

What's New in STEP 7, Version 5.7?

The following subject areas have been updated:

Operating systems

- You can find information on the operating systems supported in V5.7 in the file "Readme.rtf".

Message configuration

- If you work with existing projects that use the project-wide assignment of message numbers, you need the "SIMATIC S7-PM Project Messages" option package as of STEP 7 V5.7. If the option package is not installed, these projects are write-protected and can no longer be edited.

Security

- Measures have been taken to improve security.
