# **SIEMENS**

# **MICROMASTER 420**

Operating Instructions

Issue B1

## **MICROMASTER 420 Documentation**

## **Getting Started Guide**

Is for quick commissioning with SDP and BOP.

## **Operating Instructions**

Gives information about features of the MICROMASTER 420, Installation, Commissioning, Control modes, System Parameter structure, Troubleshooting, Specifications and available options of the MICROMASTER 420.

#### **Parameter List**

The Parameter List contains the description of all Parameters structured in functional order and a detailed description. The Parameter list also includes a series of function plans.

## **Reference Manual**

The Reference Manual gives detailed information about engineering communication troubleshooting and maintenance.

## Catalogues

In the catalogue you will find all the necessary information to select an appropriate inverter, as well as filters, chokes, operator panels and communication options.

Issue B1 Foreword

## **Foreword**

## **User Documentation**

### **WARNING**

Before installing and commissioning, you must read the safety instructions and warnings carefully and all the warning labels attached to the equipment. Make sure that the warning labels are kept in a legible condition and replace missing or damaged labels.

Information is also available from:

## **Technical Support Nuremberg**

Tel: +49 (0) 180 5050 222 Fax: +49 (0) 180 5050 223

Email: techsupport@ad.siemens.de

Monday to Friday: 7:00 am to 5:00 pm (local time)

## **Internet Home Address**

Customers can access technical and general information at: <a href="http://www.siemens.de/micromaster">http://www.siemens.de/micromaster</a>

## **Contact address**

Should any questions or problems arise while reading this manual, please contact the Siemens office concerned using the form provided at the back this manual.

## **Definitions and Warnings**

### **DANGER**

indicates an immiently hazardous situation which, if not avoided, will result in death or serious injury.

## **WARNING**

indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

#### **CAUTION**

used with the safety alert symbol indicates a potentially hazardous situationwhich, if not avoided, may result in minor or moderate injury.

## **CAUTION**

used without safety alert symbol indicates a potentially hzardous situation which, if not avoided, may result in a property demage.

#### NOTICE

indicates a potential situation which, if not avoided, may result in an undesireable result or state.

#### **NOTES**

For the purpose of this documentation, "Note" indicates important information relating to the product or highlights part of the documentation for special attention.

## **Qualified personnel**

For the purpose of this Instruction Manual and product labels, a "Qualified person" is someone who is familiar with the installation, mounting, start-up and operation of the equipment and the hazards involved. He or she must have the following qualifications:

- Trained and authorized to energize, de-energize, clear, ground and tag circuits and equipment in accordance with established safety procedures.
- Trained in the proper care and use of protective equipment in accordance with established safety procedures.
- 3. Trained in rendering first aid.

- PE Protective Earth uses circuit protective conductors sized for short circuits where the voltage will not rise in excess of 50 Volts. This connection is normally used to ground the inverter.

### Use for intended purpose only

The equipment may be used only for the application stated in the manual and only in conjunction with devices and components recommended and authorized by Siemens.

Issue B1 Safety Instructions

## Safety Instructions

The following Warnings, Cautions and Notes are provided for your safety and as a means of preventing damage to the product or components in the machines connected. This section lists Warnings, Cautions and Notes, which apply generally when handling MICROMASTER 420 Inverters, classified as **General**, **Transport & Storage**, **Commissioning**, **Operation**, **Repair** and **Dismantling & Disposal**.

**Specific Warnings, Cautions and Notes** that apply to particular activities are listed at the beginning of the relevant chapters and are repeated or supplemented at critical points throughout these chapters.

Please read the information carefully, since it is provided for your personal safety and will also help prolong the service life of your MICROMASTER 420 Inverter and the equipment you connect to it.

#### General

#### **WARNING**

- This equipment contains dangerous voltages and controls potentially dangerous rotating mechanical parts. Non-compliance with **Warnings** or failure to follow the instructions contained in this manual can result in loss of life, severe personal injury or serious damage to property.
- Only suitable qualified personnel should work on this equipment, and only after becoming familiar with all safety notices, installation, operation and maintenance procedures contained in this manual. The successful and safe operation of this equipment is dependent upon its proper handling, installation, operation and maintenance.
- Risk of electric shock. The DC link capacitors remain charged for five minutes after power has been removed. It is not permissible to open the equipment until 5 minutes after the power has been removed.
- HP ratings are based on the Siemens 1LA motors and are given for guidance only, they do not necessarily comply with UL or NEMA HP ratings.

### **CAUTION**

- Children and the general public must be prevented from accessing or approaching the equipment!
- This equipment may only be used for the purpose specified by the manufacturer. Unauthorized modifications and the use of spare parts and accessories that are not sold or recommended by the manufacturer of the equipment can cause fires, electric shocks and injuries.

#### **NOTICE**

- Keep these operating instructions within easy reach of the equipment and make them available to all users
- Whenever measuring or testing has to be performed on live equipment, the regulations of Safety Code VBG 4.0 must be observed, in particular § 8 "Permissible Deviations when Working on Live Parts". Suitable electronic tools should be used.
- Before installing and commissioning, please read these safety instructions and warnings carefully and all the warning labels attached to the equipment. Make sure that the warning labels are kept in a legible condition and replace missing or damaged labels.

## **Transport & Storage**

### **WARNING**

 Correct transport, storage, erection and mounting, as well as careful operation and maintenance are essential for proper and safe operation of the equipment.

#### **CAUTION**

 Protect the inverter against physical shocks and vibration during transport and storage. Also be sure to protect it against water (rainfall) and excessive temperatures (see table on page 76).

## Commissioning

## **WARNING**

- Work on the device/system by unqualified personnel or failure to comply with warnings can result in severe personal injury or serious damage to material. Only suitably qualified personnel trained in the setup, installation, commissioning and operation of the product should carry out work on the device/system.
- Only permanently-wired input power connections are allowed. This equipment must be grounded (IEC 536 Class 1, NEC and other applicable standards).
- ◆ If a Residual Current-operated protective Device (RCD) is to be used, it must be an RCD type B. Machines with a three phase power supply, fitted with EMC filters, must not be connected to a supply via an ELCB (Earth Leakage Circuit-Breaker - see DIN VDE 0160, section 5.5.2 and EN50178 section 5.2.11.1).
- The following terminals can carry dangerous voltages even if the inverter is inoperative:
  - the power supply terminals L/L1, N/L2, L3.
  - the motor terminals U, V, W, DC+, DC-
- This equipment must not be used as an 'emergency stop mechanism' (see EN 60204, 9.2.5.4)

### **CAUTION**

The connection of power, motor and control cables to the inverter must be carried out as shown in Figure 2-7 Seite 29, to prevent inductive and capacitive interference from affecting the correct functioning of the inverter.

Issue B1 Safety Instructions

## Operation

#### **WARNING**

- Motor parameters must be accurately configured for the motor overload protection to operate correctly.
- ♦ MICROMASTERS operate at high voltages.
- When operating electrical devices, it is impossible to avoid applying hazardous voltages to certain parts of the equipment.
- Emergency Stop facilities according to EN 60204 IEC 204 (VDE 0113) must remain operative in all operating modes of the control equipment. Any disengagement of the Emergency Stop facility must not lead to uncontrolled or undefined restart.
- Wherever faults occurring in the control equipment can lead to substantial material damage or even grievous bodily injury (i.e. potentially dangerous faults), additional external precautions must be taken or facilities provided to ensure or enforce safe operation, even when a fault occurs (e.g. independent limit switches, mechanical interlocks, etc.).
- Certain parameter settings may cause the inverter to restart automatically after an input power failure.
- ◆ This equipment is capable of providing internal motor overload protection in accordance with UL508C section 42. Refer to P0610 and P0335, i²t is ON by default. Motor overload protection can also be provided using an external PTC via a digital input.
- ◆ This equipment is suitable for use in a circuit capable of delivering not more than 10,000 symmetrical amperes (rms), for a maximum voltage of 230 V / 460 V when protected by a time delay fuse (see Tables see Tables starting on page 77).
- This equipment must not be used as an 'emergency stop mechanism' (see EN 60204, 9.2.5.4)

## Repair

## **WARNING**

- Repairs on equipment may only be carried out by Siemens Service, by repair centers authorized by Siemens or by qualified personnel who are thoroughly acquainted with all the warnings and operating procedures contained in this manual.
- Any defective parts or components must be replaced using parts contained in the relevant spare parts list.
- Disconnect the power supply before opening the equipment for access

## **Dismantling & Disposal**

## **NOTES**

- ◆ The inverter's packaging is re-usable. Retain the packaging for future use or return it to the manufacturer.
- Easy-to-release screw and snap connectors allow you to break the unit down into its component parts. You can then re-cycle these component parts, dispose of them in accordance with local requirements or return them to the manufacturer.

1 Overview

## 1 Overview

| This Chap | pter contains:  |    |
|-----------|---|----|
|           | A summary of the major features of the MICROMASTER 420 range. |    |
| 1.1       | The MICROMASTER 420   | 16 |
| 1.2       | Features  | 17 |

1 Overview Issue B1

## 1.1 The MICROMASTER 420

The MICROMASTER 420s are a range of frequency inverters for controlling the speed of three phase AC motors. The various models available range from the 120 W single phase input to the 11 kW three phase input.

The inverters are microprocessor-controlled and use state-of-the-art Insulated Gate Bipolar Transistor (IGBT) technology. This makes them reliable and versatile. A special pulse-width modulation method with selectable Pulse frequency permits quiet motor operation. Comprehensive protective functions provide excellent inverter and motor protection.

The MICROMASTER 420 with its default factory settings, is ideal for a large range of simple motor control applications. The MICROMASTER 420 can also be used for more advanced motor control applications via its comprehensive parameter lists.

The MICROMASTER 420 can be used in both 'stand-alone' applications as well as being integrated into 'Automation Systems'.

Issue B1 1 Overview

## 1.2 Features

### **Main characteristics**

- > Easy installation
- Easy commissioning
- Rugged EMC design
- Can be operated on IT line supplies
- > Fast repeatable response time to control signals
- Comprehensive range of parameters enabling configuration for widest range of applications
- Simple cable connection
- Modular design for extremely flexible configuration
- ➤ High switching frequencies for low-noise motor operation
- > Detailed status information and integrated message functions
- External options for PC communications, Basic Operator Panel (BOP), Advanced Operator Panel (AOP) and Profibus Communications Module

#### Performance characteristics

- > Flux Current Control (FCC) for improved dynamic response and motor control
- > Fast Current Limitation (FCL) for operation with trip-free mechanism
- Built-in DC brake
- Compound Braking to improve braking performance
- > Acceleration/deceleration times with programmable smoothing
- Closed-loop control using Proportional, Integral (PI) control loop function
- ➤ Multi-point V/f characteristic

## **Protection characteristics**

- Overvoltage/undervoltage protection
- Overtemperature protection for the inverter
- Ground fault protection
- > Short-circuit protection
- > i<sup>2</sup>t thermal motor protection
- > PTC for motor protection

1 Overview

Issue B1 2 Installation

## 2 Installation

## This Chapter contains:

- > General data relating to installation
- Dimensions of Inverter
- > Wiring guidelines to minimize the effects of EMI
- > Details concerning electrical installation

| 2.1 | General                      | 20 |
|-----|------------------------------|----|
| 2.2 | Ambient operating conditions | 21 |
| 2.3 | Mechanical installation      | 22 |
| 2.4 | Electrical installation      | 25 |

#### **WARNING**

- Work on the device/system by unqualified personnel or failure to comply with warnings can result in severe personal injury or serious damage to material. Only suitably qualified personnel trained in the setup, installation, commissioning and operation of the product should carry out work on the device/system.
- Only permanently-wired input power connections are allowed. This equipment must be grounded (IEC 536 Class 1, NEC and other applicable standards).
- If a Residual Current-operated protective Device (RCD) is to be used, it must be an RCD type B. Machines with a three-phase power supply, fitted with EMC filters, must not be connected to a supply via an ELCB (Earth Leakage Circuit-Breaker EN50178 Section 5.2.11.1).
- The following terminals can carry dangerous voltages even if the inverter is inoperative:
  - the power supply terminals L/L1, N/L2, L3.
  - the motor terminals U, V, W, DC+, DC-
- ♦ Always wait **5 minutes** to allow the unit to discharge after switching off before carrying out any installation work.
- This equipment must not be used as an 'emergency stop mechanism' (see EN 60204, 9.2.5.4)
- ◆ The minimum size of the earth bonding conductor must be equal to or greater than the cross-section of the power supply cables.

### **CAUTION**

The connection of power, motor and control cables to the inverter must be carried out as shown in Figure 2-7 on page 29, to prevent inductive and capacitive interference from affecting the correct functioning of the inverter.

Issue B1 2 Installation

## 2.1 General

## Installation after a Period of Storage

Following a prolonged period of storage, you must reform the capacitors in the inverter. The requirements are listed below.

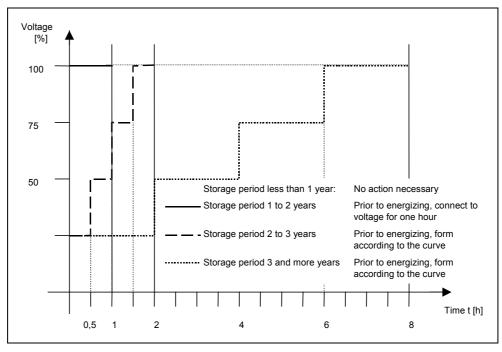

Figure 2-1 Forming

## 2.2 Ambient operating conditions

## **Temperature**

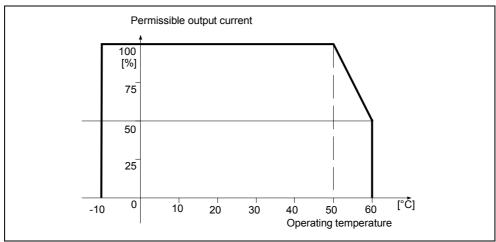

Figure 2-2 Ambient operating temperature

## Humidity

Relative air humidity ≤ 95% Non-condensing

## **Altitude**

If the inverter is to be installed at an altitude > 1000 m or > 2000 m above sea level, derating will be required:

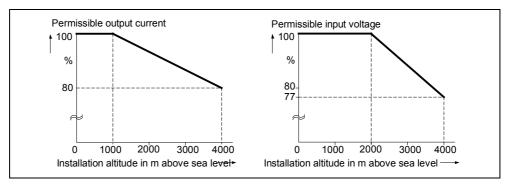

Figure 2-3 Installation altitude

## **Shock and Vibration**

Do not drop the inverter or expose to sudden shock.. Do not install the inverter in an area where it is likely to be exposed to constant vibration.

Mechanical strength to DIN IEC 68-2-6

Deflection: 0.075 mm (10 ... 58 Hz)
 Acceleration: 9.8 m/s² (> 58 ... 500 Hz)

### **Electromagnetic Radiation**

Do not install the inverter near sources of electromagnetic radiation.

## **Atmospheric Pollution**

Do not install the inverter in an environment, which contains atmospheric pollutants such as dust, corrosive gases, etc.

## Water

Take care to site the inverter away from potential water hazards, e.g. do not install the inverter beneath pipes that are subject to condensation. Avoid installing the inverter where excessive humidity and condensation may occur.

## Installation and cooling

## **CAUTION**

The inverters MUST NOT be mounted horizontally.

The inverters can be mounted without any clearance at either side.

Allow 100 mm clearance above and below the inverter. Make sure that the cooling vents in the inverter are positioned correctly to allow free movement of air.

Issue B1 2 Installation

## 2.3 Mechanical installation

### **WARNING**

- To ensure the safe operation of the equipment, it must be installed and commissioned by qualified personnel in full compliance with the warnings laid down in these operating instructions.
- ◆ Take particular note of the general and regional installation and safety regulations regarding work on dangerous voltage installations (e.g. EN 50178), as well as the relevant regulations regarding the correct use of tools and personal protective gear.
- The mains input, DC and motor terminals, can carry dangerous voltages even if the inverter is inoperative; wait 5 minutes to allow the unit to discharge after switching off before carrying out any installation work.
- ♦ The inverters can be mounted adjacent to each other. If they are mounted on top of each other, however, a clearance of 100 mm has to be observed.

## 2.3.1 Mounting on standard rail, Frame Size A

## Fitting the Inverter to a 35 mm standard rail (EN 50022)

1. Fit the inverter to the rail using the upper rail latch.

2. Push the inverter against the rail and the lower rail latch should click into place.

## Removing the Inverter from the rail

- To disengaged the release mechanism of the inverter, insert a screwdriver into the release mechanism.
- 2. Apply a downward pressure and the lower rail latch will disengage.
- 3. Pull the inverter from the rail.

Issue B1 2 Installation

## 2.4 Electrical installation

#### **WARNING**

### The inverter must always be grounded.

 To ensure the safe operation of the equipment, it must be installed and commissioned by qualified personnel in full compliance with the warnings laid down in these operating instructions.

- ◆ Take particular note of the general and regional installation and safety regulations regarding work on dangerous voltage installations (e.g. EN 50178), as well as the relevant regulations regarding the correct use of tools and personal protective gear.
- Never use high voltage insulation test equipment on cables connected to the inverter.
- The mains input, DC and motor terminals, can carry dangerous voltages even if the inverter is inoperative; wait 5 minutes to allow the unit to discharge after switching off before carrying out any installation work.

#### **CAUTION**

The control, power supply and motor leads **must** be laid separately. Do not feed them through the same cable conduit/trunking.

## 2.4.1 General

#### **WARNING**

**The inverter must always be grounded**. If the inverter is not grounded correctly, extremely dangerous conditions may arise within the inverter which could prove potentially fatal.

## Operation with ungrounded (IT) supplies

The MICROMASTER will operate from ungrounded supplies and will continue to operate if an input phase is shorted to ground. If an output phase is shorted to ground, the MICROMASTER will trip and indicate F0001.

On ungrounded supplies, it will be necessary to remove the 'Y' capacitor from the inside of the unit and fit an output choke. The procedure for removing this capacitor is described in Appendices 0 and 0.

## **Operation with Residual Current Device**

If an RCD (also referred to as ELCB or RCCB) is fitted, the MICROMASTER inverters will operate without nuisance tripping, provided that:

- ☑ A type B RCD is used.
- ☑ The trip limit of the RCD is 300mA.
- ☑ The neutral of the supply is grounded.
- ✓ Only one inverter is supplied from each RCD.
- ☑ The output cables are less than 50m (screened) or 100m (unscreened).

## Operation with long cables

All inverters will operate at full specification with cable lengths up to 50 m screened or 100 m unscreened.

## 2.4.2 Power and motor connections

#### **WARNING**

## The inverter must always be grounded.

- Isolate the mains electrical supply before making or changing connections to the unit.
- Ensure that the motor is configured for the correct supply voltage: single / three-phase 230 V MICROMASTERS must not be connected to a 400 V three-phase supply.
- When synchronous motors are connected or when coupling several motors in parallel, the inverter must be operated with voltage/frequency control characteristic (P1300 = 0, 2 or 3).

## **CAUTION**

After connecting the power and motor cables to the proper terminals, make sure that the covers have been replaced properly before supplying power to the unit!

#### **NOTICE**

- Ensure that the appropriate circuit-breakers/fuses with the specified current rating are connected between the power supply and inverter (see chapter 7, Tables starting on page 77).
- ◆ Use Class 1 60/75°C copper wire only (for UL compliance). For tightening torque see Table 7-2, page 76.

## Access to the power and motor terminals

You can gain access to the mains and motor terminals by removing the covers (see also Appendices 0, B und 0).

The mains and motor connections must be made as shown in Figure 2-6.

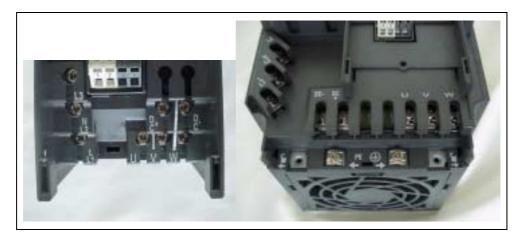

Figure 2-5 MICROMASTER 420 connection terminals

Issue B1 2 Installation

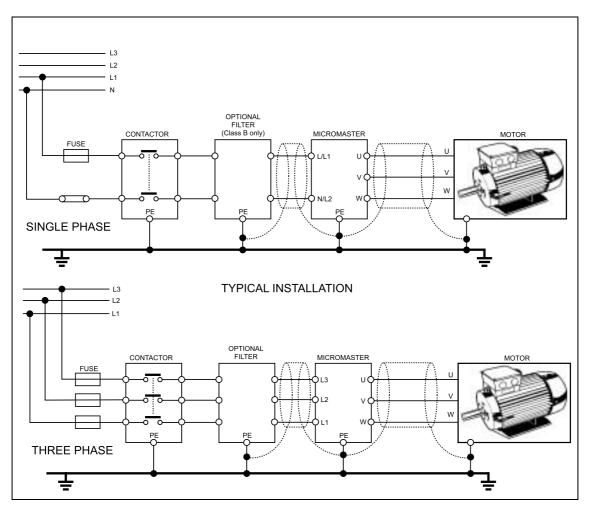

Figure 2-6 Motor and Power Connections

## 2.4.3 Avoiding Electro-Magnetic Interference (EMI)

The inverters are designed to operate in an industrial environment where a high level of EMI can be expected. Usually, good installation practices will ensure safe and trouble-free operation. If you encounter problems, follow the guidelines stated below.

#### Action to Take

- Ensure that all equipment in the cubicle is well grounded using short, thick grounding cable connected to a common star point or busbar
- Make sure that any control equipment (such as a PLC) connected to the inverter is connected to the same ground or star point as the inverter via a short thick link.
- Connect the return ground from the motors controlled by the inverters directly to the ground connection (PE) on the associated inverter
- Flat conductors are preferred as they have lower impedance at higher frequencies
- Terminate the ends of the cable neatly, ensuring that unscreened wires are as short as possible
- > Separate the control cables from the power cables as much as possible, using separate trunking, if necessary at 90° to each other.
- Whenever possible, use screened leads for the connections to the control circuitry
- ➤ Ensure that the contactors in the cubicle are suppressed, either with R-C suppressors for AC contactors or 'flywheel' diodes for DC contactors fitted to the coils. Varistor suppressors are also effective. This is important when the contactors are controlled from the inverter relay
- Use screened or armored cables for the motor connections and ground the screen at both ends using the cable clamps

## **WARNING**

Safety regulations **must not** be compromised when installing inverters!

Issue B1 2 Installation

## 2.4.4 Screening Methods

## **Gland Plate**

The Gland Plate Kit is supplied as an option. It allows easy and efficient connection of the necessary screening. See the Gland Plate Installation Instructions contained on the Docu-CD.

## Screening without a Gland Plate

Should a Gland Plate not be available, then the inverter can be screened using the methodology shown in Figure 2-7.

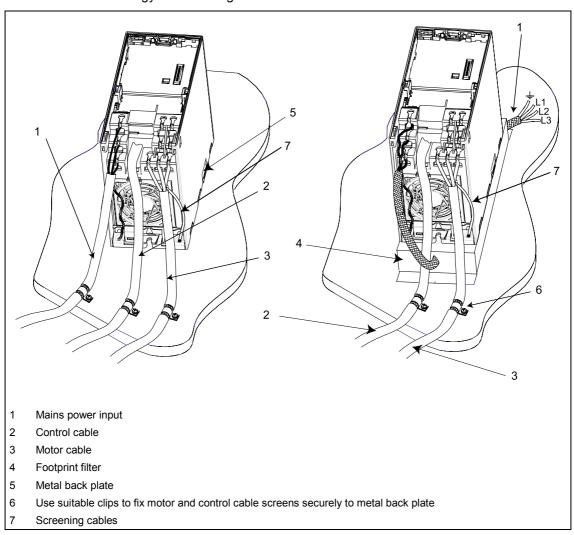

Figure 2-7 Wiring Guidelines to Minimize the Effects of EMI

## 3 Commissioning

## This Chapter contains:

- ➤ A schematic diagram of the MICROMASTER 420
- > An overview of the commissioning options and the display and operator panels
- > An overview of quick commissioing of the MICROMASTER 420

| 3.1 | Block diagram     | 33 |
|-----|-------------------|----|
| 3.2 | Commission modes  | 34 |
| 3.3 | General operation | 44 |

#### **WARNING**

- MICROMASTERS operate at high voltages.
- When operating electrical devices, it is impossible to avoid applying hazardous voltages to certain parts of the equipment.
- Emergency Stop facilities according to EN 60204 IEC 204 (VDE 0113) must remain operative in all operating modes of the control equipment. Any disengagement of the Emergency Stop facility must not lead to uncontrolled or undefined restart.
- Wherever faults occurring in the control equipment can lead to substantial material damage or even grievous bodily injury (i.e. potentially dangerous faults), additional external precautions must be taken or facilities provided to ensure or enforce safe operation, even when a fault occurs (e.g. independent limit switches, mechanical interlocks, etc.).
- Certain parameter settings may cause the inverter to restart automatically after an input power failure.
- Motor parameters must be accurately configured for motor overload protection to operate correctly.
- This equipment is capable of providing internal motor overload protection in accordance with UL508C section 42. Refer to P0610 and P0335, i²t is ON by default. Motor overload protection can also be provided using an external PTC via a digital input.
- ◆ This equipment is suitable for use in a circuit capable of delivering not more than 10,000 symmetrical amperes (rms), for a maximum voltage of 230/460V when protected by a time delay fuse (see Tables starting on page 77).
- This equipment must not be used as an 'emergency stop mechanism' (see EN 60204, 9.2.5.4)

## **CAUTION**

Only qualified personnel may enter settings in the control panels. Particular attention must be paid to safety precautions and warnings at all times.

Issue B1 3 Commissioning

## 3.1 Block diagram

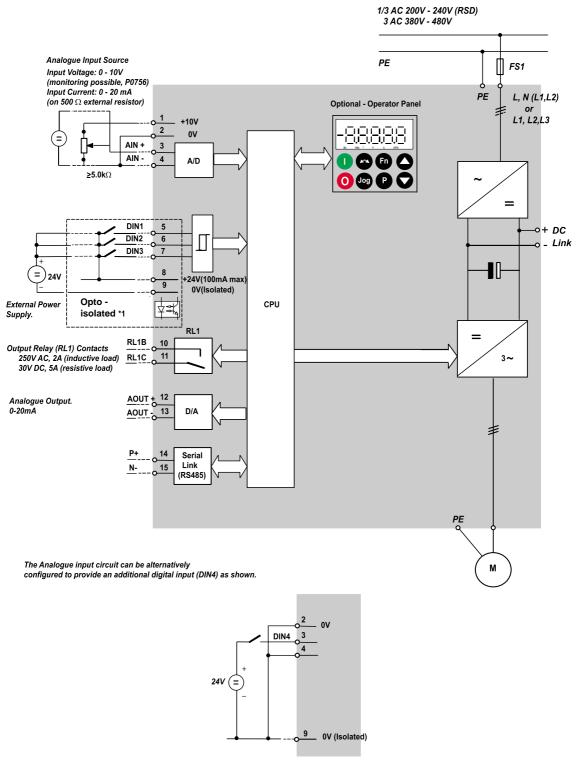

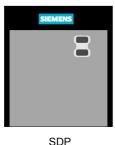

Figure 3-1 Inverter block diagram

## 3.2 Commission modes

In the standard version, the MICROMASTER 420 is fitted with the Status Display Panel (SDP) (see Figure 3-2) with which it is possible to use the inverter with the pre-assigned factory settings for a large range of applications. If these factory settings are not suitable, you can adapt them to suit your equipment conditions using the Basic Operator Panel (BOP) (see Figure 3-2) or the Advanced Operator Panel (AOP) (see Figure 3-2). The BOP and AOP are available as options. You can also adjust the factory settings using the PC IBN tool "Drive Monitor" or "STARTER". This software is available on the CD ROM which comes with the documentation of the unit.

Status Display Panel

BOP Basic Operator Panel

AOP Advanced Operator Panel

Figure 3-2 Panels available for the MICROMASTER 420 Inverter

For notes on replacing the operator panels please refer to the corresponding annexes 0 to this manual.

#### **NOTICE**

The default (factory value) frequency setting can be altered by means of the DIP switch under the SDP. The inverter is delivered as follows::

- > DIP switch 2:
  - Off position: European defaults (50 Hz, kW usw.)
  - On position: North American defaults (60 Hz, hp usw.)
- DIP switch 1: Not for customer use.

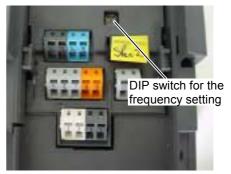

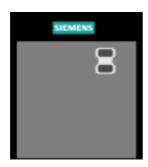

Figure 3-3 DIP switch

Issue B1 3 Commissioning

## 3.2.1 Commissioning and Operation with the SDP

The SDP has two LEDs on the front which display the current operating status of the inverter (see Section 6.1).

When the SDP is used, the presettings of the inverter must be compatible with the following motor data:

- Rated motor power
- Motor voltage
- > Rated motor current
- > Rated motor frequency

(A conventional Siemens motor is recommended)

In addition, the following conditions must be met:

- Linear V/f motor speed controlled by an analog potentiometer.
- Maximum speed 3000 rpm at 50 Hz (3600 rpm at 60 Hz); can be controlled by a potentiometer via the analog inputs of the inverter.
- Ramp acceleration time/ramp deceleration time = 10 s

Settings for more complex applications can be found in the parameter list and in Section 3.2.2 "Commission Overview with BOP or AOP".

Table 3-1 Default settings for operation using the SDP

|                 | Terminals | Parameter      | Default Operating    |
|-----------------|-----------|----------------|----------------------|
| Digital Input 1 | 5         | P0701 = '1'    | ON right             |
| Digital Input 2 | 6         | P0702 = '12'   | Reverse              |
| Digital Input 3 | 7         | P0703 = '9'    | Fault Reset          |
| Output Relay    | 10/11     | P0731 = '52.3' | Fault Identification |
| Analogue Output | 12/13     | P0771 = 21     | Output Frequency     |
| Analogue input  | 3/4       | P0700 = 0      | Frequency Setpoint   |
|                 | 1/2       |                | Analog Input supply  |

## **Basic operation with SDP**

With the **SDP** fitted, the following is possible:

- Start and stopping the motor
- Reversing the motor
- Fault Reset

Controlling the speed of the motor Connect the terminals as shown in.Figure 3-4.

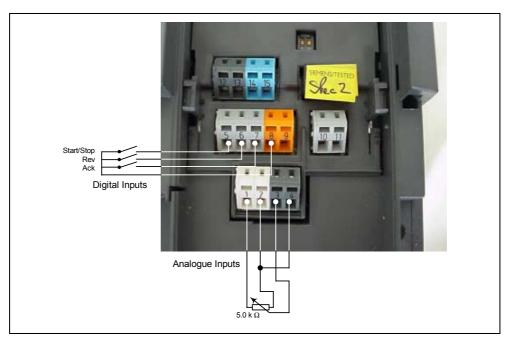

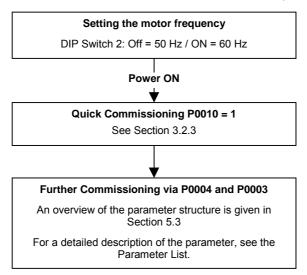

Figure 3-4 Basic operation with SDP

Issue B1 3 Commissioning

# 3.2.2 Commission Overview with BOP or AOP

# **Prerequisites**

Mechanical and electrical Installation are completed.

### NOTES

We recommend the commissioning according this scheme.

# 3.2.2.1 Commissioning with the BOP

You can alter parameter values via the BOP. To set parameters on this panel, you must remove the SDP and attach the BOP (see Appendix 0).

The BOP features a five-digit, seven-segment display for showing parameter numbers and values, alarm and fault messages and setpoints and actual values. Parameter information cannot be saved via the BOP.

Table 3-2 shows the factory default settings for operation via the BOP.

### **NOTICE**

- ◆ The BOP motor control functions are disabled by default. To control the motor via the BOP, parameter P0700 should be set to 1 and P1000 set to 1.
- ◆ The BOP can be fitted to and removed from the inverter whilst power is applied.
- ◆ If the BOP has been set as the I/O control (P0700 = 1), the drive will stop if the BOP is removed.

Table 3-2 Default settings for operation using the BOP

| Parameter | Meaning                  | Default Europe (North America)         |  |  |
|-----------|--------------------------|--|--|--|
| P0100     | Operating Mode Europe/US | 50 Hz, kW (60Hz, hp)                   |  |  |
| P0307     | Power (rated motor)      | kW (Hp)                                |  |  |
| P0310     | Motor frequency rating   | 50 Hz (60 Hz)                          |  |  |
| P0311     | Motor speed rating       | 1395 (1680) rpm [depending on variant] |  |  |
| P1082     | Maximum Motor Frequency  | 50 Hz (60 Hz)                          |  |  |

# **Buttons on the BOP**

| Panel/Button | Function             | Effects   |
|--------------|----------------------|---|
| r0000        | Indicates<br>Status  | The LCD displays the settings currently used by the converter.  |
| 1            | Start<br>converter   | Pressing the button starts the converter. This button is disabled by default. To enable this button set P0700 = 1.  |
| 0            | Stop<br>converter    | OFF1 Pressing the button causes the motor to come to a standstill at the selected ramp down rate. Disabled by default, to enable set P0700 = 1.  OFF2 Pressing the button twice (or once long) causes the motor to coast to a standstill.  This function is always enabled.   |
| $\odot$      | Change<br>direction  | Press this button to change the direction of rotation of the motor. Reverse is indicated by a minus (-) sign or a flashing decimal point. Disabled by default, to enable set P0700 = 1.   |
| <b>[99</b>   | Jog motor            | Pressing this button while the inverter has no output causes the motor to start and run at the preset jog frequency. The motor stops when the button is released. Pressing this button when the motor is running has no effect.   |
| Fn           | Functions            | This button can be used to view additional information.  It works by pressing and holding the button. It shows the following, starting from any parameter during operation:  1. DC link voltage (indicated by d – units V).  2. output current. (A)  3. output frequency (Hz)  4. output voltage (indicated by o – units V).  5. The value selected in P0005 (If P0005 is set to show any of the above (3, 4, or 5) then this will not be shown again).  Additional presses will toggle around the above displays.  Jump Function  From any parameter (rXXXX or PXXXX) a short press of the Fn button will immediately jump to r0000, you can then change another parameter, if required. Upon returning to r0000, pressing the Fn button will return you to your starting point. |
| P            | Access<br>parameters | Pressing this button allows access to the parameters.   |
| $\odot$      | Increase<br>value    | Pressing this button increases the displayed value. To change the Frequency Setpoint via the BOP set P1000 = 1.   |
| $\odot$      | Decrease<br>value    | Pressing this button decreases the displayed value. To change the Frequency Setpoint via the BOP set P1000 = 1.   |

Figure 3-5 Buttons on the BOP

# Changing parameters with the BOP

The procedure for changing the value of parameter P0004 is described below. Modifying the value of an indexed parameter is illustrated using the example of P0719. Follow exactly the same procedure to alter other parameters that you wish to set via the BOP.

# Changing P0004 – parameter filter function

|   | Step   | Result on display |
|---|--|-------------------|
| 1 | Press to access parameters                           | -0000             |
| 2 | Press until P0004 is displayed                       | P0004             |
| 3 | Press to access the parameter value level            | 0                 |
| 4 | Press or to the required value                       | 7                 |
| 5 | Press to confirm and store the value                 | P0004             |
| 6 | Only the command parameters are visible to the user. |                   |

# Changing P0719 an indexed parameter Selection of command/setpoint source

|   | Step   | Result on display |
|---|--|-------------------|
| 1 | Press to access parameters   | -0000             |
| 2 | Press until P0719 is displayed   | P0719             |
| 3 | Press to access the parameter value level  | 000               |
| 4 | Press to display current set value   | 0                 |
| 5 | Press or to the required value   | 12                |
| 6 | Press to confirm and store the value   | P0719             |
| 7 | Press until r0000 is displayed   | -0000             |
| 8 | Press to return the display to the standard drive display (as defined by the customer) |                   |

Figure 3-6 Changing parameters via the BOP

Issue B1 3 Commissioning

#### **NOTES**

In some cases - when changing parameter values - the display on the BOP shows

P----. This means the inverter is busy with tasks of higher priority.

### **Changing single digits in Parameter values**

For changing the parameter value rapidly, the single digits of the display can be changed by performing the following actions:

Ensure you are in the parameter value changing level (see "Changing parameters with BOP").

- Press (function button), which causes the right hand digit to blink.
- 2. Change the value of this digit by pressing 🙆 / 🧿
- Press (function button) again causes the next digit to blink.
- 4. Perform steps 2 to 4 until the required value is displayed.
- Press the to leave the parameter value changing level.

#### **NOTES**

The function button may also be used to acknowledge a fault condition

### 3.2.2.2 Commissioning with the AOP

The AOP is available as an option. Its advanced features include the following:

- Multilingual clear text display
- Upload/download of multiple parameter sets
- Programmable via PC
- Multidrop capability to drive up to 30 MICROMASTER 4's

Please refer to the AOP Manual for details or contact your local Siemens sales office for assistance.

### 3.2.3 Commissioning functions with BOP / AOP

# 3.2.3.1 Quick commissioning (P0010=1)

It is **important** that parameter P0010 is used for commissioning and P0003 is used to select the number of parameters to be accessed. This parameter allows a group of parameters to be selected that will enable quick commissioning. Parameters such as Motor settings and Ramp settings are included. At the end of the quick commissioning sequence, P3900 should be selected, which, when set to 1, will carry out the necessary motor calculations and clear all other parameters (not included in P0010=1) to the default settings. This will only happen in the Quick Commissioning mode.

# Flow chart Quick Commissioning (Level 1 Only)

#### P0010 Start Quick Commissioning Ready to Run **Quick Commissioning** P0700 Selection of Command Source 2) 30 Factory Setting (on / off / reverse) Factory Setting Basic Operator Panel P0010 must always be set back to '0' before operating 1 the motor. However if P3900 = 1 is set after Terminal / Digital Inputs commissioning this is done automatically. P1000 Selection of Frequency Setpoint 2) No frequency setpoint P0100 Operation for Europe/N. America BOP frequency control $\uparrow\downarrow$ Power in kW; f default 50 Hz Analogue Setpoint Power in hp; f default 60 Hz Power in kW; f default 60 Hz Settings 0 & 1 should be changed using the DIP P1080 Min. End Quick Commissioning with motor calculation but without I/O reset.

- Motor-specific parameters see motor rating plate.
- The parameters offer more setting options than listed here. See Parameter List for further setting options.

Issue B1 3 Commissioning

# Motor data for parameterization

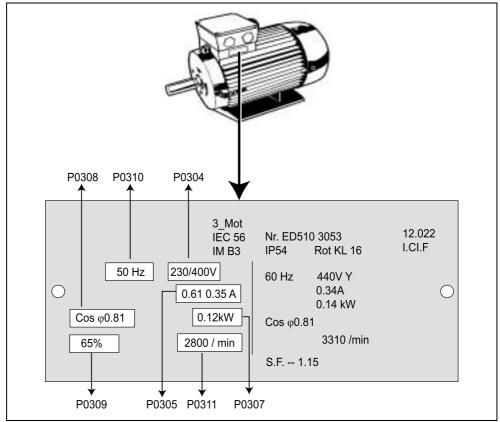

Figure 3-7 Typical Motor Rating Plate Example

### NOTICE

- P0308 & P0309 are only visible if P0003 ≥ 2. Only one of the parameters are shown depending on the settings of P0100.
- ◆ P0307 indicates kW or HP depending upon the setting of P0100. For detailed information, please see the Parameter List.
- Changing motor parameters is not possible unless P0010=1.
- ♦ Ensure that the inverter is configured correctly to the motor, i.e. in the above example delta terminal connection is for 230 V.

# 3.2.3.2 Reset to Factory default

To reset all parameters to the factory default settings; the following parameters should be set as follows (BOP, AOP or Communication Option needed):

- Set P0010 = 30
- 2. Set P0970 = 1

#### **NOTE**

The reset process can take up to 3 minutes to complete.

# 3.3 General operation

For a full description of standard and extended parameters, please refer to the Parameter List.

#### **NOTICE**

- The inverter does not have a main power switch and is live when the mains supply is connected. It waits, with the output disabled, until the RUN button is pressed or for the presence of a digital ON signal at terminal 5 (rotate right).
- 2. If a BOP or an AOP is fitted and the output frequency is selected to be displayed (P0005 = 21) the corresponding setpoint is displayed approximately every 1.0 seconds while the inverter is stopped.
- 3. The inverter is programmed at the factory for standard applications on Siemens four-pole standard motors that have the same power rating as the inverters. When using other motors it is necessary to enter the specifications from the motor's rating plate. See Figure 3-7 for details on how to read motor data
- 4. Changing motor parameters is not possible unless P0010 = 1.
- 5. You must set P0010 back to 0 in order to initiate a run.

### Basic operation with the BOP/AOP

#### **Prerequisites**

P0010 = 0 (in order to initiate the run command correctly).

P0700 = 1 (enables the start/stop button on the BOP).

P1000 = 1 (this enables the motor potentiometer setpoints).

Press the green Button to start the motor.

Press the Button while the motor is turning. Motor speed increases to 50 Hz.

When the inverter reaches 50 Hz, press the Button . Motor speed and display is decreased.

Change the direction of rotation with the Button

The red button stops the motor

Issue B1 3 Commissioning

# External motor thermal overload protection

When operated below rated speed, the cooling effect of fans fitted to the motor shaft is reduced. Consequentially, most motors require de-rating for continuous operation at low frequencies. To ensure that the motors are protected against overheating under these conditions, a PTC temperature sensor must be fitted to the motor and connected to the inverter control terminals. P0601 must also be set to 1.

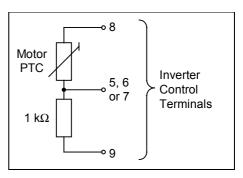

Figure 3-8 Motor Overload PTC Connection

### **NOTE**

To enable the trip function, set parameter P0701, P0702 or P0703 = 29.

# 4 Using the MICROMASTER 420

# This Chapter contains:

- > An explanation of the various methods of controlling the inverter
- > A summary of the types of control of the inverter

| 4.1 | Frequency setpoint (P1000) | 48 |
|-----|----------------------------|----|
| 4.2 | Command sources (P0700)    | 49 |
| 4.3 | OFF and braking functions  | 49 |
| 4.4 | Control modes (P1300)      | 50 |
| 4.5 | Faults and warnings        | 51 |

#### **WARNING**

- When operating electrical devices, it is impossible to avoid applying hazardous voltages to certain parts of the equipment.
- Emergency Stop facilities according to EN 60204 IEC 204 (VDE 0113) must remain operative in all operating modes of the control equipment. Any disengagement of the Emergency Stop facility must not lead to uncontrolled or undefined restart.
- Wherever faults occurring in the control equipment can lead to substantial material damage or even grievous bodily injury (i.e. potentially dangerous faults), additional external precautions must be taken or facilities provided to ensure or enforce safe operation, even when a fault occurs (e.g. independent limit switches, mechanical interlocks, etc.).
- MICROMASTERS operate at high voltages.
- Certain parameter settings may cause the inverter to restart automatically after an input power failure.
- Motor parameters must be accurately configured for motor overload protection to operate correctly.
- This equipment is capable of providing internal motor overload protection in accordance with UL508C section 42. Refer to P0610 and P0335, i²t is ON by default. Motor overload protection can also be provided using an external PTC via a digital input.
- ◆ This equipment is suitable for use in a circuit capable of delivering not more than 10 000 symmetrical amperes (rms), for a maximum voltage of 230/460V when protected by a time delay fuse (see Tables starting on page 77).
- ◆ This equipment must not be used as an 'emergency stop mechanism' (see EN 60204, 9.2.5.4).

# 4.1 Frequency setpoint (P1000)

Standard: Terminal 3/4 (AIN+/ AIN -, 0...10 V corresponds to 0...50/60 Hz)

Options see P1000

#### **NOTES**

For USS see Reference Manual, for PROFIBUS see Reference Manual and Profibus Instructions.

# 4.2 Command sources (P0700)

#### **NOTICE**

The **ramp times** and **ramp-smoothing** functions also affect how the motor starts and stops. For details of these functions, please refer to parameters P1120, P1121, P1130 – P1134 in the Parameter List.

### Starting the motor

Standard Terminal 5 (DIN1, high)Options see P0700 to P0704

### Stopping the motor

There are several ways to stop the motor:

Standard:

◆ OFF1 (4.3.1) Terminal 5 (DIN1, low)

♦ OFF2 (4.3.2) Off button on BOP/AOP, pressing the Off button once long

(two seconds) or twice (with default settings not possible

without BOP/AOP)

OFF3 (4.3.3) Not active in the default (factory) setting

Options see P0700 to P0704

### Reversing the motor

Standard Terminal 6 (DIN2, high)Options see P0700 to P0704

# 4.3 OFF and braking functions

### 4.3.1 OFF1

This command (produced by canceling the ON command) causes the inverter to come to a standstill at the selected ramp-down rate.

Parameter to change ramp time see P1121

#### **NOTICE**

- ON and the following OFF1 command must have the same source.
- If the ON/OFF1 command is set to more than one Digital input, only the last set Digital Input is number e.g. DIN3 is active.
- OFF1 can be combined with DC braking or Compound braking

# 4.3.2 OFF2

This command causes the motor to coast to a standstill.

### **NOTICE**

The OFF2 command can have one or more sources. By default the OFF2 command is set to BOP/AOP. This source still exists even if other sources are defined by **one** of the following parameters, P0700, P0701, P0702, P0703 and P0704.

### 4.3.3 OFF3

An OFF3 command causes the motor to decelerate rapidly.

For starting the motor when OFF3 is set, the binary input has to be closed (high). If OFF3 is high, the motor can be started and stopped by OFF1 or OFF2.

If OFF3 is low the motor cannot be started.

ramp down time: see P1135

#### **NOTICE**

OFF3 can be combined with DC braking or compound braking

# 4.3.4 DC braking

DC braking is possible together with OFF1 and OFF3. A DC current is applied to stop the motor quickly and hold the shaft stationary until the end of the braking period.

> set DC braking: see P0701 to P0704

set braking period: see P1233set braking current: see P1232

#### **NOTICE**

If no digital input is set to DC braking and P1233  $\neq$  0, DC braking will be active after every OFF1 command.

### 4.3.5 Compound Braking

Compound Braking is possible with both OFF1 and OFF3. For Compound Braking a DC component is added to the AC current.

set the braking current: see P1236

# 4.4 Control modes (P1300)

All control modes of the MICROMASTER 420 are based on a V/Hz control. The following different control variants are provided to suit different types of application:

- ➤ Linear V/f control, P1300 = 0

  Can be used for variable and constant torque applications, such as conveyors and positive displacement pumps.
- Linear V/f control with Flux Current Control (FCC)
  P1300 = 1
  This control mode can be used to improve the efficiency and dynamic response of the motor.
- Quadratic V/f control
   P1300 = 2
   This mode can be used for variable torque loads, such as fans and pumps.
- Multi-point V/f control P1300 = 3
  For information regarding this mode of operation, please consult the MM420
  Reference Manual.

# 4.5 Faults and warnings

### **SDP**

If an SDP is fitted, the fault states and warnings are indicated by the two LEDs on the panel, see section 6.1 on page 68 for further information.

Fault-free operation of the inverter is indicated by the following sequence of LED displays:

> Green and yellow = Ready to run

> Green = Run

### **BOP**

If a BOP is installed, the last 8 fault conditions (P0947) and warnings (P2110) are displayed if a fault condition occurs. For further information, please refer to the Parameter List.

### **AOP**

If the AOP is fitted, the fault and warning codes are displayed on the LCD panel.

# 5 System parameters

# This Chapter contains:

- ➤ An overview of the parameter structure of the MICROMASTER 420
- > A parameter list in short form

| 5.1 | Introduction to MICROMASTER system parameters | 54 |
|-----|---|----|
| 5.2 | Parameter overview                            | 55 |
| 5.3 | Parameter list (short form)                   | 56 |

# 5.1 Introduction to MICROMASTER system parameters

The parameters can only be changed by using the BOP, the Advance Operator Panel (AOP) or the Serial Interface.

Parameters can be changed and set using the BOP to adjust the desired properties of the inverter, such as ramp times, minimum and maximum frequencies etc. The parameter numbers selected and the setting of the parameter values are indicated on the optional five-digit LCD display.

- rxxxx indicates a display parameter, Pxxxx a setting parameter.
- > P0010 initiates "quick commissioning".
- The inverter will not run unless P0010 is set to 0 after it has been accessed. This function is automatically perform if P3900 > 0.
- P0004 acts as a filter, allowing access to parameters according to their functionality.
- If an attempt is made to change a parameter that cannot be changed in this status, for example, cannot be changed whilst running or can only be changed in quick commissioning, then will be displayed.
- Busy Message
  In some cases when changing parameter values the display on the BOP
  shows
  P - for maximum of five seconds. This means the inverter is busy with tasks of higher priority.

### 5.1.1 Level

There are four levels of user access, Standard, Extended, Expert and Service selectable by parameter P0003. For most applications, Standard (P0003 = 1) or Extended parameters (P0003 = 2) are sufficient.

The number of parameters that appear within each functional group depends on the access level set in parameter P0003. For further details regarding parameters, see the Parameter List on the Documentation CD-ROM.

# 5.2 Parameter overview

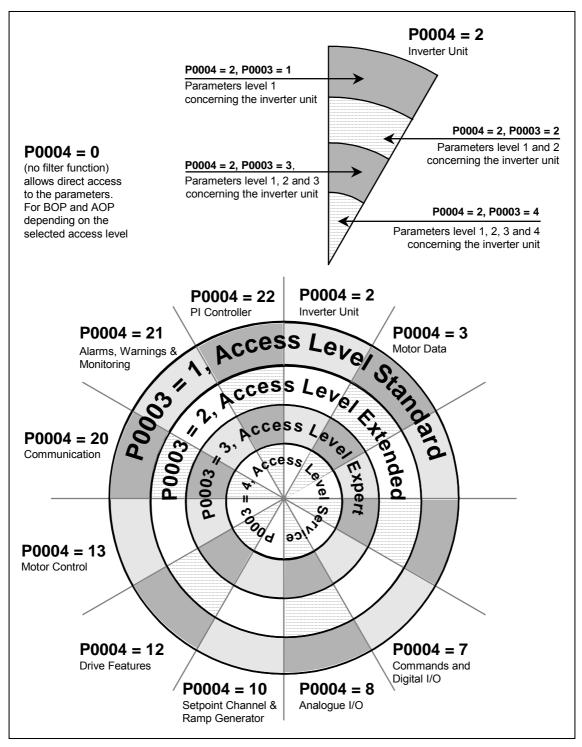

Figure 5-1 Parameter Overview

# 5.3 Parameter list (short form)

Explanatory information on following table:

Default: Factory setting

> Level: Access level

DS Inverter status (Drive State), indicates the inverter state in which a

parameter can be modified (see P0010).

◆ C Commissioning

♦ U Run

♦ T Ready to run

QC Quick Commissioning

Q Parameter can be modified in the Quick Commissioning state.

N Parameter cannot be modified in the Quick Commissioning state.

# 6 Troubleshooting

# This Chapter contains:

- An overview of the operating statuses of the inverter with the SDP
- > Notes on troubleshooting with the BOP
- > A list of the alarms and fault messages

| 6.1 | Troubleshooting with the       | 68 |
|-----|--------------------------------|----|
| 6.2 | Troubleshooting with the BOP   | 69 |
| 6.3 | MICROMASTER 420 fault messages | 70 |

#### **WARNING**

- Repairs on equipment may only be carried out by Siemens Service, by repair centers authorized by Siemens or by qualified personnel who are thoroughly acquainted with all the warnings and operating procedures contained in this manual.
- Any defective parts or components must be replaced using parts contained in the relevant spare parts list.
- Disconnect the power supply before opening the equipment for access

# 6.1 Troubleshooting with the SDP

Table 6-1 explains the meaning of the various states of the LEDs on the SDP.

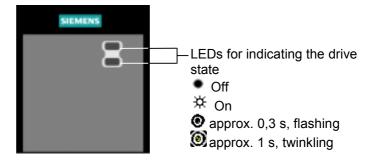

Table 6-1 Inverter conditions indicated by the LEDs on the SDP

| •                   | Mains not present                                 |
|---------------------|---|
| <b>*</b>            | Ready to run                                      |
| •<br>\ <del>X</del> | Inverter fault - other than the ones listed below |

| <b>0</b>      | Drive is not in ready state                           |
| <b>⊚</b>      | ROM failure - Both LEDs flashing same time            |
| <b>⊚</b>      | RAM failure - Both LEDs flashing alternatively        |

Issue B1 6 Troubleshooting

# 6.2 Troubleshooting with the BOP

Warnings and faults are displayed on the BOP with Axxx and Fxxx respectively. The individual messages are shown in Section 6.3.

If the motor fails to start when the ON command has been given:

- Check that P0010 = 0.
- Check that a valid ON signal is present.
- Check that P0700 = 2 (for digital input control) or P0700 = 1 (for BOP control).
- Check that the setpoint is present (0 to 10V on Terminal 3) or the setpoint has been entered into the correct parameter, depending upon the setpoint source (P1000). See the Parameter List for further details.

If the motor fails to run after changing the parameters, set P0010 = 30 then P0970 = 1 and press **P** to reset the inverter to the factory default parameter values.

Now use a switch between terminals **5** and **8** on the control board. The drive should now run to the defined setpoint by analogue input.

#### **NOTICE**

Motor data must relate to the inverter data power range and voltage.

# 6.3 MICROMASTER 420 fault messages

In the event of a failure, the inverter switches off and a fault code appears on the display.

# **NOTE**

To reset the fault code, one of three methods listed below can be used:

- 1. Cycle the power to the drive.
- 2. Press the button on the BOP or AOP.
- 3. Via Digital Input 3 (default setting)

| Fault   | Possible Causes   | Diagnose & Remedy  | Reac-<br>tion |
|---|---|--|---------------|
| F0001<br>Overcurrent                                    | <ul> <li>Motor power does not correspond to the inverter power</li> <li>Motor lead short circuit</li> <li>Earth fault</li> </ul>  | Check the following:  1. Motor power (P0307) must correspond to inverter power (P0206)  2. Cable length limits must not be exceeded  3. Motor cable and motor must have no short-circuits or earth faults  4. Motor parameters must match the motor in use  5. Value of stator resistance (P0350) must be correct  6. Motor must not be obstructed or overloaded  Increase the ramp time  Reduce the boost level | OFF2          |
| F0002<br>Overvoltage                                    | <ul> <li>DC-link voltage (r0026) exceeds trip level (P2172)</li> <li>Overvoltage can be caused either by too high main supply voltage or if motor is in regenerative mode</li> <li>Regenerative mode can be cause by fast ramp downs or if the motor is driven from an active load</li> </ul> | Check the following:  Supply voltage (P0210) must lie within limits indicated on rating plate  DC-link voltage controller must be enabled (P1240) and parameterized properly  Ramp-down time (P1121) must match inertia of load  | OFF2          |
| F0003<br>Undervoltage                                   | <ul> <li>Main supply failed</li> <li>Shock load outside specified limits</li> </ul>   | Check the following:     Supply voltage (P0210) must lie within limits indicated on rating plate     Supply must not be susceptible to temporary failures or voltage reductions  | OFF2          |
| F0004<br>Inverter Over-<br>temperature                  | <ul> <li>Ambient temperature outside of limits,</li> <li>Fan failure</li> </ul>   | Check the following: 1. Fan must turn when inverter is running 2. Pulse frequency must be set to default value 3. Air inlet and outlet points are not obstructed Ambient temperature could be higher than specified for the inverter   | OFF2          |
| F0005<br>Inverter I <sup>2</sup> t                      | <ul> <li>Inverter overloaded</li> <li>Duty cycle too demanding</li> <li>Motor power (P0307) exceeds<br/>inverter power capability (P0206)</li> </ul>  | Check the following:  1. Load duty cycle must lie within specified limits 2. Motor power (P0307) must match inverter power (P0206)   | OFF2          |
| F0011<br>Motor Over-<br>temperature I <sup>2</sup> t    | <ul><li>Motor overloaded</li><li>Motor data incorrect</li></ul>   | Check motor data     Check loading on motor     Boost settings too high     (P1310,P1311, P1312)     Check parameter for motor thermal time constant     Check parameter for motor I²t warning level   | OFF1          |
| F0041<br>Stator<br>resistance<br>measurement<br>failure | Stator resistance measurement failure   | Check if the motor is connected to the inverter     Check that the motor data has been entered correctly   | OFF2          |

| Fault   | Possible Causes   | Diagnose & Remedy   | Reac-<br>tion |
|---|---|---|---------------|
| F0051<br>Parameter<br>EEPROM Fault  | Reading or writing of the non-volatile parameter storage has failed   | Factory reset and new parameterization     Change inverter                            | OFF2          |

| A0710<br>CB communication error                   | Communication with CB (communication board) is lost   | Check CB hardware  |               |
| A0711<br>CB configu-<br>ration error              | CB (communication board) reports a configuration error  | Check CB parameters  |               |
| A0910<br>Vdc-max<br>controller de-<br>activated   | Vdc max controller has been deactivated, since controller is not capable of keeping DC-link voltage (r0026) within limits (P2172)  Occurs if main supply voltage (P0210) is permanently too high  Occurs if motor is driven by an active load, causing motor to goes into regenerative mode  Occurs at very high load inertias, when ramping down | Check the following: 1. Input voltage (P0756) lies within range? 2. Load must match In certain cases apply braking resistor  |               |
| A0911<br>Vdc-max<br>controller<br>active          | Vdc max controller is active; so ramp-<br>down times will be increased<br>automatically to keep DC-link voltage<br>(r0026) within limits (P2172)  | Check parameter inverter input voltage     Check ramp-down times   |               |
| A0912<br>Vdc-min<br>controller<br>active          | Vdc min controller will be activated if DC-link voltage (r0026) falls below minimum level (P2172)  ➤ The kinetic energy of the motor is used to buffer the DC-link voltage, thus causing deceleration of the drive!  ➤ So short mains failures do not necessarily lead to an undervoltage trip  |  |               |
| A0920<br>ADC<br>parameters<br>not set<br>properly | ADC parameters should not be set to identical values, since this would produce illogical results.  Index 0: Parameter settings for output identical  Index 1: Parameter settings for input identical  Index 2: Parameter settings for input do not correspond to ADC type   | Analogue input parameters should not be set to the same value as each other  |               |
| A0921<br>DAC<br>parameters<br>not set<br>properly | DAC parameters should not be set to identical values, since this would produce illogical results.  Index 0: Parameter settings for output identical  Index 1: Parameter settings for input identical  Index 2: Parameter settings for output do not correspond to DAC type  | Analogue Output parameters should not be set to the same value as each other   |               |
| A0922<br>No load<br>applied to<br>inverter        | <ul> <li>No Load is applied to the inverter</li> <li>As a result, some functions may not work as under normal load conditions</li> <li>Low output voltage eg when 0 boost applied at 0 Hz</li> </ul>  | Check that load is applied to the inverter     Check motor parameters correspond to motor attached     As a result, some functions may not work correctly, because there is no normal load condition |               |

| Fault | Possible Causes   | Diagnose & Remedy  | Reac-<br>tion |
|-------|---|--|---------------|
|       | Both JOG right and JOG left (P1055/P1056) have been requested. This freezes the RFG output frequency at its current value. JOG right and JOG left signals active together | Make sure that JOG right and JOG left signals are not applied simultaneously |               |

### 7 MICROMASTER 420 specifications

#### This Chapter contains:

- Table 7-1 contains the general technical specifications for the MICROMASTER 420 inverter
- > Table 7-2 contains terminal tightening torques
- Table 7-3 includes various tables of specific technical data for individual MICROMASTER 420 inverters

Table 7-1 MICROMASTER Performance Ratings

| Feature                                  | Specification  |  |  |  |  |  |
|--|--|--|--|--|--|--|
| Mains operating voltage and Power ranges | 1 AC 200 V to 240 V ± 10 % 0,12 kW - 3,0 kW (0,16 hp - 4,0 hp)<br>3 AC 200 V to 240 V ± 10 % 0,12 kW - 5,5 kW (0,16 hp - 7,5 hp)<br>3 AC 380 V to 480 V ± 10 % 0,37 kW - 11,0 kW (0,50 hp - 15,0 hp) |  |  |  |  |  |
| Input frequency                          | 47 Hz to 63 Hz   |  |  |  |  |  |
| Output frequency                         | 0 Hz to 650 Hz   |  |  |  |  |  |
| Power factor                             | ≥ 0,7  |  |  |  |  |  |
| Inverter efficiency                      | 96 % to 97 %   |  |  |  |  |  |
| Overload capability                      | $50\ \%$ overload capability for 60 s within 5 min period referred to the rated output current   |  |  |  |  |  |
| Inrush current                           | Less than nominal input current  |  |  |  |  |  |
| Control method                           | Linear V/f Control; Linear V/f with Flux Current Control (FCC), Quadratic V/f Control; Multi-point V/f control   |  |  |  |  |  |
| Pulse frequency                          | 2 kHz to 16 kHz (2 kHz steps)  |  |  |  |  |  |
| Fixed frequencies                        | 7, programmable  |  |  |  |  |  |
| Skip frequencies                         | 4, programmable  |  |  |  |  |  |
| Setpoint resolution                      | 0.01 Hz Digital, 0.01 Hz Serial, 10 bit Analogue (motor potentiometer 0.1 Hz [0.1% (in PID mode)])   |  |  |  |  |  |
| Digital inputs                           | 3, programmable (isolated), switchable active high / active low (PNP/NPN)  |  |  |  |  |  |
| Analogue input                           | 1, (0 to 10 V) used for frequency setpoint or PI feedback signal, scalable or usable as 4 <sup>th</sup> digital input  |  |  |  |  |  |
| Relay outputs                            | 1, programmable 30 V DC / 5 A (resistive), 250 V AC / 2 A (inductive)  |  |  |  |  |  |
| Analogue output                          | 1, programmable (0 mA to 20 mA)  |  |  |  |  |  |
| Serial interface                         | RS-485, Option RS-232  |  |  |  |  |  |
| Electromagnetic compatibility            | Optional EMC filters to EN55011 Class A or B, also Internal Class A filters available  |  |  |  |  |  |
| Braking                                  | DC braking, compound braking   |  |  |  |  |  |
| Protection level                         | IP20   |  |  |  |  |  |
| Temperature range                        | -10 °C to +50 °C (14 °F to 122 °F)   |  |  |  |  |  |
| Storage temperature                      | -40 °C to +70 °C (-40 °F to 158 °F)  |  |  |  |  |  |
| Humidity                                 | < 95 % RH – non-condensing   |  |  |  |  |  |
| Operational altitudes                    | up to 1000 m above sea level without derating  |  |  |  |  |  |
| Protection features                      | Undervoltage , Overvoltage, Overload, Ground Faults, Short circuit, Stall Prevention, Motor Blocking Protection, Motor Overtemperature, Inverter Overtemperature, Parameter Interlock                |  |  |  |  |  |
| Standards                                | UL, cUL, CE, C-tick  |  |  |  |  |  |
| CE Marked                                | Conformity with EC Low Voltage Directive 73/23/EEC and Electromagnetic Compatibility Directive 89/336/EEC  |  |  |  |  |  |

Table 7-2 Tightening torques for power terminals

| Frame size        |          | Α   | В    | С    |
|-------------------|----------|-----|------|------|
| Tightoning torque | [Nm]     | 1,1 | 1,5  | 2,25 |
| Tightening torque | [lbf.in] | 10  | 13,3 | 20   |

Table 7-3 MICROMASTER 420 Specifications

In order to have a UL compliant installation fuses from the SITOR range with the appropriate current rating must be used.

Input voltage range 1 AC 200 V - 240 V,  $\pm$  10 % (with built in Class A Filter)

| Order No.           | 6SE6420-   | 2AB11-<br>2AA0 | 2AB12-<br>5AA0       | 2AB13-<br>7AA0 | 2AB15-<br>5AA0       | 2AB17-<br>5AA0       | 2AB21-<br>1BA0       | 2AB21-<br>5BA0       | 2AB22-<br>2BA0 | 2AB23-<br>0CA0       |
|---------------------|------------|----------------|----------------------|----------------|----------------------|----------------------|----------------------|----------------------|----------------|----------------------|
| Motor Output Rating | [kW]       | 0,12           | 0,25                 | 0,37           | 0,55                 | 0,75                 | 1,1                  | 1,5                  | 2,2            | 3,0                  |

Issue B1 8 Options

### 8 Options

An overview of the options available for the MICROMASTER 420 is given in this section. For further information about options, please refer to the catalog or the documentation CD.

#### 8.1 Device-independent options

- Basic Operator Panel (BOP)
- Advanced Operator Panel (AOP)
- PROFIBUS module
- > PC to inverter connection kit
- PC to AOP connection kit
- > BOP/AOP door mounting kit for single inverter control
- AOP door mounting kit for multiple inverter control
- "DriveMonitor" and "Starter" commissioning tool

#### 8.2 Device-dependent options

- > EMC filter, Class A
- > EMC filter, Class B
- Additional EMC filter, Class B
- > Low leakage Class B filter
- Line commutating choke
- > Output choke
- Gland plate

## 9 Electro-magnetic compatibility (EMC)

| This Cha | apter contains:                      |    |
|----------|--------------------------------------|----|
|          | EMC information.                     |    |
| 9.1      | Electro-magnetic compatibility (EMC) | 86 |

#### 9.1 Electro-magnetic compatibility (EMC)

All manufacturers / assemblers of electrical apparatus which "performs a complete intrinsic function and is placed on the market as a single unit intended for the end user" must comply with the EMC directive 89/336/EEC.

There are three routes for the manufacturer/assembler to demonstrate compliance:

#### 9.1.1 Self-certification

This is a manufacturer's declaration that the European standards applicable to the electrical environment for which the apparatus is intended have been met. Only standards that have been officially published in the Official Journal of the European Community can be cited in the manufacturer's declaration.

#### 9.1.2 Technical construction file

A technical construction file can be prepared for the apparatus describing its EMC characteristics. This file must be approved by a 'Competent Body' appointed by the appropriate European government organization. This approach allows the use of standards that are still in preparation.

#### 9.1.3 EC type examination certificate

This approach is only applicable to radio communication transmitting apparatus. All MICROMASTER units are certified for compliance with the EMC directive, when installed in accordance with the recommendations in Section 2.

# 9.1.4 EMC Directive Compliance with Imminent Harmonics Regulations

From 1st January 2001 all electrical apparatus covered by the EMC Directive will have to comply with EN 61000-3-2 "Limits for harmonic current emissions (equipment input  $\leq$  16 A per phase)".

All Siemens variable speed drives of the MICROMASTER, MIDIMASTER, MICROMASTER Eco and COMBIMASTER ranges, which are classified as "Professional Equipment" within the terms of the standard, fulfill the requirements of the standard.

Special considerations for 250 W to 550 W drives with 230 V 1ac mains supplies when used in non-industrial applications

Units in this voltage and power range will be supplied with the following warning: "This equipment requires supply authority acceptance for connection to the public supply network". Please refer to EN 61000-3-12 sections 5.3 and 6.4 for further information. Units connected to Industrial Networks<sup>1</sup> do not require connection approval (see EN 61800-3, section 6.1.2.2).

The harmonic current emissions from these products are described in the table below:

| Table 9-1 | Permissible | harmonic | current | emissions |
|-----------|-------------|----------|---------|-----------|
|           |             |          |         |           |

| Rating          | Typical Harmonic<br>Current (A) |                 |                 | Typical Harmonic<br>Current (%) |                  |                 |                 |                 | Typical Voltage Distortion      |                  |         |         |         |
|-----------------|---------------------------------|-----------------|-----------------|---------------------------------|------------------|-----------------|-----------------|-----------------|---------------------------------|------------------|---------|---------|---------|
|                 |                                 |                 |                 |                                 |                  |                 |                 |                 | Distribution Transformer Rating |                  |         |         |         |
|                 |                                 |                 |                 |                                 |                  |                 |                 |                 | 10 kVA                          | 100 kVA          | 1 MVA   |         |         |
|                 | 3 <sup>rd</sup>                 | 5 <sup>th</sup> | 7 <sup>th</sup> | 9 <sup>th</sup>                 | 11 <sup>th</sup> | 3 <sup>rd</sup> | 5 <sup>th</sup> | 7 <sup>th</sup> | 9 <sup>th</sup>                 | 11 <sup>th</sup> | THD (%) | THD (%) | THD (%) |
| 250 W 1AC 230 V | 2.15                            | 1.44            | 0.72            | 0.26                            | 0.19             | 83              | 56              | 28              | 10                              | 7                | 0.77    | 0.077   | 0.008   |
| 370 W 1AC 230 V | 2.96                            | 2.02            | 1.05            | 0.38                            | 0.24             | 83              | 56              | 28              | 10                              | 7                | 1.1     | 0.11    | 0.011   |
| 550 W 1AC 230 V | 4.04                            | 2.70            | 1.36            | 0.48                            | 0.36             | 83              | 56              | 28              | 10                              | 7                | 1.5     | 0.15    | 0.015   |

The allowed harmonic currents for "professional equipment" with an input power > 1 kW are not yet defined. Therefore, any electrical apparatus containing the above drives which has an input power > 1 kW will not require connection approval.

Alternatively, the necessity to apply for connection approval can be avoided by fitting the input chokes recommended in the technical catalogues (except 550 W 230 V 1ac units).

<sup>1</sup> Industrial Networks are defined as those which do not supply buildings used for domestic purposes.

#### 9.1.5 Classification of EMC performance

Three General classes of EMC performance are available as detailed below:

#### Class 1: General Industrial

Compliance with the EMC Product Standard for Power Drive Systems EN 68100-3 for use in **Second Environment (Industrial)** and **Restricted Distribution**.

Table 9-2 Class 1 - General Industrial

| EMC Phenomenon                        | Standard     | Level                           |  |
|---------------------------------------|--------------|---------------------------------|--|
| Emissions:                            |              |                                 |  |
| Radiated Emissions                    | EN 55011     | Level A1                        |  |
| Conducted Emissions                   | EN 68100-3   | Limits under consideration      |  |
|                                       |              |                                 |  |
| Immunity:                             |              |                                 |  |
| Electrostatic Discharge               | EN 61000-4-2 | 8 kV air discharge              |  |
| Burst Interference                    | EN 61000-4-4 | 2 kV power cables, 1 kV control |  |
| Radio Frequency Electromagnetic Field | IEC 1000-4-3 | 26-1000 MHz, 10 V/m             |  |

#### Class 2: Filtered Industrial

This level of performance will allow the manufacturer/assembler to self-certify their apparatus for compliance with the EMC directive for the industrial environment as regards the EMC performance characteristics of the power drive system. Performance limits are as specified in the Generic Industrial Emissions and Immunity standards EN 50081-2 and EN 50082-2.

Table 9-3 Class 2 - Filtered Industrial

| EMC Phenomenon  | Standard               | Level  |
|---|------------------------|--|
| Emissions:  |                        |  |
| Radiated Emissions  | EN 55011               | Level A1   |
| Conducted Emissions   | EN 55011               | Level A1   |
|   |                        |  |
| Immunity:   |                        |  |
| Supply Voltage Distortion                                   | IEC 1000-2-4<br>(1993) |  |
| Voltage Fluctuations, Dips, Unbalance, Frequency Variations | IEC 1000-2-1           |  |
| Magnetic Fields   | EN 61000-4-8           | 50 Hz, 30 A/m  |
| Electrostatic Discharge                                     | EN 61000-4-2           | 8 kV air discharge                                     |
| Burst Interference  | EN 61000-4-4           | 2 kV power cables, 2 kV control                        |
| Radio Frequency Electromagnetic Field, amplitude modulated  | ENV 50 140             | 80-1000 MHz, 10 V/m, 80% AM, power and signal lines    |
| Radio-frequency Electromagnetic Field, pulse modulated      | ENV 50 204             | 900 MHz, 10 V/m 50% duty cycle, 200 Hz repetition rate |

#### Class 3: Filtered - for residential, commercial and light industry

This level of performance will allow the manufacturer / assembler to self-certify compliance of their apparatus with the EMC directive for the residential, commercial and light industrial environment as regards the EMC performance characteristics of the power drive system. Performance limits are as specified in the generic emission and immunity standards EN 50081-1 and EN 50082-1.

Table 9-4 Class 3 - Filtered for Residential, Commercial and Light Industry

| EMC Phenomenon  | Standard               | Level  |
|---|------------------------|--|
| Emissions:  |                        |  |
| Radiated Emissions*   | EN 55011               | Level B  |
| Conducted Emissions   | EN 55011               | Level B  |
| Immunity:   |                        |  |
| Supply Voltage Distortion                                   | IEC 1000-2-4<br>(1993) |  |
| Voltage Fluctuations, Dips, Unbalance, Frequency Variations | IEC 1000-2-1           |  |
| Magnetic Fields   | EN 61000-4-8           | 50 Hz, 30 A/m  |
| Electrostatic Discharge                                     | EN 61000-4-2           | 8 kV air discharge                                     |
| Burst Interference  | EN 61000-4-4           | 2 kV power cables, 2 kV control                        |
| Radio Frequency Electromagnetic Field, amplitude modulated  | ENV 50 140             | 80-1000 MHz, 10 V/m, 80% AM, power and signal lines    |
| Radio-frequency Electromagnetic Field, pulse modulated      | ENV 50 204             | 900 MHz, 10 V/m 50% duty cycle, 200 Hz repetition rate |

<sup>\*</sup> These limits are dependent on the inverter being correctly installed inside a metallic switchgear enclosure. The limits will not be met if the inverter is not enclosed.

#### **NOTICE**

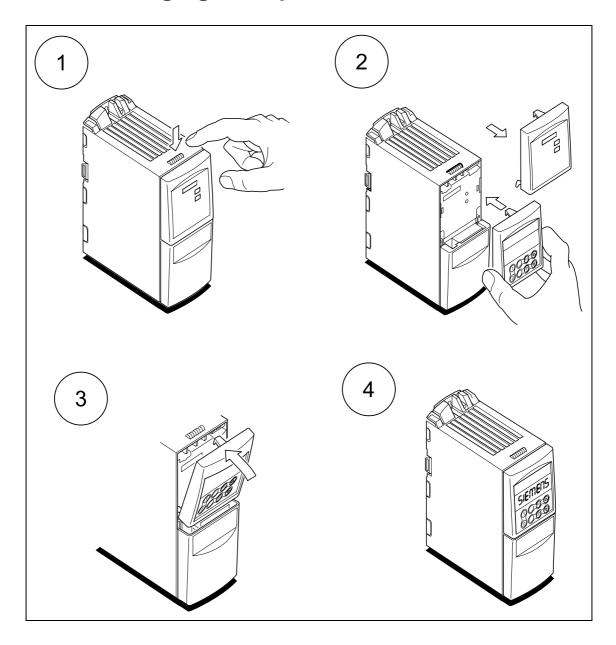

- To achieve these performance levels, you must not exceed the default Pulse frequency nor use cables longer than 25 m.
- The MICROMASTER inverters are intended exclusively for professional applications. Therefore, they do not fall within the scope of the harmonics emissions specification EN 61000-3-2.
- Maximum mains supply voltage when filters are fitted is 460 V.

Table 9-5 Compliance Table

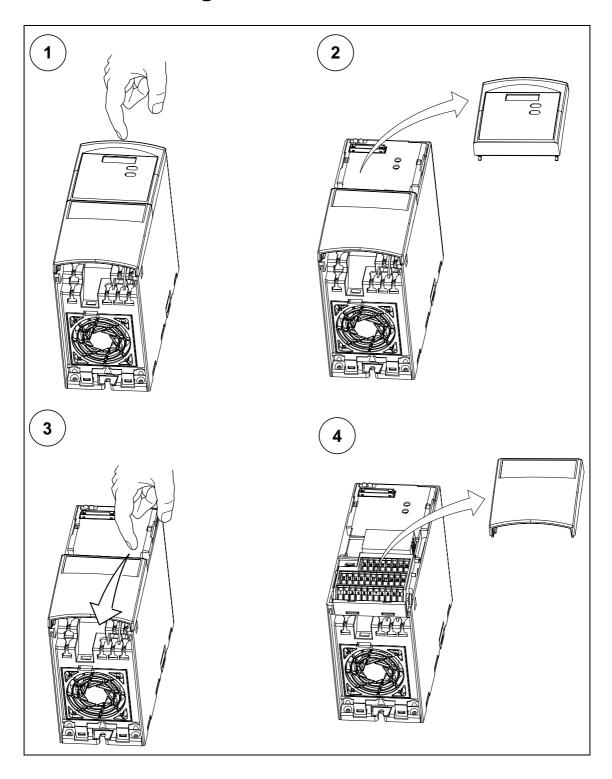

| Model   | Remarks  |  |  |  |
|---|--|--|--|--|
| Class 1 – General Industrial                                      |  |  |  |  |
| 6SE6420-2U***-**A0  | Unfiltered units, all voltages and powers.                           |  |  |  |
| Class 2 – Filtered Industrial                                     |  |  |  |  |
| 6SE6420-2A***-**A0  | All units with integral Class A filters                              |  |  |  |
| 6SE6420-2A***-**A0 with<br>6SE6400-2FA00-6AD0                     | Frame size A units 400-480 V with external Class A footprint filters |  |  |  |

## **B** Removing Covers Frame Size A

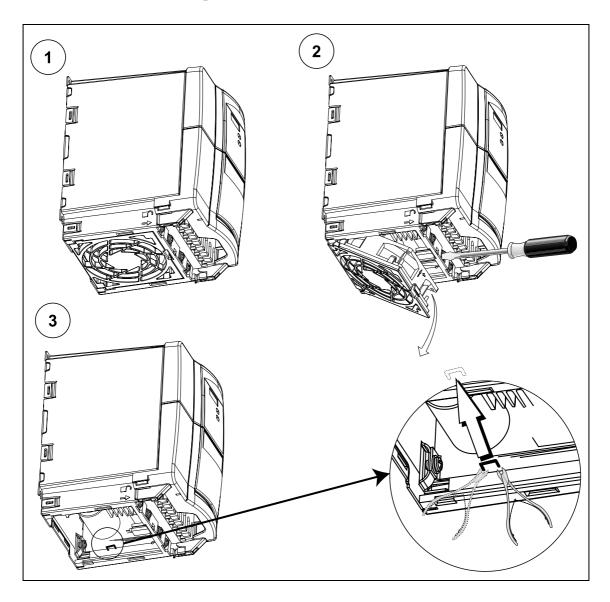

## **C** Removing Covers Frame Size B and C

## D Removing 'Y' Cap Frame Size A

## E Removing 'Y' Cap Frame Size B and C

### F Applicable Standards

#### **European Low Voltage Directive**

The MICROMASTER product range complies with the requirements of the Low Voltage Directive 73/23/EEC as amended by Directive 98/68/EEC. The units are certified for compliance with the following standards:

EN 60146-1-1 Semiconductor inverters - General requirements and line commutated inverters

EN 60204-1 Safety of machinery - Electrical equipment of machines

#### **European Machinery Directive**

The MICROMASTER inverter series does not fall under the scope of the Machinery Directive. However, the products have been fully evaluated for compliance with the essential Health & Safety requirements of the directive when used in a typical machine application. A Declaration of Incorporation is available on request.

#### **European EMC Directive**

When installed according to the recommendations described in this manual, the MICROMASTER fulfils all requirements of the EMC Directive as defined by the EMC Product Standard for Power Drive Systems EN61800-3.

#### **Underwriters Laboratories**

UL and CUL LISTED POWER CONVERSION EQUIPMENT 5B33 for use in a pollution degree 2

#### ISO 9001

Siemens plc operates a quality management system, which complies with the requirements of ISO 9001.
