

Overview

The flowmeter systems of the SITRANS FC100 series are the precision Coriolis multi-parameter flowmeter for low flow applications.

They are formed by one FCS100 sensor and one FCT transmitter:

- SITRANS FC120 is the combination of the FCS100 sensor and the FCT020 transmitter
- SITRANS FC140 is the combination of the FCS100 sensor and the FCT040 transmitter

Features:

- Compact dual curved alloy 22 measuring tubes
- Process connection: flange, thread or hygienic clamp
- Nominal sizes: DN 1 to DN 8
- Connection sizes: DN 6 to DN 40 ($\frac{1}{4}$ " to $1\frac{1}{2}$ ")
- Nominal flow rates: 21 kg/h to 950 kg/h (46 lb/h to 2 094 lb/h)
- FCS100 sensors always combine with a remote transmitter via a connecting cable
- Installation of sensor and transmitter in different locations

FCS100 sensor and FCT020/040 transmitter

SITRANS FC (Coriolis) 2023

Flowmeter systems

SITRANS FC120/FC140

Benefits

Product features aligned to user value targets

| | User value targets | SITRANS FC features and solutions |
|---|---|--|
| Engineering and project management | <ul style="list-style-type: none"> Reduce engineering investment Cut specification effort Minimize project expenditure Decrease the spending on each measurement point Eliminate function duplication Reduce number of suppliers | <ul style="list-style-type: none"> Siemens project teams offer complimentary evaluation of customer specifications, provided by regional and HQ experts Simple product selection using intuitive sizing software One SITRANS FC device can typically provide three to six individual measurements, all transmitted via digital communication, when planned during pre-project design Added value functions: batch control, viscosity, thermal energy, concentration measurement (Fraction) of two-component solutions and pressure compensation |
| Installation | <ul style="list-style-type: none"> Reduce footprint and transport outlay of OEM machinery Lower installation complexity Avoid costly modifications of existing plant | <ul style="list-style-type: none"> Can be installed in horizontal or vertical (self-draining) pipes Twin tube bend design delivers strong signal to noise characteristic resistant to external influence, so install in tight spaces with no inlet and outlet restrictions Adaptable to existing pipes: typically, three or four connection sizes for each sensor size Flexible selection of traditional inputs, outputs and digital communications |
| Configuration and commissioning | <ul style="list-style-type: none"> Shorter commissioning schedules with lower costs Faster start-up with reduced outgoings | <ul style="list-style-type: none"> Easy setup wizard delivers working meters straight after start-up microSD card stores sensor calibration data and default setup Simple configuration using Process Device Manager (PDM) Siemens device-specific faceplates simplify operation in plantwide control systems |
| Efficient plant operation | <ul style="list-style-type: none"> Improve finished product consistency to reduce waste Keep process performance when scaling production up or down Optimize process control Improve finished product quality enabling higher levels of profit Reduce downtime with fast resolution of process upsets Improve asset performance | <ul style="list-style-type: none"> SITRANS FC meters are calibrated in rigs accredited to EN/ISO 17025 to ensure consistently high performance of flow, density, and concentration measurements First-class zero-point quality maintains high accuracy into the low flow region High sensitivity and intelligent dynamic range keeps the measurement active in demanding high fluid damping cases Designed-in resilience to process extremes Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout or solid deposits building up in the tubes Diagnostic data via local menu or PDM is backed by Siemens applications experts Intelligent Siemens SITRANS IQ apps for continuing asset evaluation |
| Maintenance and asset management | <ul style="list-style-type: none"> Optimize technician training Reduce cost of spare parts Increase predictive maintenance Reduce production downtime and associated costs Decrease unplanned maintenance Maximize asset value | <ul style="list-style-type: none"> Simple product design with interchangeable modular parts microSD card loads sensor-specific data to deliver fast service exchange Self-verification: tube health check monitors key diagnostics, including tube stiffness, driver and pickups; the user defines verification frequency and alarm behavior Verification results indicate whether preventive maintenance action is required Siemens SIMATIC Maintenance Station uses cyclical acquisition to provide life cycle reports and intelligent preventive maintenance strategies |
| Industry compliance | <ul style="list-style-type: none"> Cut effort required to comply with Industry-specific demands Reduce resource needed to maintain regulatory compliance | <ul style="list-style-type: none"> Food and beverage sector covered with EHEDG and 3-A approvals, polished tubes Global hazardous area approvals for international plant duplications Common and emerging digital networks covered: HART, PROFIBUS PA, PROFINET Class-leading safety: SIL2/SIL3, secondary containment, PED, NAMUR NE95 |

Application**Application examples for SITRANS FC multi-parameter meters across diverse industry sectors****Chemical and petrochemical**

Bulk chemicals
Industrial gases
Polymers
Agrochemicals
Fine chemicals
Aroma chemicals

- Transfer, loading and unloading of bulk chemicals
- Concentration control of acids and alkalis (process optimization)
- Accurate mass or volume flow of feed chemicals to in-line blending systems
- Accurate mass flow and density (quality) of reactor fluid feeds catalyst
- Chemical recovery
- Mass balance optimization
- Compressed and cryogenic gases
- Lubricating oil blending and dosing
- High accuracy measurement of critical fluid components
- Low flow control in pilot plants and R&D facilities

Food and beverage

Food processing
Dairies
Breweries
Distilleries
Confectionary
Soft drinks
Animal feed plants
OEM

- Accurate bulk transfer (mass or volume) of all dairy products: milk, cream, whey and yoghurt
- Fat concentration in cream
- Flow, density, temperature and concentration (Plato) during all fermentation processes
- Flow, density, temperature and sugar concentration (Brix) in soft drink processing
- Distilled spirits – % alcohol by volume (ABV), liters of pure alcohol, volume transfer, blending, batch and column still optimization and energy management, cask filling, tanker loading
- Flow and density of fruit juices and pulps
- Mixing and inventory control of confectionary ingredients, e.g. chocolate, syrup, oils, flavors
- Metering pump control
- Oils, fats enzymes dosing in animal feed plants
- CO₂ dosing
- CIP liquids
- Bottling of beer, spirits, wine, soft drinks, etc.
- Bulk sugar processing – molasses, sugar slurries, density, Brix of finished product

Oil and gas

Offshore/onshore
Upstream/downstream
Pipelines
Distribution networks
Refineries
Skid manufacturers

- Loading/unloading of hydrocarbons (e.g. crude oil, bitumen) from/to ship, road tanker, rail car
- High pressure chemical injection
- High pressure low flow gas
- Net oil computing
- Gas void fraction
- Filling of gas bottles
- Furnace control
- Test separators
- LPG, natural gas hydration
- Well-head water-cut monitoring
- All hydrocarbon fluids in refineries
- Metrology, custody transfer
- Drilling mud
- Oil well cementing and hydrofracturing

Application (continued)**Application examples for SITRANS FC multi-parameter meters across diverse industry sectors****Life sciences**

Pharmaceutical
Bio

- High accuracy flow and batching of bioreactor feeds
- Solvent flow rate, density and batching
- Flow of demineralized and deionized water
- Solvents and fish oils used in high grade omega 3 oils
- Precision coatings
- Vacuum thin film coating

Household and personal care

Detergents
Cosmetics

- Blending and batching of detergent ingredients
- Tanker loading and unloading
- Salt concentration
- Reliable measurement of aerated liquids

Automotive and aeronautical

Vehicle manufacturing
Paint
Engine testing
OEM

- Fuel injection nozzle and pump testing
- Filling of under bonnet fluid reservoirs, air conditioning, coolant
- Fuel flow and density measurement in engine test beds
- Checking for air in oil using high accuracy density measurement
- Paint spray robots – requires accurate and fast measurements
- Aircraft fuel loading (kerosene)
- High pressure flow used in turbine blade manufacture

Power and energy

Renewable
Hydrogen

- Boiler fuel flow and burner control
- Turbine fuel flow
- Glycol flow and concentration
- Bioethanol

Marine

OEM
Shipbuilders

- Fuel consumption management
- Boiler control
- Bunkering management
- Density used to indicate fuel quality

Pulp, paper and textiles

Water and environmental

- Accurate dosing of dyes and chemicals
- Dosing of chemicals for water treatment
- Chemical concentration for water quality control

SITRANS FC (Coriolis) 2023

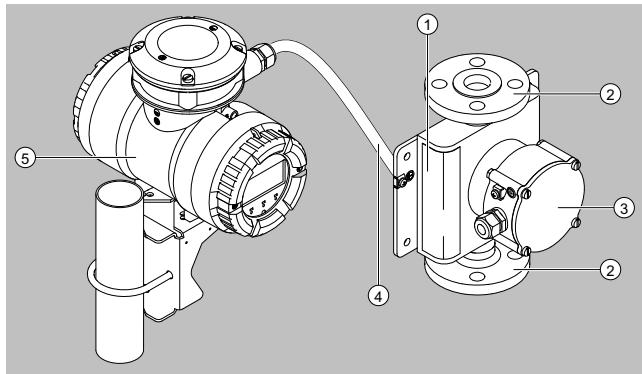

Flowmeter systems

SITRANS FC120/FC140

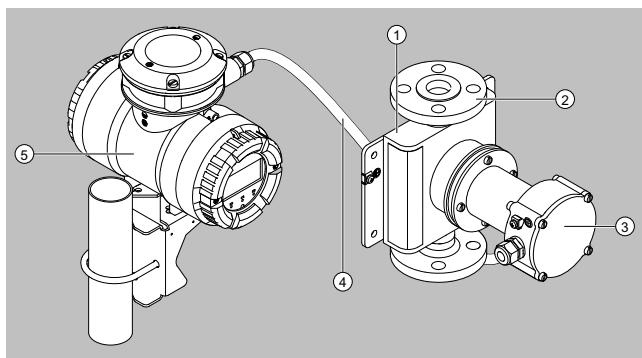

Design

Design options and related temperature range for FC100 series

| Design version | Process temperature range |
|----------------|--|
| Standard neck | Standard [-50 ... 150 °C (-58 ... 302 °F)] |
| Long neck | Standard [-50 ... 150 °C (-58 ... 302 °F)] Medium [-50 ... 260 °C (-58 ... 302 °F)] |

FCS100 sensor (standard neck version) and remote transmitter

FCS100 sensor (long neck version) and remote transmitter

| | |
|---|---------------------|
| 1 | FCS100 sensor |
| 2 | Process connection |
| 3 | Sensor terminal box |
| 4 | Connecting cable |
| 5 | Transmitter |

Compatible fluids

- Liquids
- Gases
- Mixtures, solutions, emulsions, suspensions and slurries

Primary measured variables

- Mass flow
- Density
- Temperature

Based on the primary measured quantities, the transmitter also calculates

- Volume flow

Design (continued)

- Percent concentration (fraction) of a two-component mixture (FCT040 only)
- Partial component flow rate (net flow) of a mixture consisting of two components (FCT040 only)

The mass flow, volume flow, net flow measurements can be bi-directional.

Measurement variables for NTEP approval

- Mass flow uni-directional
- Volume flow uni-directional

Feature summary

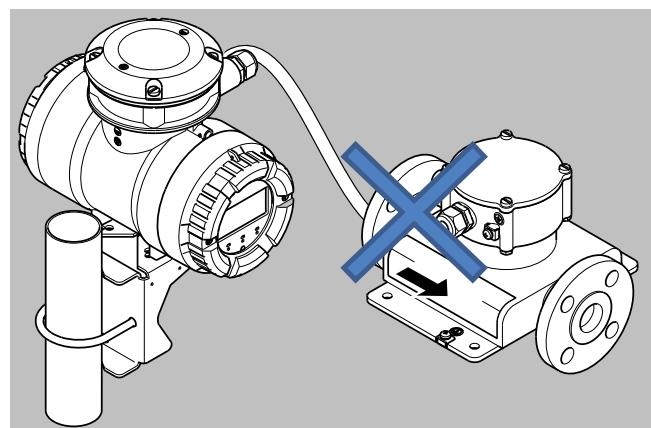

- Possibly the most compact dual curve Coriolis flowmeter for precision measurement, starting at DN 1 nominal size
- Batching function with batch leakage detection and batch control by transmitter for precise dosing
- Accurate density measurement and up to four advanced concentration measurement data sets
- Sizes to suit pilot plants, R&D labs and high value fluid additives
- Wide choice of process connections, starting with DN 6 (1/4 inch) for reduced installation efforts

Installation guidelines

FC100 series flow meters can be mounted horizontally, vertically and at an incline. The measuring tubes should be filled with the fluid during flow measurement as entrained gas may result in errors in measurement. Straight pipe runs at inlet or outlet are usually not required.

Avoid the following installation locations and positions:

- Measuring tubes as highest point in piping when measuring liquids
- Measuring tubes as lowest point in piping when measuring gases
- Immediately in front of a free pipe outlet in a downpipe
- Lateral positions

Avoid measuring tubes in sideways position resulting in possible non-homogeneous fluid separation

Function

Compatible fluids

- Liquids
- Gases
- Mixtures, solutions, emulsions, suspensions and slurries

Primary measured variables

- Mass flow
 - Density
 - Temperature

SITRANS FC (Coriolis) 2023

Flowmeter systems

SITRANS FC120/FC140

Technical specifications

Mass flow rate of liquids

The mass flow rate characteristics of SITRANS FC meters are defined by the values of zero stability, Q_{flat} , Q_{nom} and Q_{max} .

Zero stability is the maximum allowable flow rate value that can be displayed at zero flow under reference conditions. It is a good indicator of the meter performance as flow rates reduce and approach zero.

- Q_{flat} is the mass flow rate above which the base accuracy is maintained (0.1% when using FCT040 transmitters).

- Q_{nom} is the nominal mass flow rate of water at reference conditions that would result in a pressure drop of 1 bar (15 psi).

- Q_{max} is the recommended maximum mass flow rate for each sensor size.

For questions regarding expected performance in specific applications, please contact your regional Siemens Measurement Intelligence team.

Flow rate summary by FCS100 sensor size

| Nominal size | Zero stability kg/h | Q_{flat} kg/h | Q_{nom} kg/h | Q_{max} kg/h |
|--------------|------------------------|---------------------------|--------------------------|--------------------------|
| | lb/h | lb/min | lb/min | lb/min |
| DN 1 | 0.003 | 0.007 | 2.52 | 0.092 |
| DN 2 | 0.005 | 0.011 | 4.50 | 0.165 |
| DN 4 | 0.009 | 0.020 | 14.0 | 0.514 |
| DN 6 | 0.019 | 0.042 | 30.0 | 1.10 |
| DN 8 | 0.048 | 0.106 | 79.0 | 2.90 |

Performance summary by FCS100 sensor size and transmitter type

| Sensor size | DN 1 | DN 2 | DN 4 | DN 6 | DN 8 |
|----------------------------|-------------|-----------------|-----------------|----------------|-----------------|
| Mass flow (liquids) | | | | | |
| Accuracy | | | | | |
| % (of rate) | FCT020 | ± 0.2 | ± 0.2 | ± 0.2 | ± 0.2 |
| % (of rate) | FCT040 | ± 0.2 | ± 0.2 | ± 0.1 | ± 0.1 |
| Zero stability | kg/h (lb/h) | ± 0.003 (0.007) | ± 0.005 (0.011) | ± 0.009 (0.02) | ± 0.019 (0.042) |
| Density (liquids) | | | | | |
| Accuracy | | | | | |
| kg/m³ (lb/ft³) | FCT020 | ± 20 (1.25) | ± 8 (0.5) | ± 4 (0.25) | ± 4 (0.25) |
| kg/m³ (lb/ft³) | FCT040 | ± 20 (1.25) | ± 8 (0.5) | ± 1 (0.06) | ± 0.5 (0.03) |
| Mass flow (gases) | | | | | |
| Accuracy | | | | | |
| % (of rate) | FCT020 | ± 0.75 | ± 0.75 | ± 0.75 | ± 0.75 |
| % (of rate) | FCT040 | ± 0.5 | ± 0.5 | ± 0.5 | ± 0.5 |
| Temperature | | | | | |
| Accuracy | °C (°F) | ± 0.5 (0.9) | ± 0.5 (0.9) | ± 0.5 (0.9) | ± 0.5 (0.9) |

The accuracy values in the table above are based on reference conditions at the time of calibration and represent the combined measurement uncertainties including sensor, electronic and pulse output interface.

Liquid density calibration is performed when density accuracy of 0.5 kg/m³ (0.03 lb/ft³) is selected in the model code.

Mass flow calibration and density adjustment for liquids

Siemens SITRANS FC Coriolis meters are calibrated in rigs accredited according to the international standard DIN EN ISO/IEC 17025:2018. Each flowmeter comes with a standard calibration certificate.

Mass flow calibration takes place at reference conditions. Specific values are listed in the standard calibration certificate.

| Mass flow calibration reference conditions | |
|--|---|
| Fluid | Water |
| Density | 900 ... 1 100 kg/m³ (56 ... 69 lb/ft³) |
| Fluid temperature | 10 ... 35 °C (50 ... 95 °F), average temperature: 22.5 °C (72.5 °F) |
| Ambient temperature | 10 ... 35 °C (50 ... 95 °F) |
| Process pressure | 1 ... 5 bar (15 ... 73 psi) |

Density calibration reference conditions

| | |
|--|--|
| Flow condition | Fully developed flow profile |
| Fluid densities used to obtain density calibration constants | 700 kg/m³ (44 lb/ft³) 1 000 kg/m³ (62 lb/ft³) 1 650 kg/m³ (103 lb/ft³) |
| Fluid temperature | 20 °C (68 °F) |
| Determination of temperature compensation coefficients | 20 ... 80 °C (68 ... 176 °F) |

Analog output performance specification

Typical additional uncertainty when using the analog current output:

± 0.04% at a nominal mid-range current output of 12 mA, which includes the effects of:

Output adjustment, linearity, power supply variation, load resistance variation, short-term and long-term drift for one year and ambient temperature effect on the transmitter in the range 20 °C ± 30 °C (14 ... 122 °F).

Process pressure effect on flow measurement performance

Changes in operating pressure have a small effect on the mass flow measurement performance. When the pressure changes are very large this effect can be corrected by a dynamic pressure input or a fixed process pressure.

Technical specifications (continued)

| Sensor size | Additional flow measurement errors due to change in operating pressure from reference pressure | |
|-------------|--|----------------------------------|
| | in % of rate per 1 bar variation | in % of rate per 1 psi variation |
| DN 1 | none | none |
| DN 2 | none | none |
| DN 4 | none | none |
| DN 6 | -0.0011 | -0.00008 |
| DN 8 | -0.0010 | -0.00007 |

Process temperature effect

For mass flow measurement, process fluid temperature effect is defined as the change in sensor flow accuracy due to process fluid temperature change, away from the 20 °C (68 °F) reference condition. Variation in process temperature influences the measuring tube characteristics and this is compensated for using the built-in PT 1000 temperature sensor.

A small flow uncertainty remains in the compensation circuit defined below.

Uncertainty due to process temperature change: $\pm 0.001\%$ of mass flow rate per °C ($\pm 0.00056\%$ of mass flow rate per °F)

Temperature effect on zero

Temperature effect on the mass flow zero-point quality can be corrected by zeroing at the process fluid temperature.

Process conditions

Process fluid temperature range

| Process fluid temperature range | Nominal temperature | Design versions |
|--------------------------------------|---------------------|--|
| -50 ... +150 °C (-58 ... +302 °F) | Standard | All process connections except DIN 32676 Class A and C hygienic clamps |
| -10 ... +140 °C (14 ... 284 °F) | Standard | For process connections DIN 32676 Class A and C hygienic clamps |
| -50 ... +260 °C (-58 ... +302 °F) | Medium | Only selectable for remote transmitters with long neck sensor: selections D, F, and H in position 14 of the order code |

Operating pressure

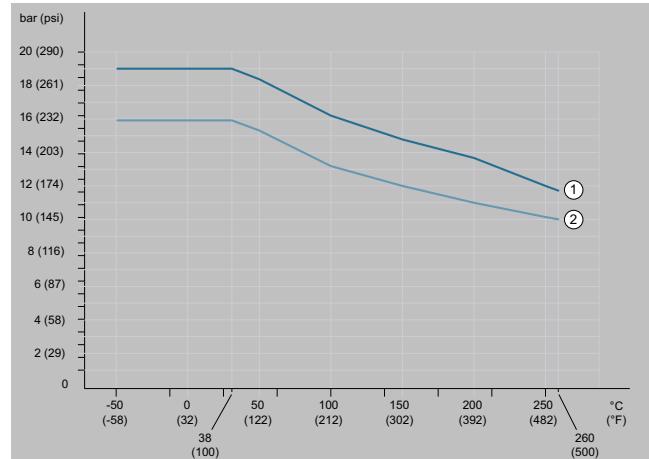

The maximum allowed process pressure depends on the selected process connection and process temperature.

The given process temperature and process pressure ranges are calculated and approved without corrosion or erosion effects.

The following diagrams show the process pressure as a function of process temperature as well as the process connection used (type and size of process connection).

Calculations for ASME flanges are based on ASME B16.5 Material group 2.2 (316/316L dual certified).

ASME class 150

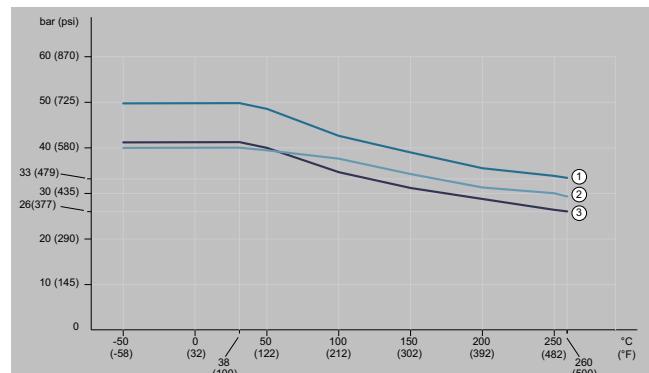

Allowed process pressure as a function of process connection temperature

1 Process connection compatible to ASME B16.5 class 150

2 Heat tracing connection compatible to ASME B16.5 class 150

ASME class 300, EN PN 40

Allowed process pressure as a function of process fluid temperature

1 Process connection compatible to ASME B16.5 class 300

2 Process and heat tracing connection compatible to EN 1092-1 PN 40

3 Heat tracing connection compatible to ASME B16.5 class 300

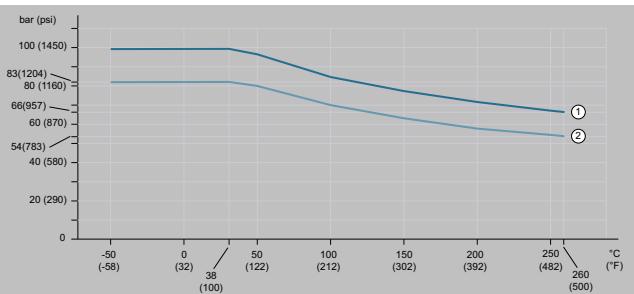

SITRANS FC (Coriolis) 2023

Flowmeter systems

SITRANS FC120/FC140

Technical specifications (continued)

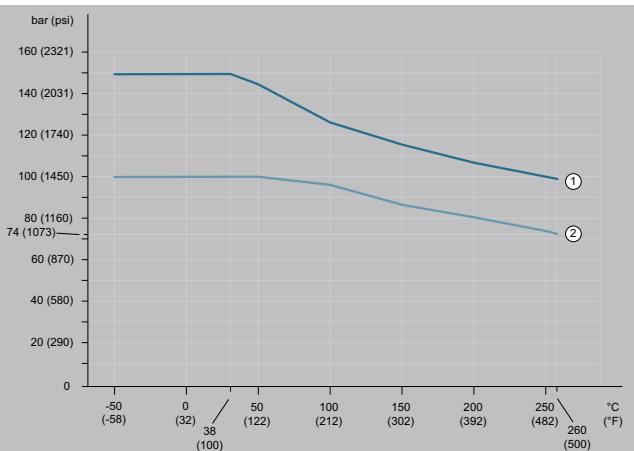

ASME class 600

Allowed process pressure as a function of process connection temperature

- 1 Process connection compatible to ASME B16.5 class 600
2 Not used for this product

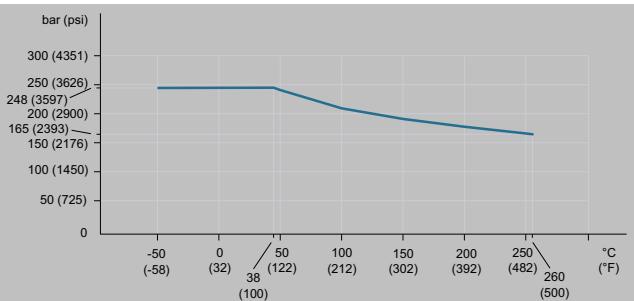

ASME class 900, EN PN100

Allowed process pressure as a function of process connection temperature

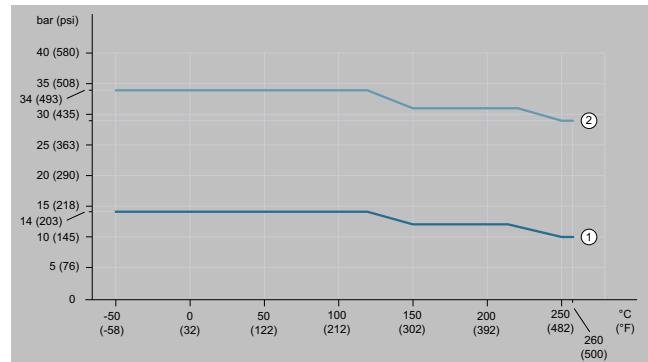

- 1 Process connection compatible to ASME B16.5 class 900
2 Process connection compatible to EN 1092-1 PN100

ASME class 1500 compatible to flange ASME B16.5

Allowed process pressure as a function of process connection temperature

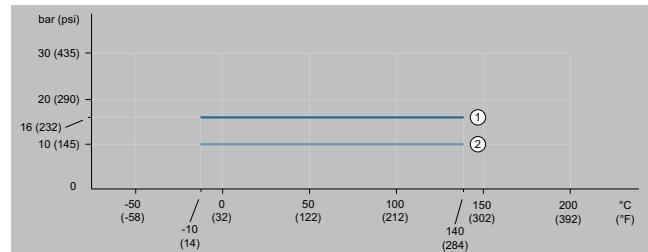

JIS 10K, JIS 20K

Allowed process pressure as a function of process connection temperature

- 1 Process connection compatible to JIS B 2220 10K
2 Process connection compatible to JIS B 2220 20K

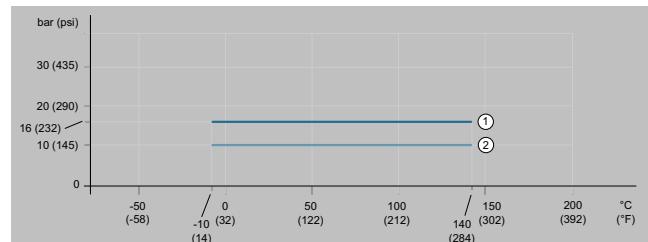

Clamp process connection according to DIN 32676 series A

Allowed process pressure as a function of process fluid temperature

- 1 Clamp connection compatible to DIN 32676 series A up to DN 50
2 Clamp connection compatible to DIN 32676 series A above DN 50

Clamp process connection according to DIN 32676 series C (Tri-Clamp)

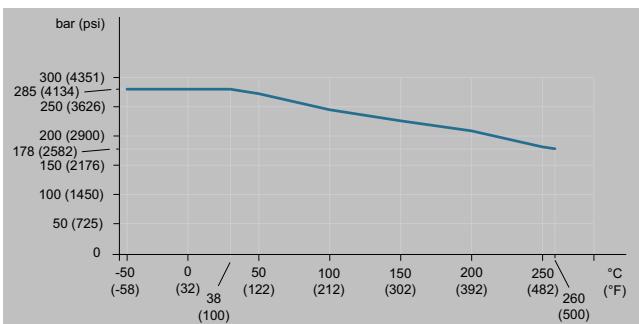

Allowed process pressure as a function of process fluid temperature

- 1 Clamp connection compatible to DIN 32676 series C up to 2"
2 Clamp connection compatible to DIN 32676 series C above 2"

Technical specifications (continued)

Process connection with internal thread G and NPT

Allowed process pressure as a function of process fluid temperature

Ambient conditions

Allowed ambient and storage temperature of SITRANS FC100 series is influenced by the temperature specification of FCS100 sensor, FCTOXO transmitter and the interconnecting cable.

Ambient temperature

Device-surrounding air temperature is considered as ambient temperature. If the device is operating outdoors make sure that the solar irradiation does not increase the surface temperature of the device higher than the allowed maximum ambient temperature. Transmitter display has limited legibility below -20 °C (-4 °F).

The sensor ambient temperature limits may also be influenced by the process fluid temperature, details shown in the chapter "Sensors" (Technical specifications).

Maximum ambient temperature ranges for FC100 series

| Cable type | Device | Ambient temperature range |
|----------------------|-------------|----------------------------------|
| Standard cable | Sensor | -50 ... +80 °C (-58 ... +176 °F) |
| | Transmitter | -40 ... +60 °C (-40 ... +140 °F) |
| Fire retardant cable | Sensor | -35 ... +80 °C (-31 ... +176 °F) |
| | Transmitter | -35 ... +60 °C (-31 ... +140 °F) |

Ambient temperature range for NTEP custody transfer approval

| Cable type | Device | Ambient temperature range |
|----------------------|-------------|----------------------------------|
| Standard cable | Sensor | -50 ... +80 °C (-58 ... +176 °F) |
| | Transmitter | -40 ... +50 °C (-40 ... +122 °F) |
| Fire retardant cable | Sensor | -35 ... +80 °C (-31 ... +176 °F) |
| | Transmitter | -35 ... +50 °C (-31 ... +122 °F) |

Maximum storage temperature ranges for FC100 series

| Cable type | Device | Ambient temperature range |
|----------------------|-------------|----------------------------------|
| Standard cable | Sensor | -50 ... +80 °C (-58 ... +176 °F) |
| | Transmitter | -40 ... +60 °C (-40 ... +140 °F) |
| Fire retardant cable | Sensor | -35 ... +80 °C (-31 ... +176 °F) |
| | Transmitter | -35 ... +60 °C (-31 ... +140 °F) |

Temperature specification of FC100 series Ex versions located in hazardous areas

Please select appropriate equipment in accordance with the laws and regulations of the relevant country/region, when it is used in a location where explosive atmospheres may be present.

The maximum ambient and process fluid temperatures depending on explosion groups and temperature classes can be determined via the SITRANS FC order code together with the Ex code (see the corresponding explosion proof type manual).

Note: The maximum process fluid temperature could be further restricted due to process connection type, refer to curves above under the heading "Allowed ambient temperature for FCS100 sensors".

SITRANS FC (Coriolis) 2023**Flowmeter systems****SITRANS FC120/FC140****Dimensional drawings (continued)***Drawings, dimensions and weight for FCT020 and FCT040 transmitters*

Dimensions of FCT020 or FCT040 transmitter in mm. Transmitter with display shown on the left. Transmitter without display shown on the right.

Dimensions L1 to L4 and H1 to H4 (material options: stainless steel, aluminum)

| Material | L1 in mm (inch) | L2 in mm (inch) | L3 in mm (inch) | L4 in mm (inch) | H1 in mm (inch) | H2 in mm (inch) | H3 in mm (inch) | H4 in mm (inch) |
|-----------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|
| Stainless steel | 255.5 (10.06) | 110.5 (4.35) | 69 (2.72) | 235 (9.25) | 201 (7.91) | 184 (7.24) | 24 (0.94) | 150.5 (5.93) |
| Aluminum | 241.5 (9.51) | 96.5 (3.8) | 70 (2.76) | 221 (8.7) | 192 (7.56) | 175 (6.89) | 23 (0.91) | 140 (5.51) |

Dimensional drawings (continued)

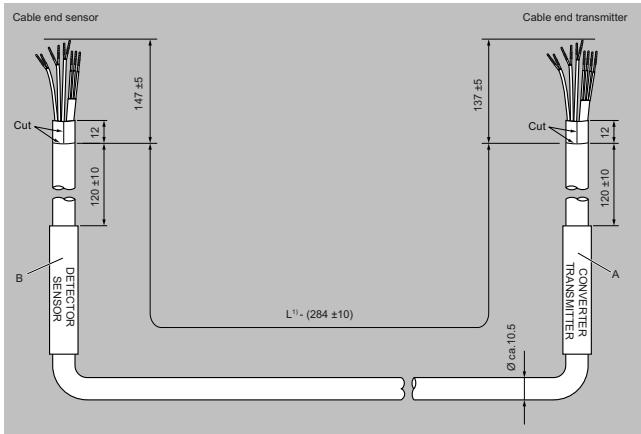

Dimensions of transmitter in mm, attached to mounting bracket.

Transmitter weights

| Design type | Transmitter enclosure material | Weight in kg (lb) |
|-------------|--------------------------------|-------------------|
| Remote | Cast aluminum | 4.2 (9.3) |
| | CF-8M stainless steel | 12.5 (27.6) |

Connecting cable dimensions and weights

Standard cable

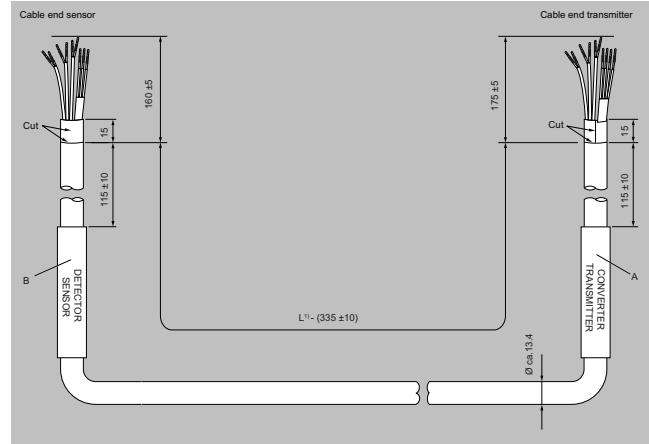

Dimensions in mm. Standard terminated cable. A and B are factory fitted labels.

| Option code | Cable length, L | Cable color |
|-------------|-----------------|-------------------------|
| L51 | 5 m (16.4 ft) | Non-Ex: gray / Ex: blue |
| L54 | 10 m (32.8 ft) | |
| L57 | 15 m (49.2 ft) | |
| L60 | 20 m (65.6 ft) | |
| L63 | 30 m (98.4 ft) | |

Weight of cable ≤ 0.200 kg/m (0.134 lb/ft)

Standard cable with steel armored option

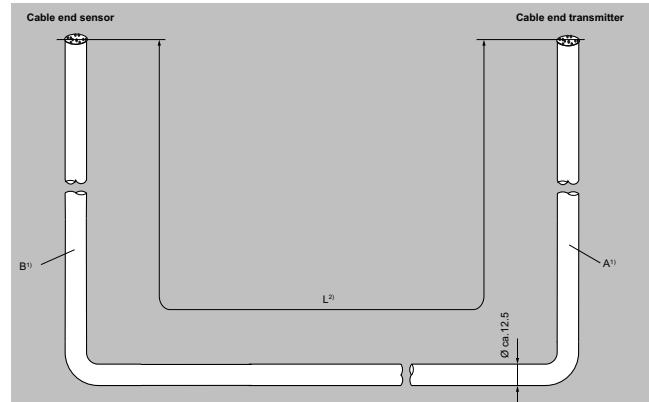

Dimensions in mm. Steel armored terminated cable. A and B are factory fitted labels.

| Option code | Cable length, L | Cable color |
|---------------|-----------------|-------------|
| L51 + A20/A21 | 5 m (16.4 ft) | Blue |
| L54 + A20/A21 | 10 m (32.8 ft) | |
| L57 + A20/A21 | 15 m (49.2 ft) | |
| L60 + A20/A21 | 20 m (65.6 ft) | |
| L63 + A20/A21 | 30 m (98.4 ft) | |

Weight of cable ≤ 0.300 kg/m (0.202 lb/ft)

Fire retardant cable

Dimensions in mm. Fire retardant unterminated cable. Labels A and B are supplied loose with termination kit.

| Option code | Cable length, L | Cable color |
|-------------|-----------------|-------------|
| L71 | 5 m (16.4 ft) | Gray |
| L74 | 10 m (32.8 ft) | |
| L77 | 15 m (49.2 ft) | |
| L80 | 20 m (65.6 ft) | |
| L83 | 30 m (98.4 ft) | |

Weight of cable ≤ 0.270 kg/m (0.181 lb/ft)
