

## Overview

The flowmeter systems of the SITRANS FC600 series are the resistant Coriolis multi-parameter flowmeter for extreme conditions.

The Coriolis flowmeters of this serie are rugged with superior performance under very tough operating conditions.

They are formed by one FCS600 sensor and one FCT transmitter:

- SITRANS FC620 is the combination of the FCS600 sensor and the FCT020 transmitter
- SITRANS FC640 is the combination of the FCS600 sensor and the FCT040 transmitter

Features:

- Resistant to high temperature up to 350 °C (662 °F)
- Resistant to high pressure up to 700 bar (10 153 psi) (gauge)
- Resistant to corrosive fluids
- Dual curved measuring tubes with optimum decoupling from external stresses and vibrations
- Wetted parts: stainless steel 316L or alloy 22
- Process connection: flange or thread
- Nominal sizes: DN 2, DN 4, DN 15, DN 25, DN 40, DN 65
- Connection sizes: DN 8 to DN 125 (¾" to 5")
- Nominal flow: 45 to 100 000 kg/h (99 to 220 462 lb/h)
- FCS600 sensors can be combined with compact or remote transmitters
- Thick measuring tubes and optional alloy 22 wetted parts for long-term durability
- Superior aeration handling and advanced diagnostic functionality

Note: FC600 sizes DN 2 and DN 4 are only available with standard neck and remote transmitter

FC620/640 Coriolis flowmeter

# SITRANS FC (Coriolis) 2023

## Flowmeter systems

### SITRANS FC620/FC640

#### Benefits

##### *Product features aligned to user value targets*

	User value targets	SITRANS FC features and solutions
Engineering and project management	<ul style="list-style-type: none"> <li>Reduce engineering investment</li> <li>Cut specification effort</li> <li>Minimize project expenditure</li> <li>Decrease the spending on each measurement point</li> <li>Eliminate function duplication</li> <li>Reduce number of suppliers</li> </ul>	<ul style="list-style-type: none"> <li>Siemens project teams offer complimentary evaluation of customer specifications, provided by regional and HQ experts</li> <li>Simple product selection using intuitive sizing software</li> <li>One SITRANS FC device can typically provide three to six individual measurements, all transmitted via digital communication, when planned during pre-project design</li> <li>Added value functions: batch control, viscosity, thermal energy, concentration measurement (Fraction) of two component solutions and pressure compensation</li> </ul>
Installation	<ul style="list-style-type: none"> <li>Reduce footprint and transport outlay of OEM machinery</li> <li>Lower installation complexity</li> <li>Avoid costly modifications of existing plant</li> </ul>	<ul style="list-style-type: none"> <li>Can be installed in horizontal or vertical (self-draining) pipes</li> <li>Twin tube bend design delivers strong signal to noise characteristic resistant to external influence, so install in tight spaces with no inlet and outlet restrictions</li> <li>Adaptable to existing pipes: typically, three or four connection sizes for each sensor size</li> <li>Flexible selection of traditional inputs, outputs, and digital communications</li> </ul>
Configuration and commissioning	<ul style="list-style-type: none"> <li>Shorter commissioning schedules with lower costs</li> <li>Faster start-up with reduced outgoings</li> </ul>	<ul style="list-style-type: none"> <li>Easy setup wizard delivers working meters straight after start-up</li> <li>microSD card stores sensor calibration data and default setup</li> <li>Simple configuration using Process Device Manager (PDM)</li> <li>Siemens device-specific faceplates simplify operation in plantwide control systems</li> </ul>
Efficient plant operation	<ul style="list-style-type: none"> <li>Improve finished product consistency to reduce waste</li> <li>Keep process performance when scaling production up or down</li> <li>Optimize process control</li> <li>Improve finished product quality enabling higher levels of profit</li> <li>Reduce downtime with fast resolution of process upsets</li> <li>Improve asset performance</li> </ul>	<ul style="list-style-type: none"> <li>SITRANS FC meters are calibrated in rigs accredited to EN/ISO 17025 to ensure consistently high performance of flow, density and concentration measurements</li> <li>First-class zero-point quality maintains high accuracy into the low flow region</li> <li>High sensitivity and intelligent dynamic range keeps the measurement active in demanding high fluid damping cases</li> <li>Designed-in resilience to process extremes</li> <li>Self-verification alerts to potential performance issues due to unplanned process events, for example gas or vapor breakout or solid deposits building up in the tubes</li> <li>Diagnostic data via local menu or PDM is backed by Siemens applications experts</li> <li>Intelligent Siemens SITRANS IQ apps for continuing asset evaluation</li> </ul>
Maintenance and asset management	<ul style="list-style-type: none"> <li>Optimize technician training</li> <li>Reduce cost of spare parts</li> <li>Increase predictive maintenance</li> <li>Reduce production downtime and associated costs</li> <li>Decrease unplanned maintenance</li> <li>Maximize asset value</li> </ul>	<ul style="list-style-type: none"> <li>Simple product design with interchangeable modular parts</li> <li>microSD card loads sensor-specific data to deliver fast service exchange</li> <li>Self-verification: tube health check monitors key diagnostics, including tube stiffness, driver and pickups; the user defines verification frequency and alarm behavior</li> <li>Verification results indicate whether preventive maintenance action is required</li> <li>Siemens SIMATIC Maintenance Station uses cyclical acquisition to provide life cycle reports and intelligent preventive maintenance strategies</li> </ul>
Industry compliance	<ul style="list-style-type: none"> <li>Cut effort required to comply with Industry-specific demands</li> <li>Reduce resource needed to maintain regulatory compliance</li> </ul>	<ul style="list-style-type: none"> <li>Food and beverage sector covered with EHEDG and 3-A approvals, polished tubes</li> <li>Global hazardous area approvals for international plant duplications</li> <li>Common and emerging digital networks covered: HART, PROFIBUS PA, PROFINET</li> <li>Class-leading safety: SIL2/SIL3, secondary containment, PED, NAMUR NE95</li> </ul>

**Application****Application examples for SITRANS FC multi-parameter meters across diverse industry sectors****Chemical and petrochemical**

Bulk chemicals  
Industrial gases  
Polymers  
Agrochemicals  
Fine chemicals  
Aroma chemicals

- Transfer, loading and unloading of bulk chemicals
- Concentration control of acids and alkalis (process optimization)
- Accurate mass or volume flow of feed chemicals to in-line blending systems
- Accurate mass flow and density (quality) of reactor fluid feeds catalyst
- Chemical recovery
- Mass balance optimization
- Compressed and cryogenic gases
- Lubricating oil blending and dosing
- High accuracy measurement of critical fluid components
- Low flow control in pilot plants and R&D facilities

**Food and beverage**

Food processing  
Dairies  
Breweries  
Distilleries  
Confectionary  
Soft drinks  
Animal feed plants  
OEM

- Accurate bulk transfer (mass or volume) of all dairy products: milk, cream, whey and yoghurt
- Fat concentration in cream
- Flow, density, temperature and concentration (Plato) during all fermentation processes
- Flow, density, temperature and sugar concentration (Brix) in soft drink processing
- Distilled spirits – % alcohol by volume (ABV), liters of pure alcohol, volume transfer, blending, batch and column still optimization and energy management, cask filling, tanker loading
- Flow and density of fruit juices and pulps
- Mixing and inventory control of confectionary ingredients, e.g. chocolate, syrup, oils, flavors
- Metering pump control
- Oils, fat enzymes dosing in animal feed plants
- CO<sub>2</sub> dosing
- CIP liquids
- Bottling of beer, spirits, wine, soft drinks, etc.
- Bulk sugar processing – molasses, sugar slurries, density, Brix of finished product

**Oil and gas**

Offshore/onshore  
Upstream/downstream  
Pipelines  
Distribution networks  
Refineries  
Skid manufacturers

- Loading/unloading of hydrocarbons (e.g. crude oil, bitumen) from/to ship, road tanker, rail car
- High pressure chemical injection
- High pressure low flow gas
- Net oil computing
- Gas void fraction
- Filling of gas bottles
- Furnace control
- Test separators
- LPG, natural gas hydration
- Well-head water-cut monitoring
- All hydrocarbon fluids in refineries
- Metrology, custody transfer
- Drilling mud
- Oil well cementing and hydrofracturing

**Application (continued)****Application examples for SITRANS FC multi-parameter meters across diverse industry sectors****Life sciences**

Pharmaceutical  
Bio

- High accuracy flow and batching of bioreactor feeds
- Solvent flow rate, density and batching
- Flow of demineralized and deionized water
- Solvents and fish oils used in high grade omega 3 oils
- Precision coatings
- Vacuum thin film coating

**Household and personal care**

Detergents  
Cosmetics

- Blending and batching of detergent ingredients
- Tanker loading and unloading
- Salt concentration
- Reliable measurement of aerated liquids

**Automotive and aeronautical**

Vehicle manufacturing  
Paint  
Engine testing  
OEM

- Fuel injection nozzle and pump testing
- Filling of under bonnet fluid reservoirs, air conditioning, coolant
- Fuel flow and density measurement in engine test beds
- Checking for air in oil using high accuracy density measurement
- Paint spray robots – requires accurate and fast measurements
- Aircraft fuel loading (kerosene)
- High pressure flow used in turbine blade manufacture

**Power and energy**

Renewable  
Hydrogen

- Boiler fuel flow and burner control
- Turbine fuel flow
- Glycol flow and concentration
- Bioethanol

**Marine**

OEM  
Shipbuilders

- Fuel consumption management
- Boiler control
- Bunkering management
- Density used to indicate fuel quality

**Pulp, paper and textiles****Water and environmental**

- Accurate dosing of dyes and chemicals
- Dosing of chemicals for water treatment
- Chemical concentration for water quality control

## Flowmeter systems

### SITRANS FC620/FC640

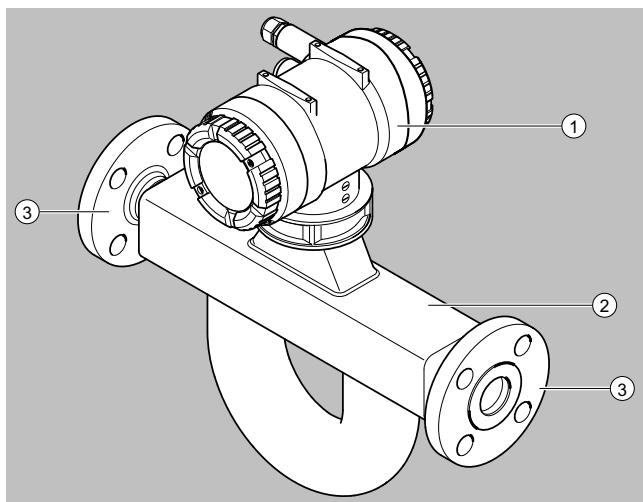

#### Design

##### Design options and related temperature range for FC600 series

Design version	Transmitter	Process fluid temperature range
Compact, standard neck	Aluminum	Standard [-50 ... +150 °C (-58 ... +302 °F)]
Compact, standard neck, hygienic clamps	Aluminum	Standard [-10 ... +140 °C (-14 ... +284 °F)]
Remote, standard neck or long neck	Aluminum or stainless steel	Standard [-70 ... +150 °C (-94 ... +302 °F)]
Remote, standard neck or long neck, hygienic clamps	Aluminum or stainless steel	Standard [-10 ... +140 °C (-14 ... +284 °F)]
Remote only, long neck only	Aluminum or stainless steel	Low [-196 ... +150 °C (-321 ... +302 °F)] Medium [-70 ... +230 °C (-94 ... +446 °F)] High [0 ... 350 °C (32 ... 662 °F)]

FCS600 in sizes DN 2 and DN 4 only available with:

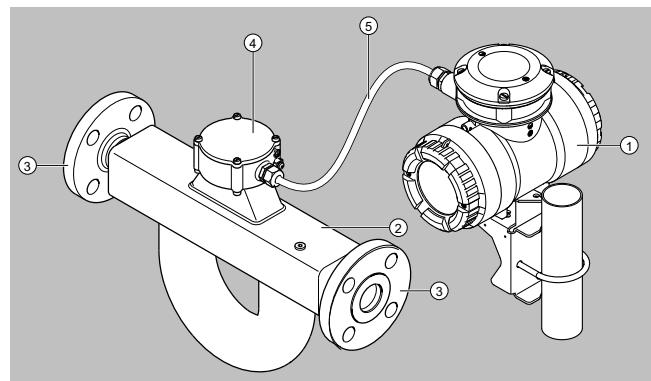

- High pressure autoclave adaptors
- Standard temperature range
- Standard sensor neck (pedestal)
- Remote mounted transmitters

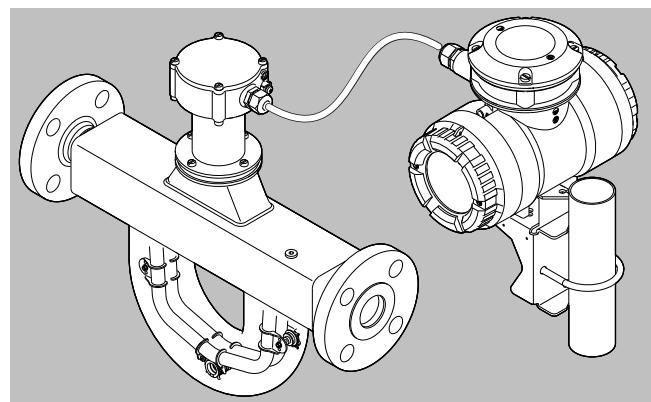

FCS600 sensor with compact, close mounted transmitter. Only sizes DN 15, DN 25, DN 40, and DN 65.

1	Transmitter
2	FCS600 sensor
3	Process connection

#### Design (continued)

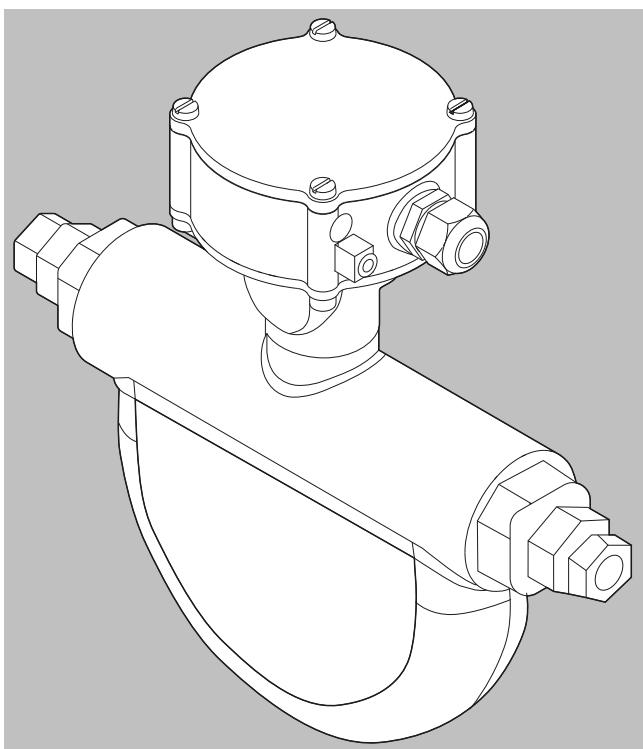

FCS600 sensor with remote transmitter, standard sensor neck

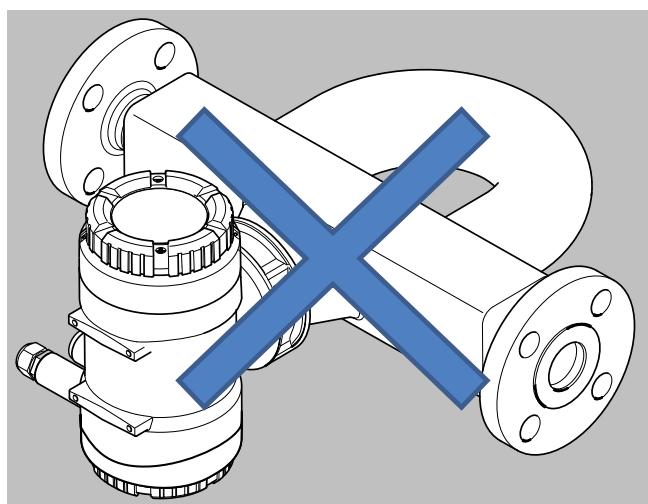

FCS600 sensor with remote transmitter, long sensor neck

1	Transmitter
2	FCS600 sensor
3	Process connection
4	Sensor terminal box
5	Connecting cable

**Design (continued)**

FCS600 sensors (remote transmitter only) in sizes DN 2 and DN 4 standard neck

**Design (continued)**

Avoid measuring tubes in sideways position resulting in possible non-homogeneous fluid separation

**Installation guidelines**

FCS600 series flowmeters can be mounted horizontally, vertically and at an incline. The measuring tubes should be filled with the fluid during flow measurement as entrained gas may result in errors in measurement. Straight pipe runs at inlet or outlet are usually not required.

Avoid the following installation locations and positions:

- Measuring tubes as highest point in piping when measuring liquids
- Measuring tubes as lowest point in piping when measuring gases
- Immediately in front of a free pipe outlet in a downpipe
- Lateral positions

# SITRANS FC (Coriolis) 2023

## Flowmeter systems

### SITRANS FC620/FC640

#### Function

##### **Compatible fluids**

FC600 series flowmeters can be used to measure the following liquids:

- Liquids
- Gases
- Mixtures, solutions, emulsions, suspensions and slurries

##### **Primary measured variables**

- Mass flow
- Density
- Temperature

*Based on the primary measured quantities, the transmitter also calculates*

- Volume flow
- Percent concentration (fraction) of a two-component mixture (FCT040 only)
- Partial component flow rate (net flow) of a mixture consisting of two components (FCT040 only)

##### **Bi-directional operation**

The mass flow, volume flow, and net flow measurements can be bi-directional.

##### **Measurement variables for NTEP approval**

- Mass flow uni-directional
- Volume flow uni-directional

#### **Feature overview**

- Designed to meet the highest safety requirements when operating at high pressures
- Temperatures from -196 °C (-321 °F), for cryogenic fluids, up to +350 °C (+662 °F)
- Insulation and heat tracing options for viscous and molten liquids
- Gas Void Fraction and Net Oil Computing functions combine to deliver in multi-phase applications
- Dynamic pressure compensation for accurate measurement under changing process pressure
- Accurate density measurement and up to four advanced concentration measurement data sets

**Selection and ordering data**

## Technical specifications

### Mass flow rate of liquids

The mass flow rate characteristics of SITRANS FC meters are defined by the values of zero stability,  $Q_{\text{flat}}$ ,  $Q_{\text{nom}}$  and  $Q_{\text{max}}$ .

Zero stability is the maximum allowable flow rate value that can be displayed at zero flow under reference conditions. It is a good indicator of the meter performance as flow rates reduce and approach zero.

- $Q_{\text{flat}}$  is the mass flow rate above which the base accuracy is maintained (0.1% when using FCT040 transmitters).

- $Q_{\text{nom}}$  is the nominal mass flow rate of water at reference conditions that would result in a pressure drop of 1 bar (15 psi).

- $Q_{\text{max}}$  is the recommended maximum mass flow rate for each sensor size.

For questions regarding expected performance in specific applications, please contact your regional Siemens Measurement Intelligence team.

### Flow rate summary by FCS600 sensor size

Nominal size	Zero stability kg/h	Q flat kg/h	Q nom kg/h	Q max kg/h
	Ib/h	Ib/min	Ib/min	Ib/min
DN 2	0.005	0.011	4.00	0.147
DN 4	0.018	0.040	14.0	0.514
DN 15	0.150	0.330	250	9.18
DN 25	0.500	1.10	830	30.5
DN 40	1.60	3.52	2 670	98.0
DN 65	5.00	11.0	8 330	306

### Performance summary by FCS600 sensor size and transmitter type

Sensor size	DN 2	DN 4	DN 15	DN 25	DN 40	DN 65
<b>Mass flow (liquids)</b>						
Accuracy % (of rate)	FCT020	± 0.2	± 0.2	± 0.2	± 0.2	± 0.2
% (of rate)	FCT040	± 0.1	± 0.1	± 0.1	± 0.1	± 0.1
Zero stability kg/h (lb/h)		± 0.005 (0.011)	± 0.018 (0.44)	± 0.15 (0.33)	± 0.5 (1.1)	± 1.6 (3.52)
<b>Density (liquids)</b>						
Accuracy kg/m³ (lb/ft³)	FCT020	± 8 (0.5)	± 4 (0.25)	± 4 (0.25)	± 4 (0.25)	± 4 (0.25)
kg/m³ (lb/ft³)	FCT040	± 8 (0.5)	± 1 (0.06)	± 0.5 (0.03)	± 0.5 (0.03)	± 0.5 (0.03)
<b>Mass flow (gases)</b>						
Accuracy % (of rate)	FCT020	± 0.75	± 0.75	± 0.75	± 0.75	± 0.75
% (of rate)	FCT040	± 0.5	± 0.5	± 0.35	± 0.35	± 0.35
<b>Temperature</b>						
Accuracy °C (°F)		± 0.5 (0.9)	± 0.5 (0.9)	± 0.5 (0.9)	± 0.5 (0.9)	± 0.5 (0.9)

### Note:

The accuracy values in the table above are based on reference conditions at the time of calibration and represent the combined measurement uncertainties including sensor, electronic and pulse output interface.

Liquid density calibration is performed when density accuracy of 0.5 kg/m³ (0.03 lb/ft³) is selected in the model code.

### Mass flow calibration and density adjustment for liquids

Siemens SITRANS FC Coriolis meters are calibrated in rigs accredited according to the international standard EN ISO/IEC 17025:2018. Each flowmeter comes with a standard calibration certificate.

Mass flow calibration takes place at reference conditions. Specific values are listed in the standard calibration certificate.

### Mass flow calibration reference conditions

Fluid	Water
Density	900 ... 1 100 kg/m³ (56 ... 69 lb/ft³)
Fluid temperature	10 ... 35 °C (50 ... 95 °F), average temperature: 22.5 °C (72.5 °F)
Ambient temperature	10 ... 35 °C (50 ... 95 °F)
Process pressure	1 ... 5 bar (15 ... 73 psi)

# SITRANS FC (Coriolis) 2023

## Flowmeter systems

### SITRANS FC620/FC640

#### Technical specifications (continued)

##### Density calibration reference conditions

Flow condition	Fully developed flow profile
Fluid densities used to obtain density calibration constants	700 kg/m <sup>3</sup> (44 lb/ft <sup>3</sup> ) 1 000 kg/m <sup>3</sup> (62 lb/ft <sup>3</sup> ) 1 650 kg/m <sup>3</sup> (103 lb/ft <sup>3</sup> )
Fluid temperature	20 °C (68 °F)
Determination of temperature compensation coefficients	20 ... 80 °C (68 ... 176 °F)

##### Analog output performance specification

Typical additional uncertainty when using the analog current output:

Sensor size	Sensor wetted parts	Additional flow measurement errors due to change in operating pressure from reference pressure	
		in % of rate per 1 bar variation	in % of rate per 1 psi variation
DN 2	Alloy 22 / AISI 316L stainless steel	-0.0001	-0.000007
DN 4	Alloy 22 / AISI 316L stainless steel	-0.0001	-0.000007
DN 15	AISI 316L stainless steel or alloy 22	-0.0005	-0.00003
DN 25	AISI 316L stainless steel	-0.0024	-0.00017
	Alloy 22	-0.0023	-0.00016
DN 40	AISI 316L stainless steel	-0.0034	-0.00023
	Alloy 22	-0.0035	-0.00024
DN 65	AISI 316L stainless steel	-0.0084	-0.00058
	Alloy 22	-0.0074	-0.00051

##### Process temperature effect

For mass flow measurement, process fluid temperature effect is defined as the change in sensor flow accuracy due to process fluid temperature change, away from the 20 °C (68 °F) reference condition. Variation in process temperature influences the measuring tube characteristics and this is compensated for using the built-in PT 1000 temperature sensor.

A small flow uncertainty remains in the compensation circuit defined below.

Uncertainty due to process temperature change: ± 0.001% of mass flow rate per °C (± 0.0006% of mass flow rate per °F)

##### Temperature effect on zero

Temperature effect on the mass flow zero-point quality can be corrected by zeroing at the process fluid temperature.

##### Process conditions

###### Process fluid temperature range

Note: Some design combinations may not be available in all sizes.

Design version	Transmitter	Process fluid temperature range
Compact, standard neck	Aluminum	Standard [-50 ... +50 °C (-58 ... +302 °F)]
Compact, standard neck, hygienic clamps	Aluminum	Standard [-10 ... +140 °C (-14 ... +284 °F)]
Remote, standard neck or long neck	Aluminum or stainless steel	Standard [-70 ... +150 °C (-94 ... +302 °F)]
Remote, standard neck or long neck, hygienic clamps		Standard [-10 ... +140 °C (-14 ... +284 °F)]
Remote only, long neck only	Aluminum or stainless steel	Low [-196 ... +150 °C (-321 ... +302 °F)]
Remote only, long neck only		Medium [-70 ... +230 °C (-94 ... +446 °F)]
Remote only, long neck only		High [0 ... 350 °C (32 ... 662 °F)]

± 0.04% at a nominal mid-range current output of 12 mA, which includes the effects of: output adjustment, linearity, power supply variation, load resistance variation, short-term and long-term drift for one year and ambient temperature effect on the transmitter in the range 20 °C ± 30 °C (14 ... 122 °F).

##### Process pressure effect on flow measurement performance

Changes in operating pressure have a small effect on the mass flow measurement performance. When the pressure changes are very large this effect can be corrected by a dynamic pressure input or a fixed process pressure.

##### Operating pressure

The maximum allowed process pressure depends on the selected process connection and process temperature.

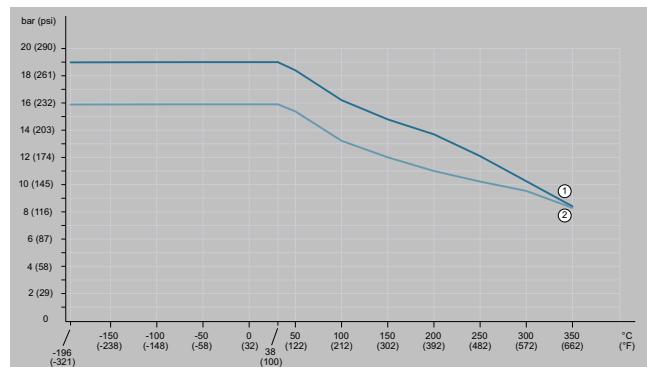

The given process temperature and process pressure ranges are calculated and approved without corrosion or erosion effects.

##### Pressure versus temperature relationship depending on selected process connection

The following diagrams show the process pressure as a function of process temperature as well as the process connection used (type and size of process connection).

Calculations for ASME flanges are based on ASME B16.5 Material group 2.2 (316/316L dual certified).

##### ASME class 150

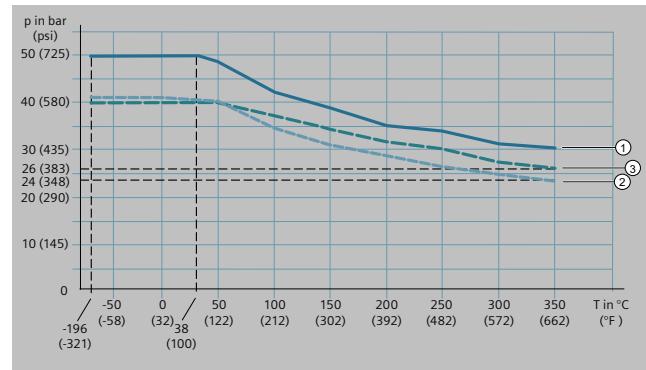

Allowed process pressure as a function of process fluid temperature

1 Process connection compatible to ASME B16.5 class 150

2 Heat tracing connection compatible to ASME B16.5 class 150

## Technical specifications (continued)

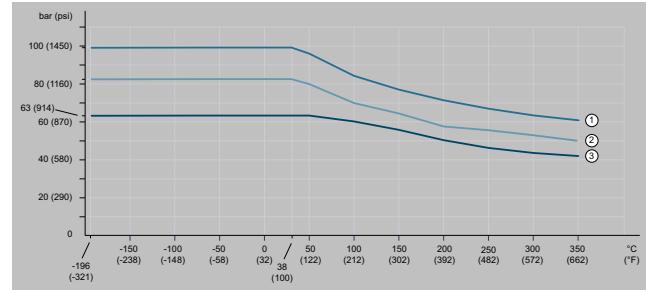

### ASME class 300, EN PN 40

Allowed process pressure as a function of process fluid temperature

- 1 Process connection compatible to ASME B16.5 class 300
- 2 Process and heat tracing connection compatible to EN 1092-1 PN 40
- 3 Process and heat tracing connection for ASME B16.5 class 300

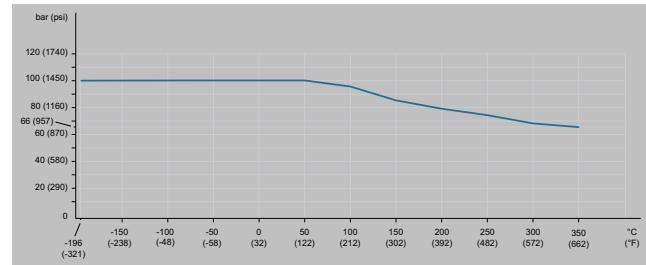

### ASME class 600, EN PN63

Allowed process pressure as a function of process fluid temperature

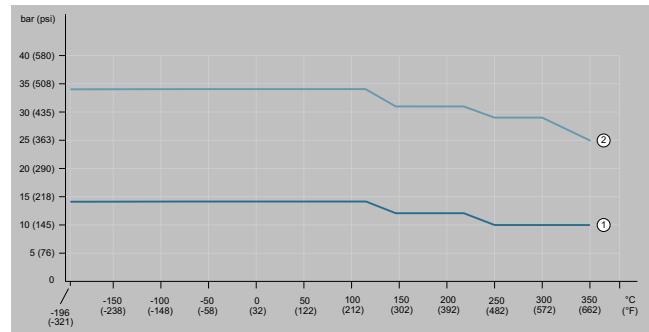

- 1 Process connection compatible to ASME B16.5 class 600
- 2 Not used for this product
- 3 Process connection compatible to EN 1092-1 PN 63

### EN PN 100

Allowed process pressure as a function of process fluid temperature, compatible to EN 1092-1 PN 100

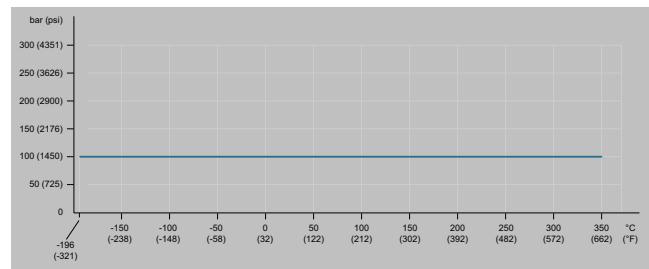

### JIS 10K, JIS 20K

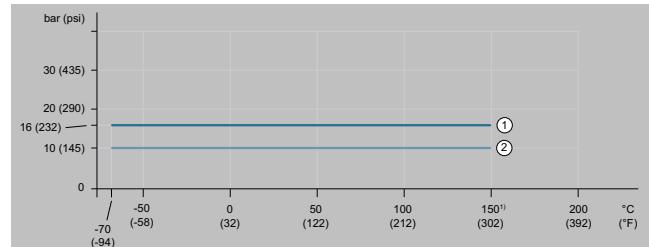

Allowed process pressure as a function of process connection temperature

- 1 Process connection compatible to JIS B 2220 10K
- 2 Process connection compatible to JIS B 2220 20K

### Process connection with internal thread G and NPT (standard pressure)

### Clamp process connection according to JIS/ISO 2852

Allowed process pressure as a function of process connection temperature

- 1 Clamp connection for JIS/ISO 2852 up to 2"
- 2 Clamp connection for JIS/ISO 2852 above 2"

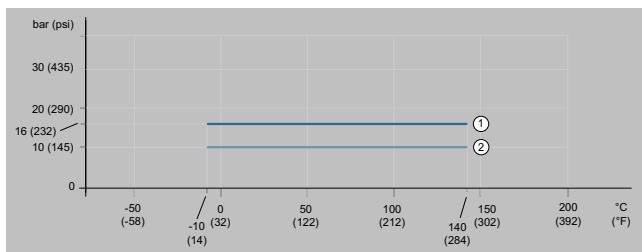

# SITRANS FC (Coriolis) 2023

## Flowmeter systems

### SITRANS FC620/FC640

#### Technical specifications (continued)

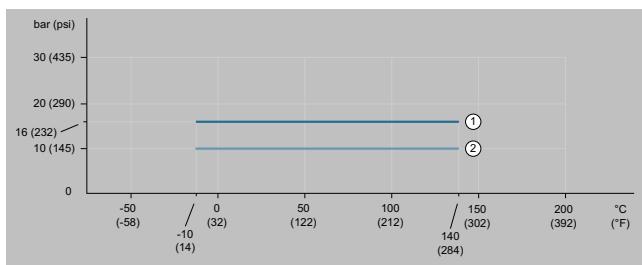

##### Clamp process connection according to DIN 32676 series A

Allowed process pressure as a function of process fluid temperature

- 1 Clamp connection compatible to DIN 32676 series A up to DN 50
- 2 Clamp connection compatible to DIN 32676 series A above DN 50

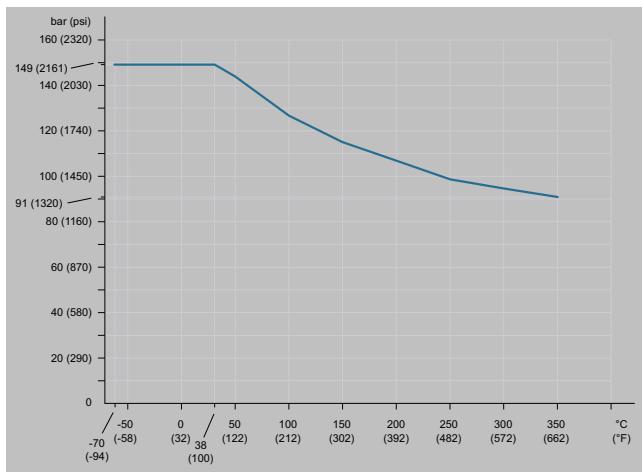

##### Clamp process connection according to DIN 32676 series C (Tri-Clamp)

Allowed process pressure as a function of process fluid temperature

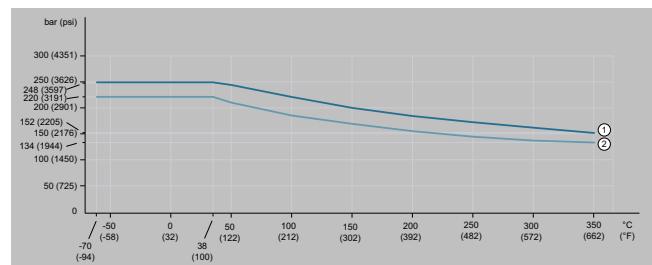

- 1 Clamp connection compatible to DIN 32676 series C up to 2"
- 2 Clamp connection compatible to DIN 32676 series C above 2"

##### ASME class 900

Allowed process pressure as a function of process fluid temperature, compatible to ASME B16.5 class 900

##### ASME class 1500

Allowed process pressure as a function of process connection temperature

##### 1 Process connection compatible to ASME B16.5 class 1500:

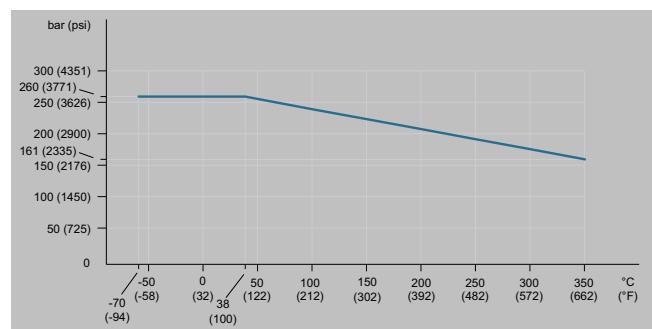

- With alloy 22 wetted parts (without ASME compliance)
- With 316L wetted parts in size DN 15 (without ASME compliance)
- With alloy 22 wetted parts in size DN 15 (requires option code C70, compliant with ASME B31.3 normal fluid service)

##### 2 Process connection compatible to ASME B16.5 class 1500:

- With 316L wetted parts in size DN 25 (without ASME compliance)
- With 316L wetted parts in size DN 15 (requires option code C70, compliant with ASME B31.3 normal fluid service)
- With alloy 22 wetted parts in size DN 25 (requires option code C70, compliant with ASME B31.3 normal fluid service)

##### Process connection with internal thread G and NPT (high pressure)

Note: Only available with FCS600 size DN 15 with 316L wetted parts

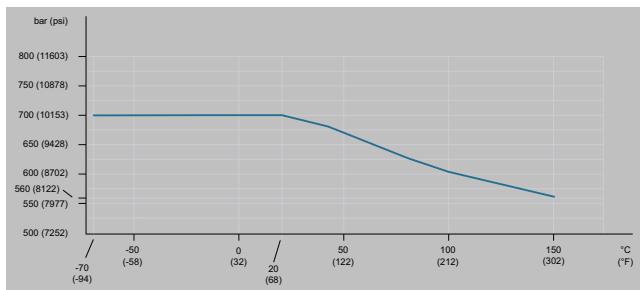

Allowed process pressure as a function of process connection temperature

##### Process connection compatible to medium pressure autoclave

Note: Only available with FCS600 sizes DN 2 and DN 4

## Technical specifications (continued)

Allowed process pressure as a function of process connection temperature

### Rupture disc

The rupture disc is located on the sensor housing. It is available with some FC600 specification combinations (selectable using order option code S32).

Its bursting pressure is 20 bar (291 psi), the nominal diameter is 8 mm (0.315 in.). In the case of larger nominal diameters and high pressures, the entire process pressure may not be released across the

rupture disc. In such case it is possible to request a customized design from your local Siemens sales organization.

In the event of a burst pipe, the rupture disc provides an acoustic signal in applications with gases.

### Ambient conditions

Allowed ambient and storage temperature of SITRANS FC600 series is influenced by the temperature specification of FCS600 sensor, FCTOXO transmitter and the interconnecting cable.

### Ambient temperature

Device surrounding air temperature is considered as ambient temperature. If the device is operating outdoors make sure that the solar irradiation does not increase the surface temperature of the device higher than the allowed maximum ambient temperature. Transmitter display has limited legibility below -20 °C (-4 °F).

The sensor ambient temperature limits may also be influenced by the process fluid temperature, details shown in the chapter "Sensors" (Technical specifications).

### Maximum ambient temperature ranges for FC600 series

Cable type	Transmitter style	Device	Ambient temperature range
None	Compact	Sensor and transmitter	-40 ... +60 °C (-40 ... +140 °F)
Standard cable	Remote	Sensor	-50 ... +80 °C (-58 ... +176 °F)
Fire retardant cable	Remote	Transmitter	-40 ... +60 °C (-40 ... 140 °F)
		Sensor	-35 ... +80 °C (-31 ... +176 °F)
		Transmitter	-35 ... +60 °C (-31 ... +140 °F)

### Ambient temperature range for NTEP custody transfer approval

Cable type	Transmitter style	Device	Ambient temperature range
None	Compact	Sensor and transmitter	-40 ... +50 °C (-40 ... +122 °F)
Standard cable	Remote	Sensor	-50 ... +80 °C (-58 ... +176 °F)
Fire retardant cable	Remote	Transmitter	-40 ... +50 °C (-40 ... +122 °F)
		Sensor	-35 ... +80 °C (-31 ... +176 °F)
		Transmitter	-35 ... +50 °C (-31 ... +122 °F)

### Maximum storage temperature ranges for FC600 series

Cable type	Transmitter style	Device	Storage temperature range
None	Compact	Sensor and transmitter	-40 ... +60 °C (-40 ... +140 °F)
Standard cable	Remote	Sensor	-50 ... +80 °C (-58 ... +176 °F)
Fire retardant cable	Remote	Transmitter	-40 ... +60 °C (-40 ... +140 °F)
		Sensor	-35 ... +80 °C (-31 ... +176 °F)
		Transmitter	-35 ... +60 °C (-31 ... +140 °F)

### Temperature specification of FC600 series Ex versions located in hazardous areas

Please select appropriate equipment in accordance with the laws and regulations of the relevant country/region when it is used in a location where explosive atmospheres may be present.

The maximum ambient and process fluid temperatures depending on explosion groups and temperature classes can be determined via the SITRANS FC order code together with the Ex code (see the corresponding explosion proof type manual).

Note: The maximum process fluid temperature could be further restricted due to process connection type, refer to curves above under the heading "Allowed ambient temperature for FCS600 sensors".

### FCS600 nominal sizes DN 2 and DN 4, remote transmitter

#### Overall length L1 and weight

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the compact type: up to 3.2 kg (7.1 lb).

#### L1 dimension and weight with process connections according to ASME B16.5, AISI 316L wetted parts

Process connection size and type	FCS600 sensor nominal size							
	DN 15 L1 in mm (inch)	Weight in kg (lb)	DN 25 L1 in mm (inch)	Weight in kg (lb)	DN 40 L1 in mm (inch)	Weight in kg (lb)	DN 65 L1 in mm (inch)	Weight in kg (lb)
ASME ½" class 150, raised face (RF)	370 (14.6)	10 (22)	n/a	n/a	n/a	n/a	n/a	n/a

**Overall length L1 and weight**

The overall length of the sensor depends on the selected process connection (type and size). The following tables list the overall length and weight as functions of the individual process connection.

The weights in the tables are for the remote type. Additional weight for the compact type: up to 3.2 kg (7.1 lb).

**Dimensional drawings (continued)****L1 dimension and weight for medium pressure autoclave process connections**

Wetted parts AISI 316L stainless steel and alloy 22
