Legal information

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent
damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert
symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are
graded according to the degree of danger.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DANGER</strong></td>
<td>Indicates that death or severe personal injury <strong>will</strong> result if proper precautions are not taken.</td>
</tr>
<tr>
<td><strong>WARNING</strong></td>
<td>Indicates that death or severe personal injury <strong>may</strong> result if proper precautions are not taken.</td>
</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Indicates that minor personal injury can result if proper precautions are not taken.</td>
</tr>
<tr>
<td><strong>NOTICE</strong></td>
<td>Indicates that property damage can result if proper precautions are not taken.</td>
</tr>
</tbody>
</table>

If more than one degree of danger is present, the warning notice representing the highest degree of danger will
be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to
property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific
task in accordance with the relevant documentation, in particular its warning notices and safety instructions.
Qualified personnel are those who, based on their training and experience, are capable of identifying risks and
avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

<table>

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software
described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the
information in this publication is reviewed regularly and any necessary corrections are included in subsequent
ditions.
Preface

CP 443-5 Extended

① LED displays
② Mode selector
③ PROFIBUS interface (9-pin D-sub socket)

Product name

This manual contains information on the following products:

- CP 443-5 Extended
  - Article number: 6GK7443-5DX05-0XE0
  - Hardware product version: 1
  - Firmware version: V7.1.8
  - Communications processor for connection of SIMATIC S7-400 / S7-400H to PROFIBUS

- CP 443-5 Extended
  - Article number: 6AG1443-5DX05-4XE0
  - Hardware product version: 1
  - Firmware version: V7.1.8
  - Communications processor for connection of SIMATIC S7-400 / S7-400H to PROFIBUS.
Preface

Printed circuit board protected against dust and moisture by additional coating (conformal coating).

Note

Names
- In this document, the term "CP" is used at times instead of the full product name.
- Instead of the full names of the configuration tools STEP 7 V5.5 and STEP 7 Professional, the STEP 7 verwendet name is used.

Structure of the documentation

The documentation for this device consists of the following parts:
- Manual Part A - Configuration manual "Configuring and Commissioning S7 CPs for PROFIBUS"

You will find this manual on the Manual Collection DVD that ships with every CP or on the Internet at the following address:
Link: (https://support.industry.siemens.com/cs/ww/de/view/1158693)

- Manual Part B - manual "S7 CPs for PROFIBUS - CP 443-5 Extended" (this manual)

Purpose of the manual

This manual describes the properties of this device and shows application examples.
The manual supports you when installing, connecting up and commissioning the device.
The required configuration steps for the device are described.
You will also find instructions for operation and information about the diagnostics options of the device.

New in this edition

- New ATEX/IECEx approval
- Editorial revision

Note

Compatibility with previous versions
Read the information relating to enhanced functions and any restrictions that may apply in the section Compatibility with previous product (Page 24).

Replaced edition
Current manual edition on the Internet

You will also find the current version of this manual on the Internet pages of Siemens Industry Online Support:

Sources of information and other documentation

You will find an overview of further reading and references in the Appendix of this manual.

License conditions

Note

Open source software

Read the license conditions for open source software carefully before using the product. The acceptance of the disclaimers of liability and warranty it contains is a clear precondition of the use of open source software.

You will find the license conditions on the same data medium as this manual under the following file name:

OSS_CP4435_86.pdf

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens’ products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit

Link: (http://www.siemens.com/industrialsecurity)

Siemens’ products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customers’ exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under

Link: (http://www.siemens.com/industrialsecurity)
Observe the following security recommendations to prevent unauthorized access to the system.

- Evaluate your plant as a whole in terms of security. Use a cell protection concept with suitable products.
- Keep the firmware up to date. Check regularly for security updates of the firmware and use them.
- Restrict physical access to the device to qualified personnel.
- Configure a protection level of the CPU.

**Recycling and disposal**

The product is low in pollutants, can be recycled and meets the requirements of the WEEE directive 2012/19/EU "Waste Electrical and Electronic Equipment".

Do not dispose of the product at public disposal sites. For environmentally friendly recycling and the disposal of your old device contact a certified disposal company for electronic scrap or your Siemens contact.

Keep to the local regulations.

You will find information on returning the product on the Internet pages of Siemens Industry Online Support:

**SIMATIC NET glossary**

Explanations of many of the specialist terms used in this documentation can be found in the SIMATIC NET glossary.

You will find the SIMATIC NET glossary on the Internet at the following address:

Application and functions

1.1 Application

Automation system

The CP 4435 Extended communications processor is designed for use in a SIMATIC S7400 (standard) and S7400H (faulttolerant system) automation system. The CP 443-5 Extended allows the S7400 / S7400H to be connected to a PROFIBUS fieldbus system.

You can use the CP as a router for data records intended for field devices (for example DP slaves).

1.2 Communication services

Supported communications services

The current version of the CP 4435 Extended supports the following communication services in the standard and H systems:

- **PROFIBUS DP with the following characteristics:**
  - DP master (class 1) (redundant operation in faulttolerant system also possible)
  - Direct data exchange (DP slave to DP slave)
    As a DP master, the CP 4435 Extended is capable of enabling direct data exchange for "its" DP slaves.
  - SYNC / FREEZE
    The outputs or inputs can be synchronized by the user program using system function SFC11.
    (Refer to the information in sections Table 1-1 Use with the current CPU types (Page 13) and Table 1-2 Use with no longer available CPU types - part 1 (Page 14))
  - Constant bus cycle time (only in the standard system)
    The ability to set a constant bus cycle time means that the DP master always starts the DP bus cycle after the same interval.
  - Selectable DP modes:
Application and functions

1.2 Communication services

<table>
<thead>
<tr>
<th>DPV1 functionality (default in STEP 7)</th>
<th>S7-compatible</th>
</tr>
</thead>
<tbody>
<tr>
<td>DP master mode for</td>
<td>DP master mode for</td>
</tr>
<tr>
<td>• DP slaves complying with the PROFIBUS DP-V0 and DPV1 standard</td>
<td>• DP Slaves complying with the PROFIBUS DPV0 standard (DP slaves complying with the DPV1 standard can only be used with restricted functionality)</td>
</tr>
<tr>
<td>• Siemens DP slaves</td>
<td>• Siemens DP slaves</td>
</tr>
</tbody>
</table>

Refer to the information about the required CPU in:

• Table 1-1 Use with the current CPU types (Page 13)
• Table 1-3 Use with no longer available CPU types - part 2 (Page 15)

(For more information on the topic of DPV1, refer to the STEP 7 online help)

• **CiR (Configuration in RUN) - in the standard system**
  
  By making a change to the configuration with CiR (Configuration in RUN), it is possible to put a DP slave / DP slot extension into operation or take it out of operation when necessary while the system is running.

  In other words, you can configure and activate additional DP slaves or DP slots while the S7 station is in RUN.

• **Enabling /disabling DP slave - in the standard system**
  
  DP slaves can be activated and deactivated by the user program using system function SFC12.

• **Diagnostics requests**

  As a DP master (class 1), the CP 4435 supports diagnostics requests of a DP master (class 2).

• **Getting the bus topology in a DP master system**

  The CP 443-5 Extended operating as DP master supports the measurement of the PROFIBUS bus topology in a DP master system using a diagnostics repeater (DP slave).

  System function SFC103 in the user program can instruct diagnostics repeaters to measure the PROFIBUS BUS topology in a DP master system. When completed, the results of the measurements made by the diagnostics repeater can then be read in and processed by the user program.

• **Open communications services (SEND/RECEIVE interface) over FDL connections of the following type:**
  
  – Specified FDL connections
  – Free layer 2 connections
  – Broadcast
  – Multicast
• **S7 communication and PG/OP communication**
  - PG functions with uploading / downloading of FM modules, configuration / diagnostics and routing
    
    Note on routing: Dynamic switchover to alternative paths (for example if there is a problem on one of the possible transmission paths) is not supported.
  - Operator control and monitoring functions (HMI)
  - Download S7 connections and gateways in RUN.
  - Client and server for data exchange on S7 connections using communications function blocks (fault tolerant S7 connections also possible)

• **Time of day synchronization via PROFIBUS**
  - The CP forwards time of day synchronization frames from the LAN to the station (CPU = time slave) or from the station to the LAN (CPU = time master).

    Another option is for this station to be synchronized via a different LAN. The time of day synchronization frame must be forwarded over PROFIBUS for the synchronization of further stations.
  - The CP supports time stamping of distributed process signals in conjunction with the IM 153.
  - Time of day status value (standard/daylight saving time switchover, synchronization status).

• **Data record routing**
  - You can use the CP as a router for data records intended for field devices (for example DP slaves). SIMATIC PDM (Process Device Manager) is a tool that creates data records of this type for assigning parameters to field devices.

    The services of the CP 4435 Extended module listed above can be used independently at the same time.

**Replacing a module without a programming device**

When installing the CP 4435 Extended, the configuration data of the CP is always stored in the CPU. This means that replacing modules is possible without having to download the configuration data from the PG.

Storage of the configuration data is protected from power failure by the battery backup or the flash memory card in the CPU.

Converting older systems (Page 14)
1.3 Requirements for use

The CP 4435 Extended described here is supported by all CPU operating systems in the versions listed in Tables 2-1 and 2-2 below.

1.3.1 Use with the current CPU types

Configuration limits

To use the CP type described here, the following limits and constraints apply within a rack:

- Number of operable CPs: 14
- Max. number of external DP lines (CP as DP master): 10

Note

The number CPs that can be operated as DP masters depends on the number of CP 443-1 Advanced modules operated as PROFINET IO controllers in the S7-400 station. In total, 10 CPs can be operated as:

- PROFINET IO controllers (CP 443-1 Advanced) - maximum 4
- DP masters (CP 443-5 Extended) - maximum 10

- Multicomputing is supported (except with CiR and H systems)

System environment

The CP 4435 Extended is supported by the S7-400 CPUs and CPU operating systems with the order numbers and versions listed in the table below.

From the table, you can see which functionality is supported when you use the CP 4435 Extended V 6.1 with the various CPU types. The following characteristics are shown:

- CPU type, order number and version
- Option of multicomputing
- The number of AG_SEND or AG_RECV calls on the SEND/RECEIVE interface that can be active at the same time (data exchange on FDL connections over PROFIBUS and corresponding connections over Industrial Ethernet)
- CPU support for SYNC/FREEZE functionality (SFC11) via the CP
- CPU support of the "activate / deactivate DP functionality (SFC12)" via the CP
- CPU support of the functionality for "identifying the bus topology in a DP master system" (SFC103) via the CP
- DPV1 functionality
- CiR functionality (DP slave / DP slot, configurable extension)

**Note**
ET 200M devices that were assigned to SYNC/FREEZE groups with STEP 7, must **not** have modules of the type FM or CP inserted.

1) All CPUs are capable of CiR (the H-CPU HCiR).
1.3.2 Converting older systems

In conjunction with the CP 443-5 Extended V 7.0, the functionality supported by the discontinued CPU types listed in Table 2-2 is as follows:

- No DPV1 functionality
- No CiR functionality (DP slave, configurable extension)
- No identification of the bus topology by the user program
- Max. number of external DP lines per station: 4
- Number of operable CPs: 8
- Multicomputing

- => The characteristic is not supported / the listed mode is not possible
1) All CPUs are capable of CiR (the H-CPUs HCiR).

1.3.3 Project engineering

Configuration and downloading the configuration data

The following version of STEP 7 is required:

<table>
<thead>
<tr>
<th>STEP 7 version</th>
<th>Functions of the CP</th>
</tr>
</thead>
<tbody>
<tr>
<td>STEP 7 as of V5.5 SP1</td>
<td>The functional range of the following CP type can be configured:</td>
</tr>
<tr>
<td>6GK7443-5DX05-0XE0</td>
<td></td>
</tr>
<tr>
<td>6GK7443-5DX05-0XE1 (conformal coating)</td>
<td></td>
</tr>
<tr>
<td>STEP 7 Professional V11 SP1</td>
<td>The functional range of the following CP type can be configured:</td>
</tr>
<tr>
<td>6GK7443-5DX04-0XE0</td>
<td></td>
</tr>
</tbody>
</table>

Depending on what is available on your PG / PC and the S7-300 station, use one of the following connectors to load the configuration data: MPI, Industrial Ethernet or PROFIBUS.
1.3 Requirements for use

---

Note
Changing bus parameters
If you change the bus parameters in the configuration data, you must not load this configuration data on the CP via PROFIBUS!

1.3.4 Programming

Program blocks

For some communications services of the CP, there are preprogrammed program blocks (FCs / FBs) available as the interface in your STEP 7 user program.

Refer to the documentation of the program blocks in the online help of STEP 7 or in the manual "7/ (Page 43)".

---

Note
We recommend that you always use the latest block versions for all module types.

You will find information on the current block versions and the current blocks to download from the Internet in our Customer Support at the following address:
Link: (https://support.industry.siemens.com/cs/ww/en/ps/15677/pm)

With older module types, this recommendation assumes that you are using the latest firmware version for the particular module type.

---

Program blocks for open communications services

<table>
<thead>
<tr>
<th>Program block</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>AG_SEND (FC5)</td>

<td>Block-oriented sending / receipt of data</td>
</tr>
<tr>
<td>PUT (SFB 14) / GET (SFB 15)</td>
<td>Write data to a remote CPU / read data from a remote CPU</td>
</tr>
</tbody>
</table>
Program block | Meaning
---|---
START (SFB 19) / STOP (SFB 20) | Run a warm restart / stop on a remote device.
RESUME (SFB 21) | Run a hot restart on a remote device.
STATUS (SFB 22) | Query the device status of a remote partner.
USTATUS (SFB 23) | Receive the status change of a remote device.
CONTROL (SFC 62) | Query the status of the connection belonging to an SFB instance.

For more information on the program blocks for S7 communication, see also STEP 7 online help or the manual /8/ (Page 43)

1.4 Performance data

1.4.1 Transmission speeds supported

The transmission speed is set with the SIMATIC STEP 7 configuration software. For the permitted values, refer to Table 7-1 in Section 7 (Page 35)

Note
Remember the cable length

The permitted cable length must be kept to depending on the transmission speed. Refer to the information in /4/ (Page 42)

1.4.2 Characteristic data of the DP interface

General characteristic data

No special program blocks are required for DP mode. The interfacing to the distributed I/O is by direct I/O access or using program blocks (SFCs/SFBs) of the CPU (see /4/ (Page 42)).

Table 1-4 General characteristic data of DP mode

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Explanation / values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of operable DP slaves</td>
<td>125</td>
</tr>
<tr>
<td>Max. size of the input area of all DP slaves</td>
<td>4 Kbytes</td>
</tr>
<tr>
<td>Max. size of the output area of all DP slaves</td>
<td>4 Kbytes</td>
</tr>
<tr>
<td>Maximum number of inputs per DP slave</td>
<td>244 bytes</td>
</tr>
<tr>
<td>Maximum number of outputs per DP slave</td>
<td>244 bytes</td>
</tr>
<tr>
<td>Max. size of the consistent area for a module</td>
<td>128 bytes</td>
</tr>
</tbody>
</table>
Diagnostics requests

As a DP master (class 1), the CP 4435 supports diagnostics requests of a DP master (class 2).

Note

Default value for the startup parameter "Monitoring time for transfer of parameters to modules"

In some situations, it is necessary to increase the default value for the startup parameter "Monitoring time for transfer of parameters to modules" in the Properties dialog of the CPU:

- When there is a large number of modules (DP slaves) configured that can be assigned parameters
- When a high value is configured for the constant bus cycle time in the network properties of the PROFIBUS DP line

CiR functionality

The numbers of connections etc. shown in Table General characteristic data of DP mode (Page 17) also apply to the entire DP master system if there is a configured DP slave expansion (CiR functionality).

If you specify the properties of a CiR object in the DP master system of the CP 4435 Extended in STEP 7, these values are included in checks performed by STEP 7.

The configurable properties relate to:

- The number of DP slaves and modules you can insert in a DP slave
- The number of input and output bytes that can still be configured in RUN.

(see also manual /5/ (Page 42))

See also

Characteristic data of the DP interface (Page 17)
1.4.3 Characteristic data of open communications services (SEND/RECEIVE interface) over FDL connections

**General characteristic data**

The characteristic data is important when operating FDL connections (specified, free layer 2 (SDA and SDN), broadcast, multicast):

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Explanation / values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total number of FDL connections that can be operated.</td>
<td>32 max.</td>
</tr>
<tr>
<td>Size of the transferable data area on FDL connections.</td>
<td>1-240 bytes max. per specified FDL connection (for sending and receiving) Free Layer 2, broadcast and multicast: Up to 236 bytes of user data can be transferred per job. The job header occupies an additional 4 bytes.</td>
</tr>
</tbody>
</table>

**Cycle load time due to FDL connections**

The calculation of the cycle load time for FDL connections is largely dependent on the time required to execute the program blocks (AG_SEND, AG_RECV) on the S7 400 CPU.

The following table lists the cycle load times of the available FCs in milliseconds. A distinction is made between the statuses "job completed" and "job active". The entries relate to the run time in the CPU 417 (6ES7 417-4XL04-0AB0 - see Table 1-1 Use with the current CPU types (Page 13)).

<table>
<thead>
<tr>
<th>Job status</th>
<th>Job completed</th>
<th>Job active</th>
</tr>
</thead>
<tbody>
<tr>
<td>Component / FC</td>
<td>min.</td>
<td>max.</td>
</tr>
<tr>
<td>AG_SEND</td>
<td>0.10 ms</td>
<td>0.11 ms</td>
</tr>
<tr>
<td>AG_RECV</td>
<td>0.13 ms</td>
<td>0.14 ms</td>
</tr>
</tbody>
</table>

1.4.4 Characteristics of S7 communication

**General characteristic data**

The following information is important when operating S7 connections:

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>Explanation / values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of S7 connections that can be operated via PROFIBUS</td>
<td>48 max. (The value depends on the S7400 CPU being used.)</td>
</tr>
</tbody>
</table>
1.4.5 Parallel use of communications services (multiprotocol mode)

Performance

Using the various available communications services at the same time affects communication performance.

To illustrate the relationship between the connection types, the DP mode, and configured connections, the following values apply to the typical configurations:

<table>
<thead>
<tr>
<th>Connection type</th>
<th>Number of connections</th>
<th>With the DP configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>FDL connections</td>
<td>32</td>
<td>No DP mode</td>
</tr>
<tr>
<td></td>
<td>32</td>
<td>With DP mode</td>
</tr>
<tr>
<td>S7 connections</td>
<td>48</td>
<td>No DP mode</td>
</tr>
<tr>
<td></td>
<td>48</td>
<td>With DP mode</td>
</tr>
<tr>
<td>FDL and S7 connections</td>
<td>59</td>
<td>No DP mode</td>
</tr>
<tr>
<td></td>
<td>54</td>
<td>With DP mode</td>
</tr>
</tbody>
</table>

1) one additional S7 connection can be set up online (for example for routing)

Note

PG or HMI functions or data record routing

If PG or HMI functions or data record routing are used, a suitable number of S7 connections must be reserved during configuration!

Help provided by STEP 7

The number of connections on PROFIBUS shown in the table above can vary due to other influencing factors. The STEP 7 configuration tool displays warnings and help messages as soon as limit values are exceeded.

Scaling of services in the "mixed mode"

The DP delay time is used to scale cyclic DP communication and the other services (FDL and S7 connections). A DP delay time of 0 seconds guarantees the fastest possible DP update. By increasing the DP delay time, you create extra time on the CP for handling other services.

Note

Recommendation for mixed mode - PROFIBUS DP along with communications functions

In mixed mode, a delay should be selected as follows: 1 ms at transmission speeds > 1.5 Mbps
Note

Calling program blocks SFCs and SFBs

For SFCs 11, 12, 13, 51, 55, 56, 57, 58, 59 and 103 as well as SFB 52 and 53, several calls are necessary. The time required to process the job depends on load, round-trip time and transmission speed. If these SFCs are called in a loop within one cycle, the cycle time could be exceeded.

Exceptions:

- SFC51 requires only one call if it is used for reading the diagnostics data in a diagnostics interrupt (SFC51 with parameter 'partial system status list' 0xB1 and 0xB3).
- For SFB54 (receive interrupt with SFB54 "RALRM"), only one call is necessary.

Blocks for DPV1 (according to the PNO standard):

- SFB52 RDREC "Read data record from a DP slave" corresponds to SFC59 in terms of function
- SFB53 WRREC "Write data record to a DP slave" corresponds to SFC58 in terms of function
- SFB54 ALARM "Read interrupt information from a DP slave" - call in an interrupt OB

1) PNO: PROFIBUS Users Organization

1.4.6 Time-of-day synchronization

The CP 4435 forwards timeofday synchronization frames in the following directions:

1. From the CPU via the CP to PROFIBUS if the local CPU is the time master or this station is synchronized via a different LAN and the timeofday synchronization frame is forwarded to PROFIBUS for the synchronization of further stations.

2. From PROFIBUS via the CP to the CPU if a remote station is time master, for example:
   - a remote CPU 41x with PROFIBUS interface (for example, CP 4435)
   - a remote PC with CP 5412 / 5613 / 5614

Note

Transmission speed and synchronization interval

With transmission rates < 1.5 Mbps, we recommend that you configure a synchronization interval of at least 10 s.
1.4.7 **Data record routing**

A maximum of 11 connections can be established simultaneously to PA field devices at any one time.

PDM can, however, use several connections to one PA field device (for more information, refer to the manual /6/ (Page 43)).

1.4.8 **Use in faulttolerant systems**

With a CP 443-5 Extended, you have the following options in a faulttolerant (H) system:

- Operating faulttolerant S7 connections with communications services configured on one partner

or

- You can implement redundant and single peripheral structures (mixed mode is also possible).

You will find more detailed information about the possible operating and structural options in the manual /2/ (Page 42).

If the CP 443-5 Extended is used in a faulttolerant S7400H system, the following communications services can also be used on single (nonredundant) connections:

- S7 connection (including PG functions and PG routing)
- S5compatible communication (SEND/RECEIVE interface) on FDL connections
- Forwarding time of day

**Note**

**Use in faulttolerant systems**

1) Note the CPU types in Table 1-1 Use with the current CPU types (Page 13) / Table 1-2 Use with no longer available CPU types - part 1 (Page 14) / Table 1-3 Use with no longer available CPU types - part 2 (Page 15)
1.4.9 Other characteristics

Note on DP:
The connected DP slaves can only be assigned to and serviced by one CPU.

---

Note
CiR functionality - no multicomputing
If you use the CiR functionality, multicomputing is not possible.

---

Memory reset on the CP

⚠️ WARNING

Memory reset on the CP
Note that when you reset the CP memory using STEP 7 or STEP 7 special diagnostics, the configuration data on the CPU must also be deleted otherwise the data will become inconsistent.

Special feature of the DP mode:
If the CPU is in RUN mode at the same time, the memory reset is rejected by the CP.

DP diagnostics frames when the CPU is in STOP

All diagnostic frames from DPV0 standard slaves and all DP alarm frames from DP-S7/DP-V1 standard slaves arriving when the CPU is in STOP mode are handled as follows:

- In "S7-compatible" mode
  The problems that still exist at the transition from CPU STOP to CPU RUN are passed on the user program.

- In DP-V1 mode
  The diagnostics/interrupt frames are forwarded even when the CPU is in STOP mode, however, they must be evaluated by a suitable user program when the module starts up.
1.5 Compatibility with previous product

1.5.1 Extended functionality compared with previous product

Replacing a module

The CP (6GK7443-5DX05-0XE0 and 6GK7443-5DX05-0XE1) described here with firmware version V7.0 can be used as a replacement for the following predecessors of the CP 443-5 Extended:

- 6GK7 443-5DX00-0XE0
- 6GK7 443-5DX01-0XE0
- 6GK7 443-5DX02-0XE0
- 6GK7 443-5DX03-0XE0
- 6GK7 443-5DX04-0XE0

Firmware loader - reduced loading time with "FWL_FAST_LOAD"

To load new firmware, use only the new function for fast loading.

To do this, select the following entry for the interface parameter assignment of your PC/PG in the firmware loader:

CPxxx(FWL_FAST_LOAD)

By using this function, the time required for loading firmware is reduced significantly compared with the old function.

---

**Note**

**CPxxx (FWL) cannot be used**

The setting CPxxx(FWL) in the interface parameter assignment cannot be used with this CP type.

---

**Note**

**PROFIBUS**

Download the firmware only via the PROFIBUS interface of the CP. To download the firmware, you can use the following:

- PROFIBUS connecting cable 6ES7 901-4BD00-0XA0
- PROFIBUS cable with a maximum length of 200 m

The use of an MPI cable is not permitted!
1.5 Compatibility with previous product

Version history / predecessor products

The document "Version History for the SIMATIC NET S7 CPs" contains information on the all the previously supplied PROFIBUS CPs for SIMATIC S7. An up-to-date version of this document is available for downloading on the Internet under the following entry ID:

1.5.2 Replacing older modules / module replacement

Module replacement

Please follow the procedure below when replacing an older module with the module described in this document:

<table>
<thead>
<tr>
<th>Module used up to now</th>
<th>Configuration procedure</th>
</tr>
</thead>
<tbody>

### Controlling the mode

There are different ways in which you can control the mode of the CP 443-5 Extended, as follows:

- Mode selector
- STEP 7 special diagnostics configuration software

To control the CP mode from STEP 7, the mode selector must be set to RUN.

#### Mode selector

With the mode selector, you can set the following modes:

- Change from STOP to RUN:
  
  The CP loads configured and/or downloaded data into the work memory and then changes to RUN mode.

- Change from RUN to STOP:
  
  The CP changes to STOP with the following response:
  
  - Established connections (FDL connections, configured, and unconfigured S7 connections) are terminated
  - DP slaves are taken out of data transfer
  - Data record routing is deactivated
  - In STOP mode, configuring and performing diagnostics on the CP remain possible
  - In STOP mode, the time of day continues to be forwarded
Installation and commissioning

3.1 Important notes on using the device

Safety notices on the use of the device

Note the following safety notices when setting up and operating the device and during all associated work such as installation, connecting up or replacing the device.

3.1.1 Notes on use in hazardous areas

**WARNING**

EXPLOSION HAZARD

Do not open the device when the supply voltage is turned on.

**WARNING**

The device may only be operated in an environment with pollution degree 1 or 2 (see IEC 60664-1).

**WARNING**

The equipment is designed for operation with Safety Extra-Low Voltage (SELV) by a Limited Power Source (LPS).

This means that only SELV / LPS complying with IEC 60950-1 / EN 60950-1 / VDE 0805-1 must be connected to the power supply terminals. The power supply unit for the equipment power supply must comply with NEC Class 2, as described by the National Electrical Code (r) (ANSI / NFPA 70).

If the equipment is connected to a redundant power supply (two separate power supplies), both must meet these requirements.

**WARNING**

EXPLOSION HAZARD

Do not connect or disconnect cables to or from the device when a flammable or combustible atmosphere is present.
### 3.1 Important notes on using the device

**WARNING**

**EXPLOSION HAZARD**

Replacing components may impair suitability for Class 1, Division 2 or Zone 2.

**WARNING**

When used in hazardous environments corresponding to Class I, Division 2 or Class I, Zone 2, the device must be installed in a cabinet or a suitable enclosure.

#### 3.1.2 Notes on use in hazardous areas according to ATEX / IECEx

**WARNING**

**DIN rail**

In the ATEX and IECEx area of application only the Siemens DIN rail 6ES5 710-8MA11 may be used to mount the modules.

**WARNING**

**Requirements for the cabinet/enclosure**

To comply with EU Directive 94/9 (ATEX95), the enclosure or cabinet must meet the requirements of at least IP54 in compliance with EN 60529.

**WARNING**

**Cable**

If the cable or conduit entry point exceeds 70 °C or the branching point of conductors exceeds 80 °C, special precautions must be taken. If the equipment is operated in an air ambient in excess of 50 °C, only use cables with admitted maximum operating temperature of at least 80 °C.

**WARNING**

Take measures to prevent transient voltage surges of more than 40% of the rated voltage. This is the case if you only operate devices with SELV (safety extra-low voltage).
3.1.3 **Notes on use in hazardous areas according to UL HazLoc**

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>EXPLOSION HAZARD</td>
</tr>
<tr>
<td>Do not connect or disconnect while the circuit is live or unless the area is known to be free of ignitable concentrations.</td>
</tr>
</tbody>
</table>

This equipment is suitable for use in Class I, Division 2, Groups A, B, C and D or non-hazardous locations only.

This equipment is suitable for use in Class I, Zone 2, Group IIC or non-hazardous locations only.

3.2 **Installation and commissioning**

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not pull or plug the CP while power is on</td>
</tr>
<tr>
<td>The CP 443-5 Extended must not be pulled or plugged while the power is connected. In some cases, this could lead to damage of the module.</td>
</tr>
<tr>
<td>If you do pull or plug the CP while power is on, the CPU changes to STOP.</td>
</tr>
<tr>
<td>Afterwards, the power for the central rack must be cycled.</td>
</tr>
</tbody>
</table>

**Keep to the installation guide for SIMATIC S7-400**

During installation, keep to the guidelines and instructions in the following documents:

- S7-400 installation manual /3/ (Page 42)
- SIMATIC NET PROFIBUS network manual /4/ (Page 42)
### Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Procedure / significance</th>
</tr>
</thead>
</table>
| 1. Plug in the CP 443-5 Extended | The CP 443-5 Extended can be operated in the following racks:  
- Central rack CR2, CR3  
- Universal rack UR1 UR2 or UR2H  
  as central device  
  as central device with rack no. 1-6 (only possible if there is no DP operation).  
The CP 443-5 Extended cannot be used in an ER1 or ER2 expansion rack.  
Suitable slots in the rack:  
With the exception of the slots reserved for the power supply and IM-R, the CP 443-5 Extended can be inserted in all slots with a P and K bus interface (in the central or in an expansion rack no. 1-6). |

**Note**

When you are using PROFIBUS-DP, the module must only be operated in the central rack!  
When using the universal rack as an extension rack, you require an IM with a communication bus link!

<table>
<thead>
<tr>
<th>Step</th>
<th>Procedure / significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Connection to PROFIBUS</td>
<td>Refer to /1/ (Page 41).</td>
</tr>
</tbody>
</table>
| 3. Project engineering | Depending on the communication services being used, configuration involves the following steps:  
- Node initialization  
  This is necessary in all cases. This assigns a PROFIBUS address and bus parameters to the PROFIBUS CP.  
- Connection configuration  
  This is necessary when using the communications services, S7 functions and FDL connections (SEND/RECEIVE interface).  
- DP configuration  
  This is necessary when the DP mode is used.  
For details, refer to /1/ (Page 41). |
| 4. PG/PC connection for configuration | You can connect the PG as follows via the PROFIBUS interface of the CP when configuring the CP:  
- via LAN / PROFIBUS  
  Requirement: The CP 443-5 Extended must already have a PROFIBUS address. As an alternative, configuration via the CPU and its available interfaces to the PG/PC is also possible.  
For details, refer to /1/ (Page 41). |
4.1 General operation on PROFIBUS

Disruptions with modified transmission speed
If you modify the transmission speed when downloading the configuration, the CP 443-5 Extended sporadically remains in the "stopping" mode.

In such cases, a memory reset of the S7 station is necessary.

Follow the steps outlined below:
1. Run a memory reset on the S7 station (CPU)
   To reset memory, use the corresponding function in the configuration tool.
2. Turn the power supply to the S7 station on and off again.

Bus fault of the type "bus short-circuit"
If there is a bus short-circuit, this can cause one of the following responses on the PROFIBUS subnet:

- Failure of the bus line
- Failure of stations / of all stations

The response can be recognized by evaluating with OB86.

Note
Bus fault statistics

With STEP 7 special diagnostics, you can read out the information from the entry PROFIBUS > Statistics > Bus fault statistics If there is a bus fault, it is possible that different bus fault events are registered in the statistics even though it appears that identical bus faults have occurred.
4.2 Display "Existing channel error" in the diagnostics interrupt OB (OB82)

Display "Existing channel error" in the diagnostics interrupt OB (OB82)

Under certain circumstances, the "Existing channel error" flag may not be set (false) although there is a channel error.

This reaction corresponds to the current response on the PROFIBUS interfaces with SIMATIC.

Remedy: You can read out detailed up-to-date diagnostics information using the diagnostics function "Read system diagnostics" SFC13 (read out standard diagnostics).

4.3 Display of the DP slave history

Restricted display of older diagnostics data in STEP 7 special diagnostics

Diagnostics data can be read out in STEP 7 special diagnostics. With an additional button, you can also have older diagnostics data displayed alongside the current diagnostics data.

With the CP 443-5 Extended (DX05), it is possible that not all the older diagnostics events can be displayed due to the limited buffer size - the display of underlying intermediate states is then omitted.

4.4 Other information available about the CP

FAQs on the Internet

You will find detailed information (FAQs) on using the PROFIBUS S7-CPs at the following Internet address (entry type: FAQ):

## General technical specifications

<table>
<thead>
<tr>
<th>Technical specifications</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transmission speeds supported</td>
<td>9.6 kbps, 19.2 kbps, 45.45 kbps</td>

</tbody>
</table>

In addition to this, all the information in the S7-400/M7-400 reference manual "Module Data" /3/ (Page 42) in the section "General Technical Specifications" on the topics listed below applies to the CP 443-5 Extended.

- Electromagnetic compatibility
- Transportation/storage conditions
- Mechanical and climatic environmental conditions
- Information on insulation checks, protection class and degree of protection
Approvals

Approvals issued

Note

Issued approvals on the type plate of the device

The specified approvals apply only when the corresponding mark is printed on the product. You can check which of the following approvals have been granted for your product by the markings on the type plate.

Approvals for shipbuilding are not printed on the device type plate.

EC declaration of conformity

The CP meets the requirements and safety objectives of the following EU directives and it complies with the harmonized European standards (EN) for programmable logic controllers which are published in the official documentation of the European Union.

- **2014/34/EU (ATEX explosion protection directive)**
  

- **2014/30/EU (EMC)**
  
  EMC directive of the European Parliament and of the Council of February 26, 2014 on the approximation of the laws of the member states relating to electromagnetic compatibility; official journal of the EU L96, 29/03/2014, pages. 79-106

- **2011/65/EU (RoHS)**
  

- **IEC 61131-2**

The EC Declaration of Conformity is available for all responsible authorities at:

Siemens Aktiengesellschaft
Division Process Industries and Drives
Process Automation
DE-76181 Karlsruhe
Germany

You will find the EC Declaration of Conformity on the Internet at the following address:
The CP has the following approvals or conforms to the following directives:

IECEX

The CP meet the requirements of explosion protection according to IECEX.

IECEX classification:

- Ex nA IIC T4 Gc
  
  Certificate: IECEx DEK 14.0034X
  
  Applied standards:
  
  - EN 60079-0 - Explosive atmospheres - Part 0: Equipment - General requirements
  
  - EN 60079-15 - Explosive atmospheres - Part 15: Equipment protection by type of protection 'n'

- Ex ec IIC T4 Gc
  
  Certificate: IECEx DEK 18.0019X
  
  Applied standards:
  
  - EN 60079-0 - Explosive atmospheres - Part 0: Equipment - General requirements
  
  - EN 60079-7 - Explosive Atmospheres - Part 7: Equipment protection by increased safety 'e'

You can see the current versions of the standards in the IECEx certificate that you will find on the Internet at the following address:

The conditions must be met for the safe deployment of the CP according to the section Notes on use in hazardous areas according to ATEX / IECEx (Page 30).

You should also note the information in the document "Use of subassemblies/modules in a Zone 2 Hazardous Area" that you will find on the Internet at the following address:

The CP meets the requirements of the EC directive 2014/34/EU "Equipment and Protective Devices for Use in Potentially Explosive Atmospheres".

ATEX approval:

- II 3 G Ex nA IIC T4 Gc
  Type Examination Certificate: KEMA 03 ATEX1125 X
  Applied standards:
  - EN 60079-0 - Explosive atmospheres - Part 0: Equipment - General requirements
  - EN 60079-15 - Explosive atmospheres - Part 15: Equipment protection by type of protection 'n'

- II 3 G Ex ec IIC T4 Gc
  Type Examination Certificate: DEKRA 18ATEX0027 X
  Applied standards:
  - EN 60079-0 - Explosive atmospheres - Part 0: Equipment - General requirements
  - EN 60079-7 - Explosive Atmospheres - Part 7: Equipment protection by increased safety 'e'

The current versions of the standards can be seen in the EC Declaration of Conformity, see above.

ATEX approval: II 3 G Ex nA IIC T4 Gc

The conditions must be met for the safe deployment of the CP according to the section Notes on use in hazardous areas according to ATEX / IECEx (Page 30).

You should also note the information in the document "Use of subassemblies/modules in a Zone 2 Hazardous Area" that you will find on the Internet at the following address:

EMC

Until 19.04.2016 the CP meets the requirements of the EC Directive 2014/30/EU "Electromagnetic Compatibility" (EMC directive).

Applied standards:

- EN 61000-6-4
  Electromagnetic compatibility (EMC) - Part 6-4: Generic standards - Emission standard for industrial environments

- EN 61000-6-2
  Electromagnetic compatibility (EMC) - Part 6-2: Generic standards - Immunity for industrial environments
RoHS

The CP meets the requirements of the EC directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

Applied standard:

- EN 50581

c(UL)us

Applied standards:

- Underwriters Laboratories, Inc.: UL 61010-1 (Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use - Part 1: General Requirements)
- IEC/UL 61010-2-201 (Safety requirements for electrical equipment for measurement, control and laboratory use. Particular requirements for control equipment)
- Canadian Standards Association: CSA C22.2 No. 142 (Process Control Equipment)

Report / UL file: E85972 (NRAG, NRAG7)

cULus Hazardous (Classified) Locations

Underwriters Laboratories, Inc.: cULus IND. CONT. EQ. FOR HAZ. LOC.

Applied standards:

- ANSI ISA 12.12.01
- CSA C22.2 No. 213-M1987

APPROVED for Use in:

- Cl. 1, Div. 2, GP. A, B, C, D T4
- Cl. 1, Zone 2, GP. IIC T4

Ta: Refer to the temperature class on the type plate of the CP

Report / UL file: E223122 (NRAG, NRAG7)

Note the conditions for the safe deployment of the CP according to the section Notes on use in hazardous areas according to UL HazLoc (Page 31).

Current approvals

SIMATIC NET products are regularly submitted to the relevant authorities and approval centers for approvals relating to specific markets and applications.

If you require a list of the current approvals for individual devices, consult your Siemens contact or check the Internet pages of Siemens Industry Online Support:

Link: (https://support.industry.siemens.com/cs/ww/en/p/)
References

Where to find Siemens documentation

- Article numbers
  You will find the article numbers for the Siemens products of relevance here in the following catalogs:
  - SIMATIC NET - Industrial Communication / Industrial Identification, catalog IK PI
  - SIMATIC - Products for Totally Integrated Automation and Micro Automation, catalog ST 70
  You can request the catalogs and additional information from your Siemens representative. You will also find the product information in the Siemens Industry Mall at the following address:
  Link: (https://mall.industry.siemens.com)
- Manuals on the Internet
  You will find SIMATIC NET manuals on the Internet pages of Siemens Industry Online Support:
  Link: (https://support.industry.siemens.com/cs/ww/en/cs/15661/manuals)
  Go to the required product in the product tree and make the following settings:
  Entry type “Manuals”
- Manuals on the data medium
  You will find manuals of SIMATIC NET products on the data medium that ships with many of the SIMATIC NET products.
