Ingenuity for life

Function repair – Get your production up and running faster and secure plant availability

[siemens.com/industry-services](https://www.siemens.com/industry-services)

Technology-based services for a greater competitive edge

Minimum downtime and the optimum use of staff and resources are key to sustainable success in industry. Siemens provides the basis for greater productivity, flexibility, and efficiency with technology-based services throughout the lifecycle of an industrial plant – reliably, globally, and around the clock. In-depth technology and product knowledge as well as industry expertise within Siemens' global network of experts ensure a considerable competitive edge.

The challenge:

Quickly get efficient production up and running again

Machines have to be quickly made operational again after a failure. After all, production downtimes cost money and not only impair ongoing operation within your own company but may also affect the follow-up processes of your business partners. Frequently, it is not the mechanical components that cause a failure but the aging process of the electronics. That's why it's necessary to regularly check the functionality of machine tools. The key is to ensure machine availability by restoring the operability of your electronic components as quickly as possible.

The solution:**Original manufacturer quality**

The service and support available from Siemens Industry Services help minimize machine downtimes and ensure availability. In making repairs, our service specialists focus on restoring the operation of the electronic components as quickly as possible. During these repairs, the customer benefits from the same high standards of quality that we maintain in our production. Siemens exclusively uses original components from certified suppliers. Our services include comprehensive function and system checks following the repair. Operators thus gain greater security for their manufacturing processes – at a convincing price.

The benefits:**Restoring production faster**

With the function repairs from Siemens Industry Services, customers benefit not only from manufacturer-quality repairs but also gain a wide range of additional advantages:

- Cost-effective repairs
- High machine availability
- Worldwide availability of expert service specialists and spare parts
- Maximum quality of the replacement components
- Siemens assumes comprehensive liability for defects in the replaced parts
- Qualified documentation in the form of a repair report
