolated)

Motor	Installation altitude above sea level m (ft)	Ambient temperature in °C (°F)				
		30 (86)	40 (104)	45 (113)	50 (122)	55 (131)
1F□7	1000 (3281)	1.05	1	0.97	0.95	0.92
	2000 (6562)	1	0.95	0.92	0.89	0.87
	3000 (9843)	0.95	0.89	0.87	0.84	0.81
	4000 (13124)	0.89	0.84	0.81	0.77	0.74
1F□2	1000 (3281)	1.05	1	0.95	0.89	0.84
	2000 (6562)	1	0.95	0.86	0.8	0.73
	3000 (9843)	0.95	0.89	0.76	0.69	0.62
	4000 (13124)	0.89	0.84	0.65	0.57	0.47

Factors for derating depending on installation altitude and ambient temperature

Encoder systems

For motors with integrated DRIVE-CLiQ interface, the encoder signal is already digitally processed in the motor, and then transferred quickly and without loss to the drive system. Motors with DRIVE-CLiQ interface simplify commissioning and diagnostics by automatically identifying the motor parameters and the encoder system.

Motors without DRIVE-CLiQ interface are intended for converters with analog encoder evaluation (e.g. from third-party manufacturers).

Single-turn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. In contrast to the multi-turn absolute encoder, it does not have a revolution counter, and can therefore only supply the position value within one revolution. It does not have a traversing range.

Multi-turn absolute encoder

This encoder outputs an absolute angular position between 0° and 360° in the specified resolution. It can also count 4096 revolutions. For a ball screw, for example, the absolute position of the slide can be determined over a longer distance.

Incremental encoder

This encoder senses relative movements and does not supply absolute position information. In combination with evaluation logic, a zero point can be determined using the integrated reference mark, which can be used to calculate the absolute position.

Resolver

A resolver provides sin/cos signal periods per motor revolution according to its number of pole pairs. 2-pole resolvers can be used for motors with any number of poles. For multi-pole resolvers, the number of motor pole pairs and the resolver are always identical.

Technical specifications

Short designation of the encoder systems

The first letters of the short designation define the encoder type. This is followed by the encoder resolution.

In the case of DRIVE-CLiQ encoders, the information is given in bits with the trailing identifier "DQ", "DQI" or "DQC".

For encoders without a DRIVE-CLiQ interface, the analog resolution follows in signals per revolution with the identifier "S/R".

Encoder type	
AM	Multi-turn absolute encoder
AS	Single-turn absolute encoder
IC	Incremental encoder sin/cos with commutation position (C/D track)
R	Resolver
Encoder resolution	
□□DQ, □□DQI, □□DQC	For encoders <u>with</u> DRIVE-CLiQ interface Resolution = □□ bit =2 ^{□□} signals per revolution
□□□□S/R	For encoders <u>without</u> DRIVE-CLiQ interface Resolution = □□□□ signals per revolution

Paint finish

All motors can be painted over with commercially available paints. Up to 2 additional paint coats are permissible.

Holding brake

Many drives require a holding brake with an EMERGENCY STOP function for safety-related reasons or to comply with process requirements.

The brakes that are used operate according to the closed-circuit principle. A spring or permanent magnet exerts a tensile force on the brake armature disk, i.e. in a zero current state, the brake is closed and the motor shaft is held.

An electric current that flows through a coil generates an opposing field that counteracts the force effect of the spring or permanent magnet and releases or holds open the brake.

Only a limited number of braking operations can be performed for an EMERGENCY STOP or voltage failure without causing excessive wear on the holding brake.

The holding brake is not an operational brake.

Regular dynamic braking leads to increased wear and premature brake failure. In order to ensure the functionality and specification of the brake, neither the total operating energy nor the maximum operating energy per braking operation may be exceeded.

The brake control is already fully integrated into the SINAMICS S120 converter system, so that an external circuit is not necessary.

SIMOTICS S servomotors

SIMOTICS S synchronous motors for SINAMICS S120

SIMOTICS S-1FT7

Overview

SIMOTICS S-1FT7 motors, forced ventilation, water cooling and natural cooling

SIMOTICS S-1FT7 servomotors are permanent-magnet synchronous motors with very compact dimensions and an optically attractive design.

S-1FT7 motors fulfill the highest standards in terms of dynamic response, speed control range, shaft and flange accuracy. They are equipped with state-of-the-art encoder technology and optimized for operation with our fully digital drive and control systems.

Natural cooling, forced ventilation or water cooling are available as cooling methods. For natural cooling, heat is dissipated through the surface of the motor, while for forced ventilation, heat is dissipated using mounted fans. Maximum cooling, and thus maximum power can be achieved using water cooling.

Configuration

You can find the Configuration Manual for SIMOTICS S-1FT7 for SINAMICS S120 at:

<https://support.industry.siemens.com/cs/ww/en/view/109482538>

Characteristic curves

Characteristics for the SIMOTICS motors are available via selectors through to the exact article number with the Siemens Product Configurator.

The Siemens Product Configurator can be accessed without having to register or log in:

www.siemens.com/spc

→ SIMOTICS S-1FT7 in the SPC

Dimensional drawings

Dimensional drawings for SIMOTICS motors are provided in the Siemens Product Configurator.

The Siemens Product Configurator can be accessed without having to register or log in:

www.siemens.com/spc

→ SIMOTICS S-1FT7 in the SPC

Benefits

- Excellent dynamic response over a wide speed range thanks to high overload capability $\sim 4 \times M_0$ with natural cooling
- Wide speed control range
- High degree of ruggedness with respect to vibration and shock loads thanks to vibration-isolated encoder mounting
- High degree of protection – permits operation even under challenging ambient conditions
- Quick and easy mounting due to cross-profile (up to SH 100) and rotatable connectors with quick-release locks
- Zero-backlash holding brake
- Extremely high efficiency

SIMOTICS S-1FT7 Compact motors

S-1FT7 Compact motors have a low torque ripple so that they are ideal for use in machine tool applications that require extremely high surface quality and optimum machining results. Their compact dimensions permit mounting in areas where space is restricted.

SIMOTICS S-1FT7 High Dynamic motors

S-1FT7 High Dynamic motors have very low rotor moments of inertia to achieve extremely good dynamic response and very short cycle times. The motors are available with forced ventilation or water cooling as cooling methods and have high continuous output ratings as a result.

Application

- High performance machine tools
- Machines with high requirements regarding dynamic response and precision, e.g.:
 - Packaging machines
 - Foil drawing systems
 - Printing machines
 - Handling equipment

More information

Some SIMOTICS S-1FT7 Compact motors are available as core types. These core types can be express-delivered as replacement motors in the event of plant outages and offer the advantage of a quicker spare parts supply. This is the reason that core types should be used whenever possible when configuring.

The selection and ordering data for SINAMICS S120 Motor Modules are based on the booksize format by way of example. Other formats are also possible. The SIZER engineering tool is available in the TIA Selection Tool for detailed configuration.

N40	Stainless steel shaft and coating for increased chemical resistance (information about validity and specification can be found in the latest Configuration Manual)
Q12	Sealing air connection (Only in conjunction with IP67 degree of protection. Not in conjunction with terminal box.)
Q13	Customer-specific additional seal, encoder flange, An encoder cannot be replaced in the field (information regarding the validity and specification in the current Configuration Manual)
Y84	Customer specifications on rating plate (max. 30 characters) ¹⁾
Paint finish	
K23	Special paint finish for "Worldwide" climate group: Primer and paint finish in pearl dark grey, similar to RAL 9023
K23+X..	Special paint finish for "Worldwide" climate group: Primer and paint finish can be selected from X01 to X09
K24	Primer (unpainted)
X01	Paint finish jet black, matt RAL 9005
X02	Paint finish cream white RAL 9001
X03	Paint finish reseda green RAL 6011
X04	Paint finish pebble gray RAL 7032
X05	Paint finish sky blue RAL 5015
X06	Paint finish light ivory RAL 1015
X08	Paint finish white aluminum
X09	Paint finish anthracite, similar to RAL 7016

The paint finish in standard and special colors meets the requirements for environmental conditions of climate class 3K4 according to IEC 60721-3-3 with the exception of the influencing variables "low air temperature", "condensation" and "low air pressure".

-Z must be added to the article number to order a motor with options.

¹⁾ Additional plain text required.

Options

N05

Alternative shaft geometry

The following versions are delivered for shaft ends with smaller dimensions:

- 1FT7034-5A.71-.... /1FT7042-5A.71-....
- 1FT7062-5A.71-.... /1FT7064-5A.71-....
- 1FT7082-5A.71-.... /1FT7084-5A.71-.... /1FT7086-5A.71-....
- 1FT7102-5A.71-.... /1FT7105-5A.71-.... /1FT7108-5A.71-....

Shaft dimensions (diameter × length) according to shaft height (SH):

- SH 36: 11 × 23 mm (0.43 × 0.91 in)
- SH 48: 14 × 30 mm (0.55 × 1.18 in)
- SH 63: 19 × 40 mm (0.75 × 1.57 in)
- SH 80: 24 × 50 mm (0.94 × 1.97 in)
- SH 100: 32 × 58 mm (1.26 × 2.28 in)

N16

Version for increased chemical resistance

Additional information is provided in the current [Configuration Manual](#).

Option N16 is available only for naturally cooled and water-cooled SIMOTICS S-1FT7 motors with the following encoders:

- Encoder AS24DQI (DRIVE-CLiQ absolute encoder 24 bit single-turn)
- Encoder AM24DQI (DRIVE-CLiQ absolute encoder 24 bit + 12 bit multi-turn)
- Encoder AM2048S/R (absolute encoder 2048 S/R, 4096 revolutions multi-turn, with EnDat interface)

Option N16 is only available for motors with rotatable connector (connector sizes 1 and 1.5).

Option N16 is not available for SIMOTICS S-1FT7 motors SH 132.

Length code

For more information about cables, see MOTION-CONNECT connection systems

1) Connector size 3 not rotatable. An alternative terminal box can be selected for connector size 3 only.
 2) Optimum efficiency in continuous duty.
 3) With default setting of the pulse frequency.
 4) The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).
 5) Cable cross-section for brake connection 2 × 1.5 mm².
 6) Only up to SH 100.
 7) $P_{calc}[kW] = \frac{M_0[Nm] \times n_N}{9550}$ $P_{calc}[hp] = \frac{M_0[lb\cdot ft] \times n_N}{5250}$

 Double Motor Module **2**
Power cable:

 MOTION-CONNECT 800PLUS **8**
 MOTION-CONNECT 500 **5**

 Without brake cores **C**
 With brake cores ⁸⁾ **D**

 Length code **....**

For more information about cables, see MOTION-CONNECT connection systems

¹⁾ Connector size 3 not rotatable. An alternative terminal box can be selected for connector size 3 only. 1FT7136-5SC7-.... and 1FT7134-5SF7-.... only with terminal box.

²⁾ The degree of protection refers to the motor. The built-in fan has degree of protection IP54/IP55 (shaft height 132).

³⁾ Optimum efficiency in continuous duty.

⁴⁾ With default setting of the pulse frequency.

⁵⁾ The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

⁶⁾ Cable cross-section for brake connection 2 × 1.5 mm².

⁷⁾ b. w. bare wire ends. Only in conjunction with terminal boxes.

⁸⁾ Holding brake not for 1FT7138-5SB7-....

⁹⁾
$$P_{calc} [kW] = \frac{M_0 [Nm] \times n_N}{9550} \quad P_{calc} [hp] = \frac{M_0 [lb\text{-ft}] \times n_N}{5250}$$

- 2) Optimum efficiency in continuous duty.
- 3) With default setting of the pulse frequency.
- 4) The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).
- 5) With the specified Motor Module, the motor cannot be fully utilized at M_0 with a winding temperature rise of $\Delta T = 100$ K. If a Motor Module with a higher rating is used, you must carefully check whether the specified power cable can be connected to the larger Motor Module.
- 6) Cable cross-section for brake connection 2×1.5 mm².

$$P_{calc} [kW] = \frac{M_0 [Nm] \times n_N}{9550} \quad P_{calc} [hp] = \frac{M_0 [lb\text{-ft}] \times n_N}{5250}$$

1) Connector size 3 is not rotatable. An alternative terminal box can be selected for connector size 3 only.
 2) Optimum efficiency in continuous duty.
 3) With default setting of the pulse frequency.
 4) The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).
 5) Cable cross-section for brake connection 2 x 1.5 mm².
 6) $P_{calc} [kW] = \frac{M_0 [Nm] \times n_N}{9550}$ $P_{calc} [hp] = \frac{M_0 [lb\cdot ft] \times n_N}{5250}$

SIMOTICS S servomotors

SIMOTICS S synchronous motors for SINAMICS S120

Built-in holding brakes for SIMOTICS S-1FT7 motors

Overview

Many drives require a holding brake with an EMERGENCY STOP function for safety-related reasons or to comply with process requirements.

The permanent magnet brakes used for SIMOTICS S-1FT7 motors function according to the closed-circuit principle. The magnetic field of the permanent magnet pulls on the brake armature disk, i.e. in a condition of zero current, the brake is closed and the motor shaft is held. When the rated voltage of 24 V DC $\pm 10\%$ is applied to the brake, current flows through the coil and produces a counter-field that cancels the pull of the permanent magnet, causing the brake to release.

In the event of an emergency stop or voltage failure, approximately 2000 braking operations can be performed with the maximum operating energy without causing excessive wear on the holding brake (condition: maximum external moment of inertia = moment of inertia of motor and n_{\max} type-specific).

The holding brake is not an operational or safety brake.

To avoid switching overvoltages and any related impact on the system environment, a varistor must be externally connected to brake connecting cables. The connection is established using a power connector or terminal box.

When connected to the SINAMICS S120 drive system, this overvoltage protection is already provided.

Technical specifications

Motor Shaft height SH	Type	Built-in holding brake					
		Holding torque ¹⁾ Nm (lb _f -ft)	DC current A	Opening time with varistor ms	Closing time with varistor ms	Moment of inertia 10^{-4} kgm ² (10^{-3} lb _f -in-s ²)	Maximum operating energy per braking operation from $n = 3000$ r/min J
SIMOTICS S-1FT7 with permanent magnet brake, zero-backlash							
36	1FT703	3 (2.21)	0.3	60	25	0.12 (0.11)	30
48	1FT704	8 (5.90)	0.6	90	30	0.87 (0.77)	270
63	1FT706	18 (13.3)	0.8	150	50	2.84 (2.51)	880
80	1FT708	48 (35.4)	1.0	220	65	15.4 (13.6)	1900
100	1FT710	85 (62.7)	1.6	250	70	27.6 (24.4)	5300
132	1FT713	140 (103)	1.8	350	70	51.0 (45.1)	9800

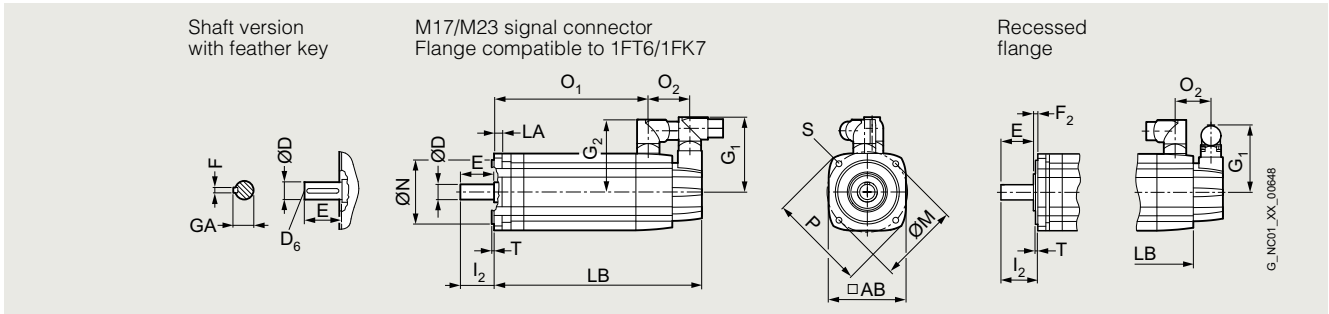

¹⁾ The holding torque is the highest permissible torque with which the closed brake can be loaded in steady-state operation without slip (holding function when the motor is stationary).

Overview

SIMOTICS S-1FT7 motor with mounted planetary gearbox SP+ series

SIMOTICS S-1FT7 motors can be combined with planetary gearboxes to create compact coaxial drive units. The gearboxes are flanged coaxially to the DE side of the motors.

Benefits

- High efficiency;
1-stage: > 97 %
2-stage: > 94 %
- Minimum torsional backlash
1-stage: ≤ 4 arcmin
2-stage: ≤ 6 arcmin
- Very low moment of inertia and thus short acceleration times of the motors
- Output shaft bearings dimensioned for high cantilever and axial loads with preloaded tapered roller bearings
- The gearboxes are enclosed (seal between gearbox and motor) and filled with oil at the factory. They are lubricated and sealed for their service life.
The gearboxes are suitable for all mounting positions.
- Degree of protection of gearbox: IP65
- Small dimensions
- Low weight

Integration

SIMOTICS S-1FT7 motors can be supplied with a flanged planetary gearbox from the factory.

The gearboxes assigned to the individual motors and gearbox ratios i available for these motor/gearbox combinations are listed in the subsequent selection table. The maximum permissible input speed of the gearbox (this is the same as the maximum motor speed) must be taken into account when a gearbox is selected.

The motor/gearbox combinations listed in the selection tables are mainly intended for cyclic operation S3-60 % (switch-on duration ≤ 60 % and ≤ 20 min). Reduced maximum motor speeds and output torques apply for use in S1 continuous duty (switch-on duration > 60 % or > 20 min). The gearbox must not exceed a temperature of 90 °C.

With feather key				J02	J03	J05	J09				
Without feather key				J22	J23	J25	J29				

Preconditions:

SP+ planetary gearboxes can be mounted with the following motor versions:

- Flange compatible with 1FT6/1FK7
- Plain motor shaft end, shaft and flange accuracy tolerance N, without/with holding brake
- Vibration severity grade A/IP65 degree of protection

SP+ planetary gearboxes can therefore only be ordered with these motors:

- **1FT7...-...1-..G1,**
- **1FT7...-...1-..H1,**
- **1FT7...-...4-..G1,**
- **1FT7...-...4-..H1**

When ordering a motor with gearbox, a **-Z** must be added to the article number and the order code of the required gearbox specified.

Example:

- 1FT7042 motor without holding brake
- With single-stage SP+ planetary gearbox
- With $i = 5$ and gearbox shaft without feather key

1FT7042-5AF74-1NG1-**Z J23**

SIMOTICS S servomotors

SIMOTICS S synchronous motors for SINAMICS S120

SIMOTICS S-1FT2

Overview

SIMOTICS S-1FT2 motors natural cooling

SIMOTICS S-1FT2 motors forced ventilation

SIMOTICS S-1FT2 servomotors are compact and highly dynamic synchronous motors to address a wide range of applications in an industrial environment. They are characterized by a high power density, degree of protection and overload capability. You can select between natural cooling or forced ventilation as cooling method. For natural cooling, the resulting heat loss is dissipated through the surface, while for forced ventilation, a mounted fan dissipates the heat loss and significantly increases the continuous power rating of the motor.

1FT2 servomotors are finely scaled in terms of torque and rated speed and have numerous variations and options. This makes it possible to create customized solutions to address the wide range of challenges in drive technology. Even more demanding tasks or applications in harsh environments can be mastered with 1FT2 servomotors.

SIMOTICS S-1FT2 High Dynamic motors

- Highest dynamic response through low inertia for highly dynamic applications with low moved masses.

SIMOTICS S-1FT2 Compact motors

- Precise, stable control with medium to high masses to be moved with medium moment of inertia.

Benefits

SIMOTICS S-1FT2 servomotors fully exploit their strengths in a system with converters from the SINAMICS S120 family:

- Short adjustment and positioning times
- Quick and precise compensation of disturbances
- Stable closed-loop control with high dynamic response
- Maximum flexibility in the selection
- Increased ruggedness
- Best accuracy

This is achieved by:

- Rapid control cycle
- High pulse frequency
- Complex rule algorithms
- Highest resolution optical encoder
- Low moment of inertia of the motors
- High overload capability

Application

- Feed axes and auxiliary axes in machine tools
- Robots and handling equipment
- Packaging machines
- Feed and withdrawal devices
- Automatic assembly machines
- Laboratory automation
- Woodworking, glass and ceramic industries
- Digital printing machines

More information

Detailed dimensional drawings, 3D models, data sheets and characteristic curves are available on the internet via the Siemens Product Configurator:

Technical specifications

General technical specifications

SIMOTICS S-1FT2	
Motor type	Permanent-magnet synchronous motor
Cooling	Natural cooling, forced ventilation
Type of construction according to EN 60034-7 (IEC 60034-7)	IM B5 (IM V1, IM V3)
Degree of protection according to EN 60034-5 (IEC 60034-5)	IP64, IP65 optional or retrofittable, IP67 optional
Shaft end according to DIN 748-3 (IEC 60072-1)	Plain shaft, optional shaft with keyway (half-key balancing)
Shaft and flange accuracy according to DIN 42955 (IEC 60072-1)	Tolerance N in each case for radial eccentricity of the shaft end, concentricity of the centering ring, and axial eccentricity of the mounting flange to the axis of the shaft end
Vibration severity grade according to EN 60034-14 (IEC 60034-14)	Grade A is maintained up to rated speed
Sound pressure level L_{pA} (1 m), max. according to EN ISO 1680, tolerance +3 dB(A)	
Natural cooling	
1FT2.03 and 1FT2.04	55 dB(A)
1FT2.05 and 1FT2.06	65 dB(A)
1FT2.08 and 1FT2.10	70 dB(A)
Forced ventilation	
1FT2.08	73 dB(A)
Connection	Connectors for signals and power, rotatable
Color of the paint finish	Anthracite, RAL 7016
Holding brake	Optional integrated holding brake
Certificates of suitability	cURus, CE, EAC, CEL
Encoder system	
AS22DQC	Absolute encoder single-turn 22-bit
AM22DQC	Absolute encoder 22-bit + 12-bit multi-turn
AS26DQC	Absolute encoder single-turn 26-bit
AM26DQC	Absolute encoder 26-bit + 12-bit multi-turn

SIMOTICS S servomotors

SIMOTICS S synchronous motors for SINAMICS S120

SIMOTICS S-1FT2

Options

SIMOTICS S-1FT2 motors can be expanded with numerous options.

Holding brake

The holding brake is used to hold the motor shaft when the motor is stationary and is designed for at least 5 million switching cycles. The holding brake is not a working brake for braking a rotating motor. A limited number of Emergency Off operations is permitted: The specified maximum operating energy for each emergency braking operation as well as the total operating energy over the service life must not be exceeded. For the 1FT2108, 1FT2208-2, 1FT2208-3, 1FT2210-2 and 1FT2210-3 motors, a reinforced holding brake can also be selected.

The following table contains technical specifications of the holding brakes for operation with a SINAMICS S120:

Motor	Holding torque at 120 °C (248 °F)	Dynamic braking torque at 120 °C (248 °F)	Maximum permissible (single operating energy ¹⁾)	Total operating energy (lifetime)	Opening time	Closing time	Rated current
	Nm (lb _r -ft)	Nm (lb _r -ft)	J	kJ	ms	ms	A
Spring-loaded brake, maximum play 1°							
1FT2.03	1.3 (0.96)	1.3 (0.96)	62	5	90	30	0.4
1FT2.04	3.3 (2.43)	3.3 (2.43)	270	35	110	40	0.5
Permanent magnet brake, zero-backlash							
1FT2.05	8 (5.90)	5 (3.69)	570	284	90	25	0.6
1FT2106	16 (11.80)	9 (6.64)	1065	774	100	50	0.7
1FT2206	13 (9.59)	6.5 (4.79)	1550	774	100	50	0.7

1FT2210-3							

Degree of protection

SIMOTICS S-1FT2 motors have degree of protection IP64 as standard. Optionally, the motor can be supplied with an IP65 or IP67 degree of protection.

Recommended degree of protection, see [page 8.1/2](#)

For 1FT2x03 and 1FT2x04 motors, the optional IP65 and IP67 shaft sealing ring shortens the shaft end that can be used. These motors can also be upgraded from IP64 to IP65 using the separately available degree of protection kit.

Shaft end

SIMOTICS S-1FT2 motors have a cylindrical shaft end. This can optionally be realized with keyway and feather key (half-key balancing).

For the 1FT2.03 and 1FT2.04 motors, an alternative shaft geometry (smaller diameter and shorter length of the shaft) is optionally available. The alternative shaft geometry is only available without feather key and for IP64 motors. It is suitable, for example, for mounting planetary gears with a small, low-inertia clamping system or for mounting small diameter pinions.

¹⁾ Maximum three EMERGENCY STOP operations in sequence with a maximum of 25 % total operating energy

Options

Encoder

SIMOTICS S-1FT2 motors are equipped with digital absolute encoders with DRIVE-CLiQ interface.

The following encoders are available for 1FT2:

- AS22DCQ: Absolute encoder single-turn 22-bit
- AM22DQC: Absolute encoder 22-bit + 12-bit multi-turn (with rotation counter for 4096 revolutions)
- AS26DQC: Absolute encoder single-turn 26-bit
- AM26DQC: Absolute encoder 26-bit + 12-bit multi-turn (with rotation counter for 4096 revolutions)

Planetary gearbox

SIMOTICS S-1FT2 motors can optionally be supplied as coaxial or angular planetary geared motors. The geared motors are specified as unit; interaction between the motor and gearbox thermal situation has been taken into account. More information about planetary geared motors: See [page 8.1/60](#)

Paint finish

If a special color and paint finish are not specified, then 1FT2 motors are painted in the standard anthracite color (RAL 7016). Optionally, various special colors are possible. Special colors are ordered by adding an order code to the article number.

Order code	Description
X00	unpainted
X01	Paint finish jet black RAL 9005
X02	Paint finish cream white RAL 9001
X03	Paint finish reseda green RAL 6011
X04	Paint finish pebble gray RAL 7032
X05	Paint finish sky blue RAL 5015
X06	Paint finish light ivory RAL 1015
X08	Paint finish white aluminum

The paint finish in standard and special colors meets the requirements for environmental conditions of climate class 3K4 according to IEC 60721-3-3 with the exception of the influencing variables "low air temperature", "condensation" and "low air pressure". It meets corrosivity category C1 according to EN ISO 12944-2.

Resistance

Options relating to resistance are ordered by adding an order code to the article number.

Order code	Description
K23	<p>Special paint finish with additional primer</p> <p>Additional primer, paint finish in standard color RAL 7016, anthracite grey</p> <p>Properties same as standard paint finish, in addition, condensation is permitted on the external surfaces of the motor.</p> <p>Combination with special color X■■ according to color table is permissible. However, a combination with X00 is not permissible.</p>
N16	<p>Motors with increased chemical resistance</p> <p>(Includes the properties of the paint with additional primer K23)</p> <ul style="list-style-type: none"> • 4-layer paint system (PS Premium paint system) • Nickel-plated plug connectors • Resistant to greases, mineral oils, aliphatic solvents (10 %), caustic soda (10 %) <p>With this option, the motor meets the requirements of corrosivity category C4(M) according to EN ISO 12944-2.</p> <p>A certificate regarding resistance against common ECOLAB cleaning agents and disinfectants is available here: https://support.industry.siemens.com/cs/document/58657336</p>
Q31	<p>Metal rating plate</p> <p>The rating plate of the motor is designed as an adhesive label as standard. With this option, an aluminum rating plate can be ordered instead. The labeling is lasered on. This ensures legibility for a long time even under poor ambient conditions.</p>
Q20	<p>Pressure equalization</p> <p>If a motor with degree of protection IP67 cools down after operation, a vacuum may build up in the motor. This may result in moisture ingress. Moisture ingress of this kind can be prevented by using a defined air supply via a connected pressure equalization tube.</p>

SIMOTICS S servomotors

SIMOTICS S synchronous motors for SINAMICS S120

SIMOTICS S-1FT2

Options

Low temperature -30 °C (-22 °F) – Q30

The permissible temperature range is defined as -15 °C to +40 °C (5 °F to 104 °F) (without power reduction).

Optionally, 1FT2 motors can be designed for an extended temperature range down to -30 °C (-22 °F) by adding order code **Q30** to the article number. Application e.g. in cold storage facilities.

The extended operating temperature range is not possible for the following variants:

- Degree of protection IP67
- Motors with gearbox
- Motors with forced ventilation

Suitability for dry room environments and certification for clean rooms – Q40

The permissible range for relative ambient air humidity is 5 % to 95 % as standard, suitability for use in clean rooms is not certified.

The 1FT2 motors can optionally be designed for use in extremely dry environments and with certification for use in clean rooms by adding order code **Q40** to the article number:

The following clean room classes are achieved according to ISO 156441-14, and have been certified accordingly by the TÜV (German Technical Inspectorate):

- Motors without gearbox, with degree of protection IP64: ISO Class 7 or better
- Motors without gearbox, with degree of protection IP65: ISO Class 6 or better
- Motors with gearbox NRB(W), NRK(W) or NLC(W): ISO Class 7 or better

Certificates are available here:

<https://support.industry.siemens.com/cs/document/109815586>

These motors feature extended specifications for use in relative air humidity: Operation from a relative humidity level of 0.3 % (dew point -50 °C at 20 °C (-58 F at 68 °F) ambient temperature) is permitted.

Customer-specific text on the rating plate – Y84

A text selected by the customer (maximum 20 characters) can be optionally printed on the rating plate of 1FT2 motors. For example, inscriptions for the name of the axis, the installation location or customer-specific spare part numbers can be provided. The order is entered using supplementary order code **Y84** and the plain text for the required inscription.

Ordering options using order codes

When ordering a motor with one or more order codes, the 16 position article number must be supplemented once with "-Z". Different order codes can be separated by spaces or "+".

Example for order codes X01 and N16:

1FT2■■■■-■■■■-■■■■-Z X01 + N16

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

SIMOTICS S-1FT2

Overview

SIMOTICS S-1FT2 servo planetary geared motors – with coaxial gearbox

- Gearbox type NRB

- Gearbox type NRK

- Gearbox type NLC

– with angular gearbox

- Gearbox type NRBW

- Gearbox type NRKW

- Gearbox type NLCW

SIMOTICS S-1FT2 servo planetary geared motors with coaxial gearboxes NRB, NRK, NLC and angular gearboxes NRBW, NRKW, NLCW are compact and efficient drive units that have a high dynamic performance. The combinations, each comprising a servomotor with a high-performance planetary gearbox, are suitable for a wide range of applications in industrial environments.

These planetary geared motors are specified and delivered as complete unit. All outstanding performance data are matched to the motor-gearbox combination.

Motors

High Dynamic

Where small masses have to be moved with maximum dynamic response and precision, the S-1FT2 High Dynamic servomotors with low inertia show their strengths to the full.

The lightweight and low-friction gearboxes in conjunction with inertia-optimized clamping systems allow the highest cycle rates to be achieved in the application.

Compact

If larger loads need to be moved with precision but also with a high dynamic response, a motor version with higher inertia is unavoidable so that the closed-loop control can be adequately handled. 1FT2 Compact servomotors with medium inertia and planetary gearboxes with higher transmission ratios enable even difficult inertia conditions to be mastered from a control perspective.

Overview

Planetary gearboxes

Planetary gearboxes NRB(W), NRK(W), and NLC(W) can be mounted in all spatial positions without restriction and are maintenance-free thanks to their life-long lubrication.

Coaxial gearboxes

NRB

NRB is the lightest gearbox with the highest power density. Thanks to its low friction bearing design it is suitable for high speeds and only generates a slight amount of heat.

Application areas:

- Packaging
- Food industry
- Pharmaceutical and medical systems
- Auxiliary axes in machine tools

NRK

The NRK series gearbox is suitable for higher radial and axial forces due to the large output bearing. This gearbox is also suitable for higher speeds thanks to low internal friction.

Application areas:

- Automation and mounting technology
- Packaging
- Auxiliary axes in machine tools

NLC

Thanks to the preloaded tapered roller bearing, the NLC gearbox has a high degree of rigidity and is perfectly suited for high radial and axial loads. The IP65 cover provides protection against dust and water.

Application areas:

- Automation and mounting technology
- Packaging
- Food industry
- Printing industry
- Auxiliary axes in machine tools

Angular gearboxes

Thanks to a first bevel gear stage, the NRB, NRK and NLC planetary gearboxes are also available as NRBW, NRKW or NLCW angular gearboxes.

The angled versions are ideal for confined spaces.

Due to the additional angle stage, the losses in the angular gearbox are slightly higher and the rated data is reduced compared to the corresponding coaxial version.

Option for shaft

The output shaft of planetary gearboxes can be ordered as a plain shaft for a friction-locked connection or optionally with a feather key for a positive locking connection. A friction-locked connection free of backlash (plain shaft) is recommended for dynamic loads, particularly in the case of reversals during operation. For pulsating loads without reversals a positive locking connection with feather key is also suitable as an alternative.

Limitation of output torques for gearbox shaft with feather key

It must be ensured that the following torques are not exceeded at the output shaft for gearboxes with feather key and changing application loads. Independent of this, other limitations are kept, for example the maximum torque $M_{2max,G}$ or the rated torque $M_{2N,G}$ of the gearbox component.

Gearbox	Max. application torque M_2 for the feather key version in Nm	
	up to 10 million load changes	up to 100 million load changes
NRB040	9	7
NRB060, NRBW060	31	25
NRB080, NRBW080	68	54
NRB120, NRBW120	132	105
NRB160	401	319
NRK050	12	9
NRK070, NRKW070	No restriction	29
NRK090, NRKW090	84	67
NRK120, NRKW120	No restriction	190

NLC060, NLCW060	37	29
NLC080, NLCW080	76	60
NLC120, NLCW120	239	190

Option for lubrication

Planetary gearboxes can be optionally ordered with a food-safe lubricant.

This lubricant was developed for the food and pharmaceutical industries for unpredictable contact with products and packaging in the food, cosmetics, pharmaceutical and animal feed industries. NSF H1 registration ensures that the lubricant is compliant with FDA 21 CFR §178.3570.

Lubrication	Gearbox shaft end	Order code
Standard lubrication	Plain solid shaft	M00
	Solid shaft with feather key	M01
Food-safe lubricant ¹⁾	Plain solid shaft	M10
	Solid shaft with feather key	M11

Option for orientation of the output for angular gearboxes

For angular geared motors, the motor connector is oriented to the gearbox output as standard at the top (when viewing the gearbox output and motor orientation to the right). Optionally, a different assembly can be carried out according to the following table.

Note: Independent of this, the geared motor can be mounted in any spatial position.

Gearbox orientation		Order code
	Standard orientation	–
	Connector on the output side	Q91
	Connector offset through 180° with respect to the standard	Q92
	Connector opposite the output	Q93

¹⁾ In angular planetary gearboxes NRBW, NRKW, NLCW, the selection of the food-safe lubricant reduces the rated data from the following data tables. In this case, you can find the precise power and rated data in the data sheet from the online configurator: www.siemens.com/spc

Technical specifications

General technical specifications for NRB, NRK, NLC coaxial gearboxes and NRBW, NRKW, NLCW angular gearboxes

Highest average input speed $n_{1av,G}$ and maximum input speed $n_{1max,G}$

$n_{1av,G}$ – highest average input speed:

In each time window of 15 minutes, the average input speed must be below $n_{1av,G}$

$n_{1max,G}$ – maximum input speed

The maximum input speed $n_{1max,G}$ must never be exceeded.

The maximum speeds of the mounted motor can be found in the data sheet resulting from the configuration on the Siemens Product Configurator.

Technical specifications

η_G – Efficiency of the gearbox component under full load

The exact values for the efficiency are, to some extent, dependent on the frame size of the mounted motor and can be found in the data sheet resulting from the configuration in the Siemens Product Configurator. In the partial load range, especially when the gearbox is cold, the efficiency of the gearbox is always lower than at operating speed.

The gearbox losses are already taken into account in the characteristic curves and in the following characteristic data of the geared motor or its components: $M_{2,0}$, $M_{2,max}$, $M_{0,M}$, $M_{max,M}$.

These characteristic curves and characteristic data do not have to be reduced based on the efficiency.

Permissible shaft loading capacity

The limit values shown for the bearing load refer to equivalent forces to be determined mathematically, whose effect is equivalent to the forces occurring in the load profile.

They only apply to radial and axial loads. Axial forces up to maximum $F_A = 0.24 \times F_R$ are permissible in case of superimposition. They apply to the output speed of 100 r/min and in case of radial force for a force application point in the center of the shaft or for centrally applied axial force. For other speeds or force application points, the permissible radial forces must be obtained from the radial force diagrams of the Configuration Manual.

Permissible shaft loading capacity

The limit values shown for the bearing load refer to equivalent forces to be determined mathematically, whose effect is equivalent to the forces occurring in the load profile.

They only apply to radial and axial loads. Axial forces up to maximum $F_A = 0.24 \times F_R$ are permissible in case of superimposition. They apply to the output speed of 100 r/min and in case of radial force for a force application point in the center of the shaft or for centrally applied axial force. For other speeds or force application points, the permissible radial forces must be obtained from the radial force diagrams of the Configuration Manual.

Permissible shaft loading capacity

The limit values shown for the bearing load refer to equivalent forces to be determined mathematically, whose effect is equivalent to the forces occurring in the load profile.

They only apply to radial and axial loads. Axial forces up to maximum $F_A = 0.24 \times F_R$ are permissible in case of superimposition.

They apply to the output speed of 100 r/min and in case of radial force for a force application point in the center of the shaft or for centrally applied axial force. For other speeds or force application points, the permissible radial forces must be obtained from the radial force diagrams of the Configuration Manual.

	Permissible shaft loading capacity, radial and axial forces in Nm		
	Gearbox NRBW060	NRBW080	NRBW120
Average radial force $F_{R\ eq}$			
• for $L_{10h} = 20000$ h	400	750	1750
• for $L_{10h} = 30000$ h	340	650	1500

 η_G – Efficiency of the gearbox component under full load

The exact values for the efficiency are, to some extent, dependent on the frame size of the mounted motor and can be found in the data sheet resulting from the configuration in the Siemens Product Configurator. In the partial load range, especially when the gearbox is cold, the efficiency of the gearbox is always lower than at operating speed.

The gearbox losses are already taken into account in the characteristic curves and in the following characteristic data of the geared motor or its components: $M_{2,0}$, $M_{2,max}$, $M_{0,M}$, $M_{max,M}$

It is not necessary to reduce these characteristic curves and characteristic data based on the efficiency.

	50 R 50	512 R 51
	64 R 64	
	100 R 00	

3rd order code – gearbox lubrication and shaft version

Standard lubrication	+	Plain solid shaft	M 0 0
Standard lubrication	+	Solid shaft with feather key	M 0 1
Food-safe lubricant	+	Plain solid shaft	M 1 0
Food-safe lubricant	+	Solid shaft with feather key	M 1 1

4th order code (optional) – different orientation of the output for angular gearboxes

	-		Q 9 1		Q 9 2		Q 9 3
Standard orientation		Connector on the output side		Connector offset through 180° with respect to the standard		Connector opposite the output	

Note:

- The geared motor can only be delivered as a unit – motor plus gearbox – (no individual gearboxes).
- Not all combinations are possible – see selection and ordering data tables.

Selection and ordering data

Characteristic curves of the geared motor (available via the Siemens Product Configurator)

- $M_{S1,M}$ – Characteristic of the highest thermally permissible effective torque of the motor component minus the gearbox friction and with consideration of the thermal interactions of the gearbox attachment.
The effective operating point must be below this line to avoid thermal overload of the geared motor.
- $M_{max,M}$ – Characteristic of the highest torque that can be generated by the motor component for a short time minus the gearbox friction.

$M_{S1,M}$ and $M_{max,M}$ may exceed the mechanically permissible limits of the gearbox, depending on the selection of the motor-gearbox combination ¹⁾.

Important gearbox component data in this catalog:

- $M_{2N,G}$ – The rated torque of the gearbox component at the output. This represents the fatigue strength limit of the gear teeth (independent of the motor).
If exceeded, the gearbox will be partially damaged and a service life calculation is required.
- $M_{2max,G}$ – Maximum torque of the gearbox component. This is the limit of the fatigue strength range (can be tolerated for 30000 revolutions of the output shaft). There is a risk of fracture if this limit is exceeded.
- $n_{1av,G}$ – Highest average input speed. In each time window of 15 minutes, the average input speed must be below $n_{1av,G}$.

Important motor component data in this catalog:

- $M_{0,M}$ – The motor component can deliver this torque thermally on a sustained basis at standstill and near standstill. It may exceed the mechanical limits of the gearbox component if necessary ¹⁾.
- $M_{max,M}$ – The motor component can deliver this torque for a short time. It may exceed the mechanical limits of the gearbox component if necessary ¹⁾.

Important geared motor system data in this catalog:

- Rated operating point:
 M_{2N} – Rated torque and
 n_{2N} – Rated speed.
This rated operating point can be permanently driven thermally and mechanically. If the S1 characteristic $M_{S1,M}$ at n_{2N} is greater than $M_{2N,G}$, then M_{2N} is reduced accordingly.
At the rated operating point, the geared motor has approximately its maximum power.
- $M_{2,0}$ – The geared motor can deliver this torque thermally on a sustained basis at standstill and near standstill.
It is reduced to $M_{2N,G}$ if necessary.
- M_{2max} – The geared motor can deliver this torque for a short time. It can be within the fatigue strength range of the gearbox.

¹⁾ In this case, it must be ensured that the torque effective at the gearbox output does not exceed the permissible limits (taking into consideration the load-to-motor inertia ratio and the motor moment of inertia when accelerating).

More information is provided in the Configuration Manual.

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

Selection and ordering data

Glossary

Formula symbols	Unit	Designation	Explanation
i		Gearbox ratio	Ratio between the input and output speed of the gearbox
C_{T2}	Nm/°	Torsional rigidity of the gearbox	Torsional rigidity of the gearbox referred to the output
J_1	kg cm ²	Mass moment of inertia of the geared motor	Total mass moment of inertia of the geared motor referred to the input or the motor shaft
$J_{1,G}$	kg cm ²	Mass moment of inertia of the gearbox component	Mass moment of inertia of the gearbox component of a geared motor related to the input of the gearbox
J_M	kg cm ²	Mass moment of inertia of the motor component without brake	Mass moment of inertia of the motor component of a geared motor
$J_{M,Br}$	kg cm ²	Mass moment of inertia of the motor component with brake	Mass moment of inertia of the motor component of a geared motor including motor holding brake
m	kg	Mass of the geared motor	Total mass of the geared motor
m_G	kg	Mass of the gearbox component	Mass of the gearbox component of a geared motor
m_M	kg	Mass of the motor component	Mass of the motor component of a geared motor
$m_{M,Br}$	kg	Mass of the motor component with brake	Mass of the motor component with motor holding brake
$M_{0,M}$	Nm	Static torque of the motor component on the geared motor	Torque of the motor component at standstill and near standstill that can be generated permanently electrically or on average. If this is above $M_{2max,G}$, it must be ensured that a maximum of $M_{2max,G}/i$ is applied to the gearbox input (observe the gearbox inertia to load inertia ratio). If necessary, limit the acceleration, torque or current accordingly on the application side.
$M_{2,0}$	Nm	Static torque of the geared motor	The geared motor can deliver this torque thermally on a sustained basis at standstill and near standstill. It is within the fatigue strength range of the gearbox.
M_{2N}	Nm	Rated torque of the geared motor	The geared motor can deliver this torque thermally on a sustained basis at its rated speed. It is within the fatigue strength range of the gearbox.
$M_{2N,G}$	Nm	Rated torque of the gearbox component	Rated torque of the gearbox component at the output. This represents the fatigue strength limit of the gear teeth (independently of the motor). If exceeded, the gearbox will be partially damaged and a service life calculation is required.
M_{rmax}	Nm	Maximum torque of the motor	Maximum torque of the motor that can be generated for a short time.
M_{2max}	Nm	Maximum torque of the geared motor	Maximum possible short-term and permissible torque at the output of the geared motor.
$M_{rmax,M}$	Nm	Maximum torque of the motor component	Maximum torque of the motor component that can be electrically generated. If this is above $M_{2max,G}$, it must be ensured that a maximum of $M_{2max,G}/i$ is applied to the gearbox input (observe the gearbox inertia to load inertia ratio). If necessary, limit the acceleration, torque or current accordingly on the application side.
$M_{2max,G}$	Nm	Maximum torque of the gearbox component	Maximum (very rare) permissible torque at the output of the gearbox. This is the limit of the fatigue strength range. There is a risk of fracture if this limit is exceeded.
$M_{2Em.Off}$	Nm	Emergency Off torque	$M_{2Em.Off}$ can be tolerated a maximum of 1000 times during the gearbox service life without causing unacceptable damage to the gearbox. This code can be used to check whether high torques, caused by very rare operating faults, can damage the gearbox.
$n_{1av,G}$	r/min	Highest average input speed of the gearbox component	In each time window of 15 minutes, the average input speed must be below $n_{1av,G}$.
$n_{1max,G}$	r/min	Maximum input speed of the gearbox component	Maximum permissible short-term input speed of the gearbox component on a geared motor
$n_{max,M}$	r/min	Maximum speed of the motor component	Maximum achievable and maximum permissible speed of the motor component on a geared motor
$n_{2B,G}$	r/min	Reference speed of the gearbox	Reference speed relative to the rated torque $M_{2N,G}$ of the gearbox component. This is required to perform a service life calculation of the gearbox output bearings.
n_{2max}	r/min	Maximum speed of the geared motor	Maximum achievable and maximum permissible speed at the gearbox output of a geared motor
n_{2N}	r/min	Rated speed of the geared motor	The rated torque of the geared motor is specified at this speed
F_R	N	Radial force	Radial force perpendicular to the shaft axis
$F_{R eq}$	N	Average radial force	Radial force averaged over the cycle, perpendicular to the shaft axis. For ball bearings, use the cubic mean value. For roller bearings, use the exponent 3.33 instead of the exponent 3.
$F_{R max}$	N	Maximum radial force	Maximum permissible static radial force
F_A	N	Axial force	Axial force
$F_{A eq}$	N	Average axial force	Axial force averaged over the cycle. For ball bearings, use the cubic mean. For roller bearings, use the exponent 3.33 instead of the exponent 3.
$F_{A max}$	N	Maximum axial force	Maximum permissible static axial force
M_b	Nm	Maximum permissible bending moment	Maximum permissible bending moment at the motor flange to gearbox adapter interface
φ_2	'	Torsional backlash of the gearbox	Torsional backlash of the gearbox with respect to the output

Selection and ordering data

Selection of servomotors with planetary gearbox

- Select gearbox type and gearbox size, e.g. on the basis of the required torque or the required shaft loads – Table *Permissible output shaft loads*.
- Select a suitable servomotor-gearbox combination from the *Selection data servomotors with planetary gearbox*, the *servomotor data* and the *planetary gearbox data* e.g. on the basis of the rated speed of the servomotor with planetary gearbox, the associated gearbox ratio and the rated torque. The fatigue strength of the motor and gearbox combination must be taken into account - see color background of the *Selection data servomotors with planetary gearbox* with associated color legend.

Structure of the tables for selection and ordering data

In the selection tables of the SIMOTICS S-1FT2 servo planetary geared motors you will find all combinations of servomotors with planetary gearboxes with the respective transmission ratios available.

The selection tables are sorted according to the following criteria:

- Line supply voltage of the converter
- Gearbox type and gearbox size

The following views contain legends with explanations of the formula symbols and units specified in the selection and order tables.

Legend for "Servomotor data":

Servomotor data	Selection data servomotors with planetary gearbox	Servomotors with planetary gearbox
$M_{0,M}$ $M_{max,M}$ J_M ($J_{M,Br}$) Nm Nm kg cm ²		
	Rotor moment of inertia of the motor component (with holding brake) ¹⁾	1F.2102-0AG...-0.A0-Z
	Maximum possible short-term torque of the motor component ²⁾	■ + ■ + ...
	Maximum thermally permissible effective torque of the motor component at standstill or near standstill ²⁾	■ + ■ + ...

Legend for "Selection data servomotors with planetary gearbox":

Servomotor data	Selection data servomotors with planetary gearbox	Servomotors with planetary gearbox
$M_{0,M}$ $M_{max,M}$ J_M ($J_{M,Br}$) Nm Nm kg cm ²		
...	n_{2N} r/min Rated speed of the servo planetary geared motor	1F.2102-0AG...-0.A0-Z
	M_{2N} Nm Rated torque of the servo planetary geared motor	■ + ■ + ...
	$M_{2,0}$ Nm Static torque of the servo planetary geared motor	
	M_{2max} Nm Max. permissible short-term output torque of the servo planetary geared motor	

Legend for "Planetary gearbox data":

Servomotor data	Selection data servomotors with planetary gearbox	Servomotors with planetary gearbox
$M_{0,M}$ $M_{max,M}$ J_M ($J_{M,Br}$) Nm Nm kg cm ²		
Planetary gearbox data		1F.2102-0AG...-0.A0-Z
Gearbox type, gearbox stages:	Gearbox type and number of gearbox stages	■ + ■ + ...
1st order code	1. Order code for gearbox type, gearbox size and number of gearbox stages	
i	Gearbox ratio	
2nd order code	2nd order code for gearbox ratio	
$M_{2N,G}$ Nm	Rated torque of the gearbox component (fatigue strength)	
$M_{2max,G}$ Nm	Maximum permissible short-term output torque of the gearbox (fatigue strength, max. 30000 revolutions of the output shaft)	
$M_{2Em.Off}$ Nm	Emergency Off output torque of the gearbox (max. 1000 times)	
$J_{1,G}$ kg cm ²	Moment of inertia of the gearbox referred to the input ¹⁾	
$\varphi_{2,G}$	Torsional backlash of the gearbox with respect to the output	

Color legend for the fatigue strength of the motor and gearbox combination:

Color legend:	$M_{max,M} \times i < M_{2N,G}$	The motor and gearbox combination is fatigue-proof
	$M_{2N,G} < M_{max,M} \times i < M_{2max,G}$	Check acceleration and inertias, perform service life calculation if necessary
	$M_{max,M} \times i > M_{2max,G}$	The motor can destroy the gearbox, check acceleration and inertias, perform service life calculation if necessary

¹⁾ The total mass inertia is the sum of the motor and gearbox mass inertias. For some motors, the inertia of the gearbox clamping system is added to that of the motor.

²⁾ Exact values can be found in the data sheet for the motor-gearbox combination, available via the Siemens Product Configurator.

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

Coaxial geared motors for servo converters with 400 V 3 AC line connection

Selection and ordering data

The following servo planetary geared motors with coaxial gear-box are suitable for servo converters with 380 V to 480 V 3 AC line supply, especially for SINAMICS S120 servo converters.

The rated operating points of the geared motors are adapted to this voltage.

SIMOTICS S-1FT2 servo planetary geared motors with coaxial gearbox

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

Coaxial geared motors for servo converters with 400 V 3 AC line connection

Selection and ordering data

Permissible output shaft loads		
Average radial force for 20000 h	$F_{R,eq}$	400 N
Average axial force for 20000 h	$F_{A,eq}$	500 N
Average radial force for 30000 h	$F_{R,eq}$	340 N
Average axial force for 30000 h	$F_{A,eq}$	450 N
Maximum radial force	$F_{R,max}$	700 N
Maximum axial force	$F_{A,max}$	800 N

$\varnothing_{2,G}$	'	7								9									

Color legend:	$M_{max,M} \times i < M_{2N,G}$	The motor and gearbox combination is fatigue-proof
	$M_{2N,G} < M_{max,M} \times i < M_{2max,G}$	Check acceleration and inertias, perform service life calculation if necessary
	$M_{max,M} \times i > M_{2max,G}$	The motor can destroy the gearbox, check acceleration and inertias, perform service life calculation if necessary

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

Coaxial geared motors for servo converters with 400 V 3 AC line connection

Table with columns for Servomotor data (M0,M, Mmax, JM, Nm) and Selection data servomotors with planetary gearbox. It lists various motor models like SIMOTICS S-1FT2 and S-1FT2, including their gearboxes and torque ratings.

Continued on the following page

Planetary gearbox data table. Columns include Gearbox type (NRK090, 1-stage vs 2-stage), 1st order code (B31, B32), 2nd order code (R03-R00), and various torque values (M2N,G, M2max,G, M2Em,Off, J1,G, phi2,G).

Color legend: Mmax,M x i < M2N,G (fatigue-proof); M2N,G < Mmax,M x i < M2max,G (check acceleration); Mmax,M x i > M2max,G (motor can destroy gearbox).

Color legend: $M_{max,M} \times i < M_{2N,G}$ **The motor and gearbox combination is fatigue-proof**
 $M_{2N,G} < M_{max,M} \times i < M_{2max,G}$ **Check acceleration and inertias, perform service life calculation if necessary**
 $M_{max,M} \times i > M_{2max,G}$ **The motor can destroy the gearbox, check acceleration and inertias, perform service life calculation if necessary**

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

Coaxial geared motors for servo converters with 400 V 3 AC line connection

Table with 4 columns: Servomotor data, Selection data servomotors with planetary gearbox, and Servomotors with planetary gearbox. It lists various motor models like 1FT2105-4AF, 1FT2105-4AH, 1FT2105-6AF, 1FT2106-3AF, 1FT2106-4AF, 1FT2106-6AF, 1FT2203-2AK, 1FT2203-4AK, 1FT2204-5AF, and 1FT2204-5AK with their respective technical specifications.

Continued on the following page

Planetary gearbox data table with columns for Gearbox type (NRK120, 1-stage B41 and NRK120, 2-stage B42), 1st order code (i), 2nd order code, and various torque and inertia values (M2N,G, M2max,G, M2Em.Off, J1,G, ϕ2,G).

Color legend explaining the gear motor combination status: green for fatigue-proof, blue for check acceleration and inertias, orange for motor can destroy gearbox.

SIMOTICS S servomotors

SIMOTICS S servo planetary geared motors for SINAMICS S120

Angular geared motors for servo converters with 400 V 3 AC line connection

Selection and ordering data

The following servo planetary geared motors with angular gearbox are suitable for servo converters with 380 V to 480 V 3 AC line connection, especially for SINAMICS S120 servo converters. They are particularly suitable for where space is restricted.

The rated operating points of the geared motors are adapted to this voltage.

SIMOTICS S-1FT2 servo planetary geared motors with angular gearbox

SIMOTICS M main motors

SIMOTICS M-1PH8 asynchronous, synchronous reluctance and synchronous motors for SINAMICS S120

Overview

SIMOTICS M-1PH8 motors, forced ventilation, shaft heights 80 to 160

The SIMOTICS M-1PH8 motor series is a generation of motors designed for universal use in plants and machines involving motion control applications. The motors are based on a flexible, modular principle and are available as asynchronous, synchronous-reluctance and compact synchronous variants, with either forced ventilation or water cooling.

In comparison to the freely selectable performance of vector and servo control with the SINAMICS S120 drive system, it is possible to select between asynchronous, synchronous-reluctance or synchronous versions in the case of the new SIMOTICS M-1PH8 motor series.

Thanks to this flexible interplay between converter and motor, it is now even easier to implement applications which involve

- extreme duty cycles
- short rise times
- high accuracy

regarding speed, torque and positioning.

SIMOTICS M-1PH8 motors, water cooling, shaft heights 80 to 160

SIMOTICS M-1PH8 motors, water cooling, shaft heights 180 to 280

SIMOTICS M-1PH8 motors have been designed specifically for use in conjunction with the SINAMICS S120 drive system. Depending on the closed-loop control requirements, suitable encoder systems are available for the SIMOTICS M-1PH8 motors to acquire motor speed and the indirect position.

Encoder systems for C-axis operation are also available for machine tools.

SIMOTICS M-1PH8 motors are available with two different cooling methods:

- Forced ventilation
- Water cooling

Benefits

- Wide power range with low construction volume
- Wide speed control ranges
- High degree of flexibility due to the choice of
 - Asynchronous, synchronous-reluctance or synchronous version
 - Forced ventilation or water cooling
 - Solid shaft or hollow shaft
 - Wide range of bearing concepts
 - Different encoder types for speed control and high-precision positioning
- Outstanding performance properties
 - Maximum speeds up to 24000 r/min
 - Excellent radial eccentricity down to 10 µm
 - Excellent vibration severity grade
 - High dynamic response (short acceleration times)
- Low noise emission
- Simple and flexible connection system
- Commissioning with electronic rating plate and DRIVE-CLiQ interface

Application

The range of applications extends across all industries and includes, for example:

- Main drives in presses and extruders
- Converting applications
- Main spindle drives in machine tools
- Rotary axes in the paper and printing industry
- Use in crane systems

The SIMOTICS M-1PH8 motors are suitable for installation in dry indoor areas without aggressive atmospheres.

Configuration

You can find the Configuration Manual for SIMOTICS M-1PH8 for SINAMICS S120 at:

<https://support.industry.siemens.com/cs/ww/en/view/109744012>

Dimensional drawings

Dimensional drawings for the SIMOTICS motors are available via selectors through to the exact article number with the Siemens Product Configurator.

www.siemens.com/spc

Characteristic curves

SIMOTICS M-1PH8 asynchronous motor

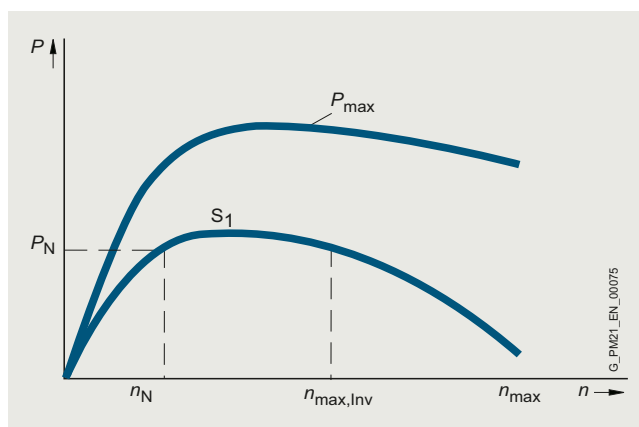

Typical speed-power characteristic for SIMOTICS M-1PH8 asynchronous motors

SIMOTICS M-1PH8 synchronous reluctance motor

Typical speed-power characteristic for SIMOTICS M-1PH8 synchronous reluctance motors

SIMOTICS M-1PH8 synchronous motor

Typical speed-power characteristic for SIMOTICS M-1PH8 synchronous motors

The characteristic curves show the typical relationship between motor speed and drive power for SIMOTICS M-1PH8 motors for duty type S1 (continuous duty) in accordance with IEC 60034-1.

The detailed characteristic curves for the voltage and winding version are provided in the SIMOTICS M-1PH8 Configuration Manual.

Characteristics for the SIMOTICS motors are available via selectors through to the exact article number with the Siemens Product Configurator.

Access to the Siemens Product Configurator

The Siemens Product Configurator can be accessed without having to register or log in:

SIMOTICS M-1PH8 asynchronous, synchronous reluctance and synchronous motors for SINAMICS S120

SIMOTICS M-1PH8 asynchronous and synchronous motors, forced ventilation

Technical specifications

SIMOTICS M-1PH8 motor, forced ventilation	
Stator winding insulation according to EN 60034-1 (IEC 60034-1)	For an ambient temperature of up to 40 °C (104 °F) Temperature class 180 (H)
Cooling according to EN 60034-6 (IEC 60034-6) • 1PH808 ... 1PH822 • 1PH828	Forced ventilation Fan mounted axially at NDE Fan mounted radially at NDE
Temperature monitoring • 1PH818 ... 1PH828	Pt1000 temperature sensor in the stator winding 1 additional Pt1000 temperature sensor as reserve
Fan supply voltage • 1PH808 • 1PH810 ... 1PH816 • 1PH818 ... 1PH822 • 1PH828	230 V 1 AC 50/60 Hz, 265 V 1 AC/60 Hz 400 V 2 AC 50/60 Hz (option L77) 400 V 3 AC 50/60 Hz, 480 V 3 AC 60 Hz 200 ... 277 V 1 AC, 50/60 Hz (EC fan) 380 V ... 480 V 3 AC 50/60 Hz (EC fan) (option L76) 380 V ... 480 V 3 AC 50/60 Hz (EC fan)
Type of construction according to EN 60034-7 (IEC 60034-7) • 1PH808 • 1PH810 ... 1PH828	IM B3, IM B5 IM B3, IM B5, IM B35
Degree of protection according to EN 60034-5 (IEC 60034-5) • 1PH808 ... 1PH828 • 1PH818 ... 1PH828	IP55 (forced ventilation) IP23 (open-circuit cooling)
Shaft end at the DE according to DIN 748-3 (IEC 60034-5)	Plain shaft or feather key full-key or half-key balancing for feather key
Shaft and flange accuracy according to DIN 42955 (IEC 60072-1) ¹⁾	Without holding brake: Tolerance R (reduced) With holding brake: Tolerance N (normal)
Vibration severity	In accordance with Siemens/EN 60034-14 (IEC 60034-14) ¹⁾
Sound pressure level L_{pA} (1 m) according to EN ISO 1680, max. Tolerance +3 dB <u>Forced ventilation (IP55)</u> • 1PH808 ... 1PH813 • 1PH816 • 1PH818 • 1PH822 • 1PH828 <u>Forced ventilation (IP23)</u> • 1PH818 • 1PH822 • 1PH828	70 dB at a rated pulse frequency of 4 kHz and a speed range up to 5000 r/min 73 dB at a rated pulse frequency of 4 kHz and a speed range up to 5000 r/min 73 dB at a rated pulse frequency of 2 kHz and a speed range up to 5000 r/min 73 dB at a rated pulse frequency of 2 kHz and a speed range up to 3500 r/min 74 dB at a rated pulse frequency of 2 kHz and a speed range up to 3300 r/min 73 dB at a rated pulse frequency of 2 kHz and a speed range up to 3000 r/min 73 dB at a rated pulse frequency of 2 kHz and a speed range up to 2000 r/min 74 dB at a rated pulse frequency of 2 kHz and a speed range up to 2800 r/min
Built-in encoder systems	Absolute and incremental encoder with or without DRIVE-CLiQ interface
Connection <u>Power</u> • 1PH808 ... 1PH813 • 1PH816 ... 1PH828 <u>Fan</u> • 1PH808 • 1PH810 ... 1PH813 • 1PH816 ... 1PH828 <u>Encoder system</u>	Connector for signals or DRIVE-CLiQ interface (mating connector not included in the scope of supply) Power connector or terminal box Terminal box Power connector Power connector or terminal box Terminal box Connector for signals or DRIVE-CLiQ interface (mating connector not included in the scope of supply)
Rating plate	1 attached to motor 1 supplied separately with terminal box
Paint finish	Standard paint finish in anthracite RAL 7016
Certificate of suitability	cURus, CE, EAC, UKCA

¹⁾ Radial eccentricity of the shaft end, concentricity of the centering ring, and axial eccentricity of the mounting flange to the axis of the shaft end.

Technical specifications

SIMOTICS M-1PH8 motor, water cooling	
Stator winding insulation according to EN 60034-1 (IEC 60034-1)	For a coolant inlet temperature of up to 30 °C (86 °F) Temperature class 180 (H) ¹⁾
Cooling according to EN 60034-6 (IEC 60034-6)	Water cooling max. cooling water pressure at inlet: 6 bar Connection thread at NDE
Temperature monitoring • 1PH808 ... 1PH816 • 1PH818 ... 1PH828	Pt1000 temperature sensor in the stator winding 1 additional Pt1000 temperature sensor as option (option 25) 1 additional Pt1000 temperature sensor as reserve
Type of construction according to EN 60034-7 (IEC 60034-7) • 1PH808 • 1PH818 ... 1PH828	IM B3, IM B5 IM B3, IM B5, IM B35
Degree of protection according to EN 60034-5 (IEC 60034-5) • 1PH808 ... 1PH816 • 1PH818 ... 1PH828	IP65 IP55
Shaft end at the DE according to DIN 748-3 (IEC 60072-1)	Plain shaft or feather key full-key or half-key balancing for feather key
Shaft and flange accuracy according to DIN 42955 (IEC 60072-1) ²⁾	Without holding brake: Tolerance R (reduced) With holding brake: Tolerance N (normal)
Vibration severity	In accordance with Siemens/EN 60034-14 (IEC 60034-14) ²⁾
Sound pressure level L_{pA} (1 m) according to EN ISO 1680, max. tolerance +3 dB • 1PH808 ... 1PH813 • 1PH816 • 1PH818 • 1PH822 • 1PH828	68 dB at a rated pulse frequency of 4 kHz and speed range up to 5000 r/min 69 dB at a rated pulse frequency of 4 kHz and speed range up to 5000 r/min 70 dB at a rated pulse frequency of 2 or 4 kHz and a speed range up to 5000 r/min 70 dB at a rated pulse frequency of 2 or 4 kHz and speed range up to 4500 r/min 72 dB for a rated pulse frequency of 2 kHz and speed range up to 3300 r/min
Integrated encoder systems	Absolute and incremental encoder with or without DRIVE-CLiQ interface
Connection	Connector for signals or DRIVE-CLiQ interface (mating connector is not included in the scope of supply)
<u>Power</u> • 1PH808 ... 1PH813 • 1PH816 ... 1PH828	Power connector or terminal box Terminal box
<u>Encoder system</u>	Connector for signals or DRIVE-CLiQ interface (mating connector is not included in the scope of supply)
Rating plate	1 unit attached to motor 1 supplied loose in terminal box
Paint finish	Standard paint finish in anthracite RAL 7016
Certificate of suitability	cURus, CE, EAC, UKCA

¹⁾ The following motors are designed to conform to temperature class 155 (F): 1PH8107-1.F2/1PH8107-1.M2 1PH8138-2/1PH8164/1PH8166/1PH8168

²⁾ Radial eccentricity of the shaft end, concentricity of the centering ring, and axial eccentricity of the mounting flange to the axis of the shaft end.

D

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to H); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).

The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Single Motor Module	1
Double Motor Module	2

Motor Module	C
For continuous load with 200 % overload (C type)	
For highly dynamic, intermittent load cycles with 300 % overload (D type)	D

1) n_2 : Maximum permissible thermal speed at constant power.

2) n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to H); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).

The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

4) The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Single Motor Module	1
Double Motor Module	2
Motor Module	
For continuous load with 200 % overload (C type)	C
For highly dynamic, intermittent load cycles with 300 % overload (D type)	D

1) n₂: Maximum permissible thermal speed at constant power.
 2) n_{max}: Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to H); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.
 3) I_N: Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system). The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

Single Motor Module 1
Double Motor Module 2

Motor Module

For continuous load with 200 % overload (C type)
For highly dynamic, intermittent load cycles with 300 %
overload (D type)

C
D

1) n_2 : Maximum permissible thermal speed at constant power.

2) n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to H); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).

The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

4) The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Single Motor Module	1	C D
Double Motor Module	2	
Motor Module		
For continuous load with 200 % overload (C type)		C
For highly dynamic, intermittent load cycles with 300 % overload (D type)		D

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{max} : Maximum speed that must not be exceeded (applicable for standard; 14th position of the Article No. A to H); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Single Motor Module	1
Double Motor Module	2

Motor Module

For continuous load with 200 % overload (C type)	C
For highly dynamic, intermittent load cycles with 300 % overload (D type)	D

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to H); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system). The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

SIMOTICS M main motors

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{\max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to F); limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{\max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to F); limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to F); limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Single Motor Module

1

Motor Module

For continuous load with 200 % overload (C type)
For highly dynamic, intermittent load cycles with
300 % overload (D type)

C
D1) n_2 : Maximum permissible thermal speed at constant power.2) n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article A to F); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

Single Motor Module	1
Motor Module For continuous load with 200 % overload (C type) For highly dynamic, intermittent load cycles with 300 % overload (D type)	C D

1) n_2 : Maximum permissible thermal speed at constant power.
 2) n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article A to F); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.
 3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system). The rated motor data are valid for 2 kHz (SH 180 to 280).

Single Motor Module

1

Motor Module

For continuous load with 200 % overload (C type)
For highly dynamic, intermittent load cycles with
300 % overload (D type)

C
D1) n_2 : Maximum permissible thermal speed at constant power.2) n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article A to F); for performance bearings (14th position = "L"), increased maximum speeds apply; limitations must be taken into consideration where necessary (e.g. with holding brake), see Article No. supplements.3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

1) n_2 : Maximum permissible thermal speed at constant power.2) n_{max} : Maximum speed that must not be exceeded (applicable for standard: 14th position of the Article No. A to D, E and F).3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

SIMOTICS M main motors

SIMOTICS M-1PH8 asynchronous, synchronous reluctance and synchronous motors for SINAMICS S120

SIMOTICS M-1PH8 synchronous reluctance motors > Forced ventilation, IP55 degree of protection

Motor Module:

Single Motor Module

1

Motor Module

For continuous load with 200 % overload (C type)

C

1) n_2 : Maximum permissible thermal speed at constant power.2) n_{max} : Maximum speed that must not be exceeded. Limitations must be taken into consideration where necessary (e.g. with holding brake).3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).

4) The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Motor Module:
Single Motor Module

1

Motor Module
For continuous load with 200 % overload (C type)

C

¹⁾ n_2 : Maximum permissible thermal speed at constant power.

²⁾ n_{max} : Maximum speed that must not be exceeded. Limitations must be taken into consideration where necessary (e.g. with holding brake).

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Motor Module:

Single Motor Module

1

Motor Module

For continuous load with 200 % overload (C type)

C

1) n_2 : Maximum permissible thermal speed at constant power.2) n_{max} : Maximum speed that must not be exceeded. Limitations must be taken into consideration where necessary (e.g. with holding brake).3) I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).

4) The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

Single Motor Module

1

Motor Module

For continuous load with 200 % overload (C type)

For highly dynamic, intermittent load cycles with 300 % overload (D type)

C
D

¹⁾ $n_{\max, Inv}$: Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the Motor Module (without protective circuit).

²⁾ n_{\max} : Maximum speed that must not be exceeded.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

⁵⁾ From approximately 85 A, the top power connector connection type is not possible (15th data position E to H).

Single Motor Module

1

Motor Module

For continuous load with 200 % overload (C type)
For highly dynamic, intermittent load cycles with
300 % overload (D type)

C

D

¹⁾ $n_{\max, Inv}$: Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the Motor Module (without protective circuit).

²⁾ n_{\max} : Maximum speed that must not be exceeded.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 4 kHz (SH 80 to 160) or 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

⁵⁾ From approximately 85 A, the top power connector connection type is not possible (15th data position E to H).

¹⁾ $n_{\max, Inv}$: Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the Motor Module (without protective circuit).

²⁾ n_{\max} : Maximum speed that must not be exceeded.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 4 kHz (SH 80 to 160).

⁴⁾ From approximately 85 A, the top power connector connection type is not possible (15th data position E to H).

¹⁾ $n_{\max, Inv}$: Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the Motor Module (without protective circuit).

²⁾ n_{\max} : Maximum speed that must not be exceeded.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

⁴⁾ The output current of the Motor Module is lower than the rated motor current for the pulse frequency on which it is based.

¹⁾ $n_{\max, Inv}$: Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the Motor Module (without protective circuit).

²⁾ n_{\max} : Maximum speed that must not be exceeded.

³⁾ I_N : Output current of the Motor Module at rated pulse frequency (see SINAMICS S120 drive system).
The rated motor data are valid for 2 kHz (SH 180 to 280).

- 1) Only possible when 8th data position is "1" (asynchronous version).
- 2) Limited to $n_{max} = 12000$ r/min.
- 3) Limited to $n_{max} = 9000$ r/min.
- 4) Limited to $n_{max} = 4600$ r/min.
- 5) Limited to $n_{max} = 15000$ r/min.
- 6) Only possible for shaft height 100, 132, and 160.
- 7) Only possible when 8th data position is "1" (asynchronous version).
Shaft height 80: limited to $n_{max} = 15000$ r/min
shaft height 100: limited to $n_{max} = 12000$ r/min
shaft height 132: limited to $n_{max} = 10000$ r/min
shaft height 160: limited to $n_{max} = 9000$ r/min, not possible if 12th data position is "2" (IM B5).
- 8) Limited to $n_{max} = 5000$ r/min, shaft height 132: $n_{max} = 4500$ r/min, shaft height 160: $n_{max} = 4000$ r/min.
- 9) Power connector for shaft height 100 only possible up to a maximum stall current of $I_0 = 36$ A, Power connector for shaft height 132 only possible up to a maximum stall current of $I_0 = 85$ A. Power connector not possible for shaft height 160.
- 10) Only possible when 14th data position is: B, C, D, G, H, Q, F; and 15th data position is: A and B.
- 11) Directly coupled to the 9th data position.
- 12) Not possible with shaft height 160 and 14th data position: L.
- 13) Not possible when 9th data position is: T, U.
- 14) Not possible with shaft height 160 and when 8th data position is "2" or "4" (synchronous version).
- 15) Limited to shaft height 100: $n_{max} = 7000$ r/min, shaft height 132: $n_{max} = 6500$ r/min, shaft height 160: $n_{max} = 5300$ r/min.

Special version (order codes required for options)																				
								Z												

¹⁾ A U option must also be provided in the order to specify the holding brake version.

Shaft height 132: limited to $n_{max} = 4500$ r/min
shaft height 160: limited to $n_{max} = 4000$ r/min

²⁾ Not possible for shaft height 160; the vibration load must be taken into consideration for shaft height 132, see Configuration Manual.

³⁾ Not possible for terminal box gk874 (1PH816 and 1PH8138-xxG2x).

⁴⁾ Directly coupled to the 9th data position.

Options

Order code	Option description	For use with motors		
		Shaft height 80 to 160	Shaft height 180 to 280	Shaft height 280 only for forced ventilation (11th data posi- tion "1" or "4")
	-Z must be attached to the Article No. to order a motor with options. The order code must also be specified for each additional required option (Order codes must not be repeated in plain text in the order)			
A12	Additional PTC thermistor chain for alarm and tripping (Only possible for version with terminal box)	✓	✓	✓
A25	Additional temperature sensor as reserve connected to signal terminal strip (Only possible for version with terminal box)	✓	Standard	Standard
A72	2 Pt1000 temperature sensors for roller bearing temperature monitoring (DE and NDE)	–	✓	✓
B02	Factory test certificate in accordance with EN 10204 2.3 (for motor ordered)	✓	Standard	Standard
B35	Factory test certificate for vibration report	✓	✓ ¹⁾	✓ ¹⁾
B36	Factory test certificate for run-out log	✓	Only for SH 180 and SH 225	–
G00	Separately driven fan NDE left, air inlet at NDE (possible if 15th data position is U, W or X)	–	–	✓
G02	Separately driven fan NDE right, air inlet at NDE (possible if 15th data position is V, W or X)	–	–	✓
G06	Separately driven fan DE left, air inlet NDE (possible at 11th position = 1 and 15th position = U, V or W; possible if 11th position = 4 and 15th position = W)	–	–	✓
G07	Separately driven fan DE left, air inlet DE (possible if 11th position = 1 and 15th position = U, V or W; possible if 11th position = 4 and 15th position = W)	–	–	✓
G08	Separately driven fan DE right, air inlet NDE (possible if 11th position = 1 and 15th position = U, V or W; possible if 11th position = 4 and 15th position = W)	–	–	✓
G09	Separately driven fan DE right, air inlet DE (possible if 11th position = 1 and 15th position = U, V or W; possible if 11th position = 4 and 15th position = W)	–	–	✓
G11	Separately driven fan DE top, air inlet DE (possible if 11th position = 1 and 15th position = U, V or W; possible if 11th position = 4 and 15th position = W)	–	–	✓
G14	With air filter (only possible when 11th data position "1" or "4")	Only for SH 132 and SH 160	✓	✓
G50	Nipple for SPM, with M8 adapter	–	✓	✓
G80	Mounting a POG 10 incremental encoder supplied by the customer (Possible if 9th data position is "K")	–	–	✓
H56	Mounting a POG 10 D 1024 incremental encoder (encoder HTL1024 S/R) (Possible if 9th data position is "K")	–	–	✓
H75	Mounting a HOG 22 hollow shaft encoder supplied by the customer (Possible if 9th data position is "G")	–	–	✓
K08	Encoder connector or DRIVE-CLiQ mounted opposite (Not possible if 15th data position is "X")	–	✓	✓
K09	Terminal box or power connector NDE right	Only for SH 100 ²⁾ up to SH 160	–	–
	Terminal box NDE right, cable entry DE, signal port top (Possible if 15th data position is "A")	–	✓	–
K10	Terminal box or power connector NDE left	Only for SH 100 ²⁾ up to SH 160	–	–
	Terminal box NDE left, cable entry DE, signal port top (Possible if 15th data position is "A")	–	✓	–
K16	Second shaft end (d x l: 95 mm x 170 mm) (Possible if 9th data position is "A" or "G" and 12th data position is "0" or "3")	–	–	✓
K17	Labyrinth seal DE for Performance version (possible if 12th data position is "5" and 14th data position is "L")	–	Only for SH 180	–
K18	Radial shaft sealing ring DE ³⁾	✓	✓	–
K40	Regreasing system, DE and NDE	–	Only for SH 180 and SH 225	Standard
		–	Not possible	
		✓	Option available	

¹⁾ Not possible with shaft height 280 and when 14th data position is "E" or "F" (increased radial forces).

²⁾ Not possible when 12th data position is "2" (type of construction IM B5).

³⁾ Only appropriate if oil spray or oil vapor is occasionally deposited on the sealing ring.
Radial shaft sealing ring not possible when: 14th data position is "E", "F" or "L".

SIMOTICS M main motors

SIMOTICS M-1PH8 asynchronous, synchronous reluctance and synchronous motors for SINAMICS S120

Options for SIMOTICS M-1PH8 asynchronous and synchronous motors

Options

Order code	Option description	For use with motors		
		Shaft height 80 to 160	Shaft height 180 to 280	Shaft height 280 only for forced ventilation (11th data posi- tion "1" or "4")
	-Z must be attached to the Article No. to order a motor with options. The order code must also be specified for each additional required option (Order codes must not be repeated in plain text in the order)			
K45	Anti-condensation heating 230 V AC	-	✓	✓
K69	Pipe connection prepared NDE right (Only possible with forced ventilation, not for G00 or G11)	-	-	✓
K70	Pipe connection prepared NDE left (Only possible with forced ventilation, not for G00 or G11)	-	-	✓
K71	Pipe connection prepared NDE top (Only possible with forced ventilation, not for G00 or G11)	-	-	✓
K80	Axial pipe connection NDE (Only possible with forced ventilation)	-	Only for SH 180 and SH 225	Options K69, K70, K71
K83	Rotation of terminal box through +90 degrees (Possible in combination with Options K09 or K10 or if 15th data position is "U", "V" or "W")	-	✓ 1)	✓
K84	Rotation of terminal box through -90 degrees (Possible in combination with Options K09 or K10 or if 15th data position is "U", "V", "W", or "X")	-	✓ 1)	✓
K85	Rotation of terminal box through +180 degrees (Possible in combination with Options K09 or K10 or if 15th data position is "U", "V", "W", or "X")	-	✓	✓
K90	Version with flange size A400 (Possible if 12th data position is "2", "3" and "5")	-	Only for SH 180	-
L00	Terminal box (standard) replaced by the next larger terminal box (note the impact on the dimensions in the Siemens Product Configurator!)	-	✓	✓
L03	Increased vibration stress (For SH 180 and SH 225 only for type of construction IM B3; 12th data position is "2")	-	Only for SH 180 and SH 225	-
L12	Condensation drain hole	-	Standard for water cooling	Only if 11th data position is "1"
L27	NDE bearing in insulated version	-	Only for SH 180	Standard
L29	Enhanced corrosion protection for installation in industrial/marine climates	-	-	✓
L72	Shaft manufactured out of special steel (Note: Option results in longer delivery times)	-	-	✓
L74	Fan version with IP65 degree of protection ²⁾	✓	-	-
L76	Connection 3-phase separately driven fan 400 V 3 AC 50/60 Hz	-	Only for SH180 and SH225	-
L77	2-phase version for connecting separately driven fans to the 400 V line supply	Only for SH 80	-	-
M03	Version for potentially explosive atmospheres Zone 2	Only for SH 100 to SH 160	-	-
M39	Version for potentially explosive atmospheres Zone 22	Only for SH 100 to SH 160	Only for SH 180 and SH 225	-
M83	Additional forcing-off thread on motor feet (Possible, if 12th data position is "0" or "3")	-	-	✓
P00	Undrilled cable entry plate	-	✓	Not for 1XB7820-P00
P01	Cable entry plate 3 × M63 × 1.5	-	Only for 1XB7700-P02 1XB7712-P03	Only for 1XB7712-P03
P02	Cable entry plate 3 × M75 × 1.5	-	Only for 1XB7712-P03	Only for 1XB7712-P01 1XB7712-P03
P03	Cable entry plate 4 × M75 × 1.5	-	-	Only for 1XB7712-P01
P04	Cable entry plate 4 × M63 × 1.5	-	Only for 1XB7712-P03	Only for 1XB7712-P01 1XB7712-P03
		-	Not possible	
		✓	Option available	

¹⁾ Not possible for 1PH822 and terminal box 1XB7712-P03.

²⁾ Regardless of the degree of protection, for high levels of atmospheric pollution, the fan must be cleaned.

Options

Order code	Option description	For use with motors		
		Shaft height 80 to 160	Shaft height 180 to 280	Shaft height 280 only for forced ventilation (11th data posi- tion "1" or "4")

For terminal box **1XB7712-P03**, other cable entries (power) can be ordered via P options, depending on the standard:

P00	Undrilled cable entry plate
P01	Cable entry plate 3 × M63 × 1.5 (not for 1XB7712-P01)
P02	Cable entry plate 3 × M75 × 1.5
P04	Cable entry plate 4 × M63 × 1.5

For terminal box **1XB7700-P02** other cable entries (power) can be ordered via P options, depending on the standard:

P00	Undrilled cable entry plate
P01	Cable entry plate 3 × M63 × 1.5

For terminal boxes **1XB7322-P05** and **1XB7422-P06**, another cable entry (power) can be ordered via the P option, depending on the standard:

P00	Undrilled cable entry plate
------------	-----------------------------

For options **K09** or **K10**, instead of terminal box **gk863**, terminal box **gk873** is used mounted on the side.

For options **K09** or **K10**, instead of terminal box **gk833**, terminal box **gk843** is used mounted on the side.

For options **K09** or **K10**, instead of terminal box **gk813**, terminal box **gk823** is used mounted on the side.

¹⁾ Depending on the version of metric cable gland (based on the MOTION-CONNECT cable type and cable glands from HUGRO or from AGRO)

²⁾ Current-carrying capacity based on EN 60204-1/IEC 60364-5-52 with installation type E.

³⁾ Thread M16 × 1.5 arranged at 90° to signal port; thread only with options A12, A25 and when 9th data position is A (without encoder).

⁴⁾ Thread M16 × 1.5 arranged opposite the signal port (lateral to the cable entry plate); thread only with option A12 and encoder version A (without encoder).

SIMOTICS M main motors

SIMOTICS M-1PH8 asynchronous, synchronous reluctance and synchronous motors for SINAMICS S120

Selection guides for SIMOTICS M-1PH8 motors > Mounted holding brakes

Overview

Mounted holding brake for SIMOTICS M-1PH8 motors

A brake can be mounted on the DE of 1PH808 to 1PH822 motors.

These brakes are electromagnetic units for dry-running operation. An electromagnetic field is used to release the brake which is applied using spring force. They operate in accordance with the quiescent current principle, i.e. when no current is flowing, the spring-operated brake brakes and holds the drive. When current flows, the brake is released and the drive is free to rotate.

In the event of a voltage failure or an Emergency Stop, the drive is braked from its current speed down to standstill.

Connection of the brakes (must be provided on the system side)

- Alternating voltage 230 V 1 AC, 50/60 Hz
- Direct voltage 24 V DC up to 1PH816

The brake control module is designed for an ambient temperature of -5 °C to +40 °C (23 °F to 104 °F).

The maximum speed of a motor with brake is limited to the maximum speed of the brake (refer to the table).

The holding brakes for 1PH818 and 1PH822 are not UL-approved. As a consequence, these motors do not have the cUR marking when mounted on brakes.

Motor type	Brake type	Holding torque	Maximum speed	Moment of inertia	Weight	Coil current		Single operating energy, perm. W_E	Total moment of inertia (emergency stop) J_{tot}	Speed (emergency stop) n	Number of emergency stops ¹⁾ z	Opening time	Closing time

Explanation of terms

Holding torque	For 1PH810 to 1PH816 motors, the holding torque can be continuously set in the specified value range using an adjustment ring. The dynamic braking torque is approximately 70 % of the set holding torque.
Single switching energy, perm. W_E	Permissible switching energy in the event of an emergency stop, $W_E = J_{tot} \times n^2 / 182.4 \times 10^{-3}$ (J in kgm ² , n in r/min)
Service life switching energy W_{max}	Maximum possible brake switching energy (for emergency stop) until the brake linings must be replaced, $W_{max} = W_E \times z$.
Number of emergency stops z	The specified number of emergency stops refers to the specified conditions. A conversion can be made for operation under different conditions: Number of emergency stops $z = W_{max} / W_E$
Coil current	Current to release the brake.
Opening time	Separating time until the brake releases (the specified values refer to the maximum braking torque and rated voltage).
Closing time	Application time until the brake closes (Values refer to the maximum braking torque and at rated voltage).

Note: You will find additional information on mounted holding brakes in the Configuration Manual.

Overview

SIMOTICS M-1FE1 synchronous built-in motors

SIMOTICS M-1FE2 built-in motors

The SIMOTICS M-1FE built-in motors are water-cooled synchronous motors that are supplied as stator and rotor components. When the stator and rotor have been mounted to the spindle in the spindle box, a complete spindle unit is created.

Benefits

- Compact and rigid spindle design
- Optimum heat dissipation through water cooling for optimum power density and precision
- Broad portfolio for almost all spindle sizes and machining tasks: Maximum speeds up to 40000 r/min, torques up to 1530 Nm in S1 operation
- High dynamic response for maximum productivity due to permanent-magnet rotors with low inertia
- Low rotor temperatures, especially in the low speed range, and low power loss in the rotor, resulting in reduced bearing temperature rise/spindle expansion
- The stator and rotor are machined **ready for installation** to facilitate quick and simple installation
- Highest accuracy and surface quality on the workpiece due to smooth, accurate spindle motion over the entire speed range
- Large rotor inner bore – advantage for spindle stiffness and ejector rod guide for automatic turning machines
- Compatible system of SINUMERIK, SINAMICS S120 and motor, therefore fast commissioning is ensured

SIMOTICS M main motors

SIMOTICS M-1FE built-in motors for SINAMICS S120

SIMOTICS M-1FE synchronous built-in motors

Application

Water-cooled SIMOTICS M-1FE built-in motors are used in combination with the SINAMICS S120 drive system for applications that require the highest quality of machining, accuracy and running smoothness, as well as very short acceleration times.

There are two main versions of SIMOTICS M-1FE built-in motor available:

- **High Torque series**
6-pole/8-pole and 16-pole synchronous motors are available that have been developed for turning and grinding machines with moderate maximum speeds. These motors are characterized by a very high torque utilization. The speed control range ($n_n : n_{max}$) here is approximately 1:2 to 1:4.
- **High Speed series**
This series has 4-pole synchronous motors for milling applications. These motors are optimized for high maximum speeds and a speed control range of up to 1:6.

Design

The SIMOTICS M-1FE built-in motor comprises:

- A laminated, permanent-magnet rotor, which, as an option, can be designed with a sleeve for simple mounting and removal.
- A wound stator core with cooling jacket and encapsulated winding overhang
 - Free cable ends, length 0.5 m, 1.5 m and 3.5 m
 - Two integrated Pt1000 temperature sensors (of which 1 is reserve), optionally with full or universal protection
 - A cooling jacket into which the stator has been inserted

Rotor with sleeve

Torque is transmitted to the spindle mechanically with zero-backlash using a cylindrical stepped press fit. The rotor is mounted on the spindle by thermal shrinking. The rotor with sleeve is pre-balanced and can be removed and subsequently remounted. The bond can be released by pressure-oil injection without affecting the joint surfaces.

Rotor without sleeve

Torque is transmitted to the spindle mechanically with zero-backlash using a cylindrical stepped press fit. The rotor is mounted on the spindle by thermal shrinking. Removal of the rotor is not possible with this type of mounting. Rotors without sleeves are not pre-balanced.

Technical specifications

Product name	SIMOTICS M-1FE synchronous built-in motors
Machine type	Synchronous spindle with permanent-magnet rotor
Constant power range	1:2 ... 1:4 (6-/8-/16-pole)/ 1:4 ... 1:6 (4-pole)
Recommended coolant inlet temperature, approx.	25 °C (77 °F)
Standard protection temperature monitoring	2 × Pt1000 PTC thermistor in the stator winding, 1 of which is reserve
Full protection optional Application example: Machining at motor standstill	In addition to standard protection 3 × PTC thermistor triplet Can be evaluated, e.g. using a thermal motor protection unit: Article No.: 3RN2013-1GW30
Universal protection optional	Full protection + NTC PT3-51F + NTC K227
Stator winding insulation according to EN 60034-1 (IEC 60034-1)	Temperature class 155 (F) for a coolant inlet temperature of 25 °C (77 °F)
Type of construction (similar to ISO)	Individual components: Stator, rotor
Degree of protection according to IEC 60034-5	IP00
Balance quality of rotor according to ISO 1940-1	<ul style="list-style-type: none"> • Rotor with sleeve Version-specific <ul style="list-style-type: none"> - Pre-balanced, balancing quality G 2.5 reference speed 3600 r/min - Unbalanced for full balancing after assembly • Rotor without sleeve Non-balanced
Encoder system	(not included in scope of supply)
Motor connection	Free cable ends with length of 0.5/1.5/3.5 m (1.64/4.92/11.48 ft)
Rating plate	2 units, enclosed separately

A Voltage Protection Module VPM is required for certain motor types if they are operated at max. speed > $n_{max Inv}$.

2

- 1) Standard scope of supply: Encapsulated winding with 2 × Pt1000 (1 × reserve).
- 2) Full protection option, application example: Load at motor standstill, external tripping device required; Article No.: 3RN2013-1GW30.
- 3) Universal protection option: Full protection + NTC PT3-51F + NTC K227.
- 4) Ordering a spare stator: 1FE1...-.....-7.W.
- 5) Ordering a spare rotor: 1FE1...-.....-3W..
- 6) For cable design, see Configuration Manual.
- 7) Stator without cooling jacket on request.
- 8) For moment of inertia with sleeve, see Configuration Manual.
- 9) For operation without external VPM but with converter function IVP (Internal Voltage Protection), a larger Motor Module is required.
- 10) PWM clock cycle must be increased.

Motor Module:
Single Motor Module

1

- 1) Standard scope of supply: Encapsulated winding with 2 × Pt1000 (1 × reserve).
- 2) Full protection option, application example: Load at motor standstill, external tripping device required; Article No.: 3RN2013-1GW30.
- 3) Universal protection option: Full protection + NTC PT3-51F + NTC K227.
- 4) Ordering a spare stator: 1FE1...-.....-7.W.
- 5) Ordering a spare rotor: 1FE1...-.....-3W..
- 6) For cable design, see Configuration Manual.
- 7) Stator without cooling jacket on request.
- 8) For moment of inertia for version R without rotor sleeve $d_i = 80$ mm (3.15 in), see Configuration Manual.
- 9) Observe the Motor Module limit value.

Motor Module: Single Motor Module	1
---	----------

- 1) Standard scope of supply: Impregnated winding with 2 × Pt1000 (1 × reserve).
- 2) Full protection option, application example: Load at motor standstill, external tripping device required; Article No.: 3RN2013-1GW30.
- 3) Universal protection option: Full protection + NTC PT3-51F + NTC K227.
- 4) Ordering a spare stator: 1FE2...-.....-2...
- 5) Ordering a spare rotor: 1FE2...-.....-3...
- 6) For cable design, see Configuration Manual.
- 7) Standard rotor is not pre-balanced.

SIMOTICS M main motors

SIMOTICS M-1FE built-in motors for SINAMICS S120

SIMOTICS M-1FE2 asynchronous built-in motors

Overview

The SIMOTICS M-1FE2 product series is the new generation of built-in asynchronous motors for directly driven motor spindles in turning, milling, grinding and multitasking machines.

SIMOTICS M-1FE2 asynchronous built-in motor, CU rotor

SIMOTICS M-1FE2 asynchronous built-in motor, AL rotor

Compared with the previous 1PH2 series, they are characterized by significantly improved torque density, higher maximum speeds, a wider constant power range and higher overload.

As a consequence, SIMOTICS M-1FE1/M-1FE2 built-in synchronous motors, this means that applications for machines in job shops and mold making, as well as turning, milling and grinding machines can be addressed more intensively.

Benefits

- Wide range of applications and high surface quality
- Optimum heat dissipation for maximum precision (encapsulated winding)
- Wide continuous power range and high overload:
 - for constant cutting performance when turning
 - short acceleration times for milling
- Safe temperature monitoring with Pt1000 (Option: PTC or NTC)
- Compact motor length compared with previous 1PH2 series and large internal rotor bore
 - advantage for the ejector rod guide of automatic turning machines and for higher spindle stiffnesses
- Harmonized system comprising SINUMERIK, SINAMICS S120 and motor
 - therefore ensuring fast commissioning.

Application

The water-cooled SIMOTICS M-1FE2 asynchronous built-in motors are used in combination with the SINAMICS S120 drive system for applications that require the highest quality of machining, accuracy and running smoothness, as well as very short acceleration times.

Mainly used for:

- Flexible combination for applications with high speeds or high torques
- Job shops and mold making
 - (high accuracy and high surface quality)
- Turning, milling and grinding applications

Design

All frame sizes are available in both winding versions, star connection and star-delta connection:

The following variants are possible:

- Stator version without cooling jacket (on request also with cooling jacket)
- Rotor version without rotor sleeve
 - in copper for the highest torque version
 - in aluminum for the highest speeds (on request also with rotor sleeve)
- Flexible connection cables 0.5/1.5 m

Additional lengths are available on request.

SIMOTICS M main motors

SIMOTICS M-1FE built-in motors for SINAMICS S120

SIMOTICS M-1FE2 asynchronous built-in motors

Technical specifications

Product name	SIMOTICS M-1FE2 asynchronous built-in motor
Machine type	Asynchronous spindle with squirrel-cage rotor, aluminum or copper
Constant power range	Up to 1:8 (star connection) or 1:10 for star-delta connection (8-pole)
Recommended coolant inlet temperature, approx.	20 °C (68 °F) (max. 40 °C (104 °F) with derating)
Standard protection temperature monitoring	2 × Pt1000 PTC thermistors in the stator winding, 1 × spare
Full protection optional	In addition to standard protection Application example: Machining when the motor is at a zero speed Can be evaluated, e.g. using a thermal motor protection unit: Article No.: 3RN2013-1GW30
Universal protection optional	Full protection + NTC PT3-51F + NTC K227
Stator winding insulation according to EN 60034-1 (IEC 60034-1)	Temperature class 155 (F) for a coolant intake temperature of 20 °C (68 °F) (max. 40 °C (104 °F) with derating)
Type of construction (similar to ISO)	Individual components: Stator, rotor
Degree of protection according to IEC 60034-5	IP00
Balance quality of rotor according to ISO 1940-1	Not pre-balanced, balancing using external balancing planes
Encoder system	Typical: Hollow shaft incremental encoder sin/cos 1 V _{pp} (Not included in the scope of delivery)
Motor connection	Free cable ends with length of 0.5/1.5 m (1.64/4.92 ft)
Rating plate	2 units, enclosed separately

Configuration

You can find the Configuration Manual for SIMOTICS M-1FE2 for SINAMICS S120 at:

<https://support.industry.siemens.com/cs/ww/en/view/109474362>

Characteristic curves

Characteristics for the SIMOTICS motors are available via selectors through to the exact article number with the Siemens Product Configurator.

Access to the Siemens Product Configurator

The Siemens Product Configurator can be accessed having to register or log in:

www.siemens.com/spc

→ SIMOTICS M-1FE2 in the SPC

 2) Stator with cooling jacket on request.
 3) Rotor with sleeve and/or final machining on request.
 4) Star/delta changeover required, incl. data set switchover with PWM 4 > 8 kHz with 62.5 μs.

SIMOTICS M main motors

Components for SIMOTICS M-1FE built-in motors

VPM Voltage Protection Module

Overview

The voltage protection function is used for SIMOTICS M-1FE motors and on the synchronous version of 2SP1 motor spindles with an EMF of $\hat{U} > 820 \text{ V}$ to 2000 V (U_{rms} 570 V to 1400 V) in order to limit the DC link voltage in the drive system in the event of a fault.

If the line voltage fails with the motor operating at maximum speed, or if the drive system pulses are suppressed as a result of a line voltage failure, the synchronous motor feeds energy at high voltage back into the DC link.

The VPM detects that the DC link voltage is too high (DC > 820 V) and short-circuits the three motor supply cables to brake the motor. The power remaining in the motor is converted to heat via the short-circuit in the VPM and motor.

Integration

The VPM can be operated in conjunction with SINAMICS S120, and with SIMOTICS M-1FE motors and with 2SP1 motor spindles.

The VPM must be installed between the motor and drive system (maximum distance from drive system 1.5 m). 6FX8 shielded motor supply cables must be used in combination with the VPM.

The VPM can always be used with:

- SINAMICS S120
- SINUMERIK 840D sl
- SINUMERIK ONE
- SINUMERIK MC

SIMOTICS L linear motors

SIMOTICS L-1FN3 linear motors for SINAMICS S120

SIMOTICS L-1FN3 linear motors with water cooling/natural cooling

Overview

SIMOTICS L-1FN3 linear motor, primary section, water cooling/natural cooling (from left to right)

In combination with the SINAMICS S120 drive system, SIMOTICS L-1FN3 linear motors provide an optimally tuned linear direct drive system for the requirements of modern mechanical engineering.

The motors comprise a primary section and a secondary section track with magnets made of rare-earth material. The primary section has fixed dimensions, while the secondary section track is made up of individual elements (secondary sections) to correspond with the required traversing range. Through parallel operation of the motors, feedrate force and length can be scaled beyond the available spectrum.

Benefits

- Outstanding dynamic response and very high traversing velocity
- Excellent precision
- Easy installation
- Drive components are free of wear thanks to contactless drive force transmission

The main advantage of linear direct drive technology is the extensive avoidance of the effects of elasticity, play, and friction, as well as natural oscillation in the drive train. This results in a higher dynamic response and increased precision. When suitable measuring systems are used and the temperature conditions are appropriate, the motors can be positioned in the nanometer range.

Configuration

You can find the Configuration Manual for SIMOTICS L-1FN3 for SINAMICS S120 at:

<https://support.industry.siemens.com/cs/ww/en/view/109475768>

Application

Linear motors with water cooling

Version for peak load

Used in machine axes that are temporarily accelerated (e.g. S3 duty), or when large forces are required for a short time.

Typical applications:

- Highly dynamic, flexible machine tool and production machine construction
- Laser machining
- Handling

Version for continuous load

Used in machine axes with constant acceleration changes (e.g. S1 duty), with high process/weight forces or for operation without water cooling.

Typical applications:

- Grinding
- Non-circular machining, e.g. oscillating applications
- Z axes without weight compensation, quills
- Handling, Cartesian robots

Linear motors with natural cooling

The degree of protection depends on the design of the machine and must therefore be implemented by the machine manufacturer.

Typical applications:

- Handling axes
- Feed axes
- Woodworking machines
- 3D printing
- 2D/3D handling portals
- Laser cutting/water jet cutting machines
- Pick-and-place machines

Design

Linear motors with water cooling/natural cooling

The simple mechanical design without transmission elements such as ballscrew, coupling or belt, enhances the reliability of the drive components.

The stainless steel encapsulation of the primary section ensures the high mechanical ruggedness and resistance to dirt and pollution required for use in machine tools and production machines, as well as high resistance to corrosive liquids. In addition, the motor places minimal demands on the preparation of mounting surfaces thanks to the generous installation dimensions. The tolerance of the installation height for motor installation is + 0.3 mm.

Linear motors with water cooling

Heat loss occurs almost exclusively in the primary section and is dissipated via an integrated liquid cooling system. The Thermo-Sandwich dual-circuit cooling system allows the motor to be thermally decoupled from the machine, and is also an inexpensive cooling design.

Design variants (water/natural cooling)

SIMOTICS L-1FN3 linear motors are available as single-sided or double-sided motors.

- Single-sided motors
The single-sided version consists of a primary section that is mounted in parallel to the associated secondary section.
- Double-sided motors
The special secondary section of the double-sided version lies between two primary sections (one primary section with standard winding and one with complementary winding). The design as a double-sided motor is particularly suitable for applications where the secondary section is moved and small traversing paths with high acceleration levels, e.g. out-of-center machining.

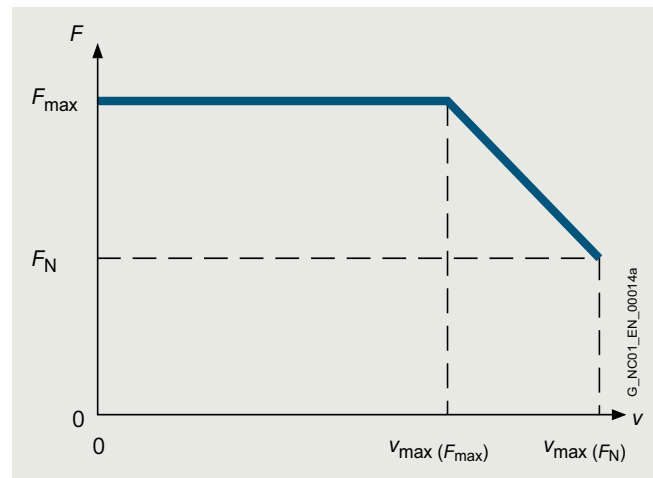

Technical specifications

Product name	SIMOTICS L-1FN3 linear motor
Motor type	Permanent-magnet linear motor
Magnet material	Rare-earth permanent magnets
Overload ratio ($F_{max}:F_N$) up to max. • Version for peak load • Version for continuous load	2.75 1.7
Cooling	Water/natural cooling
Water cooler connections	G 1/8" internal thread on all primary and secondary section coolers
Temperature influence on the surrounding construction with precision cooling, max.	+4 K
Coolant inlet temperature, permissible	35 °C (95 °F) (avoid condensation) > 35 °C (95 °F) if rated motor power is reduced
Temperature monitoring installed in the primary section winding for water cooling ¹⁾	2 monitoring circuits: Temp-S with PTC thermistor and Temp-F with Pt1000 temperature sensor
Thermal motor protection Temperature sensors for natural cooling installed in the primary section ¹⁾	1 PTC thermistor triplet with response threshold +120 °C (248 °F) acc. to DIN 44081/44082
Insulation according to EN 60034-1 (IEC 60034-1)	Temperature class 155 (F) for a winding temperature of 120 °C (248 °F)
Degree of protection according to EN 60034-5 (IEC 60034-5) • Water cooling • Natural cooling	IP65 IP23 The achievable degree of protection depends on the machine design and must be implemented by the machine manufacturer.
Design options	Different graduations due to the modular design
Secondary section cover	Exchangeable through the entire secondary section track or segment by segment
2nd rating plate	Enclosed separately
Encoder system ²⁾ (Not included in scope of supply)	Select according to the constraints specific to the application and the drive.
Connection (water cooling) • 1FN3050 • 1FN3100 ... 1FN3900 • 1FN3100 ... 1FN3900	Permanently connected signal and power cable pre-assembled with connectors or with bare wire ends Connection cover prepared for separate power and signal cable Connection cover prepared for a heavy-gauge threaded joint Version for peak load
Connection (natural cooling) • 1FN3050 ... 1FN3150	Permanently connected signal and power cable as single cores with bare wire ends
Certificate of suitability	cURus UR for 1FN3900-4WC00-...

¹⁾ Evaluation via SME120/SME125 Sensor Module External or TM120 Terminal Module, see SINAMICS S120 drive system.

²⁾ See recommended linear measuring systems.

Characteristic curves

Velocity/force characteristic curve

The SIMOTICS L-1FN3 linear motors have an overload range available for acceleration processes. The maximum force F_{max} can only be utilized up to a maximum velocity $v_{max}(F_{max})$; up to velocity $v_{max}(F_N)$ only the feedrate force F_N is available.

Characteristics for the SIMOTICS motors are available via selectors through to the exact article number with the Siemens Product Configurator.

Access to the Siemens Product Configurator

For more information about cables,
see MOTION-CONNECT
connection systems

¹⁾ For water cooling with inlet temperature 35 °C (95 °F).

²⁾ A reduction of up to 30 % must be expected in case of motor standstill, for very low velocities or very short traversing paths.

³⁾ Velocity values refer to a drive system DC link voltage of 600 V DC.

⁴⁾ No precision cooler available.

⁵⁾ Optimized selection for full performance of linear motors.

⁶⁾ Pre-assembled adapter cable for motor with connection type B/E/F.

⁷⁾ The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

Type of connection:

1FN3100 to 1FN3900 motors

Separate power and signal connections
Terminal box cover prepared for metric cable gland

B

1FN3050 motor

Separate power and signal connections,
permanently connected with bare wire ends, length: 2 m (6.56 ft)

E

Separate power and signal connections,
permanently connected, pre-assembled with connectors,
length: 0.5 m (1.64 ft)

F

Description	Article No.
Signal cable, pre-assembled with M17 connector	
For SIMOTICS L-1FN3 linear motors

connection systems

¹⁾ For water cooling with inlet temperature 35 °C (95 °F).

²⁾ A reduction of up to 30 % must be expected in case of motor standstill, for very low velocities or very short traversing paths.

³⁾ Velocity values refer to a drive system DC link voltage of 600 V DC.

⁴⁾ Optimized selection for full performance of linear motors.

⁵⁾ The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

⁶⁾ Pre-assembled adapter cable for motor with connection type B/E/F.

For more information about cables,
see MOTION-CONNECT
connection systems

¹⁾ A reduction of up to 30 % must be expected in case of motor standstill, for very low velocities or very short traversing paths.

²⁾ Velocity values refer to a drive system DC link voltage of 600 V DC.

³⁾ Optimized selection for full performance of linear motors.

⁴⁾ The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

- 1) Continuous cover for several secondary sections. The maximum length of the secondary section cover is 6 m (19.69 ft). For the following motors, this corresponds to: 1FN3050 to 1FN3150, a maximum number of 50 secondary sections (AB to FA), 1FN3300 to 1FN3900, a maximum number of 32 secondary sections (AB to DC).
- 2) The secondary section end pieces are designed to allow clamping of the integrated secondary section cover.
- 3) Can be ordered with a batch size of 4 units.

- 4) 1FN3050 to 1FN3450 motors:
2 units required per secondary section track.
1FN3600 to 1FN3900:
3 units required per secondary section track.
The maximum available length of a single-part heatsink profile is 3 m (9.84 ft).
For the following motors, this corresponds to:
1FN3050 to 1FN3150, a maximum number of 24 secondary sections (AB to CE)
1FN3300 to 1FN3900, a maximum number of 16 secondary sections (AB to BG).
- 5) Available only in length AC (corresponds to 2 secondary sections).
The difference in the secondary section track length must be compensated through assembly using the heatsink profile 1FN300-0TK04-1..0.

SIMOTICS L-1FN3 linear motors for SINAMICS S120

SIMOTICS L-1FN3 > Recommended linear measuring systems/liquid cooling

Overview

Recommended linear measuring systems for SIMOTICS L-1FN3 linear motors

Type	Incremental encoder sin/cos 1 V _{pp} encapsulated	
	Heidenhain LS 187	Heidenhain LS 487
Signal cycle	20 μm	20 μm
Acceleration in measuring direction, max.	100 m/s ² (328 ft/s ²)	100 m/s ² (328 ft/s ²)
Traversing velocity, max.	120 m/min (394 ft/min)	120 m/min (394 ft/min)
Measuring length, max.	3040 mm (120 in)	2040 mm (80.3 in)
Output signal	1 V _{pp}	1 V _{pp}

Type	Incremental encoder sin/cos 1 V _{pp} open	
	Heidenhain LIDA 485	Renishaw RTLC 20/TONIC
Signal cycle	20 μm	20 μm
Acceleration in measuring direction, max. ¹⁾	200 m/s ² (656 ft/s ²)	600 m/s ² (1969 ft/s ²)
Traversing velocity, max.	480 m/min (1575 ft/min)	600 m/min (1969 ft/min)
Measuring length, max.	30040 mm (1183 in)	25000 mm (984 in)
Output signal	1 V _{pp}	1 V _{pp}

Absolute encoders with DRIVE-CLiQ

Absolute measuring systems with integrated DRIVE-CLiQ interface are available from various manufacturers. The absolute encoders can be used as a motor feedback system.

A current overview of the various manufacturers and available measuring systems is available on the internet at:
<http://support.automation.siemens.com/WW/view/en/65402168>
 It is also possible to use absolute measuring systems with EnDat 2.1.

Overview

Liquid cooling

These are third-party products whose fundamental suitability is familiar to us. It goes without saying that equivalent products from other manufacturers may be used. Our recommendations are to be seen as helpful information, not as requirements or regulations. We do not accept liability for the quality of non-Siemens products.

SIMOTICS T torque motors

SIMOTICS T-1FW6 built-in torque motors for SINAMICS S120

SIMOTICS T-1FW6 built-in torque motors with internal rotor

Overview

SIMOTICS T-1FW6 built-in torque motors with jacket cooling (center), naturally cooled (right), and with integrated cooling (left)

SIMOTICS T-1FW6 built-in torque motors are liquid-cooled or naturally cooled multi-pole permanent-magnet three-phase synchronous motors with a hollow shaft. The motors are supplied as built-in components. An additional bearing and a rotary encoder are required for a complete drive unit.

Each frame size is available in different axis lengths. For installation in the machine, stators and rotors are equipped with flanges with centering surfaces and threaded holes.

Benefits

- No elasticity in the drive train
- High degree of availability, as there are no gearbox components that are subject to wear in the drive train
- High torque, compact design, and low construction volume
- Low moment of inertia
- Directly flanged to the machine

Additionally for SIMOTICS T-1FW6 High Speed:

- Higher speeds while maintaining the main dimensions

Configuration

You can find the Configuration Manual for SIMOTICS T-1FW6 for SINAMICS S120 at:

<https://support.industry.siemens.com/cs/ww/en/ps/13375/man>

More information

Some motor types can be express delivered as replacement motors in the event of plant outages and offer the advantage of a quicker spare parts supply.

Siemens provides comprehensive support when selecting the optimum motor solution.

Any questions relating to SIMOTICS T-1FW6 torque motors can be emailed to:

motor.support.motioncontrol@siemens.com

Application

In conjunction with the SINAMICS S120 drive system, SIMOTICS T-1FW6 built-in torque motors can be used for the following machine applications:

- Rotary indexing tables and subunits
- Rotary indexing machines
- Swivel axes
- Tool turrets
- Tool spindles
- Roller and cylinder drives
- Infeed and handling axes
- Tablet presses
- Medical systems
- Measuring machines

Additional applications for SIMOTICS T-1FW6 High Speed:

- Rotary tables for milling/turning applications
- Gear cutting machines
- Turning spindles

Design

SIMOTICS T-1FW6 built-in torque motors comprise the following components:

Stator

Version with 3-phase winding. The stator is generally designed for operation with liquid cooling.

Rotor

Cylindrical hollow shaft equipped with permanent magnets.

If the main cooler and precision cooler are connected in parallel to a cooling unit for motors with integrated dual-circuit cooling, a cooling connection adapter (accessories) can be ordered to simplify the connection.

Cooling variants

The design of the cooling system is dependent on the size (outer diameter) of the motor.

SIMOTICS T-1FW6 built-in torque motor Type	Cooling method
1FW6050 and 1FW6060	Integrated water cooling with one cooling circuit
1FW6053 and 1FW6063	Natural cooling
1FW6090 ... 1FW6150 1FW6092 ... 1FW6152	Jacket water cooling
1FW6160 ... 1FW6290 1FW6192 and 1FW6232	Integrated dual circuit water cooling

SIMOTICS T torque motors

SIMOTICS T-1FW6 built-in torque motors for SINAMICS S120

SIMOTICS T-1FW6 built-in torque motors with internal rotor**Design**Motors with natural cooling

The naturally cooled motors have the same dimensions as water-cooled motors in frame sizes 1FW6050 and 1FW6060, but have a lower continuous torque capability as a result of the cooling method. They can be used for any application for which liquid cooling is considered undesirable or unnecessary. As the mechanical interfaces are also compatible in addition to the dimensions, the cooling method can be simply changed.

Motor components, frame sizes 1FW6053 and 1FW6063 with natural cooling (rotor and stator)

Motors with integrated single-circuit water cooling

These motors have a ready-to-connect, integrated single-circuit cooling system; they are compact, and can therefore be simply integrated into machines.

Motor components, frame sizes 1FW6050 and 1FW6060 with integrated single-circuit cooling (rotor, stator)

Motors with jacket water cooling

The coolant inlet/return circuit must be provided by the machine manufacturer in the machine itself.

Motor components, frame sizes 1FW6090 to 1FW6150 with jacket water cooling (rotor and stator)

Motor components, frame sizes 1FW6092 to 1FW6152 in the High Speed version with jacket water cooling (rotor and stator)

SIMOTICS T torque motors

SIMOTICS T-1FW6 built-in torque motors for SINAMICS S120

SIMOTICS T-1FW6 built-in torque motors with internal rotor

Design

Motors with integrated dual-circuit water cooling

These motors feature a ready-to-connect, integrated dual-circuit water cooling system and are therefore thermally insulated against the mechanical axis construction to a considerable extent.

Motor components, frame sizes 1FW6160 to 1FW6290 with integrated dual-circuit water cooling (rotor and stator)

Motor components, frame sizes 1FW6192 and 1FW6232 in the High Speed version with integrated dual circuit water cooling (rotor and stator)

Integration

SIMOTICS T-1FW6 built-in torque motors controlled by a SINAMICS S120 drive system are designed for operation at a 600 V DC link voltage level.

The cable connection is brought out at the front face of the stator. The cable end either has a connector or bare wire ends depending on the motor design. The length of the power and signal cables from the motor to the drive system must not exceed 50 m.

Absolute measuring systems with DRIVE-CLiQ

Measuring systems with integrated DRIVE-CLiQ interface are available from various manufacturers. The encoders can be used as motor feedback system.

A current overview of the various manufacturers and available measuring systems is available on the internet at:

<https://support.automation.siemens.com/WW/view/en/65402168>

It is also possible to use absolute measuring systems with EnDat 2.1 or incremental systems with 1 V_{PP}.

Technical specifications

Product name	SIMOTICS T-1FW6 built-in torque motor
Motor type	Synchronous motor with permanent-magnet rotor
Torque ripple	≤ 1.5 % M ₀
Coolant inlet temperature, maximum	35 °C (95 °F) for 1FW6 Standard 20 °C (68 °F) for 1FW6 High Speed
Pressure in cooling circuit, maximum	10 bar (static)
Thermal motor protection according to DIN 44081/DIN 44082 ¹⁾	1 × PTC thermistor with response threshold +130 °C (266 °F)
Temperature monitoring according to DIN EN 60034-11 ¹⁾	1 × Pt1000 temperature sensor
Stator winding insulation according to DIN EN 60034-1	Temperature class 155 (F)
Type of construction	Individual components: Stator, rotor
Degree of protection according to DIN EN 60034-5	IP23 The final degree of protection (minimum degree of protection is IP54) for the installed motor is determined by the machine manufacturer. Protection against touch, foreign bodies, and water for electrical equipment is specified in accordance with IEC 60034-5.
Measuring system (Not included in scope of supply)	Select based on application and drive-specific constraints.
Connection, electrical	Permanently connected power and signal cables
Paint finish	Without paint finish
Rating plate	2 units, inc. 1 unit enclosed separately
Certificate of suitability	cURus

¹⁾ Evaluation via SME120/SME125 Sensor Module or TM120 Terminal Module (see SINAMICS S120 drive system).

Cable outlet only for 1FW6160 to 1FW6290:
Axial
Radially outwards
Tangential (only for type of connection C and D)

W
V
T

Type of connection:

Permanently connected power and signal cables with bare wire ends ⁴⁾
Length: 2 m (6.56 ft) **C**
Permanently connected power and signal cables pre-assembled with connectors
Length: 0.5 m (1.64 ft) **D**

Type of connection only for specific motors (not selectable):

Permanently connected power and signal cables with bare wire ends ⁴⁾
Length: 1 m (3.28 ft) **B**

Motor Module:			
Single Motor Module	1		Length code
Double Motor Module	2	

For more information about cables, see MOTION-CONNECT connection systems

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ± 10 % (drive system DC link voltage 600 V DC).

3) For water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) For type of connection with bare wire ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately.

5) Optimized selection for full performance of torque motors.

6) The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

For more information about cables, see
MOTION-CONNECT connection systems

1) Torque and current at low speeds.

2) The values refer to a supply voltage of 400 V 3 AC ± 10 % (drive system DC link voltage 600 V DC).

3) For water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

4) For type of connection with bare wire ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately.

5) Optimized selection for full performance of torque motors.

6) The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

SIMOTICS T torque motors

SIMOTICS T-1FW6 built-in torque motors for SINAMICS S120

SIMOTICS T-1FW6 built-in torque motors with external rotor

Overview

SIMOTICS T-1FW6 external rotor built-in torque motors with integrated single-circuit water cooling

SIMOTICS T-1FW6 external rotor built-in torque motors are designed as built-in motors for use as low-speed direct drives with a high torque output. These built-in torque motors are liquid-cooled, permanent-magnet-excited, (high pole number) three-phase synchronous motors.

The motors are supplied as built-in components. When delivered, the stators and rotors are separate and are inserted into the actual machine by the machine manufacturer during installation. Additional bearings and encoders are required for a complete drive unit.

The range of types includes a frame size with 4 lengths. For installation in the machine, stators and rotors are equipped with flanges with centering surfaces and threaded holes.

Benefits

- Very high power density
- High torque, compact design, and low construction volume
- High overload capability (factor 1.7)
- High degree of availability, as there are no gearbox parts that are subject to wear in the drive train
- No elasticity in the drive train
- Water cooling to increase the rated power
- Directly flanged to the machine
- Axial cable outlet
- Optimized for the SINAMICS S120 drive system

The water cooling system ensures that the stringent machine design requirements regarding thermal behavior are fulfilled by the motors.

Application

In conjunction with the SINAMICS S120 drive system, SIMOTICS T-1FW6 external rotor built-in torque motors can be used for the following machine applications:

- Rotary indexing tables and subunits
- Rotary indexing machines
- Swivel axes
- Roller and cylinder drives
- Tablet presses

Design

SIMOTICS T-1FW6 external rotor built-in torque motors comprise the following components:

Stator

Version with 3-phase winding and an iron core. The winding is encapsulated for better dissipation of the heat loss. The motor is designed for liquid cooling with water as coolant.

Rotor

Reaction part of the motor.

It comprises a cylindrical steel bell which has permanent magnets around its circumference on the inside.

Cooling variants

Motors with integrated single-circuit water cooling

These motors have a ready-to-connect, integrated single-circuit cooling system; they are compact, and can therefore be simply integrated into machines.

SIMOTICS T-1FW6 built-in torque motor Type	Cooling method
1FW67	Integrated water cooling with one cooling circuit

SIMOTICS T torque motors

SIMOTICS T-1FW6 built-in torque motors for SINAMICS S120

SIMOTICS T-1FW6 built-in torque motors with external rotor

Integration

The SIMOTICS T-1FW6 external rotor built-in torque motors supplied via the SINAMICS S120 drive system are designed for operation at a 600 V DC link voltage level.

The cable connection is brought out at the front face of the stator (B flange). The cables have open cable ends. The length of the power and signal cables from the motor to the drive system must not exceed 50 m.

Absolute measuring systems with DRIVE-CLiQ

Measuring systems with integrated DRIVE-CLiQ interface are available from various manufacturers. The encoders can be used as motor feedback system.

A current overview of the various manufacturers and available measuring systems is available on the internet at:

<https://support.automation.siemens.com/WW/view/en/65402168>

It is also possible to use absolute measuring systems with EnDat 2.1 or incremental systems with 1 V_{PP}.

Configuration

You can find the Configuration Manual for SIMOTICS T-1FW6 with external rotor for SINAMICS S120 at:

<https://support.industry.siemens.com/cs/ww/en/view/109791889>

Technical specifications

Product name	SIMOTICS T-1FW6 built-in torque motor with external rotor
Motor type	Synchronous motor with permanent-magnet rotor
Torque ripple	≤ 0.5 % M ₀
Coolant inlet temperature, maximum	35 °C (95 °F) for 1FW6720
Pressure in cooling circuit, maximum	10 bar (static)
Thermal motor protection according to DIN 44081/DIN 44082 ¹⁾	2 × PTC thermistor triplet with +130 °C (266 °F) response threshold (1 × reserve)
Temperature monitoring according to DIN EN 60034-11 ¹⁾	2 × Pt1000 temperature sensor (1 × reserve)
Stator winding insulation according to DIN EN 60034-1	Temperature class 155 (F)
Type of construction	Individual components: Stator, rotor
Degree of protection according to DIN EN 60034-5	IP23 The final degree of protection (minimum degree of protection is IP54) for the installed motor is determined by the machine manufacturer. Protection against touch, foreign bodies, and water for electrical equipment is specified in accordance with IEC 60034-5.
Measuring system (Not included in scope of supply)	Select based on application and drive-specific constraints.
Connection, electrical	Permanently connected power and signal cables with bare wire ends (0.5 m (1.64 ft))
Paint finish	Without paint finish
Rating plate	1 unit enclosed separately
Certificate of suitability	cURus

More information

Some motor types can be express delivered as replacement motors in the event of plant outages and offer the advantage of a quicker spare parts supply.

Siemens provides comprehensive support when selecting the optimum motor solution. Any questions regarding SIMOTICS T-1FW6 torque motors can be emailed to:

motor.support.motioncontrol@siemens.com

¹⁾ Torque and current at low speeds.

²⁾ The values refer to a supply voltage of 400 V 3 AC ± 10 % (drive system DC link voltage 600 V DC).

³⁾ For water cooling with inlet temperature of 35 °C (95 °F) and maximum rotor flange temperature of 60 °C (140 °F).

⁴⁾ For type of connection with bare wire ends, power and signal connectors are not included in the scope of supply of the motor and must be ordered separately.

⁵⁾ Optimized selection for full performance of torque motors.

⁶⁾ The current-carrying capacity of the power cables complies with EN 60204-1 for installation type C, under continuous operating conditions at an ambient air temperature of 40 °C (104 °F).

⁷⁾ With Z-option S80, a flange variant with a smaller circle of fastening holes is available.

⁸⁾ The corresponding rotor can be ordered with article number 1FW6720-8RA..-0AA0.

SIMOTICS T torque motors

SIMOTICS T-1FW3 complete torque motors for SINAMICS S120

SIMOTICS T-1FW3 complete torque motors

Overview

SIMOTICS T-1FW3 complete torque motors

The SIMOTICS T-1FW3 complete torque motors are water-cooled, high-pole (slow running) permanent-magnet synchronous motors. The operating characteristics are comparable to those of regular synchronous motors.

The motor spectrum comprises 3 outer diameters in various shaft lengths as well as 3 different shaft designs.

- Hollow shaft
(not available in the High Speed version 1FW3200)
 - For feed-through of cooling and heating media, measurement cables, etc.
 - Motors with various lengths can be connected to the machine shaft
- Plug-on shaft with integrated shaft centering
 - Quick and easy installation as a result of the integrated shaft adapter with centering
 - Simple clamping element
 - Easy encoder replacement (safety-capability)
 - Longer bearing lifetime
- Solid shaft
 - Classic motor mounting
 - Simple replacement of a geared motor with a complete SIMOTICS T-1FW3 torque motor without having to change the connection at the machine
 - Easy encoder replacement (safety-capability)

The SIMOTICS T-1FW3 compact complete torque motors are flanged onto the machine using the specially-developed stator torque arms. The rotor is coupled to the machine shaft using the clamping element that will be supplied if required. This results in a perfectly rigid drive train that can be optimally controlled.

SIMOTICS T-1FW3 complete torque motors can be combined with the SINAMICS S120 drive system to create a powerful, high-performance system with a high degree of functionality. The integrated encoder systems for closed-loop speed and position control can be selected depending on the application.

Benefits

- High torque, compact design, and low construction volume
- Optimized mechatronic solution
 - Highest degree of stiffness
 - High speeds possible
 - Innovative machine concepts are possible
 - Increased productivity and quality
- The right design for every application
 - Large power range
 - Hollow shaft, plug-on shaft, or solid shaft
 - Different encoder types for speed control and high-precision positioning
- Excellent performance
 - Maximum speeds up to 1800 r/min
 - Excellent radial eccentricity
 - High dynamic response, i.e. short acceleration times and rotational accuracy
- The ideal motor for energy-saving solutions
- Simple encoder replacement without requiring any readjustment for plug-on and solid shafts

Application

The SIMOTICS T-1FW3 complete torque motors were developed as direct drives. These direct drives form a compact drive unit where the mechanical motor power is transferred directly to the driven machine without any mechanical transmission elements.

- Extruder main drives
- Screw drives for injection molding machines
- Roll drive
- Winder
- Fleece folding machines
- Pull-roll drives for foil drawing machines
- Stretch, calender, casting, and chill rolls
- Dynamic positioning tasks, e.g. rotary tables, clocked conveyor belts
- Replacing hydraulic motors
- Roll drives in paper machines
- Cross-cutter drives for continuous material webs, e.g. paper, textiles, sheet metal
- Wire drawing machines

SIMOTICS T torque motors

SIMOTICS T-1FW3 complete torque motors for SINAMICS S120

SIMOTICS T-1FW3 complete torque motors

Technical specifications

Product name	SIMOTICS T-1FW3 complete torque motor
Motor type	Permanent-magnet synchronous motor
Magnet material	Rare-earth magnet material
Stator winding insulation according to EN 60034-1 (IEC 60034-1)	Temperature class 155 (F) for a winding temperature rise of $\Delta T = 100$ K at a coolant (water) inlet temperature of 30 °C (86 °F)
Cooling according to EN 60034-6 (IEC 60034-6)	Water cooling
Thermal motor protection according to EN 60034-11 (IEC 60034-11)	Pt1000 thermistor in the stator winding
Type of construction according to EN 60034-7 (IEC 60034-7)	
<ul style="list-style-type: none"> • 1FW315/1FW320 • 1FW328 	IM B14, IM V18, IM V19 IM B35, IM B34, IM B3, IM B5, IM V1, IM V3, IM V15, IM V35
Degree of protection according to EN 60034-5 (IEC 60034-5)	
<ul style="list-style-type: none"> • Hollow shaft • Plug-on shaft • Solid shaft 	IP54 IP55 (IP54 for 1FW328) IP55 (IP54 for 1FW328)
Shaft end according to DIN 748-3 (IEC 60072-1)	Hollow shaft, plug-on shaft, solid shaft
Shaft and flange accuracy according to DIN 42955 (IEC 60072-1) ¹⁾	Tolerance N (at operating temperature)
Vibration severity according to EN 60034-14 (IEC 60034-14)	Grade A (is maintained up to the rated speed)
Sound pressure level L_{pA} (1 m) according to EN ISO 1680, max.	73 dB at 4 kHz rated pulse frequency at the rated operating point
Shock load	Maximum permissible radial acceleration 50 m/s ² (164 ft/s ²) (not in operating state)
Bearing	Roller bearing with permanent grease lubrication (Bearing replacement interval with regreasing system up to $L_{h10} = 60000$ h)
Connection	Terminal box for power cable Connector for encoder signals and temperature sensor
Paint finish	Anthracite RAL 7016
2nd rating plate	Enclosed separately
Certificate of suitability	cURus

Dimensional drawings

Dimensional drawings for the SIMOTICS motors are available via selectors through to the exact article number with the Siemens Product Configurator.

- ¹⁾ Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the converter (without protective circuit).
²⁾ Maximum speed that must not be exceeded. Certain constraints may apply, see article number supplements.
³⁾ Optimum efficiency in continuous duty.
⁴⁾ The rated pulse frequencies must be taken into account. The rated motor data is valid for 4 kHz or 2 kHz.

- ¹⁾ Maximum permissible operating speed based on the voltage induced in the motor and the voltage strength of the converter (without protective circuit).
²⁾ Maximum speed that must not be exceeded. Certain constraints may apply, see article number supplements.
³⁾ Optimum efficiency in continuous duty.
⁴⁾ The rated pulse frequencies must be taken into account. The rated motor data is valid for 4 kHz or 2 kHz.
⁵⁾ The rated output current of the Motor Module was calculated with a derating factor based on the rated pulse frequency.

T32

Terminal box, max. connectable cable cross-sections

Terminal box Type	Cable entry Power	External signals	Outer cable diameter, max. ¹⁾ mm (in)	Number of main terminals	Cross-section per terminal, max mm ²	Rated current, max. ²⁾ A
gk230	2 × M32 × 1.5	1 × M16 × 1.5 ³⁾	16 (0.63)	Phases: 3 × M5 Grounding: 1 × M4	2 × 16	50
gk420	2 × M40 × 1.5	1 × M16 × 1.5 ³⁾	35 (1.38)	Phases: 3 × M10 Grounding: 1 × M6	2 × 35	105
gk630	2 × M50 × 1.5	2 × M16 × 1.5 ³⁾	50 (1.97)	Phases: 3 × M10 Grounding: 1 × M10	2 × 50	260
1XB7700	3 × M75 × 1.5	2 × M16 × 1.5 ³⁾	120 (4.72)	Phases: 3 × M12 Grounding: 1 × M12	3 × 120	450
1XB7712	4 × M75 × 1.5	4 × PG 13.5 1 × M20 × 1.5 1 × M25 × 1.5 ³⁾	120 (4.72)	Phases: 3 × M16 Grounding: 1 × M16	4 × 120	800

¹⁾ Dependent on the design of the metric gland.

²⁾ Current-carrying capacity based on EN 60204-1 and IEC 60364-5-52 for installation type C.

³⁾ For option A11 or 9th data position W (without encoder).

⁴⁾ Depending on motor type. Availability on request.

⁵⁾ Not for solid shaft.

Overview

Incremental and absolute encoders with mounting accessories

Motion control encoders are optoelectronic built-on encoders that detect the traversing distances, angles of rotation, speeds or positions of machine axes. Motion control encoders are direct measuring systems that are built-on to shafts, axes or motors. They can be used in conjunction with numerical and programmable logic controllers, drives and position displays. Motion control encoders are system-tested, certified components that have been harmonized for use with the following systems:

- SINUMERIK CNCs
- SIMOTION Motion Control Systems
- SIMATIC programmable logic controllers
- SINAMICS drive systems

Application

Motion control encoders are used with machine tools and production machines as additional external measuring systems. They are available as incremental or absolute encoders.

Incremental encoders

In the case of incremental encoders, the machine must travel to a reference point after each power-off state, as the position is not usually stored in the controller. Movements of the machine while the power is off are not recorded.

Incremental encoders are suitable for use in simple machine concepts with mostly small dimensions.

Absolute encoders

Absolute encoders, on the other hand, also record movements while the power is off and return the actual position after power on. Travel to a reference point is not necessary.

Absolute encoders are suitable for complex machines or machines with large dimensions.

Design

All motion control encoders are available in Synchro flange and clamp flange versions. The absolute encoders are also available with a hollow shaft and torque arm.

The motion control encoders are driven via a plug-in coupling or spring disk coupling. Alternatively, pulleys can also be used.

The motor control encoder supply voltage is 5 V DC or alternatively 10 V to 30 V DC. The 10 V to 30 V DC version supports longer cable lengths. Most control systems supply the voltage directly at the measuring circuit connector. With SINAMICS, the measuring systems are provided with power via the Sensor Modules.

For motion control encoders with cables, the cable length including the connector is 1 m (3.28 ft).

The following bending radii must be observed for the cable to the built-on encoder:

- One-time bending: ≥ 20 mm (0.79 in)
- Continuous bending: ≥ 75 mm (2.95 in)

More information

Power supply

Absolute encoders with EnDat, SSI or DRIVE-CLiQ and incremental encoders with sin/cos $1 V_{pp}$, HTL or TTL fulfill the requirements of IEC 61010-1 if power is supplied from a secondary circuit with limited energy (Low Voltage, Limited Energy) acc. to IEC 61010-1^{3rd Ed.}, Section 9.4 or from a Class 2 secondary circuit in accordance with UL 1310.

The corresponding sections of DIN EN 61010-1, EN 61010-1, UL 61010-1 and CAN/CSA-C22.2 No. 61010-1 can be used instead of IEC 61010-1^{3rd Ed.}, Section 9.4.

Absolute encoders with PROFIBUS DP and PROFINET IO fulfill the requirements of UL 508 and CAN/CSA-C22.2 No. 14 if power is supplied from a Class 2 secondary circuit as per National Electrical Code/Canadian Electrical Code.

Motion Control Encoder measuring systems

Built-on optoelectronic rotary encoders

Incremental encoders

Function

Incremental encoder with sin/cos $1 V_{pp}$ and clamp flange incl. cable with connector as well as incremental encoder with RS422/HTL and Synchro flange

Incremental encoders detect relative movement and deliver a defined number of electrical pulses per revolution, which represent the measurement of the traveled distance or angle.

Incremental encoders operate on the principle of optoelectronic scanning of dividing discs with the transmitted light principle. The light source is a light emitting diode (LED). The light-dark modulation generated as the encoder shaft rotates is picked up by photoelectronic elements. With an appropriate arrangement of the line pattern on the dividing disk connected to the shaft and the fixed aperture, the photoelectronic elements provide two trace signals A and B at 90° to one another, as well as a reference signal R.

The encoder electronics amplify these signals and convert them to different output levels.

Signal levels

The following signal levels are available for the incremental encoders:

Signal level	Benefits
Analog signals sin/cos with level $1 V_{pp}$	The analog signal allows the digitization of the trace signals. In order to obtain a fine resolution, the signals are interpolated in the higher-level controller.
RS422 differential signals (TTL)	The resolution can be quadrupled by means of edge evaluation.
HTL (High Voltage Transistor Logic)	Built-on encoders with an HTL interface are designed for applications with digital inputs with a 24 V level. The resolution can be quadrupled by means of edge evaluation.

Function

Absolute encoders with SSI/EnDat and PROFIBUS DP (top), and DRIVE-CLiQ and PROFINET IO (bottom)

Absolute encoders output an absolute angular position between 0° and 360° . They operate on the same scanning principle as incremental encoders, but have a greater number of tracks. For example, if there are 13 tracks, then $2^{13} = 8192$ steps are coded in the case of single-turn encoders. The code used is a one-step code (gray code). This prevents any scanning errors from occurring. After switching on the machine, the position value is transferred immediately to the controller, travel to a reference point is not necessary.

All absolute encoders are available in single-turn and multi-turn versions.

Single-turn encoders

Single-turn encoders divide one rotation (360 degrees mechanical) into a specific number of steps, e.g. 8192. A unique code word is assigned to each position. After 360° the position values are repeated.

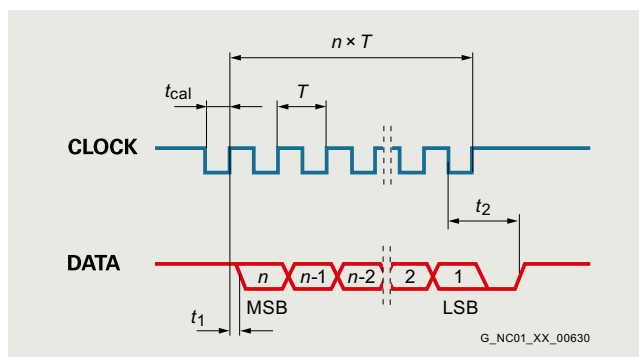

Multi-turn encoders

Multi-turn encoders record the number of revolutions in addition to the absolute position within one revolution. To do this, further code discs which are coupled via gear steps with the encoder shaft are scanned. When evaluating 12 additional tracks, this means that an additional $2^{12} = 4096$ revolutions can be coded.

Interfaces

The following interfaces are supported by the absolute encoders:

Interface	Benefits
DRIVE-CLiQ	<ul style="list-style-type: none"> • Very high data transfer rates possible • Advantages in time-critical applications • Simple and quick automatic configuration using electronic rating plates • Fast and easy diagnostics with a single tool • One interface for connecting drives as well as indirect and direct measurement systems to the CNC.
SSI	<ul style="list-style-type: none"> • Advantages in time-critical applications
EnDat 2.1	<ul style="list-style-type: none"> • High data transfer rate, bidirectional • Advantages in time-critical applications • Incremental encoder sin/cos $1 V_{pp}$ • Connection via SINAMICS Sensor Modules SMC/SME

More information

Since the DRIVE-CLiQ interface has been disclosed, it is possible to use absolute encoders with integrated DRIVE-CLiQ interface from a range of different manufacturers.

You can find additional information on the internet at:

<https://support.industry.siemens.com/cs/document/65402168>

¹⁾ Hollow shaft diameter 12 mm, 10 mm or 8 mm (0.47 in, 0.39 in or 0.31 in) possible using supplied reduction sleeves.

Overview

Couplings and clamps

Couplings

The motion control encoders are driven via a plug-in coupling or spring disk coupling. Alternatively, pulleys can also be used.

Clamps

Motion control encoders with Synchro flange can be axially mounted on the machine with screws or secured with 3 clamps.

Signal connectors as mating connectors

A signal connector is available as a mating connector for motion control encoders with flange outlet or with cable and connector.

The mating connector with 12 contacts is suitable for all incremental encoders.

The mating connector with 17 contacts is suitable for absolute encoders with EnDat.

Signal connector

A signal connector is available as a replacement for motion control encoders with cable and connector.

MOTION-CONNECT DRIVE-CLiQ signal cables

Pre-assembled MOTION-CONNECT DRIVE-CLiQ signal cables with M12 plug are available as basic cables and extensions for connecting motion control encoders with DRIVE-CLiQ interface.

For further information about the signal cables, refer to "MOTION-CONNECT connection systems".

MOTION-CONNECT connection systems

Introduction

General information

Overview

MOTION-CONNECT cables are suitable for use with many different types of machine tools and production machinery.

The following variants of MOTION-CONNECT cable are available as fully-assembled power and signal cables or sold by the meter:

- **MOTION-CONNECT 500**
 - Cost-effective solution for predominantly fixed installation
 - Suitable for low mechanical loading
 - Tested for travel distances up to 5 m (16.4 ft)
- **MOTION-CONNECT 800PLUS**
 - Meets requirements for use in cable carriers
 - Suitable for high mechanical loading
 - Oil resistance
 - Tested for travel distances of up to 50 m (164 ft)

Benefits

Pre-assembled MOTION-CONNECT cables provide high quality and perfect, system-tested functionality.

SPEED-CONNECT

Fast, stable and reliable connections can be made with the new, pre-assembled cables with SPEED-CONNECT connectors. With a short rotation as far as the stop, the cap nut of the connector secures the connection.

The cables with SPEED-CONNECT connectors supplement the previous offering of MOTION-CONNECT cables with full-thread connectors.

Application

MOTION-CONNECT cables are intended for use in machines. They are not suitable for building technology applications or outdoor installation.

MOTION-CONNECT cables have been tested in a cable carrier with horizontal travel distance and have also been designed for this type of application. They are not self-supporting.

The pre-assembled cables can be ordered in length units of 10 cm (3.94 in) and can be extended, if necessary.

When cable lengths (basic cables and extensions) are determined for the systems and applications described in this catalog, the technically permissible maximum cable lengths (e.g., 25 m (82 ft)) specified in the catalog must be observed. Malfunctions can occur if longer cables are used.

Siemens assumes no liability for correct transmission of signals or power in this case.

Compatibility between SPEED-CONNECT and full-thread connectors:

Connector on motor with external thread	Connector with cap nut on cable	Compatibility
SPEED-CONNECT	SPEED-CONNECT	✓
SPEED-CONNECT ¹⁾	Full-thread	✓
Full-thread	Full-thread	✓
Full-thread	SPEED-CONNECT	–

Function

The cables must be removed from the drum without twisting, i.e., the cables must be unwound and must never be lifted over the drum flange in loops.

To maximize the service life of the cable carrier and cables, cables in the carrier made from different materials must be separated by spacers in the cable carrier. The spacers must be filled evenly to ensure that the position of the cables does not change during operation. The cables should be distributed as symmetrically as possible according to their weights and dimensions. Cables with very different outer diameters should also be separated by spacers.

When inserting pre-assembled cables into the cable carrier, do **not** pull at the connector, as this may damage the strain relief or cable clamping.

The cables must not be fixed in the cable carrier. They must be freely movable.

The cables must be able to be moved without applying force in particular in the bending radii of the carrier. The specified minimum bending radii must be adhered to.

The cable fixings must be attached at both ends at an appropriate distance away from the end points of the moving parts in a dead zone.

¹⁾ In case of shocks and vibrations, an additional O-ring is recommended to prevent the connection from loosening.

Function

MOTION-CONNECT cables are tested in a cable carrier. The cables are attached at one end by means of strain relief to the moving ends of the cable carrier. Strain relief is applied over a wide area of the cable jacket surface without crimping the cable.

Cables must be installed in accordance with the instructions supplied by the cable carrier manufacturer.

Note:

If, for example, pre-assembled cables are installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connectors can also be supplied (power and signal cables¹⁾). In this case, the contacts of the cables are crimped and the connector is supplied separately. After installing the cables, the customer assembles the connector.

In case of vibration load and with horizontal or vertical cable entries, we recommend that the cable is additionally fixed if between the cable strain relief on the cable carrier and the terminal at the motor part of the cable is hanging loose or is not routed. To prevent machine vibrations being transmitted to the connectors, the cable should be fixed at the moving part where the motor is mounted.

	Bare wire ends
	Cable must be supplied by the customer

Characteristic curves

The shaded area beneath the characteristic represents the potential range of use for the cables. The characteristics represent the tested operating points.

Acceleration for MOTION-CONNECT 800PLUS signal and power cables up to 16 mm²

Permissible acceleration for MOTION-CONNECT 800PLUS cables of 25 mm², 35 mm², and 50 mm²

¹⁾ Not applicable to DRIVE-CLiQ signal cables.

MOTION-CONNECT connection systems

Introduction

General information

More information

Current carrying capacity for power and signal cables

The current carrying capacity of PVC/PUR-insulated copper cables is specified for installation types B1, B2, C, and E under continuous operating conditions in the table with reference to an ambient air temperature of 40 °C (104 °F). For other ambient temperatures, the values must be corrected by the derating factors from the table.

Cross-section mm ²	Current carrying capacity rms AC 50/60 Hz or DC in amps for installation type			
	B1 Single-core cables in conduits or installation ducts	B2 Multi-core cables in conduits or cable ducts	C Multi-core cables, vertically or horizontally on walls/open, without conduits and installation ducts/with contact	E Multi-core cables, horizon- tally or vertically on perforated cable racks/ open, without conduits and installation ducts/with contact

MOTION-CONNECT connection systems

Power cables for SINAMICS S120/Hybrid cables for SINAMICS S120M

Overview

Power cable for connecting a SIMOTICS motor to a SINAMICS S120 Motor Module, C/D type 3 A to 30 A.

Power cables

The synchronous and asynchronous motors are connected to the Motor Modules or Power Modules by means of MOTION-CONNECT power cables.

The pre-assembled MOTION-CONNECT power cables are of high quality and offer safety with problem-free functioning.

Depending on the design, the MOTION-CONNECT power cables are either pre-assembled at one end or at both ends.

If pre-assembled power cables are to be installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connector can also be supplied. In this case, the contacts of the cables are crimped and the connector is supplied separately. After installing the cables, the customer assembles the connector.

The 6FX.002-5....-.... power cables are available with crimped contacts and with the connector supplied separately as an option (not applicable to power cables with bare wire ends or cable lugs).

Power cables with separately supplied **module-end** connector: in this case, the 6th position of the Article No. must be changed from **0** to **1**: 6FX.012-5....-.... (not for power cables for SINAMICS S120 Power Modules or Motor Modules in booksize compact format).

Power cables without **module-end** connector: in this case, the 6th position of the Article No. must be changed from **0** to **2**: 6FX.022-5....-.... The connector can be ordered separately (see page 10/57).

Power cables with separately supplied **motor-end** connector: in this case, the 6th position of the Article No. must be changed from **0** to **4**: 6FX.042-5....-.... (not for power cables with bare wire ends on the motor end).

Type of delivery for pre-assembled power cables

Pre-assembled power cables can be ordered in units of 10 cm (3.94 in) up to a maximum length of 299 m (981 ft).

The cables are supplied as reels up to 30 kg (66.1 lb) or 100 m (328 ft). Above 30 kg or 100 m (66.1 lb or 328 ft), cable drums are used instead of reels.

Power cable with separately supplied connector for connecting a SIMOTICS motor to a SINAMICS S120 Motor Module, C/D type 3 A to 30 A.

Type of delivery for power cables sold by the meter

95 mm ²	without	≤ 100 m (328 ft)	–
120 mm ²	without	≤ 100 m (328 ft)	–

Above 30 kg or 100 m (66.2 lb or 328 ft), the cables are supplied on drums, otherwise as reels.

Hybrid cables

Hybrid cables connect AM600 Adapter Modules to the distributed components Hybrid Cabinet Bushings, DRIVE-CLiQ Extension and SINAMICS S120M, as well as the distributed components to one another. Hybrid cables are only delivered pre-assembled.

Type of delivery for pre-assembled hybrid cables

The pre-assembled cables can be delivered in length units of 10 cm (3.94 in) up to 75 m (246 ft) to suit the system.

MOTION-CONNECT connection systems

Signal cables for SINAMICS S120

Overview

MOTION-CONNECT DRIVE-CLiQ signal cable with IP20/IP67 connector

Signal cables are pre-assembled and are sold by the meter for connecting a variety of components.

The following different types of cable are available:

- DRIVE-CLiQ signal cables
- MOTION-CONNECT DRIVE-CLiQ signal cables
- MOTION-CONNECT pre-assembled signal cables

Type of delivery for pre-assembled signal cables

Pre-assembled signal cables are available in units of 10 cm (3.94 in).

The cables are supplied on reels up to 30 kg or 100 m (66.2 lb or 328 ft). Above 30 kg or 100 m (66.2 lb or 328 ft), cable drums are used instead of reels.

Usage	Connection Module end/Motor end	24 V cores	MOTION- CONNECT 200 6FX2...	MOTION- CONNECT 500 6FX5...	MOTION- CONNECT 800PLUS 6FX8...	Length stages

MOTION-CONNECT connection systems

Signal cables for SINAMICS S120

Application

DRIVE-CLiQ signal cables without 24 V DC cores

are used to connect components with DRIVE-CLiQ connections which have a separate or external 24 V DC power supply.

MOTION-CONNECT DRIVE-CLiQ signal cables with 24 V DC cores

are used whenever components with DRIVE-CLiQ connections must meet high requirements such as mechanical stress and oil resistance, e.g., where a connection is made outside the cabinet between Power Modules, Motor Modules, and SIMOTICS S-1FT7/SIMOTICS M-1PH8 motors with DRIVE-CLiQ interface.

MOTION-CONNECT pre-assembled signal cables

are used whenever motor encoders on motors without DRIVE-CLiQ interface need to be connected to Sensor Modules.

Design

If pre-assembled signal cables are to be installed in a cable carrier in such a way that the connector would inhibit assembly, pre-assembled cables without assembled connector can also be supplied. In this case, the contacts of the cables are crimped and the connector enclosure is supplied separately. After installing the cables, the customer assembles the connector enclosure.

The 6FX.002-2....-.... signal cables are available with crimped contacts and with the connector enclosure supplied separately (not in the case of DRIVE-CLiQ signal cables and signal cables with bare wire ends).

Signal cables with separately supplied **module-end** connector: in this case, the 6th position of the Article No. must be changed from **0** to **1**:

6FX.012-2C....-.... (not for signal cables for connecting via terminals or 6FX.002-2AH00-...., 6FX.002-2CA12-....).

Signal cables with separately supplied **motor-end** connector: in this case, the 6th position of the Article No. must be changed from **0** to **4**:

6FX.042-2C....-.... (not for signal cables for connecting via terminals or 6FX8002-2BA20-...., 6FX8002-2BA21-....).

Note:

Once the contacts have latched into the insulator, they can no longer be removed.

More information

Definition of lengths for pre-assembled cables

Cable with bare wire ends and pre-assembled connector

Cable with pre-assembled connectors at both ends

Tolerance:

- Cable lengths up to 10 m (32.8 ft): $\pm 2\%$
- Cable lengths of 10 m (32.8 ft) and longer: $\pm 1\%$

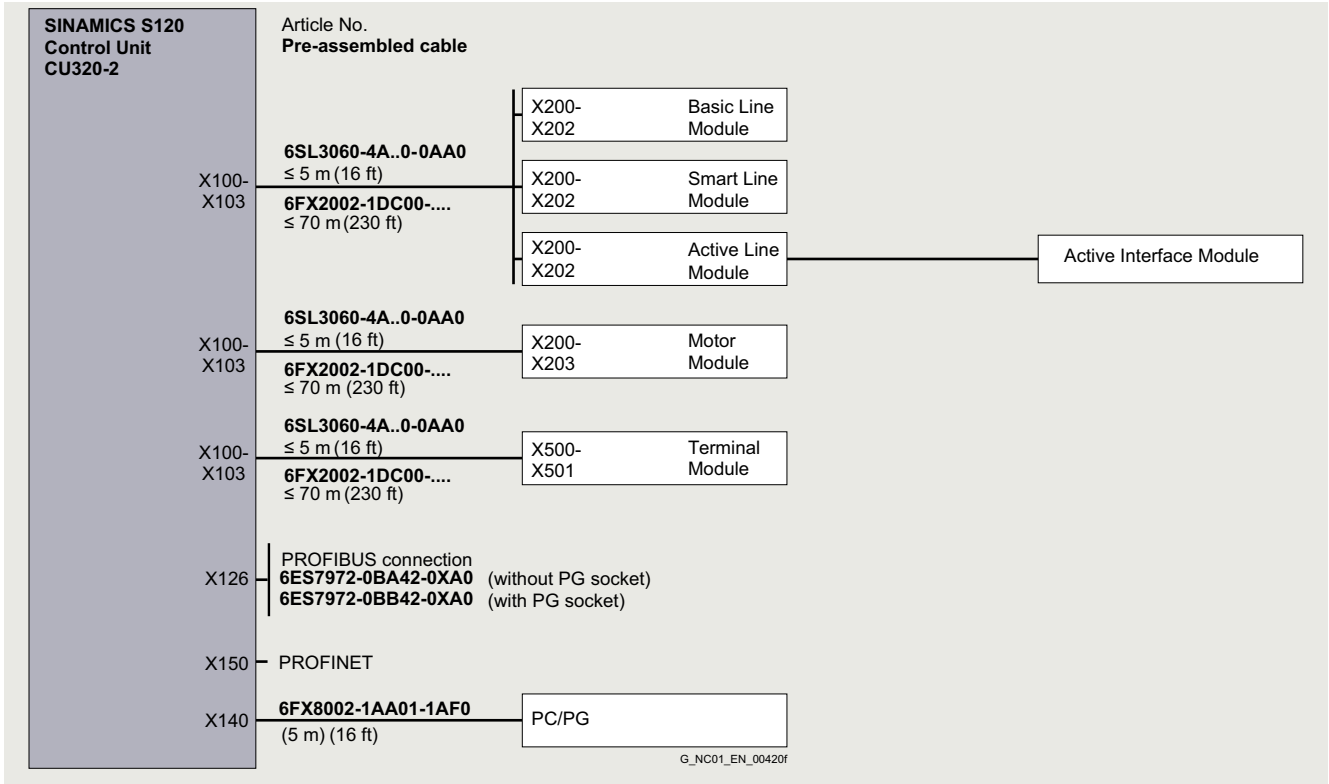

¹⁾ Note type of delivery. Cables with core cross-section $4 \times 4 \text{ mm}^2$ or $4 \times 4 \text{ mm}^2$ with brake cores can be delivered at exact length in meters. Length code as for pre-assembled cables.

Integration

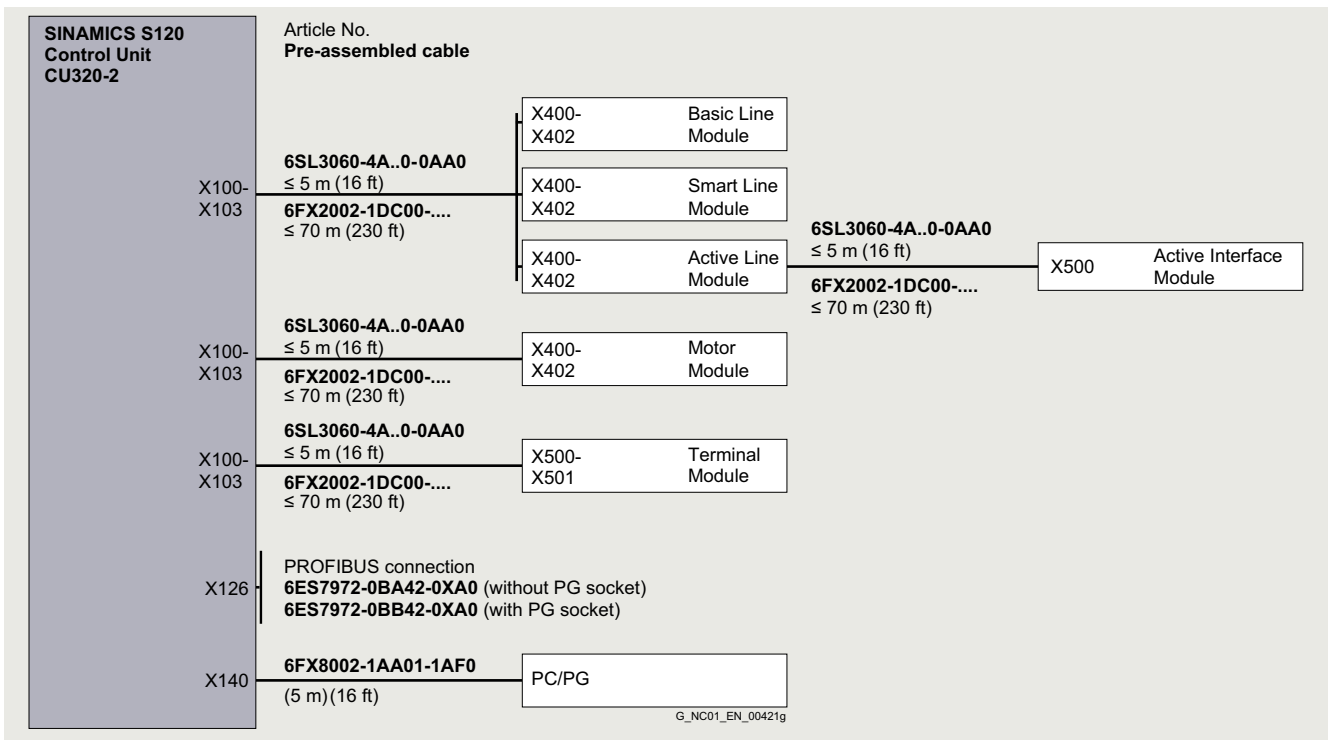

The DRIVE-CLiQ signal cables of type 6SL3060-4A..0-0AA0 required for the standard configuration are part of the scope of supply of the Line Modules and Motor Modules. In this case, the modules must be mounted directly adjacent to one another in a row.

The same components can be connected to the DRIVE-CLiQ interfaces X100-X103 (SIMOTION D425-2, SIMOTION CX32-2) or X100-X105 (SIMOTION D435-2/D445-2/D455-2) as can be connected to the DRIVE-CLiQ interfaces X100-X103 of a CU320-2.

10

Integration

Connection of a machine encoder (direct measuring system)

- 1) For Control Unit CU310-2/SIMOTION D410-2: X100.
For Control Unit CU320-2/SIMOTION D425-2/SIMOTION CX32-2: X100-X103.
For SIMOTION D435-2/D445-2/D455-2: X100-X105.
- 2) Up to 10 m (32.8 ft) possible, dependent on encoder current consumption.
- 3) The total cable length (basic cable and extension cable) must not exceed 30 m (98 ft).
- 4) See connection overview "SIMOTICS motors with RJ45 or M17 connection and external measuring systems with M12 connections" for further connection possibilities.

MOTION-CONNECT connection systems

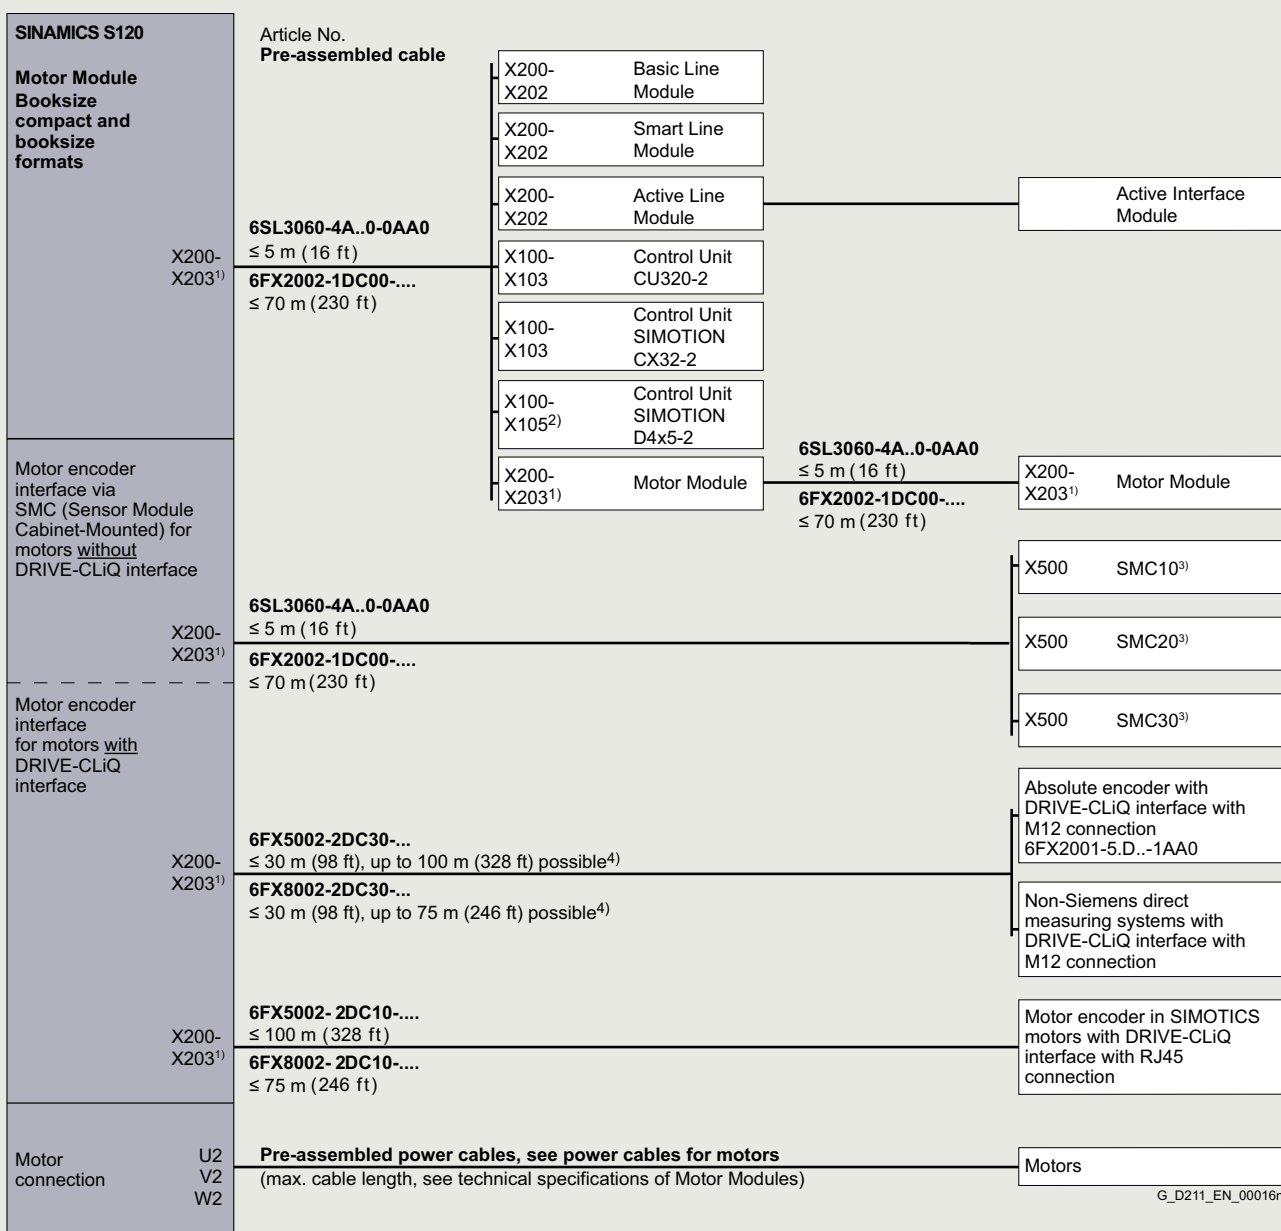

Connection overviews

SINAMICS S120 Motor Modules in booksize format

Integration

Connection overview of SINAMICS S120 Motor Modules in booksize compact and booksize formats for SIMOTICS motors with/without DRIVE-CLiQ interface

The DRIVE-CLiQ signal cables of type 6SL3060-4A..0-0AA0 required for the standard configuration are part of the scope of supply of the Line Modules and Motor Modules. In this case, the modules must be mounted directly adjacent to one another in a row.

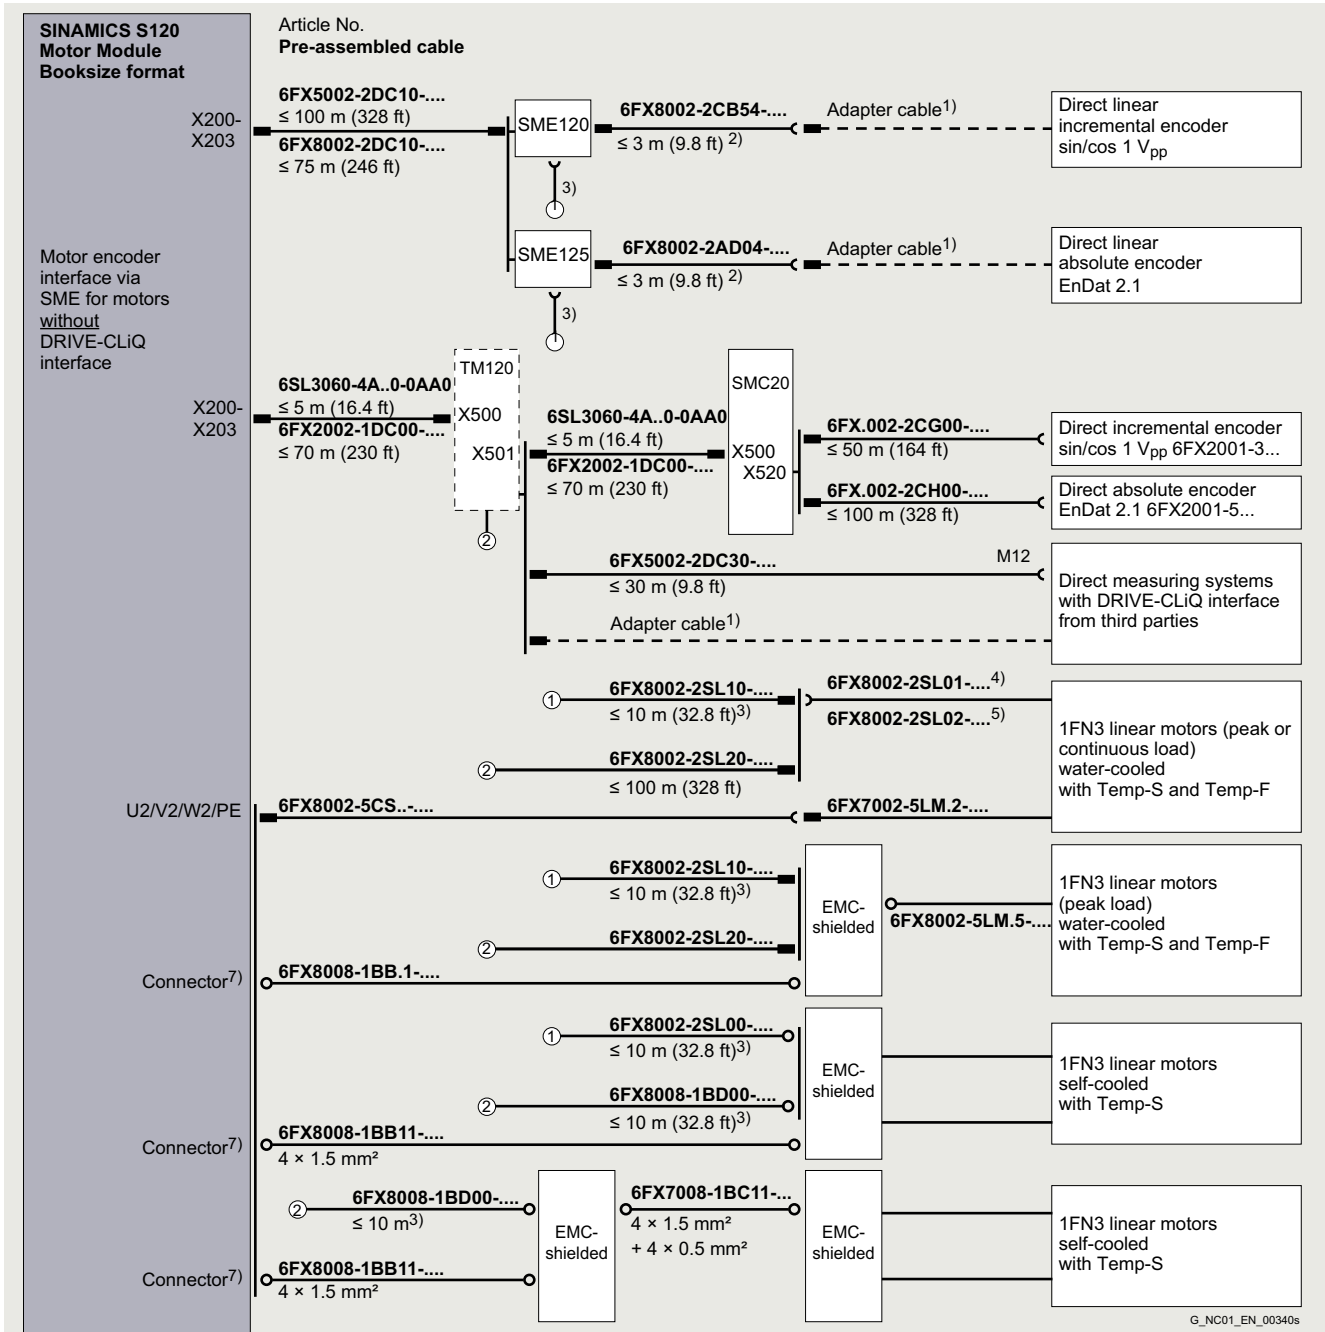

1) For Single Motor Module: X200-X202.
 For Double Motor Module: X200-X203.

2) For SIMOTION D425-2: X100-X103.
 For SIMOTION D435-2/D445-2/D455-2: X100-X105.

3) See connection overviews of SMC10/SMC20/SMC30.

4) Longer cable lengths possible when using disconnection points with M17 or RJ45, see connection overview "External measuring systems with DRIVE-CLiQ interface".

Integration
Connection overview of SINAMICS S120 Motor Modules in booksize format with SME120/SME125 or TM120 with/without SMC20 and SIMOTICS L-1FN3 linear motors

1) Adapter cable available from measuring system manufacturer.

2) Up to 10 m (32.8 ft) possible, depending on current consumption of the 5 V encoder. Up to 30 m (98.4 ft) possible for encoders with 3.6 V operating voltage.

3) The total cable length between SME120/SME125 and 1FN3 must not exceed 10 m (32.8 ft).

4) Adapter cable for 1FN3100/1FN3150 motors.

5) Adapter cable for 1FN3300 to 1FN3900 motors.

6) For further connection possibilities, refer to connection overview "SIMOTICS motors with RJ45 or M17 connection and external measuring systems with M12 connection".

7) Retrofitted connector 6SL3162-2MA00-0AC00 /6SL3162-2MA00-0AB00

²⁾ See connection overviews of SMC10/SMC20/SMC30.
³⁾ See connection overview "SIMOTICS motors with RJ45 or M17 connection and external measuring systems with M12 connections" for further connection possibilities.

Integration

Connection overview of SINAMICS S120M distributed servo drive

- 1) For SIMOTION D425-2: X100-X103
For SIMOTION D435-2/D445-2/D455-2: X100-X105
- 2) Required, if more than 6 SINAMICS S120M distributed servo drives are operated
- 3) ≥ 3 m (9.84 ft) between AM600 and the first distributed SINAMICS SM120 servo drive
- 4) The total length of the hybrid line must not exceed 100 m (328 ft) The overall length is reduced by 5 m (16 ft) for each DRIVE-CLiQ extension
- 5) A maximum of 6 SINAMICS S120M distributed servo drives per Control Unit is permissible
- 6) The maximum permissible number of SINAMICS S120M servo drives that can be connected to an AM600 Adapter Module depends on the power

Connection overviews

SINAMICS S120 Sensor Modules Cabinet-Mounted

Integration

Connection overview of SINAMICS S120 Sensor Module Cabinet-Mounted SMC30

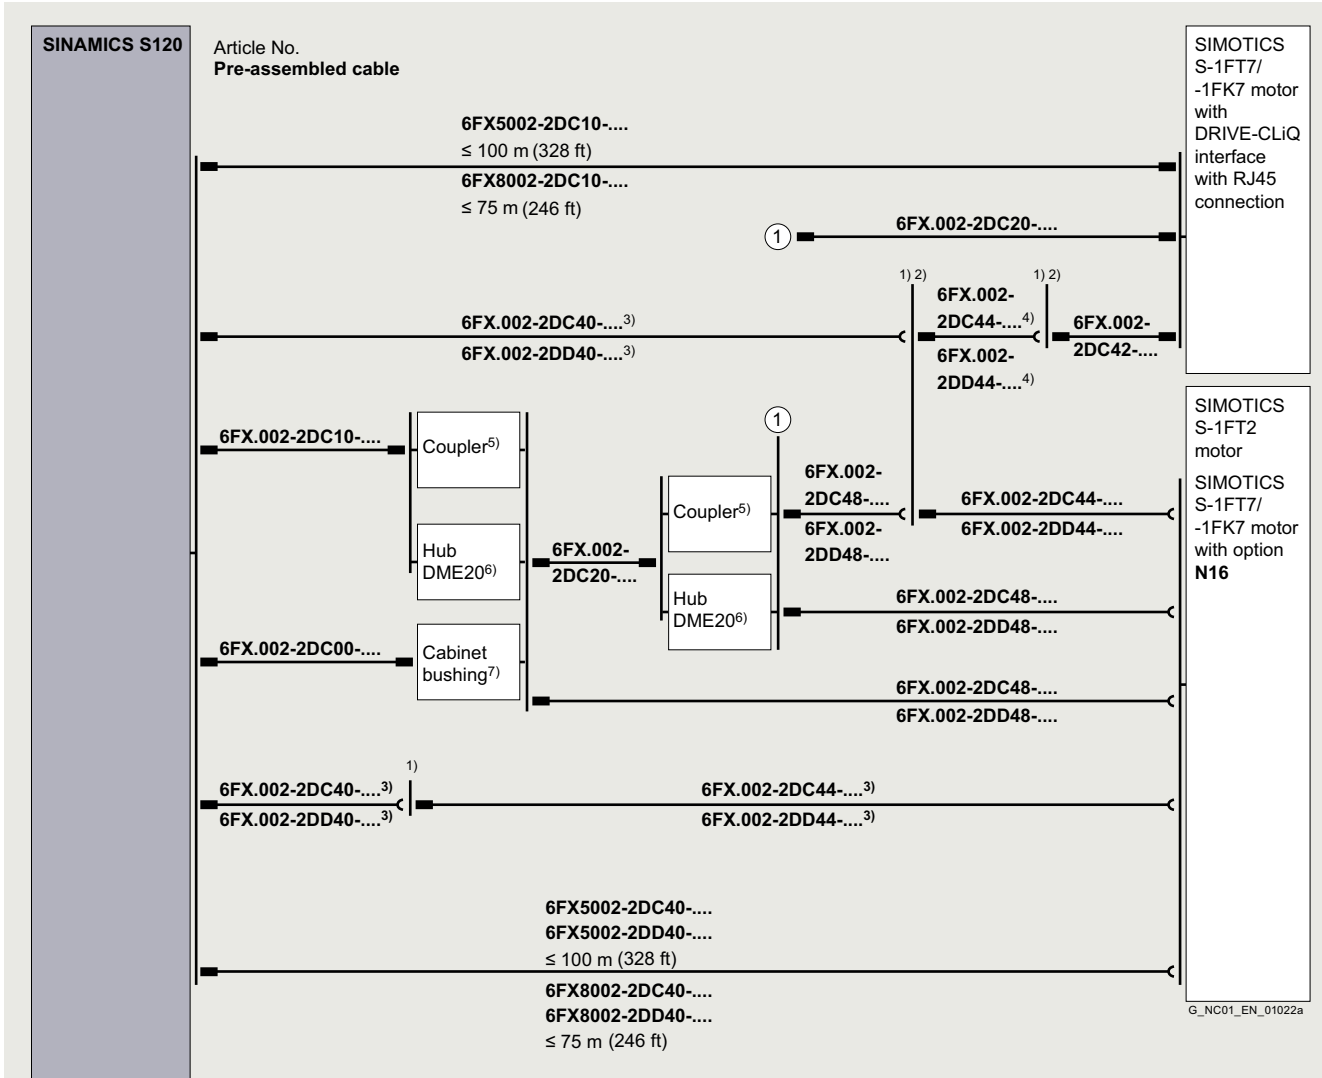

¹⁾For position control only.

²⁾Applies to HTL encoders with bipolar signal evaluation or for evaluation of difference signals A*, A and B*, B; for HTL encoders with unipolar signal evaluation the permissible cable length is reduced to 100 m (328 ft).

Integration

Connection overview of **SINAMICS S120** for **SIMOTICS S-1FT2**, **SIMOTICS S-1FT7/-1FK7** motors with **RJ45** connection or option **N16**

¹⁾ Max. 4 M17 disconnection points permissible without derating.

²⁾ Optional mounting flange (6FX2003-7HX00).

³⁾ Total permissible cable length ≤ 100 m (328 ft) (6FX5...) or ≤ 75 m (246 ft) (6FX8...).

⁴⁾ Optional DRIVE-CLiQ cable 6FX.002-2DC44-....

⁵⁾ Optional DRIVE-CLiQ RJ45/IP67 coupler (6SL3066-2DA00-0AB0), max. 3 couplers permissible with derating (total permissible cable length ≤ 100 m (328 ft) (6FX5...) or ≤ 75 m (246 ft) (6FX8...) - 5 m (16.4 ft) per coupler).

⁶⁾ Optional DME20 DRIVE-CLiQ Hub Module RJ45/IP67 (6SL3055-0AA00-6AB0), max. 2 DME20 Hub Modules possible.

⁷⁾ Optional DRIVE-CLiQ RJ45/IP67, RJ45/IP20 cabinet bushing (6SL3066-2DA00-0AA0).

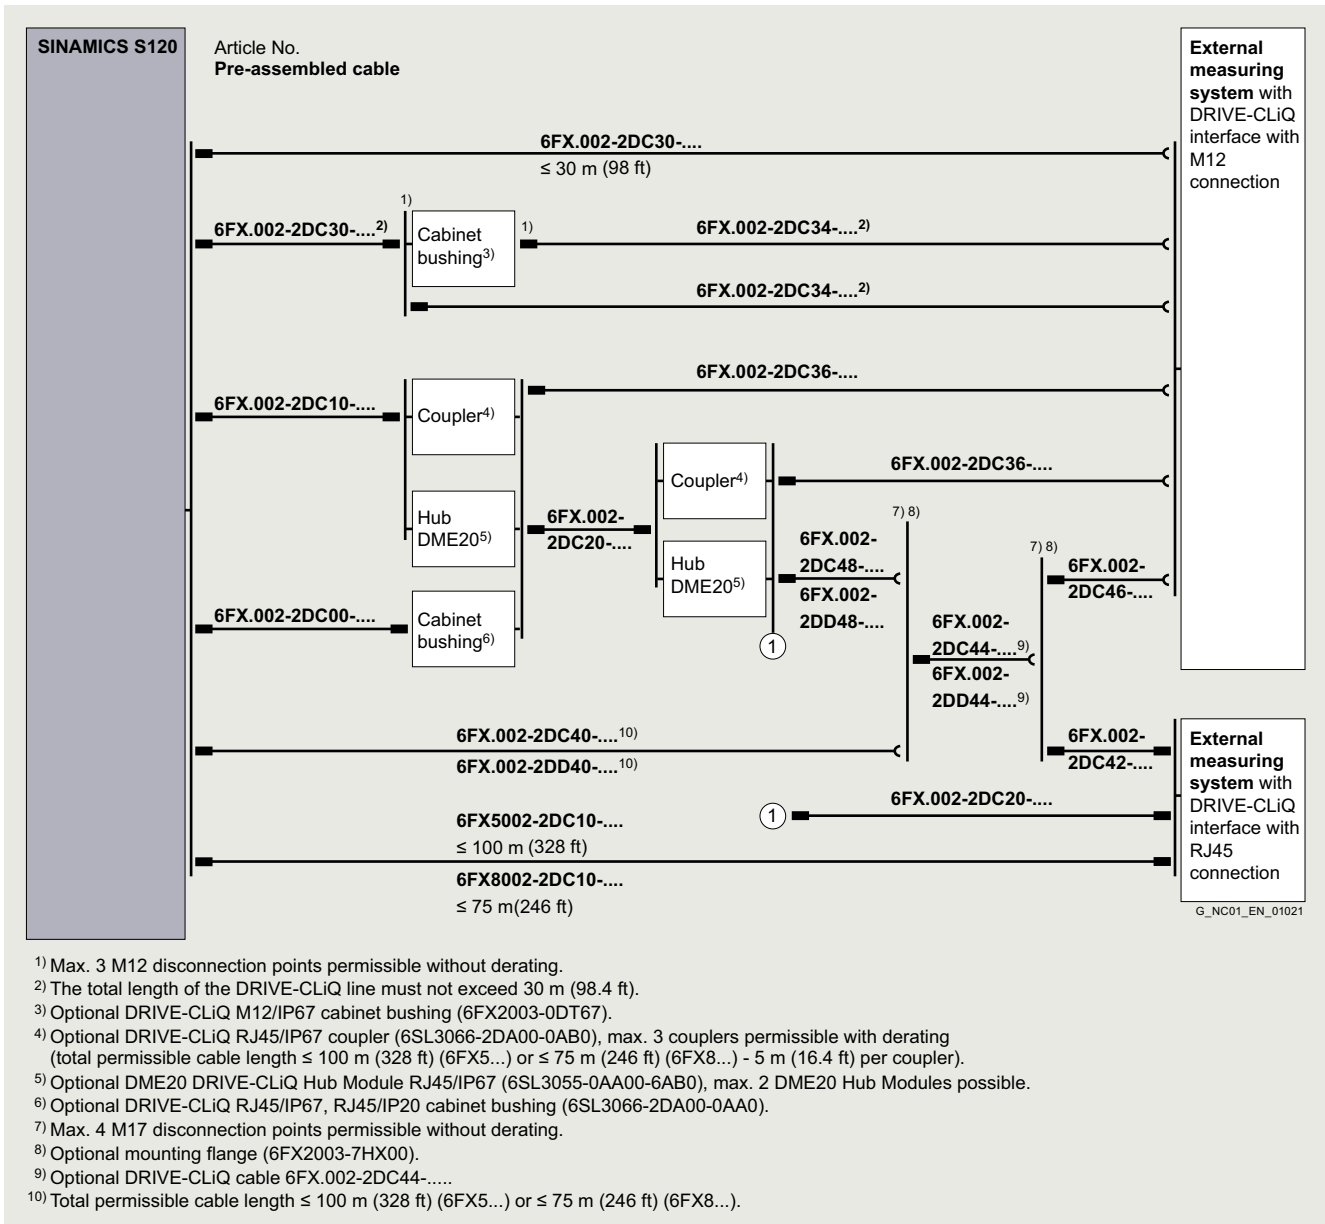

MOTION-CONNECT connection systems

Connection overviews

External measuring systems with DRIVE-CLiQ interface

Integration

Connection overview of SINAMICS S120 for external measuring systems with M12 connection or RJ45 connection

¹⁾ Max. 3 M12 disconnection points permissible without derating.

²⁾ The total length of the DRIVE-CLiQ line must not exceed 30 m (98.4 ft).

³⁾ Optional DRIVE-CLiQ M12/IP67 cabinet bushing (6FX2003-0DT67).

⁴⁾ Optional DRIVE-CLiQ RJ45/IP67 coupler (6SL3066-2DA00-0AB0), max. 3 couplers permissible with derating (total permissible cable length ≤ 100 m (328 ft) (6FX5...) or ≤ 75 m (246 ft) (6FX8...) - 5 m (16.4 ft) per coupler).

⁵⁾ Optional DME20 DRIVE-CLiQ Hub Module RJ45/IP67 (6SL3055-0AA00-6AB0), max. 2 DME20 Hub Modules possible.

⁶⁾ Optional DRIVE-CLiQ RJ45/IP67, RJ45/IP20 cabinet bushing (6SL3066-2DA00-0AA0).

⁷⁾ Max. 4 M17 disconnection points permissible without derating.

⁸⁾ Optional mounting flange (6FX2003-7HX00).

⁹⁾ Optional DRIVE-CLiQ cable 6FX.002-2DC44-....

¹⁰⁾ Total permissible cable length ≤ 100 m (328 ft) (6FX5...) or ≤ 75 m (246 ft) (6FX8...).

MOTION-CONNECT connection systems

Accessories for power and signal cables

HF (high-frequency) clamp/Mounting flange for cabinet bushing

Overview

HF (high-frequency) clamp for power connectors

To ensure correct grounding at the cable duct or cabinet wall, a ground clamp is optionally available together with the flanges for large-area discharging of high-frequency interferences. An HF (high-frequency) clamp is not required for size 3 power connectors.

Overview

Mounting flange for power connectors

Mounting flanges are used to route or fix connectors in IP67 degree of protection, for example, in control cabinets. With the exception of angled connectors, a mounting flange can be retrofitted on connectors with a cap nut or with external thread.

DRIVE-CLiQ cabinet bushing (RJ45)/DRIVE-CLiQ cabinet bushing (M12)

Overview

DRIVE-CLiQ cabinet bushing for signal cables (RJ45)

The DRIVE-CLiQ cabinet bushing (RJ45) provides the high IP67 degree of protection for the appropriate MOTION-CONNECT DRIVE-CLiQ signal cables routed through openings in control cabinets. The DRIVE-CLiQ cabinet bushing offers IP54 degree of protection on the outside and IP20 on the inside of the control cabinet.

Overview

DRIVE-CLiQ cabinet bushing for signal cables (M12)

The DRIVE-CLiQ cabinet bushing (M12) provides the high IP67 degree of protection for the appropriate MOTION-CONNECT DRIVE-CLiQ signal cables routed through openings in control cabinets. The DRIVE-CLiQ cabinet bushing (M12) has IP67 degree of protection at both ends and is designed as a socket with internal thread on the outside of the cabinet and as pins with an external thread on the inside of the cabinet.

Note:

The IP67 degree of protection is only achieved with the DRIVE-CLiQ signal cables connected.

Analyze MyDrives Cloud

Overview

Analyze MyDrives Cloud overview

The Industrial IoT, Insights Hub application Analyze MyDrives allows you to centrally monitor drive systems in the manufacturing and process industry.

Data, such as electricity consumption, torque, frequency, and power flow, for example, are gathered and evaluated giving you a holistic overview of the electrical and mechanical domain of your drive train in one application.

Analyze MyDrives offers a range of filter options, trend analysis with time sequences and scatter plots, and an email-based notification service built around configurable limit values.

Key features include:

- Customizable and easy-to-use dashboard showing the actual status of the drive system
- View hour-by-hour, daily average and historical utilization at a glance
- Create multi-line charts or scatter plots to monitor and compare different parameters
- Adjustable, event-based notification system to give you more control over your notifications
- Import relevant vibration and status variables from SIPLUS Condition Monitoring Systems SM 1281

Benefits

- Easy overview of all relevant drive system and machine vibration data
- Simplify maintenance schedule and easily keep track of your drive system
- Understand machine performance over time, in comparison to other machines/ parameters
- Detect problems before they arise, enabling preventive maintenance and better maintenance scheduling
- Get a combined overview of the electrical and mechanical domain in one app

More information

This product can only be ordered via S-DEX, Industrial IoT store. Please find the link below for Analyze MyDrives Cloud on S-DEX, Industrial IoT store.

Overview

Drivetrain Analyzer Edge Product Details

Drivetrain Analyzer Edge – Mechanical Anomaly Detector feature

Drivetrain Analyzer Edge – Energy Efficiency feature

Drivetrain Analyzer Edge – Basic Anomaly Detection feature

Drivetrain Analyzer Edge – CMS feature

Drivetrain Analyzer Edge provides data analytics models to increase the Overall Equipment Effectiveness and sustainability of all connected systems and applications by analyzing SINAMICS drives data.

Key features

- Detect deviations in the mechanical system with the Mechanical Anomaly Detector through drive data analysis.
- Get insights into the energy consumption including operation costs and CO2 footprint for the 2nd generation SINAMICS G drives through the Energy Efficiency feature.
- Monitor your drivetrain condition through the vibration data from SIPLUS CMS 1200 and the integrated CMS Dashboard.
- Monitor drivetrain anomalies specific to your application with the customizable AI model get operational insights into long-term degradation trends of your drivetrain through the Basic Operation Analysis as well as into dynamic and repetitive processes through the Dynamic Operation Analysis.

Benefits

- Increase the Overall Equipment Effectiveness of connected systems without the need for additional sensors or extended commissioning efforts.
- Optimize the service and maintenance strategies through analytics models for mechanical anomalies or connected SIPLUS CMS 1200 systems.
- Sustainability insights into the drive system, energy consumption, operating costs and CO2 footprint.
- Operational insights into dynamic and repetitive operating modes as well as long-term degradations.
- Flexible application design for the extension to address user specific use cases and failure patterns.
- Enable interactive workflows for the shopfloor through the extension of the Industrial Edge application with additional services (e.g. Industrial Edge Notifier).

More information

You can find Drivetrain Analyzer Edge manual at: <https://support.industry.siemens.com/cs/document/109827091>

This product can also be ordered via S-DEX, Industrial Edge Marketplace store. Please find the link below for Drivetrain Analyzer Edge on S-DEX, Industrial Edge Marketplace store. www.siemens.com/order-drivetrain-analyzer-edge

Digitalization in drive technology

Data analysis and Apps

SIPLUS CMS1200 Condition Monitoring System

Overview

The SIPLUS CMS1200 Condition Monitoring System is part of SIMATIC S7-1200 and is designed for the early detection of mechanical damage.

It provides the following benefits:

- vRMS machine monitoring in acc. with ISO 10816-3
- aRMS machine monitoring
- Detailed identification of damage with frequency-selective diagnostics
- Raw data recording and export for SIPLUS CMS X-Tools
- Trend recording and analysis
- Signaling of limit violations
- Permanent monitoring to protect the machines
- Effective monitoring of important processes and systems
- Early detection of damage
- Scheduled maintenance instead of spontaneous repair
- Reduction in maintenance costs
- Increase in system availability
- Optimum utilization of the service life of the units

Benefits

Easy integration of condition monitoring of mechanical components in SIMATIC S7-1200

Further advantages include:

- Monitoring of individual machines up to complex drive trains
- No additional software is required for parameterization and visualization
- Proactive maintenance through detailed and early localization of damage
- Fast full diagnostics at a glance
- Event-driven notification to the Service Center
- Expert analysis based on raw data

Application

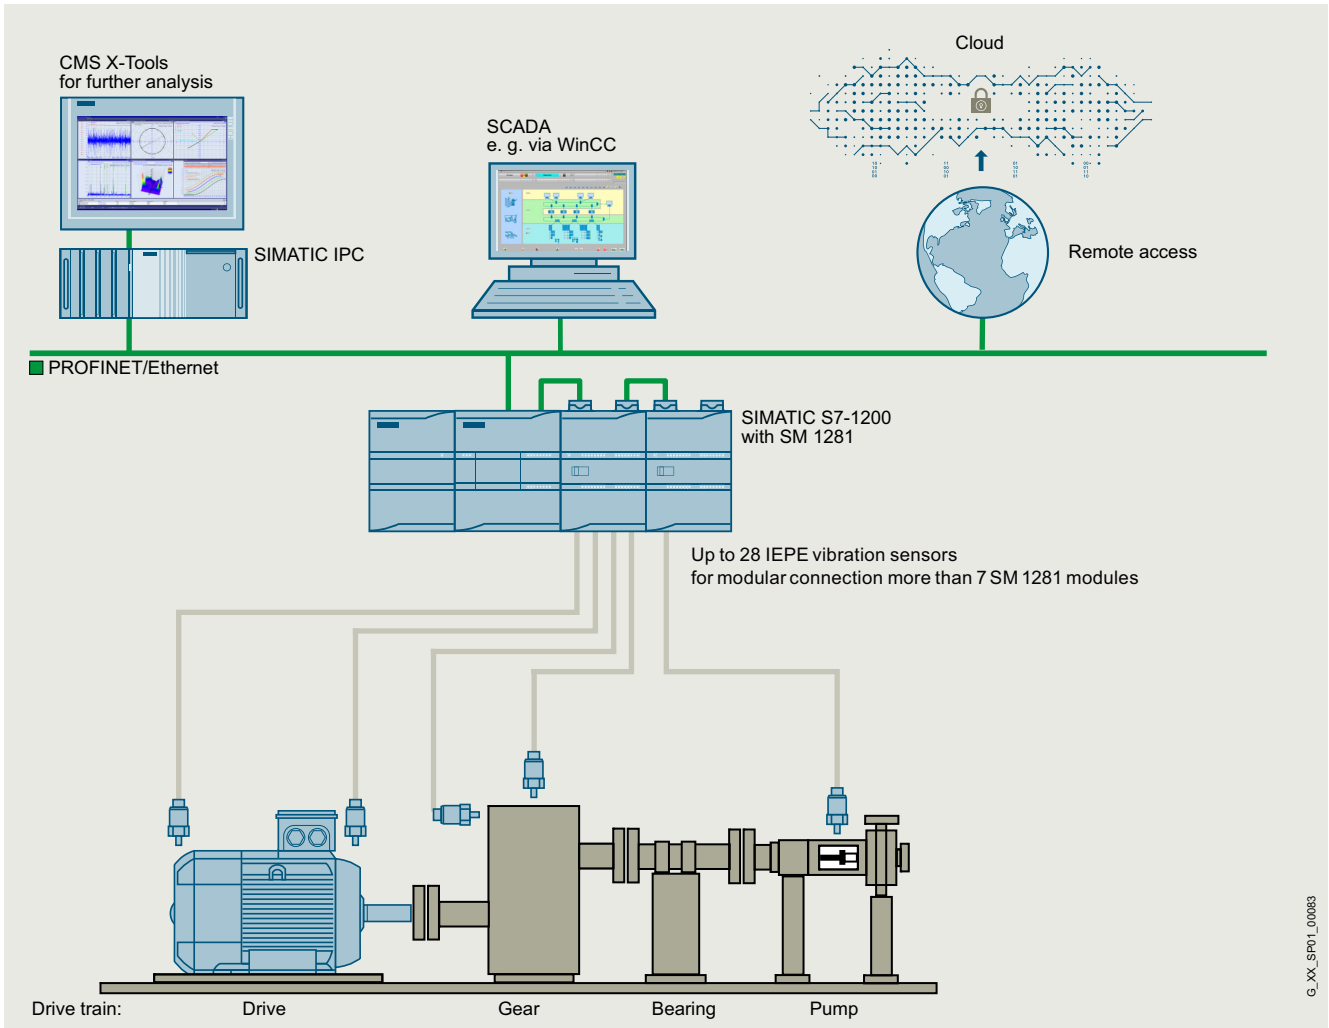

In addition to the productivity of a plant, lifecycle costs are increasingly becoming the focus of attention. Increasing plant availability is an important topic in all sectors in which machines are used.

Continuous plant monitoring and thus the early detection of impending failures are an appropriate means of minimizing downtimes. Status-oriented maintenance permits an increase in availability with a simultaneous reduction of lifecycle costs.

As part of the SIMATIC S7-1200, the Condition Monitoring System is simple to integrate via the TIA Portal (Totally Integrated Automation) engineering framework.

Fundamental parameter assignment and characteristic value-based diagnostics of the SIPLUS CMS1200 take place via the TIA Portal, and frequency-selective diagnostics take place via a web browser.

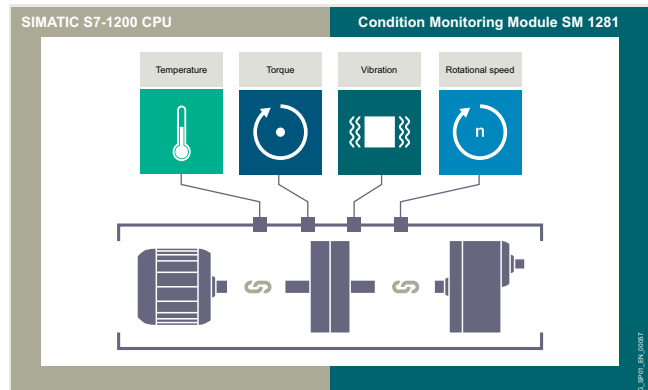

Design

SIPLUS CMS1200 Condition Monitoring System

SIPLUS CMS1200 forms part of SIMATIC S7-1200 and is made up of a maximum of 7 SM 1281 Condition Monitoring modules.

Application range:	
Mechanical components	Motors, generators, fans, pumps, wind mills, etc.
Damage analysis	Unbalance, misalignment, roller bearings, etc.
Analytical procedures:	
Characteristic values	<ul style="list-style-type: none"> Bearing monitoring: aRMS Vibration monitoring: vRMS based on ISO 10816-3 Diagnostic characteristic value: DKW
Vibration analysis	FFT, envelope curve, fingerprint comparison, trend analysis parameterizable
Monitoring function:	
Characteristic values	Adjustable limiting value for aRMS, vRMS and DKW: Warning, alarm
Frequency spectra	Adjustable warning and alarm bands
Recording function	
Saving	Raw data logging: Manually or event-triggered, FFT snapshot, characteristic values, long-term trend recording
Output	
Parameterization and visualization	TIA Portal and web browser

SIPLUS CMS1200 SM 1281 Condition Monitoring

Overview

SIPLUS CMS1200 SM 1281 Condition Monitoring forms part of SIMATIC S7-1200 and is used for the:

- Monitoring of motors, generators, pumps, fans, wind mills or other mechanical components
- Recording and analysis of vibrations
- Expansion capability of up to 7 modules

Design

SIPLUS CMS1200 SM 1281 Condition Monitoring includes:

- Integrated diagnostics software
- 4 IEPE interfaces for vibration sensors
- 1 speed input

The following accessories can also be ordered, see "Accessories":

- SIPLUS CMS1200 SM 1281 shield clamp set for EMC-compliant cable connection
- VIB-SENSOR vibration sensor for recording vibrations
- CABLE-MIL connecting cable, several cable length available

Function

SIPLUS CMS1200 SM 1281 Condition Monitoring comes with the following fixed functional scope as standard:

- Characteristic values (bearing, vibration monitoring)
- Frequency-selective analysis using FFT, H-FFT
- Trend analysis
- Limit value monitoring of frequency bands
- Recording with time stamp of trend values, raw data, frequency spectra, alarm log
- Simple localization of damage using fingerprint comparison
- Output of system and status messages
- Extraction of raw data for further diagnoses
- Web server
- OPC-UA server functionality

Technical specifications

Article number	6AT8007-1AA10-0AA0 SM1281_Condition_Monitoring
General information	
Product type designation	SM1281
Product description	S7-1200 module for the monitoring of vibrations on mechanical components based on parameters and frequency-selective analysis functions
Installation type/mounting	
Mounting type	Rail or wall mounting
Mounting position	Horizontal, vertical
Recommended mounting position	Horizontal
Supply voltage	
Type of supply voltage	DC
Rated value (DC)	24 V
permissible range, lower limit (DC)	20.4 V
permissible range, upper limit (DC)	28.8 V
Input current	
Current consumption, typ.	200 mA
Current consumption, max.	250 mA
from backplane bus 5 V DC, typ.	80 mA
from backplane bus 5 V DC, max.	85 mA
Power loss	
Power loss, typ.	4.8 W
Memory	
Total memory capacity	1 Gbyte
Hardware configuration	
Design of hardware configuration	Modular, up to 7 modules per CPU
Speed input	
Number of speed inputs	1
Input voltage	
• 24 V DC digital	Yes
Sensor input	
Number of IEPE sensor inputs	4
Sampling frequency, max.	46 875 Hz
Interfaces	
Type of data transmission	Export of raw data as WAV file for further analysis (e.g. using CMS X-Tools) can be downloaded via browser/FTP, online data transfer to CMS X-Tools
Ethernet interface	Yes
Protocols	
Bus communication	Yes
OPC-UA	Yes; OPC UA Server
Web server	
• HTTP	Yes
Interrupts/diagnostics/ status information	
Alarms	
• Diagnostic alarm	Yes
Diagnostics indication LED	
• for status of the inputs	Yes
• for maintenance	Yes
• Status indicator digital input (green)	No

Article number	6AT8007-1AA10-0AA0 SM1281_Condition_Monitoring
Integrated Functions	
Monitoring functions	
• Monitoring of the sensor inputs	Yes; Cable break and short-circuit
• Vibration characteristic monitoring via RMS value of the vibration speed	Yes
• Vibration characteristic monitoring via RMS value of the vibration acceleration	Yes
• Vibration characteristic monitoring via diagnostic characteristic value	Yes
• Frequency-selective monitoring via vibration speed spectrum	Yes
• Frequency-selective monitoring via vibration acceleration spectrum	Yes
• Frequency-selective monitoring via envelope curve analysis	Yes
Measuring functions	
• Physical measuring principle	Vibration acceleration
Measuring range	
- Measurement range vibration frequency, min.	0.1 Hz
- Measurement range vibration frequency, max.	23 000 Hz
Standards, approvals, certificates	
Certificate of suitability	CE
CE mark	Yes
EAC (formerly Gost-R)	Yes
China RoHS compliance	Yes
Ambient conditions	
Free fall	
• Fall height, max.	0.3 m; five times, in product package
Software	
Browser software required	Web browser Mozilla Firefox (ESR31) or Microsoft Internet Explorer (10/11)
Connection method	
required front connector	Yes
Design of electrical connection	Screw connection
Mechanics/material	
Material of housing	Plastic: polycarbonate, abbreviation: PC- GF 10 FR
Dimensions	
Width	70 mm
Height	112 mm
Depth	75 mm
Weights	
Weight, approx.	260 g

More information

Digitalization in drive technology

Data analysis and Apps

SIPLUS CMS1200 Condition Monitoring System > Accessories

Overview

SIPLUS CMS1200 SM 1281 shield clamp set

CMS1200 accessories

SIPLUS CMS1200 SM 1281 shield clamp set, 6AT8007-1AA20-0AA0

An additional shield clamp set must be ordered for the EMC-compliant connection of cables to the SIPLUS CMS1200 SM 1281 Condition Monitoring.

The shield clamp set comprises two shield clamps and five terminal clamps. One shield clamp is screwed on above and one below the module. The sensor cable shields are connected to the shield clamps by means of the terminal clamps.

VIB-SENSOR vibration sensors

VIB-SENSOR S01 vibration sensor

VIB-SENSOR S01 vibration sensor, 6AT8002-4AB00

VIB-SENSOR S02 vibration sensor, 6AT8008-2AA00-0AA0

VIB-SENSOR S03 vibration sensor, 6AT8008-2AA02-0AA0

The VIB-SENSOR vibration sensor with IEPE (integrated electronics piezo-electric) interface can be directly connected to the CMS1200 SM1281 Condition Monitoring module.

The sensor detects vibration accelerations.

A threaded screw with an M8 male thread for mounting to the measuring point is included in the scope of delivery. The connecting cable is connected to the vibration sensor via the MIL connector.

SIPLUS CABLE-MIL connecting cables

SIPLUS CABLE-MIL connecting cables

SIPLUS CABLE-MIL connecting cables 6AT8002-4AC03, 6AT8002-4AC10 and 6AT8008-2BA12-0AA0

The VIB-SENSOR vibration sensor is connected to the SIPLUS CMS1200 SM1281 Condition Monitoring module by means of the SIPLUS CMS CABLE-MIL connecting cable.

This high-quality industrial cable is made of black polyurethane and is pre-assembled on one end with a MIL connector (MIL-C5015). The open cable end of the shielded two-wire cable is connected directly to the screw terminals of the basic unit.

The connecting cable is available in lengths of 3 m, 10 m and 30 m.

Overview

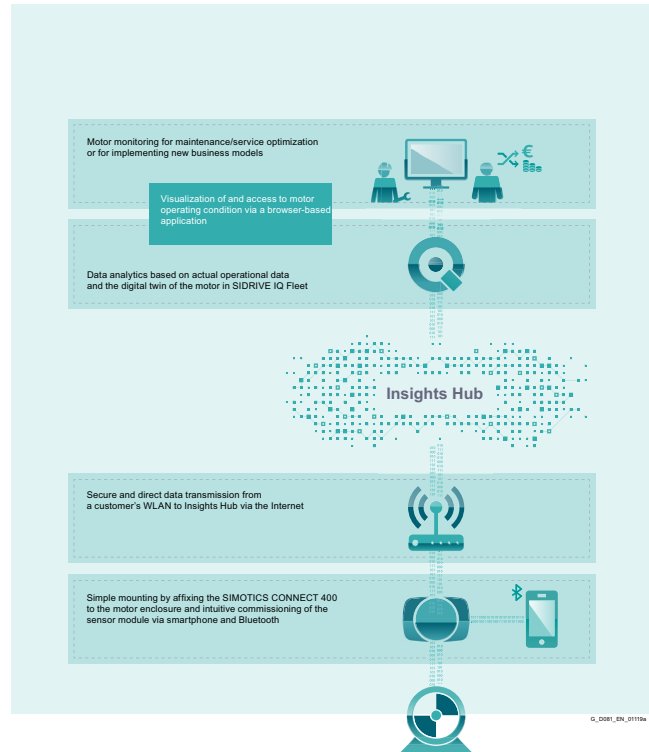

Drive systems keep production running and play a key role in countless production processes. Faults or the failure of individual drive components often result in costly production outages, which is why it's so important to monitor the condition of the machine park.

The prevention of failures through timely and planned action requires end-to-end operational transparency and measures such as targeted, proactive maintenance.

With the plug&play connectivity module SIMOTICS CONNECT 400 and the analytics app SIDRIVE IQ Fleet, you can implement a cost effective, cloud-based solution for continuous condition monitoring and comprehensive fleet management of your low-voltage motors – worldwide and 24/7.

Your low-voltage motors are equipped with SIMOTICS CONNECT 400, a connectivity module for measuring and preprocessing the motor-specific status data that's analyzed in SIDRIVE IQ Fleet.

Whether you're monitoring new motors or flexibly upgrading your installed base – in many use cases, the SIDRIVE IQ Fleet Insights Hub application improves the reliability, availability, efficiency, performance, and productivity of your low-voltage motors. You take advantage of preventive maintenance for your motors using reliable status data and information on maintenance intervals.

Besides monitoring the actual health of your motor fleet, the cloud-based SIDRIVE IQ Fleet application embedded in the Insights Hub ecosystem provides nearly endless opportunities for customer business models.

Enabling new digital business models is a key feature and differentiator in the architecture of SIDRIVE IQ Fleet.

Plug&play is key:

Installation, commissioning and configuration of SIMOTICS CONNECT 400 is as easy as it gets. Operators have the system up and running within minutes.

Data is transferred automatically and therefore guarantees a continuous condition monitoring of your motor fleet.

Benefits

- **Simplicity and user-friendliness:**
 - Simple mounting by gluing the sensor module SIMOTICS CONNECT 400 to the motor
 - Fast commissioning and configuration, thanks to the intuitively operated smartphone app SIDRIVE IQ Config
 - Use of standard network hardware (no manufacturer-specific gateways needed)
- **Autonomous design:** Power supply via battery pack and data transfer via WLAN require no connecting cables
- **Optimized serviceability:** Simple as well as ecologically and economically practical maintenance by replacing the battery pack
- **Optimum operational transparency:** SIMOTICS CONNECT 400 and SIDRIVE IQ Fleet help machine operators to better understand their machines and all relevant components. With knowledge of how the motors are currently running and what changes in operation have occurred, it's possible to make predictions about operational performance in the future.
- **Anomaly detection and trend analyses** based on historical data for optimizing your plant
- **Adjustable limit values and automated alarms** help you to detect impending failures well in advance and prevent them through maintenance activities
- **Take advantage of our expert knowledge of drive technology** by taking into account operational data (including historical), digital twins of the motors, intelligent algorithms, and analytics
- **Access to cloud-based analytics in Insights Hub** from any terminal device via a web browser, without software installation

Higher data quality and precision for Siemens motors, thanks to the use of equivalent electrical circuit diagrams, product-specific data from production, and other additional elements from the digital twin of the motor.

Integration

Insights Hub – the Siemens IoT-as-a-service solution

Insights Hub is the leading industrial IoT as a service solution. Using advanced analytics and AI, Insights Hub powers IoT solutions from the edge to the cloud – with data from connected products, plants and systems – to optimize operations, create

better quality products and deploy new business models. Insights Hub empowers customers and partners to quickly build and integrate personalized IoT applications or utilize the existing ones, such as SIDRIVE IQ Fleet.

in various applications

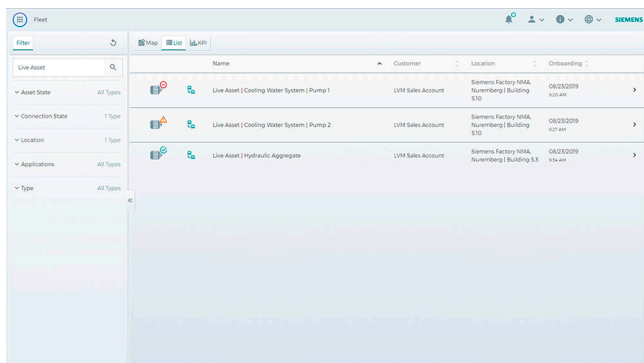

SIDRIVE IQ Fleet – cloud-based solution for motor monitoring

The Insights Hub application SIDRIVE IQ Fleet allows you to access all relevant data of your installed motors.

The application includes a variety of functions which assist you in managing motors' maintenance and operations. SIDRIVE IQ Fleet provides you with aggregated statistics and localization of your fleet, as well as individual KPIs, logbook, motor profile and product documentation.

By using SIDRIVE IQ Fleet you can optimize your fleet maintenance tasks, reduce unscheduled downtime and increase your plant availability.

More information

The SIDRIVE IQ Fleet offering consists of two main package types:

SIDRIVE IQ Fleet Package Basic includes the Insights Hub base tenant, the application SIDRIVE IQ Fleet and selected MindSphere resources which are required to access the Platform and to utilize the application.

SIDRIVE IQ Fleet Asset Packages enable you to connect additional motors to your tenant.

Benefit from the pre-defined SIDRIVE IQ Fleet Packages, tailored to your needs. Find the complete SIDRIVE IQ Fleet offering in the Insights Hub Store and choose between multiple packages to start your IoT experience by connecting your motors.

SIDRIVE IQ Fleet Package Basic

Description:

- provides unique customer tenant with customizable URL and pre-installed SIDRIVE IQ Fleet application
- deployable also on existing customer IoT Value Plan

Provided value:

- free-of-charge access to Insights Hub and motor monitoring application SIDRIVE IQ Fleet
- easy-to-understand business model without any hidden costs

SIDRIVE IQ Fleet Asset Packages

Description:

- increases the connectable assets to the tenant by x assets, depending on the package you purchase
- provides the exact amount of Insights Hub resources needed for connecting and monitoring x motors

Provided value:

- risk-free and convenient scalability thanks to a flexible asset-based payment model
- benefit of lower per-asset-prices by selecting multiple-asset-packages

All the packages have a standard subscription duration of one year and get automatically renewed at the end of the 12 months. You can find additional information and the terms & conditions in the SIDRIVE IQ Fleet Package Product Sheet.

Purchasing process via Insights Hub Store

[Process for your Insights Hub account creation and SIDRIVE IQ Fleet Packages purchase via Insights Hub Store](#)

If you do not have yet a Insights Hub Account, access Insights Hub Store and follow the steps below to start your journey with SIDRIVE IQ Fleet.

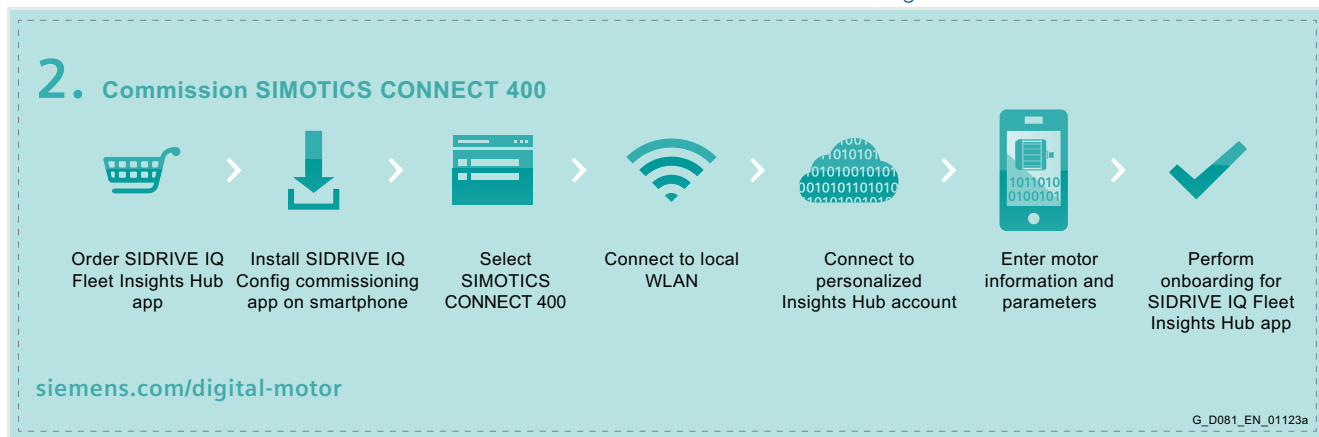

This product can only be ordered via S-DEX, Insights Hub store. Please find the link below for SIDRIVE IQ Fleet on S-DEX, Insights Hub store.

www.siemens.com/order-sidrive-iq-fleet

If you already have a Insights Hub payer account, you can purchase the packages starting directly with step 3.

You can find more information and a tutorial SIDRIVE IQ Fleet Packages purchasing process on our website www.siemens.com/digital-motor.

• Get SIDRIVE IQ Fleet app via the Insights Hub Store

- Order SIDRIVE IQ Fleet Package Basic (tenant and application) plus at least one SIDRIVE IQ Fleet Asset Package,
- e.g. SIDRIVE IQ Fleet Package 1 Asset

• Download commissioning app onto your smartphone

Install SIDRIVE IQ Config on your mobile device to configure SIMOTICS CONNECT 400

• Commission SIMOTICS CONNECT 400

Integrate the sensor module into the local WLAN network and onboard it to Insights Hub by using our intuitive mobile app SIDRIVE IQ Config

Overview

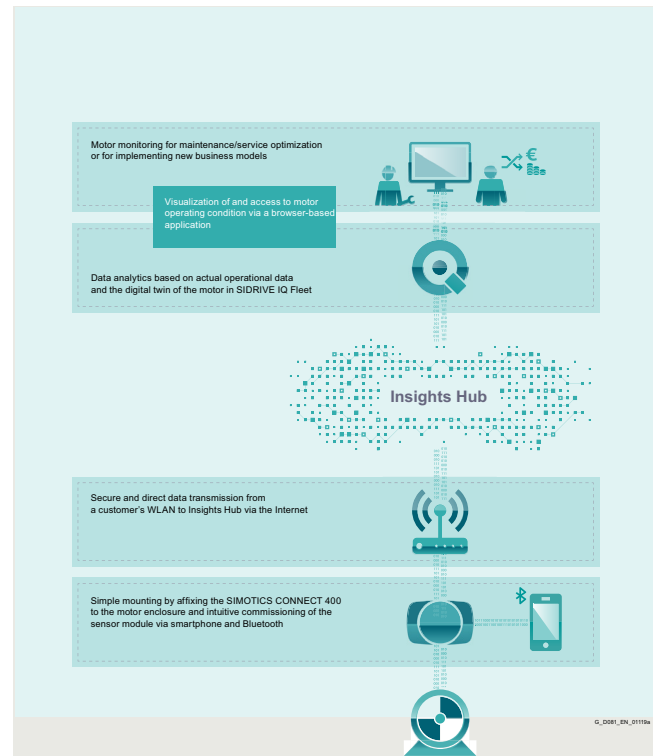

Drive systems keep production running and play a key role in countless production processes. Faults or the failure of individual drive components often result in costly production outages, which is why it's so important to monitor the condition of the machine park.

The prevention of failures through timely and planned action requires end-to-end operational transparency and measures such as targeted, proactive maintenance.

With the plug&play connectivity module SIMOTICS CONNECT 400 and the analytics app SIDRIVE IQ Fleet, you can implement a cost effective, cloud-based solution for continuous condition monitoring and comprehensive fleet management of your low-voltage motors – worldwide and 24/7.

Your low-voltage motors are equipped with SIMOTICS CONNECT 400, a connectivity module for measuring and preprocessing the motor-specific status data that's analyzed in SIDRIVE IQ Fleet.

Whether you're monitoring new motors or flexibly upgrading your installed base – in many use cases, the SIDRIVE IQ Fleet Insights Hub application improves the reliability, availability, efficiency, performance, and productivity of your low-voltage motors. You take advantage of preventive maintenance for your motors using reliable status data and information on maintenance intervals.

Besides monitoring the actual health of your motor fleet, the cloud-based SIDRIVE IQ Fleet application embedded in the Insights Hub ecosystem provides nearly endless opportunities for customer business models.

Enabling new digital business models is a key feature and differentiator in the architecture of SIDRIVE IQ Fleet.

Plug&play is key:

Installation, commissioning and configuration of SIMOTICS CONNECT 400 is as easy as it gets. Operators have the system up and running within minutes.

Data is transferred automatically and therefore guarantees a continuous condition monitoring of your motor fleet.

Benefits

- **Simplicity and user-friendliness:**
 - Simple mounting by gluing the sensor module SIMOTICS CONNECT 400 to the motor
 - Fast commissioning and configuration, thanks to the intuitively operated smartphone app SIDRIVE IQ Config
 - Use of standard network hardware (no manufacturer-specific gateways needed)
- **Autonomous design:** Power supply via battery pack and data transfer via WLAN require no connecting cables
- **Optimized serviceability:** Simple as well as ecologically and economically practical maintenance by replacing the battery pack
- **Optimum operational transparency:** SIMOTICS CONNECT 400 and SIDRIVE IQ Fleet help machine operators to better understand their machines and all relevant components. With knowledge of how the motors are currently running and what changes in operation have occurred, it's possible to make predictions about operational performance in the future.
- **Anomaly detection and trend analyses** based on historical data for optimizing your plant
- **Adjustable limit values and automated alarms** help you to detect impending failures well in advance and prevent them through maintenance activities
- **Take advantage of our expert knowledge of drive technology** by taking into account operational data (including historical), digital twins of the motors, intelligent algorithms, and analytics
- **Access to cloud-based analytics in Insights Hub** from any terminal device via a web browser, without software installation
- **Higher data quality and precision** for Siemens motors, thanks to the use of equivalent electrical circuit diagrams, product-specific data from production, and other additional elements from the digital twin of the motor

Digitalization in drive technology

Connectivity

SIMOTICS CONNECT 400 connectivity module for LV motors

Technical specifications

General information	
Product category	Sensor and communication module
Product description	SIMOTICS CONNECT 400 with integrated sensors monitors the condition of the motor to make its operation transparent, which facilitates application and process optimizations. SIMOTICS CONNECT 400 can be used in conjunction with the Insights Hub app SIDRIVE IQ Fleet only.
Monitoring application	Visualization of motor health status and data analytics based on digital motor twins are offered in the comprehensive SIDRIVE IQ Fleet Insights Hub app.
Measured motor parameters	Temperature, radial/tangential/axial vibration, electrical stator frequency, slip frequency.
Calculated motor parameters	Motor state (on/off), rotation speed, torque ¹⁾ , electrical power ¹⁾ , energy consumption ¹⁾ , number of starts, hours of operation
Extended monitoring and maintenance support	External noise cancelling via peak detection for vibration monitoring, automatic threshold suggestions, maintenance requirements, such as relubrication interval
Supported motors	Fin-cooled, 3-phase asynchronous low-voltage motors in line operation (DOL) and converter operation (VSD), IEC frames sizes 80 to 450 and NEMA frame sizes 48 to 680.
Installation/mounting	
Mounting type and position	Externally mounted on the motor's cooling fins with a mounting bracket (glued). As described in the installation instructions.
Qualified adhesives	HENKEL LOCTITE HY 4090, Weicon Fast Metal Minute Adhesive, 3M Scotch-Weld DP 8407 NS
Power supply	
Type of supply	Battery pack (LI/SOCI ₂ , 3,6 V, 4 cells, AA size, non-rechargeable)
Battery lifetime	Operating time up to 2 years ²⁾ , replaceable for lifetime extension.
Internal data storage	
Internal flash	Data storage of min. 48 hours ³⁾ , when Insights Hub connection is interrupted.
Communication	
Bluetooth	Used for configuration and commissioning ⁴⁾ <ul style="list-style-type: none"> • Compliance with Bluetooth v4.1 • Frequency: 2400 to 2482 GHz • Range: up to 10 m
WLAN	Used for data transmission ⁵⁾ and firmware updates. <ul style="list-style-type: none"> • IEEE 802.11 b/g/n • Frequency: 2400 to 2485 GHz • Range: up to 100 m
Status information	
Indication LED (blue)	Status information during configuration process.
Integrated sensors	
Measurement interval	Configurable between 1 minute and 1 hour (default: 5 minutes).
Temperature measurement	
Range	-40 to +85 °C
Resolution	0,03° Temperature measured at the contact between connectivity module and mounting bracket.
Vibration measurement	
Physical measuring principle	Overall vibration V_{RMS} 3-axis
Range	0.02 to 180 mm/s 10 Hz to 1.6 kHz
Magnetic field measurement	
Range	0.01 to 300 Hz Rotary stray field
Standards, approvals, certificates	
	CE, FCC, IC, SRRC, RCM, ETA, SDPPI, ICASA, SUBTEL, ARCOTEL, MTC, FAC, CNC, CRC, NBTC, IMDA, OFCA, MOC, KVALITET, ICT, SIGET
Degree and class of protection	
Degree of protection acc. to EN 60529	IP54 (device variant ≤ FS03 up to 12-2021) IP65 (device variant FS03 from 12-2021)
Shock resistance	Max. 100 m/s ² (tested acc. Class 3M4)

¹⁾ For motors in converter operation (VSD) not available, extension via firmware update.

²⁾ At an ambient temperature of 0 to 40° C, a measurement interval of 5 minutes and a transmission of the stored data once every 24 hours.

³⁾ At measurement interval of 1 minute.

⁴⁾ Commissioning consists of integration into the local WLAN network and onboarding to Insights Hub.

⁵⁾ Insights Hub synchronization interval adjustable between 1 and 48 hours (default: 24 hours).

SIMOTICS CONNECT 400 connectivity module for LV motors
Technical specifications

Ambient conditions	
Ambient temperature during operation	-40 to +80 °C
Ambient temperature during storage/ transportation	-20 to +40 °C
Relative humidity	5 to 95 % (without condensation)
Software	
Mobile app for commissioning and configuration	SIDRIVE IQ Config (iOS, Android)
SIMOTICS CONNECT Firmware Update	Prepared for remote firmware update via Insights Hub (v0.6.0.0 or newer)
Mechanics/material	
Housing material	Industrial Plastic Durethan (polyamide, halogen-free, glass-fiber reinforced)
Material of the	
• mounting bracket	stainless steel
• screws	steel, galvanized and passivated
Dimensions	
• Length x height x depth	IP54 version: 125 x 76 x 29 mm IP65 version: 125.4 x 77.5 x 29 mm
Weight	
Weight connectivity module, approx..	0.25 kg
Weight connectivity module including mounting material, approx.	0.5 kg
Documentation and information	
More technical product information and documentation is available at:	www.siemens.com/digital-motor

Design

The delivery is made as a single product packaging:

- SIMOTICS CONNECT 400 connectivity module including batteries (battery plug disconnected during transport)
- Metal mounting bracket for installation on the motor housing
- Retaining screws
- Assembly instructions
- Safety and security information sheet
- CD with license texts

Note:

The adhesive is NOT included in the scope of delivery. We recommend using one of the below listed adhesives, which have been tested and qualified by Siemens:
 Henkel LOCTITE HY 4090, Weicon Fast Metal Minute Adhesive, 3M Scotch-Weld DP 8407 NS

Drive Connector SINAMICS – Fingerprint-Adapter - Fingerprint triggering via IE-Databus

Drive Connector SINAMICS is an Industrial Edge application which supports easy connectivity with 2nd generation SINAMICS drives.

Drive Connector SINAMICS provides three adapters:

- High-Speed-Adapter (HS Adapter)
 - Supports CU320-2 Control Unit based drives SINAMICS S120, S150, G130, G150.
 - Supports continuous data streaming up to 8 kHz. Maximum speed depends on network and drive configuration.
 - Requires the extension TRCDATA running on CU320-2 Control Unit.
- Fingerprint-Adapter (Fingerprint)
 - Supports all 2nd generation SINAMICS S and SINAMICS G drives which support drive internal trace functionality.
 - Supports Trace configuration (e.g. number of parameters, sampling cycle, Trace duration).
 - Generates time defined snapshot of the drive data.
 - Fingerprint triggering via IE-Databus enables the user to trigger fingerprint traces via the signals that are published on IE-Databus by other IE applications (e.g. external devices such as PLCs).
 - Fingerprint-Adapter enables the user to receive traces that are configured via commissioning tools STARTER or SINAMICS Startdrive by Fingerprint-Adapter.
- Low-Speed-Adapter (LS Adapter)
 - Supports 2nd generation SINAMICS S and SINAMICS G drives.
 - Supports continuous data streaming up to 10 Hz.

Drive Connector SINAMICS has a dedicated Drive Status Information page for each connected 2nd generation SINAMICS drive.

- Provides basic nameplate information (article number, serial number and firmware) for connected drive objects of each connected 2nd generation SINAMICS drive.
- Provides drive status and temperature information for existing drive objects of each connected 2nd generation SINAMICS drive.

Other features:

- Export and import single drive configuration or single adapter configuration for Low-Speed and Fingerprint-Adapter into a new drive or a new adapter.
- Low-Speed-Adapter Simulator enables the user to simulate drive data (without a real drive) in the same format as LS adapter to be used in other IE applications such as Drivetrain Analyzer Edge.
- The web interface of Drive Connector SINAMICS supports configuration and starting the data acquisition process in a straightforward manner.
- By configuring Drive Connector SINAMICS, the target drive, drive object and signals can be selected easily.

Key features

Drive Connector SINAMICS provides continuous connection between 2nd generation of SINAMICS Drives and Edge Databus with following adapters:

- High-Speed-Adapter supports continuous data acquisition up to 8 kHz via Technology extension TRCDATA.
- Fingerprint-Adapter generates time defined snapshot of the drive data and supports data acquisition up to 2 kHz.
- Low-Speed-Adapter supports continuous data acquisition up to 10 Hz.

Digitalization in drive technology

Connectivity

Drive Connector SINAMICS

Benefits

- Provides transparency about the status of the drive system at any time in high quality.
- Enables basic and advanced analytics and maintenance scheduling like Mechanical Anomaly Detector and Basic Anomaly Detection.
- Enables basic statistics like Energy Efficiency.
- Opens doors for new innovative analysis approaches.
- Highly expandable with other Industrial Edge applications.
- Easy update on app functionality through central Industrial Edge Management system.
- Collects drive data for defined machine operational state by fingerprint triggering via IE-Databus functionality or trace configuration via commissioning tools STARTER or SINAMICS Startdrive.

More information

You can find the manual and additional information of Drive Connector SINAMICS at:

<https://sieportal.siemens.com/su/bjTFD>

This product can also be ordered via S-DEX, Industrial Edge Marketplace store. Please find the link below for Drive Connector SINAMICS on S-DEX, Industrial Edge Marketplace store.

www.siemens.com/order-drive-connector-sinamics

Overview

DriveSim Designer provides easy-to-use models for PROFIdrive-enabled SINAMICS converters, so you can create a digital twin of your drive.

The models are validated and tested against real SINAMICS converters and are available in the form of a standardized FMU (Functional Mockup Unit). Therefore, they are compatible with various standard time-based simulation programs such as SIMIT, Simcenter Amesim, ANSYS Twin Builder, MATLAB Simulink or Hopsan.

DriveSim Designer is another element in your engineering toolbox. Together with other virtual Siemens solutions, e.g. SIMATIC S7-PLCSIM Advanced or NX Mechatronics Concept Designer, a consistent model-based development process can be implemented.

Benefits

- Speed up time-to-market for OEMs
- Test validated SINAMICS models under real conditions already at the design or planning stage and make needed adjustments
- Identify issues and improvement capabilities early in the design stage and reduce testing effort to save time and cost
- Download the free-of-charge basic version with reduced functionality set, DriveSim Basic, to try the suitability of our solution before buying it
- The full version DriveSim Designer offers a wide range of additional functionalities to improve the SINAMICS simulation model, e. g. safety or position telegrams
- Valid for the most used Siemens drives

Advantages of DriveSim Designer compared to SIMIT PROFIdrive blocks:

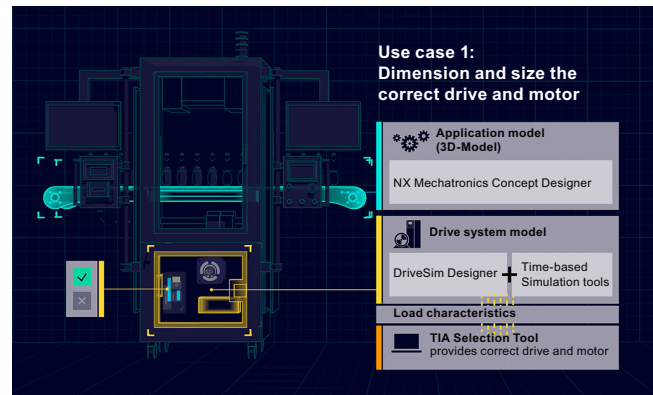

- Increased level of detail due to speed controller, current setpoint filters and internal load model
- Identical parameter values and meaning as in the real SINAMICS device
- Direct reference to SINAMICS documentation
- Basic Safety functions
- Brake control functions for lifting applications
- Validated against the real SINAMICS drive
- No wiring effort to represent functional configurations
- Significant reduction of SIMIT simulation tags (even more is possible if unused in-/ outputs are deselected within the Component Type Editor (CTE))
- Enables simulation of an (internal) two-mass oscillator as application with realistic SINAMICS parameter settings, besides the known limitations by the minimum sample time in SIMIT
- Compatible with every FMU Co-Simulation 2.0 compatible simulation tool

Application

With DriveSim Designer, you can implement three major use cases:

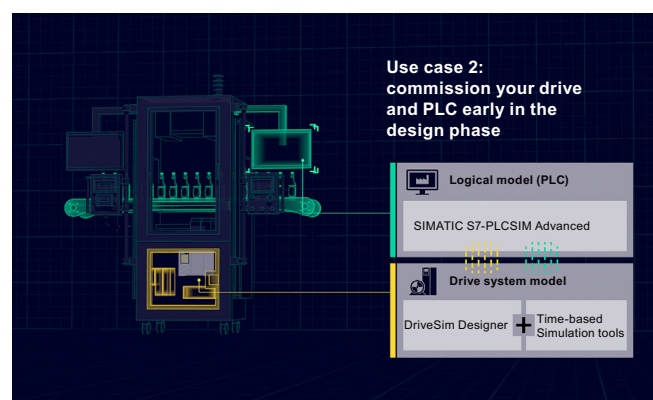

- Providing load characteristics for drive selection and dimensioning
- Virtual commission your PLC already in the design phase
- Test and improve interaction between PLC, drives and application virtually

Use case 1: Dimension and size the correct drive and motor for your application

If you are designing a machine, you want to make sure that you select the SINAMICS converter and SIMOTICS motor most suitable for your drive application. As DriveSim Designer is control-unit-agnostic and thus represents a generic drive, you can parametrize it according to the functionality of your application. Running the simulation results in load characteristics, i.e. torque or speed curves over time. You can import these load profiles into TIA Selection Tool to select the suitable Control Unit and dimension the drive to best fit to the demand. So as a result you have well selected SINAMICS converters and SIMOTICS motors with the help of the digital twin.

Use case 2: Virtual commission your drive and PLC early in the design phase

If you are designing a machine, you want to make sure the PLC code works with your SINAMICS drive. After writing the PLC code in TIA Portal, you can connect it via PLCSIM Advanced to any time-based simulation tool (e.g. SIMIT). Integrated into the simulation tool, DriveSim Designer acts as a realistic communication partner for the PLC. Next, you can commission the virtual PLC in TIA Portal as you would do with a real PLC connected to a real drive. Without simulation, you would need to do that on-site. With simulation, you not only save time, but also have the freedom to try out various configurations and optimize your PLC code early in the process.

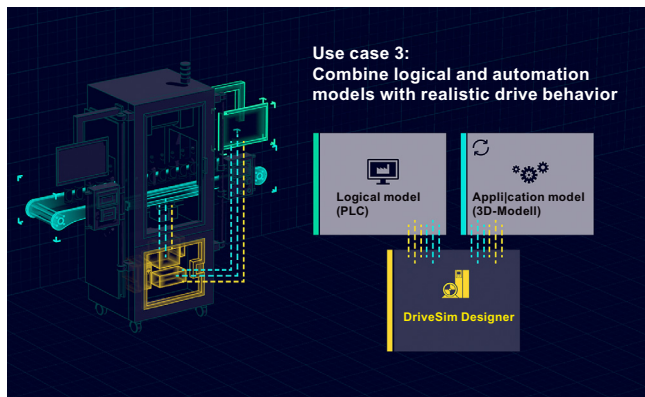

Digitalization in drive technology

Virtualization

DriveSim Designer

Application

Use case 3: Combine the application model and automation model with realistic drive system behavior

With the third Use case, you can connect a simulation tool such as NX Mechatronic Concept Designer to visualize the mechanical movements of your application. This way, you ensure that the drive behaves according to the desired machine performance. You can test several fault scenarios and optimize the interaction between PLC, application and drive virtually so overall, you can avoid unplanned machine behavior and increase the performance of your setup.

Integration

DriveSim Designer can be run in tools that support FMU 2.0 Co-Simulation Import (<https://fmi-standard.org/tools/>).

The FMU has been tested in the following simulation environments and is available in the attached application examples.

Tool	Manufacturer	DriveSim*** variant	PLC Sim Advanced interface	Notes
SIMIT	Siemens	***.fmu	Yes	<ul style="list-style-type: none"> Permissible configuration: ExternalLoad = 1 & . Speed-Controller = 0 or ExternalLoad = 0 & . Speed-Controller = 1 Simulation with external load can provide wrong results because the minimum possible time step is 1 ms
Simcenter Amesim	Siemens	***_double.fmu	Yes	
MATLAB Simulink	MathWorks	< 2019a ***_unstruct.fmu ≥ 2019a ***.fmu	Yes	
ANSYS Twin Builder	ANSYS	***.fmu	No	
Hopsan	Linköping University	***_double.fmu	No	<ul style="list-style-type: none"> Open Source Install "win64-with_compiler-installer.exe" package

Cybersecurity information

Siemens provides products and solutions with industrial cybersecurity functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial cybersecurity measures that may be implemented, please visit www.siemens.com/cybersecurity-industry

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Cybersecurity RSS Feed under www.siemens.com/cert

Siemens Product Configurator

Overview

The Siemens Product Configurator helps you to configure the optimum drive technology products for a number of applications. The product portfolio comprises the full drive technology range of gearbox, motor, converter and connection system as well as corresponding controller with suitable software license. The intuitive user interface in conjunction with product-specific preliminary selectors makes it simple, fast and efficient to configure products. The result is a bill of materials with extensive documentation consisting of technical data sheets, motor characteristic curves, 2D dimensional drawings / 3D CAD models, EPLAN macros and much more. You can order the products directly by transferring the bill of materials to the shopping cart of SiePortal.

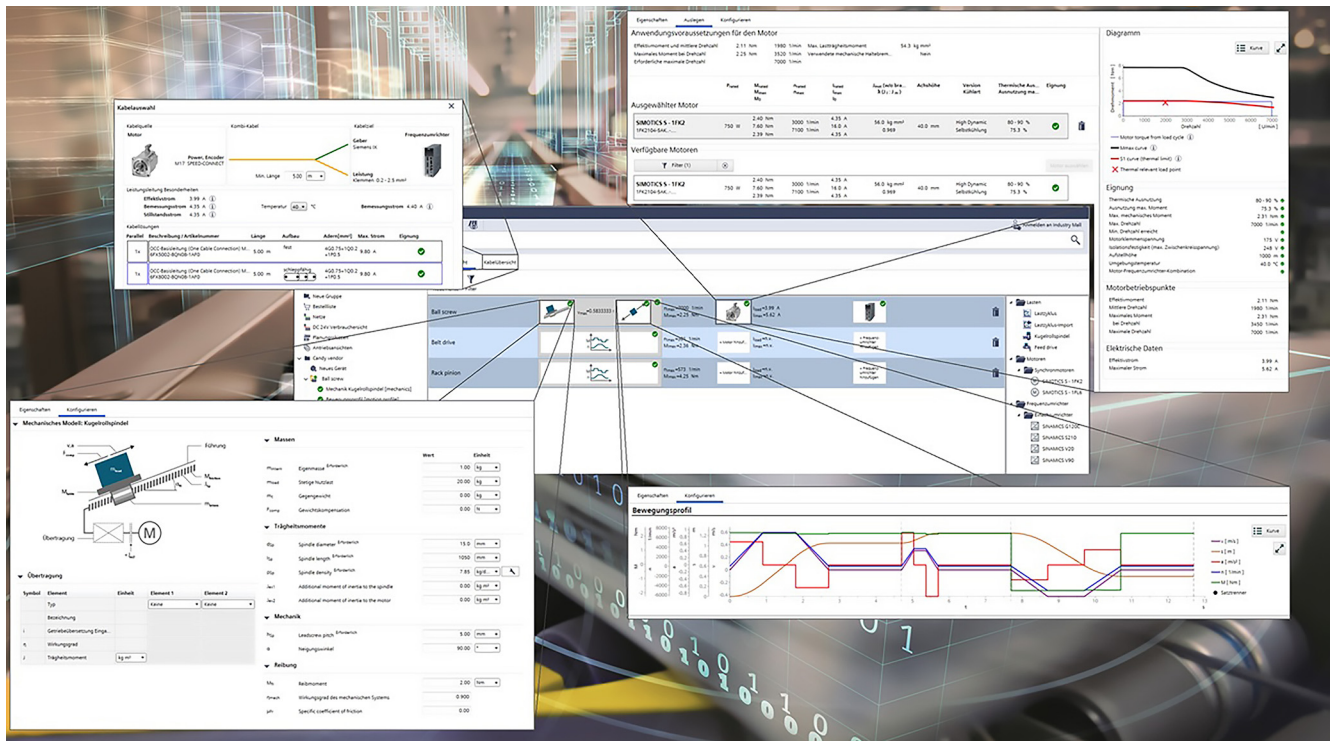

Siemens Product Configurator at a glance

- Quick and easy configuration of drive products and associated components – gearboxes, motors, converters, controllers, connection systems
- Extensive documentation for all products and components, such as
 - Data sheets in up to 12 languages
 - Motor characteristic curves
 - 2D dimensional drawings / 3D CAD models in different formats
 - Terminal box drawing and terminal connection diagram
 - Certificates
 - EPLAN macros
- Ability to order products directly through SiePortal

Access to the Siemens Product Configurator

The Siemens Product Configurator can be accessed without the need for registration or logging in:
www.siemens.com/spc

Overview

Selection guide and configurator for automation technology

Error-free configuration without expert knowledge through intelligent configurators and selection wizards. Desktop and cloud versions enable cross-team collaboration with maximum flexibility.

There are two versions of the TIA Selection Tool:

- for downloading and executing on Windows PCs (from Microsoft Windows 10)
- One for running from the cloud, which is launched from mobile devices directly in the browser (we recommend Safari, Chrome and Firefox)

Projects stored in the cloud can be edited with both tools. This makes it possible to work on-the-go using a tablet, at home on a PC – and vice versa, or together with colleagues and customers.

In order to use the full functionality, we recommended setting up a SiePortal account for both cases. This gives you access to prices and enables you to save your projects to our cloud.

You can find additional information about the TIA Selection Tool at:

www.siemens.com/tia-selection-tool

Drive dimensioning in the TIA Selection Tool

Application-specific requirements can be determined using drive technology dimensioning in the TIA Selection Tool. This can include motors, gearboxes and converters. The tool supports the configuration and dimensioning of control functions with an open and closed control loop. The technical documentation with features of the technical drive system, as well as a product list for ordering via SiePortal can also be compiled.

You can find more information on the SIZER for Siemens Drives engineering tool at

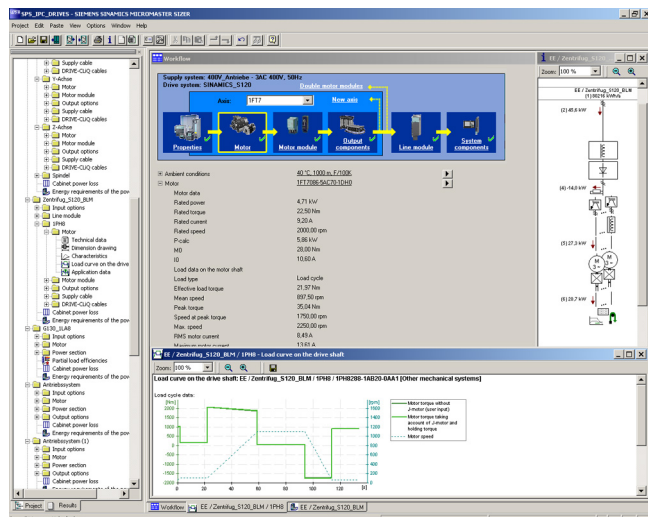

<https://support.industry.siemens.com/cs/ww/en/ps/13434/dl>

Tools and engineering

Engineering tools

SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool)

Overview

The following drives and controls can be engineered in a user-friendly way using the SIZER for Siemens Drives engineering tool:

- SIMOTICS motors, including servo geared motors
- SINAMICS low-voltage drive systems
- Motor starters
- SINUMERIK CNC
- SIMOTION Motion Control controller
- SIMATIC controller

It provides support when selecting the technologies involved in the hardware and firmware components required for a drive task. SIZER for Siemens Drives covers the full range of operations required to configure a complete drive system, from basic single drives to demanding multi-axis applications.

SIZER for Siemens Drives supports all of the engineering steps in one workflow:

- Configuring the power supply
- Designing the motor and gearbox, including calculation of mechanical transmission elements
- Configuring the drive components
- Compiling the required accessories
- Selecting the line-side and motor-side power options, e.g. cables, filters, and reactors

When SIZER for Siemens Drives was being designed, particular importance was placed on a high degree of usability and a universal, function-based approach to the drive application. The extensive user guidance makes it easy to use the tool. Status information keeps you continually informed about the progress of the configuration process.

The drive configuration is saved in a project. In the project, the components and functions used are displayed in a hierarchical tree structure.

The project view permits the configuration of drive systems and the copying/inserting/modifying of drives already configured.

The configuration process produces the following results:

- A parts list of the required components (export to Excel, use of the Excel data sheet for import to SAP)
- Technical specifications of the system
- Characteristic curves
- Comments on line harmonic distortions
- Mounting arrangement of drive and control components and dimensional drawings of motors
- Energy requirements of the configured application

These results are displayed in a results tree and can be reused for documentation purposes.

Support is provided by the technological online help menu:

- Detailed technical specifications
- Information about the drive systems and their components
- Decision-making criteria for the selection of components
- Online help in English, French, German, Italian, Chinese and Japanese

System requirements

- PG or PC, with Pentium III min. 800 MHz (recommended > 1 GHz)
- 512 MB RAM (1 GB RAM recommended)
- At least 2 GB of free hard disk space
- An additional 100 MB of free hard disk space on Microsoft Windows system drive
- Screen resolution 1024 × 768 pixels
- Operating system:
 - Microsoft Windows 7 (32/64-bit) Professional, Enterprise, Ultimate, Home
 - Microsoft Windows 8.1 (32/64-bit) Professional, Enterprise, Ultimate, Home
 - Microsoft Windows 365
 - Microsoft Windows 10 (64-bit) Professional, Enterprise
- Microsoft Office 2003/2007/2010/2013/2016/365
- Microsoft Internet Explorer V8.0
- Microsoft .NET Framework 2.0
- OpenGL 2.1

More information

Drive dimensioning in the TIA Selection Tool

Application-specific requirements can be determined using drive technology dimensioning in the TIA Selection Tool. This can include motors, gearboxes and converters. The tool supports the configuration and dimensioning of control functions with an open and closed control loop. The technical documentation with features of the technical drive system, as well as a product list for ordering via SiePortal can also be compiled.

You can find more information on the SIZER for Siemens Drives engineering tool at

<https://support.industry.siemens.com/cs/ww/en/ps/13434/dl>

You can find more information about the TIA Selection Tool at: www.siemens.com/tia-selection-tool

Overview

The user-friendly STARTER commissioning tool can be used for:

- Commissioning
- Optimization
- Diagnostics

This software can be operated as a standalone PC application, or integrated as a TIA-compatible program in SIMATIC STEP 7, or highly integrated into the SCOUT Engineering System (for SIMOTION). The basic functions and handling are the same in both cases.

In addition to the SINAMICS drives, STARTER also supports MICROMASTER 4 devices.

The project wizards can be used to create the drives within the structure of the project tree.

Beginners are supported by solution-based dialog guidance, whereby a standard graphics-based display maximizes clarity when setting the drive parameters.

First commissioning is guided by a wizard which makes all the basic settings in the drive. Therefore, getting a motor up and running is merely a question of setting a few of the drive parameters as part of the drive configuration process.

The individual settings required are made using graphics-based parameterization screens, which also precisely visualize the principle of operation of the drive.

Examples of individual settings that can be made include:

- Use of terminals
- Bus interface
- Setpoint channel (e.g. fixed setpoints)
- Closed-loop speed control (e.g. ramp-function generator, limits)
- BICO interconnections
- Diagnostics

For experts, the expert list can be used to specifically and quickly access individual parameters at any time. An individual compilation of frequently used parameters can be saved in dedicated user lists and watch tables.

In addition, the following functions are available for optimization purposes:

- Self-optimization of the controller settings (depending on drive unit)
- Setup and evaluation of trace recordings¹⁾
 - Tool function for recording 2 × 8 signals with
 - Measuring cursor function
 - Extensive trigger functions
 - Several Y scales
 - Sampling times in the current controller cycle clock

Diagnostics functions provide information about:

- Control/status words
- Parameter status
- Operating conditions
- Communication states

Performance features

- User-friendly: Only a small number of settings need to be made for successful first commissioning: The motor starts to rotate
- Solution-oriented dialog-based user guidance simplifies commissioning
- Self-optimization functions reduce manual effort for optimization.

System requirements

The following minimum requirements must be complied with:

- Hardware
 - PG or PC with Pentium III min. 1 GHz (recommended >1 GHz)
 - Work memory 2 GB (4 GB recommended)
 - Screen resolution 1024 × 768 pixels, 16-bit color depth
 - Free hard disk memory: min. 5 GB
- Software
 - Microsoft Internet Explorer V6.0 or higher
 - 64-bit operating systems:
 - Microsoft Windows Server 2019
 - Microsoft Windows Server 2022
 - Microsoft Windows 10 Pro
 - Microsoft Windows 10 Enterprise
 - Microsoft Windows 11 Home, Pro and Enterprise (64 bit)

Supported virtualization platforms

STARTER (V5.1 SP1 and higher) can be installed on a virtual machine. For this purpose, one of the following virtualization platforms in the specified version or a newer version can be used:

- VMware vSphere Hypervisor ESX(i) V8.0
- VMware Workstation Pro 17
- VMware Player 17
- Microsoft Hyper-V Server 2022

You can use the following guest operating systems to install STARTER within the selected virtualization platform:

- Microsoft Windows 10 Pro/Enterprise (64 bit)
- Microsoft Windows 11 Pro/Enterprise (64 bit)

Notes:

- The same hardware requirements apply to the guest operating system as for STARTER and SINAMICS DCC.
- The system operator must ensure that the guest operating systems have sufficient system resources.
- The use of manufacturer-certified hardware is recommended for the operation of VMware vSphere Hypervisor ESX(i).

¹⁾ Depending on drive unit. Not supported for MICROMASTER 4, SINAMICS G110, SINAMICS G120 <firmware V4.4, SINAMICS G110D and SINAMICS G120D <firmware V4.5.

Tools and engineering

Engineering tools

STARTER commissioning tool

Integration

Data can be exchanged (depending on the version) via PROFIBUS or PROFINET/Ethernet or via a serial interface.

For commissioning and service, a PG/PC can be connected to the CU320-2 Control Unit via PROFIBUS. A PROFIBUS connection must be available with a connecting cable at the PG/PC.

Further, communication between a CU320-2 Control Unit and PG/PC can also be established via Ethernet, either via an (optional) CBE20 Communication Board or the Ethernet interface -X127 on the CU320-2 Control Unit.

Note:

The terminal strip -X127 is suitable as a communication link to the PG/PC only for the purposes of servicing and commissioning.

Selection and ordering data

Description	Article No.
STARTER commissioning tool Single license and certificate of license German, English, French, Italian, Spanish <ul style="list-style-type: none"> On DVD-ROM Software download (email address required for delivery)	6SL3072-0AA00-0AG0 6SL3072-0AA00-0AK0

Note:

In addition to the STARTER commissioning tool, SINAMICS Drive Control Chart (SINAMICS DCC) can be installed. This allows the device functionality in the SINAMICS drive system to be expanded with dedicated technology functions as required.

Further information about SINAMICS DCC can be found in the section SINAMICS DCC (Drive Control Chart) with STARTER.

Accessories

Depending on the version of the Control Unit (CU), the Control Unit of the drive unit can communicate with the programming device (PG) or PC via PROFIBUS or PROFINET/Ethernet or via a serial interface. The following accessories are available for the particular drive system as listed in the following table.

Description	Recommended accessories
SINAMICS S120	
• RS232	Standard null modem cable -
• PROFIBUS	CP 5711 communication module USB adapter for connecting a PG or notebook to PROFIBUS or MPI USB cable (2 m (6.56 ft)) included in scope of supply 6GK1571-1AA00
	SIMATIC DP plug-in cable 12 MBaud, for PG connection, pre-assembled with 2 x 9-pin SUB D connector, 3 m (9.84 ft) 6ES7901-4BD00-0XA0
• PROFINET/Ethernet	Standard CAT5 Ethernet cable or PROFINET cable -

More information

The STARTER commissioning tool is also available on the internet under www.siemens.com/starter

Overview

SINAMICS DCC (Drive Control Chart) is a technological expansion for the SINAMICS S120/S150/G130/G150/MV/DCM/DCP drive systems. This allows the device functions of the SINAMICS drive system to be expanded individually with freely available closed-loop control, arithmetic and logic blocks. SINAMICS DCC for STARTER enables simple, graphic configuration of these blocks and integrates them in the drive unit.

A comprehensive standard library is available for the configuration, which can be expanded by additional libraries, the so-called DCB Extension.

Via the Siemens application support, a range of example applications (winder, synchronous operation, cross-cutter, etc.) are available for download on the basis of SINAMICS DCC with STARTER and can be used as a ready-to-use solution or be individually adapted or expanded.

Minimum hardware and software requirements

See [STARTER commissioning tool](#).

Minimum software requirements for existing SIMATIC CFC Editor

The installation of STARTER V5.6 HF1 and SINAMICS DCC V3.6 HF1 results in the following minimum requirements:

- When using STEP 7 OEM V5.7 in the standalone installation: SIMATIC CFC Editor V9.0 SP5 Upd4
- When using STEP 7 V5.7 SP1 full version (with monitoring of application integrity): SIMATIC CFC Editor V9.0 SP5 Upd4
- When using STEP 7 V5.7 SP1 full version (without monitoring of the application integrity): SIMATIC CFC Editor V9.0 SP3 Upd4

Please check the minimum requirements in relation to the product SIMATIC CFC when installing STEP 7 or SIMATIC PCS 7.

Selection and ordering data

SINAMICS DCC consists of a graphic configuration tool (DCC Editor based on SIMATIC CFC) and the standard library. SINAMICS DCC is installed as an add-on to the STARTER commissioning tool.

The SINAMICS DCC V3.6 HF1 with SIMATIC CFC Editor V9.0 SP8 Upd1 software package is a component of STARTER V5.6 HF1.

The necessary license key (floating license) for the configuration of SINAMICS DCC V3.6 HF1 must be ordered separately.

The included DCB standard library of SINAMICS DCC V3.6 HF1 does not require a runtime license. Existing licenses for SINAMICS DCC V2.1 and higher can also be used for SINAMICS DCC V3.6 HF1.

An upgrade variant for the application in STARTER V5.6 HF1 and SINAMICS DCC V3.6 HF1 is available for an existing license key of SINAMICS DCC V2.0 SPx.

Description	Article No.

<ul style="list-style-type: none"> • License key on USB flash drive 	6AU1810-1HA34-0XB0
<ul style="list-style-type: none"> • Upgrade license key on USB flash drive 	6AU1810-1HA34-0XF0
SINAMICS DCB Extension license Runtime license for license upgrading with firmware version V4.6 or later (can also be ordered in conjunction with the CompactFlash card, see CompactFlash card for CU310-2 and CU320-2 Control Units)	
<ul style="list-style-type: none"> • Electronic license 	6SL3077-0AA00-0AHO
SINAMICS DCB Studio V2.3 SP1 Development tool for programming blocks that can be imported as an additional library (DCB Extension) for SINAMICS DCC in STARTER or in the TIA Portal	On request

Further information about SINAMICS DCB Extension and SINAMICS DCB Studio can be found in the section SINAMICS DCC (Drive Control Chart) in the TIA Portal.

Tools and engineering

Engineering tools

SINAMICS Startdrive commissioning tool

Overview

SINAMICS Startdrive is integrated in the TIA Portal and is a tool for the configuration, commissioning and diagnostics of the SINAMICS family of converters.

The SINAMICS Startdrive commissioning tool has been optimized with regard to user friendliness and consistent use of the TIA Portal benefits of a common working environment for PLC, HMI and drives. Time-saving and guided step-by-step commissioning with maximum flexibility is complemented by user-friendly graphic function views for all drive functions, including functional safety (Safety Integrated) and drive-based technology functions (e.g. EPOS). The automatic message display, the powerful real-time trace and the context-sensitive online help make converter diagnostics very easy.

The software packages based on the TIA Portal are harmonized with each other and offer important benefits, the main advantage being a shared project storage. The TIA Portal enables simple integration of SINAMICS converters in your automation solution. Thanks to the standardization of operator actions and the integration in general TIA Portal operating concepts (e.g. UMAC, Openness) as well as standard TIA Portal functions (e.g. Undo/Redo), familiarization is easy both for drive experts as well as SIMATIC users. Special focus is placed on the interaction between SIMATIC and SINAMICS, especially when connecting the SINAMICS drives to SIMATIC technology objects.

Integration

Supported frequency converters

SINAMICS Startdrive Basic enables complete commissioning, diagnostics, parameterization, optimization and connection to the PLC for the following SINAMICS converters integrated in SINAMICS Startdrive:

- SINAMICS G120, G120C, G120D, G120P
- SINAMICS G115D
- SINAMICS G130, G150
- SINAMICS G220 (as of V18 SP2)
- SINAMICS S120 ¹⁾, S150
- SINAMICS S200 (as of V18 SP2)
- SINAMICS S210 and SINAMICS S210 (New) (as of V18 SP1)
- SINAMICS MV

¹⁾ Includes SINAMICS S220 Smart Line Modules booksize format as of SINAMICS Startdrive V17 Update 1.

SINAMICS Startdrive Advanced

With SINAMICS Startdrive Advanced (available as of V15) you benefit from powerful engineering functions that save you considerable time and ultimately costs.

- Safety acceptance test:
 - Guided acceptance test wizard for all drive-based Safety Integrated functions
 - Automatic and safety function-specific generation of traces to analyze the machine behavior
 - Generation of an acceptance report as Excel file (xlsx format, can also be used with OpenOffice)
 - Safety Activation Test
- Improved optimization options in the drive: Extended measuring functions (available for CU320-2 PN/DP and CU310-2 PN as of V5.2 SP3, SINAMICS S210 (New) as of V6.1 and SINAMICS S200 as of V6.2), long-term trace
- Also contains all Startdrive Basic functions
- Only license key required, no additional installation

New in V19

Startdrive Basic V19

- Support of the shared device functionality for SINAMICS S210, S120, G220 for separate control of the drives by separate controllers
- Improvement of the library function for individual drive objects in the multi-axis system
- Integration of the decentralised SINAMICS S120M drives
- Integration of the drive version V6.3 for SINAMICS S200 and SINAMICS S210 (New):
 - Introduction of the positioning function EPOS for SINAMICS S210 (New)

Startdrive Advanced V19

- Long-term trace functionality for CU320-2 PN/DP and CU310-2 PN-based drive units

Integration**Installation versions**

SINAMICS Startdrive can be installed as an optional package to SIMATIC STEP 7 or as a stand-alone application (without SIMATIC STEP 7).

System requirements

The following table shows the recommended hardware and system equipment for the operation of SINAMICS Startdrive.

Hardware	Recommendation
Computer	As of SIMATIC FIELD PG M6 Comfort (or comparable PC)
Processor	Intel Core i5-8400H (2.5 ... 4.2 GHz; 4 cores + hyper-threading; 8 MB Smart Cache)
RAM	16 GB or more (32 GB for large projects)
Hard disk	SSD with at least 50 GB available memory
Screen resolution	15.6" Full HD display (1920 × 1080 or larger)
Operating systems	<ul style="list-style-type: none"> • Microsoft Windows 10 (64 bit) <ul style="list-style-type: none"> - Windows 10 Professional Version 22H2 - Windows 10 Enterprise 21H2, 22H2 - Windows 10 Enterprise 2016 LTSC - Windows 10 Enterprise 2019 LTSC - Windows 10 Enterprise 2021 LTSC • Microsoft Windows 11 (64 bit) <ul style="list-style-type: none"> - Windows 11 Home Version 21H2, 22H2 - Windows 11 Professional Version 21H2, 22H2 - Windows 11 Enterprise 21H2, 22H2 • Microsoft Windows Server (64 bit) <ul style="list-style-type: none"> - Windows Server 2016 Standard (full installation) - Windows Server 2019 Standard (full installation) - Windows Server 2022 Standard (full installation)

Compatibility with other products

- SINAMICS Startdrive V19 operates with STEP 7, WinCC and Scout TIA V19 in one framework
- SINAMICS Startdrive V19 can be installed on the same computer in parallel with other versions of SINAMICS Startdrive V12 to V18
- SINAMICS Startdrive can be installed on the same computer as SINAMICS MICROMASTER STARTER

Supported virtualization platforms

SINAMICS Startdrive can be installed in a virtual machine. For this purpose, one of the following virtualization platforms in the specified version or a newer version can be used:

- VMware vSphere Hypervisor (ESXi) 6.7
- VMware Workstation 15.5.0
- VMware Player 15.5.0
- Microsoft Hyper-V Server 2019

Supported safety programs

The following safety programs have been tested with SINAMICS Startdrive V19:

- Virus scanners:
 - Symantec Endpoint Protection 14.6
 - Trend Micro OfficeScan 14.0
 - McAfee Endpoint Security (ENS) 10.6 and 10.7
 - Microsoft Defender
 - Qihoo 360 "Safe Guard 12.1" + "Virus Scanner"
- Encryption software:
 - Microsoft Bitlocker
- Host-based Intrusion Detection System
 - McAfee Application Control 8.3.3

Note:

SINAMICS DCC can be installed in addition to the SINAMICS Startdrive commissioning tool. This allows the device functionality in the SINAMICS drive system to be expanded with dedicated technological functions as required.

Further information about SINAMICS DCC can be found in the section SINAMICS DCC (Drive Control Chart) in the TIA Portal.

More information

The SINAMICS Startdrive Basic commissioning tool is available free on the internet at www.siemens.com/startdrive

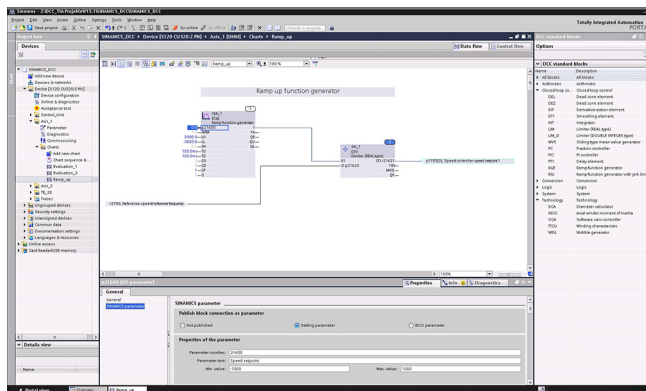

Tools and engineering

Engineering tools

SINAMICS DCC (Drive Control Chart) in the TIA Portal

Overview

SINAMICS DCC (Drive Control Chart) is a technological expansion for the SINAMICS S120/S150/G130/G150/MV drive systems and for SIMATIC Drive Controller. This allows the device functions of the converter systems to be expanded individually with freely available closed-loop control, arithmetic and logic blocks and thus opens up a new dimension of adaptation capabilities for the specific functions of the machine for the user. The user-friendly configuration tool in the TIA Portal enables simple, graphic configuration of these blocks and integrates them in the drive unit. SINAMICS DCC is available as an option for SINAMICS Startdrive Basic and Advanced in the TIA Portal.

With the integration into the TIA Portal, the focus is on simple usability. For this reason, closed loop control and open loop control functions can be graphically interconnected in just a few steps via drag and drop.

The SINAMICS DCC installation contains a comprehensive standard block library. Furthermore, additional libraries can be installed as DCB Extension to expand the range of functions of the blocks. The diagnostics functions allow the program behavior to be verified and, in the case of a fault, the cause to be identified.

Via the Siemens application support, a range of example applications (winder, synchronous operation, cross-cutter, etc.) are available for download on the basis of SINAMICS DCC and can be used as a ready-to-use solution or be individually adapted or expanded.

New in V19

- Upload of complex charts that were created with the SINAMICS MICROMASTER STARTER commissioning software
- Simplified localization of DCC parameters in the plan by cross-referencing them in the parameter view
- Statistics overview of plan contents
- Openness extensions for editing charts

Licenses

SINAMICS DCC V19 is delivered with a SINAMICS DCC V19 combo floating license. The floating license allows the use of software on any number of computers. This allows one user per license to use the software independently of the computer being used or a specific workstation. The number of existing licenses determines the number of computers on which the software can be used simultaneously.

- Existing SINAMICS DCC combo licenses V15 ... V18 can be upgraded to V19. This requires an upgrade license.
- The combo license allows parallel use of SINAMICS DCC V3.3/V3.4 and SINAMICS DCC V19 if both tools are installed on the same PC.

Installation versions

SINAMICS DCC is an option package for SINAMICS Startdrive Basic and Advanced.

System requirements

The SINAMICS DCC V19 option package has the same system requirements and supports the same virtualization platforms and safety programs as SINAMICS Startdrive V19.

Compatibility with other products

- SINAMICS DCC V19 operates with Startdrive, STEP 7 and WinCC in one framework
- SINAMICS DCC V19 can be installed on a computer in parallel with SINAMICS MICROMASTER STARTER with SINAMICS DCC

Supported languages

- Standard installation: English, German, Chinese (simplified)
- Language packages: French, Italian, Spanish

Selection and ordering data

SINAMICS DCC in the TIA Portal, consisting of the graphical configuration tool and the standard library, is the continuation of SINAMICS DCC in the STARTER.

No runtime license is required for the standard library included in the scope of supply.

Description	Article No.
SINAMICS DCC V19 for TIA Portal incl. Floating as an option package for SINAMICS Startdrive Basic or Advanced V19 Combo license key (floating license) German, English, French, Italian, Spanish, Chinese Simplified <ul style="list-style-type: none"> On DVD-ROM with license key on USB flash drive Software download incl. license key (email address required for delivery) 	6SL3070-4KA01-0XA5 6SL3070-4KA01-0XG5

Software Update Service with SINAMICS DCC in the TIA Portal ¹⁾ Delivery is performed according to the number of ordered SUS products (e.g. 10 upgrade license keys with 10 DVD-ROMs, 10 USB flash drives, etc.) <ul style="list-style-type: none"> On DVD-ROM with license key on USB flash drive Software download incl. license key (email address required for delivery) 	6SL3070-4AA01-0XL8 6SL3070-4AA01-0XY8

DCB Extension

With DCB Extension, additional libraries can be added as specifically programmed blocks to the standard block library. As a result, complex tasks can be implemented in the drive and the internal know-how protection can be increased as a Black Box. These blocks or libraries are programmed with the separate SINAMICS DCB Studio development tool in the C/C++ high-level language and can be used as a DCB Extension library for SINAMICS DCC in the TIA Portal and SINAMICS DCC in STARTER. The use of these blocks from DCB Extension libraries requires a SINAMICS DCB Extension runtime license.

SINAMICS DCB Extension license

Runtime license for re-licensing as of firmware V4.6 for the use of additional blocks/libraries (can also be ordered together with the CompactFlash card, see CompactFlash card for the Control Units CU310-2 and CU320-2) 6SL3077-0AA00-0AH0

SINAMICS DCB Studio V2.3

Development tool for programming blocks that can be imported as an additional library (DCB Extension) for SINAMICS DCC in the TIA Portal or in STARTER (upon request)

More information

TIA Portal highlights

SINAMICS web server for SINAMICS S120

Overview

Web server for efficient diagnostics and maintenance – available everywhere at all times

The SINAMICS drive system can be expanded with the web server to provide an efficient diagnostics and maintenance option. The web server provides access to multi-faceted new options for drive diagnostics and remote maintenance for every network-compatible PC with a Web browser. For example:

- Downloading a configuration
- Updating firmware
- Providing a status overview of the drive
- Evaluating warnings and fault messages
- Monitoring and adapting parameter settings
- Saving machine documentation, including notes
- Setting up of a user administration to provide access protection

Integration of the SINAMICS web server as shown by the example of the SINAMICS S120 and PROFINET communication

The SINAMICS web server is available from SINAMICS firmware V4.7 or higher on the CompactFlash card for the Control Units

- CU310-2 DP
- CU310-2 PN
- CU320-2 DP
- CU320-2 PN

For further information, refer to CU310-2 and CU320-2 Control Units.

Benefits

Shorter machine downtimes

- Efficient diagnostics and maintenance

Direct language selection

- English, German, Chinese, Italian, French, Spanish

Accessibility

- Via all LAN or PROFINET interfaces

Two users with different rights can be configured

- e. g. for operators and service personnel

Diagnostic functions

- Quick overview of the current configuration and the state of the drive
- Understandable diagnostic information and messages are displayed in plain text in multiple languages

Freely configurable parameter lists

- Monitoring parameters for diagnostic purposes, for example for operating personnel
- Adapting/optimizing existing projects, for example for service personnel

Updating functions

- The device functionality can be updated from any network-compatible PC (locally or by remote access)
- Series commissioning is possible without the STARTER commissioning tool

Archiving machine documentation

- Appropriate documentation and the state of the service and maintenance work are available on site to the operating and service personnel

Access security

- Protection against unauthorized access to the drive information

Integration of customer-specific websites

- Integrating customer know-how into the websites enables the quick, purposeful diagnostics of the customer application

Application

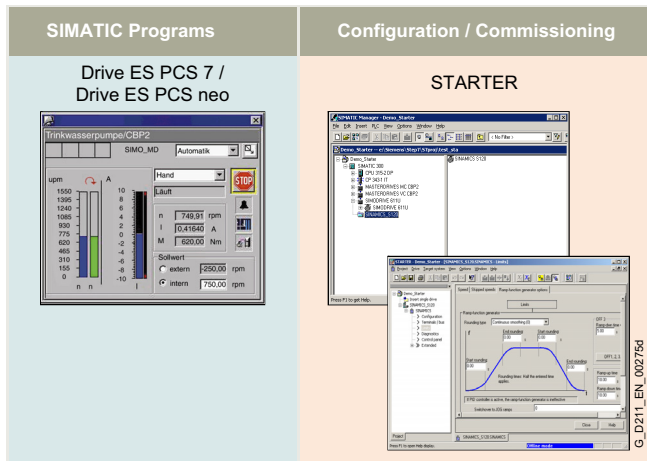

The web server is ideal for applications not requiring any special software (STARTER) or version dependencies. Easy diagnostics and maintenance are possible both locally and remotely, provided appropriate security measures are applied.

More information

Further information about the SINAMICS web server is available on the internet at

www.siemens.com/sinamics-webserver

Overview

Drive ES/STARTER is the engineering system used to integrate the communication, configuration and data management functions of Siemens drive technology into the SIMATIC automation world easily, efficiently and cost-effectively.

The following software packages are available for selection:

- STARTER
- Drive ES PCS 7 / Drive ES PCS neo

The Drive ES (**Drive Engineering Software**) fully integrates drives from Siemens into the world of Totally Integrated Automation (STEP 7 V5.x).

Design

The following software packages are available for selection:

- **STARTER**
- **Drive ES PCS 7** (APL Style or Classic Style) / **Drive ES PCS neo**

STARTER

The STARTER commissioning tool is for first-time users of the world of Totally Integrated Automation and the basic software for setting the parameters of the SINAMICS and MICROMASTER 4 drives online and offline in this environment. The STARTER integration enables both the automation system and the drives to be handled using the SIMATIC Manager software. STARTER is the starting point for common data archiving in complete projects and for extending the use of the routing and the SIMATIC teleservice to drives. STARTER provides the configuration tools for the Motion Control functions – device-to-device communication, equidistance and isochronous operation with PROFIBUS DP and ensures that drives with PROFINET IO are simply integrated into the SIMATIC environment.

Drive ES PCS 7 (APL Style or Classic Style)

Drive ES PCS 7 links the drives with a PROFIBUS DP interface into the SIMATIC PCS 7 process control system, and it requires that SIMATIC PCS 7, V6.1 and higher has first been installed. Drive ES PCS 7 provides a block library with blocks for the drives and the corresponding faceplates for the operator station, which enables the drives to be operated from the PCS 7 process control system. From V6.1 and higher, drives will also be able to be represented in the PCS 7 Maintenance Station.

From Drive ES PCS 7 V8.0 and higher, two versions of the library are available: The APL (Advanced Process Library) variant and the previous version in the so-called Classic Style.

Detailed contents of the Drive ES PCS 7 (APL Style or Classic Style)

- **Block library for SIMATIC PCS 7** Faceplates and control blocks for SIMOVERT MASTERDRIVES VC and MC, as well as MICROMASTER/MIDIMASTER of the third and fourth generation and SIMOREG DC MASTER and SINAMICS
- **STEP 7 V5.x slave object manager** for user-friendly configuration of drives and non-cyclic PROFIBUS DP communication with the drives
- **STEP 7 V5.x device object manager** for easy configuration of drives with PROFINET-IO interfaces (V8.0 SP1 and higher)
- **SETUP program** for installing the software in the SIMATIC PCS 7 environment

Drive ES PCS neo

Siemens SINAMICS drives can be controlled via SIMATIC PCS neo and operated and monitored on the OCM client with the SINAMICS library Drive ES PCS neo. The drive ES PCS neo faceplates make the data relevant for system operation available on the OCM client. The STARTER commissioning tool on the engineering server can also be used for parameter assignment, commissioning and detailed diagnostics of the SINAMICS drives.

Overview**General configuration sequence**

The function description of the machine provides the basis for the configuration. The definition of the components is based on physical dependencies and is usually carried out as follows:

Step	Description of configuration activity
1	Clarification of type of drive
2	Definition of boundary conditions and integration into automated system
3	Definition of loading case, calculation of max. load torque, definition of motor
4	Definition of the Motor Module
5	Repetition of steps 3 and 4 for additional axes
6	Calculation of the required infeed power and defining the Line Module
7	Specification of the required control performance and selection of the Control Unit, definition of component cabling
8	Specification of the line-side power options (main switch, fuses, line filters, etc.) and cable cross-sections for connecting to the line supply and motor
9	Definition of additional system components
10	Calculation of the current requirement for the 24 V DC supply for the components and specification of power supplies (SITOP devices, Control Supply Modules)
11	Specification of components for connection system
12	Configuration of drive line-up components
13	Thermal design of the control cabinet

Configuration begins with the mechanical interface to the machine. A suitable motor is selected according to the specified torques and speeds. A matching power unit is then also chosen. Depending on the requirements of the machine, the motor is supplied as a single drive via a Power Module or within a multi-motor drive group via a Motor Module. Once the basic components have been defined, the system components for matching to the electrical and mechanical interfaces are selected.

The SIZER for Siemens Drives (integrated in the TIA Selection Tool) engineering tool allows the correct components to be selected quickly and easily. Based on the torque and speed characteristics entered, SIZER for Siemens Drives (integrated in the TIA Selection Tool) guides the user through the configuring process, identifying suitable motors and matching SINAMICS power units and other system components.

The following sections describe those SINAMICS S120 components which are needed to create a drive system subject to certain boundary conditions. For information about individual components, please also refer to the online help of the SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool).

Tools and engineering

Configuration notes

EMC notes for the application of the product standard EN 61800-3

Overview

The electromagnetic compatibility describes – according to the definition of the EMC directive – the "capability of a device to work satisfactorily in an electromagnetic environment without itself causing electromagnetic interference which is unacceptable for other devices present in this environment". To guarantee that the appropriate EMC standards are observed, the devices must demonstrate a sufficiently high noise immunity, and also the emitted interference must be limited to acceptable values.

Product standard EN 61800-3 describes the EMC requirements placed on "Variable-speed drive systems".

A variable-speed drive system (or Power Drive System PDS) consists of the Control Unit and Power Module or Control Unit, Line Module and Motor Module plus the relevant electric motors and encoders including connecting cables.

The driven machine is not part of the drive system.

Environments

EN 61800-3 defines different requirements depending on the location where the drive is installed, designated as a first and second environment.

Residential buildings or locations where the drive system is directly connected to a public low-voltage supply without intermediate transformer are defined as the **first environment**.

All locations outside a residential area are defined as the **second environment**. These are basically industrial areas which are supplied from the medium-voltage network via their own transformers.

Categories

Four different categories are defined in EN 61800-3 depending on the installation site of the drive:

Category C1: Drive systems for rated voltages < 1000 V for unlimited use in the first environment.

Category C2: Stationary drive systems for rated voltages < 1000 V for use in the second environment. Use in the first environment is possible if the drive system is operated and installed by qualified personnel. The warning information and installation instructions supplied by the manufacturer must be observed.

Category C3: Drive systems for rated voltages < 1000 V for exclusive use in the second environment.

Category C4: Drive systems for rated voltages ≥ 1000 V, for rated currents ≥ 400 A or IT supply systems for use in complex systems in the second environment. An EMC plan must be drawn up.

First environment	C1	Second environment
	C2	
	C3	
	C4	

G_D213_EN_00009a

EMC notes for the application of the product standard EN 61800-3

Configuration

SINAMICS S120 Power Drive Systems (PDS) can be operated in the first and second environments. The measures necessary for operation in the respective environment are subsequently listed.

Measures for complying with product standard EN 61800-3 second environmentInterference immunity

The SINAMICS S120 drive system is suitable for operation in the second environment.

Regarding interference immunity, SINAMICS S120 can be used in the **first and second environments**.

Interference emission – complying with Category C2 second environment

Regarding interference emission, to comply with the limit values according to EN 61800-3 second environment, Category C2, the following measures must be applied:

Device-specific assignment of the measures to comply with product standard EN 61800-3 second environment, Category C2

SINAMICS S120 drive system			Measures for	Maximum pulse frequency f_p kHz	Maximum motor cable length (shielded) m (ft)

	380 ... 480 V 3 AC	FSA ... FSC	External line filter required ¹⁾	4	50 (164)	
		FSD ... FSF (75 and 90 kW)	Version with integrated line filter available	4	150 (492)	
		FSF (110 and 132 kW)	Version with integrated line filter available	2	150 (492)	
		FSG	Version with integrated line filter available	2	150 (492)	
	500 ... 690 V 3 AC	FSD ... FSF	Version with integrated line filter available (Category C3)	2	100 (328)	
		FSG	Version with integrated line filter available (Category C3)	2	300 (984)	

Interference emission – complying with Category C3 second environment

All Active Line Modules in booksize format, Basic Line Modules in booksize format 100 kW as well as Line Modules in chassis format in the standard version are compliant.

A line reactor is required for Power Modules in chassis format.

The maximum cable lengths and pulse frequencies (see the previous table) must be taken into account.

For Active Line Modules in booksize format, when using an external line filter, the maximum cable length can be increased to 1000 m (3281 ft).

¹⁾ Selection and ordering data for line filters and line reactors see sections [Line-side power components](#).

- The drive system must be installed in compliance with EMC regulations by appropriately trained professionals.
- The SINAMICS S120 drive system requires a radio interference suppression filter, Category C2 (integrated as line filter, or as optional external line filter with/without line reactor)
- The pulse frequency is less than or equal to the rated pulse frequency
- The maximum motor cable length is complied with (shielded)
- Line supply with grounded neutral point (TN/TT supply system)

Interference emission – complying with Category C4 second environment

When connected to IT line supplies, only devices without integrated filter, Basic Line Modules in booksize format up to 40 kW, and all Smart Line Modules in booksize format are permissible. To limit symmetrical interference emission, suitable external filters without capacitors connected to ground must be used.

Further selected accessories are available from "Siemens Product Partner for Drives Options":

www.siemens.com/drives-options-partner

²⁾ Refers to the pulse frequency of the Motor Modules.

Tools and engineering

Configuration notes

EMC notes for the application of the product standard EN 61800-3

Configuration

Measures for complying with product standard EN 61800-3 first environment

Only PM240-2 Power Modules in blocksize format can be used in the first environment.

Interference immunity

The SINAMICS S120 drive system is suitable for operation in the second environment.

Regarding interference immunity, SINAMICS S120 can be used in the **first and second environments**.

Interference emission – complying with Category C2 first environment

For use in the first environment, **in addition** to the requirements for use in the second environment, device-specific notes to maintain the **harmonic current** limits must be **taken into consideration**. Here, EMC product standard EN 61800-3 makes reference to the standards pertaining to harmonic currents: EN 61000-3-2 and EN 61000-3-12.

Device-specific notes for complying with harmonic current limit values according to EN 61000-3

- Power Modules with a power $P_N \leq 1$ kW
Complying with limit values according to EN 61000-3-2 cannot be guaranteed in this case. The installation company or company operating professionally used devices must obtain authorization to connect the device to the low-voltage grid from the responsible power utility company.
- Power Modules with a power $P_N > 1$ kW and a rated input current $I_{N, input} < 16$ A
These devices are not subject to any limit values regarding the harmonic currents, and can therefore be connected to the public low-voltage grid without prior authorization.
- Power Modules with a rated input current > 75 A
There are no applicable standards when installing these types of devices. However, it is recommended that the utility company (grid operator) be informed when connecting such a device.

Device-specific measures to comply with harmonic current limit values:

Power Modules in blocksize format with a rated input current $I_{N, input} > 16$ A and ≤ 75 A				Measures to comply with harmonic current limits according to EN 61000-3-12	
Rated power	Rated input current $I_{N, input}$	Supply voltage	Frame size	Line reactor $u_k = 4\%$	Minimum short-circuit power S_{SC} at the connection point of the customers plant or system
3 ... 7.5 kW	20.7 ... 37 A	200 ... 240 V 3 AC	FSC	Required ¹⁾	$S_{SC} \geq 120 \times \sqrt{3} \times U_{line} \times I_{N, input}$
5.5 ... 15 kW	17.2 ... 39.9 A	380 ... 480 V 3 AC	FSB and FSC	Required ¹⁾	
11 ... 18.5 kW	40 ... 64 A	200 ... 240 V 3 AC	FSD	Not required	$S_{SC} \geq 120 \times \sqrt{3} \times U_{line} \times I_{N, input}$
18.5 ... 37 kW	36 ... 70 A	380 ... 480 V 3 AC	FSD	Not required	

Example of calculating the minimum short-circuit power required

Determining the minimum short-circuit power S_{SC} for the Power Module in blocksize format FSD: 37 kW with $U_{line} = 400$ V and $I_{N, input} = 70$ A

$$S_{SC} \geq 120 \times \sqrt{3} \times U_{line} \times I_{N, input}$$

The short-circuit power must be greater than $120 \times 1.73 \times 400 \text{ V} \times 70 \text{ A} = 5812$ kVA

As guide value, this typically corresponds to a low-voltage transformer with an apparent power of approximately 300 ... 400 kVA.

Note:

The installation company or company operating the device is responsible for ensuring that this device is only connected at a connection point with an appropriate short-circuit power (fault level), if this is necessary after consulting the power utility (grid operator).

The installation company or company operating the device requires authorization from the power utility (grid operator) in the following situations:

- Three-phase connection to a line supply with lower short-circuit power
- Three-phase connection without a line reactor
- Connecting single-phase devices with a rated input current $I_{N, input} > 16$ A

¹⁾ Available from the "Siemens Product Partner for Drives Options":
www.siemens.com/drives-options-partner

More information

Converters are equipment used on a professional basis, deployed in certain areas of business and industry – and are not operated in the general public domain.

- The values apply with low-capacitance CY cables – the max. permissible motor cable length is 50 m (164 ft) (shielded) and 100 m (328 ft) (unshielded) as standard.
- For frame sizes FSD to FSG the maximum permissible cable lengths are not increased with an output reactor. By means of the output reactor, the loading of the motor windings is reduced by lower rates of voltage rise (dv/dt). By means of two output reactors connected in series, the maximum permissible cable lengths for frame sizes FSD and FSE are increased to 350 m (1148 ft) (shielded) and 525 m (1723 ft) (unshielded), and for frame sizes FSF and FSG to 525 m (1723 ft) (shielded) and 800 m (2625 ft) (unshielded).

For EMC-compliant installation, observe the information in the Configuration Manual EMC installation guideline:

<https://support.industry.siemens.com/cs/document/60612658>

- Maximum overvoltage at the motor terminals <1350 V with cable lengths up to 450 m (1476 ft) shielded or 650 m (2133 ft) unshielded – maximum overvoltage at the motor terminals <1500 V with cable lengths up to 525 m (1723 ft) shielded or 800 m (2625 ft) unshielded.
- The values apply with low-capacitance CY cables – the max. permissible motor cable length is 50 m (164 ft) (shielded) as standard.
- The 690 V versions of the PM240-2 Power Modules frame size FSG are only available with an integrated Category C3 filter. To operate the converter also within TN systems with grounded outer conductor, you must remove the grounding screw.
- More information is available on the internet at www.siemens.com/sinamics-g120/documentation

Tools and engineering

Configuration notes

SINAMICS S120 Control Units

Overview

For the closed-loop control of drives and the implementation of basic technological tasks, for SINAMICS S120 the CU320-2 Control Unit is available for multi-axis applications, and the CU310-2 Control Unit is available for individual drives.

Sophisticated Motion Control tasks are best supported using the powerful SIMOTION D Control Units (D410-2, D425-2, D435-2, D445-2, D455-2) with scaled performance.

Each of these Control Units is based on object-orientated SINAMICS S120 standard firmware, which includes all of the usual V/f control modes, scalable so that even the highest performance requirements can be satisfied.

The following are ready-to-configure drive objects (drive controls):

- The control for a line infeed:
Infeed Control
- The control for the broad scope of rugged asynchronous (induction) motors and torque motors, including sensorless:
Vector Control
- The control for permanent-magnet excited synchronous and servo asynchronous motors with demanding dynamic requirements:
Servo Control

All these control versions are based on the principle of field-oriented, closed-loop vector control, with a special expansion for reluctance motors.

The most commonly used V/f control modes are stored in the "Vector control" drive object and are ideal for implementing even simple applications such as group drives with SIEMOSYN motors.

Configuration

Guide to selecting a closed-loop control variant

SINAMICS S closed-loop control properties

Criteria for assessing control quality	Explanations, definitions
Rise time	The rise time is the period which elapses between an abrupt change in a setpoint and the moment the actual value first reaches the tolerance band (2 %) around the setpoint. The dead time is the period which elapses between the abrupt change in the setpoint and the moment the actual value begins to increase. The dead time is partially determined by the read-in, processing and output cycles of the digital closed-loop control. Where the dead time constitutes a significant proportion of the rise time, it must be separately identified.
Characteristic angular frequency -3 dB	The limit frequency is a measure of the dynamic response of a closed-loop control. A pure sinusoidal setpoint is input to calculate the limit frequency; no part of the control loop must reach the limit. The actual value is measured under steady-state conditions and the ratio between the amplitudes of actual value and setpoint is recorded. -3 dB limit frequency: Frequency at which the absolute value of the actual value drops by 3 dB (to 71 %) for the first time. The closed-loop control can manage frequencies up to this value and remain stable.
Ripple	The ripple is the undesirable characteristic of the actual value which is superimposed on the mean value (useful signal). Oscillating torque is another term used in relation to torque. Typical oscillating torques are caused by certain motor slot arrangements, by limited encoder resolution or by the limited resolution of the voltage control of the IGBT power unit. The torque ripple is also reflected in the speed ripple as being indirectly proportional to the mass inertia of the drive.
Accuracy	The accuracy defines the magnitude of the average, repeatable deviation between the actual value and setpoint under rated operating conditions. Deviations between the actual value and setpoint are caused by internal inaccuracies in the measuring and control systems. External influencing factors, such as temperature or speed, are not included in the accuracy assessment. The closed-loop and open-loop controls should be optimized with respect to the relevant variable.

Configuration

SINAMICS S performance characteristics

Characteristics	Servo Control	Vector Control	V/f control	Notes
Typical application	<ul style="list-style-type: none"> Drives with high dynamic motion control Angular-locked synchronism with isochronous PROFIBUS/PROFINET in conjunction with SIMOTION For use in machine tools and clocked production machines 	<ul style="list-style-type: none"> Variable-speed drives with high speed and torque stability in general machinery construction Especially suitable for induction motors and reluctance motors (1FP1) 	<ul style="list-style-type: none"> Drives with low requirements on dynamic response and accuracy Group drives running with a high degree of precision, e.g. on textile machines with SIEMOSYN motors 	Mixed operation of Servo Control and Vector Control is not possible on CU320-2. Mixed operation is possible for V/f control modes.
Dynamic response	Very high	High	Low	Highest dynamic response with 1FK7/1FT2 High Dynamic synchronous motors and Servo Control.
Control modes with encoder	Position control/ Speed control/ Torque control	Position control/ Speed control/ Torque control	None	SIMOTION D with Servo Control is standard for motion control.
Control modes without encoder	Speed control	Speed control/torque control	All V/f control modes	With Servo for induction motors only. With V/f control, the speed can be kept constant by means of selectable slip compensation.
Asynchronous motor (induction motor)	Yes	Yes	Yes	V/f control (textiles) is recommended for SIEMOSYN motors.

Typical slip values for standard asynchronous motors (induction motors)

Motor output	Slip values	Notes
< 1 kW	6 % of n_N e.g. motor with 1500 r/min: 90 r/min	The slip values of 1PH asynchronous motors are very similar to those of standard motors
< 10 kW	3 % of n_N e.g. motor with 1500 r/min: 45 r/min	
< 30 kW	2 % of n_N e.g. motor with 1500 r/min: 30 r/min	
< 100 kW	1 % of n_N e.g. motor with 1500 r/min: 15 r/min	
> 500 kW	0.5 % of n_N e.g. motor with 1500 r/min: 7.5 r/min	

CU320-2: Axis licensing according to performance enhancement (firmware version 4.3 and higher)

The CU320-2 is licensed purely according to axis number. The expanded performance is essentially required with four or more servo axes, four or more vector axes and seven or more V/f axes, irrespective of computing capacity.

	Dynamic response (current controller clock cycle)	Number of axes without performance enhancement	Number of axes with performance enhancement	Note
Servo Control	62.5 μ s	3	3	3 servo axes are possible with a cycle time of 62.5 μ s. The performance enhancement is therefore ineffective. The performance enhancement is required with 4 or more servo axes irrespective of computing capacity.
	125 μ s	3	6	
	250 μ s	3	6	
Vector Control	250 μ s	3	3	For 250 μ s, 3 vector axes are possible. This means that the performance enhancement is not active. The performance enhancement is required with 4 or more vector axes irrespective of computing capacity.
	500 μ s	3	6	
V/f control	250 μ s	6	6	For 250 μ s, 6 V/f axes are possible. This means that the performance enhancement is not active. The performance enhancement is required with 7 or more V/f axes irrespective of computing capacity.
	500 μ s	6	12	
Mixed operation				
Servo Control plus V/f Control	125 μ s/500 μ s	3+0; 2+2; 1+4; 0+6	6+0; 5+2; 4+4; 3+6 2+8; 1+10; 0+12	Two V/f axes can be computed instead of a servo or vector axis.
Vector Control plus V/f Control	500 μ s/500 μ s	3+0; 2+2; 1+4; 0+6	6+0; 5+2; 4+4; 3+6 2+8; 1+10; 0+12	

CU320-2: Possible quantity structures, maximum configurations

In addition to the number of axes, for example, the following functions and hardware components also have an influence on the possible quantity structure (maximum configuration) of the CU320-2:

- Extended Safety
- EPOS
- DCC
- CAN bus
- High-speed Terminal Modules (task = 250 μ s)

The SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool) can be used to very quickly perform reliability checks on more complex quantity structures.

Configuration notes

SINAMICS S120 Control Units

Configuration

Influencing variables on minimum required pulse frequency of power unit

Basic requirements such as maximum speed or necessary dynamic response of the control have a direct effect in determining the minimum pulse frequency of the power unit. If the minimum pulse frequency required exceeds the rated pulse frequency, derating must be implemented accordingly (see section SINAMICS S120 drive system).

The following table provides a general overview.

Influencing variables		Minimum pulse frequency	Notes
Servo Control, Vector Control (required max. output frequency/speed)	100 Hz correspond to: 3000 r/min for $Z_p = 2$ 1500 r/min for $Z_p = 4$ 428 r/min for $Z_p = 14$ 352 r/min for $Z_p = 17$	1.25 kHz	Z_p is the number of pole pairs of the motor. This equals 2 on 1PH asynchronous motors (induction motors). 1FT7/1FT2 synchronous motors have between 3 and 5 pairs of poles. For torque motors, the numbers of pole pairs are typically 14 and 17. When edge modulation is used (only possible for asynchronous motors), the output frequency is increased by a factor of 2.
	160 Hz correspond to: 4800 r/min for $Z_p = 2$ 2400 r/min for $Z_p = 4$ 685 r/min for $Z_p = 14$ 565 r/min for $Z_p = 17$	2 kHz	
	200 Hz correspond to: 6000 r/min for $Z_p = 2$ 3000 r/min for $Z_p = 4$ 856 r/min for $Z_p = 14$ 704 r/min for $Z_p = 17$	2.5 kHz	
	300 Hz correspond to: 9000 r/min for $Z_p = 2$ 4500 r/min for $Z_p = 4$ 1284 r/min for $Z_p = 14$ 1056 r/min for $Z_p = 17$	4 kHz	
	400 Hz correspond to: 12000 r/min for $Z_p = 2$ 6000 r/min for $Z_p = 4$	4 kHz	
V/f control (required max. output frequency/speed)	100 Hz correspond to: 6000 r/min for $Z_p = 1$ 3000 r/min for $Z_p = 2$	1.25 kHz	V/f Control is only intended for induction motors and SIEMOSYN motors. Z_p is the number of pole pairs of the motor. This is mainly between 1 and 4 on 1LA/1LG standard asynchronous motors (induction motors). SIEMOSYN motors have 1 or 2 pole pairs or, with larger shaft heights, 3 pairs.
	160 Hz correspond to: 9600 r/min for $Z_p = 1$ 4800 r/min for $Z_p = 2$	2 kHz	
	200 Hz correspond to: 12000 r/min for $Z_p = 1$ 6000 r/min for $Z_p = 2$	2.5 kHz	
	300 Hz correspond to: 18000 r/min for $Z_p = 1$ 9000 r/min for $Z_p = 2$	4 kHz	
	400 Hz correspond to: 24000 r/min for $Z_p = 1$ 12000 r/min for $Z_p = 2$	4 kHz	
Dynamic response requirement (current controller clock cycle)	125 μ s 250 μ s 400 μ s 500 μ s	4 kHz 2 kHz 2.5 kHz 1 kHz	Servo Control requires a minimum pulse frequency of 2 kHz.
Sine-wave filters	–	4 kHz	Notice: If sine-wave filters are operated at low pulse frequencies, resonance problems can occur and cause the filters to severely overheat.
Output reactor to motor	Max. frequency: 150 Hz correspond to 4500 r/min for $Z_p = 2$		The output reactor can be operated at minimum 2 kHz only.

Configuration

Core topologies: Component cabling with DRIVE-CLiQ

The components communicate with one another via the standard DRIVE-CLiQ interface.

This couples a Control Unit with the power components, encoders and additional system components, for example Terminal Modules. Setpoints and actual values, control commands, status messages and rating plate data of the components is transferred via DRIVE-CLiQ.

Basic rules for wiring with DRIVE-CLiQ

The following rules apply when wiring components with DRIVE-CLiQ:

- A maximum of 14 nodes can be connected to a DRIVE-CLiQ socket on the CU320-2 Control Unit
- Up to 8 nodes can be connected in a line. A line is always seen from the perspective of the Control Unit
- A maximum of 6 Motor Modules can be operated in a line
- Ring wiring is not permitted
- Components must not be double-wired
- The motor encoder should be connected to the associated Motor Module
- Up to 9 encoders can be operated on one Control Unit
- A maximum of 8 Terminal Modules can be connected
- It is not permissible for the TM54F Terminal Module to be operated on the same DRIVE-CLiQ line as Motor Modules
- The Terminal Modules TM15, TM17 High Feature and TM41 have faster sampling cycles than the TM31 and TM54F. For this reason, the two groups of Terminal Modules must be connected in separate DRIVE-CLiQ lines.
- A DRIVE-CLiQ Hub DMC20/DME20 counts as two nodes

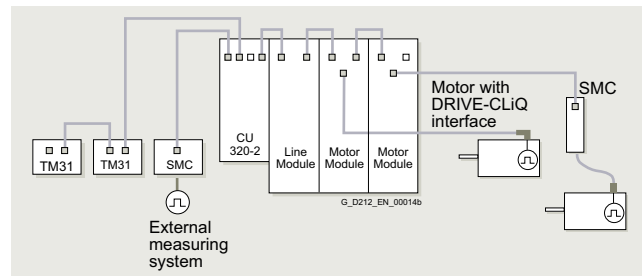

DRIVE-CLiQ configuration examples

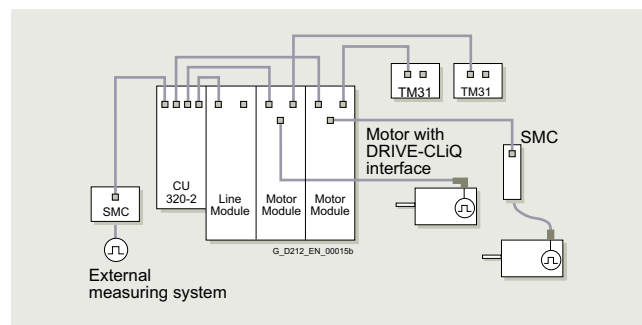

There is a basic clock cycle within a DRIVE-CLiQ connection. For this reason, only combinations of modules with the same sampling cycle or integer-divisible sampling times can be operated on a DRIVE-CLiQ connection. To simplify the configuring process, it is advisable to supply the Line Module and Motor Modules via separate DRIVE-CLiQ connections.

The power components are supplied with the required DRIVE-CLiQ connecting cable for connection to the adjacent DRIVE-CLiQ node in the axis grouping (line topology). Pre-fabricated DRIVE-CLiQ cables in various lengths up to 100 m (328 ft) are available for connecting motor encoders, direct measuring encoders, Terminal Modules, etc.

The DRIVE-CLiQ cable connections inside the control cabinet must not exceed 70 m (230 ft) in length, e.g. connection between the CU320-2 Control Unit and the first Motor Module or between Motor Modules. The maximum permissible length of DRIVE-CLiQ MOTION-CONNECT cables to external components is 100 m (328 ft).

Example of a line topology for standard solutions

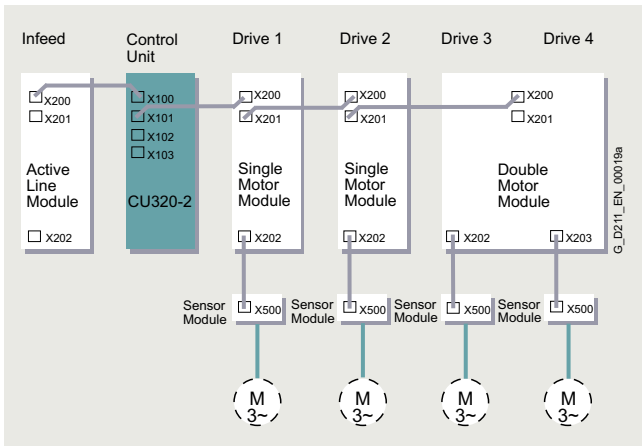

Example of a tree topology for high-performance solutions, e.g. high-speed axes in direct motion control group, selective access to individual axes/axis groupings for maintenance activities, etc.

 Motor Modules: 4 × vector control = current controller clock cycle 500 μs

Wiring illustrated by example of chassis format with different current controller clock cycles

Example of wiring: Power Modules can also be operated on a CU320-2 when connected via a CUA3

12

Configuration

Motor selection

The motor is selected on the basis of the required torque, which is defined by the application, e.g. drives for gantries, hoists, test stands, centrifuges, paper and rolling mill drives, feed drives and main spindle drives. Gear units for movement conversion or for adapting the motor speed and motor torque to the load conditions must also be considered.

As well as the load torque which is determined by the application, the following mechanical data are among those required to calculate the torque to be provided by the motor:

- Masses to be moved
- Diameter of the drive wheel/diameter
- Leadscrew pitch, gear ratios
- Frictional resistance data
- Mechanical efficiency
- Traversing paths
- Maximum velocity
- Maximum acceleration and maximum deceleration
- Cycle time

You must decide whether synchronous, induction or our especially energy-efficient synchronous-reluctance motors are to be used.

Synchronous motors should be selected for compact construction volume, low rotor moment of inertia and therefore maximum dynamic response.

Asynchronous motors (induction motors) can be used to increase maximum speeds in the field-weakening range. Asynchronous motors (induction motors) for higher powers are also available.

The following factors are of prime importance during configuration:

- The line supply configuration when using specific types of motor and/or line filters on IT systems (non-grounded systems)
- The ambient temperatures and the installation altitude of the motors and drive components

The motor-specific limiting characteristics provide the basis for defining the motors.

These define the torque or power characteristic with respect to speed and take into account the motor limits based on the DC link voltage of the Power Module or Motor Module. The DC link voltage in turn is dependent on the line voltage and, with multi-motor drives, on the type of Line Module.

Typical speed/power graph for asynchronous (induction) motors

Torque characteristics of synchronous motors

For detail engineering information, please refer to the motor configuration manuals.

An updated overview of configuration manuals is available in a number of languages on the internet at:
<https://support.industry.siemens.com/cs/document/108993276>

The SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool) is available to assist you with configuring.

Tools and engineering

Configuration notes

Power units

Configuration

Overload capability

The power units of the Line Modules, Motor Modules and Power Modules are designed for brief overloads, i.e. the Modules are capable of supplying more than the rated current I_N for short periods. In this instance, the thermal capacity of the heat sink is utilized, allowing for the relevant thermal time constants. The power semiconductors and actual current sensing circuit are rated for a maximum current I_{max} which must not be exceeded. The overload capability is determined by I_{max} , I_N and the thermal time constants. A number of characteristic duty cycles are defined in the technical specifications for the power units. The SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool) calculates the load on the basis of a specified duty cycle with optional time characteristic and then identifies the power unit which is required.

The thermal time constant of a power semiconductor chip is typically within the range of 100 ms. With frequencies below 10 Hz, the overload capacity is therefore limited. The software takes account of these limitations by means of a thermal model and protects the devices against overload in all operating states. It must be noted, especially at frequencies around 0 Hz, that the specified rated current I_N is the root-mean-square value of a sinusoidal current. If the frequency of the three-phase system is reduced to 0 Hz, a pure direct current flows in all phases at standstill. The root-mean-square value of this direct current can reach the peak value of the sinusoidal current depending on the phase relation.

The output current in this state is greater than the rated current I_N by a factor of $\sqrt{2}$. The individual motor terminals and cables are designed thermally for the rated current in normal operation, so the devices are protected against this overload while taking account of the thermal time constant.

Derating characteristics

The power units can be operated with their rated current or power and the specified pulse frequency up to an ambient temperature of 40 °C (104 °F). The heat sink reaches the maximum permissible temperature at this operating point. If the ambient temperature increases above 40 °C (104 °F), the resulting heat loss must be reduced to prevent the heat sink from overheating.

At a given current, the heat loss increases in proportion to the pulse frequency. The rated output current I_N must be reduced to ensure that the maximum heat loss or heat sink temperature for higher pulse frequencies is not exceeded. When the correction factor k_f for the pulse frequency is applied, the rated output current I_{Nf} that is valid for the selected pulse frequency is adjusted.

When configuring a drive, please note that power units may not be capable of supplying the full current or power in the temperature range between 40 °C (104 °F) and 55 °C (131 °F). The power units measure the heat sink temperature and protect themselves against thermal overloading at temperatures > 40 °C (104 °F).

The air pressure, and therefore air density, drops at altitudes above sea level. At these altitudes, the same quantity of air does not have the same cooling effect and the air gap between two electrical conductors can only insulate a lower voltage. Typical air pressure values are:

0 m (0 ft) above sea level:	100 kPa
2000 m (6562 ft) above sea level:	80 kPa
3000 m (9843 ft) above sea level:	70 kPa
4000 m (13124 ft) above sea level:	62 kPa
5000 m (16405 ft) above sea level:	54 kPa

At installation altitudes above 2000 m (6562 ft), the line voltage must not exceed certain limits to ensure that surge voltages can be insulated in accordance with EN 60664-1 for surge voltage category III. If the line voltage is higher than this limit at installation altitudes > 2000 m (6562 ft), measures must be taken to reduce transient category III surge voltages to category II values, e.g. equipment must be supplied via an isolating transformer.

In order to calculate the permissible output current or power, the derating factors must be multiplied for the effects described above. The derating factor k_I for current as a function of installation altitude can be offset against the derating factor k_T for ambient temperature. If the result of multiplying derating factor k_T by derating factor k_I is greater than 1, then the calculation must be based on a rated current of I_N or I_{Nf} . If the result is < 1, then it must be multiplied by the rated current I_N or I_{Nf} to calculate the maximum permissible continuous current. The derating factor $k = k_f \times k_T \times k_I$ calculated by this method to obtain the total derating value must be applied to all current values in the specified duty cycles (I_N , I_H , I_L).

The derating characteristic curves of Power Modules, Line Modules and Motor Modules can be found in the technical specifications of the relevant modules (see section [SINAMICS S120 drive system](#)).

Configuration

Examples of derating characteristic curves and calculation of the permissible output current:

Current derating as a function of the ambient temperature

Current derating as a function of the installation altitude

Voltage derating as a function of the installation altitude

Example 1

A drive system is to be operated at an altitude of 2500 m (8203 ft) at a maximum ambient temperature of 30 °C (86 °F) and rated pulse frequency.

Since the ambient temperature is below 40 °C (104 °F), a compensation calculation (installation altitude/ambient temperature) can be applied.

Installation altitude 2500 m (8203 ft): Derating factor $k_I = 0.965$, $k_U = 0.94$

Max. ambient temperature 30 °C (86 °F): Derating factor $k_T = 1.133$

$k_I \times k_T = 0.965 \times 1.133 = 1.093 \Rightarrow 1.0$ due to installation altitude/ambient temperature compensation

$k = k_f \times (k_I \times k_T) = 1.0 \times (1.0) = 1.0$

Result: Current derating is not required.

However, IEC 60664-1 stipulates that voltage derating is required.

The units in voltage range 380 V to 480 V can be operated up to a voltage of $480 \text{ V} \times 0.94 = 451 \text{ V}$, and the units in voltage range 660 V to 690 V up to $690 \text{ V} \times 0.94 = 648 \text{ V}$.

Example 2

When a drive line-up is configured, a Motor Module with Article No. 6SL3320-1TE32-1AA0 is selected (rated output current 210 A, base load current for high overload 178 A). The drive line-up is to be operated at an altitude of 3000 m (9843 ft) where ambient temperatures could reach 35 °C (95 °F) as a result of the installation conditions. The pulse frequency must be set to 4 kHz to provide the required dynamic response.

Installation altitude 3000 m (9843 ft): Derating factor $k_I = 0.925$, $k_U = 0.88$

Max. ambient temperature 35 °C (95 °F): Derating factor $k_T = 1.066$

$k_I \times k_T = 0.925 \times 1.066 = 0.987 \Rightarrow$ not fully compensated by installation altitude/ambient temperature

$k = k_f \times (k_I \times k_T) = 0.82 \times (0.925 \times 1.066) = 0.809$

Result: Current derating is required.

Where these boundary conditions apply,

- the max. permissible continuous current of the Motor Module is: $210 \text{ A} \times 0.809 = 170 \text{ A}$
- the base-load current for high overloading is: $178 \text{ A} \times 0.809 = 144 \text{ A}$

IEC 60664-1 stipulates that voltage derating is required.

The selected unit can be operated up to a voltage of $480 \text{ V } 3 \text{ AC} \times 0.88$ or $720 \text{ V DC} \times 0.88 = 422 \text{ V } 3 \text{ AC}$ or 634 V DC . This means that a 400 V induction motor can be operated without any restrictions. Due to the installation altitude, however, derating might be required for the asynchronous motor (induction motor).

Tools and engineering

Configuration notes

Power units

Configuration

Selection of the Power Module or Motor Module

The Motor Module is selected initially on the basis of standstill current $I_{0\ 100\ K}$ (rated current for winding temperature rise 100 K) for synchronous motors and the rated current I_N for asynchronous motors (induction motors), and is specified in the motor description. Dynamic overloads, e.g. during acceleration, must be taken into account by duty cycles and may demand a more powerful Power Module or Motor Module. In this context, it is also important to remember that the output current of the Power Module or Motor Module decreases as a function of installation altitude, ambient temperature and pulse frequency setting (see [explanations of derating characteristics](#)).

For an optimum configuration, the rms motor current I_{load} calculated from the duty cycle is replicated on the Power Module or Motor Module. The following must apply:

$$I_{N, \text{ module}} \geq I_{load}$$

$I_{N, \text{ module}}$ = permissible continuous current of Power Module or Motor Module taking derating characteristic curves into account

The Power Modules or Motor Modules can be required to supply a higher output current for specific time periods. The characteristics or overload capability must be noted (see [section SINAMICS S120 drive system](#)) when modules are engineered for overload.

The SIZER for Siemens Drives engineering tool (integrated in the TIA Selection Tool) is capable of performing precise overload calculations.

Rated current – permissible and non-permissible motor/converter combinations

- Motor rated current higher than rated output current of the Power Module or Motor Module:
In cases where a motor with a higher rated current than the rated output current of the Power Module or Motor Module is to be connected, the motor will only be able to operate under partial load. The following limit applies:
The short-time current ($= 1.5 \times$ base-load current I_H) should be higher or equal to the rated current of the connected motor. Adhering to this dimensioning rule is important because the low leakage inductance of large motors causes current peaks which may result in drive system shutdown or in continuous output limiting by the internal protective electronic circuitry.
- Motor rated current significantly lower than rated output current of the Power Module or Motor Module:
With the vector control system used, the rated motor current must equal at least 1/8 of the rated output current of the Power Module or Motor Module. With lower motor currents, the drive can be operated in V/f control mode.

Using pulse width modulation, the Power Modules or Motor Modules generate an AC voltage to feed the connected motor from the DC voltage of the DC link. The magnitude of the DC link voltage is determined by the line voltage and, in the case of a Motor Module, by the Line Module used and thus the maximum possible output voltage (see [section SINAMICS S120 drive system](#)). The speed and loading of the connected motor define the required motor voltage. The maximum possible output voltage must be greater than or equal to the required motor voltage; it may be necessary to select a motor with a different winding.

It is not possible to utilize all modes of pulse width modulation when a sine-wave filter is connected. The maximum possible output voltage (see [sine-wave filter](#)) is lower as a result.

Configuration**Long motor cables**

Using pulse width modulation, the Power Modules or Motor Modules generate an AC voltage to feed the connected motor from the DC voltage of the DC link. Capacitive leakage currents are generated in clocked operation and these limit the permissible length of the motor cable. The maximum permissible motor cable length is specified for each Power Module or Motor Module in the component description.

Motor reactors limit the rate of rise and magnitude of the capacitive leakage currents, thereby allowing longer motor cables to be used. The motor reactor and motor cable capacitance form an oscillating circuit which must not be stimulated by the pulse pattern of the output voltage. The resonant frequency

of this oscillating circuit must therefore be significantly higher than the pulse frequency. The longer the motor cable, the higher the cable capacitance and the lower the resonant frequency. To provide a sufficient safety margin between this resonant frequency and the pulse frequency, the maximum possible motor cable length is limited, even when several motor reactors are connected in series. The maximum cable lengths in combination with motor reactors are specified in the technical specifications for the motor reactors.

Where a longer motor cable is required, a higher rating power unit must be selected or the permissible continuous output current $I_{\text{continuous}}$ must be reduced in relation to the rated output current I_N .

Rated output current I_N	Length of the MOTION-CONNECT motor cable (shielded)			
	> 50 ... 100 m (164 ... 328 ft)	> 100 ... 150 m (328 ... 492 ft)	> 150 ... 200 m (492 ... 656 ft)	> 200 m (656 ft)

Notes for blocksize format Power Modules PM240-2

Motor reactors can be used for frame sizes FSA to FSG to allow longer motor cables to be used. Sine-wave filters can also be used for frame sizes FSA to FSC (400 V versions only).

The maximum cable lengths are shorter in order to comply with EMC compatibility according to EN 61800-3. [See section EMC notes.](#)

Configuration notes

Power units

Configuration

Line Modules

In multi-axis drive applications, a number of Motor Modules are operated on a common DC link, which is supplied with power by a Line Module.

The first task is to decide whether a Basic Line Module, Smart Line Module or an Active Line Module will be used. On one hand, this depends on whether the drive must be capable of regenerative feedback into the line supply and, on the other hand, whether the line infeed is uncontrolled, and therefore dependent on the line supply voltage, or controlled to obtain a constant DC link voltage. For an uncontrolled infeed Basic Line Modules/ Smart Line Modules, line voltage changes can influence the output power of the Line Modules.

The chassis format units are available in the 380 V to 480 V voltage range, but also include units in the 500 V to 690 V range. Basic Line Modules are designed for infeed operation only. Active Line Modules have regulated infeeds which feature a step-up function.

In order to calculate the required DC link power and select the correct Line Module, it is important to analyse the entire operating sequence of the drive line-up connected to the DC link. Factors such as partial load, redundancies, duty cycles, coincidence factors and the operating mode (motor / generator mode) must be taken into account.

The DC link power P_d of a single Motor Module is calculated from the shaft output P_{mech} of the motor and the efficiency of the motor η_m and Motor Module η_{wr} .

The following applies in motor mode: $P_d = P_{\text{mech}} / (\eta_m \times \eta_{wr})$

The following applies in generator mode: $P_d = P_{\text{mech}} \times \eta_m \times \eta_{wr}$

The motor and generator outputs must be added with the corresponding sign in order to calculate the total DC link power. For the power calculation, the DC link voltage U_d can be assumed to be constant. Therefore, the required DC link current can be calculated as $I_d = P_d / U_d$

Basic Line Modules

The DC link voltage U_d of the Basic Line Modules is load-dependent. Under no-load conditions, the DC link is charged to the line voltage crest value U_L , i.e. $U_d = \sqrt{2} \times U_L$, e.g. $U_d = 566$ V when a 400 V supply system is connected.

Under load conditions, the DC link voltage reaches the average value of the rectified line voltage applied to the terminals. This mean value results from the line voltage times a factor of 1.35. Under full load, the voltage in the DC link is slightly less than the theoretical value due to the voltage drop across the line reactor and the line feeder cable. In practice, the range of the DC link voltage U_d is as follows:

$$1.41 \times U_L > U_d > 1.32 \times U_L \text{ (no load } \rightarrow \text{ rated power)}$$

Smart Line Modules

The DC link voltage U_d of Smart Line Modules is regulated to the average value of the rectified line voltage U_L , i.e. $U_d \approx 1.35 \times U_L$

Due to the voltage drop across the line reactor and in the line feeder cable, the DC link voltage decreases in motor operation and increases in generator operation. The DC link voltage U_d thus varies within the same range as on drives with a Basic Line Module:

$$1.41 \times U_L > U_d > 1.32 \times U_L \text{ (rated power, generating } \rightarrow \text{ rated power, motoring)}$$

Active Line Modules

The DC link voltage U_d is regulated to an adjustable value (Active Mode). An Active Line Module can also be switched to Smart Mode and then operates like a Smart Line Module. In Active Mode, the Active Line Module draws a virtually sinusoidal current from the supply system.

The rated infeed power of the Line Module refers to a line voltage of 380 V, 400 V or 690 V (690 V applies only to chassis format Line Modules).

Depending on the ambient conditions (installation altitude, ambient temperature), the rated infeed power of the Line Modules may need to be reduced (see section SINAMICS S120 drive system).

The coincidence factor takes into account the time characteristic of the torque for each individual axis.

On the basis of these principles, the following procedure can be used to dimension the Line Module:

Configuration

The following factors must also be taken into account when dimensioning the DC link:

Braking operation

As device losses are important in motor mode, the dimensioning for motor mode is also applicable to generator mode. With respect to motor braking operation, check that the energy fed back into the DC link does not exceed the permissible peak load capability of the Line Module.

In the case of higher regenerative outputs and to control the "line failure" operating scenario, a Braking Module must be provided, the Smart or Active Line Module must be oversized or the regenerative output reduced by longer braking times.

For the configuration of the "EMERGENCY STOP" operating scenario, the Line Module must either be oversized or an additional Braking Module must be used, so that the DC link energy can be dissipated as quickly as possible.

Checking the DC link capacitance

During power-up, the Line Modules limit the charging current for the DC link capacitors. Due to the limits imposed by the pre-charging circuit, it is essential to observe the maximum permissible DC link capacitance values for the drive line-up specified in the technical specifications.

Frequency with which the DC link is precharged

For chassis format Line Modules, the maximum permissible DC link pre-charging interval is 3 minutes.

Parallel connection of power units

Up to 4 Motor Modules or Line Modules in chassis format can be connected in parallel. Parallel connections can operate only in the Vector Control mode.

Parallel connections may only include Motor Modules or Line Modules of the same type and with the same voltage and output ratings. Mixtures of different modules, e.g. Basic Line Modules and Active Line Modules, cannot be connected in parallel. The CU320-2, SIMOTION D4x5-2 or CX32-2 Control Unit can control only one drive object of type "Parallel connection Line Modules" and one of type "Parallel connection Motor Modules". It is assumed that all Line Modules or Motor Modules linked to the Control Unit are connected in parallel. A Control Unit can control, for example, the following components:

- 1 Line Module + 2 parallel-connected Motor Modules
- 2 parallel-connected Line Modules + 3 parallel-connected Motor Modules

Combinations such as the following are not permissible:
2 Line Modules + 2 parallel-connected Motor Modules + 1 Motor Module

Further information can be found in the following Engineering Manual:

<https://support.industry.siemens.com/cs/document/83180185>

System disturbances

The voltage drops across the impedance between the supply system and a load as soon as the load draws current. In a symmetrical three-phase supply system, this is the network impedance Z_n which is calculated from the impedance Z_s of the supply system and the line-side impedance Z_e of the load.

Effective impedances when a load is connected to a three-phase supply system

$$Z_n = Z_s + Z_e = R_s + jX_s + R_e + jX_e = R_n + jX_n$$

On a variable-speed drive, the line-side impedance Z_e is normally the total impedance provided by the line reactor and the feeder cable up to the PCC (Point of Common Coupling) for further loads. The ohmic component R_n is generally negligible as compared to the inductive component X_n . The inductance of an RL suppression filter is irrelevant for the purpose of this calculation, as this inductance is effective only for asymmetrical interference voltages, but not for a symmetrical line current.

If a load causes voltage drops across the impedance Z_s , this system disturbance has an impact at the PCC and thus also in the supply voltage to all other loads.

The voltage drop is proportional to current I_e and the impedance. To facilitate comparison of voltage drops under different supply and load conditions, the voltage drop is specified – normally at rated current – with reference to the phase voltage U_0 . The calculation formula, e.g. for the per unit voltage drop u_k across an impedance Z is as follows:

$$u_k = Z \times I_e / U_0$$

Tools and engineering

Configuration notes

Power units

Configuration

Example 1:

A Power Module with rated line current I_e is directly connected to a low-voltage transformer and the PCC is the transformer connection terminal. The equation for the ratio between rated line current I_e of the Power Module and rated current I_N of the transformer is $I_e = 0.25 \times I_N$. The per unit voltage drop u_k of the 400 V transformer is 4 %. If the transformer is loaded with its rated current I_N , the voltage drop across impedance Z_s is 9.2 V (corresponding to 4 % of the phase voltage $U_o = 230$ V).

$$u_k = (Z_s \times I_N) / 230 \text{ V} = 0.04$$

The following formula applies to the rated line current I_e of the Power Module: $I_e = k \times I_N$

The per unit voltage drop across the transformer when loaded with I_e is thus: $u_k = Z_s \times I_e / U_o = Z_s \times k \times I_N / U_o$

With the specified ratio between I_e and I_N , the per unit voltage drop is calculated as $u_k = 1 \%$ or 2.3 V. In relation to the Power Module, this transformer therefore functions like a line impedance in accordance with $u_k = 1 \%$.

The magnitude of system disturbance in converter systems is assessed on the basis of short-circuit power ratio R_{sc} :

$$R_{sc} = S_{cv} / P$$

According to this definition in accordance with EN 60146-1, P is the fundamental-wave apparent power drawn by the converter. S_{cv} is the short-circuit power drawn from the mains in the event of a short-circuit on the terminals U1, V1, W1. Since the ohmic components of impedances are negligible in practice, $Z_n \approx j X_n$ applies

$$S_{cv} \approx 3 \times U_o^2 / X_n$$

$$\text{and thus } R_{sc} \approx 3 \times U_o^2 / (X_n \times P)$$

The short-circuit power ratio R_{sc} is therefore dependent on the current output power P of the converter and is determined by network impedance X_n .

$$\text{If we assume the power to be } P \approx 3 \times U_o \times I_e = \sqrt{3} \times U_N \times I_e$$

the short-circuit power ratio R_{sc} is in inverse proportion to the per unit voltage drop u_k across the effective line impedance.

$$R_{sc} \approx 3 \times U_o^2 / (X_n \times P) = 3 \times U_o^2 / (X_n \times 3 \times U_o \times I_e) = U_o / (X_n \times I_e) = 1 / u_k$$

The short-circuit power ratio for example 1 is $R_{sc} \approx 100$ if no line reactor is installed ($Z_e = 0$).

Note:

The term "short-circuit power ratio" as used in technical standards is not a harmonized definition. The short-circuit power ratio R_{scc} defined according to IEC 61000-3-12 is calculated from the short-circuit power S_{sc} at the PCC referred to the power $S_{equ} = 3 \times U_o \times I_e$ consumed by the load.

Basic Line Modules and Power Modules are designed with a rectifier bridge on the line side. An inherent feature of the principle of rectification with load-side capacitance for DC link voltage smoothing are harmonics in the line current which result in a non-sinusoidal power input. The diagram shows the basic current waveform of a Power Module or Basic Line Module as a function of short-circuit power ratio R_{sc} .

Active Line Modules generate virtually no current harmonics (Active Mode) at all and are employed when system disturbance needs to be minimized, e.g. stipulation of IEEE 519 that THD (Total Harmonic Distortion) must be $< 10 \%$.

Line current of a Basic Line Module or Power Module as a function of the short-circuit power ratio R_{sc}

The rms of the line current I_e for which the line-side components must be rated comprises fundamental wave I_{e1} and the current harmonics, which increase in relation to the rise in short-circuit power ratio R_{sc} . If the DC link power P_d has been calculated (see [Line Modules](#)), the required line-side active power is a known quantity with Line Module efficiency, or the rectifier efficiency in the case of a Power Module. However, this active power is connected only with the current fundamental wave I_{e1} . The rms of the line current I_e is always greater than I_{e1} as a result of the current harmonics. The following applies for a short-circuit power ratio $R_{sc} = 100$:

$$I_e \approx 1.3 \times I_{e1}$$

The apparent power of a transformer selected to supply the drive must be greater than the drive power by a factor of about 1.3.

The harmonic currents produce only alternating power, but no active power. The following applies to the apparent power S on the line side:

$$S^2 = P^2 + Q_1^2 + D^2$$

- with active component
 $P = 3 \times U_o \times I_1 \times \cos \varphi_1$, which is solely produced by the current fundamental
- reactive component
 $Q_1 = 3 \times U_o \times I_1 \times \sin \varphi_1$
- and the distortion component

$$D = 3 \times U_o \sqrt{\sum_{v=2}^{\infty} I_v^2}$$

The ratio between active power and apparent power is referred to as power factor λ or total power factor:

$$\lambda = \frac{P}{S} = \frac{P}{\sqrt{P^2 + Q_1^2 + D^2}}$$

Configuration

Typical waveform of the line current with Power Modules and Line Modules

Tools and engineering

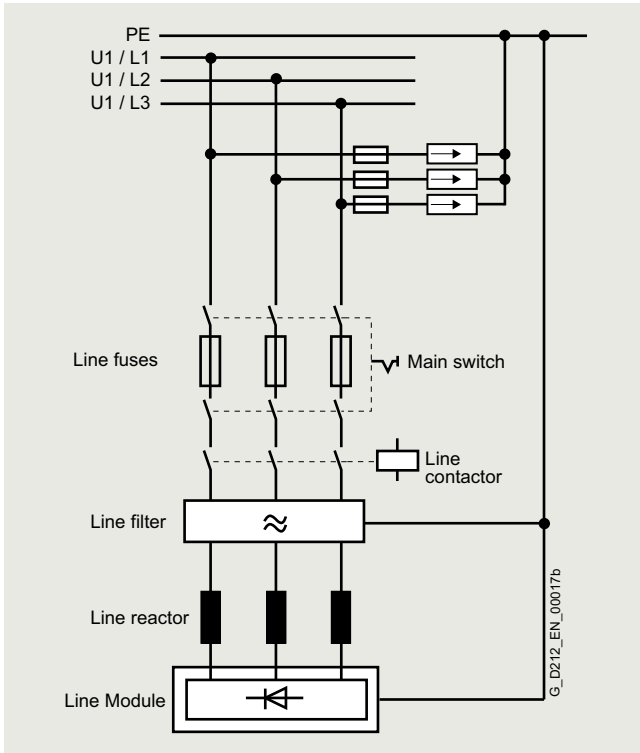

Configuration notes

Power units

Configuration

Line-side power options (main switch, fuses, line filters, etc.)

The following line-side options are recommended for the drive configuration:

General overview of line infeed

The main switch may take various formats:

- Main and EMERGENCY STOP switch + fuse switch disconnecter (with leading signal via auxiliary contact for trip mode)
- Load interruptor with fuses
- Circuit breaker

To protect the units against line-side surge voltages, it is advisable to install overvoltage protection directly at the infeed point (upstream of main switch). Surge protection is essential in order to satisfy the requirements of Canadian standard CSA C22.2 No. 14-05. For examples of suitable surge voltage arresters, go to

www.raycap.com or www.dehn-international.com

Depending on the power rating required, a fuse switch disconnecter combined with a contactor or a circuit breaker can be used as the main switch.

A line contactor can be used, for example, if the drive has to be disconnected from the line supply in the event of a fault or for remote tripping. Follow the instructions in the SINAMICS S120 Configuration Guides to interlock the line contactor in the context of safety functions.

A line filter should be used on TN (grounded) systems to reduce system disturbance.

Configuration**Motor reactors**

High-speed switching of the power transistors causes capacitive recharging currents in the motor cable and motor, as well as steep voltage rises and peak voltages in the motor windings. These currents can be reduced by installing a motor reactor.

The voltage drop across the motor reactor is normally negligible at output frequencies of 60 Hz and below. The per unit voltage drop u_k across the reactor is between 1 % and 4 % at rated current and 50 Hz. With a $\cos \varphi$ of 0.86 and an output frequency of 50 Hz, the motor voltage is about 2 % lower (as a result of the motor reactor) than in systems without a motor reactor.

Phasor diagram of motor with motor reactor

Motor reactors are compatible with all modulation types (space vector modulation, edge modulation).

Sine-wave filters

Sine-wave filters are low-pass LC filters which only let through the fundamental component of the square-wave, pulse-width-modulation output voltage of a Power Module or Motor Module. The resonant frequency of the sine-wave filter must be significantly lower than the pulse frequency of the Power Module or Motor Module and be dimensioned with a sufficient margin to the maximum permissible output frequency. Sine-wave filters therefore define the choice of pulse frequency and place a limit on the maximum possible output frequency. This type of filter is compatible only with space vector modulation. The output voltage of a Power Module or Motor Module is thus limited to an output voltage (rms value) of approximately $0.67 \times$ DC link voltage. With the voltage drop across the sine-wave filter, the maximum possible output voltage (rms value) is approximately $0.63 \times$ DC link voltage. Parameters are used to register a sine-wave filter with the Control Unit. This ensures that all those values that are dependent on it, such as permissible modulation modes and maximum output frequency, are correctly preassigned.

Sine-wave filters can be used only in conjunction with Vector Control and V/f Control modes.

dv/dt filter plus VPL and dv/dt filter compact plus VPL

The dv/dt filter plus VPL and dv/dt filter compact plus VPL comprise two components, i.e. a dv/dt reactor and a voltage limiting network (Voltage Peak Limiter). As a consequence, the use of dv/dt filters plus VPL and dv/dt filters compact plus VPL represents a suitable method of reducing the voltage load on the motor winding for line supply voltages of 500 V to 690 V to such an extent that a special motor insulation is not required. The bearing currents are also significantly reduced. Using these filters therefore allows standard motors with standard insulation and without insulated bearings to be operated with SINAMICS converters up to line supply voltages of 690 V. This applies to both Siemens motors and third-party motors.

Sensor Modules

Signal conditioning for various encoders (incremental encoder $\sin/\cos 1 V_{pp}$, absolute encoder, resolver) takes place remotely, i.e. in the vicinity of the encoder, with customized Sensor Modules. Depending on the measuring system, SMC10, SMC20 or SMC30 Sensor Modules are used. The Sensor Modules are designed to be mounted on DIN rails. They are also used for the signal conditioning of external (machine) encoders.

Expansion modules

The CU320-2 Control Unit features interfaces and terminals for communication as standard. SINAMICS S120 offers the following expansion modules:

- TB30 Terminal Board (terminal expansion for plugging into the option slot on the CU320-2 Control Unit)
- TM31 Terminal Module (terminal expansion for connection via DRIVE-CLiQ)

The following criteria regarding the use of expansion modules must be taken into account:

- Only one option board can be plugged into the option slot on the CU320-2 Control Unit.
- A maximum of 8 Terminal Modules may be operated in a drive line-up.

Braking Modules and braking resistors

Braking units comprise a Braking Module and a braking resistor, which must be attached externally.

Braking units are used when

- regenerative energy occurs occasionally and briefly, for example when the drive brakes (EMERGENCY STOP) and the drive has no regenerative feedback capability
- the drive features regenerative feedback units but cannot return the energy fast enough to the supply on an "EMERGENCY STOP"
- the drive needs to be shut down after a power failure

The braking units for Power Modules in blocksize format consist of braking resistors only, as they feature a braking chopper as standard.

In keeping with the brake resistors for the blocksize format, the braking choppers integrated in the Power Modules PM240-2 are basically designed for a load clearance of 5 %, corresponding to a load cycle of 12 s with a playing time of 240 s. In addition, the integrated braking choppers can carry 100 % of the maximum regenerative power in frame sizes FSA to FSC, and 50 % in frame sizes FSD to FSF, each at an ambient temperature of 40 °C. This extension does not apply to frame size FSG.

A number of Braking Modules can be connected in parallel to the DC link in order to increase the braking power. Each Braking Module requires its own braking resistor. It is not permissible to operate a mix of braking units in booksize and chassis format on the same DC link.

The braking power required is calculated from the DC link power P_d of the drive line-up or Power Module in generator operation.

Tools and engineering

Configuration notes

System components

Configuration

Braking Modules and braking resistors for booksize format

To operate booksize format Braking Modules, a minimum capacitance is required in the DC link. This capacitance is determined by the braking resistor used.

Braking resistor 0.3 kW/25 kW → DC link capacitance 220 μ F

Braking resistor 1.5 kW/100 kW → DC link capacitance 330 μ F

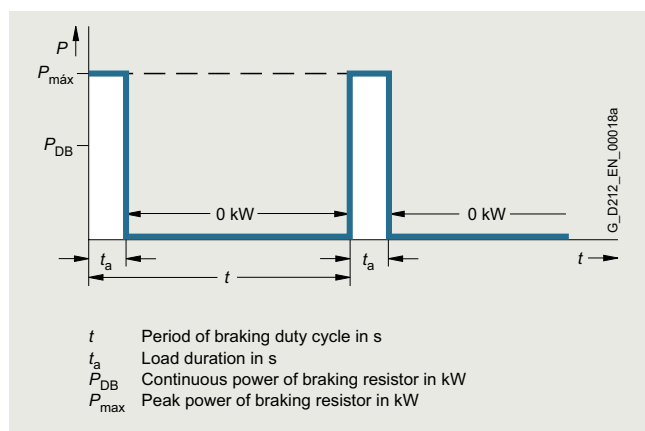

The capacitance of the booksize format Braking Module of 110 μ F is included in the total capacitance value. If the DC link capacitance is not sufficient for the use of one or more Braking Modules, a Capacitor Module can be added to increase the effective DC link capacitance of the drive line-up.

When booksize format Braking Modules are connected in parallel, the minimum capacitance specified above must be available for each Braking Module.

Note: Only booksize format modules that are directly connected to each other via the DC link busbar can be included in the total capacitance.

If the DC link capacitance is not sufficient for the operation of a number of Braking Modules, Capacitor Modules can be used to increase the DC link capacitance. The max. permissible DC link capacitance of a drive line-up on a Line Module must be taken into account. The max. DC link capacitances to be taken into account for pre-charging current limiting on the Line Modules are listed in the technical specifications for the Line Modules.

The braking resistor discharges the excess energy from the DC link:

Duty cycle for braking resistors

Braking Modules and braking resistors for chassis format

Braking Modules with a braking power of 25 kW (for frame size FX) and 50 kW (for frame sizes GX, HX and JX) are available with matching braking resistors for chassis format units. Braking units can be connected in parallel to obtain higher braking powers. In this case, the units can be installed at the Line Module end or Motor Module end.

When a Braking Module is installed in a Basic Line Module of size GB/GD, the cables supplied for the DC link connection are too short. In this case, the cable harness set 6SL3366-2NG00-0AA0 must be ordered to make the Braking Module connection.

Frame size	Rated power P_{DB} power	Peak power P_{15}	Max. possible mounting locations for Braking Module
FB	25 kW	125 kW	1
GB/GD	50 kW	250 kW	1
FX	25 kW	125 kW	1
GX	50 kW	250 kW	1
HX	50 kW	250 kW	2
JX	50 kW	250 kW	3

The Braking Module features an electronics interface (X21) with monitoring function. The braking resistor housing contains a monitoring thermocontact. Both these monitors can be integrated into the warning or shutdown circuits of the drive system.

Calculation of Braking Module and braking resistor requirements

- For periodic duty cycles with a cycle duration of ≤ 90 s, the average value of the braking power within this duty cycle must be defined. The relevant cycle duration must be applied as the time base.
- For periodic duty cycles with a cycle duration of ≥ 90 s or for sporadic braking operations, a time interval of 90 s in which the highest average value occurs must be selected. The 90 s period must be applied as the time base.

Apart from the average braking power, the required peak braking power must also be taken into account when braking units are selected (Braking Module and braking resistor).

Configuration

Basic data

Load diagram

Braking resistors for Power Modules in blocksize format

The braking resistors for frame sizes FSA and FSB must be externally mounted. Braking resistors for frame sizes FSC to FSG should be mounted outside the control cabinet due to their high heat losses.

The Control Unit monitors the pulse/pause ratio (ON time/OFF time) of the braking resistor and shuts it down on faults if it calculates that the resistor could overheat.

Braking resistors feature a temperature switch with NC contacts that open when the permissible temperature is exceeded. The temperature switch must be evaluated to prevent consequential damage if the braking resistor overheats.

The braking power P_{mech} on the motor shaft is higher than the power loss of the braking resistor, as this only needs to convert the DC link energy into heat. The DC link power P_d of the Power Module in generator mode is calculated from the shaft power P_{mech} of the motor and the power loss in the motor P_v Motor and in the Power Module P_v Power Module as:

$$P_d = P_{mech} - P_v \text{ Motor} - P_v \text{ Power Module} = P_{\text{braking resistor}}$$

The power losses can be estimated from the efficiency values of the motor η_m and Power Module η_{wr} :

$$P_{\text{braking resistor}} = P_d = P_{mech} \times \eta_m \times \eta_{wr}$$

Booksize format Capacitor Module

The Capacitor Module functions as a short-term energy buffer, e.g. for bridging brief power failures or for storing braking energy. The buffered energy W can be calculated with the following formula:

$$W = \frac{1}{2} \times C \times (U_{d1}^2 - U_{d2}^2)$$

C = effective capacity of Capacitor Module 4 mF

U_{d1} = DC link voltage when buffering starts

U_{d2} = DC link voltage when buffering ends

Example:

$$U_{d1} = 600 \text{ V}; U_{d2} = 430 \text{ V}$$

The resultant energy calculation is $W = 350 \text{ Ws}$

With this energy, for example, it is possible to buffer a Motor Module with 3 kW load for about 100 ms.

Booksize format Control Supply Module

The Control Supply Module provides a 24 V DC power supply via the line or DC link in order to maintain the electronics power supply for the components in the event of a line failure. This makes it possible, for example, to make emergency retraction movements in the event of the failure of the line supply.

Tools and engineering

Configuration notes

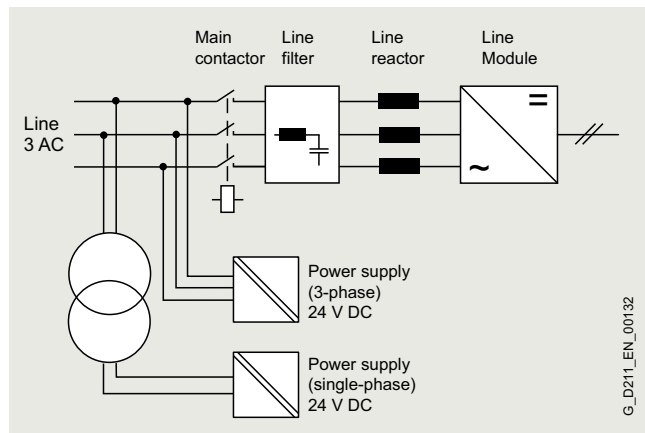

System components

Configuration

External 24 V DC supply of components

Power units (Line Modules and Motor Modules) and other system components must be provided with a 24 V DC voltage via an electronics power supply made available externally.

SITOP devices, which are available as a modular solution, are provided as the external 24 V DC electronic power supply.

Connecting the external electronics power supply

The current requirement $I_{DC\ ext}$ is calculated using the following formula:

$$\Sigma [\text{Control Unit + built-in options (e.g. TB30 + CBC10) + system components + Line Module} + \Sigma (\text{Motor Modules} + \text{SMCxx} + \text{motor brake control})]$$

The other system components (e.g. line contactor) must also be taken into account.

The current requirement of individual components can be found in the relevant technical specifications.

Limit values when configuring the system:

- The current-carrying capacity of the integrated 24 V DC busbar (featured only in booksize format) is max. 20 A.
- In the event of higher current requirements, a number of 24 V DC power supplies must be provided in one drive line-up. The other infeeds are implemented by means of 24 V terminal adapters (booksize format only).
- Cable cross sections of up to 2.5 mm² may be connected to the Control Units, Terminal Boards, Terminal Modules and Sensor Modules.
- Cable cross sections of up to 6 mm² may be connected to the 24 V terminal adapters (booksize format only) for the Line Modules and Motor Modules.
- The external 24 V DC power supply should only be used for the SINAMICS components and the direct loads.

Capacitors in the electronics supply of most components must be charged when the 24 V DC supply is first switched on. To charge these capacitors, the power supply must first supply a current peak which can be a multiple of the current requirement $I_{DC\ ext}$ calculated above. Allowance must be made for this current peak when selecting protective elements, e.g. miniature circuit breakers, for incorporation in the 24 V DC supply system (types with let-through I^2t values according to characteristic D). The current peak flows for an interval t_e of less than 100 ms. The crest value is determined by the impedance of the 24 V DC supply and its electronically limited maximum current.

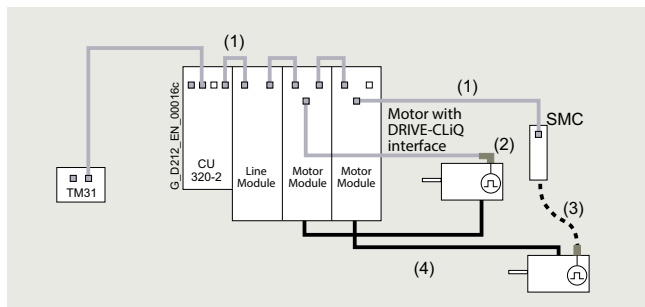

Typical waveform of the switch-on current of the external 24 V DC supply

Configuration

Specification of components for connection system

To complete the drive system, components such as motors and encoders must be connected to it via cables.

For motors with DRIVE-CLiQ interface, the DRIVE-CLiQ cables carry the 24 V DC power supply. On all other Sensor Modules, a separate 24 V DC power supply must be provided.

Drive connection system

Legend	Cable	Description
(1)	DRIVE-CLiQ cables	Standard cables for cabinet-internal configuration without 24 V cores
(2)	DRIVE-CLiQ MOTION-CONNECT 500/800 cables	Shielded cables with 24 V cores MOTION-CONNECT 500 for fixed installation (e.g. in a cable channel) and MOTION-CONNECT 800 for flexible installation (e.g. in cable carriers)
(3)	MOTION-CONNECT 500/800 signal cables	Suitable for the relevant measuring system; in versions MOTION-CONNECT 500 for fixed installation (e.g. in a cable channel) and MOTION-CONNECT 800 for flexible installation (e.g. in cable carriers)
(4)	MOTION-CONNECT 500/800 power cables	Shielded motor cables MOTION-CONNECT 500 for fixed installation (e.g. in a cable channel) and MOTION-CONNECT 800 for flexible installation (e.g. in cable carriers)

DRIVE-CLiQ cables are available in different versions and lengths (see section MOTION-CONNECT connection systems).

The required bending radii apply particularly to short cables. In addition to the distance between the two DRIVE-CLiQ sockets that the cable is to connect, a cable length of at least 60 mm (2.36 in) must be added to allow for bending radii. When defining lengths of prefabricated cables, see section MOTION-CONNECT connection systems.

Unused DRIVE-CLiQ sockets can be sealed with a blanking plug to prevent the ingress of contaminants. Suitable blanking plugs are supplied in the accessories pack for the units.

Mechanical configuration of the drive

A SINAMICS S drive line-up comprises a Line Module, Motor Modules, DC link components, a Control Unit, and the optional expansion modules.

Configuration of a drive line-up in booksize format

The following criteria must be taken into account when a drive line-up of booksize format units is configured:

- The Smart Line Modules 5 kW and 10 kW must always be arranged on the left as the first module. All other Line Modules should be arranged on the left as the first module. The CU320-2 Control Unit in this case can be "snapped onto" the left-hand side of the Line Module.
- The DC link busbars can be connected on the right and left with Basic Line Modules, Active Line Modules and Smart Line Modules rated 16 kW and larger. In this case, the modules can be arranged in reverse order (from right to left) or on both sides (see arrangement for units in chassis format).
- Only one Line Module is permitted in each drive line-up.
- A number of drive line-ups must be configured for power supplies which cannot be provided by the highest rating.
- The Motor Modules must be arranged beside the Line Module in descending order of the rated currents, that is, the Motor Module with the highest rated current is to be mounted immediately adjacent to the Line Module, and the Motor Module with the lowest rated current is positioned furthest away from the Line Module.
- DC link busbars are integrated in the Line Modules, Motor Modules, Braking Modules, Capacitor Modules and Control Supply Modules so that the modules can be connected to the drive line-up. The current carrying capacity of the integrated DC link busbars is determined by the module rating and is either 100 A or 200 A (see technical specifications). It must be ensured that the DC link busbars have the required current carrying capacity at every point within the drive line-up. When high-output Motor Modules (DC link busbars 200 A) and low-output Motor Modules (DC link busbars 100 A) are used, for example, the Braking Module (DC link busbars 100 A) must be installed downstream of the high-output Motor Modules.
- DC link adapters can be used to implement multi-tier configurations.
- The drive line-ups should be configured such that the total length of all power cables for the motor cables and the line cable, which should preferably be shielded, in each individual line-up does not exceed the permissible total cable length.

Power-oriented arrangement of booksize format Motor Modules

- The Control Unit configuration is flexible. The following configuration options are possible:
 - "Docking" on the left-hand side of the Line Module
 - Direct mounting next to the drive line-up on a mounting plate
 - Mounting in other cabinet panels taking into account the permissible DRIVE-CLiQ cable lengths

Tools and engineering

Configuration notes

Mechanical configuration of the drive system

Configuration

Configuration of a drive line-up in chassis format

- The Motor Modules must be positioned to the left or right of the Line Module with decreasing rated currents (i.e. the Motor Module with the highest rated current is positioned next to the Line Module, while the Motor Module with the lowest rated current is at the end on the left or right). You must ensure that the cables/busbars for the DC link meet the current-carrying capacity requirements for all connected Motor Modules.
- The inductance of the DC link busbars must be low, achieved, for example, by arranging the bars as close as possible in parallel, but observing the required creepage distances and air gaps.
- The Control Unit configuration is flexible. The following configuration options are possible:
 - "Docking" on the left-hand side of the Line Module
 - Direct mounting next to the drive line-up on a mounting plate
 - Mounting in other cabinet panels taking into account the permissible DRIVE-CLiQ cable lengths

Configuration of a mixed drive line-up in chassis and booksize formats

A mixed drive line-up must be configured according to the rules for chassis format units. The Motor Modules in booksize format can be connected to the higher-level DC link busbars by means of DC link rectifier adapters. There are two possible connection options - A and B. With A, each Motor Module in booksize format is connected using the appropriate DC link rectifier adapter. With B, Motor Modules in booksize format are connected to one another and the internal DC link busbars and a DC link rectifier adapter are used on the last Motor Module to make the connection to the higher-level DC link busbars. In the latter case, the DC link rectifier adapter must be attached to the last Motor Module on the right-hand side of the line. As regards the arrangement of modules with different current ratings, the guidelines specified under "Configuration of a drive line-up in booksize format" also apply to mixed drive line-ups.

Ideally, the entire length of the higher-level DC link busbars can be dimensioned for the rated DC link current of the Line Module. The busbars are then protected by the line fuses at the infeed end.

If the cross section of the DC link busbars or cabling is reduced, this branch must be designed to be short-circuit-proof. The current limiting mechanism of the Motor Modules connected to the branch with reduced cross section then protects it against overloading. It is not advisable to reduce busbars or cables down to the mandatory minimum cross section. No additional overload protection (fuse) is required on the assumption that overloading cannot occur as a result of cable damage on the cable route to the Motor Module and that the circuit branch is protected against overloading by the Motor Module.

Where the cross section has been significantly reduced, or the circuit design is not inherently short-circuit-proof, a branch fuse must be installed at the beginning of the section with reduced cross section in order to protect the DC link connections involved. In the event of a fault, the fuse must be capable of interrupting DC fault currents; other types of miniature circuit breaker are not suitable.

Allocation of branch fuses for option (A) in a supply system with grounded neutral (TN system). The calculations are based on the assumption that $\tau = L/R < 10$ ms applies to the time constant τ in the DC fault circuit and that the fault current is interrupted by the fuse after maximum 1 s.

Mandatory minimum installation clearances

Ventilation clearances for Sensor Modules and Terminal Modules

Sensor Modules and Terminal Modules can be mounted directly adjacent to one another.

When mounted on the wall, line reactors and line filters require a ventilation space of 100 mm (3.94 in) above and below respectively.

Ventilation clearances for booksize format components

Line Modules 5 kW up to 55 kW
Active Interface Modules
Motor Modules up to 85 A

Ventilation clearances for blocksize format components

The Power Modules PM240-2 can be mounted side by side. A side clearance of 1 mm (0.04 in) is recommended for tolerance-related reasons.

The ventilation clearances for Power Modules PM240-2 frame sizes FSA to FSC are:

- Top: 80 mm (3.15 in)
- Bottom: 100 mm (3.94 in)
- Front: 0

The ventilation clearances for Power Modules PM240-2 frame sizes FSD to FSG are:

- Top: 300 mm (11.81 in)
- Bottom: 350 mm (13.78 in)
- Front: 100 mm (3.94 in)

Active Line Modules 80 kW and 120 kW
Motor Modules 132 A and 200 A

Calculation of internal control cabinet temperature

Control cabinet with forced ventilation

In a control cabinet with forced ventilation, the heat loss P_V passes to the through-flowing air that then rises in temperature by $\Delta\varphi$. In the time interval Δt , the air absorbs the heat $Q = c \times m \times \Delta\varphi = P_V \times \Delta t$, and at the same time the air volume V flows through the control cabinet (c is the specific heat capacity of the air). Mass m and volume V are linked via density ρ . $m = \rho \times V$ applies. When inserted in the formula above, the following equation is obtained: $P_V = c \times \rho \times (V/\Delta t) \times \Delta\varphi$

The heat loss P_V , that can be dissipated by forced ventilation, is thus proportional to the volume flow $\dot{V} = V/\Delta t$ that the fan delivers through the control cabinet and the permissible degree of heating $\Delta\varphi = T_c - T_a$

The heat capacity and density of the air depend on the humidity level and atmospheric pressure. For this reason, the equation is dependent on other parameters. To estimate the temperature rise in the control cabinet in a typical industrial environment, $c = 1 \text{ kJ/kg} \times \text{K}$ and $\rho = 1.2 \text{ kg/m}^3$ can be assumed. This results in the following quantity equation:

$$P_V [\text{W}] = 1200 \times \dot{V} [\text{m}^3/\text{s}] \times \Delta\varphi [\text{K}]$$

with $\Delta\varphi = T_c - T_a$

The temperature T_c as the ambient temperature of the components in the interior of the control cabinet can be estimated with the formula given and must be checked by means of measurements for each application because local hot spots can form, e.g. in close proximity to a source of heat or hotspot caused by unfavorable air circulation.

ConfigurationControl cabinet without forced ventilation

A control cabinet without forced ventilation conducts the heat loss P_v generated in the interior to the surrounding air (external temperature T_a) through the surface. For the heat flow, \dot{Q} the following applies in the steady state:

$$\dot{Q} = k \times A \times \Delta\vartheta = P_v$$

k is the heat transfer coefficient, A is the effective cooling surface of the control cabinet, and $\Delta\vartheta$ is the temperature difference between the internal cabinet temperature and the external temperature $\Delta\vartheta = T_c - T_a$

The transfer of heat through the walls of the control cabinet is determined by the heat transfer of the interior air to the cabinet wall, heat conduction within the cabinet wall and heat transfer from the cabinet wall to the external air. The heat transfer is to be calculated by the heat transfer coefficient α , and heat conduction by the heat conductivity λ and the thickness d of the cabinet wall. The resulting equation for the possible heat loss P_v is:

$$P_v = [1/(1/\alpha_i + d/\lambda + 1/\alpha_a)] \times A \times \Delta\vartheta = k \times A \times \Delta\vartheta$$

$$P_v = k \times A \times \Delta\vartheta$$

Typical values for the heat transfer coefficient k in the case of control cabinets with walls of painted stainless steel which are up to 2 mm (0.08 in) thick:

	k value
Stationary (non circulating) air in the control cabinet and stationary (non circulating) external air $\alpha_i = \alpha_a = 6 \text{ W}/(\text{m}^2 \times \text{K})$	approx. $3 \text{ W}/(\text{m}^2 \times \text{K})$
Circulating air in the control cabinet and non-circulating external air $\alpha_i = 40 \text{ W}/(\text{m}^2 \times \text{K});$ $\alpha_a = 6 \text{ W}/(\text{m}^2 \times \text{K})$	approx. $5.2 \text{ W}/(\text{m}^2 \times \text{K})$

The calculating procedures of IEC 60890 (VDE 0660 Part 507) can be used for determining the ambient temperature T_c in the interior of the control cabinet. All heat sources in the control cabinet must be taken into account in the calculation, e.g. Line Modules, Motor Modules, power supplies, filters, reactors. It is important to determine the effective cooling surface dependent on the method of setting up the control cabinet. The standard can also be used for control cabinets with ventilation openings (natural convection).

The estimated temperature T_c and the temperature distribution in the control cabinet should be checked with measurements for every application since local hotspots can form, e.g. in close proximity to a source of heat or a hotspot.

Control cabinet with air conditioner

The control cabinet emits heat via its surface and the air conditioner.

Manufacturers provide information on the design of the air conditioner, e.g. Rittal:

Drive applications

Drive applications

Overview

Standard applications: Understanding and profiting from know-how

The development of standard applications is a major area of activity within the Siemens automation and drive environment. The scope of these standard applications ranges from clearly organized documentation that focuses on one or several technologies (e.g. Safety Integrated) to complete, comprehensive, standardized solutions for complex tasks (e.g. cross cutters).

Standard application requirements

One feature that all application examples have in common is that they are designed to help users help themselves. They have been created by developers with extensive tool, commissioning and application know-how to make them as user-friendly as possible. Standard applications generally provide the user with reusable components.

Technology functions in the higher-level control system

- Tested SIMATIC PLC blocks
- Reusable HMIs and faceplates

Technology functions in the drive

- Tested SIMATIC PLC blocks
- Reusable HMIs and faceplates
- Application-specific Drive Control Charts (DCC)

Advanced technology functions

The development of standard technological applications is a dedicated area of activity within the Siemens automation and drive environment. Owing to the generally large size of the applications, they are supplied with detailed documentation and example codes.

These applications focus on the use of product features such as SINAMICS Drive Control Chart (DCC) with its Drive Control Block (DCB) libraries of DCB Standard and DCB Extension, SINAMICS Technology Extensions (TEC) and Free Function Blocks (FFB).

This enables extensive, complete and standardized solutions to be developed for complex drive tasks.

These solutions can be flexibly adapted while at the same time allowing the user to expand them with additional elements or special functions as required.

Overview

Application examples

Freely available application examples offer:

- Explanation of the necessary configuring steps with Siemens engineering tools
- Reusable standardized blocks for SIMATIC PLC
- Functionally coordinated programs and blocks
- Significantly shorter commissioning times

Various application examples also explain how to use Free Function Blocks (FFB), logic processing integrated in the drive with Drive Control Chart (DCC) and Safety Integrated.

The following application examples are just a selection of some of the many applications that are available on the internet at:

- SINAMICS G: Controlling a speed axis with the "SINA_SPEED" block

More information

Technological applications for SINAMICS S120

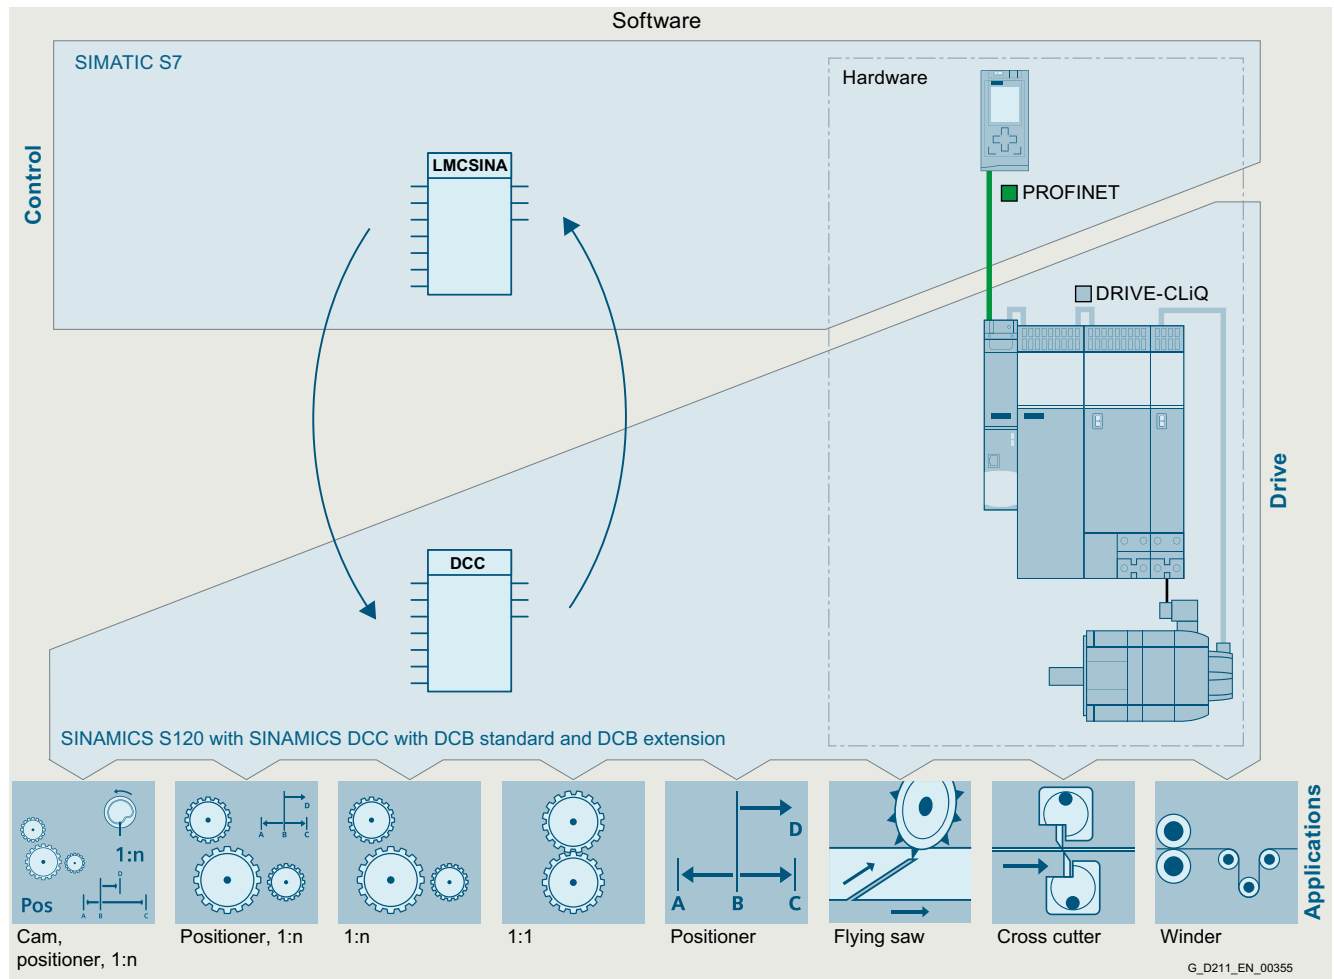

Another focal point are the technologically sophisticated application examples such as:

- Cross cutter
- Flying saw
- Winder
- Angular-locked synchronism in four different variants

¹⁾ SINAMICS G180 has its own Control Unit with its own firmware. Compared to the SINAMICS firmware, some functionalities are not available or implemented differently.

More information

The technological applications make selective use of the relevant engineering concepts in order to facilitate implementation.

Customer benefits:

- Drive-oriented solutions of positioning and synchronous operation applications
- Significant expansion of the DCC scope of functions
- Drive-oriented interpretation of application technology know-how in dedicated solutions
- Drive-oriented complex mechanical calculations

Basis for the technological applications

The technological applications supplied by Siemens are based on the DCB Extension libraries ¹⁾ "GMC" or "Math Extended".

GMC: for Motion Control applications ¹⁾

- For applications with an extensive range of Motion Control functions (positioning, synchronous operation, cam, etc.)
- Individual functions are implemented as elementary function blocks
- Functions that can be combined are linked to form complex elementary function blocks
- These functions can be optionally combined to implement complex tasks

Math Extended: for extended mathematical and logical functions ¹⁾

- Provision of supplementary mathematical functions
- Additional trigonometric functions such as arc sine and arc cosine
- Additional logarithmic functions (common/natural logarithm)
- Additional logic functions (word-serial AND / OR, etc.)

Requirement of the technological applications

Technological applications are generally complex in terms of process engineering, mathematics and concept. They are designed to provide the user with reusable components in the form of a standard application.

Reusable components:

- Tested SIMATIC PLC blocks
- Finished commissioning/configuration scripts
- Application-specific Drive Control Charts (DCC)
- With application-specific DCB Extension libraries
- Reusable HMIs and faceplates

For more information and support, please get in touch with your local Siemens contact person.

www.siemens.com/automation-contact

¹⁾ Use of the internal drive interface to integrate a DCB library requires a license. See SINAMICS Drive Control Chart (SINAMICS DCC).

Drive applications

Test stands

Overview

Machines for performing reproducible characteristic tests

Test stands are available for many areas. Irrespective whether an automotive, roller, gearbox, motor, power or some other component test stand is involved.

In addition to the mechanical design for mounting the test object, the drive and control equipment as well as sensors must be provided to be able to produce the characteristics and record the measured values.

Test stand requirements

Test stands require a variety of different technological functions, for example:

- Consistent speed and torque
- An open and flexible closed-loop control system with BICO engineering to provide outstanding torque quality
- Rotating field frequencies up to 3200 Hz
- Energy recovery for braking without dangerous current harmonics with adjustable power factor
- Resistance to power fluctuations
- Energy exchange in the coupled DC link for multi-axis test stands
- Integration of modern simulation tools, such as Matlab or Labview
- Computer link for long-term data recording and a continuous trace (including ability to export measurements for evaluation by external tools)
- Extremely high dynamic response, e.g. for the simulation of internal combustion engines
- Safety Integrated functions, e.g. SLS on entering the test cell
- Battery simulation integrated in test stand
- Setpoint specification in real time by PROFINET IRT or an internal drive function

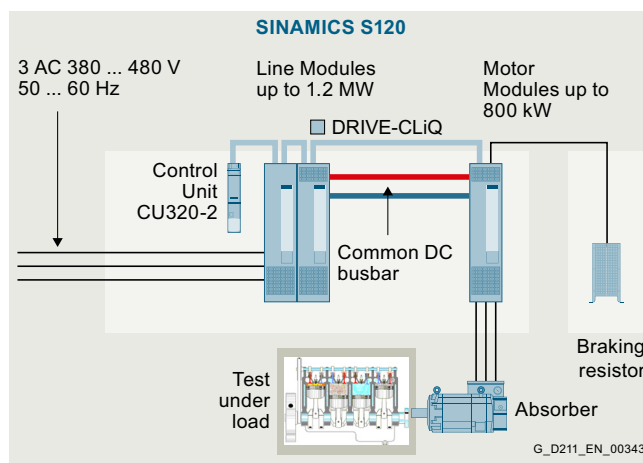

These functions can be implemented by combining a SINAMICS S120 multi-axis converter with SIMOTICS motors. The SIMOTION control system is a freely programmable platform for control structures that can be configured and connected for optimum isochronous operation with PROFINET.

Benefits

In addition to supplying the appropriate products, Siemens can also support you:

- With the planning of a test stand
- By conducting extensive vibration calculations:
 - Rotor dynamics analyses
 - Multi-body simulations
- With engineering tasks by providing openness for external setpoint sources (e.g. simulation tools)
- By supplying extended drive technologies (e.g. SINAMICS TEC for simulating combustion engines).

Design

The solution illustrated in the diagram demonstrates how combustion engines in the automotive industry are tested "cold" in the end-of-line area.

Combustion engines are quality-tested directly in the assembly line. In cold testing as opposed to hot testing, the engine is not powered by fuel but electrically, which allows for more eco-friendly testing. On completion of the leak test, the engine is filled with oil and, if required, with fuel. The cold test results will show whether the engine complies with quality requirements.

The challenge in this case is to identify any asymmetry or deviation in relation to a stored reference engine.

Overview

Benefits to the power of three – outstanding productivity, all-encompassing safety technology and optimized energy efficiency

The more flexible, speedy and precise they are, the greater the competitive edge they deliver: Storage and retrieval machines are a core component of conveyor, logistics and stock movement systems. They offer enormous potential for saving time and money. Furthermore, they play a substantial role in reducing energy consumption. Operator protection is another core issue – the relevant requirements for storage and retrieval machines are clearly defined in the C standard EN 528. As a complete provider of components and systems, Siemens can supply the solutions to all these challenges.

Throughput increased by up to 15 %

Siemens has developed the right solutions for raising the performance of storage and retrieval machines. These are designed to maximize acceleration potential while minimizing wear. They also use sway control to reduce mast vibrations, helping to deliver material savings.

Performance boost thanks to intelligent all-wheel drive

With two powered wheels on the chassis, the drive torque can be distributed in such a way as to maximize acceleration and prevent the drive wheels from spinning. Siemens can supply a specially developed application that allows the drive torque to be statically and dynamically distributed between both drive wheels.

Integral sway control in drive increases throughput

Fast acceleration rates inevitably lead to mast vibration. With the assistance of the SINAMICS technology extension VIBX (Vibration Extinction), this vibration can be prevented without restricting the dynamic performance of the machine. With VIBX, the acceleration/deceleration of the travel axes is unable to excite the natural frequency of the storage and retrieval machine. The frequency can be adapted as a function of the cargo load and the position of the load handling device while the machine is in operation. There is no need to install a sensor to detect mast vibration. The sway control function is proven to shorten the time that it takes a mast to reach a sufficiently still position to allow load handling devices to move into a rack, pick up goods and move out again so that the storage and retrieval machine can travel to the handover station. This boosts throughput by up to 10 % and also increases warehouse capacity. Thanks to the reduction in wear and tear on the machine, less expensive materials can be used in the machine construction. Energy consumption can be reduced as a result of the lower masses

By combining sway control (VIBX) with an intelligent all-wheel drive, it is possible to boost performance by up to 15 %.

100 % compliance with DIN / EN 528 – standards-compliant safety concepts

A comprehensive, but flexible safety concept is needed in order to protect operator and machine and to optimize the entire plant. Using the safety modules supplied free of charge by Siemens, it is possible to implement safety concepts in accordance with the storage and retrieval machine standard DIN EN 528. These modules are certified by TÜV (German Technical Inspectorate) and are therefore a "plug&play" solution. The optimum interaction between the Safety Integrated functions of SIMATIC S7-F controllers and SINAMICS S120 drives allows customers to develop their own safety concepts. Siemens is offering concepts for warehouses with reduced or without buffer area, safety strategies for systems subject to slip and monitoring devices for typical storage and retrieval machine applications (e.g. slack rope or overload detection).

Up to 80 % reduction in grid power input – by use of self-generated energy

Drives often need to brake heavy weights in hoisting applications. Frequency converters with energy recovery capability help significantly reduce energy requirements. By using Line Modules capable of regenerative feedback, energy can be recovered and used to supply other loads. No braking resistors are required which means that a smaller control cabinet and a simpler cooling system can be used. Energy consumption is balanced via the common DC link of the SINAMICS S120, so minimizing the overall losses in the system. Furthermore, Siemens has used ultracapacitors to implement a strategy for storing energy in the DC link. In addition to reducing power input by up to 80 %¹⁾, electrical braking remains possible even during power failures. Wear to brakes and wheels is also minimized and the availability of the storage and retrieval machine is increased.

¹⁾ Applies to electromechanical systems with an overall efficiency of 90 %. With an efficiency of 80 %, the power input is reduced by 64 %.

Drive applications

Storage and retrieval machines

Design

Flexibility based on standard components

The storage and retrieval machine solutions comprise the following standard components:

- SINAMICS S120 converter
- SIMOTICS S-1FG1 servo geared motors
- SINAMICS Drive Control Chart (SINAMICS DCC)
- SINAMICS Technology Extensions VIBX

These components allow users to implement their own individual requirements of storage and retrieval machines down to the very last detail.

Converting – unwinding, cutting, stamping, sealing, laminating, printing, coating, crosscutting, winding, ... – many functions that are used in a broad range of industrial sectors. Sectors such as paper production, the printing industry, the manufacture of cables and wires and the textile and packaging industries, to name but a few.

Siemens is offering complete, standardized drive and automation systems that are capable of performing all of these tasks. These range from an extensive spectrum of motors (asynchronous and synchronous motors, torque and linear motors, reluctance motors) to single-axis and multi-axis drive controllers, from simple vector converters to highly sophisticated multi-axis systems with integral motion controller, SIMOTION Motion Control system, safety controller and bus system up to the market-leading SIMATIC S7 automation controller in variants 300, 400, 1200 and 1500. The portfolio is rounded off by a large selection of operator panels and other system components such as filters and reactors.

But it is precisely those highly technological standards that different sectors demand of converting functions that are fulfilled in many cases by the technology functions included in the Converting Toolbox developed by Siemens.

The fully operational, tested standard functions integrated in the Siemens Converting Toolbox can be used to reduce the amount of time and money that need to be invested in all phases of the machine lifecycle.

The Converting Toolbox

Contains standard functions for converting processes with the following automation platforms:

SIMOTION
For high performance motion control applications with central intelligence

SIMATIC
For applications with a PLC as central control system

SINAMICS, SINAMICS DCC
for drive-based applications where the process control is realized in the drive system
SINAMICS S120 with the use of DCC (Drive Control Chart)

Overview

Keep your business running and shaping your digital future – with Industry Services

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier.

We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt. Of course, we take care that your production is protected against cyber threats. We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer lifespan.

You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

Training Services

Training Services

From the basics and advanced to specialist skills, SITRAIN courses provide expertise right from the manufacturer – and encompass the entire spectrum of Siemens products and systems for the industry.

Worldwide, SITRAIN courses are available wherever you need a training course in more than 170 locations in over 60 countries.

<https://support.industry.siemens.com/cs/ww/en/sc/2226>

Support and Consulting Services

Support and Consulting Services

Industry Online Support site for comprehensive information, application examples, FAQs and support requests.

Technical and Engineering Support for advice and answers for all inquiries about functionality, handling, and fault clearance. The Service Card as prepaid support for value added services such as Priority Call Back or Extended Support offers the clear advantage of quick and easy purchasing.

Information & Consulting Services, e.g. SIMATIC System Audit; clarity about the state and service capability of your automation system or Lifecycle Information Services; transparency on the lifecycle of the products in your plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2235>

Spare Parts Services

Spare Parts

Spare Parts Services are available worldwide for smooth and fast supply of spare parts – and thus optimal plant availability. Genuine spare parts are available for up to ten years. Logistic experts take care of procurement, transport, custom clearance, storage and order management.

Reliable logistics processes ensure that components reach their destination as needed.

Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer's premises with optimized **Spare Parts Packages** for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.

Asset Optimization Services help you design a strategy for parts supply where your investment and carrying costs are reduced and the risk of obsolescence is avoided.

<https://support.industry.siemens.com/cs/ww/en/sc/2110>

Repair Services

Repair Services

Repair Services are offered on-site and in regional repair centers for fast restoration of faulty devices' functionality.

Also available are extended repair services, which include additional diagnostic and repair measures, as well as emergency services.

<https://support.industry.siemens.com/cs/ww/en/sc/2154>

Field and Maintenance Services

Field and Maintenance Services

Siemens specialists are available globally to provide expert field and maintenance services, including commissioning, functional testing, preventive maintenance and fault clearance.

All services can be included in customized service agreements with defined reaction times or fixed maintenance intervals.

<https://support.industry.siemens.com/cs/ww/en/sc/2265>

Retrofit and Modernization Services

Retrofit and Modernization Services

Provide a cost-effective solution for the expansion of entire plants, optimization of systems or upgrading existing products to the latest technology and software, e.g. migration services for automation systems.

Service experts support projects from planning through commissioning and, if desired over the entire extended lifespan, e.g. Retrofit for Integrated Drive Systems for an extended lifetime of your machines and plants.

<https://support.industry.siemens.com/cs/ww/en/sc/2286>

Service Programs and Agreements

Service Programs and Agreements

A technical Service Program or Agreement enables you to easily bundle a wide range of services into a single annual or multi-year agreement.

You pick the services you need to match your unique requirements or fill gaps in your organization's maintenance capabilities.

Programs and agreements can be customized as KPI-based and/or performance-based contracts.

SITRAIN – Digital Industry Academy

Introduction

SITRAIN – DIGITAL INDUSTRY ACADEMY
The Future of Learning starts now

SITRAIN - Digital Industry Academy stands for a modern learning culture that focuses on the needs of learners and the demands of innovative companies.

SITRAIN offers a comprehensive range of knowledge on Siemens industrial products and, under the vision "Future of Learning", pursues a holistic approach that combines different forms and methods of learning. Different learning formats allow for more effective, flexible and continuous learning depending on the type of learning.

Education and training directly from the manufacturer

Industrial Automation Systems SIMATIC

Training available for: SIMATIC S7-1500, TIA Portal, SIMATIC S7-300/400, SIMATIC S7-1200

Drive Technology

Training available for: SINAMICS S120 and SINAMICS G120 low-voltage converters, SINAMICS G130 / G150 / G180 / S150

SINUMERIK CNC automation system

Training available for: SINUMERIK 840D, SINUMERIK 840D sl and SINUMERIK ONE

Process Control Systems

Training available for: SIMATIC PCS 7, SIMATIC PCS neo

Digital Enterprise

Training available for: Openness, SIMIT, OPC UA, Industrial Edge, Virtual commissioning

Industrial Communications

Training available for: PROFINET, SCALANCE, RUGGEDOM, Industrial Ethernet, Fieldbus communication, Industrial Security, Remote communication

Identification and Locating

Training available for: RFID, RTLS-Systems

Operator Control and Monitoring Systems

Training available for: SIMATIC WinCC Unified in TIA Portal, SIMATIC WinCC in TIA Portal, SIMATIC WinCC V7x

Motion Control System SIMOTION

Training available for: SIMOTION (Programming, Commissioning, Diagnostics, Service)

Smart Infrastructure

Training available for: SIRIUS, SENTRON, SIVACON, ALPHA, SIMOCODE, Circuit breakers

Process Analytics & Instrumentation

Training is available for process analytics and instrumentation, explosion protection, process gas chromatographs

Additional training offer

SIMOVE with Automated Guided Vehicles (AGV), SIPLUS CMS, Guidelines and standards for control cabinets

Introduction

Different learning formats and methods for maximum learning success

Face-to-face training in the training center or in the virtual classroom, with fixed dates and course times, learning in a group with a learning guide? Or digital training, on your own responsibility and location-independent, on demand, 24/7?

With the learning formats "Learning Journey", "Learning Membership" and "Learning Event", SITRAIN offers a wide range of different learning options in connection with didactically effective methods and modular possibilities.

Learning Journey

The combination for sustainable learning success

- The optimal mix of self-study units and guided live modules
- Includes a Learning Membership to work through the self-study modules and access on-demand content
- The SITRAIN learning consultant is available for questions and one-on-one consultations
- Ideal integration into the daily work routine and adaptation to one's own learning pace.

Learning Membership

Securing knowledge through continuous learning on your own responsibility

- With access to the comprehensive and constantly growing range of self-study units on SITRAIN access, the digital learning platform
- Search and find specific learning content or simply have a look around – anytime and anywhere
- A modern learning culture through continuous learning on your own responsibility and transparency about your learning success in the team or company.

Learning Event

Acquire theoretical and practical knowledge in a compact and guided format

- You achieve a defined learning goal in the shortest possible time
- The learning consultant guides you through the practical exercises and is also exclusively available to you during the theoretical sessions for the entire duration
- Focused learning, outside of the daily work routine, in a protected learning environment – virtually, in the training center, or at your company.

Live

Learn together with others, simultaneously and guided by a learning consultant. Online, in the SITRAIN training center or at your company.

Self-reliant

Expand your knowledge self-determined with industry learning and work on your learning units at your own pace and according to your own schedule.

On demand

Get the knowledge you need, exactly when you need it. Be it to answer a current question or to work on a special topic.

Individuell

Talk directly with the learning consultant, clarify detailed questions and get personal coaching for transferring the learned topics to your own application.

Training

Training courses for SINAMICS low-voltage converters

Overview

Training courses for SINAMICS drive system

This provides an overview of the training courses available for the SINAMICS drive system.

The courses are modular in design and are directed at a variety of target groups as well as individual customer requirements.

The system overview will acquaint decision-makers and sales personnel with the system very quickly.

The engineering course provides all the information you need to configure the drive system.

The courses dedicated to diagnostics and servicing, parameterization and commissioning, communication as well as extended functions such as Safety Integrated are sure to provide all the technical knowledge service engineers will need.

All courses contain as many practical exercises as possible to enable intensive and direct training on the drive system and with the tools in small groups.

Please also take note of the training options available for SIMOTICS motors. You will find more information about course contents and dates on the internet.

Overview

SINAMICS S120 training case with CU320 Control Unit

SINAMICS S120 training case without Control Unit

The SINAMICS S120 training case is used to teach students to use and understand the SINAMICS S120 drive system. It is suitable for direct customer presentations as well as for tests in technical departments.

The case is optimized in terms of weight and volume and is assembled complete with castors and ready for connection. It contains the following components:

- SINAMICS CU320-2 PN Control Unit with memory card with project for functional test
- SINAMICS Smart Line Module 5 kW
- SINAMICS Double Motor Module 2 x 3 A
- 2 motors SIMOTICS S-1FK7022 servomotors with DRIVE-CLiQ interface (absolute encoder or incremental encoder) Stroboscope for testing synchronous operation
- SIMATIC ET 200SP IM 155-6PN with 4 modules DI, DO, TM, AI
- Operator control box, removable for I/Os of the CU320-2 Control Unit or SIMATIC ET 200
- Reference discs for position monitoring
- Prefabricated connections for an external motor (e.g., asynchronous motor) (SIMATIC S7 mounting rail 85 mm with 24 V and PN connection).

The SINAMICS S120 training case is supplied ready-to-use with a demo project on the CompactFlash card and documentation.

Siemens Automation Cooperates with Education (SCE)

Teaching made easy - Comprehensive support on the way to Industry 4.0

Knowledge & technology – the keystones to success in digitalization

Digitalization is quickly and radically changing our world. What does this mean for education?

In the world of Industry 4.0, companies can expect a host of new opportunities and challenges. New systems are verified on the spot through simulations. Automated mass production processes can make every product on the conveyor belt a unique product.

New products are now market-ready much faster. Siemens is shaping this transformation as a technology leader in the field of automation and process lifecycle management (PLM).

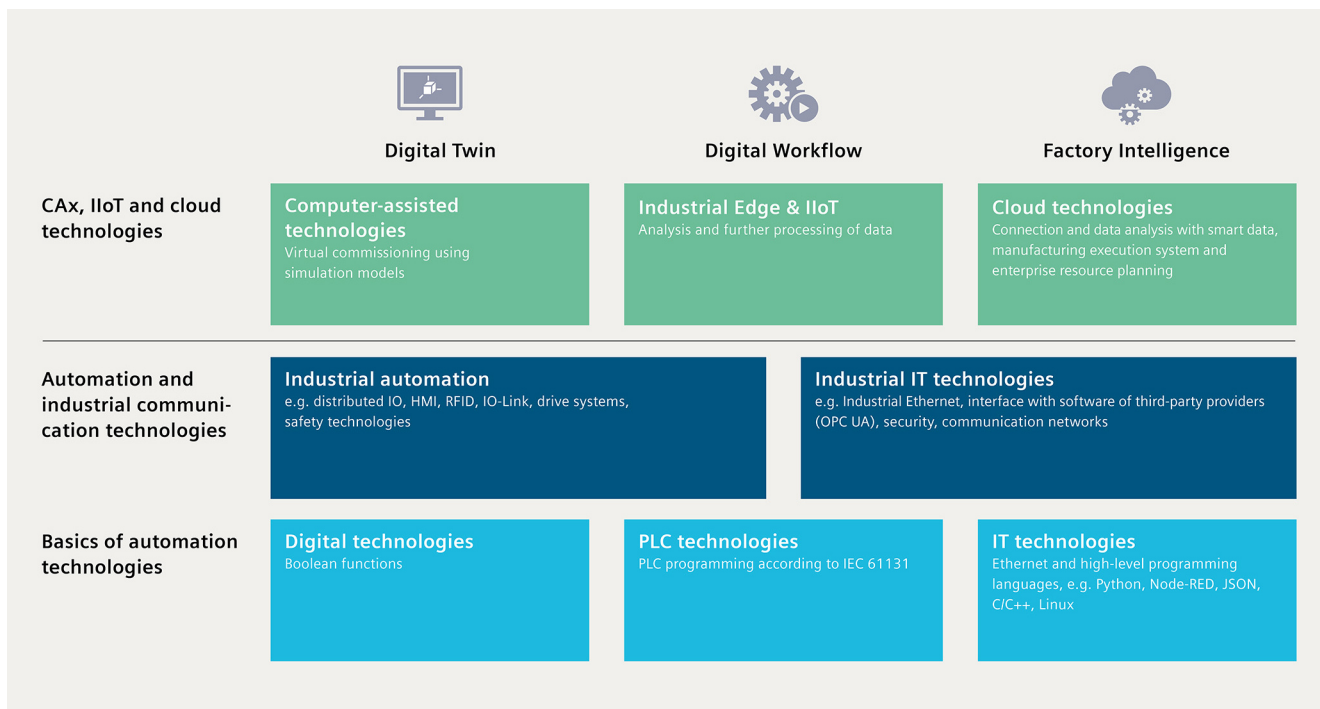

These new digitalization processes are changing the know-how requirements for employees. Many educational institutions are facing the challenge of conveying Industry 4.0 know-how as part of their teaching and training. The Siemens Automation Cooperates with Education (SCE) program is supporting educators on the way to Industry 4.0.

The SCE digitalization concept for educators

The SCE digitalization concept presented here shows how digitalization can be implemented in educational institutions – from vocational schools to universities.

Digitalization (or Industry 4.0) know-how is now introduced through computer aided technology, Industrial Edge and IIoT as well as Cloud technologies. It is founded on the basics of automation, such as digital technologies, PLC and information technologies, and on advanced automation and industrial communication technologies.

The level of digitalization knowledge can be weighted, depending on the vocational field or branch of study – e.g. mechanical engineering, automation engineering or computer science.

The SCE digitalization concept for educators

As part of their project work, students at Vocational School 2 in Wolfsburg, Germany, have implemented the three levels of the SCE Industry 4.0 concept. A virtual twin created with the Siemens NX Mechatronics Designer (MCD) CAD software was used for the design and virtual commissioning. This enables fast and efficient assembly of the real automation system, e.g. with SIMATIC S7-1500/ET 200SP/RFID, for use in classes. Production data, such as the number of bottles filled, production date and system parameters, are uploaded to a cloud using SIMATIC IOT2000.

siemens.com/sce/iot2000

siemens.com/nx

The SCE offers**Learning and training documents**

More than 100 didactically prepared learning and training documents are available through SCE and incorporate the digitalization concept. They are designed for use in classes, but can also be customized or used for individual study. These documents are available for free download, most of them in 7 languages.

siemens.com/sce/documents

Educator courses

Excellent teaching content is needed to introduce students to digitalization. For this purpose, SCE holds educator courses in certain regions. Based on our learning and training documents and through practical exercises, educators acquire the latest Industry 4.0 know-how.

siemens.com/sce/courses

**Trainer packages**

The 90 SCE trainer packages help educators teaching and implementing the SCE digitalization concept. Trainer packages comprise specially compiled, genuine Siemens hardware and software products. The trainer packages are based on the learning and training documents and are offered to schools, colleges and universities at special terms.

siemens.com/sce/tp

Support for your projects / textbooks

We support you on selected projects with advice and assistance from SCE contact partners.

As a special service, we support textbook authors. We maintain a list of textbooks on the SCE website.

Services and documentation

Siemens Automation Cooperates with Education (SCE)

Teaching made easy - Comprehensive support on the way to Industry 4.0

Partnerships for proliferation of Industry 4.0 in education

Partnership with WorldSkills

As a technology powerhouse, we support vocational training of students around the world. Since 2010, we have partnered with WorldSkills as a Global Industry Partner in order to amplify this cause.

WorldSkills is an international organization whose mission is to raise the profile and recognition of skilled people, and show how important vocational skills are in achieving economic growth and personal success. Every two years, WorldSkills hosts the world championships of skills.

Siemens provides the competitors with automation products, such as SIMATIC S7-1500 and LOGO!, for the disciplines: industrial control, electrical installations, Polymechanics/Automation and manufacturing technology.

Additionally, we support selected continental and regional competitions.

siemens.com/worldskills

Partnerships with educators

We provide support to educators and educational organizations in the form of one-on-one advice through SCE contact partners and Siemens experts as well as long-term cooperation.

siemens.com/sce/contact

Partnerships with producers of learning systems

For practical training in classrooms and labs, numerous producers of learning systems offer a wide range of complete didactic solutions based on SCE trainer packages.

siemens.com/sce/learningsystems

Information portal

To facilitate your teaching assignment and/or for selfstudy, we offer educators and students a comprehensive SCE information portal. At this portal you have quick access to all SCE offers, e.g. learning and training documents including projects, Getting Started information, videos, manuals, trial software and newsletters.

Overview
Systems Engineering Plant Chemnitz (WKC) - Electrical equipment for machines and plants

The Siemens Systems Engineering Plant Chemnitz (WKC) is the European market leader in control cabinet construction for machine tools and manufactures equipment for numerous segments the machine and plant construction industry, as well as for project business in the logistics and automotive sectors.

WKC - Control cabinet wiring

Scope of services offered

The WKC offers a complete portfolio of services for development and production: From concept support and hardware engineering, construction including complete material procurement to testing, advance commissioning support and worldwide in-bound delivery. Each customer decides individually what extent of these services the WKC is to provide.

WKC - Engineering - SSB

Competence center for standardization and air conditioning

The WKC is also competence center for the air conditioning of switchgear, has its own test laboratory, and is a certified UL Panels shop. Siemens WKC therefore is happy to support you with advice on design in accordance with standards and concepts for your drive systems, control, operation and safety. In addition, our engineers configure for you in EPLAN and other CAD systems, execute Design-To-Cost projects, and adapt your documents where necessary to UL or new automation and digitalization technologies.

WKC - Test laboratory - Heat measurement

Services and documentation

Switchgear

Overview

Individual support and maximum flexibility

Our technical consultants for complete equipment support customers and sales departments in the various regions. Our customers are supported by job centers and permanently assigned manufacturing teams. As a customer, you will benefit from individual logistics models, flexible production capacities and production areas, change management in all process phases, as well as maximum flexibility for your orders..

Distance is no problem: For coordination with our customers, we use various digital communication and business applications with user-friendly and powerful functions for screensharing, videoconferencing, file transfer, as well as all options for a customer acceptance via webcam (mobile circuit meeting room).

WKC - Automated testing SICAT

Your advantages

We offer complete services from a single source with Siemens quality and stability, extensive specialist support, and flexible resources. We will be glad to accompany you into international markets as well. With us you have a strong partner at your side - from the design stage to final delivery. Whether for series or individual units, Siemens WKC works together with you to implement your projects according to your requirements.

Overview of the portfolio of services

Order coordination

- Project manager with permanent customer assignment
- Complete material purchasing
- Change management in all process phases

Manufacturing

- Creation of a digital twin
- CNC processing of enclosure parts and mounting plates
- In-house painting
- Auto-routing of the wiring
- Automated prefabrication of cables
- Production teams with permanent customer assignment
- Batch or flow production

Automated test (standard)

- Current path test
- Function of switching, operating and signaling devices
- Observance of protective measures and safety

Optional test services / pre-commissioning

- Error-free function of the programmable controllers / I/O devices
- Parameterization and checking of bus systems
- First commissioning of Siemens NC and PLC
- Installation of customer software

WKC - Collaborative robotics

Overview

Additional services for different project phases

Our portfolio is supplemented by a host of additional services for many different project phases.

Planning

- Evaluation of requirement specifications, requirements
- Advice regarding standard applications and certifications (conformity)
- Advice regarding EMC, air conditioning, and electrical safety
- Design-To-Cost analyses
- Special rated conditions

Implementation/realization

- Creation of an electrical design in various CAE systems
- Creation of an air conditioning design through calculation and simulation
- CAE revision of production documents

Validation/certification

- International standard and certification know-how, e.g.: IEC 60204-1, IEC 61439, UL or cULus
- Checking of air conditioning / EMC designs in own Siemens laboratory or at customer premises
- Execution of EMC precompliance measurements in own laboratory or at your plant location

WKC - Additional service - Festoon cable system

Digital Enterprise Services
Service Contracts

Repair Service Contract

Overview

Repair Service Contract for Machine Tools (RSC) offers machine manufacturers and machine dealers the opportunity to cover repair costs with a lump sum by minimizing cost risks.

Your need:

- Assured availability through reduction of machine downtimes
- Improved machine productivity and total cost of ownership
- Modular services tailored to your requirements
- Regular, periodical inspection of important and critical machines

Our service offer:

- The Repair Service Contract (RSC) was developed especially for machine manufacturers and machine distributors. The RSC offers machine producers and distributors the option to cover the repair costs by a flat rate price and therefore minimize the cost risk
- The RSC ensures the subsequent rectifications of defects at the location where the machine is installed
- This contractual service covers personnel and material replacement costs for removing any trouble in Siemens Industry products after the second commissioning at the user's end
- The period of the contract can be chosen by year tranches, up to a duration of five years

Benefits

- Risks resulting from liability for defects are limited through fixed prices (planning certainty and calculable costs)
- Repair Service Contract can be synchronized with the machine warranty period
- Higher machine availability due to shorter reaction times and fast fault rectification
- Easier processing of service calls and faster response to machine faults (contract priority)
- RSC can be ordered for machine deliveries to numerous countries (see country list below)
- Worldwide service infrastructure with experienced service experts
- No obligation to provide proof of warranty claims throughout the warranty period

Application

- SINUMERIK 840 SINUMERIK ONE
- 6FC5371, 6FC5372, 6FC5373, 6FC5317

Options

RSC service description

Siemens provides for the machine manufacturer and dealer (in the following referred to as customer) at the machine installation site the services described under the scope of services on the components included in the bill of materials of the RSC certificate by Siemens DI.

The RSC is ordered by the customer stating the necessary article numbers, which can be requested from the Siemens sales partner or which are stated in the catalogs and SiePortal. Siemens hands over the customer a proof of delivery, which concludes the RSC.

Following the final destination notification by the customer, Siemens hands the customer an RSC certificate stating the place of performance and the service period.

The services to be rendered by Siemens shall be called via a service order submitted by the customer. The services must be ordered within the RSC service period.

Place of performance

The service shall be rendered at the machine installation site (in the following called on site). This corresponds to the end customer's country stated in the final destination certificate and his complete address. Services covered by this RSC shall only be provided in the countries listed in the country list.

Scope of services offered

The following services shall be provided:

- Provision of service personnel
Siemens provides qualified personnel for error diagnostics and fault correction. The services are provided during the usual working hours in the country of installation.
- On-site fault diagnostics
Fault diagnostics refer to components from Siemens DI which are listed in the bill of materials of the RSC certificate.
- Fault correction on site
Fault correction is carried out by repairing and/or replacing faulty components by Siemens DI.
- Documentation of the fault correction
A service report shall be created on site in the end customer's national language; it is then signed by the end customer. One copy remains with the end customer.

Contract periods / service period

The RSC is offered for the period of liability (warranty period) of the Siemens customers to their end customers. Different RSC periods permit various market requirements to be addressed. The service period of the RSC begins on the date notified to Siemens in the final destination notification when commissioning has been completed at the end customer's site and ends on expiry of the selected RSC term. The beginning and end of the service period are stated in the RSC certificate¹.

RSC certificate

The Customer is provided with an RSC certificate once the final destination notification has been handed over. This certificate shall contain the contract number and essential contract data such as machine number, machine type, bill of materials, beginning and end of the service period and the place of performance (address for the provision of services).

Options

Country list

A repair service is offered for the following countries:

Continent	Country/Region
Country group 1	
Americas	Mexico, USA
Asia	China, India, Japan, South Korea, Taiwan, Thailand
Australia	Australia
Europe	Andorra, Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, Italy, Liechtenstein, Luxembourg, Monaco, the Netherlands, Poland, Portugal, Romania, Slovakia, Spain, Sweden, Switzerland, Turkey
Country group 2	
Africa	South Africa
Americas	Brazil, Canada
Asia	Indonesia, Israel, Malaysia, Singapore
Australia	New Zealand
Europe	Bosnia-Herzegovina, Bulgaria, Croatia, Estonia, Ireland, Latvia, Lithuania, Norway, Slovenia
Country group 3	
Africa	Egypt
Americas	Argentina, Chile, Colombia, Ecuador, Peru, Venezuela
Asia	Bahrain, Hong Kong, Kuwait, Oman, Qatar, Saudi Arabia, United Arab Emirates, Vietnam
Europe	Greece, Malta, Serbia, Montenegro, Ukraine

Response time

As a rule, the following response times apply when the RSC is implemented in the case of a machine standstill:

Country groups	
CG 1	Next working day
CG 2	Within two working days
CG 3	Depending on country-specific conditions
Countries not listed	Depending on country-specific conditions, only for customers with framework contracts for the price of the individual contract.

The response time is the time period between the receipt of the service order which has been technically clarified by the customer and the start of travel of the service engineer to the place of performance or the beginning of fault clearance via teleservice. The specified response times apply to "technically clarified fault notifications" within the normal working hours of the region (e.g. Monday to Friday 8 a.m. to 5 p.m.) excluding public holidays.

Spare parts

Spare parts are provided from our central spare parts warehouse or from regional spare parts warehouses using our world-wide spare parts logistics infrastructure. All of the essential spare parts are stocked in our central spare parts stores. Regional spare parts warehouses are adapted to include the components specified in the final destination certificate²⁾. The following components are not defined as spare parts:

- Motors: these are repaired at an authorized repair workshop. For selected motors, Siemens in Germany stocks components for express delivery. These motors can be manufactured and delivered within a few working days. You can obtain the current list from your Siemens sales partner.
- Cables: The delivery times known to you usually apply.
- Special or customer-specific modules and components not available from Siemens as spare parts

The RSC shall only be processed in accordance with the terms and conditions applying to repair service contracts (RSC) available from your Siemens contact persons.

- For example, in the case of an RSC with 12 months contract period, this is a maximum of 24 months from the transfer of risk (delivery of components).
- Since the export of standard versions (components/system) is subject to a time-consuming official approval procedure, which applies in equal measure to the supply of such components for the purpose of servicing and spare parts supply, we offer an export version for individual components. This has usually less options than the standard version of the component and is not subject to an export authorization. Please refer to the information about export.

Options

For the Repair Service Contract for machine tools, the following supplementary options are offered. Contact your Siemens sales office/Regional Company for more information.

Flexible RSC start

Commissioning at the end customer's site can be concluded up to 24 months after delivery of the components installed in the machine. If this takes place later, the service period of the RSC will, however, begin no later than 24 months after the earliest delivery date of an installed DI Siemens component.

¹⁾ Countries not listed, for customers with framework contracts only. Embargo countries are excluded from service activities. Embargo countries are e.g.: Belarus, Cuba, Iran, North-Korea, Russia, Syria

Services and documentation

Digital Enterprise Services
Service Contracts

Repair Service Contract

Options

Earlier start of the service period

The services of the RSC can already be used before commissioning at the end customer's site. Upon conclusion of first commissioning, an additional service period starts at the place of performance that deviates from the final destination. The service period on site commences with the final destination notification.

The customer is obliged to provide Siemens in writing the following information directly following first commissioning:

- Machine number
- Machine type
- Machining technology
- Control system
- Drive system
- Number of measuring circuits
- OEM application data
- Date of first commissioning
- Country and complete address of the machine manufacturer and, if applicable, of the dealer and the BOM of the components from Siemens DI that are used, with article numbers and serial numbers

The customer then receives a preliminary RSC certificate, which states the start of the additional service period and the current place of performance of the machine. After commissioning at the end customer's site is reported, the customer receives the RSC certificate with the final destination information and the end of the service period.

Extension of an RSC

An existing RSC can be extended multiple times by 6 or 12 months, up to a maximum total RSC duration of 60 months. The contract extension must be ordered during the RSC service period. The customer will receive a new RSC certificate each time.

Data Handling

To simplify data handling, information relating to the final destination certificate for SINUMERIK Operate 2.6 and later products can be stored on the CNC. The PC tool identSNAPSHOT is needed in order to transfer the data to Siemens. The PC tool can be run directly without installing it on a computer and is available on the internet at:

www.siemens.com/identSNAPSHOT

The PC tool can also be used to generate final destination certificates for older versions of SINUMERIK CNCs and offers various options for acquiring machine parts lists. The PC tool is also capable of generating machine logbooks in PDF format. The generated data can also be kept with the machine as data backup.

For more information about identSNAPSHOT and handling the bill of materials of components used, please contact your Siemens sales office or Regional Company.

Contract versions

The framework contract is for machine manufacturers who agree to order one RSC for each machine with Siemens equipment. The individual contract is for machine manufacturers who order an RSC only for certain machines but not for all machines equipped with Siemens equipment.

OEM service levels

To guarantee repair service for OEM applications, an assessment is necessary based on the OEM service guideline. The assessment grades the OEM application from OEM service levels 0 to 4. A surcharge will be levied for OEM service levels 1 to 4.

Contact information for your local Siemens office or national company is available on the internet at:

www.siemens.com/automation-contact

Overview

Achieve your optimized machine quicker and more efficiently with Mechatronic Support

The Mechatronic Support service ensures that right from the design stage, all the systems involved in the mechanics, electronics, and IT of the new machine are modeled, tested and optimized in a simulation environment in terms of their functionality and interaction, before they are actually built.

Mechatronic Support is thus the intelligent alternative to "trial and error". Innovative machine concepts are compared with one another, and modified and optimized at the outset – a process which of course also takes account of your ideas for new mechatronic components.

Virtual simulation - real build

With the help of the Mechatronic Support service, machine ideas and new developments can be tested mechatronically and modified in a short time at low cost. The first real prototype can be built immediately afterwards as a functioning machine.

As the machine manufacturer, you have the benefit of shorter development phases and faster time-to-market; end users benefit from an optimized high-performance machine solution.

Benefits

- Shorter development times – shorter time to market
- Reliable achievement of development objectives
- Risk-free testing of innovative machine concepts
- Higher quality and productivity from the outset
- Get to the finished machine more quickly with specialist support

Services and documentation

Applications

Overview

Our understanding of an application is the customer-specific solution of an automation task based on standard hardware and software components. In this respect, industry knowledge and technological expertise are just as important as expert knowledge about how our products and systems work. We are setting ourselves this challenge with more than 280 application engineers in 20 countries.

Application centers

We currently have application centers in:

- Germany:
 - Head Office in Erlangen and in other German regions, e.g. in Munich, Nuremberg, Stuttgart, Mannheim, Frankfurt, Chemnitz, Cologne, Bielefeld, Bremen, Hanover, Hamburg
- Belgium: Brussels
- Brazil: Sao Paulo
- China: Beijing and 12 regions
- Denmark: Ballerup
- France: Paris
- Great Britain: Manchester
- India: Mumbai
- Italy: Bologna, Milan
- Japan: Tokyo, Osaka
- The Netherlands: The Hague
- Austria: Vienna
- Poland: Warsaw
- Sweden: Göteborg
- Switzerland: Zurich, Lausanne
- Spain: Madrid
- South Korea: Seoul
- Taiwan: Taipei
- Turkey: Istanbul
- USA: Atlanta

These application centers specialize in the use of SIMATIC/SIMOTION/SINAMICS. You therefore can rely on automation and drive specialists for implementing successful applications. By involving your personnel at an early stage in the process, we can provide a solid basis for rapid knowledge transfer, maintenance and further development of your automation solution.

Advice on applications and implementation

We offer a variety of consultation services to help you find the optimum solution for the SIMATIC/SIMOTION/SINAMICS application you want to implement:

The quotation phase includes

- clarification of technical questions,
- discussion of machine concepts and customer-specific solutions,
- selection of suitable technology and
- suggestions for implementation.

A technical feasibility study is also performed at the outset. In this way, difficult points of the application can be identified and solved early on. We can also configure and implement your application as a complete solution from a single source.

A large number of proven standard applications are available for use during the implementation phase. This saves engineering costs.

The system can be commissioned by experienced, competent personnel, if required. This saves time and trouble.

If servicing is required, we can support you on site or remotely. For further information about servicing, please see the section "Industry Services".

On-site application training

Training for the implemented applications can also be organized and carried out on site. This training for machine manufacturers and their customers does not deal with individual products, but the entire hardware and software system (for example, automation, drives and visualization).

From an initial concept to successful installation and commissioning: We provide complete support for SIMATIC/SIMOTION/SINAMICS! Contact your Siemens representative.

You can find further information at www.siemens.com/machinebuilding

Overview

Efficient and cost-effective maintenance strategies for the entire product lifecycle

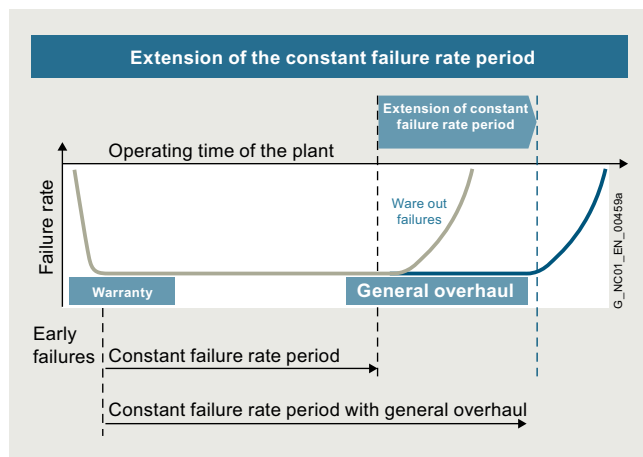

For you as an industry plant operator, maximum system productivity is your top priority.

Regular machine and plant maintenance performed by qualified service experts helps you ensure top plant performance for the long term.

For more information visit us at:
www.siemens.com/field-maintenance-services

General overhaul

Overview

Extension of phases with a constant failure rate

Machines and plants are expected to have a long service life. The service life of electronic components and mechanical parts is, however, limited and normally shorter than the planned machine/plant operating times. For higher availability of the machines or plants, we offer a general overhaul (preventive maintenance) for electronic components and motors at favorable conditions.

During the planned general overhaul, wear parts and aging parts are replaced in accordance with their stated service life so as to reduce unplanned downtimes. In the case of motors, replacement of bearings and encoders is also offered in addition to a general overhaul.

If a fault is detected during a general overhaul, troubleshooting and repair will be performed after requesting confirmation.

In the case of severe wear or major damage, we offer an "as new" spare part instead of a general overhaul for reasons of quality.

Benefits

- Preventive replacement of wear parts and aging parts in accordance with their stated service life
- Reduction in unplanned plant stoppages
- Enhanced production reliability
- Extended availability of your machines/plants
- New liability for defects for 12 months for components which have undergone a general overhaul
- Low price

More information

<https://support.industry.siemens.com/cs/sc/2120>

Contact information for your local Siemens office or national company is available on the internet at:
www.siemens.com/automation-contact

Function check

Overview

A check is made to ensure that the components function reliably. The first step involves cleaning the components. After that, all hardware, software and firmware enhancements are implemented that are known to the development, production, suppliers, service and quality management departments. Using a comprehensive test concept of series production, all functions of the software, firmware, ASICs, and complex and less complex function blocks are checked.

If a fault is detected during an overhaul, troubleshooting and repair will be performed after requesting confirmation. In the case of severe wear or major damage, we offer an "as new" spare part.

Benefits

- The component is checked and can be deployed again
- The component contains all the known improvements
- The customer's own spare parts stock is up-to-date
- Low price

Services and documentation

Spare parts services

Overview

Be safe in an emergency – always the right spare part at hand

Minimum downtimes and optimum use of staff and equipment are key to long-term success in industry.

But when a failure happens, it can bring the entire plant to a standstill in the worst case. Since even the best components will eventually reach the end of their lifecycle, our Spare Parts Services form the essential basis for smooth operation.

For more information visit us at:
www.siemens.com/spare-parts-services

Delivery of spare parts

Overview

In every sector worldwide, plants and systems are required to operate with ever increasing availability. Not having a specific spare part at the right time can result in considerable costs.

We will provide you with the support you need to prevent a standstill from occurring in the first place: with a worldwide network and optimized logistics chains.

Order type	Logistics service	Remark
Standard	Cost-optimized: Contracted shipping company	Delivery within the normal national delivery times by the contracted shipping company
Plant down-time	Time-optimized: Express, courier, collection	You choose the shortest possible delivery time as it suits you best: <ul style="list-style-type: none"> • Delivery by means of collection or courier service • Delivery by means of express delivery
Emergency service	Special logistics: Courier	Spare parts can be ordered from us 24/7 – even outside normal working hours, as well as on weekends or national holidays. <ul style="list-style-type: none"> • Delivery by means of courier service

Benefits

- New liability for spare part defects
- Long-term spare parts availability
- Optimum system compatibility

More information

You can find more information on the internet at:
<https://support.industry.siemens.com/cs/sc/2112>

Contact information for your local Siemens office or national company is available on the internet at:
www.siemens.com/automation-contact

Overview

With many products, we also offer you the option of an exchange in addition to the simple delivery of spare parts. This has the advantage that you not only receive the spare part quickly, but are able to return the defective device to us for a credit. You therefore receive our spare part at the lower exchange price.

A credit will be awarded on condition that the repair code indicates that repurchasing is admissible, a replacement is obtained from the spare parts store, and that the returned product is repairable.

The order type and logistics service determine the delivery of spare parts:

Order type	Logistics service	Remark
Standard	Cost-optimized: Contracted shipping company	Delivery within the normal national delivery times by the contracted shipping company
Plant down-time	Time-optimized: Express, courier, collection	You choose the shortest possible delivery time as it suits you best: <ul style="list-style-type: none"> • Delivery by means of collection or courier service • Delivery by means of express delivery
Emergency service	Special logistics: Courier	Spare parts can be ordered from us 24/7 – even outside normal working hours, as well as on weekends or national holidays. <ul style="list-style-type: none"> • Delivery by means of courier service

Return

For product returns, we require the following information:

- Reason for return
- If defective: detailed description of the fault
- Machine number
- Machine/system manufacturer
- End user

We will then be able to provide you with additional information in the repair report/inspection report regarding the diagnosis/inspection as well as information about the completed repair.

Benefits

- Price benefits through the option of returning defective parts
- A spare part is available immediately in the event of failure
- New liability for spare part defects
- Long-term spare parts availability
- Optimum system compatibility

Component upgrade service

Overview

Upgrade service for components: From OLD to NEW

Machines and plant are expected to have a long service life. The service life of the electronic components is, however, limited and normally shorter than the planned machine/plant operating times. To ensure that the required extended availability of the machines/plants is achieved, we offer an upgrade service for components at an attractive price.

In the course of their lifecycle, electronic components are normally redesigned/upgraded several times. With the upgrade service for components, you will always receive the latest technology.

A planned component upgrade from OLD to NEW helps to prevent unplanned machine stoppages and supports a safer and longer machines/plant availability. The upgrade service is mainly offered for older components that will soon be discontinued.

For information about the latest potential upgrades, please contact your local contact person. The upgrade service for components can only be offered to machine manufacturers or operators.

Benefits

- Price benefit through upgrade service
- New liability for new component defects
- Extended availability of your machines/plants
- Prevention of component failures due to wear and aging
- Prevention of machine stoppages due to unavailability of spare parts
- Reduced spare parts inventories
- Latest technology
- Easier servicing due to fewer variants
- Industry Services through Siemens are assured for the future

Services and documentation

Spare parts services

Return of diagnostic parts

Overview

Spare parts used for diagnostic purposes from the spare parts store can be returned within 3 months and a credit note for up to 85 % is issued.

For unused spare parts in their original packaging, you will receive a credit of 100 % in which case you will be charged a fixed price for handling.

Benefits

- Can be used for diagnostics
- Reduced spare parts inventories
- Low costs

More information

Stock reduction in spare parts store

Overview

Fast spare part delivery by Siemens enables manufacturers and plant operators to reduce their spare part stocks. For this purpose, we offer an analysis that shows exactly which parts should remain in the customer warehouse for a particular machine stock and which can be purchased directly from Siemens.

Benefits

- Reduced costs
- Stock optimization
- Minimization of fault downtimes

More information

You can find more information on the internet at: <https://support.industry.siemens.com/cs/sc/2112>

Contact information for your local Siemens office or national company is available on the internet at: www.siemens.com/automation-contact

Extended spare part availability

Overview

We normally retain spare parts for all products and systems for a period of 10 years after discontinuation of product marketing.

In individual cases, when we do not carry spare parts, we will offer a repair.

For a wide range of products and systems, spare parts availability is extended. We can provide you with the current spare parts availability for your machines/plants as a service once you have registered online with identSNAPSHOT. www.siemens.com/identsnapshot

If you require longer availability of spare parts for your machines/plants, please contact your local contact person.

Benefits

- Higher plant availability
- Security of investment
- Reduction of lifecycle costs

More information

You can find more information on the internet at: <https://support.industry.siemens.com/cs/sc/2112>

Contact information for your local Siemens office or national company is available on the internet at: www.siemens.com/automation-contact

Overview

High quality support in a breakdown – either at your premises or at a certified Siemens workshop

Even the best components eventually reach the end of their lifecycle. The result: downtimes and reduced productivity.

Our Repair Services comprise all service tasks over the entire product lifecycle, from functional maintenance to increasing performance. In this way, our service experts analyze, repair, maintain and optimize your components at Siemens manufacturer level, so that costly downtimes are minimized.

For more information visit us at:
www.siemens.com/repair-services

Downtimes cause problems in the plant as well as unnecessary costs. We can help you to reduce both to a minimum – with our worldwide repair facilities. The advantages for you are: Defects can be rectified before they cause further harm.

Repair is a favorable option when you have specific reasons for not wanting to replace the defective device or part with a new one (delivery as exchange product).

We maintain a global network of Siemens repair shops and certified partners to ensure that we will always be able to process your repairs quickly.

We can offer you different types of repair depending on your requirements:

Normal repair

Normal repair at standard conditions normally takes 10 working days following receipt of the defective item at our repair shop.

Fast repair

In particularly urgent cases, we offer you the option of a fast repair within 1 or 2 working days for many products at additional cost.

Mobile repair service

We come to you and perform the required repairs on site, for example, when the device or component cannot be removed due to its weight.

Function repair

A function repair is the same as a normal repair but excludes the repair of cosmetic defects, e.g. scratches, inscriptions, discoloration. The conditions applicable to function repairs should be observed in this case. The function repair can only be offered to machine manufacturers or operators. Please contact your local contact person for more information.

Long Life Repair

As a rule, a spare parts and repair service is offered for electronics products for a period of up to ten years after the period of active marketing. After this time, these services are generally only available in the case of acknowledged warranty conditions. Not so at Siemens. The Long Life Repair Service is available for selected electronic products and standard motors. Siemens thus offers a complete solution that includes short delivery times, long availability of original spare parts, economical repairs and a service availability of up to 25 years.

Benefits

- Short downtimes for machines and plants
- Only certified original parts are used
- Additional services from Siemens:
 - Longer availability of your machine/plant through the early replacement of wear parts and aging parts
 - Highest standards of quality
 - Use of the comprehensive test concept of series production, including software, firmware, ASICs, complex function blocks, etc.
 - Implementation of all the hardware and software/firmware enhancements known from development, production, suppliers, and service and quality management departments.
- Information supplied by repair report/inspection report

Spares on Web

Overview

Spares on Web – online identification of spare parts

The screenshot displays the Siemens Spares on Web interface. At the top, the Siemens logo and the text "Spares on Web - spare parts for YOU" are visible. Below this, there is a navigation bar with "English", "Help", "Contact", and "Login" links. The main search area includes a "Single" search mode selected, a "Multi" search mode, and a "Shopping Cart" icon. The search form contains three input fields: "Article No." with a placeholder example "6SL3730-7TE32-1BA3", "Serial number" with a placeholder example "P-12345678A123", and "Options" with a placeholder example "A01+B02+C03". There is a "Show images" checkbox and a "Search" button. At the bottom of the page, there is a footer with "© Siemens AG 2022" and links for "Corporate Information", "Privacy Policy", "Terms of Use", "Digital ID", and "Third-Party Software".

Spares on Web is a web-based tool for identifying spare parts. After you have entered the Article No. and serial number, the spare parts available for the relevant unit are displayed.

Overview

Siemens Product Partner for Drives Options

Individual options for our drives

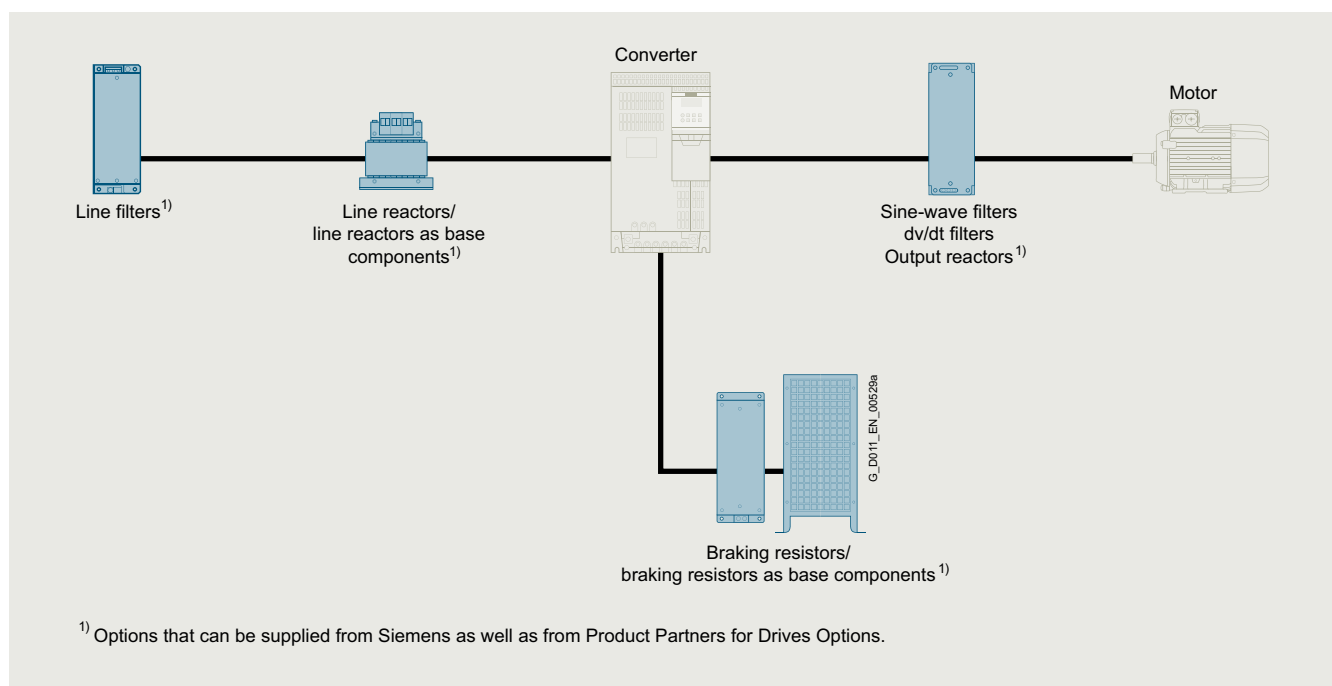

In order to meet as many customer requirements as possible in the field of drive technology, in addition to its own products, Siemens also relies on the individual and complementary services of selected partners.

We are increasingly focusing on the standard drive options, and our Siemens Product Partners for Drives Options supplement our drives with individual drive options.

This gives Siemens a unique flexibility to meet all application requirements. Naturally, we support our Siemens Product Partners for Drives Options in tailoring their options perfectly to our drives.

For you as our customer, there are multiple benefits:

- The Siemens Product Partners for Drives Options meet the same high standards of quality and performance that we place on our own products
- Drive options can be adapted to individual requirements/designs
- The Siemens Product Partners for Drives Options know our Siemens converter portfolio and can advise you individually and quickly

Services and documentation

mySupport documentation

Overview

mySupport documentation – Compiling personal documents

mySupport documentation is a web-based system for generating personalized documentation based on standard documents and is part of the Siemens Industry Online Support portal.

In mySupport, a personal document library can be created in the "Documentation" category. This library can be accessed online in mySupport or also be generated in various formats for offline use.

Previously, this functionality was available in the My Documentation Manager for configurable manuals. Due to the integration in mySupport, all entries of the Industry Online Support can now be imported into the personal document library, including FAQs or product notifications.

If you have already worked with the My Documentation Manager, all of the previously created libraries will continue to be available without restrictions in mySupport.

In addition, the personal library in mySupport can be shared with other mySupport users. In this way, a collection of relevant documents can be created very effectively and used together with other mySupport users all over the world.

You must register/log in for configuring and generating/managing

Benefits

- Display
View, print or download standard documents or personalized documents
- Configure
Transfer standard documents or parts of them to personalized documents
- Generate/Manage
Generate and manage personalized documents in the formats PDF, RTF or XML in all available languages

Function

Opening mySupport documentation in the Industry Online Support portal

- About the product support, entry type "Manual":
<https://support.industry.siemens.com/cs/ww/en/ps/manual>
By clicking on the required version of the manual and then "Show and configure", the manual opens in a modular view, where you can navigate from topic to topic. Here the direct link to a topic can be used and made available to other users. The selected document can be added to the personal library via "mySupport Cockpit" > "Add to mySupport documentation".
- Via the direct link
<https://support.industry.siemens.com/my/ww/en/documentation/advanced>
After logon/registration, the online help is displayed as the current document.

More information

You can find additional information on the internet at

- <https://support.industry.siemens.com/my/ww/en/documentation>
- https://support.industry.siemens.com/cs/helpcenter/en/index.htm?#persoenliche_bibliothek_aufbauen.htm

Overview

A high-quality programmable control or drive system can be used to maximum effect only if the user is aware of the performance of the products used as a result of intensive training and good technical documentation.

This is becoming more important due to the shorter innovation cycles of modern automation products and the convergence of electronics and mechanical engineering.

A comprehensive range of documentation is available which includes a Getting Started guide, operating instructions, installation manuals and a list manual.

In addition to technical information for SINUMERIK, SINAMICS, SIMOTION and SIMOTICS, the documentation is available for downloading as a PDF file from the internet:

- SINUMERIK
<https://support.industry.siemens.com/cs/document/108464614>
- SINAMICS
<https://support.industry.siemens.com/cs/document/109807358>
- SIMOTION
<https://support.industry.siemens.com/cs/document/109479653>
- SIMOTICS
<https://support.industry.siemens.com/cs/document/109813641>

Application

Explanations of the manuals:

- **Operating Instructions**
contain all the information needed to install the device and make electrical connections, information about commissioning and a description of the converter functions.
Phases of use: Control cabinet construction, commissioning, operation, maintenance and servicing.
- **Hardware Installation Manual**
contains all relevant information about the intended use of the components of a system (technical specifications, interfaces, dimensional drawings, characteristics, or possible applications), information about installation and electrical connections and information about maintenance and servicing.
Phases of use: Control cabinet configuration/construction, maintenance and servicing.
- **Operating and Installation Instructions**
(for converter and accessories)
contain all relevant information about the intended use of the components, such as technical specifications, interfaces, dimensional drawings, characteristics, or possible applications.
Phases of use: Control cabinet configuration/construction.
- **Manual/Configuration Manual**
contains all necessary information about the intended use of the components of a system, e.g. technical specifications, interfaces, dimensional drawings, characteristics, or possible applications.
Phases of use: Cabinet configuration/setup, circuit diagram configuration/drawing.
- **Commissioning Manual**
contains all information relevant to commissioning after installation and wiring. It also contains all safety and warning notices relevant to commissioning in addition to overview drawings.
Phases of use: Commissioning of components that have already been connected, configuration of system functions.
- **List Manual**
contains all parameters, function diagrams, and faults/alarms for the product/system as well as their meanings and setting options. It contains parameter data and fault/alarm descriptions with functional correlations.
Phases of use: Commissioning of components that have already been connected, configuration of system functions, fault cause/diagnosis.
- **Getting Started**
provides information about getting started for the first-time user as well as references to additional information. It contains information about the basic steps to be taken during commissioning. The information in the other documentation should be carefully observed for all of the other work required.
Phases of use: Commissioning of components that have already been connected.
- **Function Manual Drive Functions**
contains all the relevant information about individual drive functions: Description, commissioning and integration in the drive system.
Phases of use: Commissioning of components that have already been connected, configuration of system functions.

Appendix

Certificates of suitability

Overview

Many of the products in this Catalog fulfill requirements, e.g. for UL, CSA or FM and are labeled with the corresponding approval designation.

All of the certificates of suitability, approvals, certificates, declarations of conformity, test certificates, e.g. CE, UL, Safety Integrated etc. have been performed with the associated system components as they are described in the Catalogs and Configuration Manuals.

The certificates are only valid if the products are used with the described system components, are installed according to the Installation Guidelines and used for their intended purpose.

In other cases, the vendor of these products is responsible for arranging for the issue of new certificates.

Appendix

Software licenses

Overview

Software types

Software requiring a license is categorized into types. The following software types have been defined:

- Engineering software
- Runtime software

Engineering software

This includes all software products for creating (engineering) user software, e.g. for configuring, programming, parameterizing, testing, commissioning or servicing.

Data generated with engineering software and executable programs can be duplicated for your own use or for use by third-parties free-of-charge.

Runtime software

This includes all software products required for plant/machine operation, e.g. operating system, basic system, system expansions, drivers, etc.

The duplication of the runtime software and executable programs created with the runtime software for your own use or for use by third-parties is subject to a charge.

You can find information about license fees according to use in the ordering data (e.g. in the catalog). Examples of categories of use include per CPU, per installation, per channel, per instance, per axis, per control loop, per variable, etc.

Information about extended rights of use for parameterization/configuration tools supplied as integral components of the scope of supply can be found in the readme file supplied with the relevant product(s).

License types

Siemens Digital Industries and Smart Infrastructure offers various types of software license:

- Floating license
- Single license
- Rental license
- Rental floating license
- Trial license
- Demo license
- Demo floating license

Floating license

The software may be installed for internal use on any number of devices by the licensee. Only the concurrent user is licensed. The concurrent user is the person using the program. Use begins when the software is started. A license is required for each concurrent user.

Single license

Unlike the floating license, a single license permits only one installation of the software per license.

The type of use licensed is specified in the ordering data and in the Certificate of License (CoL). Types of use include for example per instance, per axis, per channel, etc.

One single license is required for each type of use defined.

Rental license

A rental license supports the "sporadic use" of engineering software. Once the license key has been installed, the software can be used for a specific period of time (the operating hours do not have to be consecutive).

One license is required for each installation of the software.

Rental floating license

The rental floating license corresponds to the rental license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

Trial license

A trial license supports "short-term use" of the software in a non-productive context, e.g. for testing and evaluation purposes. It can be transferred to another license.

Demo license

The demo license support the "sporadic use" of engineering software in a non-productive context, for example, use for testing and evaluation purposes. It can be transferred to another license. After the installation of the license key, the software can be operated for a specific period of time, whereby usage can be interrupted as often as required.

One license is required per installation of the software.

Demo floating license

The demo floating license corresponds to the demo license, except that a license is not required for each installation of the software. Rather, one license is required per object (for example, user or device).

Certificate of License (CoL)

The CoL is the licensee's proof that the use of the software has been licensed by Siemens. A CoL is required for every type of use and must be kept in a safe place.

Downgrading

The licensee is permitted to use the software or an earlier version/release of the software, provided that the licensee owns such a version/release and its use is technically feasible.

Delivery versions

Software is constantly being updated. The following delivery versions

- PowerPack
- Upgrade

can be used to access updates.

Existing bug fixes are supplied with the ServicePack version.

PowerPack

PowerPacks can be used to upgrade to more powerful software. The licensee receives a new license agreement and CoL (Certificate of License) with the PowerPack. This CoL, together with the CoL for the original product, proves that the new software is licensed.

A separate PowerPack must be purchased for each original license of the software to be replaced.

Upgrade

An upgrade permits the use of a new version of the software on the condition that a license for a previous version of the product is already held.

The licensee receives a new license agreement and CoL with the upgrade. This CoL, together with the CoL for the previous product, proves that the new version is licensed.

A separate upgrade must be purchased for each original license of the software to be upgraded.

Overview

ServicePack

ServicePacks are used to debug existing products. ServicePacks may be duplicated for use as prescribed according to the number of existing original licenses.

License key

Siemens Digital Industries and Smart Infrastructure supplies software products with and without license keys.

The license key serves as an electronic license stamp and is also the "switch" for activating the software (floating license, rental license, etc.).

The complete installation of software products requiring license keys includes the program to be licensed (the software) and the license key (which represents the license).

Software Update Service (SUS)

As part of the SUS contract, all software updates for the respective product are made available to you free of charge for a period of one year from the invoice date. The contract will automatically be extended for one year if it is not canceled three months before it expires.

The possession of the current version of the respective software is a basic condition for entering into an SUS contract.

You can download explanations concerning license conditions from https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf

Appendix

Metal surcharges

Explanation of the raw material/metal surcharges¹⁾

Surcharge calculation

To compensate for variations in the price of the raw materials silver, copper, aluminum, lead, gold, dysprosium²⁾ and/or neodym²⁾, surcharges are calculated on a daily basis using the so-called metal factor. These apply to products containing these raw materials and are calculated per raw material. These surcharges are added to the price of a product if the basic official price (BOP) of the raw material in question is exceeded. Surcharges are calculated in accordance with the following criteria:

Basic official price (BOP) of the raw material

- BOP of the workday prior to receipt of the order or prior to release order (Daily Price) for:
 - Silver (processed)³⁾
 - Gold (processed)³⁾
 - Aluminum (temporary constant 360.31 EUR per 100 kg, due to loss of DEL-Notiz)
 - Lead (constant 199.50 EUR per 100 kg)
- BOP of two workdays prior to receipt of the order or prior to release order (Daily Price) per 100 kg for:
 - Copper (LME-notation/10, converted from USD to EUR using LME-FX-Rate [MTLE] + 1.2 %) + 1 %⁴⁾
- If BOP is suspended, the last one is used.

Metal factor of the products

Certain products are displayed with a metal factor. The metal factor determines the official price (for those raw materials concerned) as of which the metal surcharges are applied and the calculation method used (weight or percentage method). An exact explanation is given below.

Structure of the metal factor

Metal factor consists of several digits; the first digit indicates whether the percentage method of calculation refers to the list price or a discounted price (customer net price) (L = list price / N = customer net price).

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG)
3rd digit	for copper (CU)
4th digit	for aluminum (AL)
5th digit	for lead (PB)
6th digit	for gold (AU)
7th digit	for dysprosium (Dy) ²⁾
8th digit	for neodym (Nd) ²⁾

Weight method

The weight method uses the BOP, the daily price and the raw material weight. In order to calculate the surcharge, the BOP must be subtracted from the daily price. The difference is then multiplied by the raw material weight.

The BOP can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. The raw material weight can be found in the respective product descriptions.

Percentage method

Use of the percentage method is indicated by the letters A-Z at the respective digit of the metal factor.

The surcharge is increased - dependent on the deviation of the daily price compared with the BOP - using the percentage method in "steps" and consequently offers surcharges that remain constant within the framework of this "step range". A higher percentage rate is charged for each new step. The respective percentage level can be found in the table below.

Metal factor examples

L E A - - - - -	<ul style="list-style-type: none"> Basis for % surcharge: List price Silver Basis 150 €, Step 50 €, 0.5 % Copper Basis 150 €, Step 50 €, 0.1 % No surcharge for aluminum No surcharge for lead No surcharge for gold No surcharge for dysprosium No surcharge for neodym

Explanation of the raw material/metal surcharges for dysprosium and neodym (rare earths)

Surcharge calculation

To compensate for variations in the price of the raw materials silver¹⁾, copper¹⁾, aluminum¹⁾, lead¹⁾, gold¹⁾, dysprosium and/or neodym, surcharges are calculated on a daily basis using the so-called metal factor. This applies to products containing at least one of these raw materials. The surcharge for dysprosium and neodym is calculated as a supplement to the price of a product if the basic official price (BOP) of the raw material in question is exceeded.

The surcharge is calculated in accordance with the following criteria:

- Basic official price (BOP) of the raw material²⁾
Three-month basic average price (see below) in the period before the quarter in which the order was received or the release order took place (average official price) for
 - Dysprosium (Dy metal, 99 % min. FOB China; USD/kg)
 - Neodym (Nd metal, 99 % min. FOB China; USD/kg)
- Metal factor of the products
Certain products are displayed with a metal factor. The metal factor indicates (for those raw materials concerned) the BOP as of which the surcharges for dysprosium and neodym are calculated using the weight method. An exact explanation of the metal factor is given below.

Three-month average price

The prices of rare earths vary according to the foreign currency, and there is no freely accessible stock exchange listing. This makes it more difficult for all parties involved to monitor changes in price. In order to avoid continuous adjustment of the surcharges, but to still ensure fair, transparent pricing, an average price is calculated over a three-month period using the average monthly foreign exchange rate from USD to EUR (source: European Central Bank). Since not all facts are immediately available at the start of each month, a one-month buffer is allowed before the new average price applies.

Examples of calculation of the average official price:

Period for calculation of the average price:	Period during which the order/release order is effected and the average price applies:
Sep 2012 - Nov 2012	Q1 in 2013 (Jan - Mar)
Dec 2012 - Feb 2013	Q2 in 2013 (Apr - Jun)
Mar 2013 - May 2013	Q3 in 2013 (Jul - Sep)
Jun 2013 - Aug 2013	Q4 in 2013 (Oct - Dec)

Structure of the metal factor

The metal factor consists of several digits; the first digit is not relevant to the calculation of dysprosium and neodym.

The remaining digits indicate the method of calculation used for the respective raw material. If no surcharge is added for a raw material, a "-" is used.

1st digit	List or customer net price using the percentage method
2nd digit	for silver (AG) ¹⁾
3rd digit	for copper (CU) ¹⁾
4th digit	for aluminum (AL) ¹⁾
5th digit	for lead (PB) ¹⁾
6th digit	for gold (AU) ¹⁾
7th digit	for dysprosium (Dy)
8th digit	for neodym (Nd)

Weight method

The weight method uses the basic official price, the average price and the raw material weight. In order to calculate the surcharge, the BOP must be subtracted from the average price. The difference is then multiplied by the raw material weight.

The basic official price can be found in the table below using the number (1 to 9) of the respective digit of the metal factor. Your Sales contact can inform you of the raw material weight.

Metal factor examples

1) For a different method of calculation, refer to the separate explanation for these raw materials on the previous page.

1. General Provisions

By using this catalog you can purchase hard- and software products as well as services (together hereinafter referred to as "products") described therein from Siemens Aktiengesellschaft subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Note, for products purchased from any Siemens entity having a registered office outside of Germany, the respective terms and conditions of sale and delivery of the respective Siemens entity apply exclusively. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in European Union

For customers with a seat or registered office in European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the text of the product description, these specific terms and conditions shall apply and subordinate thereto,,
- for stand-alone software products and software products forming a part of a product or project, the "General Conditions for Software Products for Infrastructure & Industry Business (German law)"¹⁾ and/or
- for consulting services the "Allgemeine Geschäftsbedingungen für Beratungsleistungen für Infrastructure & Industry Geschäft (Deutsches Recht)"¹⁾ (available only in German) and/or
- for other services, the „Supplementary Terms and Conditions for Services for Infrastructure & Industry Business (German Law) ("BL")"¹⁾ and/or
- for other products the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾.
In case such products should contain Open Source Software, the conditions of which shall prevail over the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾, the Product will be given a note as to which special conditions apply to this open source software. This shall apply mutatis mutandis for notices referring to other third-party software components.

1.2 For customers with a seat or registered office outside European Union

For customers with a seat or registered office outside European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for consulting services the "Standard Terms and Conditions for Consulting Services for Infrastructure & Industry Business (Swiss Law)"¹⁾ and/or
- for other services the "International Terms & Conditions for Services"¹⁾ supplemented by "Software Licensing Conditions"¹⁾ and/or
- for other products the "International Terms & Conditions for Products"¹⁾ supplemented by "Software Licensing Conditions"¹⁾

1.3 For customers with master or framework agreement

To the extent products offered are covered by an existing master or framework agreement, the terms and conditions of that agreement shall apply instead of T&C.

2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation. The metal factor, provided it is relevant, can be found in the respective product description.

You will find a detailed explanation of the metal factor on the page headed "Metal surcharges".

To calculate the surcharge (except in the cases of copper, dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to copper, the official price from two days prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

https://mall.industry.siemens.com/legal/ww/en/terms_of_trade_en.pdf

Appendix

Conditions of sale and delivery

4. Export Control and Sanctions Compliance

4.1 General

Customer shall comply with all applicable sanctions, embargoes and (re-)export control laws and regulations, and, in any event, with those of the European Union, the United States of America and any locally applicable jurisdiction (collectively "Export Regulations").

4.2 Checks for Products

Prior to any transaction by customer concerning products (including hardware, documentation and technology) delivered by Siemens, or products (including maintenance and technical support) performed by Siemens with a third party, customer shall check and certify by appropriate measures that

- (i) the customer's use, transfer, or distribution of such products, the brokering of contracts or the provision of other economic resources in connection with products will not be in violation of any Export Regulations, also taking into account any prohibitions to circumvent these (e.g., by undue diversion)
- (ii) the products are not intended or provided for prohibited or unauthorized non-civilian purposes (e.g. armaments, nuclear technology, weapons, or any other usage in the field of defense and military);
- (iii) customer has screened all direct and indirect parties involved in the receipt, use, transfer, or distribution of the products against all applicable restricted party lists of the Export Regulations concerning trading with entities, persons and organizations listed therein and
- (iv) products within the scope of items-related restrictions, as specified in the respective annexes to the Export Regulations, will not, unless permitted by the Export Regulations, be
 - (a) exported, directly or indirectly (e.g., via Eurasian Economic Union (EAEU) countries), to Russia or Belarus, or
 - (b) resold to any third party business partner that does not take a prior commitment not to export such products to Russia or Belarus.

4.3 Non-Acceptable Use of Software and Cloud Services

Customer shall not, unless permitted by the Export Regulations or respective governmental licenses or approvals,

- (i) download, install, access or use the products from or in any location prohibited by or subject to comprehensive sanctions or subject or to license requirements according to the Export Regulations;
 - (ii) grant access to, transfer, (re-)export (including any "deemed (re-)exports"), or otherwise make available the products to any entity, person, or organization identified on a restricted party list of the Export Regulations;
 - (iii) use the products for any purpose prohibited by the Export Regulations (e.g. use in connection with armaments, nuclear technology or weapons);
 - (iv) upload to a products platform any customer content unless it is non-controlled (e.g. in the EU: AL = N; in the U.S.: ECCN = N or EAR99);
 - (v) facilitate any of the afore mentioned activities by any user.
- Customer shall provide all users with all information necessary to ensure compliance with the Export Regulations.

4.4 Semiconductor Development

Customer will not, without advance written authorization from Siemens, use offerings for the development or production of integrated circuits at any semiconductor fabrication facility located in China meeting the criteria specified in the U.S. Export Administration Regulations, 15 C.F.R. 744.23.

4.5 Information

Upon request by Siemens, customer shall promptly provide Siemens with all information pertaining to users, the intended use and the location of use or the final destination (in the case of hardware, documentation and technology) of the products. Customer will notify Siemens prior to customer disclosing any information to Siemens that is defense-related or requires controlled or special data handling pursuant to applicable government regulations, and will use the disclosure tools and methods specified by Siemens.

4.6 Reservation

Siemens shall not be obligated to fulfill this agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes or other sanctions. Customer acknowledges that Siemens may be obliged under the Export Regulations to limit or suspend access by customer and/or users to products.

5. Miscellaneous

Errors excepted and subject to change without prior notice.

Selection and ordering at Siemens SiePortal – Ordering products and downloading catalogs

Easy product selection and ordering with SiePortal

SiePortal > Products & Services

The internet ordering platform of Siemens AG is located in SiePortal. It provides you with online access to a comprehensive product spectrum that is presented in an informative, well-organized way.

Powerful search functions help you select the required products, while configurators enable you to configure complex product and system components quickly and easily. CAX data are also available for you to use.

Data transfer allows the entire procedure, from selection through ordering to tracking and tracing, to be carried out online. Availability checks, individual customer discounting, and quotation preparation are also possible.

<https://sieportal.siemens.com>

Downloading catalogs

SiePortal > Support > Knowledge base

You can download catalogs and brochures in PDF format from Siemens Industry Online Support without having to register.

The filter box makes it possible to perform targeted searches.

Cybersecurity information

Siemens provides products and solutions with industrial cybersecurity functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial cybersecurity measures that may be implemented, please visit

www.siemens.com/cybersecurity-industry

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Cybersecurity RSS Feed under

www.siemens.com/cert

Subject to changes and errors. The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.

All product designations may be trademarks or product names of Siemens AG or other companies whose use by third parties for their own purposes could violate the rights of the owners.
