### p6397 Motor module phase shift second system / MM ph_sh 2nd sys

**VECTOR_G**
- **Can be changed:** T
- **Data type:** Integer16
- **P-Group:** Converter
- **Min:** 0
- **Value:**
  - 0: Shift by +30 °
  - 1: Shift by -30 °
  - 2: Shift by 0 °
- **Dependency:** Refer to: p7003
- **Notice:**
  - The parameter is only evaluated if p7003 = 2.
  - For p6397 = 0 the following applies: The second systems leads for a positive direction of rotation.
  - For p6397 = 1 the following applies: The second systems lags for a positive direction of rotation.

### r7000 Par_circuit No. of active power units / Qty active PU

**B_INF (Parallel), VECTOR_G (Parallel)**

</tr>
</tbody>
</table>
### Description:
Displays the maximum absolute deviation of the measured current actual values of phase W from the average value as peak value.

Dependency:
Refer to: r7022, r7025, r7026

### Dependency:
Refer to: A05052

### Description:
Displays the deviation of the measured DC link voltage from the average value.
The maximum deviation from the average value is displayed in r7031.

Dependency:
Refer to: r7030

### Description:
Sets the operating mode of the circulating current control.
The circulating current control ensures symmetrical distribution of the total currents to the individual converters.

Value:
0: Circulating current control de-activated
1: Circulating current control activated

Dependency:
Circulating current control is not possible for separate, offset motor winding systems (p7003 = 2).
### p7036[0...n] Par_circuit circulating current control proportional gain / Circ_I Kp

**VECTOR_G (Parallel)**

- **Can be changed:** U, T
- **Data type:** FloatingPoint32
- **P-Group:** Modulation
- **Not for motor type:** -
- **Min:** 0.00000 [ohm]
- **Max:** 200.00000 [ohm]
- **Factory setting:** 0.00000 [ohm]

**Description:**
Sets the proportional gain for the circulating current controller.
The parameter is pre-set to the cable resistance.

**Dependency:**
Refer to: p0115

- **Access level:** 3
- **Func. diagram:** -
- **Unit selection:** -
- **Expert list:** 1

**Min Max Factory setting**
0.00000 [ohm] 200.00000 [ohm] 0.00000 [ohm]

### p7037[0...n] Par_circuit circulating current control integral time / I_circ Tn

**VECTOR_G (Parallel)**

- **Can be changed:** U, T
- **Data type:** FloatingPoint32
- **P-Group:** Modulation
- **Not for motor type:** -
- **Min:** 2.0
- **Max:** 1000.0
- **Factory setting:** 4.0

**Description:**
Sets the integral time of the circulating current controller.
The parameter is referred to the current controller sampling time (p0115[0]).

**Dependency:**
Refer to: p0115

- **Access level:** 3
- **Func. diagram:** -
- **Unit selection:** -
- **Expert list:** 1

**Min Max Factory setting**
2.0 1000.0 4.0

### p7038[0...n] Par_circuit circulating current control limit / I_circ limit

**VECTOR_G (Parallel)**

- **Can be changed:** U, T
- **Data type:** FloatingPoint32
- **P-Group:** Modulation
- **Not for motor type:** -
- **Min:** 1 [%]
- **Max:** 100 [%]
- **Factory setting:** 50 [%]

**Description:**
Sets the limit of the circulating current controller output values.
The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).

### p7040[0...n] Par_circuit correction valve lockout time phase U / Comp t_lockout U

**VECTOR_G (Parallel)**

- **Can be changed:** U, T
- **Data type:** FloatingPoint32
- **P-Group:** Modulation
- **Not for motor type:** -
- **Min:** -1000000.00 [µs]
- **Max:** 1000000.00 [µs]
- **Factory setting:** 0.00 [µs]

**Description:**
For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase U (p1828).
The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.

**Dependency:**
Refer to: p1828

Parameters

List of parameters

r7103[0...99]  Par_circuit ring buffer fault/alarm gone / F/A gone

- Can be changed: -
- Data type: Unsigned32
- P-Group: Displays, signals
- Min: -
- Not for motor type: -

Description:
Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module).
Displays the relative system runtime when the fault or alarm was withdrawn.

Dependency:
Refer to: r7100, r7101, r7102

Note:
The last fault case that occurred is documented in index 0.
The parameter is reset to 0 at POWER ON.

r7200[0...n]  Par_circuit power unit overload I2t / PU overload I2t

- Can be changed: -
- Data type: FloatingPoint32
- P-Group: Displays, signals
- Min: - [%]

Description:
Displays the overload of the particular power unit in a parallel circuit configuration calculated using the I2t function.
The maximum value of all power units is displayed in r0036.

r7201[0...n]  CO: Par_circuit power unit temperatures max. inverter / PU temp max inv

- Can be changed: -
- Data type: FloatingPoint32
- P-Group: Displays, signals
- Min: - [°C]

Description:
Displays the maximum inverter temperature in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[0].

r7202[0...n]  Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer

- Can be changed: -
- Data type: FloatingPoint32
- P-Group: Displays, signals
- Min: - [°C]

Description:
Displays the maximum depletion layer temperature in the power unit for a parallel circuit configuration.
The maximum value of all power units is displayed in r0037[1].

### r7250[0...4] Par_circuit power unit rated power / PU P_rated

**B_INF (Parallel), VECTOR_G (Parallel)**

**Data type:** FloatingPoint32  
**P-Group:** Converter  
**Not for motor type:** -  
**Min** - [kW]  
**Max** - [kW]  

**Description:** Displays the rated power of the individual power units connected in parallel for various load duty cycles. The sum of the rated powers of all power units connected in parallel is displayed in r0206.

**Index:**

- [0] = Rated value  
- [1] = Load duty cycle with low overload  
- [2] = Load duty cycle with high overload  
- [3] = S1 cont duty cyc  
- [4] = S6 load duty cycle

**Dependency:** The value is displayed in [kW] or [hp]. Refer to: p0100, p0205

### r7251[0...4] Par_circuit power unit rated current / PU PI_rated

**B_INF (Parallel), VECTOR_G (Parallel)**

**Data type:** FloatingPoint32  
**P-Group:** Converter  
**Not for motor type:** -  
**Min** - [Arms]  
**Max** - [Arms]  

**Description:** Displays the rated current of the individual power units connected in parallel for various load duty cycles. The sum of the rated currents of all power units connected in parallel is displayed in r0207.

**Index:**

- [0] = Rated value  
- [1] = Load duty cycle with low overload  
- [2] = Load duty cycle with high overload
Parameters

List of parameters

- \[3\] = S1 cont duty cyc
- \[4\] = S6 load duty cycle

Dependency: Refer to: p0205

\begin{itemize}
  \item \textbf{r7252[0...4]} Par\_circuit maximum power unit current / PU I\_max
  \begin{itemize}
    \item B\_INF (Parallel), VECTOR\_G (Parallel)
    \item Can be changed: -
    \item Data type: FloatingPoint32
    \item P-Group: Converter
    \item Not for motor type: -
    \item Min: -
    \item - [Arms]
    \item Calculated: -
    \item Dynamic index: -
    \item Units group: -
    \item Scaling: -
    \item Expert list: 1
    \item Factory setting: - [Arms]
    \item Access level: 2
    \item Func. diagram: -
    \item Unit selection: -
  \end{itemize}

  Description: Displays the maximum output current of the individual power units connected in parallel. The sum of the maximum currents of all power units connected in parallel is displayed in r0209.

  Index:
  \begin{itemize}
    \item [0] = Rated value
    \item [1] = Load duty cycle with low overload
    \item [2] = Load duty cycle with high overload
    \item [3] = S1 cont duty cyc
    \item [4] = S6 load duty cycle
  \end{itemize}

  Dependency: Refer to: p0205
\end{itemize}

\begin{itemize}
  \item \textbf{r7758[0...19]} KHP Control Unit serial number / KHP CU ser\_no
  \begin{itemize}
    \item CU\_G130\_DP, CU\_G130\_PN, CU\_G150\_DP, CU\_G150\_PN
    \item Can be changed: -
    \item Data type: Unsigned8
    \item P-Group: -
    \item Not for motor type: -
    \item Min: -
    \item Calculated: -
    \item Dynamic index: -
    \item Units group: -
    \item Scaling: -
    \item Expert list: 1
    \item Factory setting: -
    \item Access level: 3
    \item Func. diagram: -
    \item Unit selection: -
  \end{itemize}

  Description: Displays the actual serial number of the Control Unit. The individual characters of the serial number are displayed in the ASCII code in the indices. For the commissioning software, the ASCII characters are displayed uncoded.

  Dependency: Refer to: p7765, p7766, p7767, p7768

  Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

  Note: KHP: Know-How Protection
\end{itemize}

\begin{itemize}
  \item \textbf{p7759[0...19]} KHP Control Unit reference serial number / KHP CU ref\_ser\_no
  \begin{itemize}
    \item CU\_G130\_DP, CU\_G130\_PN, CU\_G150\_DP, CU\_G150\_PN
    \item Can be changed: T
    \item Data type: Unsigned8
    \item P-Group: -
    \item Not for motor type: -
    \item Min: -
    \item Calculated: -
    \item Dynamic index: -
    \item Units group: -
    \item Scaling: -
    \item Expert list: 1
    \item Factory setting: -
    \item Access level: 3
    \item Func. diagram: -
    \item Unit selection: -
  \end{itemize}

  Description: Sets the reference serial number for the Control Unit. Using this parameter, if a Control Unit and/or a memory card is replaced at the end customer, the OEM can again adapt the project to the modified hardware.

  Dependency: Refer to: p7765, p7766, p7767, p7768

  Note: KHP: Know-How Protection
  \begin{itemize}
    \item - The OEM may only change this parameter for the use case "Sending encrypted SINAMICS data".
    \item - SINAMICS only evaluates this parameter when powering up from the encrypted "Load into file system..." output or when powering up from the encrypted PS files. The evaluation is only made when know-how protection and memory card copy protection have been activated.
  \end{itemize}
\end{itemize}
### r7760

**Write protection/know-how protection status / Wr_prot/KHP stat**

<table>
<thead>
<tr>
<th>Bit</th>
<th>Signal name</th>
<th>1 signal</th>
<th>0 signal</th>
<th>FP</th>
</tr>
</thead>
<tbody>
<tr>
<td>00</td>
<td>Write protection active</td>
<td>Yes</td>
<td>No</td>
<td>-</td>
</tr>
<tr>
<td>01</td>
<td>Know-how protection active</td>
<td>Yes</td>
<td>No</td>
<td>-</td>
</tr>
<tr>
<td>02</td>
<td>Know-how protection temporarily withdrawn</td>
<td>Yes</td>
<td>No</td>
<td>-</td>
</tr>
<tr>
<td>03</td>
<td>Know-how protection cannot be deactivated</td>
<td>Yes</td>
<td>No</td>
<td>-</td>
</tr>
<tr>
<td>04</td>
<td>Memory card copy protection active</td>
<td>Yes</td>
<td>No</td>
<td>-</td>
</tr>
</tbody>
</table>

**Dependency:** Refer to: p7761, p7765, p7766, p7767, p7768

**Notice:** For bits 01 ... 04, the following applies:
- For SIMOTION D410-2 these bits have no significance (they are always 0).

**Note:**
- KHP: Know-How Protection
  - Re bit 00: Write protection can be activated/deactivated via p7761 on the Control Unit.
  - Re bit 01: The know-how protection can be activated by entering a password (p7766 ... p7768).
  - Re bit 02: If it has already been activated, know-how protection can be temporarily deactivated by entering the valid password in p7766. In this case, bit 1 = 0 and bit 2 = 1 offset.
  - Re bit 03: Know-how protection cannot be deactivated, as p7766 is not entered in the OEM exception list (only the factory setting is possible). This bit is only set if know-how protection is active (bit 1 = 1) and p7766 has not been entered in the OEM exception list.
  - Re bit 04: When know-how protection has been activated, the contents of the memory card (parameter and DCC data) can be additionally protected against being used with other memory cards. This bit is only set if know-how protection is active and p7765 = 1.

### p7761

**Write protection / Write protection**

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>

</tr>
<tr>
<td>Min</td>
<td>Max</td>
<td>Factory setting</td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>1</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>

**Description:** Setting for activating/de-activating the write protection for adjustable parameters.

**Value:**
- 0: Deactivate write protection
- 1: Activate write protection

**Dependency:** Refer to: r7760

**Note:** While write protection is active, a download is prevented; however, it is still possible to restore the factory settings.

Examples of parameters, which for the SINAMICS drive family, are excluded from write protection:
### p7762
**Write protection multi-master fieldbus system access behavior / Fieldbus acc_behav**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
<th>Dependency</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

**Notice:**

For SIMOTION D410-2, this parameter has no significance.

**Note:**

KHP: Know-How Protection

Even if know-how protection is set, parameters in this list can be read and written to.

---

### p7764[0...n]
**KHP OEM exception list / KHP OEM excep list**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
<th>Dependency</th>
</tr>
</thead>
<tbody>
<tr>
<td>p7764[0...n]</td>
<td>OEM exception list (p7764[0...n]) for setting parameters that should be excluded from know-how protection.</td>
<td>B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G</td>
<td>Refer to: p7763</td>
</tr>
<tr>
<td></td>
<td></td>
<td>p7764[0...n], with n = p7763 - 1</td>
<td></td>
</tr>
</tbody>
</table>

**Notice:**

For SIMOTION D410-2, this parameter has no significance.

**Note:**

KHP: Know-How Protection

Even if know-how protection is set, parameters in this list can be read and written to.
Dependency: The number of indices depends on p7763.

Notice: For SIMOTION D410-2, this parameter has no significance.

Note: KHP: Know-How Protection

Even if know-how protection is set, parameters in this list can be read and written to.

**p7765**

<td>KHP password input / KHP passw input</td>
<td>Sets the password for know-how protection. Example of a password: 123aBc = 49 50 51 97 66 99 dec (ASCII characters)</td>
<td>123aBc = 49 50 51 97 66 99 dec (ASCII characters)</td>
<td>Refer to: p7767, p7768</td>
</tr>
</tbody>
</table>

**Notice:** An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

When using the STARTER commissioning software, the password should be entered using the associated dialogs.

**Note:** KHP: Know-How Protection

When reading, p7766[0...29] = 42 dec (ASCII character = """") is displayed.

When using the STARTER commissioning software, when reading via the expert list, p7766[0...29] is displayed with **********.

The following rules apply when entering the password:
- Password entry must start with p7766[0].
- No gaps are permissible in the password.
- Entering a password is completed when writing to p7766[29] (p7766[29] = 0 for passwords less than 30 characters).
### List of parameters

</table>
### Parameters

#### List of parameters

**Value:**
- 0: Inactive
- 1: Load NVRAM data to parameters
- 2: Load parameters to NVRAM
- 3: Reset

**Notice:**
- After action p7770 = 1 no more pulses may be enabled.
- After action p7770 = 2, it is essential that parameters are backed up (p0977 = 1) and that a warm restart is then performed (p0009 = 30, p0976 = 2, 3). This will apply the values written.

**Note:**
- If value = 1:
  - This action loads the NVRAM data to the parameters.
- If value = 2:
  - This action loads the parameters to the NVRAM.
- If value = 3:
  - This action sets parameters p7771 ... p7774 to the factory setting.
  - It is recommended to avoid placing unnecessary load on the subsequent upload/download operation.

**Description:**
Setting to backup/import/delete NVRAM data.

NVRAM data are non-volatile data in the device (e.g. fault buffer).

For NVRAM data actions, the following data are excluded:
- Crash diagnostics
- CU operating hours counter
- CU temperature
- Safety logbook

**p7775**
**NVRAM data backup/import/delete / NVRAM backup**

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Inactive</td>
</tr>
<tr>
<td>1</td>
<td>NVRAM data backup to memory card</td>
</tr>
<tr>
<td>2</td>
<td>Import NVRAM data from the memory card</td>
</tr>
<tr>
<td>3</td>
<td>Delete NVRAM data in the device</td>
</tr>
<tr>
<td>10</td>
<td>Error when clearing</td>
</tr>
<tr>
<td>11</td>
<td>Error when backing up, memory card not available</td>
</tr>
<tr>
<td>12</td>
<td>Error when backing up, insufficient memory space</td>
</tr>
<tr>
<td>13</td>
<td>Error when backing up</td>
</tr>
<tr>
<td>14</td>
<td>Error when importing, memory card not available</td>
</tr>
<tr>
<td>15</td>
<td>Error when importing, checksum error</td>
</tr>
<tr>
<td>16</td>
<td>Error when importing, no NVRAM data available</td>
</tr>
<tr>
<td>17</td>
<td>Error when importing</td>
</tr>
</tbody>
</table>

**Notice:**
- Re value = 2, 3:
  - These actions are only possible when pulses are inhibited.

**Note:**
- After the action has been successfully completed, the parameter is automatically set to zero.
- The actions importing and deleting NVRAM data immediately initiate a warm restart.
- If the procedure was not successfully completed, then an appropriate fault value is displayed (p7775 >= 10).

**Description:**
Setting of the tolerance window for the sign of life monitoring for communication to the power unit.

**p7788**
**Power unit sign-of-life monitoring tolerance window / PU SoL monit tol**

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Power unit sign-of-life monitoring tolerance window</td>
</tr>
</tbody>
</table>

**Notice:**
- These actions are only possible when pulses are inhibited.

**Note:**
- If the procedure was not successfully completed, an inappropriate fault value is displayed (p7775 >= 10).
**Parameters**

**List of parameters**

**Dependency:** Refer to: A30853

**Note:**
An active window is generated by means of DRIVE-CLiQ telegrams.
If more than one sign-of-life error appears in the window, then A30853 is output.
The lower the value in p7788, the greater the monitoring tolerance.

**p7789** Power unit sign-of-life monitoring fault threshold / PU SoL monit FThr

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Can be changed: U, T</th>
<th>Calculated: -</th>
<th>Access level: 4</th>
</tr>
</thead>
<tbody>
<tr>

<td>Factory setting</td>
<td></td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>1000</td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description:** Sets the number of consecutive sign-of-life errors that are tolerated for communication to the power unit.

**Dependency:** Refer to: F30008

**Note:** F30008 is output in the case of a fault.
The higher the value in the parameter, the higher the monitoring tolerance.

**p7820** DRIVE-CLiQ component component number / DLQ comp_no

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Can be changed: U, T</th>
<th>Calculated: -</th>

</table>

**Dependency:** Refer to: p0121, p0141, p0151, p7829

**Note:** For p7828[0] = 399, the firmware for all of the existing components is downloaded.

The firmware download is started with p7829 = 1.

**Note:**

- 1: Activate download.
- -1: activate the download and carry out a reset.
- 0: Download successfully completed.
- > 1: Fault code
  - 011: DRIVE-CLiQ component has detected a checksum error.
  - 015: The selected DRIVE-CLiQ components did not accept the contents of the firmware file.
  - 018: Firmware version is too old and is not accepted by the component.
  - 019: Firmware version is not suitable for the hardware release of the component.
  - 101: After several communication attempts, no response from the DRIVE-CLiQ component.
  - 140: Firmware file for the DRIVE-CLiQ component not available on the memory card/device memory.
  - 143: Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.
  - 144: When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card/device memory is defective.
  - 145: Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.
  - 156: Component with the specified component number is not available.

</tbody>
</table>

### Description:
Displays the version of the firmware stored on the memory card/device memory.
Index:

- [0] = Internal
- [1] = External
- [2] = Parameter backup

Note:

Re index 0:
Displays the internal firmware version (e.g. 04402315).
This firmware version is the version of the memory card/device memory and not the CU firmware (r0018), however, normally they have the same versions.

Re index 1:
Displays the external firmware version (e.g. 04040000 -> 4.4).
For automation systems with SINAMICS Integrated this is the runtime version of the automation system.

Re index 2:
Displays the internal CU firmware version (r0018) of the parameter backup.
With this CU firmware version, the parameter backup was saved, which was used when powering up.

**r7850[0...23]**

### Drive object operational/not operational / DO ready for oper

| CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN |
| Can be changed: - | Calculated: - | Access level: 4 |
| Data type: Integer16 | Dynamic index: - | Func. diagram: - |
| P-Group: - | Units group: - | Unit selection: - |
| Not for motor type: - | Scaling: - | Expert list: 1 |
| Min | Max | Factory setting |
|-32786 | 32767 | - |

Description:
Displays whether, for an activated drive object, all activated topology components are available or not (or whether these can be addressed).
0: Drive object not ready for operation
1: Drive object ready for operation

**p7852**

### Number of indices for r7853 / Qty indices r7853

| CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN |
| Can be changed: U, T | Calculated: - | Access level: 4 |
| Data type: Unsigned16 | Dynamic index: - | Func. diagram: - |
| P-Group: - | Units group: - | Unit selection: - |
| Not for motor type: - | Scaling: - | Expert list: 1 |
| Min | Max | Factory setting |
| 1 | 200 | 1 |

Description:
Displays the number of indices for r7853[0...n].
This corresponds to the number of DRIVE-CLiQ components that are in the target topology.

Dependency:
Refer to: r7853

Note:
The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.

**r7853[0...n]**

### Component available/not available / Comp present

| CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN |
| Can be changed: - | Calculated: - | Access level: 4 |
| Data type: Unsigned16 | Dynamic index: p7852 | Func. diagram: - |
| P-Group: - | Units group: - | Unit selection: - |
| Not for motor type: - | Scaling: - | Expert list: 1 |
| Min | Max | Factory setting |
| 0000 hex | FFFF hex | - |

Description:
Displays the component and whether this component is currently present.
High byte: Component number
Low byte: 0/1 (not available/available)

Dependency:
Refer to: p7852

Note:
The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.
### Parameters

#### List of parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>p7857</strong></td>
<td>Sub-boot mode / Sub-boot mode</td>

</tr>
<tr>
<td></td>
<td></td>
<td>Min</td>
<td>Max</td>
</tr>
<tr>
<td></td>
<td></td>
<td>0</td>
<td>1</td>
</tr>
</tbody>
</table>

**Description:**
Sets the mode for the sub-boot.

**Value:**
- 0: Sub-boot manual
- 1: Sub-boot automatic

**Note:**
For p7857 = 0 (manual sub-boot) the following applies:
The parameter should be set to 1 to start the sub-boot.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Component number global / Comp_nr global</th>
<th>Can be changed: U, T</th>
<th>Calculated: -</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>

<tr>
<td></td>
<td></td>
<td>Min</td>
<td>Max</td>
</tr>
<tr>
<td></td>
<td></td>
<td>-32786</td>
<td>32767</td>
</tr>
</tbody>
</table>

**Description:**
Sets the global and unique component number in a drive system with several Control Units.

Each index of the parameter corresponds to a possible local component number on the corresponding Control Unit.
The indices are allocated to the global component numbers as follows:
- p7859[0]: Not used
- p7859[1]: Sets the global component number for the local component number 1
- p7859[2]: Sets the global component number for the local component number 2
- p7859[199]: Sets the global component number for the local component number 199

**Notice:**
This parameter is preferably set via suitable commissioning software (e.g. UpdateAgent, STARTER, SCOUT).
Changing the parameter via the AOP (Advanced Operator Panel) or BOP (Basic Operator Panel) can destroy a valid unique setting.

**Note:**
The parameter is not influenced by setting the factory setting.

p7900[0...23] Drive objects priority / DO priority
CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN
Can be changed: U, T
Calculated: -
Access level: 4
Data type: Unsigned16
Dynamic index: -
Func. diagram: -
P-Group: -
Units group: -
Unit selection: -
Not for motor type: -
Scaling: -
Expert list: 1
Min Max Factory setting
0 65535 0
Description: Sets the priority for processing the existing drive objects in the system.
The parameter enables a free sequence to be set for processing the drive objects. For this purpose all the drive object numbers existing in the system have to be written in the desired sequence into the corresponding indices of the parameter. After re-booting this sequence will be effective without a plausibility check.
With the factory setting the following priorities regarding processing are applicable:
- The drive objects are pre-sorted according to their type as follows: CONTROL UNIT, INFEED, SERVO, VECTOR, TM, HUB, CU_LINK
- If they are of the same type, they are sorted in ascending order according to their drive object number, i.e. the lower the number, the higher the priority for processing.

Index:
- [0] = Drive object number Control Unit
- [1] = Drive object number object 1
- [2] = Drive object number object 2
- [3] = Drive object number object 3
- [4] = Drive object number object 4
- [5] = Drive object number object 5
- [6] = Drive object number object 6
- [7] = Drive object number object 7
- [8] = Drive object number object 8
- [9] = Drive object number object 9
- [10] = Drive object number object 10
- [11] = Drive object number object 11
- [12] = Drive object number object 12
- [13] = Drive object number object 13
- [14] = Drive object number object 14
- [15] = Drive object number object 15
- [16] = Drive object number object 16
- [17] = Drive object number object 17
- [18] = Drive object number object 18
- [19] = Drive object number object 19
- [20] = Drive object number object 20
- [21] = Drive object number object 21
- [22] = Drive object number object 22
- [23] = Drive object number object 23

Notice: This parameter may only be used by qualified service personnel.

Note: If the same drive object numbers are used and if the existing drive object numbers in the system are entered incompletely, the content of this parameter is ignored entirely. The behavior as with factory setting will then become effective.

**r7901[0...43]** Sampling times / t_sample

</tbody>
</table>

**Description:** Displays the ACX file saved in the appropriate directory in the non-volatile memory.
Dependency: Refer to: p1500
Note: For a value = 9999999, the following applies: The read operation is still running.

### r8585
**Macro execution actual / Macro executed**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Can be changed</th>
<th>Calculated</th>
<th>Access level</th>
</tr>
</thead>
<tbody>
<tr>
<td>B_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, TB30, TM150, TM31, VECTOR_G</td>
<td>Displays the macro currently being executed on the drive object.</td>
<td>-</td>
<td>-</td>
<td>1</td>
</tr>
</tbody>
</table>

Note: Corresponds to the CANopen object 1000 hex.

For each detected drive, the device type is displayed in object 67FF hex + 800 hex * x (x: Drive number 0 ... 7).

### r8600
**CAN device type / Device type**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Can be changed</th>
<th>Calculated</th>
<th>Access level</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)</td>
<td>Displays all of the devices connected to the CAN bus after run-up.</td>
<td>-</td>
<td>-</td>
<td>3</td>
</tr>
</tbody>
</table>

Note: Displays the CANopen object 1000 hex.

For each detected drive, the device type is displayed in object 67FF hex + 800 hex * x (x: Drive number 0 ... 7).

### r8601
**CAN error register / Error register**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Can be changed</th>
<th>Calculated</th>
<th>Access level</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)</td>
<td>Displays the error register for CANopen.</td>
<td>-</td>
<td>-</td>
<td>3</td>
</tr>
</tbody>
</table>

Description:
- Bit 0: Generic error
  - 0 signal: No error present.
  - 1 signal: Generic error present.
- Bit 1 ... 3: Not supported (always a 0 signal)
- Bit 4: Communications error
  - 0 signal: There is no message in the range 8700 ... 8799.
  - 1 signal: There is at least one message (fault or alarm) in the range 8700 ... 8799.
Bit 5 ... 6: Not supported (always a 0 signal)
Bit 7: Fault outside the range 8700 ... 8799
0 signal: There is no fault outside the range 8700 ... 8799.
1 signal: There is at least one fault outside the range 8700 ... 8799.

Note:
Corresponds to the CANopen object 1001 hex.

<table>
<thead>
<tr>
<th>p8602</th>
<th>CAN SYNC object / SYNC object</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)</td>
<td>Can be changed: T Calculated: - Access level: 3</td>
</tr>
<tr>
<td>Data type: Unsigned32 Dynamic index: - Func. diagram: -</td>
<td></td>
</tr>
<tr>
<td>P-Group: Communications Units group: - Unit selection: -</td>
<td></td>
</tr>
<tr>
<td>Not for motor type: - Scaling: - Expert list: 1</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Min</th>
<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0000 hex</td>
<td>FFFF FFFF hex</td>
<td>0080 hex</td>
</tr>
</tbody>
</table>

Description: Sets the SYNC object parameter for the following CANopen objects:
- 1005 hex: COB-ID

Note: SINAMICS operates as SYNC load.
SINAMICS operates as SYNC load.
COB-ID: CAN object identification

<table>
<thead>
<tr>
<th>p8603</th>
<th>CAN COB-ID Emergency Message / COB-ID EMCY Msg</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)</td>
<td>Can be changed: T Calculated: - Access level: 3</td>
</tr>
<tr>
<td>Data type: Unsigned32 Dynamic index: - Func. diagram: -</td>
<td></td>
</tr>
<tr>
<td>P-Group: Communications Units group: - Unit selection: -</td>
<td></td>
</tr>
<tr>
<td>Not for motor type: - Scaling: - Expert list: 1</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Min</th>
<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0000 hex</td>
<td>FFFF FFFF hex</td>
<td>0000 hex</td>
</tr>
</tbody>
</table>

Description: Sets the COB-ID for the emergency message (error telegram).
It corresponds to the CANopen objects:
- 1014 hex: COB-ID

Note: If, when downloading, the pre-set value 0 is downloaded, then the CANopen pre-set value 80 hex + Node-ID is automatically set.
Online, the value 0 is rejected as, according to the CANopen Standard, COB-ID 0 is not permitted here.
The changeover of the node ID using the hardware switch at the Control Unit or per software has no effect on the COB-ID EMCY. The saved value remains effective.

<table>
<thead>
<tr>
<th>p8604[0...1]</th>
<th>CAN node guarding / Node guarding</th>
</tr>
</thead>
<tbody>
<tr>
<td>CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)</td>

<thead>
<tr>
<th>Min</th>
<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>65535</td>
<td>0</td>
</tr>
</tbody>
</table>

Description: Sets the node guarding parameter for the following CANopen objects:
- 100C hex: Guard Time
- 100D hex: Life Time Factor
The life time is derived by multiplying guard time by the life time factor.

Index:
[0] = Time interval [ms] for new node guarding telegram
[1] = Factor for failure of the node guarding telegram
Dependency: Only adjustable if heartbeat time = 0 (heartbeat is disabled).
Refer to: p8606

Note: For p8604[0] = 0 and/or p8604[1] = 0, the node guarding protocol is not used.
Either node guarding or heartbeat can be used.

---

**p8606**

**CAN Producer Heartbeat Time / Prod Heartb Time**

**CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)**

<table>
<thead>
<tr>
<th>Can be changed:</th>

<tr>
<td>Not for motor type:</td>
<td>-</td>
<td>Scaling:</td>
<td>-</td>
</tr>
</tbody>
</table>

**Min | Max | Factory setting**
---|---|---
0 [ms] | 65535 [ms] | 0 [ms]

**Description:**
Sets the time [ms] to cyclically send heartbeat telegrams.
The smallest cycle time is 100 ms.
When a 0 is written, then heartbeat telegrams are not sent.

**Dependency:**
Only adjustable if guard time = 0 (node guarding disabled).
Refer to: p8604

**Note:**
Corresponds to the CANopen object 1017 hex.
Either node guarding or heartbeat can be used.

---

**r8607[0...3]**

**CAN Identity Object / Identity object**

**CU_G130_DP (CAN), CU_G130_PN (CAN), CU_G150_DP (CAN), CU_G150_PN (CAN)**

<table>
<thead>
<tr>
<th>Can be changed:</th>

</tbody>
</table>

**Min | Max | Factory setting**
---|---|---
- | - | -

**Description:**
General device information display.

**Index:**
[0] = Vendor ID
[1] = Product code
[2] = Revision number
[3] = Serial number

**Note:**
Corresponds to the CANopen object 1018 hex.
Re index 3:
The SINAMICS serial number comprises 60 bits. Of these bits, the following are displayed in this index:
Bits 0 ... 19: Consecutive number
Bits 20 ... 23: Production ID
- 0 hex: Development
- 1 hex: P1 unique number
- 2 hex: P2 unique number
- 3 hex: WA unique number
- 9 hex: Pattern
- F hex: All others
Bits 24 ... 27: Month of manufacture (0 means January, B means December)
Bits 28 ... 31: Year of manufacture (0 means 2002)

<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0000 hex</td>
<td>FFFF 1000 hex</td>
<td>0000 hex</td>
</tr>
</tbody>
</table>

**Description:**
Displays the Pre-defined Error Field of the CAN node.

It includes the number of all errors that have occurred, the number of errors that have occurred for each drive and the errors according to their history.

The first 16 bits represent the CANopen error code and the second 16 bits the SINAMICS error code.

Index 1 has the same structure - however, the drive object ID is in the second 16 bits instead of the SINAMICS error code.

CANopen error code:
- 0000 hex: No error present
- 8110 hex: Alarm A08751 present
- 8120 hex: Alarm A08752 present
- 8130 hex: Alarm A08700(F) with alarm value = 2 present
- 1000 hex: Generic error 1 present (there is at least one fault outside the range 8700 ... 8799)
- 1001 hex: Generic error 2 present (there is at least one alarm in the range 8700 ... 8799 with the exception of A08751, A08752, A08700)

All drive objects are acknowledged by writing the value 0 to the index 0. As soon as a fault has been acknowledged or an alarm cleared, then it is also cleared from the fault list.

**Index:**
- [0] = Number of all faults in the drive unit
- [1] = Most recent drive number / fault number
- [2] = Number of faults drive 1
- [3] = Fault 1/ drive 1
- [4] = Fault 2/ drive 1
- [7] = Fault 5/ drive 1
- [8] = Fault 6/ drive 1
- [9] = Fault 7/ drive 1
- [10] = Fault 8/ drive 1
- [11] = Number of faults drive 2
- [12] = Fault 1/ drive 2
- [16] = Fault 5/ drive 2
- [17] = Fault 6/ drive 2
- [18] = Fault 7/ drive 2
- [19] = Fault 8/ drive 2
- [20] = Number of faults drive 3
- [21] = Fault 1/ drive 3
- [22] = Fault 2/ drive 3
- [23] = Fault 3/ drive 3
- [26] = Fault 6/ drive 3
- [27] = Fault 7/ drive 3
- [28] = Fault 8/ drive 3
- [29] = Number of faults drive 4
- [30] = Fault 1/ drive 4

---

**Note:**
Corresponds to the CANopen object 1200 hex.

SDO: Service Data Object

[43] = Fault 5/ drive 5
[45] = Fault 7/ drive 5
[46] = Fault 8/ drive 5
[47] = Number of faults drive 6
[48] = Fault 1/ drive 6
[49] = Fault 2/ drive 6
[50] = Fault 3/ drive 6
[51] = Fault 4/ drive 6
[52] = Fault 5/ drive 6
[53] = Fault 6/ drive 6
[54] = Fault 7/ drive 6
[55] = Fault 8/ drive 6
[56] = Number of faults drive 7
[57] = Fault 1/ drive 7
[58] = Fault 2/ drive 7
[59] = Fault 3/ drive 7
[60] = Fault 4/ drive 7
[61] = Fault 5/ drive 7
[63] = Fault 7/ drive 7
[64] = Fault 8/ drive 7
[65] = Number of faults drive 8
[66] = Fault 1/ drive 8
[67] = Fault 2/ drive 8
[68] = Fault 3/ drive 8
[69] = Fault 4/ drive 8
[70] = Fault 5/ drive 8
[71] = Fault 6/ drive 8
[72] = Fault 7/ drive 8
[73] = Fault 8/ drive 8
[74] = Number of faults Control Unit
[75] = Fault 1/Control Unit
[76] = Fault 2/Control Unit
[77] = Fault 3/Control Unit
[78] = Fault 4/Control Unit
[79] = Fault 5/Control Unit
[80] = Fault 6/Control Unit
[81] = Fault 7/Control Unit
[82] = Fault 8/Control Unit

Note: Corresponds to the CANopen object 1003 hex.
### p8620 CAN Node-ID / Node ID

- **Can be changed:** T
- **Data type:** Unsigned8
- **P-Group:** -
- **Not for motor type:** -

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Min</th>
<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1</td>
<td>127</td>
<td>126</td>
</tr>
</tbody>
</table>

**Description:**
Display or setting of the CANopen Node ID.

- The Node ID can be set as follows:
  1. Using the address switch on the Control Unit.
  2. Using p8620

- **Dependency:**
  Refer to: r8621

- **Note:**
  Every node ID change only becomes effective after a POWER ON.

### r8621 CAN Node-ID active / Node ID active

- **Can be changed:** -
- **Data type:** Unsigned8
- **P-Group:** Communications
- **Not for motor type:** -

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Min</th>
<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Displays the active CANopen Node ID.

**Dependency:**
Refer to: p8620

### p8622 CAN bit rate / Bit rate

- **Can be changed:** T
- **Data type:** Integer16
- **P-Group:** -
- **Not for motor type:** -

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Min</th>
<th>Max</th>
<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>0</td>
<td>7</td>
<td>6</td>
</tr>
</tbody>
</table>

**Description:**
Setting the bit rate for the CAN bus.

- The appropriate bit timings are selected that are defined in p8623 in the associated sub-index.

- **Example:**
  Bit rate = 20 kbit/s --> p8622 = 6 --> associated bit timing is in p8623[6].
### List of parameters

**Value:**
- `0`: 1 Mbit/s
- `1`: 800 kbit/s
- `2`: 500 kbit/s
- `3`: 250 kbit/s
- `4`: 125 kbit/s
- `5`: 50 kbit/s
- `6`: 20 kbit/s
- `7`: 10 kbit/s

**Dependency:** Refer to: p8623

**Note:** The parameter is not influenced by setting the factory setting.

<tr>
<td><strong>Min</strong></td>
<td><strong>Max</strong></td>
<td><strong>Factory setting</strong></td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>65535</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>

**Description:** Sets the drive object selection (index 0), the sub-index area (index 1) and the parameter area (index 2) when using virtual objects.

This means that it is possible to access all SINAMICS parameters via CAN.

**Index 0 (drive object number):**
0: Not possible to access virtual CANopen objects
1: Device
2 ... 65535: drive object number of drive 1 ... 8

**Index 1 (sub-index area):**
0: 0 ... 255
1: 256 ... 511
2: 512 ... 767
3: 768 ... 1023

**Index 2 (parameter area):**
0: 1 ... 9999
1: 10000 ... 19999
2: 20000 ... 29999
3: 30000 ... 39999

**Index:**
[0] = Drive object number
[1] = Sub-index range
[2] = Parameter range

#### p8641

PDO: Process Data Object

### p8710[0...3] CAN Receive Mapping for RPDO 1 / Mapping RPDO 1

**Description:** Sets the mapping parameters for CANopen Receive Process Data Object 1 (RPDO 1).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
- Corresponds to the CANopen object 1600 hex + 40 hex * x (x: Drive number 0 ... 7).
- Dummy mapping not supported.
- The parameter can only be written online when the associated COB ID in p870x is set as invalid.
### Description:
Sets the mapping parameters for CANopen Receive Process Data Object 2 (RPDO 2).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
Corresponds to the CANopen object 1601 hex + 40 hex * x (x: Drive number 0 ... 7). 
Dummy mapping not supported.

The parameter can only be written online when the associated COB ID in p870x is set as invalid.

### Description:
Sets the mapping parameters for CANopen Receive Process Data Object 3 (RPDO 3).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
Corresponds to the CANopen object 1602 hex + 40 hex * x (x: Drive number 0 ... 7). 
Dummy mapping not supported.

The parameter can only be written online when the associated COB ID in p870x is set as invalid.

### Description:
Sets the mapping parameters for CANopen Receive Process Data Object 4 (RPDO 4).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
Corresponds to the CANopen object 1603 hex + 40 hex * x (x: Drive number 0 ... 7). 
Dummy mapping not supported.

The parameter can only be written online when the associated COB ID in p870x is set as invalid.
**Parameters**

**List of parameters**

### p8714[0...3] CAN Receive Mapping for RPDO 5 / Mapping RPDO 5

**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T
- **Data type:** Unsigned32
- **P-Group:** Communications
- **Not for motor type:** -
- **Min:** 0000 hex
- **Max:** FFFF FFFF hex

**Description:**
Sets the mapping parameters for CANopen Receive Process Data Object 5 (RPDO 5).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
Corresponds to the CANopen object 1604 hex + 40 hex * x (x: Drive number 0 ... 7).

Dummy mapping not supported.

The parameter can only be written online when the associated COB ID in p870x is set as invalid.

### p8715[0...3] CAN Receive Mapping for RPDO 6 / Mapping RPDO 6

**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T
- **Data type:** Unsigned32
- **P-Group:** Communications
- **Not for motor type:** -
- **Min:** 0000 hex
- **Max:** FFFF FFFF hex

**Description:**
Sets the mapping parameters for CANopen Receive Process Data Object 6 (RPDO 6).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
Corresponds to the CANopen object 1605 hex + 40 hex * x (x: Drive number 0 ... 7).

Dummy mapping not supported.

The parameter can only be written online when the associated COB ID in p870x is set as invalid.

### p8716[0...3] CAN Receive Mapping for RPDO 7 / Mapping RPDO 7

**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T
- **Data type:** Unsigned32
- **P-Group:** Communications
- **Not for motor type:** -
- **Min:** 0000 hex
- **Max:** FFFF FFFF hex

**Description:**
Sets the mapping parameters for CANopen Receive Process Data Object 7 (RPDO 7).

**Index:**
- [0] = Mapped object 1
- [1] = Mapped object 2
- [3] = Mapped object 4

**Note:**
Corresponds to the CANopen object 1606 hex + 40 hex * x (x: Drive number 0 ... 7).

Dummy mapping not supported.

The parameter can only be written online when the associated COB ID in p870x is set as invalid.

Index:

- [0] = PDO COB-ID
- [1] = PDO transmission type
- [2] = Inhibit time (in 100 µs)
- [3] = Reserved
- [4] = Event timer (in ms)

Dependency:

A valid COB-ID can only be set for the available (existing) channel.

Refer to: p8740, p8741

Notice:

For inhibit time and event timer, the following apply:

A value that is not a multiple integer of CANopen (4 ms) is rounded-off.

Note:

Corresponds to the CANopen object 1801 hex + 40 hex * x (x: Drive number 0 ... 7).

Transmission types 0, 1 ... F0, FE and FF can be set.

## Parameters

### List of parameters

**Dependency:**

A valid COB-ID can only be set for the available (existing) channel. Refer to: p8740, p8741

**Notice:**

For inhibit time and even timer, the following apply:

A value that is not a multiple integer of CANopen (4 ms) is rounded-off.

**Note:**

Corresponds to the CANopen object 1804 hex + 40 hex * x (x: Drive number 0 ... 7). Transmission types 0, 1 ... F0, FE and FF can be set.

PDO: Process Data Object

### p8724[0...4] CAN Transmit PDO 5 / Transmit PDO 5

**VECTOR_G (CAN)**

**Can be changed:** C1(3), T  
**Calculated:** -  
**Access level:** 3

**Data type:** Unsigned32  
**Dynamic index:** -  
**Func. diagram:** 9208

**P-Group:** Communications  
**Units group:** -  
**Unit selection:** -

**Not for motor type:** -

**Min**  
0000 hex  
**Max**  
C000 06DF hex

**Dependency:**

A valid COB-ID can only be set for the available (existing) channel. Refer to: p8740, p8741

**Notice:**

For inhibit time and even timer, the following apply:

A value that is not a multiple integer of CANopen (4 ms) is rounded-off.

**Note:**

Corresponds to the CANopen object 1804 hex + 40 hex * x (x: Drive number 0 ... 7). Transmission types 0, 1 ... F0, FE and FF can be set.

PDO: Process Data Object

### p8725[0...4] CAN Transmit PDO 6 / Transmit PDO 6

**VECTOR_G (CAN)**

**Can be changed:** C1(3), T  
**Calculated:** -  
**Access level:** 3

**Data type:** Unsigned32  
**Dynamic index:** -  
**Func. diagram:** 9208

[0] = PDO transmission type
[2] = Inhibit time (in 100 µs)
[4] = Event timer (in ms)

Dependency: A valid COB-ID can only be set for the available (existing) channel.
Refer to: p8740, p8741

Notice: For inhibit time and even timer, the following apply:
A value that is not a multiple integer of CANopen (4 ms) is rounded-off.

Note: Corresponds to the CANopen object 1807 hex + 40 hex * x (x: Drive number 0 ... 7).
Transmission types 0, 1 ... F0, FE and FF can be set.
PDO: Process Data Object
### List of parameters

#### p8730[0...3] CAN Transmit Mapping for TPDO 1 / Mapping TPDO 1
**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T  
- **Data type:** Unsigned32  
- **P-Group:** Communications  
- **Not for motor type:** -  
- **Min:** 0000 hex  
- **Max:** FFFF FFFF hex  
- **Factory setting:** 0000 hex  

**Description:**
Sets the mapping parameters for CANopen Transmit Process Data Object 1 (TPDO 1).

**Index:**
- [0] = Mapped object 1  
- [1] = Mapped object 2  
- [3] = Mapped object 4  

**Note:**
Corresponds to the CANopen object 1A00 hex + 40 hex * x (x: Drive number 0 ... 7).
The parameter can only be written online when the associated COB ID in p872x is set as invalid.

#### p8731[0...3] CAN Transmit Mapping for TPDO 2 / Mapping TPDO 2
**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T  
- **Data type:** Unsigned32  
- **P-Group:** Communications  
- **Not for motor type:** -  
- **Min:** 0000 hex  
- **Max:** FFFF FFFF hex  
- **Factory setting:** 0000 hex  

**Description:**
Sets the mapping parameters for CANopen Transmit Process Data Object 2 (TPDO 2).

**Index:**
- [0] = Mapped object 1  
- [1] = Mapped object 2  
- [3] = Mapped object 4  

**Note:**
Corresponds to the CANopen object 1A01 hex + 40 hex * x (x: Drive number 0 ... 7).
The parameter can only be written online when the associated COB ID in p872x is set as invalid.

#### p8732[0...3] CAN Transmit Mapping for TPDO 3 / Mapping TPDO 3
**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T  
- **Data type:** Unsigned32  
- **P-Group:** Communications  
- **Not for motor type:** -  
- **Min:** 0000 hex  
- **Max:** FFFF FFFF hex  
- **Factory setting:** 0000 hex  

**Description:**
Sets the mapping parameters for CANopen Transmit Process Data Object 3 (TPDO 3).

**Index:**
- [0] = Mapped object 1  
- [1] = Mapped object 2  
- [3] = Mapped object 4  

**Note:**
Corresponds to the CANopen object 1A02 hex + 40 hex * x (x: Drive number 0 ... 7).
The parameter can only be written online when the associated COB ID in p872x is set as invalid.

#### p8733[0...3] CAN Transmit Mapping for TPDO 4 / Mapping TPDO 4
**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T  
- **Data type:** Unsigned32  
- **P-Group:** Communications  
- **Not for motor type:** -  
- **Min:** 0000 hex  
- **Max:** FFFF FFFF hex  
- **Factory setting:** 0000 hex  

**Description:**
Sets the mapping parameters for CANopen Transmit Process Data Object 4 (TPDO 4).

- [3] = Mapped object 4

Note:
- Corresponds to the CANopen object 1A07 hex + 40 hex * x (x: Drive number 0 ... 7).
- The parameter can only be written online when the associated COB ID in p872x is set as invalid.

p8740[0...23] CAN channel distribution / Chann assign.

**Note:**  
Corresponds to the CANopen object 6041 hex + 800 hex * x (x: Drive number 0 ... 7).

Re bit 10:  
When the ramp-function generator is activated, the interconnection from CI: p2151 = r1119 can be changed, so that to evaluate bit 10, the setpoint can be retrieved (taken) from in front of the ramp-function generator.

Re bit 10, 12:  
When braking, the two bits must indicate the same state. This is the reason that the following parameters must be set the same:

- p2161 (speed threshold value 3, for r2199.0) = p2163 (speed threshold value 4, for r2197.7)
- p2150 (hysteresis speed 3, for r2199.0) = p2164 (hysteresis speed 4, for r2197.7)

- **P-Group:** Communications
- **Units group:** -
- **Unit selection:** -
- **Not for motor type:** -
- **Scaling:** -
- **Expert list:** 1
- **Min:** -
- **Max:** -
- **Factory setting:** 0

**Description:**
Binector input for CANopen status word bit 15.

**Dependency:**
Refer to: r8784

---

### p8790

**CAN control word - auto interconnection / STW interc auto**

**VECTOR_G (CAN)**

- **Can be changed:** C1(3), T
- **Calculated:** -
- **Access level:** 3
- **Data type:** Integer16
- **Dynamic index:** -
- **Func. diagram:** -
- **P-Group:** Communications
- **Units group:** -
- **Unit selection:** -
- **Not for motor type:** -
- **Scaling:** -
- **Expert list:** 1
- **Min:** 0
- **Max:** 1
- **Factory setting:** 0

**Description:**
Sets the automatic BICO interconnection of the CANopen control word.

**Value:**
- 0: No interconn
- 1: Interconnection

**Dependency:**
Refer to: r2050, r2090, r2091, r2092, r2093, r8750, r8850, r8890, r8891, r8892, r8893

**Note:**
The following BICO interconnections are automatically established if the CANopen control word is mapped at one of the locations x = 0 ... 3 in the receive process data buffer.

For SINAMICS S120 with CBC10, the PZD interface IF2 is used:
- BI: p0840.0 = r889x.0
- BI: p0844.0 = r889x.1
- BI: p0848.0 = r889x.2
- BI: p0852.0 = r889x.3
- BI: p2103.0 = r889x.7

For SINAMICS S110, the PZD interface IF1 is used:
- BI: p0840.0 = r209x.0
- BI: p0844.0 = r209x.1
- BI: p0848.0 = r209x.2
- BI: p0852.0 = r209x.3
- BI: p2103.0 = r209x.7

The write access is rejected if a CANopen control word is not mapped at one of these locations. This also causes the project download of the commissioning software to be canceled.

---

### r8795

**CAN control word / Control word**

**VECTOR_G (CAN)**

- **Can be changed:** -
- **Calculated:** -
- **Access level:** 3
- **Data type:** Unsigned16

### r8796  CAN Target Velocity / Target velocity

**VECTOR_G (CAN)**

- **Can be changed:** -
- **Calculated:** -
- **Access level:** 3

**Data type:** Integer32

**P-Group:** -

**Not for motor type:** -

**Min**

**Max**

**Factor setting**

**Dependency:** Refer to: p8790

**Note:** Corresponds to the CANopen object 6040 hex + 800 hex * x (x: Drive number 0 ... 7).

**Description:**
Access to the CANopen object target velocity using the SDO transfer.

The value is displayed in increments/second as standard.

**Note:**
Corresponds to the CANopen object 60FF hex + 800 hex * x (x: Drive number 0 ... 7).

The displayed value is calculated as follows:

\[ r8796 = \frac{n_{set} \text{ [RPM]}}{60 \text{ s}} \times p0408 \times 2^{p0418} \times \frac{p8798[1]}{p8798[0]} \]

### r8797  CAN Target Torque / Target torque

**VECTOR_G (CAN)**

- **Can be changed:** -
- **Calculated:** -
- **Access level:** 3

**Data type:** Integer16

**P-Group:** -

**Not for motor type:** -

**Min**

**Max**

**Factory setting**

**Dependency:** Refer to: p8790

**Note:**
Corresponds to the CANopen object 6071 hex + 800 hex * x (x: Drive number 0 ... 7).

The displayed value is calculated as follows:

\[ r8797 \text{ [per mille]} = \frac{M_{set} \text{ [Nm]}}{p0333 \text{ [Nm]}} \times 1000 \]

### p8798[0...1]  CAN speed conversion factor / n_conv_factor

**VECTOR_G (CAN)**

- **Can be changed:** T
- **Calculated:** -
- **Access level:** 3

**Data type:** Unsigned32

**P-Group:** -

**Not for motor type:** -

**Min**

**Max**

**Factory setting**

**Dependency:** Refer to: p8790

**Note:**
Corresponds to the CANopen object 6094 hex.

The internal velocity is calculated as follows:

\[ n_{set\_internal} = \frac{\text{object 6094.1}}{\text{object 6094.2 \times (p0408 \times 2^{p0418}) \times n_{set\_bus}}} \]

**Index:**
- [0] = Counter
- [1] = Denominator

| p8812[0...1] | Sets the clock cycle for SINAMICS Link.  
Re index 0: 0 = clock synchronous mode not activated, 1 = clock synchronous mode activated  
Re index 1: Possible values: 500, 1000, 2000 µs | 0 = clock synchronous mode not activated, 1 = clock synchronous mode activated  
Re index 1: Possible values: 500, 1000, 2000 µs | SINAMICS Link requires that the appropriate CBE20 firmware version is selected (p8835 = 3).  
The parameter must be set the same for all participants.  
A change only becomes effective after a POWER ON.  
The parameter is not influenced by setting the factory setting. |

### Note

- When newly selecting the project p8811, p8812[1] is set to the factory setting.  
For p8811 = 16, the following applies: Min/max/factory setting: 500/500/500 µs  
For p8811 = 64, the following applies: Min/max/factory setting: 1000/2000/2000 µs
### p8815[0...1] IF1/IF2 PZD functionality selection / IF1/IF2 PZD fct

<td></td>
<td></td>
</tr>
</tbody>
</table>
## Index:

- [0] = Interface 1
- [1] = Interface 2

## Dependency:

Refer to: p2030, p8815

## Note:

For value = 99 (automatic) the following applies:
- If a COMM BOARD is not inserted, then the onboard interface (PROFIBUS/PROFINET/USS) communicates via IF1.
- If a CBE20 is inserted, then the following applies:
  -- CU320-2 DP: PROFINET CBE20 communicates via IF1 and PROFIBUS/USS via IF2.
  -- CU320-2 PN: PROFINET onboard communicates via IF1 and PROFINET CBE20 via IF2.
- CAN CBC10 always communicates via IF2.

For a value not equal to 99 (automatic) the following applies:
- Both indices must be set to a number not equal to 99 (automatic).
  A change only becomes effective after POWER ON, reset or download.

### p8840

**COMM BOARD monitoring time / CB t_monit**

<table>
<thead>
<tr>
<th>Can be changed:</th>
<th>[U, T]</th>

<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 [ms]</td>
<td>65535000 [ms]</td>
<td>20 [ms]</td>
</tr>
</tbody>
</table>

**Description:**

Sets the monitoring time to monitor the process data received via COMM BOARD.

If, during this time, the Control Unit does not receive any process data from the COMM BOARD, then an appropriate message is output.

**Dependency:**

Refer to: F08501

**Note:**

This monitoring function only monitors the connection between the Control Unit and COMM BOARD and not the data traffic on the fieldbus.

Value = 0: Monitoring is de-activated.

### p8841[0...239]

**COMM BOARD send configuration data / CB s config_dat**

<table>

<td>0</td>
</tr>
</tbody>
</table>

**Description:**

Sets the send configuration data for the COMM BOARD.

The setting is activated with p8842.

**Dependency:**

Refer to: p8842

**Note:**

The configuration data are specific to the inserted COMM BOARD.

For CBE20, the configuration data are not relevant.
<table>

### p8848 IF2 PZD sampling time / IF2 PZD t_sample

- **CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN**
- **Data type:** FloatingPoint32
- **P-Group:** Communications
- **Not for motor type:** -
- **Description:** Sets the sampling time for the cyclic interface 2 (IF2).
- **Note:**
  - The system only permits certain sampling times and after writing to this parameter, displays the value that has actually been set.
  - For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).

[14] = PZD 15  
[15] = PZD 16

**Dependency:**  
Refer to: p8872

**Note:**  
Value range:  
0: Not used  
1 ... 16: Telegram word  
A pair of values p8870[index], p8872[index] may only be used once in single a device.  
A change only becomes effective after POWER ON, reset, project download or p8842 = 1.

### p8871[0...15]

**SINAMICS Link send telegram word PZD / Send link word**

| B_INF (PROFINET), CU_G130_DP (PROFINET), CU_G130_PN (PROFINET), CU_G150_DP (PROFINET), CU_G150_PN (PROFINET), ENC (PROFINET), TB30 (PROFINET), TM150 (PROFINET), TM31 (PROFINET), VECTOR_G (PROFINET) |
|---|---|---|
| Can be changed: T | Calculated: - | Access level: 3 |
| Data type: Unsigned16 | Dynamic index: - | Func. diagram: - |
| P-Group: Communications | Units group: - | Unit selection: - |
| Not for motor type: - | Scaling: - | Expert list: 1 |

**Description:**  
Assigns a PZD to a telegram word in the SINAMICS Link send telegram.  
p8871[index] assigns PZD p2051[index].

**Index:**  
[0] = PZD 1  
[1] = PZD 2  
[2] = PZD 3  
[3] = PZD 4  
[5] = PZD 6  
[6] = PZD 7  
[7] = PZD 8  
[8] = PZD 9  
[9] = PZD 10  
[10] = PZD 11  
[12] = PZD 13  
[13] = PZD 14  
[14] = PZD 15  
[15] = PZD 16

**Dependency:**  
Refer to: p2051, p8851

**Note:**  
Value range:  
0: Not used  
1 ... 16: Send telegram word
A specific telegram word send may only be used once within a single device.
A change only becomes effective after POWER ON, reset, project download or p8842 = 1.

</table>

### Description

Using p8898[0], the signals of CI: p8899[0] are influenced.
Using p8898[1], the signals of CI: p8899[1] are influenced.

Setting to invert the individual binector outputs of the connector-binector converter.

Sets the signal source for the connector-binector converter.

A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Refer to: p8898, p8899, r8898, r8895, p8899
Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted. 
P8899[0...1] together with r8894.0...15 and r8895.0...15 forms two connector-binector converters: 
Connector input p8899[0] to binector output in r8894.0...15 
Connector input p8899[1] to binector output in r8895.0...15

### p8903[0...3] IE Subnet Mask of Station / IE Subnet Mask

<table>
<thead>
<tr>
<th>Parameters</th>
<th>CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Data type:</strong></td>
<td>Unsigned8</td>
</tr>
<tr>
<td><strong>P-Group:</strong></td>
<td>-</td>
</tr>
<tr>
<td><strong>Not for motor type:</strong></td>
<td>-</td>
</tr>
<tr>
<td><strong>Min</strong></td>
<td>0</td>
</tr>
<tr>
<td><strong>Max</strong></td>
<td>255</td>
</tr>
</tbody>
</table>

**Description:** Sets the subnet mask for the Industrial Ethernet interface (X127) on the Control Unit. The active subnet mask is displayed in r8913.

**Dependency:** Refer to: p8905, r8913

**Note:** The parameter is not influenced by setting the factory setting.

### p8904 IE DHCP mode / IE DHCP mode

<table>
<thead>
<tr>
<th>Parameters</th>
<th>CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Data type:</strong></td>
<td>Unsigned8</td>
</tr>
<tr>
<td><strong>P-Group:</strong></td>
<td>-</td>
</tr>
<tr>
<td><strong>Not for motor type:</strong></td>
<td>-</td>
</tr>
<tr>
<td><strong>Min</strong></td>
<td>0</td>
</tr>
<tr>
<td><strong>Max</strong></td>
<td>3</td>
</tr>
</tbody>
</table>

**Description:** Sets the DHCP mode for the Industrial Ethernet interface (X127) on the Control Unit. The interface configuration (p8900 and following) is activated with p8905 = 1. The parameter is not influenced by setting the factory setting.

**Note:**
- If value = 0: DHCP deactivated.
- If value = 2: DHCP activated.
  - Re value = 1, 3: Reserved.

### p8905 IE Interface configuration / IE IF config

<table>
<thead>
<tr>
<th>Parameters</th>
<th>CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td><strong>Not for motor type:</strong></td>
<td>-</td>
</tr>
<tr>
<td><strong>Min</strong></td>
<td>0</td>
</tr>
<tr>
<td><strong>Max</strong></td>
<td>3</td>
</tr>
</tbody>
</table>

**Description:** Setting to activate the interface configuration for the Industrial Ethernet interface (X127) on the Control Unit. p8905 is automatically set to 0 at the end of an operation.

**Value:**
- 0: No function
- 1: Activate configuration
- 2: Activate and save configuration
- 3: Delete configuration

**Dependency:** Refer to: p8900, p8901, p8902, p8903
Refer to: A08561

**Note:**
- Re p8905 = 1: The interface configuration (p8900 and following) is activated.
- Re p8905 = 2: The interface configuration (p8900 and following) is activated and saved to non-volatile memory.
- Re p8905 = 3: The interface configuration is reset to the factory setting at all points.
  - The factory settings for the interface configuration are loaded on activation (p8905 = 1) or at the next POWER ON.
## List of parameters

### p8908  Activate FTP / Act FTP

<table>
<thead>
<tr>

<td>1</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>

#### Description:
Activation of the FTP server.
Permits the FTP access to the /INSTALL/SINAMICS directory of the memory card.

#### Value:
- **0**: No
- **1**: Yes

#### Note:
- Activation of the FTP server becomes effective immediately.
- Deactivation only becomes effective after POWER ON of the Control Unit.
- Before commissioning the system for the first time, the FTP server is activated independent of the parameter setting.

### r8909  PN device ID / PN device ID

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN</strong></td>

SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A
### r8931[0...3] PN IP Address of Station active / PN IP of Stat act

- **Can be changed:** -
- **Data type:** Unsigned8
- **P-Group:** -
- **Min:** -
- **Description:** Displays the active IP address for the onboard PROFINET interface on the Control Unit.

### r8932[0...3] PN Default Gateway of Station active / PN Def Gateway act

- **Can be changed:** -
- **Data type:** Unsigned8
- **P-Group:** -
- **Min:** -
- **Description:** Displays the active default gateway for the onboard PROFINET interface on the Control Unit.

### r8933[0...3] PN Subnet Mask of Station active / PN Subnet Mask act

- **Can be changed:** -
- **Data type:** Unsigned8
- **P-Group:** -
- **Min:** -
- **Description:** Displays the active subnet mask for the onboard PROFINET interface on the Control Unit.

### r8935[0...1] PN MAC Address of Station / PN MAC of Station

- **Can be changed:** -
- **Data type:** Integer16
- **P-Group:** -
- **Min:** Max
- **Description:** Displays the MAC address for the onboard PROFINET interface on the Control Unit.

### r8936[0...1] PN state cyclic connections / PN stat cyc conn

- **Can be changed:** -
- **Data type:** Integer16
- **P-Group:** -
- **Min:** Max
- **Description:** Displays the state of the cyclic PROFINET connections.
- **Value:**
  - 0: Interrupted
  - 1: Not connected
  - 2: Connection starts to be established
  - 3: Module information expected
  - 4: Module information received
  - 5: Module address expected
  - For two connections (Shared Device) the display in the index depends on the sequence in which the connections are established.
Parameters

List of parameters

6: Module address received
7: Parameterization data expected
8: Parameterization data received
9: Evaluate parameterization data
10: Connection being established completion expected
11: Configured controller RUN expected
12: Configured controller STOP
13: Configured controller RUN

Dependency:
Refer to: p829

Note:
If value = 10:
If the connection remains in this state, then when using PROFINET IRT the following can apply:
- topology error (incorrect port assignment).
- synchronization missing.

r8937[0...5] PN diagnostics / PN diag

CU_G130_PN,
CU_G150_PN

Can be changed: -
Data type: Unsigned32
P-Group: -
Not for motor type: -
Min
Max

Calculated: -
Dynamic index: -
Units group: -
Scaling: -
Expert list: 1

Access level: 3
Func. diagram: -
Unit selection: -
Factory setting

Description:
Display to diagnose the cyclic PROFINET connections.

Index:
[0] = Number of cyclic connections
[1] = Number of send subslots of all connections
[2] = Number of send net data (bytes) of all connections
[3] = Number of receive subslots of all connections
[4] = Number of receive net data (bytes) of all connections
[5] = Connection type (RT, IRT)

Dependency:
Refer to: p829

Note:
Refer index 5:
Bit 0 = 1: there is at least one RT connection.
Bit 1 = 1: there is an IRT connection.

r8939 PN DAP ID / PN DAP ID

CU_G130_PN,
CU_G150_PN

Can be changed: -
Data type: Unsigned32
P-Group: -
Not for motor type: -
Min
Max

Calculated: -
Dynamic index: -
Units group: -
Scaling: -
Expert list: 1

Access level: 3
Func. diagram: -
Unit selection: -
Factory setting

Description:
Displays the PROFINET Device Access Point ID (DAP ID) for the onboard PROFINET interface.
The combination of device ID (r8909) and DAP ID uniquely identifies a PROFINET access point.

Note:
List of the SINAMICS DAP IDs:
20005 hex: CBE20 V4.3
20006 hex: CBE20 V4.4
20007 hex: CBE20 V4.5
20010 hex: CU310-2 PN V4.4
20014 hex: CU310-2 PN V4.5
20026 hex: CU305 PN V4.4
20030 hex: CU320-2 PN V4.4
20037 hex: CU320-2 PN V4.5
20047 hex: CU230-2 PN /CU240-2PN
20057 hex: CU250-2 PN

**Func. diagram:** -  
**Unit selection:** -  
**Expert list:** 1
p8943[0...3] CBE20 Subnet Mask of Station / CBE20 Subnet Mask

**Description:**
Sets the subnet mask for the Communication Board Ethernet 20 (CBE20).

**Note:**
The parameter is only valid for firmware version "PROFINET Device" (p8835 = 1) or "Ethernet/IP" (p8835 = 4).
The interface configuration (p8940 and following) is activated with p8945 = 2 (becomes effective after the next POWER ON).
The parameter is not influenced by setting the factory setting.

**Min** | **Max** | **Factory setting**
---|---|---
0 | 255 | 0

p8944 CBE20 DHCP Mode / CBE20 DHCP Mode

**Description:**
Sets the DHCP mode for the Communication Board Ethernet 20 (CBE20).

**Note:**
The parameter is only valid for firmware version "PROFINET Device" (p8835 = 1) or "Ethernet/IP" (p8835 = 4).
The interface configuration (p8940 and following) is activated with p8945 = 2 (becomes effective after the next POWER ON).
The parameter is not influenced by setting the factory setting.

**Min** | **Max** | **Factory setting**
---|---|---
0 | 255 | 0

p8945 CBE20 interface configuration / CBE20 IF config

**Description:**
Sets the activation of the interface configuration for the Communication Board Ethernet 20 (CBE20).
p8945 is automatically set to 0 at the end of an operation.

**Value:**
0: No function
2: Save and activate configuration
3: Delete configuration

**Note:**
The parameter is only valid for firmware version "PROFINET Device" (p8835 = 1) or "Ethernet/IP" (p8835 = 4). Otherwise, it is locked.
Re p8945 = 2:
The interface configuration (p8940 and following) is saved and activated after the next POWER ON.
Re p8945 = 3:
The factory setting of the interface configuration is loaded after the next POWER ON.

**Description:** Displays the active subnet mask for the Communication Board Ethernet 20 (CBE20).
### Parameters

#### List of parameters

1. **r8954**  
   **CBE20 DHCP Mode active / CBE20 DHCP act**  
   - Can be changed: -  
   - Calculated: -  
   - Access level: 3  
   - Data type: Unsigned8  
   - Dynamic index: -  
   - Units group: -  
   - Unit selection: -  
   - P-Group: -  
   - Scaling: -  
   - Expert list: 1  
   - Min: -  
   - Max: -  
   - Factory setting: -  
   - Description: Displays the active DHCP mode for the Communication Board Ethernet 20 (CBE20).

2. **r8955[0...5]**  
   **CBE20 MAC Address of Station / CBE20 MAC addr**  
   - Can be changed: -  
   - Calculated: -  
   - Access level: 3  
   - Data type: Unsigned8  
   - Dynamic index: -  
   - Units group: -  
   - Unit selection: -  
   - P-Group: -  
   - Scaling: -  
   - Expert list: 1  
   - Min: -  
   - Max: -  
   - Factory setting: -  
   - Description: Displays the MAC address for the Communication Board Ethernet 20 (CBE20).

3. **r8959**  
   **CBE20 DAP ID / CBE20 DAP ID**  
   - Can be changed: -  
   - Calculated: -  
   - Access level: 3  
   - Data type: Unsigned32  
   - Dynamic index: -  
   - Units group: -  
   - Unit selection: -  
   - P-Group: -  
   - Scaling: -  
   - Expert list: 1  
   - Min: -  
   - Max: -  
   - Factory setting: -  
   - Description: 
     - Displays the PROFINET Device Access Point ID (DAP ID) for PROFINET CBE20.  
     - The combination of device ID (r8909) and DAP ID uniquely identifies a PROFINET access point.  
   - Note:  
     - List of the SINAMICS DAP IDs:  
       - 20005 hex: CBE20 V4.3  
       - 20006 hex: CBE20 V4.4  
       - 20106 hex: CU310-2 PN V4.4  
       - 20206 hex: CU305 PN V4.4  
       - 20306 hex: CU320-2 PN V4.4

4. **r8960[0...2]**  
   **PN subslot controller assignment / PN subslot assign**  
   - Can be changed: -  
   - Calculated: -  
   - Access level: 3  
   - Data type: Unsigned8  
   - Dynamic index: -  
   - Units group: -  
   - Unit selection: -  
   - P-Group: -  
   - Scaling: -  
   - Expert list: 1  
   - Min: 0  
   - Max: 8  
   - Factory setting: -  
   - Description: Displays the controller assignment of a PROFINET subslot on the actual drive object.
### List of parameters

#### Index:
- [0] = Subslot 2 PROFIsafe
- [1] = Subslot 3 PZD telegram
- [2] = Subslot 4 PZD supplementary data

#### Dependency:
Refer to: r8961, r8962

#### Note:
Example:
If the parameter contains the value 2 in index [1], then this means that subslot 3 is assigned to controller 2.

#### r8961[0...3] PN IP Address Remote Controller 1 / IP Addr Rem Ctrl1

<table>
<thead>
<tr>
<th>Description</th>
<th>Can be changed:</th>
<th>Calculated:</th>
<th>Access level:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Displays the IP address of the first PROFINET controller connected with the device via PN onboard.</td>
<td>-</td>
<td>-</td>
<td>3</td>
</tr>
</tbody>
</table>

</tbody>
</table>

#### p8969 PROFIsafe wait for clock synchronization / PS wait sync

<table>
<thead>
<tr>
<th>Description</th>
<th>Can be changed:</th>
<th>Calculated:</th>
<th>Access level:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Setting for the behavior of a PROFIsafe communication connection depending on another isochronous communication connection.</td>
<td>U, T</td>
<td>-</td>
<td>3</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Recommend.</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>Min</td>
<td>0</td>
<td>No</td>
<td></td>
</tr>
<tr>
<td>Max</td>
<td>1</td>
<td>Yes</td>
<td></td>
</tr>
</tbody>
</table>

#### Value:
- 0: No
- 1: Yes

#### Recommend.:
A value of 1 is recommended, if problems are encountered with the PROFIsafe connection when synchronizing.

#### Note:
- A PROFIsafe connection is only accepted if an isochronous connection exists.
- Relevant, if PROFIsafe and isochronous operation are configured via various communication connections (e.g. PROFINET Shared Device).
**Parameters**

**List of parameters**

---

**r8970[0...2]**  
**CBE20 subslot controller assignment / CBE20 subslot**

- **B_INF (PROFINET)**
- **CU_G130_DP (PROFINET)**
- **CU_G130_PN (PROFINET)**
- **CU_G150_DP (PROFINET)**

**Description:** Data setting to read topology properties. The result is displayed depending on the property in r9207 or r9208.

**Re index 0:**
- 0: actual topology, 1: target topology

**Re index 1:**
- Sets the component number of the component involved.

**Re index 2:**
- 7: Name (r9208)
- 8: Component type (r9207)
- 9: Number of DRIVE-CLiQ connections (r9207)
- 11: Manufacturer (upper byte) and version (lower byte) (r9207)
- 12: Serial number (r9208)
- 13: Index (r9207)
- 15: Comparison level (r9207)
- 23: Order number (r9207)
- 24: Hardware serial number (r9208)
- 25: Collective order number (r9207)
- 28: Firmware version (r9207)
- 29: EPROM version (r9207)
- 30: Hardware version (r9207)

**Index:**
- [0] = Actual topology/target topology
- [1] = Component number
- [2] = Identifier/property

**Dependency:**
- Refer to: r9207, r9208

<td>1</td>
<td>-1</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the function for the component selected in p9210.

After initiating a function, the parameter is automatically reset again.

Example:
- Set the component number (p9210).
- Select the "flashing on" function (set p9211 = 1).

**Value:**
-1: Select function
0: Flashing off
1: Flashing on

**Dependency:**
Refer to: p9210

**Notice:**
If a task cannot be executed (e.g. the component number in p9210 does not exist), the following applies:
- There is no negative feedback signal.
- The value is reset anyway.

<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the monitoring clock cycle for safe motion monitoring.

**Dependency:**
Refer to: p9500, p9511

Refer to: F01652

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
The monitoring clock cycle must be a multiple of the actual value sensing clock cycle in p9311 or of the DP clock cycle.

A change only becomes effective after a POWER ON.

</tbody>
</table>

**Dependency:**
- Refer to: p9502

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
- For the commissioning software, after changing over the axis type, the units dependent on the axis type are only updated after a project upload.
- A change only becomes effective after a POWER ON.
Parameters

Description:
Sets the modulo value in degrees for rotary axes of the "Safe position" function.
This modulo value is taken into account when safely referencing as well as when transferring the safe position via PROFIsafe when the absolute position is enabled.
The modulo function is deactivated for a value = 0.

Dependency:
Refer to: F01681

Notice:
When the "SLP" function is activated, the modulo function must be deactivated as otherwise fault F30681 will be output.
If the absolute position is not enabled, then the parameterized modulo value is not taken into account.
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note:
SLP: Safely-Limited Position
SP: Safe Position

Description:
Sets the function specification for the safe motion monitoring.

Value:
0: Safety with encoder and accel_monitoring(SAM) / delay time
1: Safety without encoder and braking ramp(SBR)
3: Safety without encoder with accel_monitoring(SAM) / delay time

Dependency:
Refer to: C30711

Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Description:
Sets the function configuration for the safe motion monitoring functions.

Bit field:

<table>
<thead>
<tr>
<th>Bit</th>
<th>Signal name</th>
<th>1 signal</th>
<th>0 signal</th>
<th>FP</th>
</tr>
</thead>
<tbody>
<tr>
<td>00</td>

<td>Induction motor</td>
<td>-</td>
</tr>
<tr>
<td>03</td>
<td>SS1 drive-based braking response</td>
<td>without OFF3</td>
<td>with OFF3</td>
<td>-</td>
</tr>
</tbody>
</table>

Dependency:
Refer to: C01711

Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note:
Re bit 00:
When the function is activated, a safety-relevant acknowledgement (internal event acknowledge) can be performed by selecting/deselecting STO.
Re bit 01:
When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.
Re bit 02:
This bit defines the type of motor, which the sensorless safety technology evaluates.
For bit = 0, the sensorless motion monitoring function calculates the actual velocity for an induction motor.
For bit = 1, an actual velocity is calculated for a synchronous motor. This value depends on the setting in p0300.
Bit = 0 should be set if no motor is defined (p0300 = 0).
Re bit 03:
When the function is activated, the drive-based braking response (OFF3 ramp) after SS1/internal STOP B is deac-
tivated. Braking monitoring (SBR, SAM) is also deactivated.

p9309  SI Motion behavior during pulse suppression (Motor Module) / SI Mtn behav IL MM

<table>
<thead>
<tr>
<th>Vector</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the behavior of safety functions and their feedback during pulse suppression in encoderless operation.

**Dependency:**
Refer to: C01711

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Re bit 00:
If the OFF1 or the OFF3 ramp-down time is too low, or there is an insufficient clearance between the SSM limit speed, and the shutdown speed, then it is possible that the "speed under limit value" signal does not change to 1, because no speed actual value below the SSM limit was able to be identified before pulse cancellation. In this case, the OFF1 or the OFF3 ramp-down time or the clearance between the SSM limit speed and shutdown speed must be increased.

**Note:**
SDI: Safe Direction (safe motion direction)
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

Re bit 01:
For bit = 1 and with the SSM safety function activated, the following applies:
- During pulse suppression, monitoring is switched off and the feedback signal has a 0 signal level.
For bit = 0 and with the SSM safety function activated, the following applies:
- Monitoring continues during pulse suppression. The feedback signal last displayed before pulse suppression is kept and the system goes into the STO state.

Re bit 08:
For bit = 1 and with the SDI safety function activated, the following applies:
- During pulse suppression, monitoring is switched off and the status signal indicates inactive.
For bit = 0 and with the SDI safety function activated, the following applies:
- Monitoring continues during pulse suppression. The status signal indicates active and the system goes into the STO state.

p9311  SI Motion actual value sensing clock cycle (Motor Module) / SI Mtn act clk MM

<table>
<thead>
<tr>
<th>Vector</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>

<td>0.0000 [µs]</td>
<td>25000.0000 [µs]</td>
<td>0.0000 [µs]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the clock cycle time of the actual value sensing for safe motion monitoring.
Setting criteria if the motion monitoring functions are executed with an encoder:
- A slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for safe actual value sensing.
- The maximum permissible velocity which, when exceeded, can mean that errors occur during safe actual value sensing, is displayed in r9730.
- The isochronous PROFIBUS clock cycle is used as a clock cycle time for actual value sensing with a setting of 0 ms; the setting is 1 ms if isochronous operation is not being used.

Setting criteria if the motion monitoring functions are executed without an encoder:
- The actual value sensing clock cycle must be set to the same value as the current controller clock cycle (p0115).

Dependency:
Refer to: p0115, p9300, p9511
Refer to: F01652

Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Note:
The parameter is only active for drive-based motion monitoring functions (p9801.2 = 1).
The monitoring clock cycle from p9300 must be an integer multiple of this parameter.
In the case of motion monitoring functions with encoder, the clock cycle time for actual value sensing must be an integer multiple of the current controller clock cycle and at least 4 times slower than the current controller clock cycle. A factor of at least 8 is recommended.
The clock cycle time of the actual value sensing should not be set to more than 8 ms.
A change only becomes effective after a POWER ON.

**p9312**
Select SI Motion safety functions without selection (MM) / SI Mtn w/o sel MM

<table>

<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the upper limit for the function "Safely-Limited Position" (SLP).

**Index:**
- [0] = Limit value SLP1 (SE1)
- [1] = Limit value SLP2 (SE2)

**Dependency:**
Refer to: p9501, p9535, p9562
Refer to: C01714

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
For setting this limit value, the following applies: p9334[x] > p9335[x], x = 0, 1
A change only becomes effective after a POWER ON.
SLP: Safely-Limited Position / SE: Safe software limit switches
p9334[0...1]  |  SI Motion SLP upper limit values (Motor Module) / SI Mtn SLP uplimMM
---|---
**VECTOR_G** (Safety rot)  |  Can be changed: C2(95)  |  Calculated: -  |  Access level: 3
**Data type:** FloatingPoint32  |  Dynamic index: -  |  Func. diagram: 2822
**P-Group:** Safety Integrated  |  Units group: -  |  Unit selection: -
**Not for motor type:** -  |  Scaling: -  |  Expert list: 1
**Min**  |  -2147000.000 [°]  |  Factory setting
**Max**  |  2147000.000 [°]  |  100000.000 [°]
**Description:**
Sets the upper limit for the function "Safety-Limited Position" (SLP).

**Index:**
- [0] = Limit value SLP1 (SE1)
- [1] = Limit value SLP2 (SE2)

**Dependency:**
Refer to: p9501, p9535, p9562
Refer to: C01715

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
For setting this limit value, the following applies: p9334[x] > p9335[x], x = 0, 1
A change only becomes effective after a POWER ON.
SLP: Safety-Limited Position / SE: Safe software limit switches

p9335[0...1]  |  SI Motion SLP lower limit values (Motor Module) / SI Mtn SLPLowLimMM
---|---
**VECTOR_G**  |  Can be changed: C2(95)  |  Calculated: -  |  Access level: 3
**Data type:** FloatingPoint32  |  Dynamic index: -  |  Func. diagram: 2822
**P-Group:** Safety Integrated  |  Units group: -  |  Unit selection: -
**Not for motor type:** -  |  Scaling: -  |  Expert list: 1
- **Min**  |  -2147000.000 [mm]  |  Factory setting
- **Max**  |  2147000.000 [mm]  |  -100000.000 [mm]
**Description:**
Sets the lower limit for the function "Safety-Limited Position" (SLP).

**Index:**
- [0] = Limit value SLP1 (SE1)
- [1] = Limit value SLP2 (SE2)

**Dependency:**
Refer to: p9501, p9534, p9562
Refer to: C01715

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
For setting this limit value, the following applies: p9334[x] > p9335[x], x = 0, 1
A change only becomes effective after a POWER ON.
SLP: Safety-Limited Position / SE: Safe software limit switches
**Example Parameters**

**Description:** Sets the comparison algorithm for the encoder position monitoring functions. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

**Value:**
- 0: SMx20 safety algorithm
- 10: DQL binary safety algorithm
- 11: DQL linear non-binary safety algorithm
- 255: Safety algorithm unknown

**Dependency:** Refer to: p9541

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** For a linear axis, the tolerance is internally limited to 10 mm. For a "linear axis with rotating motor" and standard setting of p9320, p9321 and p9322, the standard setting of p9342 corresponds to a position tolerance of 36 ° on the motor side.

**Example Parameters**

**Description:** Sets the tolerance for the crosswise data comparison of the actual position between the two monitoring channels. For encoderless motion monitoring functions, the tolerance must be set to a higher value (12 degrees rotary and 1 mm linear).

**Dependency:** Refer to: p9542

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:** For a linear axis, the tolerance is internally limited to 10 mm. For a "linear axis with rotating motor" and standard setting of p9320, p9321 and p9322, the standard setting of p9342 corresponds to a position tolerance of 36 ° on the motor side.

</table>

**Description:**
Sets the velocity tolerance that is used for a 2-encoder system in crosswise comparison between the two monitoring channels.

**Dependency:**
Refer to: p9301, p9342, p9549

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
If the "actual value synchronization" is not enabled (p9301.3 = 0), then the value parameterized in p9342 is used as tolerance in the crosswise data comparison.

### p9349
**SI Motion slip velocity tolerance (Motor Module) / SI Mtn slip MM** (Safety rot)

**Description:** Sets the delay time for the SLS changeover or for the changeover from SLS to SOS for the function "Safely-Limited Speed" (SLS). When transitioning from a higher to a lower safely-limited velocity/speed stage or to the safe operating stop (SOS), within this delay time, the "old" velocity stage remains active. Even if SLS or SOS is activated from non safety-related operation, then this delay is still applied.

**Dependency:** Refer to: p9551

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SLS: Safely-Limited Speed
SOS: Safe Operating Stop

**Description:** Sets the time after which the pulses must have been suppressed when initiating the test stop.

**Dependency:** Refer to: p9557
Refer to: C01798

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.

---

**p9358**

**Description:** Sets the maximum time for the acceptance test mode.
If the acceptance test mode takes longer than the selected time limit, then the mode is automatically terminated.

**Dependency:** Refer to: p9558
Refer to: C01799

**Notice:** This parameter is overwritten by the copy function of the safety functions integrated in the drive.
### List of parameters

#### p9360
**SI Motion pulse suppression shutdown velocity (Motor Module) / SI Mtn IL v_sh MM**

<table>
<thead>
<tr>
<th>VECTOG</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data type: FloatingPoint32</td>
<td>Dynamic index: -</td>
<td>Func. diagram: -</td>
<td></td>
</tr>
<tr>
<td>P-Group: Safety Integrated</td>
<td>Units group: -</td>
<td>Unit selection: -</td>

</tr>
<tr>
<td>0.00 [mm/min]</td>
<td>6000.00 [mm/min]</td>
<td>0.00 [mm/min]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the shutdown velocity for pulse suppression. Below this velocity "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A). In the case of encoderless motion monitoring functions, the parameter must be > 0 (recommended value: 10).

**Dependency:**
Refer to: p9356, p9560

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SS1: Safe Stop 1

#### p9360
**SI Motion pulse suppression shutdown speed (Motor Module) / SI Mtn IL n_sh MM**

<table>
<thead>
<tr>
<th>VECTOG (Safety rot)</th>
<th>Can be changed: C2(95)</th>

<td></td>
</tr>
<tr>
<td>0.00 [rpm]</td>
<td>6000.00 [rpm]</td>
<td>0.00 [rpm]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the shutdown speed for the pulse suppression. Below this speed "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A).

**Dependency:**
Refer to: p9356, p9560

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SS1: Safe Stop 1

#### p9362[0...1]
**SI Motion SLP stop response (Motor Module) / SI mtn SLP stop MM**

<table>
<thead>
<tr>
<th>VECTOG</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data type: Integer16</td>

<td></td>
</tr>
<tr>
<td>Min</td>
<td>Max</td>
<td>Factory setting</td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>14</td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the stop response for the function "Safety-Limited Position" (SLP).

**Value:**
0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

**Index:**
[0] = Limit value SLP1 (SE1)
[1] = Limit value SLP2 (SE2)

**Dependency:**
Refer to: p9534, p9535

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SLP: Safely-Limited Position
**Parameters**

**List of parameters**

---

### p9363[0...3]

**SI Motion SLS stop response (Motor Module) / SI Mtn SLS Stop MM**

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data type: Integer16</td>
<td>Dynamic index: -</td>
<td>Func. diagram: -</td>
<td></td>
</tr>
<tr>
<td>P-Group: Safety Integrated</td>
<td>Units group: -</td>
<td>Unit selection: -</td>
<td></td>
</tr>
<tr>
<td>Not for motor type: -</td>
<td>Scaling: -</td>
<td>Expert list: 1</td>
<td></td>
</tr>
<tr>
<td>Min</td>
<td>Max</td>
<td>Factory setting</td>
<td></td>
</tr>
<tr>
<td>0</td>
<td>14</td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the stop response for the function "Safely-Limited Speed" (SLS).
These settings apply to the individual limit values for SLS.
In the case of encoderless motion monitoring (p9306 = 1), only a value of 0 or 1 is permitted.

**Value:**
- 0: STOP A
- 1: STOP B
- 2: STOP C
- 3: STOP D
- 4: STOP E
- 10: STOP A with delayed pulse suppression when the bus fails
- 11: STOP B with delayed pulse suppression when the bus fails
- 12: STOP C with delayed pulse suppression when the bus fails
- 13: STOP D with delayed pulse suppression when the bus fails
- 14: STOP E with delayed pulse suppression when the bus fails

**Index:**
- [0] = Limit value SLS1
- [1] = Limit value SLS2
- [2] = Limit value SLS3
- [3] = Limit value SLP4

**Dependency:**
Refer to: p9331, p9380, p9563

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F).

---

### p9364

**SI Motion SDI tolerance (Motor Module) / SI Mtn SDI tol MM**

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>

<td></td>
</tr>
<tr>
<td>0.001 [mm]</td>
<td>360.000 [mm]</td>
<td>12.000 [mm]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the tolerance for the function "Safe motion direction" (SDI).
This motion in the monitored direction is still permissible before safety message C30716 is initiated.

**Dependency:**
Refer to: p9365, p9366
Refer to: C30716

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SDI: Safe Direction (safe motion direction)

---

### p9364

**SI Motion SDI tolerance (Motor Module) / SI Mtn SDI tol MM**

<table>
<thead>
<tr>
<th>VECTOR_G (Safety rot)</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>

<td></td>
</tr>
<tr>
<td>0.001 [']</td>
<td>360.000 [']</td>
<td>12.000 [']</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the tolerance for the function "Safe motion direction" (SDI).
This motion in the monitored direction is still permissible before safety message C30716 is initiated.
### p9365
**SI Motion SDI delay time (Motor Module) / SI Mtn SDI t MM**

**VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Min:** 0.00 [µs]
- **Max:** 600000000.00 [µs]
- **Access level:** 3

**Description:**
Sets the delay time for the function "Safe motion direction" (SDI). When selecting the SDI function, motion in the monitored direction is permissible as a maximum for this time; this means that this time can be used for braking existing motion.

**Dependency:**
Refer to: p9364, p9365

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SDI: Safe Direction (safe motion direction)

```
min Max Factory setting
0.00 [µs] 600000000.00 [µs] 100000.00 [µs]
```

### p9366
**SI Motion SDI stop response (Motor Module) / SI Mtn SDI Stop MM**

**VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** Integer16
- **P-Group:** Safety Integrated
- **Min:** 0
- **Max:** 14
- **Access level:** 3

**Description:**
Sets the stop response for the function "Safe motion direction" (SDI). This setting applies to both directions of motion.

In the case of encoderless motion monitoring (p9306 = 1), only a value of 0 or 1 is permitted.

**Value:**
0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

**Dependency:**
Refer to: p9364, p9365

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F).

SDI: Safe Direction (safe motion direction)

### p9368
**SI Motion SAM velocity limit (Motor Module) / SI Mtn SAM v_limitMM**

**VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Min:** 0.00 [mm/min]
- **Max:** 1000.00 [mm/min]
- **Access level:** 3

**Description:**
Sets the velocity tolerance limit for the "SAM" function.

```
0.00 [mm/min] 1000.00 [mm/min] 0.00 [mm/min]
```
SAM is de-activated once the set velocity limit has been undershot.

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
SAM: Safe Acceleration Monitor (safe acceleration monitoring)  
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)  
For p9568 = p9368 = 0, the following applies:  
The value in p9546/p9346 (SSM) is applied as the velocity limit for SAM.

### p9368  
**SI Motion SAM velocity limit (Motor Module) / SI Mtn SAM v_limMM**

<table>
<thead>
<tr>
<th>Can be changed:</th>
<th>C2(95)</th>
</tr>
</thead>
<tbody>

<td>Safety Integrated</td>
</tr>
<tr>
<td>Not for motor type:</td>
<td>-</td>
</tr>
</tbody>
</table>

**Min**: 0.00 [rpm]  
**Max**: 1000.00 [rpm]  
**Factory setting**: 0.00 [rpm]

**Description:**
Sets the velocity tolerance limit for the "SAM" function.

**Notice:**
SAM is de-activated once the set velocity limit has been undershot.

**Note:**
SAM: Safe Acceleration Monitor (safe acceleration monitoring)  
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)  
For p9568 = p9368 = 0, the following applies:  
The value in p9546/p9346 (SSM) is applied as the velocity limit for SAM.

### p9370  
**SI Motion acceptance test mode (Motor Module) / SI Mtn acc_mod MM**

<table>
<thead>

</tr>
</tbody>
</table>

**Min**: 0000 hex  
**Max**: 00AC hex  
**Factory setting**: 0000 hex

**Description:**
Setting to select and de-select the acceptance test mode.

**Value:**
0: [00 hex] De-select the acceptance test mode  
172: [AC hex] Select the acceptance test mode

**Dependency:**
Refer to: p9358, r9371  
Refer to: C01799

**Note:**
Acceptance test mode can only be selected if the motion monitoring functions, which are integrated in the drives, are enabled (p9601.2/p9801.2).

### r9371  
**SI Motion acceptance test status (Motor Module) / SI Mtn acc_stat MM**

<table>
<thead>

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### p9382  SI Motion brake ramp delay time (Motor Module) / SI Mtn rp t_del MM

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -  
Access level: 3  
Data type: FloatingPoint32  
Dynamic index: -  
Func. diagram: -  
P-Group: Safety Integrated  
Units group: -  
Unit selection: -  
Not for motor type: -  
Scaling: -  
Expert list: 1  
Min: 1000.00 [us]  
Max: 99000000.00 [us]  
Factory setting: 250000.00 [us]

**Description:**  
Sets the delay time for monitoring the brake ramp.  
Monitoring of the brake ramp starts once the delay time has elapsed.

**Dependency:**  
Refer to: p9381, p9383

**Notice:**  
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### p9383  SI Motion brake ramp monitoring time (Motor Module) / SI Mtn rp t_mon MM

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -  
Access level: 3  
Data type: FloatingPoint32  
Dynamic index: -  
Func. diagram: -  
P-Group: Safety Integrated  
Units group: -  
Unit selection: -  
Not for motor type: -  
Scaling: -  
Expert list: 1  
Min: 500.00 [ms]  
Max: 3600000.00 [ms]  
Factory setting: 10000.00 [ms]

**Description:**  
Sets the monitoring time to define the brake ramp.  
The rate of rise of the brake ramp depends upon p9381 (reference value) and p9383 (monitoring time).

**Dependency:**  
Refer to: p9381, p9382

**Notice:**  
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### p9385  SI Motion fault tolerance actual value sensing sensorless (MM) / SI mtn Sl to sl MM

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -  
Access level: 3  
Data type: Integer32  
Dynamic index: -  
Func. diagram: -  
P-Group: Safety Integrated  
Units group: -  
Unit selection: -  
Not for motor type: -  
Scaling: -  
Expert list: 1  
Min: -1  
Max: 4  
Factory setting: -1

**Description:**  
Sets the tolerance of the plausibility monitoring of the current and voltage angle.  
p9385 = 4 must be parameterized for synchronous motors.

**Dependency:**  
Refer to: p9507  
Refer to: C01711, F30681

**Notice:**  
This parameter is overwritten by the copy function of the safety functions integrated in the drive.  
Reducing this value can adversely affect the actual value sensing and the plausibility check.  
When the value is increased, this results in a longer evaluation delay.

**Note:**  
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).  
For a value of -1, for synchronous motors, the value 4 is used automatically for the calculation – and for induction motors, the value 0.

### p9386  SI Motion delay time of the evaluation sensorless (MM) / SI Mtn t_del SL MM

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -  
Access level: 3  
Data type: FloatingPoint32  
Dynamic index: -  
Func. diagram: -  
P-Group: Safety Integrated  
Units group: -  
Unit selection: -  
Not for motor type: -  
Scaling: -  
Expert list: 1  
Min: 5.00 [ms]  
Max: 1000.00 [ms]  
Factory setting: 100.00 [ms]

**Description:**  
Sets the evaluation delay for encoderless actual value sensing after pulse enable.  
The value should be greater than or equal to the motor magnetizing time.
### Dependency:
Refer to: C30711

### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

If this value is reduced, this can have a negative impact on the actual value acquisition and plausibility check – and result in Safety message C30711 with the message value 1041 or 1042.

When the value is increased, this results in a longer evaluation delay.

### Note:
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

#### p9387  
**SI Motion act val sensing encoderless filter time (Motor Module) / SI Mtn SL filt MM**

**VECTOR_G**  
**Can be changed:** C2(95)  
**Data type:** FloatingPoint32  
**P-Group:** Safety Integrated  
**Not for motor type:** -  
**Min** 0.00 [µs]  
**Max** 100000.00 [µs]  
**Factory setting** 25000.00 [µs]

### Description:
Sets the filter time for smoothing the actual value with sensorless actual value sensing.

### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### Note:
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

#### p9388  
**SI Motion act val sensing encoderless min current (Motor Module) / SI Mtn SL _min MM**

**VECTOR_G**  
**Can be changed:** C2(95)  
**Data type:** FloatingPoint32  
**P-Group:** Safety Integrated  
**Not for motor type:** -  
**Min** 0.00 [%]  
**Max** 100.00 [%]  
**Factory setting** 10.00 [%]

### Description:
Sets the minimum current for encoderless actual value sensing in reference to 10 mA (i.e. when 1 % = 10 mA).

- The value must be increased if C30711 has occurred with message value 1042.
- The value must be decreased if C30711 has occurred with message value 1041.

### Dependency:
Refer to: C30711

### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### Note:
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

#### p9389  
**SI Motion voltage tolerance acceleration (Motor Module) / SI Mtn U tol MM**

**VECTOR_G**  
**Can be changed:** C2(95)  
**Data type:** FloatingPoint32  
**P-Group:** Safety Integrated  
**Not for motor type:** -  
**Min** 10.00 [%]  
**Max** 3300.00 [%]  
**Factory setting** 100.00 [%]

### Description:
Sets the voltage tolerance for suppressing acceleration peaks.

An increase in this percentage value means that voltage peaks will need to have a higher amplitude when accelerating if they are not to affect actual value sensing.

- The value must be increased if C30711 with message value 1042 has occurred.
- The value must be lowered if acceleration procedures have led to an excessive Safety actual velocity.

### Dependency:
Refer to: C30711

### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### Note:
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

Parameters

List of parameters

r9406[0] = 0
--> All of the parameter values were able to be transferred error-free.
r9406[0...x] > 0
--> indicates the parameter number in the following cases:
- parameter, whose value was not able to be completely accepted.
- indexed parameter, where at least 1 index was not able to be accepted. The first index that is not transferred is displayed in r9407.

Dependency:
Refer to: r9407, r9408

Note:
All indices from r9406 to r9408 designate the same parameter.
r9406[x] parameter number, parameter not accepted
r9407[x] parameter index, parameter not accepted
r9408[x] fault code, parameter not accepted

- - -

Description: Displays the first index of the signal source being searched for.

Dependency: Refer to: r9481, r9482, r9483, p9484, r9485

Note: The signal source to be searched is set in p9484 (BICO-coded).
The search result is contained in r9482 and r9483 and is specified by the count (r9486) and the first index (r9486).

<table>

Description: Displays the number of signal sources from this drive to other drives/drive objects (Binector Output/Connector Output, BO/CO).

Dependency: Refer to: r9491, r9492, p9493
### r9491[0...9]

**Title:** BI/CI of BICO interconnections to other drives / BI/CI to drive

**Description:** Displays the signal receiver list (Binector Input/Connector Input, BI/CI) for the first interconnections between this drive and other drives/drive objects.

**Dependency:** Refer to: r9490, r9492, p9493

**Notice:** A drive cannot be deleted if this list is not empty! Otherwise, another drive would continue to attempt to read a signal from a drive that no longer existed.

**Note:** All indices of r9491 to p9493 designate the same interconnection.
r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.

**Can be changed:** -
**Calculated:** -
**Access level:** 3
**Data type:** Unsigned32
**Dynamic index:** -
**Func. diagram:** -
**P-Group:** Commands
**Units group:** -
**Unit selection:** -
**Not for motor type:** -
**Scaling:** -
**Expert list:** 1
**Min:** -
**Max:** -
**Factory setting:** -

### r9492[0...9]

**Title:** BO/CO of BICO interconnections to other drives / BO/CO to drive

**Description:** Displays the signal source list (Binector Output/Connector Output, BO/CO) for the first interconnections between this drive and other drives/drive objects.

**Dependency:** Refer to: r9490, r9491, p9493

**Notice:** A drive cannot be deleted if this list is not empty! Otherwise, another drive would continue to attempt to read a signal from a drive that no longer existed.

**Note:** All indices of r9491 to p9493 designate the same interconnection.
r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.

**Can be changed:** -
**Calculated:** -
**Access level:** 3
**Data type:** Unsigned32
**Dynamic index:** -
**Func. diagram:** -
**P-Group:** Commands
**Units group:** -
**Unit selection:** -
**Not for motor type:** -
**Scaling:** -
**Expert list:** 1
**Min:** -
**Max:** -
**Factory setting:** -

### p9493[0...9]

**Title:** Reset BICO interconnections to other drives / Reset BICO to drive

**Description:** Setting to reset the BICO interconnections to other drives. Each interconnection can be individually reset.

**Value:**
- 0: Set connection to 0
- 1: Set connection to 1 (100 %)
- 15: Finished

**Dependency:** Refer to: r9490, r9491, r9492

**Note:** All indices of r9491 to p9493 designate the same interconnection.
r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.

**Can be changed:** T
**Calculated:** -
**Access level:** 3
**Data type:** Integer16
**Dynamic index:** -
**Func. diagram:** -
**P-Group:** -
**Units group:** -

<tbody>
<tr>
<td>0</td>
<td>2</td>
<td>0</td>
</tr>
</tbody>
</table>

**Description:**
Sets the behavior when activating BICO interconnections to drive objects that are either not capable of operation or have been deactivated.

**Value:**
- 0: Inactive
- 1: Restore the interconnections from the list
- 2: Delete the interconnections from the list

**Dependency:**
Refer to: p9495, p9497, p9498, p9499  
Refer to: A01318, A01507

**Note:**
The BI/CI parameters involved are listed in p9498[0...29] (signal sink).
The associated BO/CO parameters are listed in p9499[0...29] (signal source).

After p9496 = 1, 2 the following applies:
- p9497 = 0
- p9496 = 0
### Parameters

**List of parameters**

<table>
<thead>
<tr>
<th>p9497</th>
<th>BICO interconnections to de-activated drive objects number / Interconn obj qty</th>

<td>25.00 [ms]</td>
<td></td>
<td>12.00 [ms]</td>
</tr>
</tbody>
</table>

**Description:**
Sets the monitoring clock cycle for safe motion monitoring.

**Dependency:**
Refer to: r2064, p9511
Refer to: F01652

**Note:**
A change only becomes effective after a POWER ON.

The monitoring clock cycle must be a multiple of the actual value sensing clock cycle in p9511 (dbSI) or of the DP clock cycle (ncSI).

**p9501**
**SI Motion enable safety functions (Control Unit) / SI Mtn enable CU**

<td>Enable</td>
<td>Inhibit</td>
</tr>
<tr>
<td>25</td>
<td>Enable transfer safe position via PROFIsafe</td>
<td>Enable</td>
<td>Inhibit</td>
</tr>
</tbody>
</table>

**Dependency:**
Refer to: F01682, F01683

**Note:**
A change only becomes effective after a POWER ON.

SDI: Safe Direction (safe motion direction)
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

**p9502**
**SI Motion axis type (Control Unit) / SI Mtn ax type CU**

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>

<tr>
<td></td>
<td>1</td>
<td></td>
<td>0</td>
</tr>
</tbody>
</table>

**Description:**
Sets the axis type (linear axis or rotary axis/spindle).

**Value:**
0: Linear axis
1: Rot axis/spindle

**Note:**
For the commissioning software, after changing over the axis type, the units dependent on the axis type are only updated after a project upload.
A change only becomes effective after a POWER ON.

</tr>
</tbody>
</table>

**Dependency:**
Refer to: p9501
Refer to: F01686

**Note:**
The "Safe Cam" function (SCA) can either be enabled using p9501 or p9503.
SCA: Safe Cam / SN: Safe software cam
Dependency: Refer to: p9501
Refer to: F01681

Notice: When the "SLP" function is activated, the modulo function must be deactivated as otherwise fault F01681 will be output.
If the absolute position is not enabled, then the parameterized modulo value is not taken into account.

Note: SLP: Safety-Limited Position
SP: Safe Position

**p9506**

### SI Motion function specification (Control Unit) / SI Mtn fct_spc CU

**VECTOR_G**

* Can be changed: C2(95)  
* Calculated: -  
* Access level: 3  

**Data type:** Integer16  
**Dynamic index:** -  
**Func. diagram:** -  

**P-Group:** Safety Integrated  
**Units group:** -  
**Unit selection:** -  

**Not for motor type:** -  
**Scaling:** -  
**Expert list:** 1  

**Min**  
**Max**  
**Factory setting**  
0  
3  
0

**Description:** Sets the function specification for the safe motion monitoring.

**Value:**  
0: Safety with encoder and accel_monitoring(SAM) / delay time  
1: Safety without encoder with braking ramp (SBR)  
3: Safety without encoder with accel_monitoring(SAM) / delay time

**Dependency:** Refer to: C01711

**p9507**

### SI Motion function specification (Control Unit) / SI Mtn config CU

**VECTOR_G**

* Can be changed: C2(95)  
* Calculated: -  
* Access level: 3  

**Data type:** Unsigned32  
**Dynamic index:** -  
**Func. diagram:** -  

**P-Group:** Safety Integrated  
**Units group:** -  
**Unit selection:** -  

**Not for motor type:** -  
**Scaling:** -  
**Expert list:** 1  
**Factory setting**  
0000 bin

**Description:** Sets the function configuration for the safe motion monitoring functions.

**Bit field:**

<table>
<thead>
<tr>
<th>Bit</th>
<th>Signal name</th>
<th>1 signal</th>
<th>0 signal</th>
<th>FP</th>
</tr>
</thead>
<tbody>
<tr>
<td>00</td>
<td>Extended message acknowledgement</td>
<td>Yes</td>
<td>No</td>
<td>-</td>
</tr>
<tr>
<td>01</td>
<td>Setpoint velocity limit for STOP F</td>
<td>No</td>
<td>Yes</td>
<td>-</td>
</tr>
<tr>
<td>02</td>
<td>Motor type sensorless actual value sensing</td>
<td>Synchronous motor</td>
<td>Induction motor</td>
<td>-</td>
</tr>
<tr>
<td>03</td>
<td>SS1 drive-based braking response</td>
<td>without OFF3</td>
<td>with OFF3</td>
<td>-</td>
</tr>
</tbody>
</table>

**Dependency:** Refer to: C01711

**Note:**

Re bit 00:  
When the function is activated, a safety-relevant acknowledgement (internal event acknowledge) can be performed by selecting/deselecting STO.
Re bit 01:  
When the function is activated, the active setpoint velocity limit (CO: r9733) is set to zero when STOP F is active.
Re bit 02:  
This bit defines the type of motor, which the sensorless safety technology evaluates.
For bit = 0, the sensorless motion monitoring function calculates the actual velocity for an induction motor.
For bit = 1, an actual velocity is calculated for a synchronous motor. This value depends on the setting in p0300.
Bit = 0 should be set if no motor is defined (p0300 = 0).
Re bit 03:  
When the function is activated, the drive-based braking response (OFF3 ramp) after SS1/internal STOP B is deactivated. Braking monitoring (SBR, SAM) is also deactivated.
### p9509
**SI Motion behavior during pulse suppression (Control Unit) / SI Mtn behav IL CU**

**VECTOR_G**

<table>
<thead>
<tr>
<th>Bit</th>
<th>Signal name</th>
<th>1 signal</th>
<th>0 signal</th>
<th>FP</th>
</tr>
</thead>
<tbody>
<tr>
<td>00</td>
<td>SSM during pulse suppression and sensor-less</td>
<td>Becomes inactive</td>
<td>Remains active</td>
<td>-</td>
</tr>
<tr>
<td>08</td>
<td>SDI during pulse suppression and sensor-less</td>
<td>Becomes inactive</td>
<td>Remains active</td>
<td>-</td>
</tr>
</tbody>
</table>

**Dependency:** Refer to: C01711

**Notice:**
- If the OFF1 or the OFF3 ramp-down time is too low, or there is an insufficient clearance between the SSM limit speed, and the shutdown speed, then it is possible that the "speed under limit value" signal does not change to 1, because no speed actual value below the SSM limit was able to be identified before pulse cancellation. In this case, the OFF1 or the OFF3 ramp-down time or the clearance between the SSM limit speed and shutdown speed must be increased.

**Note:**
- SDI: Safe Direction (safe motion direction)
- SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

**Description:** Sets the behavior of safety functions and their feedback during pulse suppression in encoderless operation.

### p9510
**SI Motion clock-cycle synchronous PROFIBUS master / SI Mtn sync master**

**VECTOR_G**

**Description:** Setting for clock cycle synchronous communication between PROFIdrive controller and Control Unit.

The parameter is only relevant, if the safety-relevant motion monitoring functions integrated in the drive have been enabled (p9601.2 = 1).

If a PROFIdrive controller exchanges process data in clock cycle synchronisation with the Control Unit, then p9510 must be set to 1. This also applies if the drive itself does not exchange process data in clock cycle synchronisation.

Examples for clock cycle synchronisation communication:
- clock-cycle synchronous control for the motion control (e.g. SIMOTION).
- clock-cycle synchronous PROFI safe master (e.g. SIMATIC S7-400F).

**Value:**
- 0: Communication not isochronous
- 1: Communication isochronous

**Dependency:** Refer to: C01711, A01796

**Notice:** As of firmware version 2.6, the parameter has no effect.
### p9511  SI Motion actual value sensing cycle clock (Control Unit) / SI Mtn act clk CU

| Description: | Sets the clock cycle time of the actual value sensing for safe motion monitoring. Setting criteria if the motion monitoring functions are executed with an encoder: - A slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for safe actual value sensing. - The maximum permissible velocity which, when exceeded, can mean that errors occur during safe actual value sensing, is displayed in r9730. - The isochronous PROFIBUS clock cycle is used as a clock cycle time for actual value sensing with a setting of 0 ms; the setting is 1 ms if isochronous operation is not being used. Setting criteria if the motion monitoring functions are executed without an encoder: - The actual value sensing clock cycle must be set to the same value as the current controller clock cycle (p0115). |
| Dependency: | Refer to: p0115, F01652 |
| Note: | The parameter is only active for drive-based motion monitoring functions (p9601.2 = 1). The monitoring clock cycle from p9500 must be an integer multiple of this parameter. In the case of motion monitoring functions with encoder, the clock cycle time for actual value sensing must be an integer multiple of the current controller clock cycle and at least 4 times slower than the current controller clock cycle. A factor of at least 8 is recommended. The clock cycle time of the actual value sensing should not be set to more than 8 ms. A change only becomes effective after a POWER ON. |

### p9512  Select SI Motion safety functions without selection (CU) / SI Mtn w/o sel CU

| Description: | Sets the safety functions without selection. The safety functions without selection are enabled with p9601.5/p9801.5. Using this parameter, the individual motion monitoring functions can then be selected (e.g. SLS, SDI positive, SDI negative), which should then be permanently selected. |
| Dependency: | Refer to: p9601, p9801, F01682 |
| Note: | A change becomes immediately effective after exiting the safety commissioning mode. SDI: Safe Direction (safe motion direction). SLS: Safely-Limited Speed |

Parameters

List of parameters

**p9513**

SI Motion non safety-relevant measuring steps POS1 (CU) / nsrPOS1

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** Unsigned32
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min**
  - 0
- **Max**
  - 4294967295

**Description:**
Sets the non safety-relevant measuring steps of position value POS1.

The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:**
Refer to: p0416, r0473, p9313

**Note:**
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9513 is automatically set the same as r0416 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9513 is checked to see that it matches p0416.

**p9514**

SI Motion absolute encoder linear measuring steps (CU) / Enc lin meas step

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** Unsigned32
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min**
  - 0 [nm]
- **Max**
  - 4294967295 [nm]

**Description:**
Sets the resolution of the absolute position for a linear absolute encoder.

The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:**
Refer to: p0422, r0469, p9314

**Note:**
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9514 is automatically set the same as r0422 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9514 is checked to see that it matches r0422.

**p9515**

SI Motion encoder coarse position value config (Control Unit) / SI Mtn s config CU

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** Unsigned32
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min**
  - -
- **Max**
  - 0000 0000 0000 0000 0000

**Description:**
Sets the encoder configuration for the redundant coarse position value.

The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Bit field:**

<table>

</tbody>
</table>

**Dependency:**
Refer to: r0474, p9315
Note:
For safe functions that are not enabled (p9501 = 0), the following applies:
- p9515 is automatically set the same as p0474 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9515 is checked to see that it matches p0474.

**p9516**
**SI Motion encoder configuration safety functions (Control Unit) / SI Mtn enc_cfg CU**

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -

<td>No</td>
<td>-</td>
</tr>
</tbody>
</table>

**Dependency:**
Refer to: p0404, p0410
Refer to: F01671

**Note:**
For safe functions that have not been enabled (p9501 = 0), the following applies:
- p9516.0 is automatically set the same as p0404.0 when the system boots.
- p9516.1 is automatically set the same as p0410.1 when the system boots.
For safety functions that are enabled (p9501 > 0), the following applies:
- p9516.0 is checked to identify whether it coincides with p0404.0.

**p9517**
**SI Motion linear scale grid division (Control Unit) / SI Mtn grid CU**

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -  
Access level: 3

**Data type:** FloatingPoint32  
Dynamic index: -  
Func. diagram: -

**P-Group:** Safety Integrated  
Units group: -  
Unit selection: -

**Not for motor type:** -  
Scaling: -  
Expert list: 1

**Min**  
Max  
Factory setting: 0.00 [nm] 250000000.00 [nm] 10000.00 [nm]

**Description:**
Sets the grid division for a linear motor encoder.

The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Dependency:**
Refer to: p0407, p9516
Refer to: F01671

**Note:**
For safety functions that have not been enabled (p9501 = 0), the following applies: When booting p9517 is automatically set the same as p0407.
For safety functions that are enabled (p9501 > 0), the following applies: p9517 is checked whether it coincides with p0407.

**p9518**
**SI Motion encoder pulses per revolution (Control Unit) / SI Mtn puls/rev CU**

**VECTOR_G**  
Can be changed: C2(95)  
Calculated: -  
Access level: 3

**Data type:** Unsigned32  
Dynamic index: -  
Func. diagram: -

**P-Group:** Safety Integrated  
Units group: -  
Unit selection: -

**Not for motor type:** -  
Scaling: -  
Expert list: 1

**Min:**  
Max  
Factory setting: 0 16777215 2048

**Description:**
Sets the number of encoder pulses per revolution for rotary motor encoders.

The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.
Parameters

List of parameters

Dependency: Refer to: p0408, p9516
Refer to: F01671

Note: For safety functions that have not been enabled (p9501 = 0), the following applies: When booting, p9518 is automatically set the same as p0408.
For safety functions that are enabled (p9501 > 0), the following applies: p9518 is checked whether it coincides with p0408.

p9519 | SI Motion fine resolution G1_XIST1 (Control Unit) / SI Mtn G1_XIST1 CU
VECTOR_G
Can be changed: C2(95)
Data type: Unsigned32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
18
11

Description:
Sets the fine resolution for G1_XIST1 in bits.
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

Dependency: Refer to: p0418
Refer to: F01671

Note: For safety functions that have not been enabled (p9501 = 0), the following applies: When booting, p9519 is automatically set the same as p0418.
For safety functions that are enabled (p9501 > 0), the following applies: p9519 is checked whether it coincides with p0418.

G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)

p9520 | SI Motion spindle pitch (Control Unit) / SI Mtn Sp_pitch CU
VECTOR_G
Can be changed: C2(95)
Data type: FloatingPoint32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
0.1000 [mm]
8388.0000 [mm]
10.0000 [mm]

Description:
Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder.

Notice: The fourth decimal point can be rounded-off depending on the size of the entered number (from 3 places before the decimal point).

p9521[0...7] | SI Motion gearbox enc (motor)/load denominator (Control Unit) / SI Mtn gear den CU
VECTOR_G
Can be changed: C2(95)
Data type: Unsigned32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
1
2147000000
1

Description:
Sets the denominator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load.

Index:
[0] = Gearbox 1
[1] = Gearbox 2
[7] = Gearbox 8

Dependency: Refer to: p9522

Notice: It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.
### List of parameters

#### p9522[0...7]
**SI Motion gearbox encoder (motor)/load numerator (Control Unit) / SI Mtn gear num CU**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Index</th>
<th>Dependency</th>
<th>Notice</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>p9522[0...7]</td>
<td>Sets the numerator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load.</td>
<td>[0]</td>
<td>Gearbox 1</td>
<td>It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.</td>
<td>p9521</td>
</tr>
<tr>
<td></td>
<td></td>
<td>[1]</td>
<td>Gearbox 2</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>[7]</td>
<td>Gearbox 8</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Dependency:** Refer to: p9521

**Notice:** It is not possible to change over the gearbox stages. Gearbox 1 (index 0) is always active.

**Note:** In the case of encoderless monitoring functions, the pole pair number must be multiplied by the numerator of the gearbox ratio.

Example:
- Gearbox ratio 1:4, pole pair number (r0313) = 2
  --> p9521 = 1, p9522 = 8 (4 x 2)

#### p9523
**SI Motion redundant coarse pos. value valid bits (Control Unit) / Valid bits CU**

<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Assigns the individual cams to the maximum of 4 cam tracks and defines the numerical value for the SGA "cam range".

p9538[0...29] = CBA dec

C = Assignment of the cam to the cam track.
Valid values are 1, 2, 3, 4.

BA = Numerical value for the SGA "cam range".
If the position lies in the range of this cam, the value BA is signaled to the safety-relevant logic via the SGA "cam range" of the cam track set using C.
Valid values are 0 ... 14. Each numerical value may only be used once for each cam track.
**Parameters**

**List of parameters**

Examples:

\[ p9538[0] = 207 \]

Cam 1 (index 0) is assigned cam track 2. If the position lies within the range of this cam, a value of 7 is entered in the SGA "cam range" of the second cam track.

\[ p9538[5] = 100 \]

Cam 6 (index 5) is assigned cam track 1. If the position lies within the range of this cam, a value of 0 is entered in the SGA "cam range" of the first cam track.

**Index:**

\[ [0] = \text{Track assignment SCA1} \]
\[ [1] = \text{Track assignment SCA2} \]
\[ [2] = \text{Track assignment SCA3} \]
\[ [3] = \text{Track assignment SCA4} \]

**Min**  
0  
255

**Max**  
255  
255

**Description:**  
Sets the comparison algorithm for the encoder position monitoring functions.  
The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.

**Value:**  
0: SMx20 safety algorithm  
10: DQL binary safety algorithm  
11: DQL linear non-binary safety algorithm  
255: Safety algorithm unknown

**Dependency:**  
Refer to: p0417, p9341

**Note:**  
For safe functions that are not enabled (p9501 = 0), the following applies:  
- p9541 is automatically set the same as r0417 when the system boots.  
For safety functions that are enabled (p9501 > 0), the following applies:  
- p9541 is checked to see that it matches r0417.

360.0000 [mm]  
0.1000 [mm]

**Max**  
360.0000 [mm]  
0.1000 [mm]

**Description:**  
Sets the tolerance for the crosswise data comparison of the actual position between the two monitoring channels.  
For encoderless motion monitoring functions, the tolerance must be set to a higher value (12 degrees rotary and 1 mm linear).

**Dependency:**  
Refer to: C01711

**Note:**  
For a linear axis, the tolerance is internally limited to 10 mm.  
For a "linear axis with rotating motor" and standard setting of p9520, p9521 and p9522, the standard setting of p9542 corresponds to a position tolerance of 36 ° on the motor side.

</tr>
</tbody>
</table>

**Description:**
Sets the filter time for the SSM feedback signal to detect standstill.

**Note:**
The filter time is effective only if the function is enabled (p9501.16 = 1). The parameter is included in the crosswise data comparison of the two monitoring channels. SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)
List of parameters

**Description:**
Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx).
When this limit value is undershot, the signal "SSM feedback signal active" (SGA n < n_x) is set.
For p9568 = 0, the value in p9546 is also applicable for the function "SAM".

**Caution:**
The following applies for p9506 = 3:
The "SAM" function is switched out if the selected threshold value is undershot.

**Note:**
F-DO: Failsafe Digital Output / SGA: Safety-related output
SAM: Safe Acceleration Monitor (safe acceleration monitoring)
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) / SGA n < nx: Safety-related output n < nx

</tbody>
</table>

| Dependency | Refer to: C01798, p9705, A01697, C01798 |
| Note       | STO: Safe Torque Off                   |

### Parameters

**p9557**  
**SI Motion pulse suppression test time (Control Unit) / SI Mtn IL t_test**  
Can be changed: C2(95)  
Data type: FloatingPoint32  
P-Group: Safety Integrated  
Not for motor type:  
Min: 0.00 [ms]  
Max: 10000.00 [ms]  
Factory setting: 100.00 [ms]

**Description:** Sets the time after which the pulses must have been suppressed when initiating the test stop.

**Dependency:** Refer to: C01798

**Note:** A change only becomes effective after a POWER ON.

**p9558**  
**SI Motion acceptance test mode time limit (Control Unit) / SI Mtn acc t CU**  
Can be changed: C2(95)  
Data type: FloatingPoint32  
P-Group: Safety Integrated  
Not for motor type:  
Min: 5000.00 [ms]  
Max: 100000.00 [ms]  
Factory setting: 40000.00 [ms]

**Description:** Sets the maximum time for the acceptance test mode.

**Dependency:** Refer to: C01799

**p9559**  
**SI Motion forced checking procedure timer (Control Unit) / SI Mtn dyn timer**  
Can be changed: C2(95)  
Data type: FloatingPoint32  
P-Group: Safety Integrated  
Not for motor type:  
Min: 0.00 [h]  
Max: 90000.00 [h]  
Factory setting: 8.00 [h]

**Description:** Sets the time interval for carrying out the forced checking procedure and testing the safety motion monitoring functions integrated in the drives.

**Dependency:** Refer to: p9705, A01697, C01798

**Note:** STO: Safe Torque Off

**p9560**  
**SI Motion pulse suppression shutdown velocity (Control Unit) / SI Mtn IL v_shutCU**  
Can be changed: C2(95)  
Data type: FloatingPoint32  
P-Group: Safety Integrated  
Not for motor type:  
Min: 0.00 [mm/min]  
Max: 60000.00 [mm/min]  
Factory setting: 0.00 [mm/min]

**Description:** Sets the shutdown velocity for pulse suppression.

**Dependency:** Refer to: p9556

</thead>
<tbody>
<tr>
<td>0</td>
<td>14</td>
<td>2</td>
</tr>
</tbody>
</table>

Description:

Sets the SLS-specific stop response for the function "Safely-Limited Speed" (SLS).

These settings apply to the individual limit values for SLS.

An input value of less than 5 signifies personnel protection, from 10 and upwards, machine protection.

In the case of encoderless motion monitoring (p9506/p9306 = 1, 3), only a value of 0 or 1 is permitted.

Value:

0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

Index:

\[[0] = \text{Limit value SLS1}\]
\[[1] = \text{Limit value SLS2}\]
\[[2] = \text{Limit value SLS3}\]
\[[3] = \text{Limit value SLP4}\]

Dependency:

Refer to: p9531, p9561, p9580

Note:

In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TMS4F).

SLS: Safely-Limited Speed / SG: Safely reduced speed

### p9564

**SI Motion SDI tolerance (Control Unit) / SI Mtn SDI tol CU**

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>

</thead>
<tbody>
<tr>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**

Sets the stop response for the function "Safe motion direction" (SDI). This setting applies to both directions of motion.

**Value:**

0: STOP A
1: STOP B
2: STOP C
3: STOP D
4: STOP E
10: STOP A with delayed pulse suppression when the bus fails
11: STOP B with delayed pulse suppression when the bus fails
12: STOP C with delayed pulse suppression when the bus fails
13: STOP D with delayed pulse suppression when the bus fails
14: STOP E with delayed pulse suppression when the bus fails

**Dependency:**

Refer to: p9564, p9565

Refer to: C01716

**Notice:**

In the case of encoderless motion monitoring (p9506 = 1), only a value of 0 or 1 is permitted.

**Note:**

In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F).

SDI: Safe Direction (safe motion direction)
### List of parameters

#### p9568

**SL Motion SAM velocity limit (Control Unit) / SI Mtn SAM v_limCU**

**VECTOR_G**

- **Can be changed:** C2(95)
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min:** 0.00 [mm/min]
- **Max:** 1000.00 [mm/min]
- **Factory setting:** 0.00 [mm/min]

**Description:** Sets the velocity tolerance limit for the "SAM" function.

SAM is de-activated once the set velocity limit has been undershot.

**Note:**
- SAM: Safe Acceleration Monitor (safe acceleration monitoring)
- SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

For p9568 = p9368 = 0, the following applies:

The value in p9546/p9346 (SSM) is applied as the velocity limit for SAM.

#### p9568

**SL Motion SAM velocity limit (Control Unit) / SI Mtn SAM v_limCU**

**VECTOR_G (Safety rot)**

- **Can be changed:** C2(95)  U, T
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min:** 0.00 [rpm]
- **Max:** 1000.00 [rpm]
- **Factory setting:** 0.00 [rpm]

**Description:** Sets the velocity tolerance limit for the "SAM" function.

SAM is de-activated once the set velocity limit has been undershot.

**Note:**
- SAM: Safe Acceleration Monitor (safe acceleration monitoring)
- SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

For p9568 = p9368 = 0, the following applies:

The value in p9546/p9346 (SSM) is applied as the velocity limit for SAM.

#### p9570

**SI Motion acceptance test mode (Control Unit) / SI Mtn Acc_mode**

**VECTOR_G**

- **Can be changed:** U, T
- **Data type:** Integer16
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min:** 0000 hex
- **Max:** 00AC hex

**Description:** Setting to select and de-select the acceptance test mode.

**Value:**
- 0: [00 hex] De-select the acceptance test mode
- 172: [AC hex] Select the acceptance test mode

**Dependency:**
- Refer to: p9558, r9571, p9601

**Note:**
- Acceptance test mode can only be selected if the safe motion monitoring functions are enabled.

#### r9571

**SI Motion acceptance test status (Control Unit) / SI Mtn acc_status**

**VECTOR_G**

- **Can be changed:** -
- **Data type:** Integer16
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min:** 0000 hex

**Description:** Displays the status of the acceptance test mode.

**Value:**
- 0: [00 hex] Acc_mode inactive
- 12: [0C hex] Acc_mode not possible due to POWER ON fault
Parameters
List of parameters

13: [0D hex] Acc_mode not possible due to incorrect ID in p9570
15: [0F hex] Acc_mode not possible due to expired Acc_timer
172: [AC hex] Acc_mode active

Dependency:
Refer to: p9558, p9570
Refer to: C01799

p9572 SI Motion reference position (Control Unit) / SI mtn rel_pos
VECTOR_G
Can be changed: U, T
Data type: FloatingPoint32
P-Group: Safety Integrated
Not for motor type: -
Min -737280.000 [mm]
Max 737280.000 [mm]
Access level: 3
Description: The reference position entered in this parameter, is used as safe absolute position when setting p9573.
If errors are identified when performing the plausibility checks, then message C01711 is output with message value 1003
Note: The unit depends on the selected axis type, linear or rotary axis, in p9502

p9572 SI Motion reference position (Control Unit) / SI mtn rel_pos
VECTOR_G (Safety rot)
Can be changed: U, T
Data type: FloatingPoint32
P-Group: Safety Integrated
Not for motor type: -
Min -737280.000 [°]
Max 737280.000 [°]
Access level: 3
Description: The reference position entered in this parameter, is used as safe absolute position when setting p9573.
If errors are identified when performing the plausibility checks, then message C01711 is output with message value 1003
Note: The unit depends on the selected axis type, linear or rotary axis, in p9502

p9573 SI Motion accept reference position (Control Unit) / SI mtn set_ref_pos
VECTOR_G
Can be changed: U, T
Data type: Integer16
P-Group: Safety Integrated
Not for motor type: -
Min 0
Max 122
Access level: 3
Description: The safe absolute position is rejected or newly set using this parameter.
If errors are identified when performing the plausibility checks, then message C1711 is output with message value 1003
Value: 0: No action
89: Set reference position at standstill
122: Declare reference position invalid
Dependency: Refer to: p9572

p9574 SI Motion safe position scaling (Control Unit) / SI mtn SP scal CU
VECTOR_G
Can be changed: C2(95)
Data type: Integer32
P-Group: Safety Integrated
Not for motor type: -
Min 1
Max 100000
Access level: 3
Description: Sets the scaling factor to transfer the safe position via PROFlsafe in the 16-bit notation.
Dependency: Refer to: r9713
Note: The parameter is only effective when PROFIsafe telegram 901 is selected.
By selecting a suitable scaling of the 32 bit position actual value (r9713[0]), it must be ensured that the scaled position actual value is not greater than 16 bit. The scaling is realized by dividing r9713[0] with this scaling factor.
If, during operation, a position actual value is determined, which cannot be scaled to the 16 bits, then message C0711 with value 7001 is output and safety stop response STOP F.

**p9580**

**SI Motion pulse suppression delay bus failure (Control Unit) / SI Mtn t to IL CU**

**VECTOR_G**

Can be changed: C2(95)  
Calculated:  
Access level: 3

Data type: FloatingPoint32  
Dynamic index: -  
Func. diagram: -

P-Group: Safety Integrated  
Units group: -  
Unit selection: -

Not for motor type: -

<th>Factory setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.00 [ms]</td>
<td>800.00 [ms]</td>
<td>0.00 [ms]</td>
</tr>
</tbody>
</table>

Description: Sets the delay time after which the pulses are safely suppressed after a bus failure.
Dependency: Refer to: p9561, p9563

Note: In the extended sense, a bus failure should be seen here as a communication error in the control signals of the safety functions (e.g. via PROFIsafe or TM54F).
The main use of the wait time is the ESR function (Extended Stop and Retract).

**p9581**

**SI Motion brake ramp reference value (Control Unit) / SI Mtn ramp ref CU**

**VECTOR_G**

Can be changed: C2(95)  
Calculated:  
Access level: 3

Data type: FloatingPoint32

</tbody>
</table>

Description: Sets the delay time for monitoring the brake ramp.
Monitoring of the brake ramp starts once the delay time has elapsed.
Dependency: Refer to: p9581, p9583
**Parameters**

**List of parameters**

### p9583 SI Motion brake ramp monitoring time (Control Unit) / SI Mtn rp t_mon CU

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Calculated:** -
- **Access level:** 3
- **Data type:** FloatingPoint32
- **Dynamic index:** -
- **Func. diagram:** -
- **P-Group:** Safety Integrated
- **Units group:** -
- **Unit selection:** -
- **Not for motor type:** -
- **Scaling:** -
- **Expert list:** 1
- **Min:** 0.50 [s]
- **Max:** 3600.00 [s]
- **Factory setting:** 10.00 [s]

**Description:**
Sets the monitoring time to define the brake ramp.

The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).

**Dependency:**
Refer to: p9581, p9582

### p9585 SI Motion fault tolerance actual value sensing sensorless (CU) / SI mtn Sl to SL CU

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Calculated:** -
- **Access level:** 3
- **Data type:** Integer32
- **Dynamic index:** -
- **Func. diagram:** -
- **P-Group:** Safety Integrated
- **Units group:** -
- **Unit selection:** -
- **Not for motor type:** -
- **Scaling:** -
- **Expert list:** 1
- **Min:** -1
- **Max:** 4
- **Factory setting:** -1

**Description:**
Sets the tolerance of the plausibility monitoring of the current and voltage angle p9585 = 4 must be parameterized for synchronous motors.

**Dependency:**
Refer to: r9787
Refer to: F01681, C01711

**Notice:**
Reducing this value can adversely affect the actual value sensing and the plausibility check.

When the value is increased, this results in a longer evaluation delay.

**Note:**
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

For a value of -1, for synchronous motors, the value 4 is used automatically for the calculation – and for induction motors, the value 0.

### p9586 SI Motion delay time of the evaluation sensorless (CU) / SI Mtn t_del SL CU

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Calculated:** -
- **Access level:** 3
- **Data type:** FloatingPoint32
- **Dynamic index:** -
- **Func. diagram:** -
- **P-Group:** Safety Integrated
- **Units group:** -
- **Unit selection:** -
- **Not for motor type:** -
- **Scaling:** -
- **Expert list:** 1
- **Min:** 5.00 [ms]
- **Max:** 1000.00 [ms]
- **Factory setting:** 100.00 [ms]

**Description:**
Sets the evaluation delay for encoderless actual value sensing after pulse enable.

The value should be greater than or equal to the motor magnetizing time.

**Dependency:**
Refer to: C01711

**Notice:**
If this value is reduced, this can have a negative impact on the actual value acquisition and plausibility check – and result in Safety message C01711 with the message value 1041 or 1042.

When the value is increased, this results in a longer evaluation delay.

**Note:**
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

### p9587 SI Motion act val sensing sensorless filter time (Control Unit) / SI Mtn SL filt CU

- **VECTOR_G**
- **Can be changed:** C2(95)
- **Calculated:** -
- **Access level:** 3
- **Data type:** FloatingPoint32
- **Dynamic index:** -
- **Func. diagram:** -
- **P-Group:** Safety Integrated
- **Units group:** -
- **Unit selection:** -
- **Not for motor type:** -
- **Scaling:** -
- **Expert list:** 1
- **Min:** 0.00 [ms]
- **Max:** 100.00 [ms]
- **Factory setting:** 25.00 [ms]

**Description:**
Sets the filter time for smoothing the actual value with sensorless actual value sensing.

**Note:**
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).
**List of parameters**

### p9588
**SI Motion act val sensing sensorless min current (Control Unit) / SI Mtn SL I_min CU**

**VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Min:** 0.00 [%]
- **Max:** 1000.00 [%]
- **Factory setting:** 10.00 [%]

**Description:**
Sets the minimum current for encoderless actual value sensing in reference to 10 mA (i.e. when 1 % = 10 mA).
- The value must be increased if C01711 has occurred with message value 1042.
- The value must be decreased if C01711 has occurred with message value 1041.

**Dependency:**
Refer to: r9785
Refer to: C01711

**Notice:**
Reducing this percentage value can adversely affect actual value sensing.

**Note:**
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

### p9589
**SI Motion voltage tolerance acceleration (Control Unit) / SI Mtn U tol CU**

**VECTOR_G**
- **Can be changed:** C2(95)
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Min:** 10.00 [%]
- **Max:** 3300.00 [%]
- **Factory setting:** 100.00 [%]

**Description:**
Sets the voltage tolerance for suppressing acceleration peaks.
An increase in this percentage value means that voltage peaks will need to have a higher amplitude when accelerating if they are not to affect actual value sensing.
- The value must be increased if C01711 with message value 1043 has occurred.
- The value must be lowered if acceleration procedures have led to an excessive Safety actual velocity.

**Dependency:**
Refer to: r9784
Refer to: C01711

**Note:**
This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

### r9590[0...3]
**SI Motion version safety motion monitoring (Control Unit) / SI Mtn version CU**

**VECTOR_G**
- **Can be changed:**
- **Data type:** Unsigned16
- **P-Group:** Safety Integrated
- **Min:**
- **Max:**
- **Factory setting:**

**Description:**
Displays the Safety Integrated version for the safe monitoring functions.

**Index:**
- [0] = Safety Version (major release)
- [1] = Safety Version (minor release)
- [2] = Safety Version (baselevel or patch)
- [3] = Safety Version (hotfix)

**Dependency:**
Refer to: r9770, r9870, r9890

**Note:**
Example:
r9590[0] = 2, r9590[1] = 60, r9590[2] = 1, r9590[3] = 0 --> SI Motion version V02.60.01.00
**List of parameters**

### Description:
Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Control Unit. Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used:

- **0000 hex:** Safety functions integrated in the drive inhibited (no safety function).
- **0001 hex:** Basic functions are enabled via onboard terminals (permissible for r9771.0 = 1).
- **0004 hex:** Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9771.5 = 1).
- **0005 hex:** Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9771.5 = 1).
- **0008 hex:** Basic functions are enabled via PROFIsafe (permissible for r9771.6 = 1).
- **0009 hex:** Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9771.6 = 1).
- **0024 hex:** Extended functions without selection are enabled (permissible for r9771.16 = 1).
- **0025 hex:** Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9771.16 = 1).

### Dependency:
Refer to: r9771, p9801

### Note:
A change always becomes effective only after a POWER ON. Exception: Changes to p9601.0 become effective immediately.

- **CU:** Control Unit
- **STO:** Safe Torque Off / **SH:** Safe standstill
- **SS1:** Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
- **SI:** Safety Integrated
- **SMM:** Safe Motion Monitoring
- **F-DI:** Failsafe Digital Input
- **F-DO:** Failsafe Digital Output

### p9602 SI enable Safe Brake Control (Control Unit) / SI enable SBC CU

**VECTOR_G**  
**Calculated:** -  
**Access level:** 3  
**Func. diagram:** 2814  
**Expert list:** 1

**Description:** Sets the enable signal for the function "Safe Brake Control" (SBC) on the Control Unit.

**Value:**  
- 0: Inhibit SBC  
- 1: Enable SBC

**Dependency:** Refer to: p9802

**Note:**  
The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9601 not equal to 0). It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake. The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical. It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

**CU:** Control Unit  
**SBC:** Safe Brake Control  
**SI:** Safety Integrated

**Description:**  
Sets the signal source for the following functions on the Control Unit:  
STO: Safe Torque Off / SH: Safe standstill  
SBC: Safe Brake Control  
SS1: Safe Stop 1 (time monitored)  

**Dependency:**  
Refer to: p9601  

**Note:**  
The following signal sources are permitted:  
- fixed zero (standard setting).  
- digital inputs DI 0 ... 7, 16, 20, 21 on the Control Unit 320-2 (CU320-2).  
- digital inputs DI 0 ... 3 on the Controller Extensions (CX32-2, NX10.3, NX15.3).  
- digital inputs DI 0 ... 3, 16 on the Control Unit 310-2 (CU310-2).  

It is not permitted to establish an interconnection to a digital input in the simulation mode.  
For a parallel circuit configuration of n power units, the following applies:  
p9620[0] = Signal source for power unit 1  
...  
p9620[n-1] = Signal source for power unit n

**p9621**  
**BI: SI Safe Brake Adapter signal source (Control Unit) / SI SBA S_src CU**

**Description:**  
Sets the delay times for activating and de-activating the Safe Brake Adapter relay.

---

© Siemens AG 2012 All Rights Reserved  
SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A
The relay-specific minimum delay times for evaluating the feedback signal contacts have to be set. They differ for the activation and de-activation of one and the same relay.

**Index:**
- [0] = Wait time activation
- [1] = Wait time deactivation

**Dependency:**
Refer to: p9822

**Note:**
For a crosswise data comparison between p9622 and p9822, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle.

### p9650: SI SGE changeover tolerance time (Control Unit) / SI SGE_chg tol CU

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>

</tr>
</tbody>
</table>

**Description:**
Sets the tolerance time to change over the safety-related inputs (SGE) on the Control Unit.

An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a crosswise data comparison during this tolerance time.

**Dependency:**
Refer to: p9850

**Note:**
For a crosswise data comparison between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated.

The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle.

SGE: Safety-related input (e.g. STO terminals)

### p9651: SI STO/SBC/SS1 debounce time (Control Unit) / SI STO t_debou CU

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>0.00 [ms]</td>
<td>100.00 [ms]</td>
<td>0.00 [ms]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the debounce time for the failsafe digital inputs used to control STO/SBC/SS1.

The debounce time is rounded to whole milliseconds. It specifies the maximum duration of a fault pulse at the failsafe digital inputs with no reaction/influence on the selection or deselection of the Safety Basic Functions.

**Example:**
Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed.

Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.

### p9652: SI Safe Stop 1 delay time (Control Unit) / SI Stop 1 t_del CU

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data type: FloatingPoint32</td>

<td></td>
</tr>
<tr>
<td>0.00 [s]</td>
<td>300.00 [s]</td>
<td>0.00 [s]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the delay time of the pulse suppression for the function "Safe Stop 1" (SS1) on the Control Unit to brake along the OFF3 down ramp (p1135).

**Recommend.:**
In order that the drive can completely ramp-down along the OFF3 ramp and a motor holding brake that is possibly available can close, then the delay time should be set as follows:

Motor holding brake parameterized: delay time >= p1135 + p1228 + p1217
Motor holding brake not parameterized: delay time >= p1135 + p1228

**Dependency:**
Refer to: p1135, p9852
Note: For a crosswise data comparison between p9652 and p9852, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle.

SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

---

### p9653  
**SI Safe Stop 1 drive-based braking response / SI SS1 OFF3**

*VECTOR_G*
- **Can be changed:** C2(95)
- **Data type:** Integer16
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min:** 0
- **Max:** 1
- **Value:**
  - 0: SS1 with OFF3
  - 1: SS1 without OFF3

**Description:**
Sets the drive-based braking response for the "Safe Stop 1" (SS1) function.

**Value:**
- 0: SS1 with OFF3
- 1: SS1 without OFF3

**Note:** SS1: Safe Stop 1 (Safe Stop 1, corresponds to Stop Category 1 acc. to EN60204)

---

### p9658  
**SI transition time STOP F to STOP A (Control Unit) / SI STOP F->A CU**

*VECTOR_G*
- **Can be changed:** C2(95)
- **Data type:** FloatingPoint32
- **P-Group:** Safety Integrated
- **Not for motor type:** -
- **Min:** 0.00 [ms]
- **Max:** 30000.00 [ms]
- **Value:**
  - 0: 0.00 [ms]
  - 1: 30000.00 [ms]

**Description:**
Sets the transition period from STOP F to STOP A on the Control Unit.

**Dependency:**
- Refer to: r9795, p9858
- Refer to: F01611

**Note:**
For a crosswise data comparison between p9658 and p9858, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle.

STOP F: Defect in a monitoring channel (error in the crosswise data comparison)
STOP A: Pulse suppression via the safety shutdown path

---

### p9659  
**SI forced checking procedure timer / SI FCP Timer**

*VECTOR_G*
- **Can be changed:** C2(95)

**Expert list:** 1  
**Min**  
**Max**  
**Factory setting** -

**Description:** Displays the actual load-side actual values of both monitoring channels and their difference. For rotary axes, the following unit applies: Millidegrees. For linear axes, the following unit applies: micrometers.

**Index:**

- [0] = Load-side actual value on the CU  
- [1] = Load-side actual value on the second channel  
- [2] = Load-side actual value difference CU - second channel  
- [3] = Load-side max. actual value difference CU - second channel  
- [4] = Load-side actual value as safe position via PROFIsafe

**Dependency:** Refer to: r9708, r9724

**Note:**

- The value of this parameter is displayed in r9708 with units (mm or degrees).
- The display is updated in the safety monitoring clock cycle.

#### Re index 0:

The display of the load-side position actual value on the Control Unit is updated in the monitoring clock cycle.

#### Re index 1:

The display of the load-side position actual value on the second channel is updated in the CDC clock cycle (r9724) and delayed by one CDC clock cycle.

#### Re index 2:

The difference between the load-side position actual value on the Control Unit and load-side position actual value in the second channel is updated in the CDC clock cycle (r9724) and delayed by one CDC clock cycle.

#### Re index 3:

The maximum difference between the load-side position actual value on the Control Unit and the load-side position actual value on the second channel.

#### Re index 4:

Displays the load-side position actual value when enabling the function "Safe position via PROFIsafe". The value is an average value from the values in index 0 and 1.

For a 16-bit notation, the value is influenced using the scaling factor (p9574/p9374). When the function is not enabled, the content corresponds to the value in index 0.

**Unit selection:** -  
**Not for motor type:** -  
**Scaling:** -  
**Expert list:** 1  
**Min**  
**Max**  
**Factory setting** - [mm/min]

**Description:** Displays the velocity actual values for the motion monitoring functions on the Control Unit.

**Index:**

- [0] = Load-side velocity actual value on the Control Unit  
- [1] = Actual SAM/SBR velocity limit on the Control Unit  
- [2] = Actual SLS velocity limit on the Control Unit

**Dependency:** Refer to: r9732

**Notice:**

This SLS velocity limit can, as a result of conversion into the internal monitoring format, deviate from the specified SLS velocity limit (see r9732).
**Parameters**

### List of parameters

**Note:**

The display is updated in the safety monitoring clock cycle.
For linear axes, the following unit applies: millimeters per minute
For rotary axes, the following unit applies: revolutions per minute

#### r9714[0...2]

**CO: SI motion diagnostics velocity / SI Mtn diag v**

| Description: | Displays the velocity actual values for the motion monitoring functions on the Control Unit. |
| Index: | 
| [0] = Load-side velocity actual value on the Control Unit |
| [1] = Actual SAM/SBR velocity limit on the Control Unit |

#### Note:
- Re r9719.0 and r9719.1:
  - These two bits must be considered together.
  - if SOS/SLS (SBH/SG) is de-selected using bit 0, then assignment of bit 1 is irrelevant.
  - if SOS/SLS (SBH/SG) is selected using bit 0, then a changeover is made between SOS (SBH) and SLS (SG) using bit 1.

SLP: Safely-Limited Position / SE: Safe software limit switches
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
SDI: Safe Direction (safe motion direction)

**Not for motor type:** -

**Min**

| - |

**Description:**
Re index 0:
Displays the message value that resulted in the STOP F on the drive.
Value = 0:
The Control Unit signaled a STOP F.
Value = 1 ... 999:
Number of the incorrect date in the crosswise data comparison between the monitoring channels.
Value >= 1000:
Additional diagnostic values of the drive.
Re index 1:
Displays the value of the Control Unit that resulted in the STOP F.
Re index 2:
Displays the value from the second channel that resulted in the STOP F.

**Index:**

- [0] = Message value for CDC
- [1] = Control Unit CDC actual value
- [2] = Components CDC actual value

**Dependency:**
Refer to: C01711

**Note:**
The significance of the individual message values is described in message C01711.

**CDC:** Crosswise Data Comparison

### r9730
**SI Motion Safe maximum velocity / SI mtn safe v_Max**

**VECTOR_G**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Can be changed:</td>
<td>-</td>
<td>Calculated: -</td>
</tr>
<tr>
<td>Data type:</td>
<td>FloatingPoint32</td>
<td>Dynamic index: -</td>
</tr>
<tr>
<td>P-Group:</td>
<td>Safety Integrated</td>
<td>Units group: -</td>
</tr>
<tr>
<td>Not for motor type:</td>
<td>-</td>
<td>Scaling: -</td>
</tr>
<tr>
<td>Min</td>
<td>- [mm/min]</td>
<td>Max</td>
</tr>
</tbody>
</table>

**Description:**
Displays the safe maximum velocity (on the load side) that is permissible for the safe motion monitoring functions as a result of the actual value sensing. This parameter indicates up to which load velocity the safe encoder actual values (redundant encoder coarse position) can still be correctly detected as a result of the particular encoder parameterization. This parameter is only of significance for enabled safety with encoder (otherwise "0").

**Note:**
If the value displayed is exceeded, message C01711 is output indicating relevant subsequent faults.

### r9731
**SI Motion Safe position accuracy / SI Mtn pos acc**

**VECTOR_G**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Can be changed:</td>
<td>-</td>
<td>Calculated: -</td>
</tr>
<tr>
<td>Data type:</td>
<td>FloatingPoint32</td>
<td>Dynamic index: -</td>
</tr>
<tr>
<td>P-Group:</td>
<td>Safety Integrated</td>
<td>Units group: -</td>
</tr>
<tr>
<td>Not for motor type:</td>
<td>-</td>
<td>Scaling: -</td>
</tr>
<tr>
<td>Min</td>
<td>- [mm]</td>
<td>Max</td>
</tr>
</tbody>
</table>

**Description:**
Displays the safe position accuracy (load side). As a result of the actual value sensing for safe motion monitoring functions, this accuracy can be achieved as the maximum.

**Note:**
The parameter is only of significance for enabled safety with encoder (otherwise "0").
**r9732**  
**SI Motion velocity resolution / SI Mtn v_res**

**VECTOR_G**

- **Can be changed:** -  
- **Calculated:** -  
- **Access level:** 3

**Data type:** FloatingPoint32  
**Dynamic index:** -  
**Func. diagram:** -

**P-Group:** Safety Integrated  
**Units group:** -  
**Unit selection:** -

**Not for motor type:** -  
**Scaling:** -  
**Expert list:** 1

- **Min** - [mm/min]  
- **Max** - [mm/min]  
- **Factory setting** - [mm/min]

**Description:** Displays the safe velocity resolution (load side). Setpoints for velocity limits or parameter changes for velocities below this threshold have no effect.

**Note:** This parameter does not provide any information about the actual accuracy of the velocity sensing. This depends on the type of actual value sensing, the gear factors as well as the quality of the encoder being used.

**r9733[0...2]**  
**CO: SI Motion setpoint speed limit effective / SI Mtn setp_lim**

**VECTOR_G**

- **Can be changed:** -  
- **Calculated:** -  
- **Access level:** 3

**Data type:** FloatingPoint32  
**Dynamic index:** -  
**Func. diagram:** 2820, 2861, 3630

**P-Group:** Safety Integrated  
**Units group:** 3_1  
**Unit selection:** p0505

**Not for motor type:** -  
**Scaling:** p2000  
**Expert list:** 1

- **Min** - [rpm]  
- **Max** - [rpm]  
- **Factory setting** - [rpm]

**Description:** Displays the necessary setpoint speed limit as a result of the selected motion monitoring functions. Contrary to the parameterization of the SI limit values, this parameter specifies the motor-side limit value and not the load-side limit value.

**Recommend.:** For the ramp-function generator, by appropriately interconnecting the speed limits p1051 and p1052 with r9733[0, 1], a drive-based setpoint velocity limiting can be realized.

**Index:**  
- [0] = Setpoint limiting positive  
- [1] = Setpoint limiting negative  
- [2] = Setpoint limit absolute

**Dependency:**  
For SLS: r9733[0] = p9531[x] x p9533 (converted from the load side to the motor side)  
For SDI negative: r9733[0] = 0  
For SLS: r9733[1] = - p9531[x] x p9533 (converted from the load side to the motor side)  
For SDI positive: r9733[1] = 0

[x] = Selected SLS stage  
Conversion factor from the motor side to the load side:  
- motor type = rotary and axis type = linear: p9522 / (p9521 x p9520)  
- otherwise: p9522 / p9521

Refer to: p9531, p9533

Description: Enters a new Safety Integrated password.
Parameters

List of parameters

Dependency: A change made to the Safety Integrated password must be acknowledged in the following parameter:
Refer to: p9763

p9763  SI password acknowledgement / SI ackn password
Can be changed: C2(95)  Calculated: -  Access level: 3
Data type: Unsigned32  Dynamic index: -  Func. diagram: 2800
P-Group: Safety Integrated  Units group: -  Unit selection: -
Not for motor type: -  Scaling: -  Expert list: 1
Min  Max  Factory setting
0000 hex  FFFF FFFF hex  0000 hex
Description: Acknowledges the new Safety Integrated password.
Dependency: Refer to: p9762
Note: The new password entered into p9762 must be re-entered in order to acknowledge.
p9762 = p9763 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.

r9765  SI Motion forced check procedure remaining time (Control Unit) / SI Mtn dyn remain
Can be changed: -  Calculated: -  Access level: 3
Data type: FloatingPoint32  Dynamic index: -  Func. diagram: -
P-Group: Safety Integrated  Units group: -  Unit selection: -
Not for motor type: -  Scaling: -  Expert list: 1
Min  Max  Factory setting
- [h]  - [h]  - [h]
Description: Displays the time remaining until the next dynamization and testing of the safety motion monitoring functions integrated in the drives.
The signal source to initiate the forced checking procedure is parameterized in p9705.
Dependency: Refer to: p9705
Refer to: r9769

r9768[0...7]  SI PROFINet receive control words (Control Unit) / SI Ps PZD recv CU
Can be changed: -  Calculated: -  Access level: 3
Data type: Unsigned16  Dynamic index: -  Func. diagram: -
P-Group: Safety Integrated  Units group: -  Unit selection: -
Not for motor type: -  Scaling: -  Expert list: 1
Min  Max  Factory setting
- - -
Description: Displays the received PROFINet telegram on the Control Unit.
Index:
[0] = PZD 1
[1] = PZD 2
[2] = PZD 3
[3] = PZD 4
[5] = PZD 6
[6] = PZD 7
[7] = PZD 8
Dependency: Refer to: r9769
Note: The PROFINet trailer at the end of the telegram is also displayed (2 words).
### r9769[0...7]
**SI PROFlsafe send status words (Control Unit) / SI Ps PZD send CU**

**Description:**
Displays the PROFIsafe telegram to be sent on the Control Unit.

**Index:**
- [0] = PZD 1
- [1] = PZD 2
- [2] = PZD 3
- [3] = PZD 4
- [4] = PZD 5
- [5] = PZD 6
- [6] = PZD 7
- [7] = PZD 8

**Dependency:**
Refer to: r9768

**Note:**
The PROFIsafe trailer at the end of the telegram is also displayed (2 words).

### r9770[0...3]
**SI version drive-integrated safety function (Control Unit) / SI version Drv CU**

**Description:**
Displays the Safety Integrated version for the drive-integrated safety functions on the Control Unit.

**Index:**
- [0] = Safety Version (major release)
- [1] = Safety Version (minor release)
- [2] = Safety Version (baselevel or patch)
- [3] = Safety Version (hotfix)

**Dependency:**
Refer to: r9870, r9890

**Example:**
\[ r9770[0] = 2, r9770[1] = 60, r9770[2] = 1, r9770[3] = 0 \] \rightarrow \text{Safety version V02.60.01.00}

### r9771
**SI common functions (Control Unit) / SI common fct CU**

**Description:**
Displays the Safety Integrated monitoring functions supported on the Control Unit and Motor Module.

</tr>
</tbody>
</table>
Dependency:
Refer to: r9872

Note:
Re bit 00:
When STO or "Safe pulse cancellation" is selected, the cause is displayed in bits 16 ... 20.
Re bit 01:
- For p9772.1 = 1 and p9772.19 = 0, an STO from the Safety Basic functions is active.
- For p9772.1 = 1 and p9772.19 = 1, safe pulse cancellation is active, if safety functions without selection are activated via p9601.2/p9801.2 = 1 and p9601.5/p9801.5 = 1.

Note:
If p9601.0 = 1 and p9601.2 = 1 and p9801.5 = 1 then for bit 0 and 1, the STO function applies.
Re bit 05:
When SS1 is selected, the cause is displayed in bits 22 and 23.
Re bit 18:
When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).
Re bit 19:
With SMM encoderless no actual value sensing is possible on account of OFF2.
With SMM with encoder no actual value sensing is possible on account of parking.
For Safety functions without selection, safe pulse cancellation to selected (p9772.19 = 1).
SMM: Safe Motion Monitoring
Re bit 22 and 23:
These bits show via which path the SS1 has been triggered, i.e. what has started the SS1 delay time.
If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

Parameters

List of parameters

Dependency:
Refer to: p9620, r9773

Notice:
If a drive belonging to a group is de-activated via p0105, then the signals in r9774 can no longer be correctly displayed (Remedy: Before de-activating, remove this drive from the group).

Note:
A group is formed by appropriately grouping the terminals for the function "Safe Torque Off" (STO). The status of a group of n drives is, for drives 1 to n - 1 displayed with a delay of one monitoring clock cycle; this is a system-related effect.

r9776
SI diagnostics / SI diagnostics

</tbody>
</table>

**Description:**
- Displays the time stamps for the checksums for tracking changes for Safety Integrated.
- The time stamps for the checksums for tracking changes (fingerprint for the "safety logbook" functionality) made to safety parameters are saved in parameters p9781[0] and p9781[1].

**Index:**
- [0] = SI time stamp for checksum to track functional changes
- [1] = SI time stamp for checksum to track hardware-specific changes

**Dependency:**
- Refer to: p9601, p9729, p9799
- Refer to: F01690

---

**Description:**
- Sets the field-generating current for sensorless actual value sensing of synchronous motors.
- The percentage value can adversely affect actual value sensing with synchronous motors. If the value is increased, this results in an increased motor power loss.

**Dependency:**
- Refer to: p9588
- Refer to: C01711

**Notice:**
- This parameter is only effective for encoderless actual value sensing (p9506/p9306 = 1, 3).

---

**Description:**
- Display to diagnose acceleration values of the encoderless actual values sensing.
- Shows the parameterized acceleration values of p9389/p9589.
- Shows the actually measured acceleration values of the encoderless actual value sensing

**Index:**
- [0] = Setpoint acceleration value
- [1] = Actual acceleration value

**Dependency:**
- Refer to: p9389, p9589

- **Units group:** -
- **Function diagram:** -
- **Scaling:** -
- **Min:** -
- **Max:** 0000 0000 bin
- **Factory setting:** -

**Description:**
Sets the enable signals for the safety functions integrated in the drive and the type of selection on the Motor Module.

Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used:

- **0000 hex:**
  - Safety functions integrated in the drive inhibited (no safety function).
- **0001 hex:**
  - Basic functions are enabled via onboard terminals (permissible for r9871.0 = 1).
- **0004 hex:**
  - Extended functions via Terminal Module 54F (TM54F) have been enabled (permissible for r9871.5 = 1).
- **0005 hex:**
  - Extended functions via Terminal Module 54F (TM54F) and the basic functions via onboard terminals have been enabled (permissible for r9871.5 = 1).
- **0008 hex:**
  - Basic functions are enabled via PROFIsafe (permissible for r9871.6 = 1).
- **0009 hex:**
  - Basic functions are enabled via PROFIsafe onboard terminals (permissible for r9871.6 = 1).
- **000C hex:**
  - Extended functions are enabled via PROFIsafe (permissible for r9871.4 = 1).
- **000D hex:**
  - Extended functions are enabled via PROFIsafe and basic functions via onboard terminals (permissible for r9871.4 = 1).
0024 hex:
Extended functions without selection are enabled (permissible for r9871.16 = 1).

0025 hex:
Extended functions without selection and basic functions via onboard terminals are enabled (permissible for r9871.16 = 1).

</tbody>
</table>

**Dependency:**
Refer to: p9601, r9871

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
MM: Motor Module.
SI: Safety Integrated.
SMM: Safe Motion Monitoring.
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204).
F-DI: Failsafe Digital Input.
F-DO: Failsafe Digital Output.

A change always becomes effective only after a POWER ON. Exception: Changes to p9801.0 become effective immediately.

### p9802
**SI enable Safe Brake Control (Motor Module) / SI enable SBC MM**
VECTOR_G

**Description:**
Sets the enable signal for the "Safe Brake Control" function (SBC) on the Motor Module.

0: Inhibit SBC
1: Enable SBC

**Dependency:**
Refer to: p9602

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9801 not equal to 0 and/or p9801 not equal to 0).

It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated

</tbody>
</table>

**Description:**
Sets the signal source for Safe Brake Adapter (SBA).

**Value:**
- 0: No Safe Brake Control (SBC) with Safe Brake Adapter (SBA) available.
- 9621/p9821 = r0722.x (x = 0, 1 ... 7)
- Safe Brake Adapter and Booksize unit (no Communication Interface Module (CIM)).
- Safe Brake Adapter and Chassis unit (CIM).

**Dependency:**
Refer to: p9601, p9802, p9821

**Notice:**
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

**Note:**
No difference is tolerated for a crosswise data comparison between p9621 and p9821.

To use the "Safe Brake Adapter" function the following must apply:
- p9601 = p9801 <> 0 and p9602 = p9802 = 1
### Description:
Sets the delay times for activating and de-activating the Safe Brake Adapter relay. The relay-specific minimum delay times for evaluating the feedback signal contacts have to be set. They differ for the activation and de-activation of one and the same relay.

### Index:
- \([0]\) = Wait time activation
- \([1]\) = Wait time deactivation

### Dependency:
Refer to: p9622

### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

### p9850 SI SGE changeover tolerance time (Motor Module) / SI SGE_chg tol MM

<table>
<thead>
<tr>
<th>VECTOR_G</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data type: FloatingPoint32</td>

</tr>
<tr>
<td>0.00 [µs]</td>
<td>2000000.00 [µs]</td>
<td>0.00 [µs]</td>
<td></td>
</tr>
</tbody>
</table>

#### Description:
Sets the tolerance time to change over the safety-related inputs (SGE) on the Motor Module. An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a crosswise data comparison during this tolerance time.

#### Dependency:
Refer to: p9650

#### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

#### Note:
For a crosswise data comparison between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle.

SGE: Safety-related input (e.g. STO terminals)

### p9851 SI STO/SBC/SS1 debounce time (Motor Module) / SI STO t_debou MM

<table>
<thead>
<tr>
<th>VECTOR_G</th>

</tr>
<tr>
<td>0.00 [µs]</td>
<td>100000.00 [µs]</td>
<td>0.00 [µs]</td>
<td></td>
</tr>
</tbody>
</table>

#### Description:
Sets the debounce time for the EP terminal of the Motor Module.

#### Notice:
This parameter is overwritten by the copy function of the safety functions integrated in the drive.

#### Note:
The debounce time is rounded to whole milliseconds. It specifies the maximum duration of a fault pulse at the fail-safe digital inputs with no reaction/influence on the selection or deselection of the Safety Basic Functions.

**Example:**
- Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed.
- Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.

**Dependency:** Refer to: r9772

**Notice:** If communication between the Control Unit and the Motor Module is interrupted (e.g. by switching off the Motor Module), this display parameter is no longer updated. The last transferred status of the Motor Module is displayed.

**Note:**
- Re bit 00: When STO is selected, the cause is displayed in bits 16 ... 18 and in bit 20.
- Re bit 05: When SS1 is selected, the cause is displayed in bits 22 and 23.
- Re bit 18: When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).
- SMM: Safe Motion Monitoring
  - Re bit 22, 23: These bits show via which path the SS1 was triggered, i.e. what has started the SS1 delay time.
  - If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.
  - Re bit 24: Only for parallel connection and active motion monitoring functions: Slave Motor Module ready for communication

SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A
### Description:
Displays the actual topology of the drive unit. The actual topology is sub-divided into several sections. Each of the following data is saved under an index.

General data on the topology:
- version
- attribute to compare the actual topology and target topology
- number of components

Data on a component:
- type component of the node ID of the component
- number of DRIVE-CLiQ sockets in the Node Identifier
- manufacturer and version of the Node Identifier
- serial number of the Node Identifier (4 indices)
- index of the component
- order number (8 indices)
- attribute to compare the actual topology and target topology of the component
- communications address
- number of port types
- port type
- number of ports of the port type
- communications address of the associated/linked component
- number of the associated/linked port
- communications address of the associated/linked component
- number of the associated port, etc.

Data on the next component:
- etc.

### Dependency:
Refer to: r9900

### Note:
Only for internal Siemens use.
The parameter is not displayed for the STARTER commissioning software.

<td>: Unsigned16</td>
</tr>
<tr>
<td><strong>P-Group:</strong></td>
<td>: Topology</td>
</tr>
<tr>
<td><strong>Min:</strong></td>
<td>: 0000 hex</td>
</tr>
</tbody>
</table>

**Description:**
Sets the target topology of the drive unit.

The target topology is sub-divided into several sections. Each of the following data is saved under an index.

**General data on the topology:**
- version
- attribute to compare the actual topology and target topology
- number of components

**Data on a component:**
- type component of the Node Identifier of the component
- number of DRIVE-CLiQ sockets in the Node Identifier
- manufacturer and version of the Node Identifier
- serial number of the Node Identifier (4 indices)
- index of the component
- order number (8 indices)
- attribute to compare the actual topology and target topology of the component
- component number
- number of port types
- port type
- number of ports of the port type
- component number of the associated/linked component
- number of the associated/linked port
- component number of the associated/linked component
- number of the associated port, etc.

**Data on the next component:**
- etc.

#### Dependency:
Refer to: p9902

#### Note:
The target topology can only be modified using the commissioning software.
The parameter is not displayed for the STARTER commissioning software.
Changes only become effective when the state of p0009 = 101 changes to 0 or 111.

<table>
<thead>
<tr>
<th>p9904</th>
<th><strong>Topology comparison, acknowledge differences / Topo_compare ackn</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Can be changed:</strong></td>
<td>: C1(1)</td>
</tr>
<tr>
<td><strong>Data type:</strong></td>
<td>: Unsigned32</td>
</tr>
<tr>
<td><strong>P-Group:</strong></td>
<td>: Topology</td>
</tr>
<tr>
<td><strong>Min:</strong></td>
<td>: 0000 hex</td>
</tr>
</tbody>
</table>

**Description:**
If, when comparing the actual topology and target topology, only error has occurred, that can be acknowledged, then using this parameter, a new comparison can be started - acknowledging the error in the target topology.

Differences that can be acknowledged:
- topology comparison, component shifted
- topology comparison, serial number of a component has been detected to be different (byte 3 = 1)
- topology comparison shows one component that is connected differently
The following parameter values are available:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>p9904 = 1</td>
<td>The procedure is started.</td>
</tr>
<tr>
<td>p9904 = 0</td>
<td>The procedure has been successfully completed.</td>
</tr>
<tr>
<td>p9904 = 1</td>
<td>The procedure has not been successfully completed.</td>
</tr>
</tbody>
</table>

The possible causes for an unsuccessful procedure are located in bytes 4, 3, 2.

**Byte 2:**
Number of structural differences.

**Byte 3:**
Number of differences that can be acknowledged (p9904).

**Byte 4:**
Number of differences. These differences can be resolved as follows:
- sets the topology comparison (p9906 or p9907/p9908).
- change over the actual topology.

The appropriate action should be selected corresponding to the message that is displayed/output.

**Note:**
In order to permanently accept the acknowledgement of the fault that can be resolved, then it must be saved in a non-volatile fashion (p0977).

### p9905 Device specialization / Specialization

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Can be changed:</td>
<td>C1(1)</td>
</tr>
<tr>
<td>Data type:</td>
<td>Unsigned16</td>
</tr>
<tr>
<td>P-Group:</td>
<td>Topology</td>
</tr>
<tr>
<td>Not for motor type:</td>
<td>-</td>
</tr>
<tr>
<td>Min</td>
<td>0</td>
</tr>
<tr>
<td>Max</td>
<td>2</td>
</tr>
<tr>
<td>Factory setting</td>
<td>0</td>
</tr>
</tbody>
</table>

**Access level:** 3

**Description:**
With p9905 = 1, the serial numbers and the hardware versions of all of the components are transferred from the actual topology into the target topology and a new comparison is started.

For this device specialization, the components of the target topology may only differ from those of the actual topology by the serial numbers.

With p9905 = 2, the serial numbers, the hardware versions and the order numbers of all of the components are transferred from the actual topology into the target topology and a new comparison is started.

For this device specialization, the components of the target topology may only differ from those of the actual topology by the serial numbers and order numbers.

**Note:**
- p9905 is automatically set to 0 at the end of the operation.
- In order to permanently accept the data, it is necessary to save in a non-volatile fashion (p0977).

### p9906 Topology comparison, comparison stage of all components / Topo_cmpr tot comp

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Can be changed:</td>
<td>C1(1)</td>
</tr>
<tr>
<td>Data type:</td>
<td>Integer16</td>
</tr>

</tr>
<tr>
<td>Min</td>
<td>0</td>
</tr>
<tr>
<td>Max</td>
<td>99</td>
</tr>
<tr>
<td>Factory setting</td>
<td>0</td>
</tr>
</tbody>
</table>

**Access level:** 3

**Description:**
Sets the type of comparison between the actual topology and target topology.

The comparison is started by setting the required value.

**Value:**
0: High: Compares the complete electronic rating plate
1: Average: Compares the component type and the Order number
2: Low: Compares the component type
3: Minimum: Compares the component class
99: Topology has different comparison stages

**Note:**
The electronic rating plate comprises the following data:
- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
### Parameters

#### List of parameters

- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:

- **p9906 = 0**: Component type, Order No., Hardware version, Manufacturer, Serial No.
- **p9906 = 1**: Component type, Order No.
- **p9906 = 2**: Component type
- **p9906 = 3**: Component class (e.g. Sensor Module or Motor Module)

| **99**                           | 0                        |

#### Description:

Sets the type of comparison of a component in the target topology with the actual topology.

The comparison is started by setting the required value.

#### Value:

- **0**: High: Compares the complete electronic rating plate
- **1**: Average: Compares the component type and the Order number
- **2**: Low: Compares the component type
- **3**: Minimum: Compares the component class
- **99**: Topology has different comparison stages

#### Dependency:

Refer to: p9907

#### Note:

The electronic rating plate comprises the following data:

- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:

- **p9908 = 0**: Component type, Order No., Hardware version, Manufacturer, Serial No.
- **p9908 = 1**: Component type, Order No.
- **p9908 = 2**: Component type
- **p9908 = 3**: Component class (e.g. Sensor Module or Motor Module)
### Parameters

#### List of parameters

<table>
<thead>
<tr>

</tbody>
</table>

**Description:**
For p9909 = 1, the serial number and the hardware version of the new replaced component is automatically transferred from the actual topology into the target topology and then saved in a non-volatile fashion.

For the components that have been replaced, the electronic rating plate must match as far as the following data is concerned:
- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")

For p9909 = 0, serial numbers and hardware versions are not automatically transferred. In this case, the transfer must be made using p9904.

**Dependency:**
Refer to: p9904, p9905

**Note:**
The modified target topology is automatically saved in a non-volatile fashion when the drive object runs-up (e.g. after a POWER ON).

Special case for Control Unit and option slot modules:
When replacing these components, independent of p9909, the serial number and hardware version are automatically transferred and saved in a non-volatile fashion.

</tr>
<tr>
<td><strong>...</strong></td>
<td><strong>Index 9 = license key character 10 (e.g. 0 dec)</strong></td>
</tr>
</tbody>
</table>

**Description:**
- Enters the license key for this drive unit.
- Example of the license key:
  - EACZ-QBCA = 69 65 67 90 45 81 66 67 65 dec (ASCII characters)
  - Index 0 = license key character 1 (e.g. 69 dec)
  - Index 1 = license key character 2 (e.g. 65 dec)
  - ...
  - Index 8 = license key character 9 (e.g. 65 dec)
  - Index 9 = license key character 10 (e.g. 0 dec)

**Dependency:**
- Refer to: r7843, p9921
- Refer to: A13000, A13001, F13010

**Notice:**
- An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.
- With the STARTER commissioning software, ASCII characters are not entered coded, i.e. the characters of the license key can be entered as printed in the Certificate of License. In this case, STARTER codes the characters.

**Note:**
- For an invalid license key, all the indices have the value 0 dec.
- Only the ASCII characters contained in a license key can be entered ("1" to "9", "A" to "H", "K" to "N", "P" to "Z" as well as ".").
- When manually changing p9920[x] to the value 0 dec, all the values of all the following indices are also set to 0 dec.
- After entering the license key, the license key must be activated (p9921).
- If the licensing is not adequate, then the following alarm is displayed together with LED:
  - A13000 --> licensing not sufficient
  - LED READY --> flashes green/red with 0.5 Hz

---

</tbody>
</table>

**Description:**
- Activates the entered license key.
- The following is executed when activating the license key.
- the checksum of the entered license key is checked.
- the entered license key is saved in a non-volatile fashion on the memory card.
- re-enter the license key.

Value:
0: Inactive
1: Activate start license key

Dependency:
Refer to: p9920
Refer to: A13000, A13001, F13010

Note:
Before activation, the license key entered using parameter p9920 is checked. If this check identifies an error, activation is rejected. In this case, writing a 1 to p9921 is rejected.
When the license key has been activated, p9921 is automatically set to 0.

**Description:**

- Displays the system utilization.
- If the utilization is greater than 100%, fault F01054 is output.

**Index:**

- \[0\] = Reserved
- \[1\] = Computing time utilization
- \[2\] = Reserved
- \[3\] = Reserved
- \[4\] = Reserved
- \[5\] = Largest total utilization
- \[6\] = Reserved
- \[7\] = Reserved

**Dependency:**

Refer to: r9979, r9980
Refer to: F01054, F01205

**Note:**

- Re index 1: The value shows the total computing time load of the system. Re index 5: The total utilization is determined using all sampling times used. The largest total utilization is mapped here. The sampling time with the largest total utilization is displayed in r9979. Total utilization: Computing time load of sampling time involved including load from higher-priority sampling times (interrupts).

<td>Min</td>
<td>Max</td>
<td>Factory setting</td>
</tr>
<tr>
<td>0000 hex</td>
<td>FFFF FFFF hex</td>
<td>0000 hex</td>
<td></td>
</tr>
</tbody>
</table>

**Description:** Sets the actual Node Identifier (word 3, bit 64 ... 95) for the Motor Modules.

**Index:**

[0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

**Dependency:** Refer to: p10012, p10013

**Note:**

The complete Node Identifier (96 bit) is represented in p10012, p10013 and p10014.

### p10017 SI digital inputs debounce time / SI DI t_debounce

<table>
<thead>
<tr>
<th>TM54F_MA, TM54F_SL</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data type: FloatingPoint32</td>
<td>Dynamic index: -</td>
<td>Units group: -</td>
<td>Unit selection: -</td>
</tr>
<tr>
<td>P-Group: Safety Integrated</td>
<td>Scaling: -</td>
<td>Expert list: 1</td>
<td></td>
</tr>
<tr>
<td>Not for motor type: -</td>
<td>Min</td>
<td>Max</td>
<td>Factory setting</td>
</tr>
<tr>
<td>1.00 [ms]</td>
<td>100.00 [ms]</td>
<td>1.00 [ms]</td>
<td></td>
</tr>
</tbody>
</table>

**Description:** Sets the debounce time for digital inputs.

The debounce time is accepted rounded off to whole milliseconds.
The debounce time acts on the following digital inputs:
- Fail-safe digital inputs (F-DI).
- Single-channel digital inputs (DI).

**Note:**
Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed.
Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.
The debounce result can be read in r10051.

### p10020[0...3] SI special operating mode selection / SI spec op sel

<table>
<thead>
<tr>
<th>TM54F_MA</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>TM54F_SL</td>
<td>Data type: Unsigned32</td>
<td>Dynamic index: -</td>
<td>Func. diagram: -</td>

<td>P-Group: Safety Integrated</td>
<td>Units group: -</td>
<td>Unit selection: -</td>
<td></td>
</tr>
<tr>
<td>Not for motor type: -</td>
<td>Scaling: -</td>
<td>Expert list: 1</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the special operating mode for the operating mode "function interface".
0 = Inactive
1 = Safe Operating Stop with braking (SS2)
2 = Safe Operating Stop without braking (SOS)
3 = Safely reduced speed without standstill (SLS)
4 = Safely reduced speed with agreement (SS2 --> SLS)

**Index:**
[0] = Drive group 1
[1] = Drive group 2
[2] = Drive group 3
[3] = Drive group 4

**Dependency:**
Refer to: p10008

**Note:**
Parameter being prepared. For this firmware version, the function interface is not supported.

### p10021[0...3] SI Emergency Stop stop response / SI Emergency Stop

<table>
<thead>
<tr>
<th>TM54F_MA</th>
<th>Can be changed: C2(95)</th>
<th>Calculated: -</th>
<th>Access level: 4</th>
</tr>
</thead>
<tbody>
<tr>
<td>TM54F_SL</td>

<td>Units group: -</td>
<td>Unit selection: -</td>
<td></td>
</tr>
<tr>
<td>Not for motor type: -</td>
<td>Scaling: -</td>
<td>Expert list: 1</td>
<td></td>
</tr>
</tbody>
</table>

**Description:**
Sets the stop response for the drive group for Emergency Stop.
The input terminal for Emergency Stop is set in p10038.
0 = Stop reaction STO
1 = Stop reaction SS1
2 = Stop reaction SS2

**Index:**
[0] = Drive group 1
[1] = Drive group 2
[2] = Drive group 3
[3] = Drive group 4

**Dependency:**
Refer to: p10008, p10038

**Note:**
Parameter being prepared. For this firmware version, the function interface is not supported.
### p10022[0...3] SI STO input terminal / SI STO DI

**Description:**
Sets the input terminal for the "STO" function (operating mode "control interface").

**Value:**
- 0: Statically active
- 1: F-DI 0 (X521.2/3/6)
- 2: F-DI 1 (X521.4/5/7)
- 3: F-DI 2 (X522.1/2/7)
- 4: F-DI 3 (X522.3/4/8)
- 5: F-DI 4 (X522.5/6/9)
- 6: F-DI 5 (X531.2/3/6)
- 7: F-DI 6 (X531.4/5/7)
- 8: F-DI 7 (X532.1/2/7)
- 9: F-DI 8 (X532.3/4/8)
- 10: F-DI 9 (X532.5/6/9)
- 255: Statically inact

**Index:**
- [0] = Drive group 1
- [1] = Drive group 2
- [2] = Drive group 3
- [3] = Drive group 4

**Note:**
- If value = 0: No terminal assigned, safety function always active.
- If value = 255: No terminal assigned, safety function always inactive.

**F-DI:** Failsafe Digital Input

**STO:** Safe Torque Off

### p10023[0...3] SI SS1 input terminal / SI SS1 DI

**Description:**
Sets the input terminal for SS1 (operating mode "control interface").

**Value:**
- 0: Statically active
- 1: F-DI 0 (X521.2/3/6)
- 2: F-DI 1 (X521.4/5/7)
- 3: F-DI 2 (X522.1/2/7)
- 4: F-DI 3 (X522.3/4/8)
- 5: F-DI 4 (X522.5/6/9)
- 6: F-DI 5 (X531.2/3/6)
- 7: F-DI 6 (X531.4/5/7)
- 8: F-DI 7 (X532.1/2/7)
- 9: F-DI 8 (X532.3/4/8)
- 10: F-DI 9 (X532.5/6/9)
- 255: Statically inact

**Index:**
- [0] = Drive group 1
- [1] = Drive group 2
- [2] = Drive group 3
- [3] = Drive group 4
### Parameters

#### List of parameters

**Note:**
- If value = 0:
  - No terminal assigned, safety function always active.
- If value = 255:
  - No terminal assigned, safety function always inactive.

**F-DI:** Failsafe Digital Input

**SS1:** Safe Stop 1

<td></td>
</tr>
</tbody>
</table>

When this test mode is being used, and excessive resistance of the load between DO+ and DO- can lead to problems during the test stop. It is therefore important to make sure that the load resistance at an individual F-DO does not exceed 10 kOhm.

</tbody>
</table>

**Dependency:**
Refer to: p10017, p10040

**Note:**
If a safety function is assigned to an input (e.g. via p10022), then the following applies:
- logical "0": Safety function is selected
- logical "1": Safety function is de-selected
The interrelationship between the logical level and the external voltage level at the input depends on the parameterization (refer to p10040) of the input as either NC or NO contact and is aligned to the use of a safety function:
With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.
This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, de-selects the safety function.
With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.
This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V de-selects the safety function.

Description: Displays the events that lead to the transfer of failsafe signals to all drives assigned to the TM54F. If the second channel of the TM54F transmits failsafe signals, then these are synchronized to the other channel.

Possibilities of resolving the situation:
- error during test stop: correctly perform the test stop.
- internal software error: no possibility of resolving this problem, POWER ON.
- internal synchronization problem: no possibility of resolving this problem, POWER ON.
- all other causes: remove the cause of the error and carry out a safety-relevant acknowledgement (p10006).

r10056.0 CO/BO: SI Status / SI stat

TM54F_MA

Can be changed: -
Data type: Unsigned32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
Description: Displays the status of the Terminal Module 54F (TM54F).

Bit field: Bit | Signal name | 1 signal | 0 signal | FP |
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>

p10061 SI password input TM54F / SI password inp

TM54F_MA, TM54F_SL

Can be changed: T
Data type: Unsigned32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
Description: Enters the Safety Integrated password for the Terminal Module 54F (TM54F). This password is required to change the safety-relevant parameters.

p10062 SI password new TM54F / SI password new

TM54F_MA, TM54F_SL

Can be changed: C2(95)
Data type: Unsigned32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
Description: Enters the new Safety Integrated password for the Terminal Module 54F (TM54F).
Dependency: A change made to the Safety Integrated password must be acknowledged in the following parameter: Refer to: p10063

p10063 SI password acknowledgement TM54F / SI ackn password

TM54F_MA, TM54F_SL

Can be changed: C2(95)
Data type: Unsigned32
P-Group: Safety Integrated
Not for motor type: -
Min
Max
Description: Acknowledgement of the new Safety Integrated password for the Terminal Module 54F (TM54F).
Dependency: Refer to: p10062

Note: The new password entered into p10062 must be re-entered in order to acknowledge.

p10062 = p10063 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.

r10090[0...3] SI TM54F version / SI TM54F version

Description: Displays the Safety Integrated version for the Terminal Module 54F (TM54F).

Index:
- [0] = Safety Version (major release)
- [1] = Safety Version (minor release)
- [2] = Safety Version (baselevel or patch)
- [3] = Safety Version (hotfix)

Dependency: Refer to: r9390, r9590, r9770, r9870, r9890

Note: Example:
r10090[0] = 2, r10090[1] = 60, r10090[2] = 1, r10090[3] = 0 --> SI TM54F version V02.60.01.00

p60022 PROFIsafe telegram selection / Ps telegram_sel

Description: Sets the PROFIsafe telegram number.

Value:
- 0: No PROFIsafe telegram selected
- 30: PROFIsafe standard telegram 30, PZD-1/1
- 31: PROFIsafe standard telegram 31, PZD-2/2
- 901: PROFIsafe SIEMENS telegram 901, PZD-3/5
- 902: PROFIsafe SIEMENS telegram 902, PZD-3/6

Dependency: Refer to: p9611, p9811

r61000[0...239] PROFINET Name of Station / PN Name of Station

Description: Displays PROFINET Name of Station.

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

1.3.2 Parameters for drive data sets (DDS)

The following list contains the parameters that are dependent on the drive data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: DDS

- p0186[0...n] Motor Data Sets (MDS) number / MDS number
- p0187[0...n] Encoder 1 encoder data set number / Enc 1 EDS number
- p0188[0...n] Encoder 2 encoder data set number / Enc 2 EDS number
- p0189[0...n] Encoder 3 encoder data set number / Enc 3 EDS number
- p0340[0...n] Automatic calculation, motor/control parameters / Calc auto par
- p0572[0...n] Activate/de-activate inhibit list / Inh_list act/deact
- p0578[0...n] Calculate technology-dependent parameters / Calc tec par
- p0640[0...n] Current limit / Current limit
- p1001[0...n] CO: Fixed speed setpoint 1 / n_set_fixed 1
- p1002[0...n] CO: Fixed speed setpoint 2 / n_set_fixed 2
- p1003[0...n] CO: Fixed speed setpoint 3 / n_set_fixed 3
- p1004[0...n] CO: Fixed speed setpoint 4 / n_set_fixed 4
- p1005[0...n] CO: Fixed speed setpoint 5 / n_set_fixed 5
- p1006[0...n] CO: Fixed speed setpoint 6 / n_set_fixed 6
- p1007[0...n] CO: Fixed speed setpoint 7 / n_set_fixed 7
- p1008[0...n] CO: Fixed speed setpoint 8 / n_set_fixed 8
- p1009[0...n] CO: Fixed speed setpoint 9 / n_set_fixed 9
Parameters

Parameters for data sets

- p1010[0...n] CO: Fixed speed setpoint 10 / n_set_fixed 10
- p1011[0...n] CO: Fixed speed setpoint 11 / n_set_fixed 11
- p1012[0...n] CO: Fixed speed setpoint 12 / n_set_fixed 12
- p1013[0...n] CO: Fixed speed setpoint 13 / n_set_fixed 13
- p1014[0...n] CO: Fixed speed setpoint 14 / n_set_fixed 14
- p1015[0...n] CO: Fixed speed setpoint 15 / n_set_fixed 15
- p1030[0...n] Motorized potentiometer configuration / Mop configuration
- p1037[0...n] Motorized potentiometer maximum speed / MotP n_max
- p1038[0...n] Motorized potentiometer minimum speed / MotP n_min
- p1040[0...n] Motorized potentiometer starting value / Mop start value
- p1047[0...n] Motorized potentiometer ramp-up time / Mop ramp-up time
- p1048[0...n] Motorized potentiometer ramp-down time / Mop ramp-down time
- p1058[0...n] Jog 1 speed setpoint / Jog 1 n_set
- p1059[0...n] Jog 2 speed setpoint / Jog 2 n_set
- p1063[0...n] Speed limit setpoint channel / n_limit setp
- p1080[0...n] Minimum speed / n_min
- p1082[0...n] Maximum speed / n_max
- p1083[0...n] CO: Speed limit in positive direction of rotation / n_limit pos
- p1086[0...n] CO: Speed limit in negative direction of rotation / n_limit neg
- p1091[0...n] Skip speed 1 / n_skip 1
- p1092[0...n] Skip speed 2 / n_skip 2
- p1093[0...n] Skip speed 3 / n_skip 3
- p1094[0...n] Skip speed 4 / n_skip 4
- p1101[0...n] Skip speed bandwidth / n_skip bandwidth
- p1120[0...n] Ramp-function generator ramp-up time / RFG ramp-up time
- p1121[0...n] Ramp-function generator ramp-down time / RFG ramp-down time
- p1130[0...n] Ramp-function generator initial rounding-off time / RFG t_start_round
- p1131[0...n] Ramp-function generator final rounding-off time / RFG t_end_delay
- p1134[0...n] Ramp-function generator rounding-off type / RFG round-off type
- p1135[0...n] OFF3 ramp-down time / OFF3 t_RD
- p1136[0...n] OFF3 initial rounding-off time / RFGOFF3 t_strt_rnd
- p1137[0...n] OFF3 final rounding-off time / RFG OFF3 t_end_del
- p1145[0...n] Ramp-function generator tracking intensity, / RFG track intens
- p1148[0...n] Ramp-function gen., tolerance for ramp-up and ramp-down active / RFG tol HL/RL act
- p1151[0...n] Ramp-function generator configuration / RFG config
- p1169[0...n] Speed setpoint configuration / n_ctrl config
- p1200[0...n] Flying restart operating mode / FlyRest op_mode
- p1202[0...n] Flying restart search current / FlyRest I_srch
- p1203[0...n] Flying restart search rate factor / FlyRst v_Srch Fact
- p1226[0...n] Threshold for zero speed detection / n_standst n_thresh
- p1240[0...n] Vdc controller or Vdc monitoring configuration / Vdc_ctr config
- p1243[0...n] Vdc_max controller dynamic factor / Vdc_max dyn_factor
- p1245[0...n] Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level
- p1247[0...n] Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor
- p1249[0...n] Vdc_max controller speed threshold / Vdc_max n_thresh
- p1250[0...n] Vdc controller proportional gain / Vdc Ctrl Kp
- p1251[0...n] Vdc controller integral time / Vdc Ctrl Tn
- p1252[0...n] Vdc controller rate time / Vdc Ctrl t_rate
- p1255[0...n] Vdc_min controller time threshold / Vdc_min t_thresh
- p1256[0...n] Vdc_min controller response (kinetic buffering) / Vdc_min response
- p1257[0...n] Vdc_min controller speed threshold / Vdc_min n_thresh
- p1262[0...n] Bypass dead time / Bypass t_dead
- p1280[0...n] Vdc controller or Vdc monitoring configuration (U/f) / Vdc_ctr config U/f

1.3.3 Parameters for encoder data sets (EDS)

The following list contains the parameters that are dependent on the encoder data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: EDS

- p0141[0...n] Encoder interface (Sensor Module) component number / Enc_interf comp_no
- p0142[0...n] Encoder component number / Encoder comp_no
- p0144[0...n] Sensor Module detection via LED / SM detection LED
- p0145[0...n] Activate/de-activate encoder interface / Enc_intf act/deact
- r0146[0...n] Encoder interface active/inactive / Enc_intf act/inact
- r0147[0...n] Sensor Module EEPROM data version / SM EEPROM version
- r0148[0...n] Sensor Module firmware version / SM FW version
- p0400[0...n] Encoder type selection / Enc_typ sel
- p0401[0...n] Encoder type, OEM selection / Enc type OEM sel
- p0402[0...n] Gearbox type selection / Gearbox type sel
- p0404[0...n] Encoder configuration effective / Enc_config eff
- r0406[0...n] Encoder configuration active / Enc_config act
- p0407[0...n] Encoder configuration / Enc_config
- p0408[0...n] Encoder configuration / Enc_config
- p0409[0...n] Encoder configuration / Enc_config
- p0410[0...n] Gearbox type selection / Gearbox type sel
- p0411[0...n] Gearbox type selection / Gearbox type sel
- p0412[0...n] Gearbox type selection / Gearbox type sel
- p0413[0...n] Gearbox type selection / Gearbox type sel

Parameters for data sets

1.3.4 Parameters for motor data sets (MDS)

The following list contains the parameters that are dependent on the motor data sets.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: MDS

- `p0131[0...n]` Motor component number / Mot comp_no
- `p0300[0...n]` Motor type selection / Mot type sel
- `p0301[0...n]` Motor code number selection / Mot code No. sel
- `r0302[0...n]` Motor code number of motor with DRIVE-CLiQ / Motor code Mot DLQ
- `r0303[0...n]` Motor with DRIVE-CLiQ status word / Motor w DLQ ZSW
- `p0304[0...n]` Rated motor voltage / Mot U_rated
- `p0305[0...n]` Rated motor current / Mot I_rated
- `p0306[0...n]` Number of motors connected in parallel / Motor qty
- `p0307[0...n]` Rated motor power / Mot P_rated
- `p0308[0...n]` Rated motor power factor / Mot cos_phi_rated
- `p0309[0...n]` Rated motor efficiency / Mot eta_rated
Parameters for data sets

- **p0310[0...n]** Rated motor frequency / Mot f_rated
- **p0311[0...n]** Rated motor speed / Mot n_rated
- **r0313[0...n]** Motor pole pair number, actual (or calculated) / Mot PolePairNo act
- **p0314[0...n]** Motor pole pair number / Mot pole pair No.
- **p0316[0...n]** Motor torque constant / Mot kT
- **p0318[0...n]** Motor stall current / Mot I_standstill
- **p0320[0...n]** Motor rated magnetizing current/short-circuit current / Mot I_mag_rated
- **p0322[0...n]** Maximum motor speed / Mot n_max
- **p0323[0...n]** Maximum motor current / Mot I_max
- **p0324[0...n]** Winding maximum speed / Winding n_max
- **p0325[0...n]** Motor pole position identification current, 1st phase / Mot PolID I 1st ph
- **p0327[0...n]** Optimum motor load angle / Mot phi_load opt
- **p0328[0...n]** Motor reluctance torque constant / Mot kT_retractance
- **p0329[0...n]** Motor pole position identification current / Mot PolID current
- **r0330[0...n]** Rated motor slip / Mot slip_rated
- **r0331[0...n]** Actual motor magnetizing current/short-circuit current / Mot I_mag_rtd act
- **r0332[0...n]** Rated motor power factor / Mot cos_phi_rated
- **r0333[0...n]** Rated motor torque / Mot M_rated
- **r0334[0...n]** Motor cooling type / Motor cooling type
- **r0335[0...n]** Motor cooling type / Motor cooling type
- **r0336[0...n]** Actual rated motor frequency / Mot f_rated act
- **r0337[0...n]** Rated motor EMF / Mot EMF_rated
- **r0339[0...n]** Rated motor voltage / Mot U_rated
- **p0341[0...n]** Motor moment of inertia / Mot M_mom of inert
- **r0342[0...n]** Ratio between the total and motor moment of inertia / Mot MmInert Ratio
- **r0343[0...n]** Rated motor current identified / Mot I_rated ident
- **r0344[0...n]** Motor weight (for the thermal motor model) / Mot weight th mod
- **r0345[0...n]** Nominal motor starting time / Mot t_start_rated
- **r0346[0...n]** Motor excitation build-up time / Mot t_excitation
- **r0347[0...n]** Motor de-excitation time / Mot t_de-excitat.
- **p0350[0...n]** Motor stator resistance, cold / Mot R_stator cold
- **p0351[0...n]** Motor series inductance / Mot L_series
- **p0352[0...n]** Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d
- **p0353[0...n]** Motor damping resistance, q axis / Mot R_damp q
- **p0354[0...n]** Motor stator leakage inductance / Mot L_stator leak.
- **p0355[0...n]** Motor stator inductance, d axis / Mot L_stator d
- **p0356[0...n]** Motor rotor leakage inductance / damping inductance, d axis / Mot L_r leak / LDd
- **p0357[0...n]** Motor damping inductance, q axis / Mot L_damp q
- **p0358[0...n]** Motor magnetizing inductance/magn. inductance, d axis saturated / Mot Lh/Lh d sat
- **p0359[0...n]** Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
- **p0360[0...n]** Motor saturation characteristic flux 1 / Mot saturat.flux 1
- **p0361[0...n]** Motor saturation characteristic flux 2 / Mot saturat.flux 2
- **p0362[0...n]** Motor saturation characteristic flux 3 / Mot saturat.flux 3
- **p0363[0...n]** Motor saturation characteristic flux 4 / Mot saturat.flux 4
- **p0364[0...n]** Motor saturation characteristic flux 1 / Mot sat. I_mag 1
- **p0365[0...n]** Motor saturation characteristic I_mag 2 / Mot sat. I_mag 2
- **p0366[0...n]** Motor saturation characteristic I_mag 3 / Mot sat. I_mag 3
- **p0367[0...n]** Motor saturation characteristic I_mag 4 / Mot sat. I_mag 4
- **r0370[0...n]** Motor stator resistance, cold / Mot R_stator cold
- **r0372[0...n]** Cable resistance / Mot R_cable
- **r0373[0...n]** Motor rated stator resistance / Mot R_stator rated
- **r0374[0...n]** Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd
Parameters

Parameters for data sets

- r0375[0...n] Motor damping resistance, q axis / Mot R_damp q
- r0376[0...n] Rated motor rotor resistance / Mot R_rotor rated
- r0377[0...n] Motor leakage inductance, total / Mot L_leak total
- r0378[0...n] Motor stator inductance, d axis / Mot L_stator d
- r0380[0...n] Motor damping inductance, d axis / Mot L_damping d
- r0381[0...n] Motor damping inductance, q axis / Mot L_damping q
- r0382[0...n] Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat
- r0383[0...n] Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
- r0384[0...n] Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd
- r0385[0...n] Motor damping time constant, q axis / Mot L_damping q
- r0386[0...n] Motor stator leakage time constant / Mot T_stator leak
- r0387[0...n] Motor stator leakage time constant, q axis / Mot T_Sleak /T_Sq
- p0389[0...n] Excitation rated no-load current / Exc I_noload_rated
- p0390[0...n] Rated excitation current / Exc I_rated
- p0391[0...n] Current controller adaptation, starting point KP / I_adapt pt KP
- p0392[0...n] Current controller adaptation, starting point KP adapted / I_adapt pt KP adapt
- p0393[0...n] Current controller adaptation P gain scaling / I_adapt Kp scal
- r0395[0...n] Actual stator resistance / R_stator act
- r0396[0...n] Actual rotor resistance / R_rotor act
- p0398[0...n] Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1
- p0399[0...n] Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3
- p0530[0...n] Bearing version selection / Bearing vers sel
- p0531[0...n] Bearing code number selection / Bearing codeNo sel
- p0532[0...n] Bearing maximum speed / Bearing n_max
- p0600[0...n] Motor temperature sensor for monitoring / Mot temp_sensor
- p0601[0...n] Motor temperature sensor type / Mot_temp_sens type
- p0604[0...n] Mot temp_mod 1/KTY alarm threshold / Mod 1/KTY A thresh
- p0605[0...n] Mot temp_mod 1/2 threshold / Threshold
- p0606[0...n] Mot temp_mod 2/KTY timer / Mod 2/KTY t_timer
- p0607[0...n] Temperature sensor fault timer / Sensor fault time
- p0610[0...n] Motor overtemperature response / Mot temp response
- p0611[0...n] I2t motor model thermal time constant / I2t mot_mod T
- p0612[0...n] Mot temp_mod activation / Mot temp_mod act
- p0615[0...n] Mot temp_mod 1 (I2t) fault threshold / I2t F thresh
- p0616[0...n] Motor overtemperature alarm threshold 1 / Mot temp alarm 1
- p0620[0...n] Thermal adaptation, stator and rotor resistance / Mot therm_adapt R
- p0621[0...n] Identification stator resistance after restart / Rst_ident Restart
- p0622[0...n] Motor excitation time for Rs_ident after powering up again / t_excit Rs_id
- p0624[0...n] Motor temperature offset PT100 / Mot T_offset PT100
- p0625[0...n] Motor ambient temperature / Mot T_ambient
- p0626[0...n] Motor overtemperature, stator core / Mot T_over core
- p0627[0...n] Motor overtemperature, stator winding / Mot T_over stator
- p0628[0...n] Motor overtemperature rotor winding / Mot T_over rotor
- r0630[0...n] Mot temp_mod ambient temperature / Mod T_ambient
- r0631[0...n] Mot temp_mod stator iron temperature / Mod T_stator
- r0632[0...n] Mot temp_mod stator winding temperature / Mod T_winding
- r0633[0...n] Mot temp_mod rotor temperature / Mod TRotor
- p0634[0...n] Q flux flux constant unsaturated / PSIQ KPSI UNSAT
- p0635[0...n] Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT
- p0636[0...n] Q flux direct axis current constant unsaturated / PSIQ KID UNSAT
- p0637[0...n] Q flux flux gradient saturated / PSIQ Grad SAT
- p0643[0...n] Overvoltage protection for synchronous motors / Overvolt_protect
- p0650[0...n] Actual motor operating hours / Mot t_oper act

1.4 Parameters for write protection and know-how protection

Note:
References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Write protection and know-how protection"

1.4.1 Parameters with "WRITE_NO_LOCK"

The following list contains the parameters with the "WRITE_NO_LOCK" attribute.
These parameters are not affected by the write protection.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: WRITE_NO_LOCK

- p0003 BOP access level / BOP acc_level
- p0009 Device commissioning parameter filter / Dev comm par filt
- p0124[0...n] Power unit detection via LED / PU detection LED
- p0124[0...23] Main component detection using LED / M_comp detect LED
- p0144[0...n] Sensor Module detection via LED / SM detection LED
- p0154 DRIVE-CLiQ Hub Module detection via LED / Hub detection LED
- p0154 Terminal Module detection via LED / TM detection LED
- p0972 Drive unit reset / Drv_unit reset
- p0976 Reset and load all parameters / Reset load all par
- p0977 Save all parameters / Save all par
- p2035 Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no
- p2102 BI: Acknowledge all faults / Ackn all faults
- p2111 Alarm counter / Alarm counter
- p3100 RTC time stamp mode / RTC t_stamp mode
- p3101[0...1] RTC set UTC time / RTC set UTC
- p3103 RTC synchronization source / RTC sync_source
- p3950 Service parameter / Serv. par.
- p3981 Faults, acknowledge drive object / Faults ackn DO
- p3985 Master control mode selection / PcCtrl mode select
- p4700[0...1] Trace control / Trace control
- p4701 Measuring function, control / Meas fct ctrl
- p4707 Measurement function configuration / Meas fct config
- p4710[0...1] Trace trigger condition / Trace Trig_cond
- p4711[0...5] Trace trigger signal / Trace trig_signal
- p4712[0...1] Trace trigger threshold / Trace trig_thres
- p4713[0...1] Trace tolerance band trigger threshold 1 / Trace trig thr 1
- p4714[0...1] Trace tolerance band trigger threshold 2 / Trace trig thr 2
- p4715[0...1] Trace bit mask trigger, bit mask / Trace trig mask
- p4716[0...1] Trace, bit mask trigger, trigger condition / Trace Trig_cond
- p4717 Measuring function, number of averaging operations / Meas fct avg qty
- p4718 Measuring function, number of stabilizing periods / MeasFct StabPerQty
- p4720[0...1] Trace recording cycle / Trace record_cyc
- p4721[0...1] Trace recording time / Trace record_time
- p4722[0...1] Trace trigger delay / Trace trig_delay
- p4723[0...1] Trace time slice cycle / Trace cycle
- p4724[0...1] Trace average in the time range / Trace average
Parameters
Parameters for write protection and know-how protection

p4730[0...5] Trace record signal 0 / Trace record sig 0
p4731[0...5] Trace record signal 1 / Trace record sig 1
p4732[0...5] Trace record signal 2 / Trace record sig 2
p4733[0...5] Trace record signal 3 / Trace record sig 3
p4734[0...5] Trace record signal 4 / Trace record sig 4
p4735[0...5] Trace record signal 5 / Trace record sig 5
p4736[0...5] Trace record signal 6 / Trace record sig 6
p4737[0...5] Trace record signal 7 / Trace record sig 7
p4780[0...1] Trace physical address signal 0 / Trace PhyAddr Sig0
p4781[0...1] Trace physical address signal 1 / Trace PhyAddr Sig1
p4782[0...1] Trace physical address signal 2 / Trace PhyAddr Sig2
p4783[0...1] Trace physical address signal 3 / Trace PhyAddr Sig3
p4784[0...1] Trace physical address signal 4 / Trace PhyAddr Sig4
p4785[0...1] Trace physical address signal 5 / Trace PhyAddr Sig5
p4786[0...1] Trace physical address signal 6 / Trace PhyAddr Sig6
p4787[0...1] Trace physical address signal 7 / Trace PhyAddr Sig7
p4789[0...1] Trace physical address trigger signal / Trace PhyAddr Trig
p4795 Trace memory bank changeover / Trace mem changeov
p4800 Function generator control / FG control
p4810 Function generator mode / FG operating mode
p4812 Function generator physical address / FG phys address
p4813 Function generator physical address reference value / FG phys addr ref
p4815[0...2] Function generator drive number / FG drive number
p4816 Function generator output signal integer number scaling / FG outp integ scal
p4819 Bl: Function generator control / FG control
p4820 Function generator signal shape / FG signal shape
p4821 Function generator period / FG period duration
p4822 Function generator pulse width / FG pulse width
p4823 Function generator bandwidth / FG bandwidth
p4824 Function generator amplitude / FG amplitude
p4825 Function generator 2nd amplitude / FG 2nd amplitude
p4826 Function generator offset / FG offset
p4827 Function generator ramp-up time to offset / FG ramp-up offset
p4828 Function generator lower limit / FG lower limit
p4829 Function generator upper limit / FG upper limit
p4830 Function generator time slice cycle / FG time slice
p4831 Function generator amplitude scaling / FG amplitude scal
p4832[0...2] Function generator amplitude scaling / FG amplitude scal
p4833[0...2] Function generator offset scaling / FG offset scal
p4835[0...4] Function generator free measurement function scaling / FG fr MeasFct scal
p7761 Write protection / Write protection
p7770 NVRAM action / NVRAM action
p8550 AOP LOCAL/REMOTE / AOP LOCAL/REMOTE
p8829 CBE20 remote controller number / CBE20 rem ctrl num
p9210 Flashing component number / Flash comp_no.
p9211 Flash function / Flash fct.
p9484 BICO interconnections search signal source / BICO S_src srch
1.4.2 Parameters with "KHP_WRITE_NO_LOCK"

The following list contains the parameters with the "KHP_WRITE_NO_LOCK" attribute. These parameters are not affected by the know-how protection.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: KHP_WRITE_NO_LOCK

- p0003 BOP access level / BOP acc_level
- p0009 Device commissioning parameter filter / Dev comm par_filt
- p0124[0...n] Power unit detection via LED / PU detection LED
- p0124[0...23] Main component detection using LED / M_comp detect LED
- p0144[0...n] Sensor Module detection via LED / SM detection LED
- p0154 DRIVE-CLiQ Hub Module detection via LED / Hub detection LED
- p0154 Terminal Module detection via LED / TM detection LED
- p0972 Drive unit reset / Drv_unit reset
- p0976 Reset and load all parameters / Reset load all par
- p0977 Save all parameters / Save all par
- p2035 Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no
- p2102 BI: Acknowledge all faults / Ackn all faults
- p2111 Alarm counter / Alarm counter
- p3100 RTC time stamp mode / RTC t_stamp mode
- p3101[0...1] RTC set UTC time / RTC set UTC
- p3103 RTC synchronization source / RTC sync_source
- p3950 Service parameter / Serv. par.
- p3981 Faults, acknowledge drive object / Faults ackn DO
- p3985 Master control mode selection / PcCtrl mode select
- p7761 Write protection / Write protection
- p7770 NVRAM action / NVRAM action
- p8550 AOP LOCAL/REMOTE / AOP LOCAL/REMOTE
- p8829 CBE20 remote controller number / CBE20 rem ctrl num
- p9210 Flashing component number / Flash comp_no.
- p9211 Flash function / Flash fct.
- p9484 BICO interconnections search signal source / BICO S_src srcrch

1.4.3 Parameters with "KHP_ACTIVE_READ"

The following list contains the parameters with the "KHP_ACTIVE_READ" attribute. These parameters can also be read with activated know-how protection.

Product: SINAMICS G130/G150, Version: 4502400, Language: eng, Type: KHP_ACTIVE_READ

- p0015 Macro drive object / Macro DO
- p0015 Macro drive unit / Macro drv unit
- p0100 IEC/NEMA mot stds / IEC/NEMA mot stds
- p0101[0...23] Drive object numbers / DO numbers
- p0103[0...23] Application-specific view / Appl_spec view
- p0105 Activate/de-activate drive object / DO act/deact
- p0107[0...23] Drive object type / DO type
- p0108[0...23] Drive objects, function module / DO function module
- p0120 Number of Power unit Data Sets (PDS) / PDS count
- p0121[0...n] Power unit component number / PU comp_no
- p0125[0...n] Activate/de-activate power unit components / PU_comp act/deact
- p0130 Number of Motor Data Sets (MDS) / MDS count
### Parameters for write protection and know-how protection

- **p0131[0...n]** Motor component number / Mot comp_no
- **p0140** Number of Encoder Data Sets (EDS) / EDS count
- **p0141[0...n]** Encoder interface (Sensor Module) component number / Enc_interf comp_no
- **p0142[0...n]** Encoder component number / Encoder comp_no
- **p0145[0...n]** Activate/de-activate encoder interface / Enc_intf act/deact
- **p0150** Number of VSM data sets / VSM dat_sets qty.
- **p0151[0...1]** DRIVE-CLiQ Hub Module component number / Hub comp_no
- **p0151** Terminal Module component number / TM comp_no
- **p0151[0...n]** Voltage Sensing Module component number / VSM comp_no
- **p0161** Option board, component number / Opt board comp_no
- **p0170** Number of Command Data Sets (CDS) / CDS count
- **p0180** Number of Drive Data Sets (DDS) / DDS count
- **p0199[0...24]** Drive object name / DO name
- **p0300[0...n]** Motor type selection / Mot type sel
- **p0304[0...n]** Rated motor voltage / Mot U_rated
- **p0305[0...n]** Rated motor current / Mot I_rated
- **p0400[0...n]** Encoder type selection / Enc_typ sel
- **p0505** Selecting the system of units / Unit sys select
- **p0595** Technological unit selection / Tech unit select
- **p0806** BI: Inhibit master control / PcCtrl inhibit
- **p0864** BI: Infeed operation / INF operation
- **p0922** IF1 PROFidrive telegram selection / IF1 PD Telegr_sel
- **p0978[0...24]** List of drive objects / List of the DO
- **p1080[0...n]** Minimum speed / n_min
- **p1082[0...n]** Maximum speed / n_max
- **p1520[0...n]** CO: Torque limit upper / M_max upper
- **p2000** Reference frequency / f_ref
- **p2000** Reference speed reference frequency / n_ref f_ref
- **p2000** Reference velocity, reference frequency / v_ref f_ref
- **p2001** Reference voltage / Reference voltage
- **p2002** Reference current / I_ref
- **p2003** Reference torque / M_ref
- **p2005** Reference angle / Reference angle
- **p2006** Reference temp / Ref temp
- **p2007** Reference acceleration / a_ref
- **p2030** Field bus int protocol selection / Field bus protocol
- **p2038** IF1 PROFi drive STW/ZSW interface mode / PD STW/ZSW IF mode
- **p2079** IF1 PROFi drive PZD telegram selection extended / IF1 PD PZD tel ext
- **p4956[0...n]** OA application activation / OA act
- **p7763** KHP OEM exception list number of indices for p7764 / KHP OEM qty p7764
- **p7764[0...n]** KHP OEM exception list / KHP OEM excep list
- **p7852** Number of indices for r7853 / Qty indices r7853
- **p9500** SI Motion monitoring clock cycle (Control Unit) / SI Mtn clock CU
- **p9601** SI enable, functions integrated in the drive (Control Unit) / SI enable fct CU
- **p9810** SI PROFi safe address (Motor Module) / SI PROFi safe MM
- **p9902** Target topology number of indices / TargetTopo indices

2.1 Table of contents

2.2 Explanations on the function diagrams

1020 – Explanation of the symbols (Part 1) ........................................................................... 2-981
1021 – Explanation of the symbols (Part 2) ........................................................................... 2-982
1022 – Explanation of the symbols (Part 3) ........................................................................... 2-983
1030 – Handling BICO technology ....................................................................................... 2-984

2.3 Overviews

1510 – CU320-2 input/output terminals ............................................................................. 2-985
1520 – PROFldrive ................................................................................................................. 2-986
1530 – Internal control/status words, data sets ................................................................. 2-987
1550 – Setpoint channel ....................................................................................................... 2-988
1680 – Vector control, encoder evaluations (position, speed, temperature) ..................... 2-989
1690 – Vector control, V/f control ......................................................................................... 2-990
1700 – Vector control, speed control and generation of the torque limits ......................... 2-991
1710 – Vector control, current control .................................................................................... 2-992
1750 – Monitoring functions, faults, alarms ......................................................................... 2-993
1773 – Basic Infeed ............................................................................................................... 2-994
1790 – Terminal Board 30 (TB30) ....................................................................................... 2-995
1840 – Terminal Module 31 (TM31) ..................................................................................... 2-996
1850 – Terminal Module 54F (TM54F) ............................................................................... 2-997

2.4 CU320-2 input/output terminals

2120 – Digital inputs, electrically isolated (DI 0 ... DI 3, DI 16, DI 17) ................................ 2-999
2121 – Digital inputs, electrically isolated (DI 4 ... DI 7, DI 20, DI 21) .............................. 2-1000
2130 – Digital inputs/outputs, bidirectional (DI/DO 8 ... DI/DO 9) .................................... 2-1001
2131 – Digital inputs/outputs, bidirectional (DI/DO 10 ... DI/DO 11) ......................... 2-1002
2132 – Digital inputs/outputs, bidirectional (DI/DO 12 ... DI/DO 13) ......................... 2-1003
2133 – Digital inputs/outputs, bidirectional (DI/DO 14 ... DI/DO 15) ......................... 2-1004

2.5 CU_LINK

2211 – Data transfer ............................................................................................................. 2-1005

2.6 PROFldrive

2410 – PROFIBUS (PB) / PROFINET (PN), addresses and diagnostics ......................... 2-1006
2415 – Standard telegrams and process data 1 .............................................................. 2-1007

### Parameter

- **Symbol**: Parameter name (Unit)
- **Meaning**: Monitoring parameter (parameter may appear several times if the parameter appears a multiple number of times, then diagram references are specified).

### Connectors

- **Symbol**: pxxxx
- **Meaning**: Connector input CI.

### Binectors

- **Symbol**: rxxxx
- **Meaning**: Binector input BI with index [y] and factory setting (Def).

### Cross references between diagrams

- **Symbol**: [aaaa] Text = Unique signal designation
- **Meaning**: Signal goes to target diagram aaaa

### Connectors/binectors

- **Symbol**: pxxxx
- **Meaning**: Original parameter of signal

### Cross references for control bits

- **Symbol**: [aaaa] Text = Unique signal designation
- **Meaning**: Signal goes to signal path aaaa

### Sampling times

- **Symbol**: p0115
- **Meaning**: Time slice depending on the pre-setting of the drive object.

### Explanations on the function diagrams

- **Function diagram number, signal path**: fp_1020_51_eng.vsd
- **Diagram references for setting parameters that occur a multiple number of times**: DO: All objects
- **Diagram references for setting parameters that occur a multiple number of times**: SINAMICS

---

**Parameters in Function Diagrams**

- **Parameter name**: pxxxx
- **Meaning**: Parameter number (xxxx) with Index number [y] and bit number [w].

- **Parameter name**: [aaaa] Text = Signal goes to source diagram aaaa
- **Meaning**: Signal comes from source diagram aaaa

- **Parameter name**: p0115
- **Meaning**: Time slice depending on the pre-setting of the drive object.

- **Parameter name**: p0115
- **Meaning**: Time slice depending on the rated pulse frequency of the motor module.

- **Parameter name**: p0115
- **Meaning**: Time slice depending on the rated pulse frequency of the motor module.

- **Parameter name**: p0115
- **Meaning**: Time slice depending on the rated pulse frequency of the motor module.

- **Parameter name**: p0115
- **Meaning**: Time slice depending on the rated pulse frequency of the motor module.

- **Parameter name**: p0115
- **Meaning**: Time slice depending on the rated pulse frequency of the motor module.

---

**Sampling times**

- **Symbol**: p0115
- **Meaning**: Time slice depending on the pre-setting of the drive object.

- **Symbol**: p0115
- **Meaning**: Time slice depending on the pre-setting of the drive object.

- **Symbol**: p0115
- **Meaning**: Time slice depending on the pre-setting of the drive object.

- **Symbol**: p0115
- **Meaning**: Time slice depending on the pre-setting of the drive object.

---

**Explanations on the function diagrams**

- **Function diagram number, signal path**: fp_1020_51_eng.vsd
- **Diagram references for setting parameters that occur a multiple number of times**: DO: All objects
- **Diagram references for setting parameters that occur a multiple number of times**: SINAMICS
Symbols for logic functions

- **Logical inversion**
- **AND element**
  with logical inversion of an input signal
- **R/S flip-flop**
  \[ y = -x \]
  \[ y = |x| \]
  \[ y = \frac{2}{x} \]
- **Comparator**
  Output \( y = 1 \) if the analog signal \( x > 0 \), i.e., is positive.
- **Exclusive-OR/XOR**
  \( y = 1 \) when \( x_1 \neq x_2 \) is.

Symbols for computational and closed-loop control functions

- **Sign reversal**
  \( y = -x \)
- **Absolute value generator**
  \( y = |x| \)
- **Divider**
  \( y = \frac{x}{x_1} \)
- **Comparator**
  Output \( y = 1 \) if the analog signal \( x > 0 \), i.e., is positive.
- **Differentiator**
  \( y = \frac{dx}{dt} \)
- **Threshold value switch 1/0**
  Outputs at \( y \) a logical "1" if \( x < S \).
- **Threshold value switch 0/1**
  Outputs at \( y \) a logical "1" if \( x > S \).
- **Threshold value 1/0 with hysteresis**
  Outputs a logical "1" at \( y \) if \( x < S \). If \( x >= S + H \) then \( y \) returns to 0.
- **Threshold value 0/1 with hysteresis**
  Outputs a logical "1" at \( y \) if \( x > S \). If \( x <= S - H \) then \( y \) returns to 0.
- **Limiter**
  \( x \) is limited to the upper limit \( LU \) and the lower limit \( LL \) and output at \( y \).
  The digital signals \( MLU \) and \( MLL \) have the value "1", if the upper or lower limit is active.
- **Sample & Hold element**
  Sample and hold element. \( y = x \) if \( SET = 1 \) (not retentively saved at POWER OFF).

Explanations for the function diagrams - Explanation of the symbols (Part 2)
Switch-on delay

The digital signal x must have the value "1" without any interruption during the time T before output y changes to "1".

Switch-off delay

The digital signal x must have the value "0" without interruption during the time T before output y changes to "0".

Delay (switch-on and switch-off)

The digital signal x must have the value "1" without interruption during time T1 or must have the value "0" during time T2 before output y changes its signal state.

PT1 element

Delay element, first order.

\[ p_{\text{xxxx}} = \text{time constant} \]

2nd-order filter (bandstop/general filter)

Natural frequency, numerator
\[ f_{\text{n},z} \]

Damping, numerator
\[ D_{\text{z},n} \]

Natural frequency, denominator
\[ f_{\text{n},n} \]

Damping, denominator
\[ D_{\text{n},n} \]

Used as bandstop filter - center frequency \( f_s \):

\[ f_{\text{n},z} = f_s \]

\[ f_{\text{n},n} = f_s \]

- bandwidth \( f_B \):

\[ D_{\text{z},n} = 0 \]

\[ D_{\text{n},n} = \frac{f_B}{f_s^2} \]

Transfer function when used as general filter

\[
H(s) = \frac{s^2 + 2 \cdot D_z \cdot s + 1}{s^2 + 2 \cdot D_n \cdot s + 1}
\]

Analog adder can be activated

The following applies to \( I = 1 \) signal: \( y = x_1 + x_2 \)

The following applies to \( I = 0 \) signal: \( y = x_1 \)
Handling BICO technology

Binectors are binary signals that can be freely interconnected (BO = Binector Output). They represent a bit of a "BO:" display parameter (e.g. bit 15 from r0723).

Connectors are bit fields or numerical values that can be freely interconnected (e.g. "analog signals", like percentage variables, speeds or torques). Connectors are also "CO:" display parameters (CO = Connector Output).

**Parameterization:**
At the signal destination, the required binector or connector is selected using appropriate parameters:
- "B1:" parameter for binectors (BI = Binector Input)
- "C1:" parameter for connectors (CI = Connector Input)

**Example:**
The main setpoint for the speed controller (CI: p1070) should be received from the output of the motorized potentiometer (CO: r1050) and the "jog" command (BI: p1055) from digital input DI 0 (BO: r0722.0, X122.1 terminal) on the CU320.

**Parameterizing steps:**
1. p1055[0] = 722.0 Terminal X122.1 acts as "Jog bit 0".
2. p1070[0] = 1050 The output of the motorized potentiometer acts as main setpoint for the speed controller.

Fig. 2-25 2410 – PROFIBUS (PB) / PROFINET (PN), addresses and diagnostics

### CU-specific functions

**Setting the PROFIBUS address**

- PB PZD state Setpoint failure
  - PB state t_monit p2047

- PD PZD state Clock cycle synchronous operation active
  - r2043.0

**Address switches on the Control Unit**

- DP ADDRESS
  - DP H
  - DP L

Example: 15 hex = 21 dez

**Setting the PROFIBUS address**

- Via p0918:
  - Set the address switches DP H and DP L to 00 hex (= 0 dez), 7F hex (= 127 dez), 80 hex or FF hex.

- Via the address switches DP H and DP L:
  - Set the desired address as hexa-decimal value between 01 hex (= 1 dez) and 7E hex (= 126 dez).

Any change only becomes effective after a POWER ON.

**PB address**

- p0918 (126)

**Monitoring functions**

- Cyclic telegrams from the master

**PD PZD state**

- r2054

**Diagnostic parameters**

- PB diag standard r2055[0...2]

- PB diag clock sync r2064[0...7]

### Drive-specific functions (available once for each drive object)

**Drive-specific functions**

- **POWER ON**
  - Memory
  - SET
  - PB addr switch dia r2057

- **PD PZD state**
  - Clock cycle synchronous operation active

- **PD status**
  - r2054

- **PB diag standard**
  - r2055[0...2]

### PROFIBUS sampling time

Refer to [1020.7]

### Setting the PROFIBUS address

- Via p0918:
  - Set the address switches DP H and DP L to 00 hex (= 0 dez), 7F hex (= 127 dez), 80 hex or FF hex.

- Via the address switches DP H and DP L:
  - Set the desired address as hexa-decimal value between 01 hex (= 1 dez) and 7E hex (= 126 dez).

Any change only becomes effective after a POWER ON.

**PB address**

- p0918 (126)

**Monitoring functions**

- Cyclic telegrams from the master

**PD PZD state**

- r2054

**Diagnostic parameters**

- PB diag standard r2055[0...2]

- PB diag clock sync r2064[0...7]

### PROFIBUS sampling time

Fig. 2-26 2415 – Standard telegrams and process data

- Depending on the drive object, only specific telegrams can be used. Not suitable for sensorless vector control.
- If p0922 = 999 is changed to another value, the telegram is automatically assigned as specified in [2415] - [2424].
- The maximum number of PZD words depends on the drive object type.
- Only for SINAMICS S120/S150.

PROFIdrive - E_ZSW1 status word infeed interconnection

---

**References**

Fig. 2-50 2457 - E_ZSW1 status word infeed interconnection

Refer to [1020.7]
<1> The number of PZD receive words depends on the drive object type.

<2> The connector-biector converter only converts the lower 16 bits irrespective of the input variable.

<3> The following representation applies for words: 4000 hex = 100 % for double words 4000 0000 hex = 100 %.

<4> In order to maintain the PROFIdrive profile, receive word 1 must be used as control word (STW1) (due to bit 10 "control requested").

<5> Using the connector-biector converters, the bits can be extracted from two of the PZD receive words 5 to 32 and used as biectors.

<6> Every PZD word can be assigned a word or a double word. Only one of the 2 interconnection parameters r2050 or r2060 can have a value 0 for a PZD word.

<7> When interconnecting a connector output multiple times all the connector inputs must have either Integer or FloatingPoint data type.

PROFIdrive - IF1 receive telegram, free interconnection via BICO (p0922 = 999)
Fig. 2-52  2470 - IF1 send telegram, free interconnection via BICO (p0922 = 999)

- The number of PZD send words depends on the drive object type.
- A PZD send word can either be supplied via connector input p2051[x] (WORD) or via p2061[x] (DWORD).
- The two corresponding connector inputs cannot be interconnected.
- Physical word and double word values are inserted in the telegram as referenced variables. p200x apply as reference variables (telegram contents = 4000 hex or 4000 0000 hex in the case of double words, if the input variable has the value p200x).
- The following applies for temperature values: 100°C -> 100% = 4000 hex or 4000 0000 hex, 0°C -> 0%.
- To comply with the PROFIdrive profile, send word 1 must be used as status word 1 (ZSW1), not as DWORD.

DO: ENC, SERVO, TM41, VECTOR

PROFIdrive - IF1 send telegram, free interconnection via BICO (p0922 = 999)

Refer to [1020.7]
5 binector-connector converter

- For clock-cycle synchronous all drive objects, these signals must not be interconnected (slave sign-of-life).

- Only for SINAMICS S120.

Fig. 2-54 2481 – IF1 receive telegram, free interconnection via BICO (p0922 = 999)

- PROFIdrive - IF1 receive telegram

1. When interconnecting a connector output multiple times all the connector inputs must have either Integer or FloatingPoint data type.

2. Using the two connector-binector converters, two of the PZD receive words 3 to 5 can be converted into binectors for continued interconnection.

3. The following representation applies for words: 4000 hex = 100 %.

4. To comply with the PROFIdrive profile, receive word 1 for A_INF, B_INF, S_INF and CU_S must be used as control word (STW1) (due to bit 10 "control requested").
**Description:**

The image contains a function diagram illustrating the process of sending a telegram via BICO (p0922 = 999) in the context of PROFIdrive. The diagram is labeled as Fig. 2-55 and includes multiple send word sequences and interconnection scenarios.

### Diagram Details:

- **Header:**
  - Drive object 1
  - Drive object 2
  - Drive object n
  - Drive object m
  - Trailer

- **PROFINET PROFIBUS**

### Send Word Sequences:

1. **Send Word 1:**
   - p2051[0] (0)
   - p2051[1] (0)
   - p2051[2] (0)
   - p2051[3] (0)
   - p2051[4] (0)

   - p2051[11] (0)
   - p2051[12] (0)
   - p2051[13] (0)
   - p2051[14] (0)
   - p2051[15] (0)
   - p2051[16] (0)
   - p2051[17] (0)
   - p2051[18] (0)
   - p2051[19] (0)
   - p2051[20] (0)
   - p2051[21] (0)

2. **Send Word 2:**
   - p200x

3. **Send Word 3:**
   - R2053[0...4], [0...7], [0...20]

4. **Send Word 4:**
   - Reference variables for further interconnection

5. **Send Word 5:**
   - P2051

6. **Send Word 6:**
   - IF1 Diag send word

7. **Send Word 7:**
   - 2053[0...4, 0...7, 0...20]

### Notes:

- The number of PZD receive words depends on the drive object type.
- TM15DI_DO, TM120 not for G130/G150.
- The following representation applies for words: 4000 hex = 100 %.
- The reference variables p200x apply for the ongoing interconnection (100 % -> p200x).
- The following applies for temperature values:
  - 100 °C -> 100 % = 4000 hex; 0 °C -> 0 %.
- In order to maintain the PROFIdrive profile, send word 1 must be used as status word 1 (ZSW1) for A_INF, B_INF, S_INF and CU_S.
- Using the bioperator/connector converters at [2472], bits of 4 send words can be interconnected with any bioperators.
- A_INF and S_INF not for G130/G150.
Fig. 2-56 2485 - IF2 receive telegram, free interconnection via BICO

1. The number of PZD receive words depends on the drive object type.
2. The connector-binector converter only converts the lower 16 bits irrespective of the input variable.
3. The following representation applies for words: 4000 hex = 100 % for double words: 40000000 hex = 100 %.
   The reference variables p200x apply for the ongoing interconnection (100 % -> p200x).
4. Using the connector-binector converters, the bits can be extracted from two of the PZD receive words 5 to 16 and used as binectors.
5. Every PZD word can be assigned a word or a double word. Only one of the 2 interconnection parameters r8850 or r8860 can have a value = 0 for a PZD word.
6. When interconnecting a connector output multiple times all the connector inputs must have either Integer or FloatingPoint data type.

<1> B_INF and S_INF not for S150 and G130.
<2> A_INF, S_INF, TM15DI_DO and TM120 not for G130/G150.
<3> The following representation applies for words: 4000 hex = 100 %.
The reference variables p200x apply for the ongoing interconnection (100 % -> p200x).
The following applies for temperature values: 100 °C -> 100 % = 4000 hex; 0 °C -> 0 %.
<4> Using the two connector-binector converters, two of the PZD receive words 3 to 5 can be converted into binectors for continued interconnection.
<5> When interconnecting a connector output multiple times all the connector inputs must have either Integer or FloatingPoint data type.
<6> Not for TB30, TM15DI_DO, TM31 and TM120.

PROFIdrive - IF2 send telegram, free interconnection

**Reference quantities for further interconnection**

- B_INF and S_INF not for S150 and G130.
- A_INF and S_INF not for G130/G150.
- The following representation applies for words: 4000 hex = 100 %.
- The reference variables p200x apply for the ongoing interconnection (100 % -> p200x).
- The following applies for temperature values: 100 °C -> 100 % = 4000 hex; 0 °C -> 0 %.
- Using the binector/connector converters at [2472], bits of 4 send words can be interconnected with any binectors.
- Only for CU_S and CU_G.
- Not for TB30, TM15DI_DO, TM31 and TM120.
- TM15DI_DO and TM120 not for G130/G150.

15. STW sequence ctrl
    0 = STW1.10 must be set to ensure that the drive object accepts the process data (PZD).
    1 = Command, close brake

<1> STW1.10 must be set to ensure that the drive object accepts the process data (PZD).
<2> Only for telegram 220.
<3> When the master control is retrieved, predefined by STARTER or AOP30.
<4> Only applies if the function module "extended brake control (r0108.14 = 1)" is active.
<5> For DO ENC only bit 10.
<6> PROFIdrive interconnection: For PROFIdrive standard telegrams, the upper inputs are connected with PROFIdrive-STW1 [2415] and [2416]. Only relevant for CDS0.

**S1: Switching on inhibited**
- ZSWA.06 = 1, ZSWA.11 = 0
- ZSWA.00.0102 = 0
- Pulses inhibited

**S2: Ready for switching on**
- Main contactor is OPEN
- Wait for power-up or jog

**S3: Ready**
- ZSWA.00/01/02 = 1
- ZSWA.11 = 1
- ZSWA.06 = 0
- Line contactor is CLOSED
- Wait for pre-charging

**S4: Operation**
- ZSWA.00/01/02 = 1
- ZSWA.11 = 1
- ZSWA.06 = 0
- No jog operation: Setpoints enabled
- Pulses enabled
- Controller enabled

**S5a: Ramp stop**
- ZSWA.00/01 = 1
- ZSWA.11 = 1
- ZSWA.02/06 = 0
- Bring the drive to n <= 0 along the Ramp-funktion generator, then inhibit the pulses

**S5b: Fast stop**
- ZSWA.00/01 = 1
- ZSWA.11 = 1
- ZSWA.02/06 = 0
- Bring the drive to n <= 0 along the fast stopping ramp or torque limit, then inhibit the pulses

**S5c: Jogging - down ramp**
- ZSWA.00/01 = 1
- ZSWA.11 = 1
- ZSWA.02/06 = 0
- Bring the drive to n <= 0 along the Ramp-funktion generator, then inhibit the pulses

**SSa: Ramp stop**
- ZSWA.00/01 = 1
- ZSWA.11 = 1
- ZSWA.02/06 = 0
- Bring the drive to n <= 0 along the Ramp-funktion generator, then inhibit the pulses

**Faults**

</tbody>
</table>
Brake control - Extended brake control, zero-speed detection (r0108.14 = 1)

1. Shutdown threshold of the standstill detection. In this case (e.g. when using a brake), another criterion than the speed actual value can be selected to clear the pulses. Otherwise, we recommend to keep the factory setting.

2. For p1276 = 300.000 s, the timer is de-activated, i.e. the timer output is always 0. Note: When operating a motor with a brake which must not be applied while the motor is rotating, the monitoring time of both timers must be set to 300 s.

3. For operation without brake, p1224[0...3] must be 0 (factory setting) in order to avoid undesirable interaction with the sequence control.

4. The internal signal comprises signals that lead to OFF1 or OFF3, e.g. BICO or fault response.

5. Only for SINAMICS S120.

---

**Function diagrams**

**Brake control**

Fig. 2-82 2704 – Extended brake control, zero-speed detection (r0108.14 = 1)

- For p1276 = 300.000 s, the timer is de-activated, i.e. the timer output is always 0. Note: When operating a motor with a brake which must not be applied while the motor is rotating, the monitoring time of both timers must be set to 300 s.

- For operation without brake, p1224[0...3] must be 0 (factory setting) in order to avoid undesirable interaction with the sequence control.

- The internal signal comprises signals that lead to OFF1 or OFF3, e.g. BICO or fault response.

- Only for SINAMICS S120.
Fig. 2-83 – Extended brake control, open/close brake (r0108.14 = 1)

Motor holding brake configuration
1 = Unconditionally close the holding brake
2 = Unconditionally open the holding brake
3 = Brake control active (brake connection can be interconnected using BICO)

Note:
A motor brake cannot be connected to all power units. p1215 is set to 3 and the brake is controlled via a digital output (e.g. TM31).

Priority assignment (high -> low): p1215, p0858, p0855, p0855/p1219, apply brake from standstill detection, p1218.

If the brake is permanently applied or released (p0855, p0856 or p1215), the drive does not wait until the brake is released or applied.

Brake control - Extended brake control, open/close brake (r0108.14 = 1)
Function diagrams

Brake control - Extended brake control, signal outputs (r0108.14 = 1)

1 = Command, open brake

1 = Command, close holding brake

1 = Open the holding brake

1 = Open the brake

<1> This pulse enable path only works for operation with brake (p1215 > 0).

<2> Only if Safety Integrated is active (Double Motor Module: X22, Chassis: X41).

<3> Only if an external motor holding brake is used, p1215 should be set to 3 and r1229.1 should be used as control signal.

<4> If the internal signal comprises signals that lead to OFF1 or OFF3, e.g., BICO or fault response.

<5> If the function module "extended brake control" is active (r0108.14 = 1), r1229.1 should be interconnected as control signal.

<6> Only for SINAMICS S120 booksize.

<7> Only for SINAMICS S120 Chassis/S150/G130/G150.

Note: Braking signal diagnostic evaluation (p1278) is only relevant for SBC (Safe Brake Control) (controls the Safe Brake Relay).

<p115[3]>
Refer to [1020.7]

<p100>
<1> For automatic commissioning, p1037 and p1038 are set to the maximum motor speed or to the rated motor speed, provided that n_max_mot has not been specified.

</p101>
<2> If initial rounding-off is active (p1030.2 = 1), the selected ramp-up/down times are exceeded accordingly.

<3> Only effective if p1030.0 = 0.

<100> For SERVO, the following applies: Only if the function module "extended setpoint channel" is activated (r0108.8 = 1).

<101> To view the pre-assignment of the sampling times in p0115, refer to p0112.
Fig. 2-108 3030 – Main/supplementary setpoint, setpoint scaling, jogging

AOP30

<1> AOP30 not at SINAMICS SM150.

<2> Only active in LOCAL mode (r0807.0 = 1) [2501.2].

<3> Jogging can only be activated in the following operating states (sequencer see [2610]):
- For SERVO and VECTOR: In the "Ready to start (S2)" operating state.
- For VECTORGL and VECTORMV: In the "Operation (S4)" operating state.

<4> Only if control priority is with control panel with speed setpoint input.

<5> With simultaneous jog 1 and 2 (p1055 = p1056 = 1) the last setpoint remains effective (Freeze ramp-function generator).

<100> For SERVO, the following applies: Only if the function module "extended setpoint channel" is activated (r0108.8 = 1).

<101> To view the pre-assignment of the sampling times in p0115, refer to p0112.
DO: SERVO, VECTOR, VECTORGL, VECTORMV, VECTORSL

Setpoint channel - Direction limitation and direction reversal

fp_3040_51_eng.vsd

Function diagram

- 3040 -
A suppression speed of "0" de-activates the suppression speed bandwidth.

If the drive is not stopped via the input setpoint, but via controlled intervention, the lower hysteresis branch is relevant after a subsequent run-up.

For SERVO, the following applies: Only if the function module "Extended Stop and Retract" is activated (r0108.9 = 1).

For SERVO, the following applies: Only if the function module "Extended setpoint channel" is activated (r0108.8 = 1). For r0108.8 = 0, [3095] applies for the generation of the speed limits.

To view the pre-assignment of the sampling times in p0115, refer to p0112.
**Setpoint channel - Basic ramp-function generator**

For SERVO and VECTOR, the following applies: Inhibited during jogging.

Not at S150/G130/G150.

After a 0/1 signal a ramp-up is started again.

With simultaneous jog 1 and 2 (p1055 = p1056 = 1) the last setpoint remains effective (Freeze ramp-function generator).

For SERVO, the following applies: Only if the function module "Extended setpoint channel" is activated.

To view the pre-assignment of the sampling times in p0115, refer to p0112.

**Function diagram**

Fig. 2-111 3060 – Basic ramp-function generator

**SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A**
<1> For \( p1145 > 0 \), ramp-function generator tracking is activated when the torque limiting responds. This means that the speed controller output only exceeds the torque limit by a deviation that can be set via \( p1145 \).

<2> For OFF1/OFF3, the ramp-function generator ramp is active. The ramp-function generator is set (SERVO: to the actual value, VECTOR, VECTORGL, VECTORMV, VECTORSL: to the setpoint \( r1170 \)) and stops the drive with the ramp-downtime (\( p1160 \)).

<3> The interpolator is only active with activated "basic positioner" Function Module or with isochronous PROFIdrive mode and sign of life received by the master (STW2.12 ... STW2.15).

<4> Behavior of the response ramp of the torque limiting:

- \( p1145 = 0.0 \): No ramp-function generator tracking. The ramp-function generator ramp is no longer in the range of the speed actual value.
- \( p1145 > 1.0 \): The ramp-function generator ramp remains as close as possible to the speed actual value.

\[ p1145 = 1.0 \] The ramp-function generator ramp is steeper than for \( p1145 = 1.0 \) (higher "speed following error").

<5> The value is displayed correctly only with \( \text{r0899.2} = 1 \) (Operation enabled).

<6> For SERVO only.

<7> For VECTOR, VECTORMV only.

<8> For VECTORGL only.

<101> To view the pre-assignment of the sampling times in \( p0115 \), refer to \( p0112 \).

Controller

Intervention by the Vdc controller.

Intervention when the speed limit is exceeded + 2 % n rated.

P1555 = 0 switches the evaluation of the connector input P1555 off.

Only for SINAMICS S120/S150.

Ony for PEM.
Vector control - Current setpoint filter

Filter 1
- General 2nd-order filter (detailed representation at [1022]).
- 2nd order low pass (detailed representation at [1022]).
- The frequency is multiplied by this factor.
- Only for SINAMICS S120/S150.

Filter 2
- Frequency negative
- With p1699 = 1, the parameter settings are transferred to the controller.
- Only for SINAMICS S120/S150.

- 8070 -
Changing the fault response for maximum 20 faults <1>

Changing the acknowledge mode for maximum 20 faults <1>

Changing the message type - fault <=> alarm for maximum 20 faults/alarms <1>

<1> The fault response, acknowledge mode and message type for all faults and alarms are set to meaningful default values in the factory setting. Changes that may be required are only possible in specific value ranges specified by SIEMENS.

When the message type is changed, the supplementary information is transferred from fault value r0949 to alarm value r2124 and vice versa.

Function diagrams

Diagnostics - Measuring sockets

-100 000.00...100 000.00 % p0777[0] (0.00)
-100 000.00...427.9E9 % p0779[0] (100.00)

Scaling

-100 000.00...427.9E9 %
-100 000.00...100 000.00 %
0.00...4.98 V
0.00...4.98 V

Limit

Reference quantities p200x

-100 000.00...100 000.00 %
-100 000.00...427.9E9 %
0.00...4.98 V
0.00...4.98 V

Example: If a speed signal is entered via p0071 and r0786 indicates 100.0, a speed change of 100 RPM results in an output voltage change of 1.0 V.

<1> Only for measuring equipment with Ri ≥ 1 MΩ.
<2> With the factory setting, input values from -100...100 % result in output voltages from 0...4.98 V.
<3> The input signals are determined by the reference quantities p200x (100 % corresponds to p200x). The calculated normalization is indicated via r0786.
<4> Example: If a speed signal is entered via p0071 and r0786 indicates 100.0, a speed change of 100 RPM results in an output voltage change of 1.0 V.

<1> Encoder errors always refer to the currently active Encoder Data Set.
The following applies for the changeover of motor data sets:

1. SERVO and VECTOR: The thermal model of motors with the same motor number is identical.

2. VECTORGL and VECTORMV: The thermal monitoring of motors with the same motor number is identical. An unequal bit number means that the motor must be changed over.

<1> Differential input!
- For an input signal referred to ground, terminal X521.2 must be connected to reference potential M.

**Caution:**
- The voltage between an input (X521.1 or X521.2) and the ground point must not exceed 35 V.
- When the load resistor is switched in (S5.0 closed), the voltage between the input terminals must not exceed 15 V.

<2> For p4056 = 2, 3, 5, the units are mA.
- For p4056 = 0, 4, the units are V.

<3> p4056
- = 0: 0 V ... +10 V
- = 2: 0 mA ... +20 mA
- = 3: 4 mA ... +20 mA with monitoring
- = 4: -10 V ... +10 V
- = 5: -20 mA ... +20 mA

Fig. 2-188 9572 – Analog outputs (AO 0 ... AO 1)

For p4076 = 0, 2, 3 the units are mA.
For p4076 = 1, 4 the units are V.

For a voltage output, the output voltage can be taken between the following terminals:
AO 0 between X522.2 (reference potential) and X522.1, AO 1 between X522.5 (reference potential) and X522.4.

For a current output, the output current can be taken from between the following terminals:
AO 0 between X522.2 and X522.3, AO 1 between X522.5 and X522.6.

The input signals are referred to the reference quantities p2004 ... r2004 (100 % = p200x).

Terminal Module 31 (TM31) - Analog outputs (AO 0 ... AO 1)
An alarm A35920 in the temperature evaluation of the TM31 is signaled to the next (downstream) vector control via the special temperature value -300 °C (refer to [9577]).

As a result of the wire breakage monitoring [9577.3] the maximum temperature that can be measured is limited to approx. 188.6 °C.

A value > 250 °C de-activates the alarm or fault.

For KTY p4103 = 0 Output from TempTimer (0).
For PTC p4103 = 0 delay time = 0s.

3.1 Overview of faults and alarms

3.1.1 General information on faults and alarms

Fault and alarm displays

If a fault occurs, the drive indicates this by issuing corresponding fault(s) and/or alarm(s).

The following methods for displaying faults and alarms are available:

- Display via the fault and alarm buffer with PROFIBUS.
- Display online via the commissioning software.

Differences between faults and alarms

The differences between faults and alarms are as follows:

Table 3-1 Differences between faults and alarms

<table>
<thead>
<tr>
<th>Type</th>

<tr>
<td></td>
<td></td>
<td></td>
<td>Note: When the &quot;Basic positioner&quot; function module is activated (r0108.4 = 1), the following applies: When a fault occurs with fault reaction &quot;NONE&quot;, an active traversing task is interrupted and the system switches to tracking mode until the fault has been rectified and acknowledged.</td>
</tr>
</tbody>
</table>
| OFF1          | ON/OFF      | Brake along the ramp-function generator deceleration ramp followed by pulse disable | Speed control (p1300 = 20, 21)  
• n_set = 0 is input immediately to brake the drive along the ramp-function generator deceleration ramp (p1121).  
• When zero speed is detected, the motor holding brake (if parameters have been assigned for it) is closed (p1215). The pulses are suppressed when the brake closing time (p1217) expires.  
• Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint <= speed threshold (p1226) has expired.  
Closed-loop torque control (p1300 = 23)  
• The following applies for torque control:  
  Reaction as for OFF2  
• When the system switches to torque control with p1501, the following applies:  
  No separate braking reaction.  
  If the actual speed value drops below the speed threshold (p1226) or the timer stage (p1227) has expired, the motor holding brake (if one is being used) is closed. The pulses are suppressed when the brake closing time (p1217) expires. |
| OFF1_DELAYED  | -           | As for OFF1, but delayed | Faults with this fault reaction do not become effective until after the delay time set in p3136. The remaining time up to OFF1 is displayed in r3137. |
| OFF2          | COAST STOP  | Internal/external pulse disable | Closed-loop speed and torque control  
• Instantaneous pulse suppression, the drive "coasts" to a standstill.  
• The motor holding brake (if one is being used) is closed immediately.  
• "Switching on inhibited" is activated. |

<td>4 Acknowledge all faults: p2102  BI: Acknowledge all faults</td>
</tr>
<tr>
<td></td>
<td>All of the faults on all of the drive objects of the drive system can be acknowledged using this binector input.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong></td>
</tr>
<tr>
<td></td>
<td>• These faults can also be acknowledged by a POWER ON operation.</td>
</tr>
<tr>
<td></td>
<td>• If this action has not eliminated the fault cause, the fault will continue to be displayed after acknowledgement.</td>
</tr>
<tr>
<td></td>
<td>• Safety Integrated faults</td>
</tr>
<tr>
<td></td>
<td>The &quot;Safe standstill&quot; (SH) function must be deselected before these faults are acknowledged.</td>
</tr>
<tr>
<td>PULSE DISABLE</td>
<td>The fault can only be acknowledged with a pulse disable (r0899.11 = 0).</td>
</tr>
<tr>
<td></td>
<td>The same options are available for acknowledging as described under acknowledgement with IMMEDIATELY.</td>
</tr>
</tbody>
</table>
Saving the fault buffer when switching off

The contents of the fault buffer are saved to the non-volatile memory when the Control Unit is switched off, i.e. the fault buffer history is still available when the unit is switched on again.

The fault buffer of a drive object comprises the following parameters:

- r0945[0...63], r0947[0...63], r0948[0...63], r0949[0...63]
- r2109[0...63], r2130[0...63], r2133[0...63], r2136[0...63]

The fault buffer contents can be deleted manually as follows:

- Delete fault buffer for all drive objects:
  \[ p2147 = 1 \rightarrow p2147 = 0 \] is automatically set after execution.

- Delete fault buffer for a specific drive object:
  \[ p0952 = 0 \rightarrow \] The parameter belongs to the specified drive object.

The fault buffer contents are automatically deleted when the following occurs:

- Restore factory setting (p0009 = 30 and p0976 = 1).
- Download with modified structure (e.g. number of drive objects changed).
- Power-up after other parameter values have been loaded (e.g. p0976 = 10).
- Upgrade firmware to later version.
3.1.2 **Explanation of the list of faults and alarms**

The data in the following example has been chosen at random. The information listed below is the maximum amount of information that a description can contain. Some of the information is optional.

The list of faults and alarms (See Section 3.2) is structured as follows:

---

**Start of example**

<table>
<thead>
<tr>
<th>Axxxxx (F, N)</th>
<th>Fault location (optional): Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Message value:</td>
<td>Component number: %1, fault cause: %2</td>
</tr>
<tr>
<td>Drive object:</td>
<td>List of objects.</td>
</tr>
<tr>
<td>Reaction:</td>
<td>NONE</td>
</tr>
<tr>
<td>Acknowledgment:</td>
<td>NONE</td>
</tr>
<tr>
<td>Cause:</td>
<td>Description of possible causes.</td>
</tr>
<tr>
<td>Fault value (r0949, interpret format): or alarm value (r2124, interpret format):</td>
<td>Information about fault or alarm values (optional).</td>
</tr>
<tr>
<td>Remedy:</td>
<td>Description of possible remedies.</td>
</tr>
<tr>
<td>Reaction to F:</td>
<td>A_INFEED: OFF2 (OFF1, NONE)</td>
</tr>
<tr>
<td></td>
<td>SERVO: NONE (OFF1, OFF2, OFF3)</td>
</tr>
<tr>
<td></td>
<td>VECTOR: NONE (OFF1, OFF2, OFF3)</td>
</tr>
<tr>
<td>Acknowledgment for F:</td>
<td>IMMEDIATELY (POWER ON)</td>
</tr>
<tr>
<td>Reaction to N:</td>
<td>NONE</td>
</tr>
<tr>
<td>Acknowledgment for N:</td>
<td>NONE</td>
</tr>
</tbody>
</table>

---

**End of example**

Axxxxx  Alarm xxxxx
Axxxxx (F, N)  Alarm xxxxx (message type can be changed to F or N)
Fxxxxx  Fault xxxxx
Fxxxxx (A, N)  Fault xxxxx (message type can be changed to F or N)
Nxxxxx  No message
Nxxxxx (A)  No message (message type can be changed to A)
Cxxxxx  Safety message (separate message buffer)

A message comprises a letter followed by the relevant number. The meaning of the letters is as follows:

- A means "Alarm".
- F means "Fault".
- N means "No message" or "Internal message" ("No report")
- C means "Safety message"

The optional brackets indicate whether the type specified for this message can be changed and which message types can be adjusted via parameters (p2118, p2119).

Information on reaction and acknowledgement is specified independently for a message with an adjustable message type (e.g. reaction to F, acknowledgement for F).
Note:
You can change the default properties of a fault or alarm by setting parameters.
The list of faults and alarms (see Section 3.2) provides information in relation to the properties of a message that have been set as standard. If the properties of a specific message are changed, the corresponding information may have to be modified in this list.

Fault location (optional): Name
The fault location (optional), the name of the fault or alarm and the message number are all used to identify the message (e.g. with the commissioning software).

Message value:
The information provided under the message value tells you about the composition of the fault/alarm value.

Example:
Message value: Component number: %1, fault cause: %2
This message value contains information about the component number and fault cause. The entries %1 and %2 are placeholders, which are filled appropriately in online operation (e.g. with the commissioning software).

Drive object:
Each message (fault/alarm) specifies the drive object in which it can be found.
A message can belong to either one, several, or all drive objects.

Reaction: Default fault reaction (adjustable fault reaction)
Specifies the default reaction in the event of a fault.
The optional brackets indicate whether the default fault reaction can be changed and which fault reactions can be adjusted via parameters (p2100, p2101).

Note:
See Section 3.1.1

Acknowledgement: Default acknowledgement (adjustable acknowledgement)
Specifies the default method of acknowledging faults after the cause has been eliminated.
The optional brackets indicate whether the default acknowledgement can be changed and which acknowledgement can be adjusted via parameters (p2126, p2127).

Note:
See Section 3.1.1
Overview of faults and alarms

Cause:

Describes the possible causes of the fault/alarm. A fault or alarm value can also be specified (optional).

Fault value (r0949, format):
The fault value is entered in the fault buffer in r0949[0...63] and specifies additional, more precise information about a fault.

Alarm value (r2124, format):
The alarm value specifies additional, more precise information about an alarm.
The alarm value is entered in the alarm buffer in r2124[0...7] and specifies additional, more precise information about an alarm.

Remedy:

Describes the methods available for eliminating the cause of the active fault or alarm.

Alarm

In certain cases, service and maintenance personnel are responsible for choosing a suitable method to eliminate the cause of faults.
### 3.1.3 Number ranges of faults and alarms

Note:
The following number ranges represent an overview of all faults and alarms used in the SINAMICS drive family.

The faults and alarms for the product described in this List Manual are described in detail in Section 3.2.

Faults and alarms are organized into the following number ranges:

<table>
<thead>
<tr>
<th>From</th>
<th>To</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000</td>
<td>3999</td>
<td>Control Unit</td>

3.2 List of faults and alarms

F01000 Internal software error
Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An internal software error has occurred.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy:
- evaluate fault buffer (r0945).
- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

F01001 FloatingPoint exception
Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An exception occurred during an operation with the FloatingPoint data type.
The error may be caused by the base system or an OA application (e.g., FBLOCKS, DCC).
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Note:
Refer to r9999 for further information about this fault.
r9999[0]: Fault number.
r9999[1]: Program counter at the time when the exception occurred.
r9999[2]: Cause of the FloatingPoint exception.
Bit 0 = 1: Operation invalid
Bit 1 = 1: Division by zero
Bit 2 = 1: Overflow
Bit 3 = 1: Underflow
Bit 4 = 1: Imprecise result
Remedy:
- carry out a POWER ON (power off/on) for all components.
- check configuration and signals of the blocks in FBLOCKS.
- check configuration and signals of DCC charts.
- upgrade firmware to later version.
- contact the Hotline.

F01002 Internal software error
Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: An internal software error has occurred.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy:
- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

<td>Firmware download for DRIVE-CLiQ component unsuccessful</td>
<td>Component number: %1, fault cause: %2</td>
<td>All objects</td>
<td>NONE</td>
<td>IMMEDIATELY</td>
<td>It was not possible to download the firmware to a DRIVE-CLiQ component. Fault value (r0949, interpret hexadecimal): DRIVE-CLiQ component has detected a checksum error.</td>
<td>- contact the Hotline.</td>
</tr>
</tbody>
</table>

#### Cause
- yyyyhex: yy = component number, xxxx = fault cause
- xxxx = 000B hex = 11 dec: DRIVE-CLiQ component has detected a checksum error.
- xxxx = 000F hex = 15 dec: The selected DRIVE-CLiQ component did not accept the contents of the firmware file.
- xxxx = 0012 hex = 18 dec: Firmware version is too old and is not accepted by the component.
- xxxx = 0013 hex = 19 dec: Firmware version is not suitable for the hardware release of the component.
- xxxx = 0065 hex = 101 dec: After several communication attempts, no response from the DRIVE-CLiQ component.
- xxxx = 008B hex = 139 dec: Initially, a new boot loader is loaded (must be repeated after POWER ON).
- xxxx = 008C hex = 140 dec: Firmware file for the DRIVE-CLiQ component not available on the memory card.
- xxxx = 008D hex = 141 dec: An inconsistent length of the firmware file was signaled. The firmware download may have been caused by a loss of connection to the firmware file. This can occur during a project download/reset in the case of a SINAMICS Integrated Control Unit, for example.
- xxxx = 008F hex = 143 dec: Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.
- xxxx = 0090 hex = 144 dec: When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card is defective.
Faults and alarms

List of faults and alarms

xxxx = 0091 hex = 145 dec:
Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.
xxxx = 009C hex = 156 dec:
Component with the specified component number is not available (P7828).
xxxx = Additional values:
Only for internal Siemens troubleshooting.

Remedy:
- check the selected component number (P7828).
- check the DRIVE-CLiQ connection.
- save suitable firmware file for download in the directory "\siemens\sinamics\code\sac".
- use a component with a suitable hardware version
- after POWER ON has been carried out again for the DRIVE-CLiQ component, download the firmware again.
Depending on P7826, the firmware will be automatically downloaded.

A01006 Firmware update for DRIVE-CLiQ component required
Message value: Component number: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The firmware of a DRIVE-CLiQ component must be updated as there is no suitable firmware or firmware version in
the component for operation with the Control Unit.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.

Remedy: Firmware update using the commissioning software:
The firmware version of all of the components on the "Version overview" page can be read in the Project Navigator
under "Configuration" of the associated drive unit and an appropriate firmware update can be carried out.
Firmware update via parameter:
- take the component number from the alarm value and enter into P7828.
- start the firmware download with P7829 = 1.

A01007 POWER ON for DRIVE-CLiQ component required
Message value: Component number: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: A DRIVE-CLiQ component must be powered up again (POWER ON) (e.g. due to a firmware update).
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.
Note: For a component number = 1, a POWER ON of the Control Unit is required.

Remedy: - Switch off the power supply of the specified DRIVE-CLiQ component and switch it on again.
- For SINUMERIK, auto commissioning is prevented. In this case, a POWER ON is required for all components and
the auto commissioning must be restarted.

A01009 (N) CU: Control module overtemperature
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The temperature (r0037[0]) of the control module (Control Unit) has exceeded the specified limit value.

Remedy: - check the air intake for the Control Unit.
- check the Control Unit fan.
Note: The alarm automatically disappears after the limit value has been undershot.

Reaction upon N: NONE
Acknowl. upon N: NONE

</tr>
</tbody>
</table>
**F01015  Internal software error**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF2
- **Acknowledge:** POWER ON

**Cause:**
An internal software error has occurred.

**Fault value (r0949, interpret decimal):**
Only for internal Siemens troubleshooting.

**Remedy:**
- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

**A01016 (F)  Firmware changed**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE

**Cause:**
At least one firmware file in the directory was illegally changed on the non-volatile memory (memory card/device memory) with respect to the version when shipped from the factory.
Alarm value (r2124, interpret decimal):
0: Checksum of one file is incorrect.
1: File missing.
2: Too many files.
3: Incorrect firmware version.
4: Incorrect checksum of the back-up file.

**Remedy:**
For the non-volatile memory for the firmware (memory card/device memory), restore the delivery condition.

**Note:**
The file involved can be read out using parameter r9925.
The status of the firmware check is displayed using r9926.
See also: r9925 (Firmware file incorrect), r9926 (Firmware check status)

**Reaction upon F:** OFF2
**Acknowl. upon F:** POWER ON

**A01017  Component lists changed**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE

**Cause:**
On the memory card, one file in the directory /SIEMENS/SINAMICS/DATA or /ADDON/SINAMICS/DATA has been illegally changed with respect to that supplied from the factory. No changes are permitted in this directory.
Alarm value (r2124, interpret decimal):
zyx dec: x = Problem, y = Directory, z = File name
x = 1: File does not exist.
x = 2: Firmware version of the file does not match the software version.
x = 3: File checksum is incorrect.
y = 0: Directory /SIEMENS/SINAMICS/DATA/
y = 1: Directory /ADDON/SINAMICS/DATA/
z = 0: File MOTARM.ACX
z = 1: File MOTSRM.ACX
z = 2: File MOTSLM.ACX
z = 3: File ENCDATA.ACX
z = 4: File FILTDATA.ACX
z = 5: File BRKDATA.ACX
z = 6: File DAT_BEAR.ACX
z = 7: File CFG_BEAR.ACX
z = 8: File ENC_GEAR.ACX

**Remedy:**
For the file on the memory card involved, restore the status originally supplied from the factory.
A01020  Writing to RAM disk unsuccessful
Message value:  -
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  A write access to the internal RAM disk was unsuccessful.
Remedy:  Adapt the file size for the system logbook to the internal RAM disk (p9930).
See also:  p9930 (System logbook activation)

F01023  Software timeout (internal)
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  An internal software timeout has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:  - carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

F01030  Sign-of-life failure for master control
Message value:  -
Drive object:  B_INF, ENC, VECTOR_G
Reaction:  Infeed: OFF1 (NONE, OFF2)
Vector: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:  IMMEDIATELY
Cause:  For active PC master control, no sign-of-life was received within the monitoring time.
The master control was returned to the active BICO interconnection.
Remedy:  Set the monitoring time higher at the PC or, if required, completely disable the monitoring function.
For the commissioning software, the monitoring time is set as follows:
<Drive> -> Commissioning -> Control panel -> Button "Fetch master control" -> A window is displayed to set the mon-
itoring time in milliseconds.
Notice:
The monitoring time should be set as short as possible. A long monitoring time means a late response when the
communication fails!

F01031  Sign-of-life failure for OFF in REMOTE
Message value:  -
Drive object:  B_INF, VECTOR_G
Reaction:  Infeed: OFF1 (NONE, OFF2)
Vector: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:  IMMEDIATELY
Cause:  With the "OFF in REMOTE" mode active, no sign-of-life was received within 3 seconds.
Remedy:  - Check the data cable connection at the serial interface for the Control Unit (CU) and operator panel.
- Check the data cable between the Control Unit and operator panel.

A01032 (F)  ACX: all parameters must be saved
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  The parameters of an individual drive object were saved (p0971 = 1), although there is still no backup of all drive
system parameters.
The saved object-specific parameters are not loaded the next time that the system powers up.
For the system to successfully power up, all of the parameters must have been completely backed up.
**Faults and alarms**

**List of faults and alarms**

---

**Alarm value (r2124, interpret decimal):**
Only for internal Siemens troubleshooting.

**Remedy:**
Save all parameters (p0977 = 1 or "copy RAM to ROM").
See also: p0977 (Save all parameters)

**Reaction upon F:**
Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

**Acknowl. upon F:** IMMEDIATELY

---

### F01033 Units changeover: Reference parameter value invalid

**Message value:** Parameter: %1

**Drive object:** B_INF, ENC, VECTOR_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:**
When changing over the units to the referred representation type, it is not permissible for any of the required reference parameters to be equal to 0.0
Fault value (r0949, parameter):
Reference parameter whose value is 0.0.
See also: p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Technological unit selection)

**Remedy:**
Set the value of the reference parameter to a number different than 0.0.

---

### F01034 Units changeover: Calculation parameter values after reference value change unsuccessful

**Message value:** Parameter: %1

**Drive object:** B_INF, ENC, VECTOR_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:**
The change of a reference parameter meant that for an involved parameter the selected value was not able to be re-calculated in the per unit representation. The change was rejected and the original parameter value restored.
Fault value (r0949, parameter):
Parameter whose value was not able to be re-calculated.

**Remedy:**
Select the value of the reference parameter such that the parameter involved can be calculated in the per unit representation.

---

### A01035 (F) ACX: Parameter back-up file corrupted

**Message value:** %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**
When the Control Unit is booted, no complete data set was found from the parameter back-up files. The last time that the parameterization was saved, it was not completely carried out.
It is possible that the backup was interrupted by switching off or withdrawing the memory card.
Alarm value (r2124, interpret hexadecimal):
ddccbbbaa hex:
aa = 01 hex:
Power up was realized without data backup. The drive is in the factory setting.
aa = 02 hex:
The last available backup data record was loaded. The parameterization must be checked. It is recommended that the parameterization is downloaded again.

dd, cc, bb:
Only for internal Siemens troubleshooting.
See also: p0971 (Save drive object parameters), p0977 (Save all parameters)

**Remedy:**
- Download the project again with the commissioning software.
- save all parameters (p0977 = 1 or "copy RAM to ROM").
See also: p0977 (Save all parameters)
Faults and alarms

List of faults and alarms

**Reaction upon F:** Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
**Acknowl. upon F:** IMMEDIATELY

**F01036 (A)**

**ACX: Parameter back-up file missing**

**Message value:** %1
**Drive object:** All objects
**Reaction:** Infeed: NONE (OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
**Acknowledge:** IMMEDIATELY

**Cause:** When downloading the device parameterization, a parameter back-up file PSxxxxyy.ACX associated with a drive object cannot be found.
Fault value (r0949, interpret hexadecimal):
Byte 1: yy in the file name PSxxxxyy.ACX
yyy = 000 --> consistency back-up file
yyy = 001 ... 062 --> drive object number
yyy = 099 --> PROFIBUS parameter back-up file
Byte 2, 3, 4:
Only for internal Siemens troubleshooting.

**Remedy:** If you have saved the project data using the commissioning software, carry out a new download for your project.
Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory.
If you have not saved the project data, then first commissioning of the system has to be carried out again.

**Reaction upon A:** NONE
**Acknowl. upon A:** NONE

**F01038 (A)**

**ACX: Loading the parameter back-up file unsuccessful**

**Message value:** %1
**Drive object:** All objects
**Reaction:** Infeed: NONE (OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
**Acknowledge:** IMMEDIATELY

**Cause:** An error has occurred when downloading PSxxxxyy.ACX or PTxxxxyy.ACX files from the non-volatile memory.
Fault value (r0949, interpret hexadecimal):
Byte 1: yy in the file name PSxxxxyy.ACX
yyy = 000 --> consistency back-up file
yyy = 001 ... 062 --> drive object number
yyy = 099 --> PROFIBUS parameter back-up file
Byte 2:
255: Incorrect drive object type.
254: Topology comparison unsuccessful -> drive object type was not able to be identified.
Reasons could be:
- Incorrect component type in the actual topology
- Component does not exist in the actual topology.
- Component not active.
Additional values:
Only for internal Siemens troubleshooting.
Byte 4, 3:
Only for internal Siemens troubleshooting.

**Remedy:**
- If you have saved the project data using the commissioning software, download the project again. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory.
- replace the memory card or Control Unit.
Re byte 2 = 255:
- Correct the drive object type (see p0107).

**Reaction upon A:** NONE
**Acknowl. upon A:** NONE
F01039 (A)  ACX: Writing to the parameter back-up file was unsuccessful

Message value:  \%1

Drive object:  All objects

Reaction:  Infeed: NONE (OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowledge:  IMMEDIATELY

Cause:
Writing to at least one parameter back-up file PSxxxyyy.*** in the non-volatile memory was unsuccessful.
- In the directory /USER/SINAMICS/DATA/ at least one parameter back-up file PSxxxyyy.*** has the "read only" file attribute and cannot be overwritten.
- There is not sufficient free memory space available.
- The non-volatile memory is defective and cannot be written to.

Fault value (r0949, interpret hexadecimal):
dcba hex
a = yyy in the file names PSxxxyyy.***
a = 000 --> consistency back-up file
a = 001 ... 062 --> drive object number
a = 070 --> FEPROM.BIN
a = 080 --> DEL4BOOT.TXT
a = 099 --> PROFIBUS parameter back-up file
b = xxx in the file names PSxxxyyy.***
b = 000 --> data save started with p0977 = 1 or p0971 = 1
b = 010 --> data save started with p0977 = 10
b = 011 --> data save started with p0977 = 11
b = 012 --> data save started with p0977 = 12

d, c:
Only for internal Siemens troubleshooting.

Remedy:  
- check the file attribute of the files (PSxxxyyy.***, CAxxxyyy.***, CCxxxyyy.*** and, if required, change from "read only" to "writeable".  
- check the free memory space in the non-volatile memory. Approx. 80 kbyte of free memory space is required for every drive object in the system.
- replace the memory card or Control Unit.

Reaction upon A:  NONE
Acknowl. upon A:  NONE

F01040  Save parameter settings and carry out a POWER ON

Message value:  -

Reaction:  OFF2

Acknowledge:  POWER ON

Cause:  A parameter was changed in the drive system which means that it is necessary to save the parameters and re-boot.

Remedy:  
- save the parameters (p0971/p0977).
- carry out a POWER ON (power off/on) for all components.

Then:
- upload the drive unit (commissioning software).

F01040  Save parameter settings and carry out a POWER ON

Message value:  -

Drive object:  VECTOR_G

Reaction:  OFF2

Acknowledge:  POWER ON

Cause:  A parameter was changed in the drive system which means that it is necessary to save the parameters and re-boot.
Examples:
- p1810.2 (wobulation of the pulse frequency) and p1802 (edge modulation)
- p1750.5 (cl.-loop control mode PESM up to f=0Hz with HF signal injection)
### F01041 Parameter save necessary

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** Defective or missing files were detected on the memory card when booting.  
- Source file cannot be opened.  
- Source file cannot be read.  
- Target directory cannot be set up.  
- Target file cannot be set up/opened.  
- Target file cannot be written to.  
**Remedy:**  
- save the parameters.  
- download the project again to the drive unit.  
- update the firmware  
- if required, replace the Control Unit and/or memory card card.  

### F01042 Parameter error during project download

**Message value:** Parameter: %1, Index: %2, fault cause: %3  
**Drive object:** All objects  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
**Acknowledge:** IMMEDIATELY  
**Cause:** An error was detected when downloading a project using the commissioning software (e.g. incorrect parameter value).  
For the specified parameter, it was detected that dynamic limits were exceeded that may possibly depend on other parameters.  
Fault value (r0949, interpret hexadecimal):  
- Parameter = aaaa  
- Index = bb  
- Fault cause = cc  
- 0: Parameter number illegal.  
- 1: Parameter value cannot be changed.  
- 2: Lower or upper value limit exceeded.  
- 3: Sub-index incorrect.  
- 4: No array, no sub-index.  
- 5: Data type incorrect.  
- 6: Setting not permitted (only resetting).  
- 7: Descriptive element cannot be changed.  
- 9: Descriptive data not available.  
- 11: No master control.  
- 15: No text array available.  
- 17: Task cannot be executed due to operating state.  
- 20: Illegal value.  
- 21: Response too long.  
- 22: Parameter address illegal.  
- 23: Format illegal.  
- 24: Number of values not consistent.  
- 25: Drive object does not exist.  
- 101: Presently de-activated.  
- 104: Illegal value.  
- 107: Write access not permitted when controller enabled.
Faults and alarms

List of faults and alarms

108: Unit unknown.
109: Write access only in the commissioning state, encoder (p0010 = 4).
110: Write access only in the commissioning state, motor (p0010 = 3).
111: Write access only in the commissioning state, power unit (p0010 = 2).
112: Write access only in the quick commissioning mode (p0010 = 1).
113: Write access only in the ready mode (p0010 = 0).
114: Write access only in the commissioning state, parameter reset (p0010 = 30).
115: Write access only in the Safety Integrated commissioning state (p0010 = 95).
116: Write access only in the commissioning state, technological application/units (p0010 = 5).
117: Write access only in the commissioning state (p0010 not equal to 0).
118: Write access only in the commissioning state, download (p0010 = 29).
119: Parameter may not be written in download.
120: Write access only in the commissioning state, drive basic configuration (device: p0009 = 3).
121: Write access only in the commissioning state, define drive type (device: p0009 = 2).
122: Write access only in the commissioning state, data set basic configuration (device: p0009 = 4).
123: Write access only in the commissioning state, device configuration (device: p0009 = 1).
124: Write access only in the commissioning state, device download (device: p0009 = 29).
125: Write access only in the commissioning state, device parameter reset (device: p0009 = 3).
126: Write access only in the commissioning state, device ready (device: p0009 = 0).
127: Write access only in the commissioning state, device (device: p0009 not equal to 0).
129: Parameter may not be written in download.
130: Transfer of the master control is inhibited via binector input p0806.
131: Required BICO interconnection not possible because BICO output does not supply floating value
132: Free BICO interconnection inhibited via p0922.
133: Access method not defined.
200: Below the valid values.
201: Above the valid values.
202: Cannot be accessed from the Basic Operator Panel (BOP).
203: Cannot be read from the Basic Operator Panel (BOP).
204: Write access not permitted.

Remedy:
- enter the correct value in the specified parameter.
- identify the parameter that restricts the limits of the specified parameter.

F01043 Fatal error at project download
Message value: Fault cause: %1
Drive object: All objects
Reaction: Infeed: OFF2 (OFF1)
Vector: OFF2 (OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: A fatal error was detected when downloading a project using the commissioning software. Fault value (r0949, interpret decimal):
1: Device status cannot be changed to Device Download (drive object ON?).
2: Incorrect drive object number.
3: A drive object that has already been deleted is deleted again.
4: Deleting of a drive object that has already been registered for deletion.
5: Deleting a drive object that does not exist.
6: Generating an undeleted drive object that already existed.
7: Regenerating a drive object already registered for generation.
8: Maximum number of drive objects that can be generated exceeded.
9: Error while generating a drive object.
10: Error while generating target topology parameters (p9902 and p9903).
11: Error while generating a drive object (global component).
12: Error while generating a drive object (drive component).
13: Unknown drive object type.
14: Drive status cannot be changed to "ready for operation" (p0947 and p0949).
15: Drive status cannot be changed to drive download.
16: Device status cannot be changed to "ready for operation".
17: It is not possible to download the topology. The component wiring should be checked, taking into account the various messages/signals.
18: A new download is only possible if the factory settings are restored for the drive unit.
19: The slot for the option module has been configured several times (e.g. CAN and COMM BOARD)
20: The configuration is inconsistent (e.g. CAN for Control Unit, however no CAN configured for drive objects A_INF, SERVO or VECTOR).
21: Error when accepting the download parameters.
22: Software-internal download error.

Additional values: only for internal Siemens troubleshooting.

Remedy:
- use the current version of the commissioning software.
- modify the offline project and carry out a new download (e.g. compare the number of drive objects, motor, encoder, power unit in the offline project and at the drive).
- change the drive state (is a drive rotating or is there a message/signal?).
- carefully note any other messages/signals and remove their cause.
- boot from previously saved files (power-down/power-up or p0976).

F01044 CU: Descriptive data error

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: POWER ON
Cause: An error was detected when loading the descriptive data saved in the non-volatile memory.
Remedy: Replace the memory card or Control Unit.

A01045 CU: Configuring data invalid

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An error was detected when evaluating the parameter files PSxxxxxx.ACX, PTxxxxxx.ACX, CAxxxxxx.ACX, or CCxxxxxx.ACX saved in the non-volatile memory. Because of this, under certain circumstances, several of the saved parameter values were not able to be accepted. Also see r9406 up to r9408.
Alarm value (r2124, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - Check the parameters displayed in r9406 up to r9408, and correct these if required.
- Restore the factory setting using (p0976 = 1) and re-load the project into the drive unit.
Then save the parameterization in STARTER using the "Copy RAM to ROM" function or with p0977 = 1. This over-
writes the incorrect parameter files in the non-volatile memory – and the alarm is withdrawn.

A01049 CU: It is not possible to write to file

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: It is not possible to write into a write-protected file (PSxxxxxx.acx). The write request was interrupted.
Alarm value (r2124, interpret decimal):
Drive number.
Remedy: Check whether the "write protected" attribute has been set for the files in the non-volatile memory under ...
USER/SINAMICS/DATA/...
When required, remove write protection and save again (e.g. set p0977 to 1).

F01050 Memory card and device incompatible

Message value: -
Drive object: All objects
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The memory card and the device type do not match (e.g. a memory card for SINAMICS S is inserted in SINAMICS G).
Remedy: - insert the matching memory card.
- use the matching Control Unit or power unit.
**F01054**  **CU: System limit exceeded**  
**Message value:** %1  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** At least one system overload has been identified. 
Fault value (r0949, interpret decimal):  
1: Computing time load too high (r9976[1]).  
5: Peak load too high (r9976[5]).  
See also: r9976 (System utilization)  
**Remedy:**  
- reduce the computing time load of the drive unit (r9976[1] and r9976[5]) to under 100%.  
- check the sampling times and adjust if necessary (p0115, p0799, p4099).  
- de-activate function modules.  
- de-activate drive objects.  
- remove drive objects from the target topology.  
- note the DRIVE-CLiQ topology rules and if required, change the DRIVE-CLiQ topology.  
When using the Drive Control Chart (DCC) or free function blocks (FBLOCKS), the following applies:  
- the computing time load of the individual run-time groups on a drive object can be read out in r21005 (DCC) or r20005 (FBLOCKS).  
- if necessary, the assignment of the run-time group (p21000, p20000) can be changed in order to increase the sampling time (r21001, r20001).  
- if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS).  

**F01055**  **CU: Internal error (SYNO of port and application not identical)**  
**Message value:** %1  
**Drive object:** B_INF, TM150, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** All applications that operate with slaves at one port must be derived from the same SYNO clock cycle.  
The first application whose registration (log-on) connects a slave to a port defines the SYNO clock cycle that will be used as basis for the port.  
Fault value (r0949, interpret hexadecimal): Method ID.  
Note: Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.  

**F01056**  **CU: Internal error (clock cycle of parameter group already assigned differently)**  
**Message value:** %1  
**Drive object:** B_INF, TM150, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested parameter group (IREG, NREG, ...) is already being used in a different clock cycle.  
Fault value (r0949, interpret hexadecimal): Method ID.  
Note: Only for internal Siemens troubleshooting.  
**Remedy:** Contact the Hotline.  

**F01057**  **CU: Internal error (different DRIVE-CLiQ type for the slave)**  
**Message value:** %1  
**Drive object:** B_INF, TM150, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The requested DRIVE-CLiQ type (hps_ps, hps_enc, ...) has been specified differently for the same slave component.  
Fault value (r0949, interpret hexadecimal): Method ID.
F01058  CU: Internal error (slave missing in topology)
Message value: %1
Drive object: B_INF, TM150, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The requested slave component does not exist in the topology.
Fault value (r0949, interpret hexadecimal):
Method ID.
Note: Only for internal Siemens troubleshooting.
Remedy: Contact the Hotline.

F01059  CU: Internal error (port does not exist)
Message value: %1
Drive object: B_INF, TM150, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The port object assigned according to the topology of the requested slave component does not exist.
Fault value (r0949, interpret hexadecimal):
Method ID.
Note: Only for internal Siemens troubleshooting.
Remedy: Contact the Hotline.

F01060  CU: Internal error (parameter group not available)
Message value: %1
Drive object: B_INF, TM150, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The requested parameter group (IREG, NREG, ...) is not offered by this slave type.
Fault value (r0949, interpret hexadecimal):
Method ID.
Note: Only for internal Siemens troubleshooting.
Remedy: Contact the Hotline.

F01061  CU: Internal error (application not known)
Message value: %1
Drive object: B_INF, TM150, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: An application that is not registered with TSM has attempted to register with registerSlaves().
The cause can be an unsuccessful TSM registration or an incorrect registration sequence. It is always necessary to
log in to the TSM before registerSlaves() can be used.
Fault value (r0949, interpret hexadecimal):
Method ID.
Note: Only for internal Siemens troubleshooting.
Remedy: Contact the Hotline.
### F01063  CU: Internal error (PDM)

- **Message value:** %1
- **Drive object:** B_INF, TM150, VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** An internal software error has occurred.  
  Fault value (r0949, interpret hexadecimal):  
  Method ID.  
  Note:  
  Only for internal Siemens troubleshooting.
- **Remedy:** Contact the Hotline.

### A01064 (F)  CU: Internal error (CRC)

- **Message value:** -  
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** CRC error in the Control Unit program memory
- **Remedy:**  
  - carry out a POWER ON (power off/on) for all components.  
  - upgrade firmware to later version.  
  - contact the Hotline.
- **Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
  Vector: NONE (OFF1, OFF2, OFF3, STOP2)
- **Acknowl. upon F:** IMMEDIATELY (POWER ON)

### F01068  CU: Data memory, memory overflow

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** The utilization for a data memory area is too large.  
  Fault value (r0949, interpret binary):  
  - Bit 0 = 1: High-speed data memory 1 overloaded  
  - Bit 1 = 1: High-speed data memory 2 overloaded  
  - Bit 2 = 1: High-speed data memory 3 overloaded  
  - Bit 3 = 1: High-speed data memory 4 overloaded
- **Remedy:**  
  - de-activate the function module.  
  - de-activate drive object.  
  - remove the drive object from the target topology.

### A01069  Parameter backup and device incompatible

- **Message value:** -  
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The parameter backup on the memory card and the drive unit do not match.  
  The module boots with the factory settings.  
  Example:  
  Devices A and B. are not compatible and a memory card with the parameter backup for device A is inserted in device B.
- **Remedy:**  
  - insert a memory card with compatible parameter backup and carry out a POWER ON.  
  - insert a memory card without parameter backup and carry out a POWER ON.  
  - save the parameters (p0977 = 1).
F01070  Project/firmware is being downloaded to the memory card

Message value:  %1
Drive object:  All objects
Reaction:  OFF2
Acknowledge:  IMMEDIATELY
Cause:  An upgrade (project/firmware download) was initiated on the memory card. While this fault is present, the corresponding update takes place with plausibility and consistency checks. After this, depending on the command option, a new boot (reset) for the Control Unit is initiated.
Caution:  During the upgrade and while this fault is present, it is not permissible to switch off the Control Unit. If the operation is interrupted, this can destroy the file system on the memory card. The memory card will then no longer work properly and must be repaired.
Remedy:  Not necessary. The fault automatically disappears after the upgrade has been completed.

A01099  Tolerance window of time synchronization exited

Message value:  -
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  The time master exited the selected tolerance window for time synchronization.
See also:  p3109 (RTC real time synchronization, tolerance window)
Remedy:  Select the re-synchronization interval so that the synchronization deviation between the time master and drive system lies within the tolerance window.
See also:  r3108 (RTC last synchronization deviation)

A01100  CU: Memory card withdrawn

Message value:  -
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The memory card (non-volatile memory) was withdrawn during operation.
Notice:  It is not permissible for the memory card to be withdrawn or inserted under voltage.
Remedy:  - power down the drive system.
- re-insert the memory card that was withdrawn - this card must match the drive system.
- power up the drive system again.

F01105 (A)  CU: Insufficient memory

Message value:  %1
Drive object:  All objects
Reaction:  OFF1
Acknowledge:  POWER ON
Cause:  Too many functions have been configured on this Control Unit (e.g. too many drives, function modules, data sets, OA applications, blocks, etc).
Fault value (r0949, interpret decimal):  Only for internal Siemens troubleshooting.
Remedy:  - change the configuration on this Control Unit (e.g. fewer drives, function modules, data sets, OA applications, blocks, etc).
- use an additional Control Unit.
Reaction upon A:  NONE
Acknowl. upon A:  NONE
### F01106 CU: Insufficient memory
- **Message value:** %1
- **Drive object:** B_INF, TM150, VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** There is not sufficient free memory space available.
- **Remedy:** Not necessary.

### F01107 CU: Data save in the non-volatile memory unsuccessful
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** A data save in the non-volatile memory was not able to be successfully carried out.
  - non-volatile memory is defective.
  - insufficient space in the non-volatile memory.
  - Fault value (r0949, interpret decimal):
  - Only for internal Siemens troubleshooting.
- **Remedy:**
  - try to save again.
  - replace the memory card or Control Unit.

### F01110 CU: More than one SINAMICS G on one Control Unit
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** More than one SINAMICS G type power unit is being operated from the Control Unit.
  - Fault value (r0949, interpret decimal):
  - Number of the second drive with a SINAMICS G type power unit.
- **Remedy:** Only one SINAMICS G drive type is permitted.

### F01111 CU: Mixed operation of drive units illegal
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** Illegal operation of various drive units on one Control Unit:
  - SINAMICS S together with SINAMICS G
  - SINAMICS S together with SINAMICS S Value or Combi
  - Fault value (r0949, interpret decimal):
  - Number of the first drive object with a different power unit type.
- **Remedy:** Only power units of one particular drive type may be operated with one Control Unit.

### F01112 CU: Power unit not permissible
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** The connected power unit cannot be used together with this Control Unit.
  - Fault value (r0949, interpret decimal):
  - 1: Power unit is not supported (e.g. PM240).
  - 2: DC/AC power unit connected to CU310 not permissible.
  - 3: Power unit (S120M) not permitted for vector control.
- **Remedy:** Replace the power unit that is not permissible by a component that is permissible.
### F01120 (A) Terminal initialization has failed

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1 (OFF2)
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** An internal software error occurred while the terminal functions were being initialized.
- **Fault value (r0949, interpret hexadecimal):**
  - Only for internal Siemens troubleshooting.
- **Remedy:**
  - carry out a POWER ON (power off/on) for all components.
  - upgrade firmware to later version.
  - contact the Hotline.
  - replace the Control Unit.
- **Reaction upon A:** NONE
- **Acknowl. upon A:** NONE

### F01122 (A) Frequency at the measuring probe input too high

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1 (OFF2)
- **Acknowledge:** IMMEDIATELY
- **Cause:** The frequency of the pulses at the measuring probe input is too high.
- **Fault value (r0949, interpret decimal):**
  - 1: DI/DO 9 (X122.8)
  - 2: DI/DO 10 (X122.10)
  - 4: DI/DO 11 (X122.11)
  - 8: DI/DO 13 (X132.8)
  - 16: DI/DO 14 (X132.10)
  - 32: DI/DO 15 (X132.11)
  - 64: DI/DO 8 (X122.7)
  - 128: DI/DO 12 (X132.7)
- **Remedy:** Reduce the frequency of the pulses at the measuring probe input.
- **Reaction upon A:** NONE
- **Acknowl. upon A:** NONE

### F01150 CU: Number of instances of a drive object type exceeded

- **Message value:** Drive object type: %1, number permitted: %2, actual number: %3
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** The maximum permissible number of instances of a drive object type was exceeded.
- **Drive object type:** Drive object type (p0107), for which the maximum permissible number of instances was exceeded.
- **Number permitted:** Max. permissible number of instances for this drive object type.
- **Actual number:** Current number of instances for this drive object type.
- **Note regarding the message value:**
  - The individual information is coded as follows in the message value (r0949/r2124):
  - ddcbbbaa hex: aa = drive object type, bb = number limited, cc = actual number, dd = no significance
- **Remedy:**
  - power down the unit.
  - suitably restrict the number of instances of a drive object type by reducing the number of inserted components.
  - re-commission the unit.
F01151  CU: Number of drive objects of a category exceeded  
Message value:  Drive object category: %1, number permitted: %2, actual number: %3  
Drive object:  All objects  
Reaction:  NONE  
Acknowledge:  IMMEDIATELY  
Cause:  The maximum permissible number of drive objects of a category was exceeded.  
Drive object category:  Drive object category, for which the maximum permissible number of drive objects was exceeded.  
Number permitted:  Max. permissible number for this drive object category.  
Actual number:  Actual number for this drive object category.  
Note regarding the message value:  The individual information is coded as follows in the message value (r0949/r2124):  
ddccbbaa hex:  
aa = drive object category,  
bb = number limited,  
cc = actual number,  
dd = no significance  
Remedy:  
- power down the unit.  
- suitably restrict the number of drive objects of the specified category by reducing the number of inserted components.  
- re-commission the unit.  

F01200  CU: Time slice management internal software error  
Message value:  %1  
Drive object:  All objects  
Reaction:  OFF2  
Acknowledge:  IMMEDIATELY (POWER ON)  
Cause:  A time slice management error has occurred.  
It is possible that the sampling times have been inadmissibly set.  
Fault value (r0949, interpret hexadecimal):  
998:  
Too many time slices occupied by OA (e.g. DCC).  
999:  
Too many time slices occupied by the basic system. Too many different sampling times may have been set.  
Additional values:  
Only for internal Siemens troubleshooting.  
Remedy:  
- check the sampling time setting (p0112, p0115, p4099, p9500, p9511).  
- contact the Hotline.  

F01205  CU: Time slice overflow  
Message value:  %1  
Drive object:  All objects  
Reaction:  OFF2  
Acknowledge:  POWER ON  
Cause:  Insufficient processing time is available for the existing topology.  
Fault value (r0949, interpret hexadecimal):  
Only for internal Siemens troubleshooting.  
Remedy:  
- reduce the number of drives.  
- increase the sampling times.  

F01221  CU: Bas clk cyc too low  
Message value:  %1  
Drive object:  All objects  
Reaction:  NONE  
Acknowledge:  IMMEDIATELY  
Cause:  The closed-loop control / monitoring cannot maintain the envisaged clock cycle.  
The runtime of the closed-loop control/monitoring is too long for the particular clock cycle or the computing time remaining in the system is not sufficient for the closed-loop control/monitoring.  
Fault value (r0949, interpret hexadecimal):  
Only for internal Siemens troubleshooting.
### Remedy:
Increase the basic clock cycle of DRIVE-CLiQ communication.
See also: p0112 (Sampling times pre-setting p0115)

### F01222
CU: Basic clock cycle too low (computing time for communication not available)

- **Message value:** %1
- **Drive object:** B_INF, TM150, VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:**
  - A time slice has not been defined that fulfills the requirements.
  - The port cannot be correctly operated as the alternating cyclic clock cycle cannot be maintained.

#### Fault value (r0949, interpret hexadecimal):
- Method ID.

#### Note:
Only for internal Siemens troubleshooting.

### A01223
CU: Sampling time inconsistent

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  - When changing a sampling time (p0115[0], p0799 or p4099), inconsistency between the clock cycles has been identified.
  - Alarm value (r2124, interpret decimal):
    - 1: Value lower than minimum value.
    - 2: Value higher than maximum value.
    - 3: Value not a multiple of 1.25 µs.
    - 4: Value does not match clock-cycle synchronous PROFIBUS operation.
    - 5: Value not a multiple of 125 µs.
    - 6: Value not a multiple of 250 µs.
    - 7: Value not a multiple of 375 µs.
    - 8: Value not a multiple of 400 µs.
    - 10: Special restriction of the drive object violated.
    - 20: On a SERVO with a sampling time of 62.5 µs, more than two drive objects or one drive object of a type other than SERVO have been detected on the same DRIVE-CLiQ line (a maximum of two SERVO type drive objects are permitted).
    - 21: Value can be a multiple of the current controller sampling time of a servo or vector drive in the system (e.g. for TB30, the values of all of the indices should be taken into account).
    - 30: Value less than 31.25 µs.
    - 31: Value less than 62.5 µs (31.25 µs is not supported for SMC10, SMC30, SM110 and Double Motor Modules).
    - 32: Value less than 125 µs.
    - 33: Value less than 250 µs.
    - 40: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs. Further, none of the nodes has a sampling time of less than 125 µs.
    - 41: A chassis unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 125 µs.
    - 42: An Active Line Module was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 125 µs.
    - 43: A Voltage Sensing Module (VSM) was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is not equal to the current controller sampling time of the drive object of the VSM.
    - 44: The highest common denominator of the sampling times of all of the components connected to the DRIVE-CLiQ line is not the same for all components of this drive object (e.g. there are components on different DRIVE-CLiQ lines on which different highest common denominators are generated).
    - 45: A chassis parallel unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 162.5 µs or 187.5 µs (for a 2 or 3x parallel connection).
    - 46: A node has been identified on the DRIVE-CLiQ line whose sampling time is not a multiple of the lowest sampling time on this line.
    - 52: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 31.25 µs.
Faults and alarms

List of faults and alarms

54: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 62.5 µs.
56: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs.
58: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 250 µs.
99: Inconsistency of cross drive objects detected.
116: Recommended clock cycle in r0116[0...1].

General note:
The topology rules should be noted when connecting up DRIVE-CLiQ (refer to the appropriate product documentation).
The parameters of the sampling times can also be changed with automatic calculations.
Example for highest common denominator: 125 µs, 125 µs, 62.5 µs --> 62.5 µs

Remedy:
- check the DRIVE-CLiQ cables.
- set a valid sampling time.
See also: p0115, p0799, p4099

A01224 CU: Pulse frequency inconsistent

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: When changing the minimum pulse frequency (p0113) inconsistency between the pulse frequencies was identified.
Alarm value (r2124, interpret decimal):
1: Value lower than minimum value.
2: Value higher than maximum value.
3: Resulting sampling time is not a multiple of 1.25 µs.
4: Value does not match clock-cycle synchronous PROFIBUS operation.
10: Special restriction of the drive object violated.
99: Inconsistency of cross drive objects detected.
116: Recommended clock cycle in r0116[0...1].

Remedy:
Set a valid pulse frequency.
See also: p0113 (Minimum pulse frequency, selection)

F01250 CU: CU-EEPROM incorrect read-only data

Message value: %1
Drive object: All objects
Reaction: NONE (OFF2)
Acknowledge: POWER ON
Cause: Error when reading the read-only data of the EEPROM in the Control Unit.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- carry out a POWER ON.
- replace the Control Unit.

A01251 CU: CU-EEPROM incorrect read-write data

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Error when reading the read-write data of the EEPROM in the Control Unit.
Alarm value (r2124, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
For alarm value r2124 < 256, the following applies:
- carry out a POWER ON.
- replace the Control Unit.
For alarm value r2124 >= 256, the following applies:
- for the drive object with this alarm, clear the fault memory (p0952 = 0).
- as an alternative, clear the fault memory of all drive objects (p2147 = 1).
- replace the Control Unit.

---

### F01255
**CU: Option Board EEPROM read-only data error**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE (OFF2)
- **Acknowledge:** POWER ON
- **Cause:** Error when reading the read-only data of the EEPROM in the Option Board.
  - Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
- **Remedy:**
  - carry out a POWER ON.
  - replace the Control Unit.

### A01256
**CU: Option Board EEPROM read-write data error**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** Error when reading the read-write data of the EEPROM in the Option Board.
  - Fault value (0949, interpret decimal): Only for internal Siemens troubleshooting.
- **Remedy:**
  - carry out a POWER ON.
  - replace the Control Unit.

### F01303
**DRIVE-CLiQ component does not support the required function**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** A function requested by the Control Unit is not supported by a DRIVE-CLiQ component.
  - Fault value (0949, interpret decimal):
    - 1: The component does not support the de-activation.
    - 101: The Motor Module does not support an internal armature short-circuit.
    - 102: The Motor Module does not support the de-activation.
    - 201: The Sensor Module does not support actual value inversion (p0410.0 = 1) when using a Hall sensor (p0404.6 = 1) for the commutation.
    - 202: The Sensor Module does not support parking/unparking.
    - 203: The Sensor Module does not support the de-activation.
    - 204: The firmware of this Terminal Module 15 (TM15) does not support the application TM15DI/DO.
    - 205: The Sensor Module does not support the selected temperature evaluation (r0458).
    - 206: The firmware of this Terminal Modules TM41/TM31/TM15 refers to an old firmware version. It is urgently necessary to upgrade the firmware to ensure disturbance-free operation.
    - 207: The power unit with this hardware version does not support operation with device supply voltages of less than 380 V.
    - 208: The Sensor Module does not support de-selection of commutation with zero mark (via p0430.23).
    - 211: The Sensor Module does not support single-track encoders (r0459.10).
    - 212: The Sensor Module does not support LVDT sensors (p4677.0).
    - 213: The Sensor Module does not support the characteristic type (p4662).
- **Remedy:**
  - Upgrade the firmware of the DRIVE-CLiQ component involved.
  - For fault value = 205:
    - Check parameter p0600 and p0601 and if required, adapt interpretation.
  - For fault value = 207:
    - Replace the power unit or if required set the device supply voltage higher (p0210).
  - For fault value = 208:
    - Check parameter p0430.23 and reset if necessary.
### A01304 (F)
**Firmware version of DRIVE-CLiQ component is not up-to-date**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The non-volatile memory has a more recent firmware version than the one in the connected DRIVE-CLiQ component.
  - Alarm value (r2124, interpret decimal):
  - Component number of the DRIVE-CLiQ component involved.
- **Remedy:** Update the firmware (p7828, p7829 and commissioning software).
- **Reaction upon F:** NONE
- **Acknowl. upon F:** IMMEDIATELY

### F01305
**Topology: Component number missing**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** The component number from the topology was not parameterized (p0121 (for power unit, refer to p0107), p0131 (for servo/vector drives, refer to p0107), p0141, p0151, p0161).
  - Fault value (r0949, interpret decimal):
  - Data set number.
  - Note:
    - The fault also occurs if speed encoders have been configured (p0187 to p0189) but no component numbers exist for them.
    - In this case, the fault value includes the drive data set number plus 100 * encoder number (e.g. 3xx, if a component number was not entered in p0141 for the third encoder (p0189)).
  - See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189

**Remedy:**
- Enter the missing component number or remove the component and restart commissioning.
- See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189

### A01306
**Firmware of the DRIVE-CLiQ component being updated**

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** Firmware update is active for at least one DRIVE-CLiQ component.
  - Alarm value (r2124, interpret decimal):
  - Component number of the DRIVE-CLiQ component.
- **Remedy:** Not necessary.

This alarm automatically disappears after the firmware has been updated.

### A01314
**Topology: Component must not be present**

- **Message value:** Component number: %1, Component class: %2, Connection number: %3
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** For a component, "de-activate and not present" is set but this component is still in the topology.
  - Alarm value (r2124, interpret hexadecimal):
    - ddcbbbaa hex:
      - aa = component number
      - bb = component class of the component
      - cc = connection number
  - Note:
    - Component class and connection number are described in F01375.
Remedy: - remove the corresponding component.
- change the setting "de-activate and not present".
Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).
See also: p0105, p0125, p0145, p0155

A01315 Drive object not ready for operation
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: For the active drive object involved, at least one activated component is missing.
Note:
All other active and operational drive objects can be in the "RUN" state.
Remedy: The alarm automatically disappears again with the following actions:
- de-activate the drive object involved (p0105 = 0).
- de-activate the components involved (p0125 = 0, p0145 = 0, p0155 = 0, p0165 = 0).
- re-insert the components involved.
See also: p0105, p0125, p0145, p0155

A01316 Drive object inactive and again ready for operation
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: If, when inserting a component of the target topology, an inactive, non-operational drive object becomes operational again. The associated parameter of the component is, in this case, set to "activate" (p0125, p0145, p0155, p0165).
Note:
This is the only message that is displayed for a de-activated drive object.
Remedy: The alarm automatically disappears again with the following actions:
- activate the drive object involved (p0105 = 1).
- again withdraw the components involved.
See also: p0105 (Activate/de-activate drive object)

A01317 (N) De-activated component again present
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: If a component of the target topology for an active drive object is inserted and the associated parameter of the component is set to "de-activate" (p0125, p0145, p0155, p0165).
Note:
This is the only message that is displayed for a de-activated component.
Remedy: The alarm automatically disappears again with the following actions:
- activate the components involved (p0125 = 1, p0145 = 1, p0155 = 1, p0165 = 1).
- again withdraw the components involved.
See also: p0125 (Activate/de-activate power unit components), p0145 (Activate/de-activate encoder interface), p0155 (Voltage Sensing Module, activate/de-activate)
Faults and alarms

List of faults and alarms

A01318  BICO: De-activated interconnections present
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  This alarm is used in the following cases:
- If an inactive/non-operational drive object is active again/ready for operation
- If there are items in the list of Bi/CI parameters (r9498[0...29], r9499[0...29])
- If the BICO interconnections saved in the list of Bi/CI parameters (r9498[0...29], r9499[0...29]) have actually been changed
Remedy:  Reset alarm:
- Set p9496 to 1 or 2
or
- de-activate the drive object again.

A01319  Inserted component not initialized
Message value:  -
Drive object:  B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  Initialization is required for at least one inserted component.
This is only possible if the pulses are inhibited for all the drive objects.
Remedy:  Activate pulse inhibit for all drive objects.

A01320  Topology: Drive object number does not exist in configuration
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  A drive object number is missing in p0978
Alarm value (r2124, interpret decimal):
Index of p0101 under which the missing drive object number can be determined.
Remedy:  Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.

A01321  Topology: Drive object number does not exist in configuration
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  p0978 contains a drive object number that does not exist.
Alarm value (r2124, interpret decimal):
Index of p0978 under which the drive object number can be determined.
Remedy:  Set p0009 to 1 and change p0978:
Rules:
- p0978 must include all of the drive object numbers (p0101).
- it is not permissible for a drive object number to be repeated.
- by entering a 0, the drive objects with PZD are separated from those without PZD.
- only 2 partial lists are permitted. After the second 0, all values must be 0.
- dummy drive object numbers (255) are only permitted in the first partial list.
### A01322
**Topology: Drive object number present twice in configuration**

<tr>
<td>Acknowledge:</td>
<td>NONE</td>
</tr>
</tbody>
</table>
| Cause:         | In p0978, dummy drive object numbers (255) are only permitted in the first partial list.  
Alarm value (r2124, interpret decimal):  
Index of p0978 under which the illegal value is located. |
| Remedy:        | Set p0009 to 1 and change p0978:  
Rules:  
- p0978 must include all of the drive object numbers (p0101).  
- it is not permissible for a drive object number to be repeated.  
- by entering a 0, the drive objects with PZD are separated from those without PZD.  
- only 2 partial lists are permitted. After the second 0, all values must be 0.  
- dummy drive object numbers (255) are only permitted in the first partial list. |

### F01325
**Topology: Component number not present in target topology**

<table>
<thead>
<tr>
<th>Message value:</th>
<th>Component number: %1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>All objects</td>
</tr>
<tr>
<td>Reaction:</td>
<td>NONE</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY</td>
</tr>
</tbody>
</table>
| Cause:         | The component configured in a parameter (e.g. p0121, p0131, etc.) is not present in the target topology.  
Alarm value (r2124, interpret decimal):  
Configured component number that is not present in target topology. |
| Remedy:        | Establish topology and DO configuration consistency. |
### Faults and alarms

**List of faults and alarms**

<table>
<thead>
<tr>
<th>Fault Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A01330</td>
<td>Topology: Quick commissioning not possible</td>
</tr>
</tbody>
</table>

**Message value:** Fault cause: %1, supplementary information: %2, preliminary component number: %3

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** Unable to carry out a quick commissioning. The existing actual topology does not fulfill the requirements.

Alarm value (0x124, interpret hexadecimal): cccccbbaa hex: cccc = preliminary component number, bb = supplementary information, aa = fault cause

```
aa = 01 hex = 1 dec:
On one component illegal connections were detected.
- bb = 01 hex = 1 dec: For a Motor Module, more than one motor with DRIVE-CLIQ was detected.
- bb = 02 hex = 2 dec: For a motor with DRIVE-CLIQ, the DRIVE-CLIQ cable is not connected to a Motor Module.
```

```
aa = 02 hex = 2 dec:
The topology contains too many components of a particular type.
- bb = 01 hex = 1 dec: There is more than one master Control Unit.
- bb = 02 hex = 2 dec: There is more than 1 infeed (8 for a parallel circuit configuration).
- bb = 03 hex = 3 dec: There are more than 10 Motor Modules (8 for a parallel circuit configuration).
- bb = 04 hex = 4 dec: There are more than 9 encoders.
- bb = 05 hex = 5 dec: There are more than 8 Terminal Modules.
- bb = 07 hex = 7 dec: Unknown component type
- bb = 08 hex = 8 dec: There are more than 6 drive slaves.
- bb = 09 hex = 9 dec: Connection of a drive slave not permitted.
- bb = 0a hex = 10 dec: There is no drive master.
- bb = 0b hex = 11 dec: There is more than one motor with DRIVE-CLIQ for a parallel circuit.
- bb = 0c hex = 12 dec: Different power units are being used in a parallel connection.
- cccc: Not used.
```

```
aa = 03 hex = 3 dec:
More than 16 components are connected at a DRIVE-CLIQ socket of the Control Unit.
- bb = 0, 1, 2, 3 means e.g. detected at the DRIVE-CLIQ socket X100, X101, X102, X103.
- cccc: Not used.
```

```
aa = 04 hex = 4 dec:
The number of components connected one after the other is greater than 125.
- bb: Not used.
- cccc = preliminary component number of the first component and component that resulted in the fault.
```

```
aa = 05 hex = 5 dec:
The component is not permissible for SERVO.
- bb = 01 hex = 1 dec: SINAMICS G available.
- bb = 02 hex = 2 dec: Chassis available.
- cccc = preliminary component number of the first component and component that resulted in the fault.
```

```
aa = 06 hex = 6 dec:
On one component illegal EEPROM data was detected. These must be corrected before the system continues to boot.
- bb = 01 hex = 1 dec: The Order No. [MLFB] of the power unit that was replaced includes a space retainer. The space retainer (*) must be replaced by a correct character.
```

```
aa = 07 hex = 7 dec:
The actual topology contains an illegal combination of components.
- bb = 01 hex = 1 dec: Active Line Module (ALM) and Basic Line Module (BLM).
- bb = 02 hex = 2 dec: Active Line Module (ALM) and Smart Line Module (SLM).
- bb = 03 hex = 3 dec: SIMOTION control (e.g. SIMOTION D445) and SINUMERIK component (e.g. NX15).
- bb = 04 hex = 4 dec: SINUMERIK control (e.g. SINUMERIK 730.net) and SIMOTION component (e.g. CX32).
- cccc: Not used.
```

**Note:** Connection type and connection number are described in F01375. See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

**Remedy:**
- adapt the output topology to the permissible requirements.
- carry out commissioning using the commissioning software.
- for motors with DRIVE-CLIQ, connect the power and DRIVE-CLIQ cable to the same Motor Module (Single Motor Module: DRIVE-CLIQ at X202, Double Motor Module: DRIVE-CLIQ from motor 1 (X1) to X202, from motor 2 (X2) to X203).
Faults and alarms

List of faults and alarms

Re aa = 06 hex = 6 dec and bb = 01 hex = 1 dec:
Correct the order number when commissioning using the commissioning software.

A01331  Topology: At least one component not assigned to a drive object
Message value:  Component number: %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  At least one component is not assigned to a drive object.
- when commissioning, a component was not able to be automatically assigned to a drive object.
- the parameters for the data sets are not correctly set.
Alarm value (r2124, interpret decimal):
Component number of the unassigned component.
Remedy:  This component is assigned to a drive object.
Check the parameters for the data sets.
Examples:
- power unit (p0121).
- motor (p0131, p0186).
- encoder interface (p0140, p0141, p0187 ... p0189).
- encoder (p0140, p0142, p0187 ... p0189).
- Terminal Module (p0151).
- option board (p0161).

F01340  Topology: Too many components on one line
Message value:  Component number or connection number: %1, fault cause: %2
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  For the selected communications clock cycle, too many DRIVE-CLiQ components are connected to one line of the Control Unit.
Fault value (r0949, interpret hexadecimal):
xyy hex: x = fault cause, yy = component number or connection number.
1yy:
The communications clock cycle of the DRIVE-CLiQ connection on the Control Unit is not sufficient for all read transfers.
2yy:
The communications clock cycle of the DRIVE-CLiQ connection on the Control Unit is not sufficient for all write transfers.
3yy:
Cyclic communication is fully utilized.
4yy:
The DRIVE-CLiQ cycle starts before the earliest end of the application. An additional dead time must be added to the control. Sign-of-life errors can be expected.
The conditions of operation with a current controller sampling time of 31.25 µs have not been maintained.
5yy:
Internal buffer overflow for net data of a DRIVE-CLiQ connection.
6yy:
Internal buffer overflow for receive data of a DRIVE-CLiQ connection.
7yy:
Internal buffer overflow for send data of a DRIVE-CLiQ connection.
8yy:
The component clock cycles cannot be combined with one another.
900:
The lowest common multiple of the clock cycles in the system is too high to be determined.
901:
The lowest common multiple of the clock cycles in the system cannot be generated with the hardware.
Faults and alarms

List of faults and alarms

Remedy:
- check the DRIVE-CLiQ connection.
- Reduce the number of components on the DRIVE-CLiQ line involved and distribute these to other DRIVE-CLiQ sockets of the Control Unit. This means that communication is uniformly distributed over several lines.
Re fault value = 1yy - 4yy in addition:
- increase the sampling times (p0112, p0115, p4099). If necessary, for DCC or FBLOCKS, change the assignment of the run-time group (p21000, p20000) so that the sampling time (r21001, r20001) is increased.
- if necessary, reduce the number of cyclically calculated blocks (DCC) and/or function blocks (FBLOCKS).
- reduce the function modules (r0108).
- establish the conditions for operation with a current controller sampling time of 31.25 µs (at the DRIVE-CLiQ line, only operate Motor Modules and Sensor Modules with this sampling time and only use a permitted Sensor Module (e.g. SMC20, this means a 3 at the last position of the order number)).
- For an NX, the corresponding Sensor Module for a possibly existing second measuring system should be connected to a free DRIVE-CLiQ socket of the NX.
Re fault value = 8yy in addition:
- check the clock cycles settings (p0112, p0115, p4099). Clock cycles on a DRIVE-CLiQ line must be perfect integer multiples of one another. As clock cycle on a line, all clock cycles of all drive objects in the previously mentioned parameters apply, which have components on the line involved.
Re fault value = 9yy in addition:
- check the clock cycles settings (p0112, p0115, p4099). The lower the numerical value difference between two clock cycles, the higher the lowest common multiple. This behavior has a significantly stronger influence, the higher the numerical values of the clock cycles.

F01341 Topology: Maximum number of DRIVE-CLiQ components exceeded
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Too many DRIVE-CLiQ components were defined in the actual topology.
Note: Pulse enable is withdrawn and prevented.
Remedy:
- check the DRIVE-CLiQ connection.
- reduce the number components on the DRIVE-CLiQ line involved in order to maintain the maximum quantity structure.

F01354 Topology: Actual topology indicates an illegal component
Message value: Fault cause: %1, component number: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The actual topology indicates at least one illegal component.
Fault value (r0949, interpret hexadecimal):
yyyx hex: yy = component number, xx = cause.
xx = 1: Component at this Control Unit not permissible.
xx = 2: Component in combination with another component not permissible.
Note: Pulse enable is prevented.
Remedy: Remove the illegal components and restart the system.

F01355 Topology: Actual topology changed
Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The device target topology (p0099) does not correspond to the device actual topology (r0098). The fault only occurs if the topology was commissioned using the automatic internal device mechanism and not using the commissioning software.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
See also: r0098 (Actual device topology), p0099 (Device target topology)
List of faults and alarms

Remedy: One of the following counter-measures can be selected if no faults have occurred in the topology detection itself:

- If commissioning is still not completed:
  - carry out a self-commissioning routine (starting from p0009 = 1).
  - set p0099 = r0098, set p0009 = 0; for existing Motor Modules, this results in servo drives being automatically generated (p0107).
  - generating servo drives: set p0097 to 1, set p0009 to 0.
  - generating vector drives: set p0097 to 2, set p0009 to 0.
  - generating vector drives with parallel circuit: set p0097 to 12, set p0009 to 0.

- In order to set configurations in p0108, before setting p0009 to 0, it is possible to first set p0009 to 2 and modify p0108. The index corresponds to the drive object (p0107).

- If commissioning has already been completed:
  - re-establish the original connections and re-connect power to the Control Unit.
  - restore the factory setting for the complete equipment (all of the drives) and allow automatic self-commissioning again.
  - change the device parameterization to match the connections (this is only possible using the commissioning software).

Notice: Topology changes that result in this fault being generated cannot be accepted by the automatic function in the device, but must be transferred using the commissioning software and parameter download. The automatic function in the device only allows constant topology to be used. Otherwise, when the topology is changed, all of the previous parameter settings are lost and replaced by the factory setting.

See also: r0098 (Actual device topology)

F01356 Topology: There is a defective DRIVE-CLiQ component

Message value:
Fault cause: %1, Component number: %2, Connection number: %3

Drive object:
All objects

Reaction:
OFF2

Acknowledge:
IMMEDIATELY

Cause:
The actual topology indicates at least one defective DRIVE-CLiQ component.
Fault value (r0949, interpret hexadecimal):
zzyyxx hex:
zz = connection number of the component at which the defective component is connected
yy = component number of the component at which the defective component is connected
xx = fault cause
xx = 1: Component at this Control Unit not permissible.
xx = 2: component with communication defect.

Note:
Pulse enable is withdrawn and prevented.

Remedy:
Replace the defective component and restart the system.

F01357 Topology: Two Control Units identified on the DRIVE-CLiQ line

Message value:
component number: %1, connection number: %2

Drive object:
All objects

Reaction:
OFF2

Acknowledge:
IMMEDIATELY

Cause:
In the actual topology, 2 Control Units are connected with one another through DRIVE-CLiQ. This is not permitted.
Fault value (r0949, interpret hexadecimal):
yyxx hex:
yy = connection number of the Control Unit at which the second Control Unit is connected
xx = component number of the Control Unit at which the second Control Unit is connected

Note:
Pulse enable is withdrawn and prevented.

Remedy:
- remove the second Control Unit and restart the system.
- for the component DRIVE-CLiQ extension, interchange the hybrid cable (IN/OUT).
### Faults and alarms

#### List of faults and alarms

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>

<tbody>
<tr>
<td>A01358</td>
<td><strong>Topology: Line termination not available</strong></td>
</tr>
<tr>
<td>F01360</td>
<td><strong>Topology: Actual topology not permissible</strong></td>
</tr>
</tbody>
</table>

#### A01358
- **Message value:** CU connection number: %1, component number: %2, connection number: %3
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** At least one line with distributed drives is not terminated. The last participant on the line must be terminated with a line termination connector. This therefore ensures the degree of protection of the distributed drives.
- **Fault value (r0949, interpret hexadecimal):**
  - zzyyxx hex:
    - zz = connection number of the distributed drive where there is no terminating connector
    - yy = component number
    - xx = CU connection number
- **Remedy:** Install the line terminating connector for the last distributed drive.

#### F01360
- **Message value:** Fault cause: %1, preliminary component number: %2
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** The detected actual topology is not permissible.
  - Fault value (r0949, interpret hexadecimal):
    - ccccbbaa hex: cccc = preliminary component number, aa = fault cause
    - aa = 01 hex = 1 dec: Too many components were detected at the Control Unit. A maximum of 199 components is permissible.
    - aa = 02 hex = 2 dec: The component type of a component is not known.
    - aa = 03 hex = 3 dec: It is illegal to combine ALM and BLM.
      - aa = 04 hex = 4 dec: It is illegal to combine ALM and SLM.
      - aa = 05 hex = 5 dec: It is illegal to combine BLM and SLM.
      - aa = 06 hex = 6 dec: A CX32 was not directly connected to a permitted Control Unit.
      - aa = 07 hex = 7 dec: An NX10 or NX15 was not directly connected to a permitted Control Unit.
      - aa = 08 hex = 8 dec: A component was connected to a Control Unit that is not permitted for this purpose.
      - aa = 09 hex = 9 dec: A component was connected to a Control Unit with out-of-date firmware.
      - aa = 0A hex = 10 dec: Too many components of a particular type detected.
      - aa = 0B hex = 11 dec: Too many components of a particular type detected on a single line.
- **Note:** The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
- **Remedy:**
  - Re fault cause = 1:
    - Change the configuration. Connect less than 199 components to the Control Unit.
  - Re fault cause = 2:
    - Remove the component with unknown component type.
  - Re fault cause = 3, 4, 5:
    - Establish a valid combination.
  - Re fault cause = 6, 7:
    - Connect the expansion module directly to a permitted Control Unit.
  - Re fault cause = 8:
    - Remove component or use a permissible component.
  - Re fault cause = 9:
    - Upgrade the firmware of the Control Unit to a later version.
List of faults and alarms

Re fault cause = 10, 11:
Reduce the number of components.

A01361 Topology: Actual topology contains SINUMERIK and SIMOTION components

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause:
The detected actual topology contains SINUMERIK and SIMOTION components.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Alarm value (r2124, interpret hexadecimal):
ddcobbaa hex: cc = fault cause, bb = component class of the actual topology, aa = component number of the component
cc = 01 hex = 1 dec:
An NX10 or NX15 was connected to a SIMOTION control.
cc = 02 hex = 2 dec:
A CX32 was connected to a SINUMERIK control.
Remedy:
Re alarm value = 1:
Replace all NX10 or NX15 by a CX32.
Re alarm value = 2:
Replace all CX32 by an NX10 or NX15.

A01362 Topology: Topology rule(s) broken

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause:
At least one topology rule for the SINAMICS S120 Combi has been broken.
In the event of a fault, the ramping up of the drive system is aborted and closed-loop drive control is not enabled.
The alarm value indicates which rule has been violated.
1: The S120 Combi may only be wired via DRIVE-CLiQ socket X200 to X100 on the NCU.
2: Only one Single Motor Module (SMM) or one Double Motor Module (DMM) may be connected via X200 to the DRIVE-CLiQ socket X101 on the NCU.
3: Only one Terminal Module 54F (TM54F) or one DRIVE-CLiQ Hub Module (hub) may be connected via X500 to the DRIVE-CLiQ socket X102 on the NCU.
4: Only Sensor Modules may be connected to DRIVE-CLiQ sockets X201 up to X203 (3-axis) or X204 (4-axis) on the S120 Combi.
5: Only one Sensor Module, type SMC20 or SME20 may be connected to DRIVE-CLiQ socket X205 (X204 is not available for 3-axis).
6: If a Single Motor Module is being used as the first expansion axis, only one more Single Motor Module may be connected (via X200 to X201 on the first Single Motor Module).
7: Only Sensor Modules may be connected to the corresponding DRIVE-CLiQ socket X202 on any Single Motor Modules which may be present.
8: For a second Single Motor Module or for a Double Motor Module, it is not permissible to connect anything at X201.
9: If a Double Motor Module is used as an expansion axis, only Sensor Modules may be connected to X202 and X203.
10: If a Terminal Module 54F (TM54F) is configured, only one DRIVE-CLiQ Hub Module (DMC20, DME20) may be connected to X501 of the TM54F module via DRIVE-CLiQ socket X500.
11: On the DRIVE-CLiQ Hub Module, only Sensor Modules Cabinet (SMC) and Sensor Modules External (SME) may be connected to X501 through X505.
12: Only certain Motor Modules may be used for expansion axes.
13: For an S120 Combi with 3 axes, nothing must be connected at the DRIVE-CLiQ Hub Module at X503.
Remedy:
Evaluate the fault value and ensure compliance with the corresponding topology rule(s).
## F01375  Topology: Actual topology, duplicate connection between two components

**Message value:** Preliminary component number: %1, component class: %2, connection number: %3

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** When detecting the actual topology, a ring-type connection was detected.

Fault value (r0949, interpret hexadecimal):

```
ccbbaaaa hex:
cc = connection number
bb = component class
aaaa = preliminary component number of a component included in the ring
```

Component class:
1: Control Unit.
2: Motor Module.
3: Line Module.
4: Sensor Module (SM).
5: Voltage Sensing Module (VSM).
6: Terminal Module (TM).
7: DRIVE-CLiQ Hub Module.
8: Controller Extension 32 (CX32, NX10, NX15).
9: Filter Module
49: DRIVE-CLiQ components (non-listed components).
50: Option Slot (e.g. Terminal Board 30).
60: Encoder (e.g. EnDat).
70: Motor with DRIVE-CLiQ.

Component type:
Precise designation within a component class (e.g. "SMC20").

Connection number:
Consecutive numbers, starting from zero, of the appropriate connection or slot (e.g. DRIVE-CLiQ connection X100 on the Control Unit has the connection number 0).

**Remedy:** Output the fault value and remove the specified connection.

**Note:**
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

## F01380  Topology: Actual topology, defective EEPROM

**Message value:** Preliminary component number: %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** POWER ON

**Cause:** When detecting the actual topology, a component with a defective EEPROM was detected.

Fault value (r0949, interpret hexadecimal):

```
bbbbaaaa hex:
aaaa = preliminary component number of the defective components
```

**Remedy:** Output the fault value and remove the defected component.

## A01381  Topology: Comparison power unit shifted

**Message value:** Component number: %1, component class: %2, component number: %3, connection number: %4

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** The topology comparison has detected a power unit in the actual topology that has been shifted with respect to the target topology.

Alarm value (r2124, interpret hexadecimal):

```
ddccbbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
```
List of faults and alarms

Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy:
Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).

Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01382 Topology: Comparison Sensor Module shifted
Message value: Component number: %1, component class: %2, component number: %3, connection number: %4
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The topology comparison has detected a Sensor Module in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
  dd = connection number
  cc = component number
  bb = component class
  aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy:
Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).

Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01383 Topology: Comparison Terminal Module shifted
Message value: Component number: %1, component class: %2, component number: %3, connection number: %4
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The topology comparison has detected a Terminal Module in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbbaa hex:
  dd = connection number
  cc = component number
  bb = component class
  aa = component number of the component shifted in the target topology
Note:
The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy:
Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).

Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01384 Topology: Comparison DRIVE-CLiQ Hub Module shifted
Message value: Component number: %1, component class: %2, component number: %3, connection number: %4
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The topology comparison has detected a DRIVE-CLiQ Hub Module in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.
- commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project.
- automatically remove the topology error (p9904).
Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01385 Topology: Comparison CX32 shifted
Message value: Component number: %1, component class: %2, component number: %3, connection number: %4
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The topology comparison has detected a controller extension 32 (CX32) in the actual topology that has been shifted with respect to the target topology.
Alarm value (r2124, interpret hexadecimal):
ddccbaa hex:
dd = connection number
cc = component number
bb = component class
aa = component number of the component shifted in the target topology
Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy: Adapting the topologies:
- undo the change to the actual topology by changing over the DRIVE-CLiQ cables.

A01416  Topology: Comparison additional component in actual topology

Message value: Component number: %1, Component class: %2, Connection number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The topology comparison has found a component in the actual topology which is not specified in the target topology.
The alarm value includes the component number and connection number of the component with which the additional component is connected.
Alarm value (r2124, interpret hexadecimal):

ddccbbaa hex:
cc = connection number
bb = component class of the additional component
aa = component number

Note:
- component class and connection number are described in F01375.
- components that are connected to this additional component are not operational.
### A01420 Topology: Comparison a component is different

**Message value:** Component number: %1, component class target: %2, component class actual: %3, fault cause: %4

**Drive object:** All objects

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**
The topology comparison has detected differences in the actual and target topologies in relation to one component. There are differences in the electronic rating plate.

**Alarm value (r2124, interpret hexadecimal):**
ddccbaaa hex: aa = component number of the component, bb = component class of the target topology, cc = component class of the actual topology, dd = fault cause

dd = 01 hex = 1 dec:
- Different component type.
- Different Order No.
- Different manufacturer.

**Remedy:**
- check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences.
- parameterize the topology comparison of all components (p9906).
- parameterize the topology comparison of one components (p9907, p9908).

### A01421 Topology: Comparison different components

**Message value:** Component number: %1, component class target: %2, component class actual: %3, fault cause: %4

**Drive object:** B_INF, TM150, VECTOR_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**
The topology comparison has detected differences in the actual and target topologies in relation to one component. The component class, the component type or the number of connections differ.

**Alarm value (r2124, interpret hexadecimal):**
ddccbaaa hex: aa = component number of the component, bb = component class of the target topology, cc = component class of the actual topology, dd = fault cause

dd = 01 hex = 1 dec:
- Different component class.
- Different Order No.

**Remedy:**
- Adapting the topologies:
- download the target topology that matches the actual topology (commissioning software).

Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).
Faults and alarms

List of faults and alarms

Note:
Component class, component type and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy:
Check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences.

Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01425

Topology: Comparison serial number of a component is different

Message value: Component number: %1, Component class: %2, Differences: %3
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The topology comparison has detected differences in the actual and target topologies in relation to one component.
The serial number is different.
Alarm value (r2124, interpret hexadecimal):
   ddcbbaa hex:
   cc = number of differences
   bb = component class
   aa = component number of the component
Note:
The component class is described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy:
Adapting the topologies:
- change over the actual topology to match the target topology.
- download the target topology that matches the actual topology (commissioning software).
Re byte cc:
   cc = 1 --> can be acknowledged using p9904 or p9905.
   cc > 1 --> can be acknowledged using p9905 and can be de-activated using p9906 or p9907/p9908.
Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).
See also: p9904 (Topology comparison, acknowledge differences), p9905 (Device specialization), p9906 (Topology comparison, comparison stage of all components), p9907 (Topology comparison, comparison stage of the component number), p9908 (Topology comparison, comparison stage of a component)

A01428

Topology: Comparison connection of a component is different

Message value: Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The topology comparison has detected differences in the actual and target topologies in relation to one component.
A component was connected to another connection.
The different connections of a component are described in the alarm value:
Alarm value (r2124, interpret hexadecimal):
   ddcbbaa hex:
   dd = connection number of the target topology
   cc = connection number of the actual topology
   bb = component class
   aa = component number
Note:
Component class and connection number are described in F01375.
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.

Remedy:
Adapting the topologies:
- change over the actual topology to match the target topology.
- download the target topology that matches the actual topology (commissioning software).
- automatically remove the topology error (p9904).
### Note:
Under "Topology -> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).
See also: p9904 (Topology comparison, acknowledge differences)

### A01429 - Topology: Comparison connection is different for more than one component

**Message value:** Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** A topology comparison has found differences between the actual and target topology for several components. A component was connected to another connection.  
The different connections of a component are described in the alarm value:  
Alarm value (r2124, interpret hexadecimal):  
ddccbbaa hex:  
  
<table>
<thead>
<tr>
<th>dd</th>
<th>cc</th>
<th>bb</th>
<th>aa</th>
</tr>
</thead>
<tbody>
<tr>
<td>connection number of the target topology</td>
<td>connection number of the actual topology</td>
<td>component class</td>
<td>component number</td>
</tr>
</tbody>
</table>
  
**Note:**  
Component class and connection number are described in F01375.  
The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.  

**Remedy:**  
Adapting the topologies:  
- change over the actual topology to match the target topology.  
- download the target topology that matches the actual topology (commissioning software).  
**Note:**  
In the software, a Double Motor Module behaves just like two separate DRIVE-CLiQ nodes. If a Double Motor Module is re-inserted, this can result in several differences in the actual topology.  
Under "Topology -> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

### F01451 - Topology: Target topology is invalid

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** An error was detected in the target topology.  
The target topology is invalid.  
Fault value (r0949, interpret hexadecimal):  
ccccbbbaa hex:  
  
<table>
<thead>
<tr>
<th>cccc</th>
<th>bb</th>
<th>aa</th>
</tr>
</thead>
<tbody>
<tr>
<td>index error</td>
<td>component number</td>
<td>fault cause</td>

<th>aa</th>
<th>20</th>
<th>32</th>
</tr>
</thead>
<tbody>
<tr>
<td>hex</td>
<td>dec</td>
<td>dec</td>
</tr>
</tbody>
</table>
    
**Remedy:**  
Reload the target topology using the commissioning software.

### F01470 - Topology: Target topology ring-type connection detected

**Message value:** Component number: %1, Component class: %2, Connection number: %3  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** A ring-type connection was detected when writing to the target topology.  
Fault value (r0949, interpret hexadecimal):  
ddccbbaa hex:  
  
<table>
<thead>
<tr>
<th>dd</th>
<th>cc</th>
<th>bb</th>
<th>aa</th>
</tr>
</thead>
<tbody>
<tr>
<td>connection number</td>
<td>connection class</td>
<td>component number of a component included in the ring</td>
<td></td>
</tr>
</tbody>
</table>
Faults and alarms

List of faults and alarms

Note:
Component class and connection number are described in F01375.

Remedy:
Read out the fault value and remove one of the specified connections.
Then download the target topology again using the commissioning software.
Note:
Under "Topology → Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

F01475  Topology: Target topology duplicate connection between two components
Message value:
Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4
Drive object:
All objects
Reaction:
NONE
Acknowledge:
IMMEDIATELY
Cause:
When writing the target topology, a duplicate connection between two components was detected.
Fault value (r0949, interpret hexadecimal):
ddccbbaa hex:
dd = connection number 2 of the duplicate connection
cc = connection number 1 of the duplicate connection
bb = component class
aa = component number of one of the components connected twice
Note:
Component class and connection number are described in F01375.
Remedy:
Read out the fault value and remove one of the two specified connections.
Then download the target topology again using the commissioning software.
Note:
Under "Topology → Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01481  Topology: Comparison power unit missing in the actual topology
Message value:
Component number: %1
Drive object:
All objects
Reaction:
NONE
Acknowledge:
NONE
Cause:
The topology comparison has detected a power unit in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.
Remedy:
- delete the drive belonging to the power unit in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that the power unit is working properly.
Note:
Under "Topology → Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01482  Topology: Comparison Sensor Module missing in the actual topology
Message value:
Component number: %1
Drive object:
All objects
Reaction:
NONE
Acknowledge:
NONE
Cause:
The topology comparison has detected a Sensor Module in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components.
Remedy:
- re-configure the drive belonging to the Sensor Module in the commissioning software project (encoder configuration) and download the new configuration to the drive unit.
- delete the drive belonging to the Sensor Module in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check the 24 V supply voltage.
- check that the Sensor Module is working properly.

Note:
Under “Topology --> Topology view” the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

**A01483 Topology: Comparison Terminal Module missing in the actual topology**

- **Message value:** Component number: %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The topology comparison has detected a Terminal Module in the target topology that is not available in the actual topology.
  - Alarm value (r2124, interpret decimal):
  - Component number of the additional target components.
- **Remedy:**
  - delete the Terminal Module in the commissioning software project and download the new configuration to the drive unit.
  - check that the actual topology matches the target topology and if required, change over.
  - check DRIVE-CLiQ cables for interruption and contact problems.
  - check the 24 V supply voltage.
  - check that the Terminal Module is working properly.

Note:
Under “Topology --> Topology view” the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

**A01484 Topology: Comparison DRIVE-CLiQ Hub Module missing in the actual topology**

- **Message value:** Component number: %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The topology comparison has detected a DRIVE-CLiQ Hub Module in the target topology that does not exist in the actual topology.
  - Alarm value (r2124, interpret decimal):
  - Component number of the additional target components.
- **Remedy:**
  - delete the DRIVE-CLiQ Hub Module in the commissioning software project and download the new configuration to the drive unit.
  - check that the actual topology matches the target topology and if required, change over.
  - check DRIVE-CLiQ cables for interruption and contact problems.
  - check the 24 V supply voltage.
  - test the DRIVE-CLiQ Hub Module to ensure that it functions properly.

Note:
Under “Topology --> Topology view” the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

**A01485 Topology: Comparison CX32 missing in the actual topology**

- **Message value:** Component number: %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The topology comparison has detected a controller extension 32 (CX32) in the target topology that is not available in the actual topology.
  - Alarm value (r2124, interpret decimal):
  - Component number of the additional target components.
- **Remedy:**
  - delete the CX32 / NX in the commissioning software project and download the new configuration to the drive unit.
  - check that the actual topology matches the target topology and if required, change over.
  - check DRIVE-CLiQ cables for interruption and contact problems.
  - check the 24 V supply voltage.
- check that CX32/NX functions correctly.

Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

</tbody>
</table>
| Cause: | The topology comparison has detected an EnDat encoder in the target topology that is not available in the actual topology.
Alarm value (r2124, interpret decimal):
Component number of the additional target components. |
| Remedy: | - re-configure the drive belonging to the encoder in the commissioning software project (encoder configuration) and download the new configuration to the drive unit.
- delete the drive belonging to the encoder in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over. |
Note:
Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

A01489  Topology: Comparison motor with DRIVE-CLiQ missing in the actual topology
Message value:  Component number: %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  The topology comparison has detected a motor with DRIVE-CLiQ in the target topology that is not available in the actual topology.
Alarm value (%2124, interpret decimal): Component number of the additional target components.
Remedy:  - re-configure the drive belonging to this motor in the commissioning software project and download the new configuration to the drive unit.
- check that the actual topology matches the target topology and if required, change over.
- check DRIVE-CLiQ cables for interruption and contact problems.
- check that the motor is working properly.
Note:  Under "Topology --> Topology view" the commissioning software where relevant offers improved diagnostics capability (e.g. setpoint/actual value comparison).

F01505 (A)  BICO: Interconnection cannot be established
Message value:  Parameter: %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  A PROFIdrive telegram has been set (p0922).
An interconnection contained in the telegram was not able to be established.
Fault value (r0949, interpret decimal): Parameter receiver that should be changed.
Remedy:  Establish another interconnection.
Reaction upon A:  NONE
Acknowl. upon A:  NONE

F01506 (A)  BICO: No standard telegram
Message value:  Parameter: %1
Drive object:  B_INF, TM150, TM31, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  The standard telegram in p0922 is not maintained and therefore p0922 is set to 999.
Fault value (r0949, interpret decimal): BICO parameter for which the write attempt was unsuccessful.
Remedy:  Again set the required standard telegram (p0922).
Reaction upon A:  NONE
Acknowl. upon A:  NONE

A01507 (F, N)  BICO: Interconnections to inactive objects present
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  There are BICO interconnections to an inactive/inoperable drive object.
The B/I parameters involved are listed in r9498.
The associated BO/CO parameters are listed in r9499.
Faults and alarms

List of faults and alarms

The list of the BICO interconnections to other drive objects is displayed in r9491 and r9492 of the de-activated drive object.

Note:
r9498 and r9499 are only written to, if p9495 is not set to 0.
Alarm value (r2124, interpret decimal):
Number of BICO interconnections found to inactive drive objects.

Remedy:
- set all open BICO interconnections centrally to the factory setting with p9495 = 2.
- make the non-operational drive object active/operational again (re-insert or activate components).

Reaction upon F: Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A01508 BICO: Interconnections to inactive objects exceeded

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause:
The maximum number of BICO interconnections (signal sinks) when de-activating a drive object was exceeded.
When de-activating a drive object, all BICO interconnections (signal sinks) are listed in the following parameters:
- r9498[0...29]: List of the BI/CI parameters involved.
- r9499[0...29]: List of the associated BO/CO parameters.

Remedy:
The alarm automatically disappears as soon as no BICO interconnection (value = 0) is entered in r9498[29] and r9499[29].
Notice:
When re-activating the drive object, all BICO interconnections should be checked and if required, re-established.

F01510 BICO: Signal source is not float type

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause:
The requested connector output does not have the correct data type. This interconnection is not established.
Fault value (r0949, interpret decimal):
Parameter number to which an interconnection should be made (connector output).

Remedy:
Interconnect this connector input with a connector output having a float data type.

F01511 (A) BICO: Interconnection with different scalings

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause:
The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values.
- the BICO output has different normalized units than the BICO input.
- message only for interconnections within a drive object.
Example:
The BICO output has, as normalized unit, voltage and the BICO input has current.
This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input.
p2002: contains the reference value for current
p2001: contains the reference value for voltage
Fault value (r0949, interpret decimal):
Parameter number of the BICO input (signal sink).

Remedy:
Not necessary.
Reaction upon A: NONE
Acknowl. upon A: NONE
### F01512  BICO: No scaling available

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** Infeed: OFF2 (OFF1)  
Vector: OFF2  
**Acknowledge:** POWER ON  
**Cause:**  
An attempt was made to determine a conversion factor for a scaling that does not exist.  
Fault value (r0949, interpret decimal): Unit (e.g. corresponding to SPEED) for which an attempt was made to determine a factor.  
**Remedy:** Apply scaling or check the transfer value.

### F01513 (A)  BICO: Interconnection cross DO with different scalings

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
The requested BICO interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values.  
An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different.  
Example 1:  
BICO output with voltage normalized unit, BICO input with current normalized unit, BICO output and BICO input lie in different drive objects. This means that the factor p2002/p2001 is calculated between the BICO output and the BICO input.  
p2002: contains the reference value for current  
p2001: contains the reference value for voltage  
Example 2:  
BICO output with voltage normalized unit in drive object 1 (DO1), BICO input with voltage normalized unit in drive object 2 (DO2). The reference values for voltage (p2001) of the two drive objects have different values. This means that the factor p2001(DO1)/p2001(DO2) is calculated between the BICO output and the BICO input.  
p2001: contains the reference value for voltage, drive objects 1, 2  
**Fault value (r0949, interpret decimal):** Parameter number of the BICO input (signal sink).  
**Remedy:** Not necessary.  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE

### A01514 (F)  BICO: Error when writing during a reconnect

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:**  
During a reconnect operation (e.g. while booting or downloading - but can also occur in normal operation) a parameter was not able to be written to.  
Example:  
When writing to BICO input with double word format (DWORD), in the second index, the memory areas overlap (e.g. p8861). The parameter is then reset to the factory setting.  
**Alarm value (r2124, interpret decimal):** Parameter number of the BICO input (signal sink).  
**Remedy:** Not necessary.  
**Reaction upon F:** NONE  
**Acknowl. upon F:** IMMEDIATELY
F01515 (A)  
BICO: Writing to parameter not permitted as the master control is active

Message value:  -
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  When changing the number of CDS or when copying from CDS, the master control is active.
Remedy:  If required, return the master control and repeat the operation.
Acknowl. upon A:  NONE

A01590 (F)  
Drive: Motor maintenance interval expired

Message value:  Fault cause: %1 bin
Drive object:  B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The selected service/maintenance interval for this motor was reached.
Alarm value (r2124, interpret decimal):
Motor data set number.
See also: p0650 (Actual motor operating hours), p0651 (Motor operating hours maintenance interval)
Remedy:  carry out service/maintenance and reset the service/maintenance interval (p0651).
Reaction upon F:  NONE
Acknowl. upon F:  IMMEDIATELY

F01600  
SI CU: STOP A initiated

Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected a fault and initiated a STOP A (pulse suppression via the safety shutdown path of the Control Unit).
- forced checking procedure of the safety shutdown path of the Control Unit unsuccessful.
- subsequent response to fault F01611 (defect in a monitoring channel).
Fault value (r0949, interpret decimal):
0: Stop request from the Motor Module.
1005: Pulses suppressed although STO not selected and there is no internal STOP A present.
1010: Pulses enabled although STO is selected or an internal STOP A is present.
1015: Feedback of the safe pulse suppression for Motor Modules connected in parallel are different.
9999: Subsequent response to fault F01611.
Remedy:  - select Safe Torque Off and de-select again.
- replace the Motor Module involved.
For fault value = 9999:
- carry out diagnostics for fault F01611.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

F01611  
SI CU: Defect in a monitoring channel

Message value:  %1
Drive object:  VECTOR_G
Reaction:  NONE (OFF1, OFF2, OFF3)
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected a fault in the crosswise data comparison between the CU and Motor Module (MM) and initiated a STOP F.
As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.
Fault value (r0949, interpret decimal):
0: Stop request from the Motor Module.
1 ... 999:
Number of the cross-compared data that resulted in this fault. This number is also displayed in r9795.
1: SI monitoring clock cycle (r9780, p9880).
2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.
3: SI SGE changeover tolerance time (p9650, p9850).
4: SI transition period STOP F to STOP A (p9658, p9858).
5: SI enable Safe Brake Control (p9602, p9802).
6: SI Motion enable, safety-relevant functions (p9501, internal value).
7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).
8: SI PROFIsafe address (p9610, p9810).
9: SI debounce time for STO/SBC/SS1 (MM) (p9651, p9851).
10: SI delay time for pulse suppression for ESR (p9697, p9897).
11: SI Safe Brake Adapter mode, BICO interconnection (p9621, p9821).
12: SI Safe Brake Adapter relay ON time (p9622[0], p9822[0]).
13: SI Safe Brake Adapter relay OFF time (p9622[1], p9822[1]).
14: SI PROFIsafe telegram selection (p9611, p9811).
1000: Watchdog timer has expired.

Within the time of approx. 5 x p9650, alternatively, the following was defined:
- Too many switching operations have occurred at the EP terminal of the Motor Module.
- Via PROFIsafe/TS54F, STO was too frequently initiated (also as subsequent response).
- Safe pulse cancellation (r9723.9) was too frequently initiated (also as subsequent response).
1001, 1002: Initialization error, change timer / check timer.
1900: CRC error in the SAFETY sector.
1901: CRC error in the ITCM sector.
1902: Overloading in the ITCM sector has occurred in operation.
1950: Module temperature outside the permissible temperature range.
1951: Module temperature not plausible.
2000: Status of the STO selection on the Control Unit and Motor Module are different.
2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.
2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different (status of the timer in p9650/p9850).
2004: Status of the STO selection for modules connected in parallel are different.
2005: Feedback signal of the safe pulse suppression on the Control Unit and Motor Modules connected in parallel are different.
6000 ... 6999:
Error in the PROFI safe control.
For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.
The significance of the individual message values is described in safety message C01711.

Remedy:

Re fault value = 1 ... 5 and 7 ... 999:
- check the cross data comparison that resulted in a STOP F.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
For fault value = 6:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
For fault value = 1000:
- check the EP terminal at the Motor Module (contact problems).
- PROFI safe: Remove contact problems/faults at the PROFINET master/PROFINET controller.
- check the wiring of the failsafe inputs at the TM54F (contact problems).
Re fault value = 1001, 1002:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Re fault value = 1900, 1901, 1902:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Control Unit software.
- replace Control Unit.
Faults and alarms

List of faults and alarms

- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the causes of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace the Motor Module involved.

Re fault value = 6000 ... 6999:
Refer to the description of the message values in safety message C01711.

Note:
CU: Control Unit
EP: Enable Pulses (pulse enable)
ESR: Extended Stop and Retract
MM: Motor Module
SGE: Safety-relevant input
SI: Safety Integrated
SMM: Safe Motion Monitoring
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill

F01612 SI CU: STO inputs for power units connected in parallel different
Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-integrated "Safety Integrated" function on the Control Unit (CU) has identified different states of the AND’ed STO inputs for power units connected in parallel and has initiated a STOP F.
As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.
Fault value (r0949, interpret binary):
Binary image of the digital inputs of the Control Unit that are used as signal source for the function "Safe Torque Off".
Remedy:
- check the tolerance time SGE changeover and if required, increase the value (p9650).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).

Note:
CU: Control Unit
SGE: Safety-relevant input
SI: Safety Integrated
SMM: Safe Motion Monitoring
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill

N01620 (F, A) SI CU: Safe Torque Off active
Message value: 
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The "Safe Torque Off" (STO) function of the basic functions has been selected on the Control Unit (CU) using the input terminal and is active.
Note:
- This message does not result in a safety stop response.
- This message is not output when STO is selected using the Extended Functions.
Remedy:
Not necessary.

Note:
CU: Control Unit
SI: Safety Integrated
SMM: Safe Motion Monitoring
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill

Reaction upon F: OFF2
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon A: NONE
Acknowl. upon A: NONE
### N01621 (F, A)
**SI CU: Safe Stop 1 active**

**Message value:** -
**Drive object:** VECTOR_G
**Reaction:** NONE
**Acknowledge:** NONE

**Cause:** The "Safe Stop 1" (SS1) function has been selected on the Control Unit (CU) and is active.
- This message does not result in a safety stop response.

**Remedy:** Not necessary.
**Note:**
- CU: Control Unit
- SI: Safety Integrated
- SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

**Reaction upon F:** NONE (OFF3)
**Acknowl. upon F:** IMMEDIATELY (POWER ON)
**Reaction upon A:** NONE
**Acknowl. upon A:** NONE

### F01625
**SI CU: Sign-of-life error in safety data**

**Message value:** %1
**Drive object:** VECTOR_G
**Reaction:** OFF2
**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected an error in the sign-of-life of the safety data between the CU and Motor Module (MM) and initiated a STOP A.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- a time slice overflow of the safety software has occurred.
**Fault value (r0949, interpret decimal):**
Only for internal Siemens troubleshooting.

**Remedy:**
- select Safe Torque Off and de-select again.
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- de-select all drive functions that are not absolutely necessary.
- reduce the number of drives.
- check the electrical cabinet design and cable routing for EMC compliance

**Note:**
- CU: Control Unit
- MM: Motor Module
- SI: Safety Integrated

### F01630
**SI CU: Brake control error**

**Message value:** %1
**Drive object:** VECTOR_G
**Reaction:** OFF2
**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The drive-integrated "Safety Integrated" function on the Control Unit (CU) has detected a brake control fault and initiated a STOP A.
**Fault value (r0949, interpret decimal):**
- Fault value = 10, 11:
  - "open holding brake" operation.
  - Parameter p1278 incorrectly set.
  - No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
  - Ground fault in brake cable.
- Fault value = 20:
  -Fault in "brake open" state.
  - Short-circuit in brake winding.
Faults and alarms

List of faults and alarms

Re fault value = 30, 31:
Fault in "close holding brake" operation.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Short-circuit in brake winding.
For fault value = 40:
Fault in "brake closed" state.
For fault value = 50:
Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).
For fault value = 80:
Safe Brake Adapter.
Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).
For fault value = 90:
Brake released for service purposes (X4).
Note:
The following causes may apply to fault values:
- motor cable is not shielded correctly.
- defed in control circuit of the Motor Module.

Remedy:
- check parameter p1278 (for SBC, only p1278 = 0 is permissible).
- for a parallel connection, check the setting of the power unit data set to control the holding brake (p7015).
- select Safe Torque Off and de-select again.
- check the motor holding brake connection.
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLIQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g., shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.

Operation with Safe Brake Module or Safe Brake Adapter:
- check the Safe Brake Module or Safe Brake Adapter connection.
- Replace the Safe Brake Module or Safe Brake Adapter.
Note:
CU: Control Unit
SBC: Safe Brake Control
SI: Safety Integrated

F01649 SI CU: Internal software error
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal error in the Safety Integrated software on the Control Unit has occurred.
Note: This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy:
- carry out a POWER ON (power off/on) for all components.
- re-commission the "Safety Integrated" function and carry out a POWER ON.
- Upgrade the firmware of the Control Unit to a later version.
- contact the Hotline.
- replace the Control Unit.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
F01650  SI CU: Acceptance test required

Message value:  %1
Drive object:   All objects
Reaction:       OFF2
Acknowledge:    IMMEDIATELY (POWER ON)
Cause:          The drive-integrated "Safety Integrated" function on the Control Unit requires an acceptance test.

Note:           This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
130: Safety parameters for the Motor Module not available.

Note:           This fault value is always output when Safety Integrated is commissioned for the first time.
1000: Reference and actual checksum on the Control Unit are not identical (booting).
- as a result of the changed current controller sampling time (p0115[0]), the clock cycle time for the Safety Integrated
  Basic Functions (r9780) was adapted.
- at least one checksum-checked piece of data is defective.
- Safety parameters set offline and loaded into the Control Unit.
2000: Reference and actual checksum on the Control Unit are not identical (commissioning mode).
- reference checksum incorrectly entered into the Control Unit (p9799 not equal to r9798).
- when de-activating the safety functions, p9501 or p9503 were not deleted.
2001: Reference and actual checksum on the Motor Module are not identical (commissioning mode).
- reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898).
- when de-activating the safety functions, p9501 or p9503 are not deleted.
2002: Enable of safety-related functions between the Control Unit and Motor Module differ (p9601 not equal to
  p9801).
2003: Acceptance test is required as a safety parameter has been changed.
2004: An acceptance test is required because a project with enabled safety-functions has been downloaded.
2005: The Safety logbook has identified that a functional safety checksum has changed. An acceptance test is
  required.
2010: Safe Brake Control is enabled differently between the Control Unit and Motor Module (p9602 not equal to
  p9802).
2020: Error when saving the safety parameters for the Motor Module.
3003: Acceptance test is required as a hardware-related safety parameter has been changed.
3005: The Safety logbook has identified that a hardware-related safety checksum has changed. An acceptance test
  is required.
9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance
test.

Remedy:
For fault value = 130:
- carry out safety commissioning routine.
For fault value = 1000:
- check the Safety Integrated Basic Functions (r9780) and adapt the reference checksum (p9799).
- again carry out safety commissioning routine.
- replace the memory card or Control Unit.
- Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate
  settings).
For fault value = 2000:
- check the safety parameters in the Control Unit and adapt the reference checksum (p9799).
For fault value = 2001:
- check the safety parameters in the Motor Module and adapt the reference checksum (p9899).
For fault value = 2002:
- enable the safety-related functions in the Control Unit and check in the Motor Module (p9601 = p9801).
Re fault value = 2003, 2004, 2005:
- Carry out an acceptance test and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided
in the following literature:
SINAMICS S120 Function Manual Safety Integrated
The fault with fault value 2005 can only be acknowledged when the "STO" function is de-selected.
For fault value = 2010:
- check enable of the safety-related brake control in the Control Unit and Motor Module (p9602 = p9802).
For fault value = 2020:
- again carry out safety commissioning routine.
- replace the memory card or Control Unit.
For fault value = 3003:
- carry out the function checks for the modified hardware and generate an acceptance report.

The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
SINAMICS S120 Function Manual Safety Integrated

For fault value = 3005:
- carry out the function checks for the modified hardware and generate an acceptance report.
The fault with fault value 3005 can only be acknowledged when the "STO" function is de-selected.

For fault value = 9999:
- carry out diagnostics for the other safety-related fault that is present.

Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off

**F01651 SI CU: Synchronization safety time slices unsuccessful**

<table>
<thead>
<tr>
<th>Message value:</th>
<th>%1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>VECTOR_G</td>
</tr>
<tr>
<td>Reaction:</td>
<td>OFF2</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY (POWER ON)</td>
</tr>
</tbody>
</table>
| Cause:         | The "Safety Integrated" function requires a synchronization of the safety time slices between the Control Unit (CU) and Motor Module (MM) and between the Control Unit and the higher-level control. This synchronization routine was unsuccessful. Note:

- This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):
- 121:
  - with SINUMERIK Safety Integrated enabled, a drive-side warm restart was performed on the CU/NX.
  - with SINUMERIK Safety Integrated enabled, the function "restore factory setting" was selected on a drive object of the CU and a drive-side warm restart was initiated.
- 150:
  - fault in the synchronization to the PROFIBUS master.

All other values:
- only for internal Siemens troubleshooting.

See also: p9510 (SI Motion clock-cycle synchronous PROFIBUS master)

| Remedy: | For fault value = 121:
- carry out a common POWER ON/warm restart for the higher-level control and SINAMICS.
For fault value = 150:
- check the setting of p9510 (SI Motion clock-cycle synchronous PROFIBUS master) and if required, correct.

General:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- upgrade the software of the higher-level control.

Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
See also: p9510 (SI Motion clock-cycle synchronous PROFIBUS master) |

---

**F01652 SI CU: Illegal monitoring clock cycle**

<table>
<thead>
<tr>
<th>Message value:</th>
<th>%1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>VECTOR_G</td>
</tr>
<tr>
<td>Reaction:</td>
<td>OFF2</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY (POWER ON)</td>
</tr>
<tr>
<td>Cause:</td>
<td>The monitoring clock cycle is not permissible.</td>
</tr>
</tbody>
</table>

One of the Safety Integrated monitoring clock cycles is not permissible.
- the monitoring clock cycle integrated in the drive cannot be maintained due to the communication conditions required in the system.
- the monitoring clock cycle for safe motion monitoring functions is not permissible (p9500).
- the actual value sensing clock cycle for safe motion monitoring functions is not permissible (p9511).
- The sampling time for the current controller (p0112, p0115[0]) cannot be supported.

Note:
This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):
- For motion monitoring functions that are not enabled (p9601.2 = p9801.2 = 0, p9501 = 0), the following applies:
  - Minimum setting for the monitoring clock cycle (in µs).
- For motion monitoring functions that are enabled (p9601.2 = p9801.2 = 1 and/or p9501 > 0), the following applies:
  - No matching monitoring clock cycle was able to be found.
  - The monitoring clock cycle is not an integer multiple of the actual value sensing clock cycle.
  - An error has occurred when transferring the actual value sensing clock cycle to the Motor Module (MM).
  - An error has occurred when transferring the actual value sensing clock cycle to the Sensor Module.
  - four times the current controller sampling time (p0115[0]) is greater than 1 ms when operating with a non-isochronous PROFIBUS.
  - four times the current controller sampling time (p0115[0]) is greater than the DP clock cycle when operating with an isochronous PROFIBUS.
  - The DP clock cycle is not an integer multiple of the sampling time of the current controller (p0115[0]).
  - The monitoring clock cycle does not match the monitoring clock cycle of the TM54F.
  - The actual value sensing clock cycle (p9511) is less than four times the current controller sampling time (p0115[0]).
  - The actual value sensing clock cycle (p9511) is not an integer multiple of the sampling time of the current controller (p0115[0]).
  - The parameterized actual value sensing clock cycle cannot be set on this component.
  - If the motion monitoring functions have been parameterized as encoderless (p9506), the actual value sensing clock cycle (p9511) and the current controller clock cycle (p0115[0]) must be identical.

The following applies to SINAMICS S110:
- If the motion monitoring functions have been parameterized as encoderless (p9506), the actual value sensing clock cycle p9511 must be = 250 µs.
- The actual value sensing clock cycle (p9511) for safety with encoder (p9506 = 0) is less than 2 ms for this Control Unit (e.g. CU305).
- The actual value sensing clock cycle is not an integer multiple of the sampling time of the current controller (p0115[0]).
- For the S120M the monitoring clock cycle cannot be maintained as a result of the conditions required in the system.
- The current controller sampling time is set to zero (p0115[0]).

Remedy:
- Upgrade the firmware of the Control Unit to a later version.
- correct the monitoring clock cycle (p9500) and carry out POWER ON.
- For fault value = 101:
  - actual value sensing clock cycle corresponds to position control clock cycle/DP clock cycle (factory setting).
  - For motion monitoring functions integrated in the drive (p9601/p9801bit 2 = 1) the actual value sensing clock cycle can be directly parameterized in P9511/p9311.
  - set a separate actual value sensing clock cycle in p9511.
  - restrict operation to a maximum of two vector drives. For the standard setting in p0112, p0115, the current controller sampling time is automatically reduced to 250 µs. If the standard values were changed, then the current controller sampling time (p0112, p0115) should be appropriately set.
  - increase the DP clock cycle for operation with a clock-cycle synchronous PROFIBUS so that there is a multiple clock cycle ratio of at least 4:1 between the DP clock cycle and the current controller sampling time. A clock cycle ratio of at least 8:1 is recommended.
  - With firmware version 2.5, please ensure that parameter p9510 is set to 1 in the drive (clock cycle synchronous operation).
For fault value = 106:
- set the parameters for the monitoring clock cycles the same (p10000 and p9500 / p9300).

For fault value = 107:
- Set an actual value sensing clock cycle that matches the current controller clock cycle (p9511 >= 4 * p0115[0], 8 * p0115[0]) is recommended.

Note:
An actual value sensing clock cycle (p9511) that is set too low, can sporadically mean that safety messages C01711/C30711 are output with message value 1020 or 1021.

For fault value = 108:
- set a suitable actual value sensing clock cycle in p9511.
- if the DP clock cycle is used as the actual value sensing clock cycle for operation with isochronous PROFIBUS (p9511 = 0), then a suitable DP clock cycle must be configured. This must be set to less than 8 ms. If this is not possible, then p9511 must be set to the required actual value sensing clock cycle (< 8 ms).
- For SIMOTION D410-2, a suitable multiple of the DP clock cycle (e.g. 1, 2, 3, 4, 5, 6, 8, 10) must be parameterized. Otherwise, the clock cycle must be set to less than 8 ms.

For fault value = 109:
- set the actual value sensing clock cycle in p9511 to the same value as the current controller clock cycle (p0115[0]).

The following applies to SINAMICS S110:
- set the actual value sensing clock cycle to p9511 = 250 µs.

For fault value = 110:
- set the actual value sensing clock cycle in p9511 to 2 ms or higher.

For fault value = 111:
- set the monitoring clock cycle in p9500 as an integer multiple of the sampling time of the current controller (p0115[0]).

Re fault value = 200, 201:
- Increase the current controller sampling time (p0115[0]).
- If required, reduce the number of components connected to the corresponding DRIVE-CLiQ line, or distribute the components across several DRIVE-CLiQ sockets.

For fault value = 202:
- Set the current controller sampling time to a sensible value (p0115[0]).

Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

---

**F01653**

**SI CU: PROFIBUS/PROFINET configuration error**

**Message value:** %1

**Drive object:** VECTOR_G

**Reaction:** NONE (OFF1, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** There is a PROFIBUS/PROFINET configuration error for using Safety Integrated monitoring functions with a higher-level control (SINUMERIK or F-PLC).

Note:
For safety functions that have been enabled, this fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):
200: A safety slot for receive data from the control has not been configured.
210, 220: The configured safety slot for the receive data from the control has an unknown format.
230: The configured safety slot for the receive data from the F-PLC has the incorrect length.
231: The configured safety slot for the receive data from the F-PLC has the incorrect length.
240: The configured safety slot for the receive data from the SINUMERIK has the incorrect length.
250: A PROFIsafe slot is configured in the higher-level F control, however PROFIsafe is not enabled in the drive.
300: A safety slot for the send data to the control has not been configured.
310, 320: The configured safety slot for the send data to the control has an unknown format.
330: The configured safety slot for the send data to the F-PLC has the incorrect length.
331: The configured safety slot for the send data to the F-PLC has the incorrect length.
340: The configured safety slot for the send data to the SINUMERIK has the incorrect length.

**Remedy:**
The following generally applies:
- check and, if necessary, correct the PROFIBUS/PROFINET configuration of the safety slot on the master side.
- upgrade the Control Unit software.

For fault value = 250:
- remove the PROFIsafe configuring in the higher-level F control or enable PROFIsafe in the drive.
Re fault value = 231, 331:
- configure the PROFIsafe telegram matching the parameterization in the F-PLC.
The following applies for p9501.30 = 1 (F-DI via PROFIsafe is enabled):
- PROFIsafe telegram 900 must be configured.
For p9501.30 = 0 (F-DI not enabled via PROFIsafe), the following applies:
- PROFIsafe telegram 30 must be configured.

SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A
F01656  SI CU: Motor Module parameter error
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  When accessing the Safety Integrated parameters for the Motor Module (MM) in the non-volatile memory, an error has occurred.
        This fault results in a STOP A that can be acknowledged.
        Fault value (r0949, interpret decimal):
        129:
        - safety parameters for the Motor Module corrupted.
        - drive with enabled safety functions was possibly copied offline using the commissioning software and the project downloaded.
        131: Internal Motor Module software error.
        132: Communication errors when uploading or downloading the safety parameters for the Motor Module.
        255: Internal software error on the Control Unit.
Remedy:
        - re-commission the safety functions.
        - upgrade the Control Unit software.
        - upgrade the Motor Module software.
        - replace the memory card or Control Unit.
        For fault value = 129:
        - activate the safety commissioning mode (p0010 = 95).
        - adapt the PROFIsafe address (p9610).
        - start the copy function for SI parameters (p9700 = D0 hex).
        - acknowledge data change (p9701 = DC hex).
        - exit the safety commissioning mode (p0010 = 0).
        - save all parameters (p0977 = 1 or "copy RAM to ROM").
        - carry out a POWER ON (power off/on) for all components.
        For fault value = 132:
        - check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01657  SI CU: PROFIsafe telegram number invalid
Message value:
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  POWER ON
Cause:  The PROFIsafe telegram number set in p9611 is not valid.
        When PROFIsafe is enabled (p9601.3 = 1), then a telegram number greater than zero must be entered in p9611.
        This fault does not result in a safety stop response.
Note:
See also: p9611 (SI PROFIsafe telegram selection (Control Unit)), p60022 (PROFIsafe telegram selection)
Remedy:
Check the telegram number setting (p9611).

F01658  SI CU: PROFIsafe telegram number not equal
Message value:
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The PROFIsafe telegram number is set differently in p9611 and p60022.
        For p9611 not equal to 998, the following applies:
        - The telegram number must be identically set in both parameters.
        - As a result of the compatibility to firmware versions < 4.5, then only the values 0 and 30 are permitted in p60022.
### Faults and alarms

#### List of faults and alarms

**Note:**
This fault does not result in a safety stop response.
See also: p9611 (SI PROFIsafe telegram selection (Control Unit)), p60022 (PROFIsafe telegram selection)

**Remedy:**
Match the telegram number in both parameters so that they are the same (p9611, p60022).

<td>The write request for one or several Safety Integrated parameters on the Control Unit (CU) was rejected.</td>
</tr>
</tbody>
</table>

**Note:**
This fault does not result in a safety stop response.

**Fault value (r0949, interpret decimal):**
1: The Safety Integrated password is not set.
2: A reset of the drive parameters was selected. However, the Safety Integrated parameters were not reset, as Safety Integrated is presently enabled.
3: The interconnected STO input is in the simulation mode.
10: An attempt was made to enable the STO function although this cannot be supported.
11: An attempt was made to enable the SBC function although this cannot be supported.
12: An attempt was made to enable the SBC function although this cannot be supported for a parallel circuit configuration (p9671.14).
13: An attempt was made to enable the SS1 function although this cannot be supported.
14: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different.
15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.
16: An attempt was made to enable the STO function although this cannot be supported when the internal voltage protection (p1231) is enabled.
17: An attempt was made to enable the PROFIsafe function although this cannot be supported for a parallel circuit configuration.
18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported.
19: An attempt was made to enable the SBA (Safe Brake Adapter), although this cannot be supported.
20: An attempt was made to enable the motion monitoring functions integrated in the drive and the STO function, both controlled via F-DI.
21: An attempt was made to enable the motion monitoring functions integrated in the drive for a parallel connection, although these cannot be supported.
22: An attempt was made to enable the Safety Integrated functions although these cannot be supported by the connected Power Module.
23: For ESR, an attempt was made to enable the delay for pulse suppression, although this cannot be supported.
24: An attempt was made to enable the SBC function, although no power unit data set is set for the brake control (p7015 = 99).
25: An attempt was made to parameterize a PROFIsafe telegram although this cannot be supported.
26: At a digital input of the Control Unit, an attempt was made to activate the simulation mode (p0795), which is used by Safety Integrated (p10049).
33: An attempt was made to enable the motion monitoring functions without selection integrated in the drive (p9601.5, p9801.5), although this cannot be supported.

**Remedy:**

For fault value = 1:
- set the Safety Integrated password (p9761).
For fault value = 2:
- Inhibit Safety Integrated (p9501, p9601) or reset safety parameters (p0970 = 5), then reset the drive parameters again.
For fault value = 3:
- end the simulation mode for the digital input (p0795).
Re fault value = 10, 11, 12, 13, 14, 15, 17, 18, 19, 21, 22, 23:
- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
For fault value = 16:
- inhibit the internal voltage protection (p1231).
For fault value = 20:
- correct setting in p9601.
For fault value = 22:
- use a Power Module that supports the Safety Integrated functions.
For fault value = 24:
- set the power unit data set for the holding brake (p7015).
For fault value = 25:
- use a Power Module that supports the PROFIsafe telegram selection.
- Correct the telegram number setting (p9611).
For fault value = 26:
- check whether p10049 is set. Also check p10006 and p10009. Check whether in p10046, p10047 a test top of the FDO with a read back input is parameterized.
- correct the setting in p9611.
For fault value = 33:
- Deselect motion monitoring functions without selection integrated in drive (p9601.5, p9801.5) and select safety functions that are supported (see p9771/p9871),
or:
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Note:
CU: Control Unit
ESR: Extended Stop and Retract
MM: Motor Module
SBA: Safe Brake Adapter
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill
See also: p9501 (SI Motion enable safety functions (Control Unit)), p9601 (SI enable, functions integrated in the drive (Control Unit)), p9620 (SI signal source for STO (SH)/SBC/SS1 (Control Unit)), p9761 (SI password input), p9801 (SI enable, functions integrated in the drive (Motor Module))

F01659 SI CU: Write request for parameter rejected
Message value: %1
Drive object: TM54F_MA, TM54F_SL
Reaction: IMMEDIATELY (POWER ON)

The write request for one or several Safety Integrated parameters on the Control Unit (CU) was rejected.

Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
1: The Safety Integrated password is not set.
2: A reset of the drive parameters was selected. However, the Safety Integrated parameters were not reset, as Safety Integrated is presently enabled.
3: The interconnected STO input is in the simulation mode.
10: An attempt was made to enable the STO function although this cannot be supported.
11: An attempt was made to enable the SBC function although this cannot be supported.
12: An attempt was made to enable the SBC function although this cannot be supported for a parallel circuit configuration (r9871.14).
13: An attempt was made to enable the SS1 function although this cannot be supported.
14: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different.
15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.
16: An attempt was made to enable the STO function although this cannot be supported when the internal voltage protection (p1231) is enabled.
17: An attempt was made to enable the PROFIsafe function although this cannot be supported for a parallel circuit configuration.
18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported.
19: An attempt was made to enable the SBA (Safe Brake Adapter), although this cannot be supported.

20: An attempt was made to enable the motion monitoring functions integrated in the drive and the STO function, both controlled via F-DI.

21: An attempt was made to enable the motion monitoring functions integrated in the drive for a parallel connection, although these cannot be supported.

22: An attempt was made to enable the Safety Integrated functions although these cannot be supported by the connected Power Module.

23: For ESR, an attempt was made to enable the delay for pulse suppression, although this cannot be supported.

24: An attempt was made to enable the SBC function, although no power unit data set is set for the brake control (p7015 = 99).

25: An attempt was made to parameterize a PROFIsafe telegram although this cannot be supported.

26: At a digital input of the Control Unit, an attempt was made to activate the simulation mode (p0795), which is used by Safety Integrated (p10049).

33: An attempt was made to enable the motion monitoring functions without selection integrated in the drive (p9601.5, p9801.5), although this cannot be supported.

See also: p0970, p3900, r9771, r9871

Remedy:

For fault value = 1:
- set the Safety Integrated password (p10061).

For fault value = 2:
- Inhibit Safety Integrated (p9501, p9601) or reset safety parameters (p0970 = 5), then reset the drive parameters again.

For fault value = 3:
- end the simulation mode for the digital input (p0795).

Re fault value = 10, 11, 12, 13, 14, 15, 17, 18, 19, 21, 22, 23:
- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 16:
- inhibit the internal voltage protection (p1231).

For fault value = 20:
- correct setting in p9601.

For fault value = 22:
- use a Power Module that supports the Safety Integrated functions.

Note:
CU: Control Unit
ESR: Extended Stop and Retract
MM: Motor Module
SBA: Safe Brake Adapter
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill

See also: p9501 (SI Motion enable safety functions (Control Unit)), p9601 (SI enable, functions integrated in the drive (Control Unit)), p9620 (SI signal source for STO (SH)/SBC/SS1 (Control Unit)), p9761 (SI password input), p9801 (SI enable, functions integrated in the drive (Motor Module))
### F01661 SI CU: Simulation of the safety inputs active

**Message value:** Fault cause: %1 bin  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The simulation of the digital inputs of the Control Unit (p0795) is active. It is not permissible that safety inputs (refer to p9620, p10022 ... p10032) are simulated. Fault value (r0949, interpret binary): The display bits indicate which Dis may not be simulated.  
**Remedy:** Deactivate the simulation of the digital inputs of the Control Unit for the safety inputs (refer to p795) and acknowledge the fault.

### F01663 SI CU: Copying the SI parameters rejected

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** One of the following values is saved in p9700 or was entered offline: 87 or 208. This is the reason that when booting, an attempt is made to copy SI parameters from the Control Unit to the Motor Module. However, no safety-relevant function has been selected on the Control Unit (p9501 = 0, p9601 = 0). Copying was rejected for safety reasons. As a consequence, inconsistent parameterization can occur in both monitoring channels, which in turn results in additional error messages. Especially for inconsistent enabling of the safety functions on both monitoring channels (p9601 = 0, p9801 <> 0), fault F30625 is output.  
**Note:** This fault does not result in a safety stop response. See also: p9700 (SI Motion copy function)  
**Remedy:** - Set p9700 to 0.  
- Check p9501 and p9601 and if required, correct.  
- Restart the copying function by entering the corresponding value into p9700. Alternatively, using the STARTER commissioning tool, perform the following steps in the online mode:  
  - Call the "Safety Integrated" screen form (the field "Select safety functions" is at "No Safety Integrated").  
  - Click on "Change settings".  
  - Click on "Activate settings" (as a consequence, Safety Integrated is inhibited on both monitoring channels).  
  - save all parameters (p0977 = 1 or "copy RAM to ROM").  
  - carry out a POWER ON (power off/on) for all components.

### F01664 SI CU: No automatic firmware update

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** During booting, the system detected that the "Firmware update automatic" function (p7826 = 1) was not activated. This function must be activated for automatic firmware updates/downgrades to prevent impermissible version combinations when safety functions are enabled.  
**Note:** This fault does not result in a safety stop response. See also: p7826 (Firmware update automatic)  
**Remedy:** When safety functions are enabled (p9501 <> 0 and/or p9601 <> 0):  
1. Activate the "Firmware update automatic" function (p7826 = 1).  
2. Save the parameters (p0977 = 1) and carry out a POWER ON. When de-activating the safety functions (p9501 = 0, p9601 = 0), the fault can be acknowledged after exiting the safety commissioning mode.
### F01665  SI CU: System is defective

### F01670  SI Motion: Invalid parameterization Sensor Module

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The parameterization of a Sensor Module used for Safety Integrated is not permissible. 

**Note:**  
This fault results in a STOP A that cannot be acknowledged.  
Fault value (r0949, interpret decimal):  
1: No encoder was parameterized for Safety Integrated.  
2: An encoder was parameterized for Safety Integrated that does not have an A/B track (sine/cosine).  
3: The encoder data set selected for Safety Integrated is still not valid.  
4: A communication error with the encoder has occurred.  
5: Number of relevant bits in the encoder coarse position invalid.  
6: DRIVE-CLiQ encoder configuration invalid.  
7: Non-safety relevant component of the encoder coarse position for the linear DRIVE-CLiQ encoder not valid.  
8: Parameterized Safety comparison algorithm not supported.  
9: Relationship between the grid division and measuring step for linear DRIVE-CLiQ encoder is not binary.  
10: For an encoder used for Safety Integrated, not all of the Drive Data Sets (DDS) are assigned to the same Encoder Data Set (EDS) (p0187 ... p0189).  

**Remedy:**  
For fault value = 1, 2:  
- use and parameterize an encoder that Safety Integrated supports (encoder with track A/B sine-wave, p0404.4 = 1).  
For fault value = 3:  
- check whether the drive or drive commissioning function is active and if required, exit this (p0009 = p00010 = 0), save the parameters (p0971 = 1) and carry out a POWER ON  
For fault value = 4:  
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Sensor Module involved and if required, carry out a diagnostics routine for the faults identified.  
For fault value = 5:  
- p9525 = 0 (not permissible). Check the encoder parameterization on the Sensor Modules involved.  
For fault value = 6:  
- check p9515.0 (for DRIVE-CLiQ encoders, the following applies: p9515.0 = 1). Check the encoder parameterization on the Sensor Modules involved.  
For fault value = 7:  
- p12033 for an encoder used for Safety Integrated is not equal to 1. Use a linear DRIVE-CLiQ and parameterize for p12033 = 1.  
For fault value = 8:  
- check p9541. Use and parameterize an encoder that implements an algorithm supported by Safety Integrated.  
For fault value = 9:  
- check p9514 and p9522. Use an encoder and parameterize, where the ratio between p9514 and p9522 is binary.  
For fault value = 10:  
- align the EDS assignment of all of the encoders used for Safety Integrated (p0187 ... p0189).  
For fault value = 11:  
- p12036 for an encoder used for Safety Integrated is not equal to 0. Use a linear DRIVE-CLiQ and parameterize for p12036 = 0.  
**Note:**  
SI: Safety Integrated

### F01671  SI Motion: Parameterization encoder error

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The parameterization of the encoder used by Safety Integrated is different to the parameterization of the standard encoder. 

**Note:**  
This fault does not result in a safety stop response.  
Fault value (r0949, interpret decimal):  
Parameter number of the non-corresponding safety parameter.
Remedy: Align the encoder parameterization between the safety encoder and the standard encoder.

Notice:
SI: Safety Integrated

F01672  SI CU: Motor Module software/hardware incompatible
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Motor Module software does not support safe motion monitoring or is not compatible to the software on the Control Unit or there is a communications error between the Control Unit and Motor Module.

Notice:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
1: The existing Motor Module software does not support the safe motion monitoring function.
2, 3, 6, 8: There is a communications error between the Control Unit and Motor Module.
4, 5, 7: The existing Motor Module software is not compatible to the software on the Control Unit.
9,10,11,12: The actual Motor Module software does not support safe encoderless motion monitoring.
13: At least one Motor Module in parallel operation does not support the safe motion monitoring function.

Remedy:
- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
For fault value = 1:
- use a Motor Module that supports safe motion monitoring.
Re fault value = 2, 3, 6, 8:
- check whether there is a DRIVE-CLIQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
Re fault value = 4, 5, 7, 9, 13:
- upgrade the Motor Module software.

Notice:
SI: Safety Integrated

F01673  SI Motion: Sensor Module software/hardware incompatible
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Sensor Module software and/or hardware does not support the safe motion monitoring function with the higher-level control.

Notice:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
- upgrade the Sensor Module software.
- use a Sensor Module that supports the safe motion monitoring function.

Notice:
SI: Safety Integrated

F01674  SI Motion CU: Safety function not supported by PROFIsafe telegram
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: POWER ON
Cause: The monitoring function enabled in p9501 and p9601 is not supported by the currently set PROFIsafe telegram (p9611).

Notice:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret bitwise binary):
Bit 24 = 1:
Transfer SLS (SG) limit value via PROFIsafe not supported (p9501.24).
### Faults and alarms

#### List of faults and alarms

Bit 25 = 1: 
Transfer safe position via PROFIsafe is not supported (p9501.25).

**Remedy:**
- Deselect the monitoring function involved (p9501, p9601).
- Set the matching PROFIsafe telegram (p9611).

**Note:**
SI: Safety Integrated  
SLS: Safely-Limited Speed / SG: Safely reduced speed  
SP: Safe Position

#### F01680

| Cause:         | The actual checksum calculated by the drive and entered in r9728 via the safety-relevant parameters does not match the reference checksum saved in p9729 at the last machine acceptance.  
Safety-relevant parameters have been changed or a fault is present.

**Note:**
This fault results in a STOP A that can be acknowledged.

**Fault value (r0949, interpret decimal):**
0: Checksum error for SI parameters for motion monitoring.
1: Checksum error for SI parameters for actual values.
2: Checksum error for SI parameters for component assignment.

**Remedy:**
- Check the safety-relevant parameters and if required, correct.
- Execute the function "Copy RAM to ROM".
- Perform a POWER ON if safety parameters requiring a POWER ON have been modified.
- Carry out an acceptance test.

#### F01681

| Cause:         | The parameter cannot be parameterized with this value.  
Note:  
This fault does not result in a safety stop response.

**Fault value (r0949, interpret decimal):**
yyyyxxxx dec:  
yyyy = supplementary information,  
xxxx = parameter  
yyyy = 0: no additional information available.  
xxxx = 9500:  
p9500 is not equal to p9300 or not an integer multiple of the sampling time of the current controller (p0115[0]).  
xxxx = 9501:  
It is not permissible to enable the function "n<nx hysteresis and filtering" (p9501.16) in conjunction with the function "extended functions without selection" (p9601.5).  
xxxx = 9505:  
When SLP is active (p9501.1 = 1), the modulo function is activated and this is not permitted (p9505 not equal to 0).  
xxxx = 9511:  
yyyy = 1:  
p9511 is not equal to p9311.  
yyyy = 2:  
On a double axis motor module, between the drive objects, no different values in p9511 and p0115[0] is permitted.  
xxxx = 9522:  
The gear stage was set too high.  
xxxx = 9544:  
For linear axes, the maximum value is limited to 1 mm.  
xxxx = 9547:  
p9547 is too low.  
xxxx = 9585:  
For Safety without encoder and synchronous motor, a value of 4 must be entered into p9585.

Faults and alarms

3-1277© Siemens AG 2012 All Rights Reserved

SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A

xxxx = 9601:
yyy = 1:
If motion monitoring functions integrated in the drive (p9601.2 = 1) and extended functions without selection (p9601.5 = 1) are enabled, then PROFIsafe (p9601.3 = 1) or onboard F-DI (p9601.4 = 1) is not possible.

yyy = 2:
Extended functions without selection (p9601.5 = 1) are enabled, without enabling motion monitoring functions integrated in the drive (p9601.2).

yyy = 3:
Onboard F-DI are enabled, without enabling motion monitoring functions integrated in the drive (p9601.2).

yyy = 4:
Onboard F-DI are enabled, then it is not permissible to simultaneously set PROFIsafe and F-DI via PROFIsafe (p9501.30).

yyy = 5:
Transfer of the SLS limit value via PROFIsafe (p9501.24) has been enabled, without enabling PROFIsafe.

yyy = 6:
Transfer of the safe position via PROFIsafe (p9501.25) has been enabled, without enabling PROFIsafe.

Remedy:
Correct parameter (if required, also on the second monitoring channel, p9801).

xxxx = 9500:
- Transfer of the safe position via PROFIsafe (p9501.25) has been enabled, without enabling PROFIsafe.
Set p9500 "SI Motion monitoring clock cycle" as an integer multiple of p115[0] "Current controller sampling time". Align parameters 9300 and 9500, backup parameters (p0971 = 1) and carry out a POWER ON.

With hysteresis/filtering enabled (p9501.16 = 1), the following applies:
- Set parameters p9546/p9346 and p9547/p9347 acc. to the following rule: p9546 >= 2 x p9547; p9346 >= 2 x p9347.
- The following rule must also be adhered to when actual value synchronization (p9501.3 = 1) is enabled: p9549 <= p9547; p9349 <= p9347.

xxx = 9501:
- Correct parameters p9501.16 and p9301.16, or deselect the extended functions without selection (p9601.5).

xxx = 9505:
Correct parameter p9501.1 or p9505.

xxx = 9507:
Set synchronous or induction motor according to p0300.

xxx = 9511:
Align parameters p9311 and p9511, backup parameters (p0971 = 1) and carry out a POWER ON.

xxx = 9517:
Also check p9516.0.

xxx = 9522:
Correct parameters.

xxx = 9544:
Correct parameter (for linear axes, the maximum value is limited to 1 mm).

xxx = 9585:
Correct parameter (if required, also on the second monitoring channel, p9385).

xxx = 9601:

yyy = 1:
Only enable motion monitoring functions integrated in the drive (p9601.2 = 1) and extended functions without selection (p9601.5 = 1), or only enable PROFIsafe (p9601.3 = 1) or only onboard F-DI (p9601.4 = 1).

yyy = 2, 3:
Enable motion monitoring functions integrated in the drive (p9601.2 = 1).

yyy = 4:
If onboard F-DI are enabled, then it is not permissible to simultaneously set PROFIsafe and F-DI via PROFIsafe (p9501.30), deselect PROFIsafe functionality or onboard F-DI.

yyy = 5:
To transfer the SLS limit values via PROFIsafe (p9501.24 = 1), also enable PROFIsafe (p9601.3 = 1) and motion monitoring functions integrated in the drive (p9601.2 = 1).

yyy = 6:
For the safe position via PROFIsafe (p9501.25 = 1), also enable PROFIsafe (p9601.3 = 1) and motion monitoring functions integrated in the drive (p9601.2 = 1).
F01682  SI Motion CU: Monitoring function not supported

Message value: %1
Drive object: VECTOR_G
Reaction: IMMEDIATELY (POWER ON)
Acknowledge: IMMEDIATELY (POWER ON)

Cause: The monitoring function enabled in p9501, p9601, p9801, p9307 or p9507 is not supported in this firmware version.
Note: This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret decimal):
1: Monitoring function SLP not supported (p9501.1).
2: Monitoring function SCA not supported (p9501.7 and p9501.8 ... 15 and p9503).
3: Monitoring function SLS override not supported (p9501.5).
4: Monitoring function external ESR activation not supported (p9501.4).
5: Monitoring function F-DI in PROFIsafe not supported (p9501.30).
6: Enable actual value synchronization not supported (p9501.3).
9: Monitoring function not supported by the firmware or enable bit not used.
10: Monitoring functions only supported for a SERVO drive object.
11: Encoderless monitoring functions (p9506.1) only supported for motion monitoring integrated in the drive (p9601.2).
12: Monitoring functions for ncSI are not supported for CU305.
20: Motion monitoring functions integrated in the drive are only supported in conjunction with PROFIsafe (p9501, p9601.1 ... 2 and p9801.1 ... 2).
21: Enable a safe motion monitoring function (in p9501), not supported for enabled basic functions via PROFIsafe (p9601.2 = 0, p9601.3 = 1).
22: Encoderless monitoring functions in "chassis" format not supported.
23: CU240 does not support monitoring functions requiring an encoder.
24: Monitoring function SDI not supported (p9501.17).
25: Drive-integrated motion monitoring functions not supported (p9501, p9601.2).
26: Hysteresis and filtering for SSM monitoring function without an encoder not supported (p9501.16).
27: This hardware does not support onboard F-DI and F-DO.
29: SINAMICS S120M: SSM encoderless not supported.
31: This hardware does not support transfer SLS (SG) limit value via PROFIsafe (p9301/p9501.24).
33: Safety functions without selection not supported (p9601.5, p9801.5).
34: This module does not support safe position via PROFIsafe.
36: Function "SS1 without OFF3" not supported.
40: SIMOTION D410-2: Motion monitoring functions integrated in the drive or PROFIsafe control not supported.
41: SIMOTION D410-2: Safety functions not supported for the "Chassis" format.
42: Motion monitoring functions SLP and SP not supported for D4x5-2 and CX32-2 (p9501.1, 25).
43: Motion monitoring functions SLP and SP as well as PROFIsafe telegrams 31/901/902 not supported for D410 (p9501.1, 24, 25, 30 / 9611).
9586: Set value of p9586/p9386 is greater than the supported maximum value.
9588: Set value of p9588/p9388 is greater than the supported maximum value.
9589: Set value of p9589/p9389 is greater than the supported maximum value.

Remedy: - De-select the monitoring function involved (p9501, p9503, p9506, p9601, p9801, p9307, p9507).
- Reduce the set value (p9586, p9588, p9589).

Note:
ESR: Extended Stop and Retract
SCA: Safe Cam / SN: Safe software cam
SDI: Safe Direction (safe motion direction)
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
SLS: Safely-Limited Speed / SG: Safely reduced speed
SP: Safe Position

</table>
Faults and alarms

List of faults and alarms

The following conditions must be complied with to assign cams to a cam track:
- the cam length of cam x = p9536[x] - p9537[x] must be greater or equal to the cam tolerance + the position tolerance (= p9540 + p9542). This also means that for cams on a cam track, the minus position value must be less than the plus position value.
- the distance between 2 cams x and y (minus position value[y] - plus position value[x] = p9537[y] - p9536[x]) on a cam track must be greater than or equal to the cam tolerance + position tolerance (= p9540 + p9542).

Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Number of the "Safe Cam" with an illegal position.
See also: p9501 (SI Motion enable safety functions (Control Unit))

Remedy:
Correct the cam position and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
See also: p9536 (SI Motion SCA (SN) plus cam position (Control Unit)), p9537 (SI Motion SCA (SN) plus cam position (Control Unit))

F01687  SI Motion: Illegal parameterization modulo value SCA (SN)
Message value:
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
The parameterized modulo value for the "Safe Cam" (SCA) function is not a multiple of 360 000 mDegrees.
Note:
This fault does not result in a safety stop response.
Remedy:
Correct the modulo value for SCA and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
See also: p9505 (SI Motion SP modulo value (Control Unit))

F01688  SI Motion CU: Actual value synchronization not permissible
Message value:
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
- It is not permissible to enable actual value synchronization for a 1-encoder system.
- It is not permissible to simultaneously enable actual value synchronization and a monitoring function with absolute reference (SCA/SLP).
- It is not permissible to simultaneously enable actual value synchronization and safe position via PROFIsafe.
Note:
This fault results in a STOP A that cannot be acknowledged.
Remedy:
- Either select the "actual value synchronization" function or parameterize a 2-encoder system.
- Either de-select the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON.
- Either deselect the "actual value synchronization" function or do not enable "Safe position via PROFIsafe".
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
SP: Safe Position
See also: p9501 (SI Motion enable safety functions (Control Unit)), p9526 (SI Motion encoder assignment second channel)

<tr>
<td></td>
<td><strong>Cause:</strong> The configured times for PROFIBUS communication are not permitted and the DP cycle is used as the actual value acquisition cycle for the safe movement monitoring functions. Isochronous PROFIBUS: The sum of Ti and To is too high for the selected DP cycle. The DP cycle should be at least 1 current controller cycle greater than the sum of Ti and To. No isochronous PROFIBUS: The DP clock cycle must be at least 4x the current controller clock cycle.</td>
</tr>
</tbody>
</table>
Notice:
If this alarm is not observed, then message C01711 or C30711 – with the value 1020 ... 1021 – can sporadically occur.

Remedy:
Configure Ti and To low so that they are suitable for the DP cycle or increase the DP cycle time.
Alternative when SI monitoring integrated in the drive is enabled (p9601/p9801 > 0):
Use the actual value acquisition cycle p9511/p9311 and, in turn, set independently from DP cycle. The actual values sensing clock cycle must be at least 4x the current controller clock cycle. A clock cycle ratio of at least 8:1 is recommended.
See also: p9511 (SI Motion actual value sensing cycle clock (Control Unit))

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F01692 SI Motion CU: Parameter value not permitted for encoderless
Message value: Parameter: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
The parameter cannot be set to this value if encoderless motion monitoring functions have been selected in p9506.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number with the incorrect value.
See also: p9501 (SI Motion enable safety functions (Control Unit))
Remedy:
- Correct the parameter specified in the fault value.
- If necessary, de-select encoderless motion monitoring functions (p9506).
See also: p9501 (SI Motion enable safety functions (Control Unit))

A01693 (F) SI CU: Safety parameter settings changed, warm restart/POWER ON required
Message value: %1
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
Safety parameters have been changed; these will only take effect following a warm restart or POWER ON.
Notice:
All changed parameters of the safety motion monitoring functions will only take effect following a warm restart or POWER ON.
Alarm value (r2124, interpret decimal):
Parameter number of the safety parameter which has changed, necessitating a warm restart or POWER ON.
Remedy:
- carry out a warm restart (p0009 = 30, p0976 = 2, 3).
- carry out a POWER ON (power off/on) for all components.
Note:
Before performing an acceptance test, a POWER ON must be carried out for all components.

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: POWER ON

F01694 (A) SI Motion CU: Firmware version Motor Module older Control Unit
Message value: -
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
The firmware version of the Motor Module is older than the version of the Control Unit.
It is possible that safety functions are not available (r9771/r9871).
Note:
This message does not result in a safety stop response.
This message can also occur, if after an automatic firmware update, a POWER ON was not carried out (Alarm A01007).
Remedy: Upgrade the firmware of the Motor Module to a later version. See also: r9390 (SI Motion version safety motion monitoring (Motor Module)), r9590 (SI Motion version safety motion monitoring (Control Unit))

Reaction upon A: NONE
Acknowl. upon A: NONE

A01695 (F) SI Motion: Sensor Module was replaced
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: A Sensor Module, which is used for safe motion monitoring functions, was replaced. The hardware replacement must be acknowledged. An acceptance test must be subsequently performed. Note: This message does not result in a safety stop response.

Remedy: Carry out the following steps using the STARTER commissioning software:
- press the "Acknowledge hardware replacement" button in the safety screen form.
- execute the function "Copy RAM to ROM".
- carry out a POWER ON (power off/on) for all components.
As an alternative, carry out the following steps in the expert list of the commissioning software:
- start the copy function for the node identifier on the drive (p9700 = 1D hex).
- acknowledge the hardware CRC on the drive (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
Then carry out an acceptance test (refer to the Safety Integrated Function Manual).
For SINUMERIK, the following applies:
HMI supports the replacement of components with Safety functions (operating area "Diagnostics" --> Softkey "Alarm list" --> Softkey "Confirm SI HW" etc.).
The precise procedure is given in the following document:
SINUMERIK Function Manual Safety Integrated
See also: p9700 (SI Motion copy function), p9701 (Acknowledge SI motion data change)

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A01696 (F) SI Motion: Testing of the motion monitoring functions selected when booting
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The test of the motion monitoring functions was already illegally active when booting. This is the reason that the test is only carried out again after selecting the forced checking procedure parameterized in p9705.
Note: This message does not result in a safety stop response. See also: p9705 (SI Motion: Test stop signal source)

Remedy: De-select the forced checking procedure of the safety motion monitoring functions and then select again. The signal source for initiation is parameterized in binector input p9705.
Notice: It is not permissible to use TM54F inputs to start the test stop. Note: SI: Safety Integrated See also: p9705 (SI Motion: Test stop signal source)

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)
A01697 (F)  SI Motion: Motion monitoring functions must be tested

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: The time set in p9559 for the forced checking procedure of the safety motion monitoring functions has been exceeded. A new test is required.
After next selecting the forced checking procedure parameterized in p9705, the message is withdrawn and the monitoring time is reset.

Note:
- This message does not result in a safety stop response.
- As the shutdown paths are not automatically checked during booting, an alarm is always issued once booting is complete.
- The test must be performed within a defined, maximum time interval (p9559, maximum of 9000 hours) in order to comply with the requirements as laid down in the standards for timely fault detection and the conditions to calculate the failure rates of safety functions (PFH value). Operation beyond this maximum time period is permissible if it can be ensured that the forced checking procedure is performed before persons enter the hazardous area and who are depending on the safety functions correctly functioning.

See also: p9559 (SI Motion forced checking procedure timer (Control Unit)), p9705 (SI Motion: Test stop signal source)

Remedy: Carry out the forced checking procedure of the safety motion monitoring functions.
The signal source for initiation is parameterized in binector input p9705.

Notice:
- It is not permissible to use TM54F inputs to start the test stop.
- SI: Safety Integrated

See also: p9705 (SI Motion: Test stop signal source)

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A01698 (F)  SI CU: Commissioning mode active

Message value: -
Drive object: B_INF, TM54F_MA, VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: The commissioning of the "Safety Integrated" function is selected.
This message is withdrawn after the safety functions have been commissioned.

Note:
- This message does not result in a safety stop response.
- In the safety commissioning mode, the "STO" function is internally selected.

See also: p0010

Remedy: Not necessary.

Note:
- CU: Control Unit
- SI: Safety Integrated

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A01699 (F)  SI CU: Shutdown path must be tested

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: The time set in p9659 for the forced checking procedure of the safety shutdown paths has been exceeded. The safety shutdown paths must be re-tested.
After the next time the "STO" function is de-selected, the message is withdrawn and the monitoring time is reset.
List of faults and alarms

Note:
- This message does not result in a safety stop response.
- The test must be performed within a defined, maximum time interval (p9659, maximum of 9000 hours) in order to comply with the requirements as laid down in the standards for timely fault detection and the conditions to calculate the failure rates of safety functions (PFH value). Operation beyond this maximum time period is permissible if it can be ensured that the forced checking procedure is performed before persons enter the hazardous area and who are depending on the safety functions correctly functioning.
See also: p9659 (SI forced checking procedure timer)

Remedy:
Select STO and then de-select again.

Note:
CU: Control Unit
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

C01700 SI Motion CU: STOP A initiated

Message value:
-

Drive object:
VECTOR_G

Reaction:
OFF2

Acknowledge:
IMMEDIATELY (POWER ON)

Cause:
The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit).
Possible causes:
- stop request from the second monitoring channel.
- pulses not suppressed after a parameterized time (p9557) after test stop selection.
- subsequent response to the message C01706 "SI Motion CU: SAM/SBR limit exceeded".
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01701 "SI Motion CU: STOP B initiated".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded".

Remedy:
- remove the cause of the fault on the second monitoring channel.
- carry out a diagnostics routine for message C01706.
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01701.
- carry out a diagnostics routine for message C01715.
- carry out a diagnostics routine for message C01716.
- check the value in p9557 (where available), increase the value if necessary, and carry out a POWER ON
- check the shutdown path of the Control Unit (check DRIVE-CLiQ communication if it has been implemented)
- replace the Motor Module/Power Module
- replace Control Unit.
This message can be acknowledged without a POWER ON as follows:
- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only

Note:
SAM: Safe Acceleration Monitor (safe acceleration monitoring)
SBR: Safe Brake Ramp (safe brake ramp monitoring)
SI: Safety Integrated

C01701 SI Motion CU: STOP B initiated

Message value:
-

Drive object:
VECTOR_G

Reaction:
NONE (OFF3)

Acknowledge:
IMMEDIATELY (POWER ON)

Cause:
The drive is stopped via a STOP B (braking along the OFF3 deceleration ramp).
As a result of this fault, after the time parameterized in p9556 has expired, or the speed threshold parameterized in p9560 has been undershot, message C01700 "STOP A initiated" is output.
Possible causes:
- stop request from the second monitoring channel.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01711 "SI Motion CU: Defect in a monitoring channel".
Faults and alarms

List of faults and alarms

Note:
SI: Safety Integrated

C01706  SI Motion CU: SAM/SBR limit exceeded
Message value:  
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Motion monitoring functions with encoder (p9506 = 0) or encoderless with set acceleration monitoring (p9506 = 3):
SAM - safe acceleration monitoring. After initiating STOP B (SS1) or STOP C (SS2), the speed has exceeded the selected tolerance.
Motion monitoring functions encoderless with set brake ramp monitoring (p9506 = 1):
SBR - Safe brake ramp monitoring. After initiating STOP B (SS1) or SLS changeover to the lower speed stage, the speed has exceeded the selected tolerance.
The drive is shut down by the message C01700 "SI Motion: STOP A initiated".

Remedy:
Check the braking behavior and, if necessary, adapt the tolerance for the "SAM" function or modify the parameter settings for the "SBR" function.
This message can be acknowledged without a POWER ON as follows:
- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only
Note:
SAM: Safe Acceleration Monitor (safe acceleration monitoring)
SBR: Safe Brake Ramp (safe ramp monitoring)
SI: Safety Integrated
See also: p9548 (SI Motion SAM actual velocity tolerance (Control Unit)), p9581 (SI Motion brake ramp reference value (Control Unit)), p9582 (SI Motion brake ramp delay time (Control Unit)), p9583 (SI Motion brake ramp monitoring time (Control Unit))

C01707  SI Motion CU: Tolerance for safe operating stop exceeded
Message value:  
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The actual position has distanced itself further from the target position than the standstill tolerance.
The drive is shut down by the message C01701 "SI Motion: STOP B initiated".

Remedy:
- check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
- carry out a POWER ON.
This message can be acknowledged without a POWER ON as follows:
- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9530 (SI Motion standstill tolerance (Control Unit))
### C01708  SI Motion CU: STOP C initiated

**Message value:** - 
**Drive object:** VECTOR_G 
**Reaction:** STOP2 
**Acknowledge:** IMMEDIATELY (POWER ON) 
**Cause:** The drive is stopped via a STOP C (braking along the OFF3 deceleration ramp). "Safe Operating Stop" (SOS) is activated after the parameterized time has expired. Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded". 
See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))

**Remedy:**
- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714/C01715/C01716. 
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe 
- motion monitoring functions with SINUMERIK: Via the machine control panel 

**Note:**
- SI: Safety Integrated 
- SOS: Safe Operating Stop / SBH: Safe operating stop

### C01709  SI Motion CU: STOP D initiated

**Message value:** - 
**Drive object:** VECTOR_G 
**Reaction:** NONE 
**Acknowledge:** IMMEDIATELY (POWER ON) 
**Cause:** The drive is stopped via a STOP D (braking along the path). "Safe Operating Stop" (SOS) is activated after the parameterized time has expired. Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded". 
See also: p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))

**Remedy:**
- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714/C01715/C01716. 
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe 
- motion monitoring functions with SINUMERIK: Via the machine control panel 

**Note:**
- SI: Safety Integrated 
- SOS: Safe Operating Stop / SBH: Safe operating stop

### C01710  SI Motion CU: STOP E initiated

**Message value:** - 
**Drive object:** VECTOR_G 
**Reaction:** NONE 
**Acknowledge:** IMMEDIATELY (POWER ON) 
**Cause:** The drive is stopped via a STOP E (retraction motion). "Safe Operating Stop" (SOS) is activated after the parameterized time has expired. Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C01716 "SI Motion CU: tolerance for safe motion direction exceeded". 
See also: p9554 (SI Motion transition time STOP E to SOS (SBH) (Control Unit))
### Faults and alarms

#### List of faults and alarms

**Remedy:**
- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714/C01715/C01716.

This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

**Note:**
- SI: Safety Integrated
- SOS: Safe Operating Stop / SBH: Safe operating stop

</tbody>
</table>

**Cause:**
When cross-comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.

If at least one monitoring function is active, then after the parameterized timer has expired, the message C01701 "SI Motion: STOP B initiated" is output.

The message value that resulted in a STOP F is displayed in r9725. The described message values involve the crosswise data comparison between the Control Unit and Motor Module. If the drive is operated together with a SINUMERIK, the message values are described in message 27001 of SINUMERIK.

The following message values may also occur in the following cases if the cause that is explicitly mentioned does not apply:
- cycle times not set uniformly (p9500/p9300 and p9511/p9311)
- differently parameterized axis types (p9502/p9302),
- excessively fast cycle times (p9500/p9300, p9511/p9311).
- for message values 3, 44 ..., 57, 232 and 1-encoder systems, differently parameterized encoder values (p9516/p9316, p9517/p9317, p9518/p9318, p9520/p9320, p9521/p9321, p9522/p9322, p9526/p9326).
- incorrect synchronization.

**Message value (r9749, interpret decimal):**
- 0 to 999: Number of the cross-compared data that resulted in this fault.
- Message values that are not subsequently listed are only for internal Siemens troubleshooting.

0: Stop request from the other monitoring channel.
1: Status image of monitoring functions SOS, SLS or SLP (result list 1) (r9710[0], r9710[1]).
2: Status image of monitoring function SCA or n < nx (result list 2) (r9711[0], r9711[1]).
3: The position actual value differential (r9713) between the two monitoring channels is greater than the tolerance in p9542/p9342. When actual value synchronization is enabled (p9501.3/p9301.3), the velocity differential (based on the position actual value) is greater than the tolerance in p9549/p9349.
4: Error when synchronizing the crosswise data comparison between the two channels.
5: Function enable signals (p9501/p9301)
6: Limit value for SLS1 (p9531[0]/p9331[0])
7: Limit value for SLS2 (p9531[1]/p9331[1])
8: Limit value for SLS3 (p9531[2]/p9331[2])
9: Limit value for SLS4 (p9531[3]/p9331[3])
10: Standstill tol. (p9530/p9330)
11: Upper limit value for SLP1 (p9534[0]/p9334[0]).
12: Lower limit value for SLP1 (p9535[0]/p9335[0]).
13: Upper limit value for SLP2 (p9534[1]/p9334[1]).
14: Lower limit value for SLP2 (p9535[1]/p9335[1]).
31: Position tolerance (p9542/p9342) or (p9549/p9349) when actual value synchronization is enabled (p9501.3/p9301.3)
32: Position tolerance for safe referencing (p9544/p9344).
33: Time, velocity changeover (p9551/p9351)
35: Delay time, pulse canc. (p9556/p9356)
36: Checking time, pulse canc. (p9557/p9357)
37: Trans. time, STOP C to SOS (p9552/p9352)
38: Trans. time STOP D to SOS (p9553/p9353)
39: Trans. time, STOP E to SOS (p9554/p9354)
40: Stop response for SLS (p9561/p9361)
41: Stop response for SLP1 (p9562[0]/p9362[0])
42: Shutdown speed, pulse canc. (p9560/p9360)
List of faults and alarms

Possible cause 1 (during commissioning or parameter modification)
The tolerance value for the monitoring function is not the same on the two monitoring channels.
Possible cause 2 (during active operation)
The limit values are based on the actual value (r9713). If the safe actual values on the two monitoring channels do not match, the limit values, which have been set at a defined interval, will also be different (i.e. corresponding to fault value 3). This can be ascertained by checking the safe actual positions.

- **44: Position actual value (r9713) + limit value for SLS1 (p9531[0]/p9331[0]) * Safety monitoring clock cycle**
- **45: Position actual value (r9713) - limit value for SLS1 (p9531[0]/p9331[0]) * Safety monitoring clock cycle**
- **46: Position actual value (r9713) + limit value for SLS2 (p9531[1]/p9331[1]) * Safety monitoring clock cycle**
- **47: Position actual value (r9713) - limit value for SLS2 (p9531[1]/p9331[1]) * Safety monitoring clock cycle**
- **48: Position actual value (r9713) + limit value for SLS3 (p9531[2]/p9331[2]) * Safety monitoring clock cycle**
- **49: Position actual value (r9713) - limit value for SLS3 (p9531[2]/p9331[2]) * Safety monitoring clock cycle**
- **50: Position actual value (r9713) + limit value for SLS4 (p9531[3]/p9331[3]) * Safety monitoring clock cycle**
- **51: Position actual value (r9713) - limit value for SLS4 (p9531[3]/p9331[3]) * Safety monitoring clock cycle**

- **52: Standstill position + tolerance (p9530/9330)**
- **53: Standstill position - tolerance (p9530/9330)**
- **54: Position actual value (r9713) + limit value nx (p9546/p9346) + tolerance (p9542/p9342)**
- **55: Position actual value (r9713) + limit value nx (p9546/p9346)**
- **56: Position actual value (r9713) - limit value nx (p9546/p9346)**
- **57: Position actual value (r9713) - limit value nx (p9546/p9346) - tolerance (p9542/p9342)**

- **58: Actual stop request.**
- **75: Velocity limit nx (p9546, p9346).**
  When the function "n<nx: hysteresis and filtering" (p9501.16=1) is enabled, this fault value is also output for a different hysteresis tolerance (p9547/p9347).
- **76: Stop response for SLS1 (p9563[0]/p9363[0])**
- **77: Stop response for SLS2 (p9563[1]/p9363[1])**
- **78: Stop response for SLS3 (p9563[2]/p9363[2])**
- **79: Stop response for SLS4 (p9563[3]/p9363[3])**

- **80: Modulo value for SP for rotary axes (p9505/p9305).**
- **81: Velocity tolerance for SAM (p9548/p9348).**
- **82: SGEs for SLS correction factor.**
- **83: Acceptance test timer (p9555/p9355).**
- **84: Trans. time STOP F (p9555/p9355).**
- **85: Trans. time bus failure (p9550/p9350).**
- **86: ID 1-encoder system (p9526/p9326).**
- **87: Encoder assignment, second channel (p9526/p9326).**

- **89: Encoder limit freq.**
- **230: Filter time constant for n < nx.**
- **231: Hysteresis tolerance for n < nx.**
- **232: Smoothed velocity actual value.**
- **233: Limit value nx / safety monitoring clock cycle + hysteresis tolerance.**
- **234: Limit value nx / Safety monitoring clock cycle.**
- **235: Limit value nx / Safety monitoring clock cycle - hysteresis tolerance.**
- **236: Limit value nx / safety monitoring clock cycle - hysteresis tolerance.**
- **237: SGA n < nx.**
- **238: Speed limit value for SAM (p9568/p9368).**
- **239: Acceleration for SBR (p9581/p9381 and p9583/p9383).**
- **240: Inverse value of acceleration for SBR (p9581/p9381 and p9583/p9383).**
- **241: Deceleration time for SBR (p9582/p9382).**
- **242: Encoderless safety (p9506/p9306).**
- **243: Extended alarm acknowledgment (p9507/p9307).**
- **244: Encoderless actual value sensing filter time (p9567/p9367).**
- **245: Encoderless actual value sensing minimum current (p9568/p9368).**
- **246: Voltage tolerance acceleration (p9589/p9389).**
- **247: SDI tolerance (p9564/p9364).**
- **248: SDI positive upper limit (0x7fffffff).**
- **249: Position actual value (r9713) - SDI tolerance.**
- **250: Position actual value (r9713) + SDI tolerance.**
- **251: SDI negative lower limit (0x80000001).**
- **252: SDI stop response (p9566/p9366).**
- **253: SDI delay time (p9565/p9365).**
- **254: Setting the evaluation delay for actual value sensing after pulse enable (p9586/p9386).**
Faults and alarms
List of faults and alarms

255: Setting, behavior during pulse suppression (p9509/p9309).
256: Status image of monitoring functions SOS, SLS, SLP, test stop, SBR, SDI (result list 1 ext) (r9710).
257: Safety functions for motion monitoring functions without selection (p9512/p9312) different.
258: Fault tolerance, actual value sensing encoderless (p9585/p9385).
259: Scaling factor for safe position via PROFIsafe (p9574/p9374) different.
260: Modulo value including scaling (p9505/p9305 and p9574/p9374) for SP with 16 bit.
261: Scaling factor for acceleration for SBR different.
262: Scaling factor for the inverse value of the acceleration for SBR different.
263: Stop response for SLP2 (p9562[1]/p9362[1])
264: Position tolerance including scaling (p9542/p9342 and p9574/p9374) for SP with 16 bit.
1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.
1001: Initialization error of watchdog timer.
1002: User agreement after the timer has expired different.
The user agreement is not consistent. After a time of 2 s has elapsed, the status of the user agreement is different in both monitoring channels.
1003: Reference tolerance exceeded.
When the user agreement is set, the difference between the new reference point that has been determined after power up (absolute encoder) or reference point approach (distance-coded or incremental measuring system) and the safe actual position (saved value + traversing distance) is greater than the reference tolerance (p9544). In this case, the user agreement is withdrawn.
1004: Plausibility error for user agreement.
  1. If the user agreement has already been set, then setting is initiated again. In this case, the user agreement is withdrawn.
  2. The user agreement was set, although the axis has still not been referenced.
1005: - For safe motion monitoring functions without encoder: pulses already suppressed for test stop selection.
  - For safe motion monitoring functions with encoder: STO already active for test stop selection.
1011: Acceptance test status between the monitoring channels differ.
1012: Plausibility violation of the actual value from the encoder.
1020: Cyc. communication failure between the monit. cycles.
1021: Cyc. communication failure between the monit. channel and Sensor Module.
1022: Sign-of-life error for DRIVE-CLiQ encoder CU
1023: Error in the effectiveness test in the DRIVE-CLiQ encoder
1032: Sign-of-life error for DRIVE-CLiQ encoder MM
1033: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder CU
1034: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder MM
1041: Current absolute value too low (encoderless)
1042: Current/voltage plausibility error
1043: Too many acceleration phases
1044: Actual current values plausibility error.
5000 ... 5140: PROFIsafe message values.
  For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.
5000, 5014, 5023, 5024, 5030 ... 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ...
  5125, 5132 ... 5135, 5140: An internal software error has occurred (only for internal Siemens troubleshooting).
5012: Error when initializing the PROFIsafe driver.
5013: The result of the initialization is different for the two controllers.
5022: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.
5025: The result of the F parameterization is different for the two controllers.
5026: CRC error for the F parameters. The transferred CRC value of the F parameters does not match the value calculated in the PST.
5065: A communications error was identified when receiving the PROFIsafe telegram.
5066: A timeout error (timeout) was identified when receiving the PROFIsafe telegram.
6000 ... 6166: PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).
  For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.
6000: A fatal PROFIsafe communication error has occurred.
6064 ... 6071: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.
6064: Destination address and PROFIsafe address are different (F_Dest_Add).
Faults and alarms

6065: Destination address not valid (F_Dest_Add).
6066: Source address not valid (F_Source_Add).
6067: Watchdog time not valid (F_WD_Time).
6068: Incorrect SIL level (F_SIL).
6069: Incorrect F-CRC length (F_CRC_Length).
6070: Incorrect F parameter version (F_Par_Version).
6071: CRC error for the F parameters (CRC1). The transferred CRC value of the F parameters does not match the value calculated in the PROFIsafe driver.
6072: F parameterization is inconsistent.
6165: A communications error was identified when receiving the PROFIsafe telegram. The fault may also occur if an inconsistent or out-of-date PROFIsafe telegram has been received after switching the Control Unit off and on or after plugging in the PROFIBUS/PROFINET cable.
6166: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.
7000: Difference of the safe position is greater than the parameterized tolerance (p9542/p9342).
7001: Scaling value for the safe position in the 16 bit notation, too low (p9574/p9374).
7002: Cycle counter for transferring the safe position is different in both monitoring channels.

See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

Remedy:
The following generally applies:
The monitoring clock cycles in both channels and the axis types should be checked for equality and the same setting applied if necessary. If the error continues to be identified, increasing the monitoring clock cycles may resolve it.

Re message value = 0:
- no error was identified in this monitoring channel. Note the error message of the other monitoring channel (for MM: C30711).

Re message value = 3:
Commissioning phase:
Encoder evaluation for own or second channel has been set incorrectly --> Correct the encoder evaluation.
In operation:
Check the mechanical design and the encoder signals.
Re message value = 4:
The monitoring clock cycles in both channels should be checked for equality and if required, set the same. In combination with fault value 5 from the other monitoring channel (with MM: C30711), the monitoring clock cycle settings must be increased.
Re message value = 232:
- increase the hysteresis tolerance (p9547/p9347). Possibly set the filtering higher (p9545/p9345).

Re message value = 1 ... 999:
- if the message value is listed under cause: Check the crosswise-compared parameters to which the message value refers.
- copy the safety parameters.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- correction of the encoder evaluation. The actual values differ as a result of mechanical faults (V belts, travel to a mechanical endstop, wear and window setting that is too narrow, encoder fault, ...).
Re message value = 1000:
- investigate the signal associated with the safety-relevant input (contact problems).
Re message value = 1001:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
Re message value = 1002:
- Perform safe acknowledgment, set the user agreement in both monitoring channels simultaneously (within 2 s).
Re message value = 1003:
- check the mechanical system of the axis. It is possible that the axis was shifted when switched-off, and the last saved actual position no longer corresponds with the new actual position after the system has been powered up again.
- Increase the tolerance for the actual value comparison when referencing (p9544).
Then check the actual values, perform a POWER ON and set the user agreement again.
Re message value = 1004:
For 1., the following applies: Perform safe acknowledgment. Set the user agreement again.
For 2., the following applies: Perform safe acknowledgment. Only set the user agreement again if the axis has been referenced.
Faults and alarms

List of faults and alarms

Re message value = 1005:
- For safe motion monitoring functions without encoder: check the conditions for pulse enable.
- For safe motion monitoring functions with encoder: check the conditions for STO deselection.

Note:
For a power module, the test stop should always be performed for pulse enable (independent of whether with encoder or without encoder).

Re message value = 1011:
- for diagnostics, refer to parameter (r9571).

Re message value = 1012:
- upgrade the Sensor Module software.
- for 1-encoder systems, the following applies: check the encoder parameters for equality (p9515/p9315, p9519/p9319, p9523/p9323, p9524/p9324, p9525/p9325, p9529/p9329).
- For DQI encoders the following applies: If required, upgrade the firmware version of the Control Unit to a more recent version, which is released for DQI encoders.
- check the electrical cabinet design and cable routing for EMC compliance

Re message value = 1020, 1021:
- check the communication link.
- increase the monitoring cycle clock settings (p9500, p9511).
- carry out a POWER ON (power off/on) for all components.
- replace the hardware.

Re message value = 1033:
- If required, upgrade the firmware version of the Control Unit to a more recent version, which is released for DQI encoders.

Re message value = 1041:
- Check whether the motor has sufficient current (>r9785[0]).
- reduce the minimum current (p9588).
- for synchronous motors increase the absolute value of p9783.
- Check whether the function "Closed-loop controlled operation with HF signal injection" is activated (p1750.5 = 1) and if required, deactivate.

Re message value = 1042:
- increase the ramp-function generator ramp-up/down time (p1120/p1121).
- check that the current/speed control is set correctly (torque-generating/field-generating current and actual speed value may not fluctuate).
- reduce the dynamic response of the setpoint value.
- Check the absolute current and voltage values, and set the control behavior so that this is greater than 3% of the rated converter data in operation or in the case of a fault.

Re message value = 1043:
- increase the voltage tolerance (p9589).
- increase the ramp-function generator ramp-up/down time (p1120/p1121).
- check that the current/speed control is set correctly (torque-generating/field-generating current and actual speed value may not fluctuate).
- reduce the dynamic response of the setpoint value.

Re message value = 5000, 5014, 5023, 5030, 5031, 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ...
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

Re message value = 5012:
- check the setting of the PROFiSafe address of the Control Unit (p9610) and that of the Motor Module (p9810). It is not permissible for the PROFiSafe address to be 0 or FFFF!

Re message value = 5013, 5025:
- carry out a POWER ON (power off/on) for all components.
- check the setting of the PROFiSafe address of the Control Unit (p9610) and that of the Motor Module (p9810). It is not permissible for the PROFiSafe address to be 0 or FFFF!

Re message value = 5022:
- check the setting of the values of the F parameters at the PROFiSafe slave (F_SIL, F_CRC_Len, F_Par_Version, F_Source_Add, F_Dest_add, F_WD_Time).

Re message value = 5026:
- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFiSafe slave and update.
Re message value = 5065:
- check the configuration and communication at the PROFlsafe slave (cons. No. / CRC).
- check the setting of the value for F parameter F_WD_Time on the PROFlsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re message value = 5066:
- check the setting of the value for F parameter F_WD_Time on the PROFlsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFlsafe connection.

Re message value = 6000:
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- increase the monitoring cycle clock settings (p9500, p9511).
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

Re message value = 6064:
- check the setting of the value in the F parameter F_Dest_Add at the PROFlsafe slave.
- check the setting of the PROFlsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).

Re message value = 6065:
- check the setting of the value in the F parameter F_Dest_Add at the PROFlsafe slave. It is not permissible for the destination address to be either 0 or FFFF!

Re message value = 6066:
- check the setting of the value in the F parameter F_Source_Add at the PROFlsafe slave. It is not permissible for the source address to be either 0 or FFFF!

Re message value = 6067:
- check the setting of the value in the F parameter F_WD_Time at the PROFlsafe slave. It is not permissible for the watch time to be 0!

Re message value = 6068:
- check the setting of the value in the F parameter F_SIL at the PROFlsafe slave. The SIL level must correspond to SIL2!

Re message value = 6069:
- check the setting of the value in the F parameter F_CRC_Length at the PROFlsafe slave. The setting of the CRC2 length is 2-byte CRC in the V1 mode and 3-byte CRC in the V2 mode!

Re message value = 6070:
- check the setting of the value in the F parameter F_Par_Version at the PROFlsafe slave. The value for the F parameter version is 0 in the V1 mode and 1 in the V2 mode!

Re message value = 6071:
- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFlsafe slave and, if required, update.

Re message value = 6072:
- check the settings of the values for the F parameters and, if required, correct.
The following combinations are permissible for F parameters F_CRC_Length and F_Par_Version:

F_CRC_Length = 2-byte CRC and F_Par_Version = 0
F_CRC_Length = 3-byte CRC and F_Par_Version = 1

Re message value = 6165:
- if the fault occurs after powering up the Control Unit or after plugging in the PROFIBUS/PROFINET cable, acknowledge the fault.
- check the configuration and communication at the PROFlsafe slave.
- check the setting of the value for F parameter F_WD_Time on the PROFlsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re message value = 6166:
- check the configuration and communication at the PROFlsafe slave.
- check the setting of the value for F parameter F_WD_Time on the PROFlsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFlsafe connection.

Re message value = 7000:
- Increase the position tolerance (p9542/p9342).
- Determine the actual position of CU (r9713[0]) and the second channel r9713[1], and check the difference for plausibility.
- Reduce the difference of the actual position from CU (r9713[0] and the second channel r9713[1] for a 2-encoder system.
Faults and alarms

List of faults and alarms

Re message value = 7001:
- Increase the scaling value for the safe position in the 16 bit notation (p9574/p9374).
- If required, reduce the traversing range.

Re message value = 7002:
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLIQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

| Cause: | When cross checking and comparing the two monitoring channels, the drive detected a difference between parameters or results of the F-IO processing and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible. The safety message C01711 with message value 0 is also displayed due to initiation of STOP F. If at least one monitoring function is active, the safety message C01701 "SI Motion: STOP B initiated" is output after the parameterized timer has expired. Message value (%9749, interpret decimal):
Number of the cross-compared data that resulted in this message.
1: SI discrepancy monitoring time inputs (p10002, p10102).

C01714  SI Motion CU: Safely-Limited Speed exceeded
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive has moved faster than that specified by the velocity limit value (p9531). The drive is stopped as a result of the configured stop response (p9563).
Message value (r9749, interpret decimal):
100: SLS1 exceeded.
200: SLS2 exceeded.
300: SLS3 exceeded.
400: SLS4 exceeded.
1000: Encoder limit frequency exceeded.
Remedy:
- check the traversing/motion program in the control.
- check the limits for "Safely-Limited Speed (SLS) and if required, adapt (p9531).
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9531 (SI Motion SLS (SG) limit values (Control Unit)), p9563 (SI Motion SLS (SG)-specific stop response (Control Unit))

C01715  SI Motion CU: Safely-Limited Position exceeded
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The axis has moved past a parameterized position that is monitored by the "SLP" function.
Message value (r9749, interpret decimal):
10: SLP1 violated.
20: SLP2 violated.
Remedy:
- check the traversing/motion program in the control.
- check the limits for "SLP" function and if required, adapt (p9534, p9535).
This message can be acknowledged as follows:
- motion monitoring functions with SINUMERIK: Via the machine control panel

Note:
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
See also: p9534 (SI Motion SLP (SE) upper limit values (Control Unit)), p9535 (SI Motion SLP (SE) lower limit values (Control Unit))
### C01716 SI Motion CU: Tolerance for safe motion direction exceeded

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The tolerance for the "safe motion direction" function was exceeded. The drive is stopped as a result of the configured stop response (p9566).  
Message value (%9749, interpret decimal):  
0: Tolerance for the "safe motion direction positive" function exceeded.  
1: Tolerance for the "safe motion direction negative" function exceeded.  
**Remedy:**  
- check the traversing/motion program in the control.  
- check the tolerance for "SDI" function and if required, adapt (p9564).  
This message can be acknowledged as follows:  
- Deselect the "SDI" function and select again.  
- Perform a safe acknowledgment via F-DI or PROFIsafe.  
**Note:**  
SDI: Safe Direction (safe motion direction)  
SI: Safety Integrated  
See also: p9564 (SI Motion SDI tolerance (Control Unit)), p9565 (SI Motion SDI delay time (Control Unit)), p9566 (SI Motion SDI stop response (Control Unit))

### C01730 SI Motion CU: Reference block for dynamic safely limited speed invalid

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The reference block transferred via PROFIsafe is negative.  
A reference block is used to generate a referred velocity limit value based on the reference quantity "Velocity limit value SLS1" (p9531[0]).  
The drive is stopped as a result of the configured stop response (p9563[0]).  
Message value (%9749, interpret decimal):  
requested, invalid reference block.  
**Remedy:**  
In the PROFIsafe telegram, input data S_SLS_LIMIT_IST must be corrected.  
This message can be acknowledged as follows:  
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe  
- motion monitoring functions with SINUMERIK: Via the machine control panel  
**Note:**  
SI: Safety Integrated  
SLS: Safely-Limited Speed / SG: Safely reduced speed

### C01745 SI Motion CU: Checking braking torque for the brake test

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** POWER ON (IMMEDIATELY)  
**Cause:** The scaling of the brake torque for the brake test can be changed using parameter p2003.  
An acceptance test must be carried out again for the braking test. This determines whether the braking test is still carried out with the correct braking torque.  
**Remedy:**  
- carry out a POWER ON (power off/on) for all components.  
- repeat the acceptance test for the safe brake test if the brake test is used.  
See also: p2003 (Reference torque)
C01750  SI Motion CU: Hardware fault safety-relevant encoder
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The encoder that is used for the safety-relevant motion monitoring functions signals a hardware fault. Message value (#9749, interpret decimal):
Encoder status word 1, encoder status word 2 that resulted in the message.
Remedy:
- check the encoder connection.
- replace encoder.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.
Note regarding encoder replacement for a third-party motor:
The serial number of the encoder must be copied in order to acknowledge this safety message.
This can be realized using p0440 = 1 or p1990 = 1.

C01751  SI Motion CU: Effectivity test error safety-relevant encoder
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The DRIVE-CLiq encoder for safe motion monitoring signals an error for the effectivity tests. Message value (#9749, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
- check the encoder connection.
- replace encoder.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

C01770  SI Motion CU: Discrepancy error of the failsafe inputs or outputs
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The fail-safe digital inputs/digital outputs (F-DI/F-DO) show a different state longer than that parameterized in p10002 / p10102.
Fault value (r0949, interpret bitwise binary):
yyyyxxxx bin
xxxx: Discrepancy error for fail-safe digital inputs (F-DI).
Bit 0: Discrepancy error for F-DI 0
Bit 1: Discrepancy error for F-DI 1
...
yyyy: Discrepancy error for fail-safe digital outputs (F-DO).
Bit 0: Discrepancy error for F-DO 0
...
Note:
If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.
Remedy:
- check the wiring of the F-DI (contact problems).
Note:
Discrepancy errors of an F-DI can only be completely acknowledged if safe acknowledgement was carried out once the cause of the error was resolved (p10006 or acknowledgment via PROFIsafe). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state internally.
For cyclic switching operations at the F-DI, it may be necessary to adapt the discrepancy time to the switching frequency.
If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.
Faults and alarms

List of faults and alarms

p10002 < (tp / 2) - td (discrepancy time must be less than half the period minus the actual discrepancy time)
p10002 >= p9500 (discrepancy time must be no less than P9500)
p10002 > td (discrepancy time must be greater than the switch discrepancy time which may actually apply)

td = possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p9500).

tp = period for a switching operation in ms.

When debounce p10017 is active, the discrepancy time is directly specified by the debounce time.

If the period of a cyclic switching pulse has the order of magnitude of twice the debounce time, then the following formulas should be checked.

p10002 < p10017 + 1 ms - td
p10002 > td
p10002 >= p9500

Example:
For a 12 ms SI sampling cycle and a switching frequency of 110 ms (p10017 = 0), the maximum discrepancy time which can be set is as follows:
p10002 <= (110/2 ms) - 12 ms = 43 ms
Rounded-off, p10002 <= 36 ms is obtained (since the discrepancy time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if the result is not an exact multiple of an SI sampling cycle).

Note:
F-DI: Failsafe Digital Input
F-DO: Failsafe Digital Output

A01772 SI Motion CU: Test stop failsafe inputs/outputs active
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The test stop for the fail-safe digital inputs (F-DI) and/or fail-safe digital outputs (F-DO) is presently being performed.
Note:
F-DI: Failsafe Digital Input
F-DO: Failsafe Digital Output
Remedy: The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.

F01773 SI Motion CU: Test stop error
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A fault has occurred on the CU side during the test stop for the fail-safe outputs.
Fault value (r0949, interpret hexadecimal):
RRRVWXYZ hex:
R: Reserved.
V: Actual state of the DO channel concerned (see X) on the CU (corresponds to the states read back from the hardware, bit 0 = DO 0, bit 1 = DO 1, etc.).
W: Required state of the DO channel concerned (see X, bit 0 = DO 0, bit 1 = DO 1, etc.).
X: DO channels involved, which indicate an error (bit 0 = DO 0, bit 1 = DO 1, etc.).
Y: Reason for the test stop fault.
Z: State of the test stop in which the fault has occurred.
Y: Reason for the test stop fault
Y = 1: MM side in incorrect test stop state (internal fault).
Y = 2: Expected states of the DOs were not fulfilled (CU305: readback via DI 22 / CU240 readback DI 2).
Y = 3: Incorrect timer state on CU side (internal fault)
Y = 4: Expected states of the diag DOs were not fulfilled (CU305: internal readback on MM channel).
Y = 5: Expected states of the second diag DOs were not fulfilled (CU305: internal readback on CU channel).
X and Y indicate the DI or Diag-DO state dependent upon the reason for the fault (2, 4 or 5).
In the event of multiple test stop faults, the first one that occurred is shown.
Z: Test stop state and associated test actions
Z = 0...3: Synchronization phase of test stop between CU and Motor Module no switching operations
Z = 4: DO + OFF and DO - OFF
Z = 5: Check to see if states are as expected
Z = 6: DO + ON and DO - OFF
Z = 7: Check to see if states are as expected
Z = 8: DO + OFF and DO - ON
Z = 9: Check to see if states are as expected
Z = 10: DO + ON and DO - OFF
Z = 11: Check to see if states are as expected
Z = 12: DO + OFF and DO - OFF
Z = 13: Check to see if states are as expected
Z = 14: End of test stop

Diag expected states in table format:
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4
5: 0/-/-/1
7: 0/-/-/0
9: 0/-/-/0
11: 1/-/-/1
13: 0/-/-/1

Second diag expected states in table format:
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4
5: -/-/-/1
7: -/-/-/0
9: -/-/-/1
11: -/-/-/0
13: -/-/-/1

DI expected states in table format:
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4
5: -/1/1/-
7: -/0/0/-
9: -/0/1/-
11: -/1/1/-
13: -/1/1/-

Example:
Fault F01773 (CU) is signaled with fault value = 0001_0127 and fault F30773 (MM) is signaled with fault value 0000_0127.
This means that in state 7 (Z = 7) the state of the external readback signal was not set correctly (Y = 2) after DO-0 (X = 1) was switched to ON/ON.
Fault value 0001_0127 indicates that 0 was expected (W = 0) and 1 (V = 1) was read back from the hardware.
Fault value 0000_0127 on the MM indicates that the states were as expected.
In the case of fault F30773, W and V are always identical; a value of 0 always means that 0 was expected at the readback input but was not present on the other channel (CU).

Remedy:
Check the wiring of the F-DOs and restart the test stop.

Note:
The fault is withdrawn if the test stop is successfully completed.
In the event of multiple test stop faults, the first one that occurred is shown.
Once the test stop has been restarted the next queued test stop fault will be signaled (if there is one).

A01774  SI Motion CU: Test stop necessary
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
- after powering up the drive, a test stop has still not been carried out.
- a new test stop is required after commissioning.
- the time to carry out the forced checking procedure (test stop) has expired (p10003).
Note:
- The test must be performed within a defined, maximum time interval (p10003, maximum of 8760 hours) in order to comply with the requirements as laid down in the standards for timely fault detection and the conditions to calculate the failure rates of safety functions (PFH value). Operation beyond this maximum time period is permissible if it can be ensured that the forced checking procedure is performed before persons enter the hazardous area and who are depending on the safety functions correctly functioning.
Remedy:
Initiate test stop (BI: p10007).

---

**A01795**

- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** After exiting safe pulse cancellation, within the wait time of 5 seconds, encoderless actual value sensing was not able to be activated for the extended functions without selection. A change is again made into the "safe pulse cancellation" state.
- **Remedy:**
  - Check missing enable signals, which prevent the drive control from being commissioned (r0046).
  - Evaluate possible fault messages of the encoderless actual value sensing and remove.

**A01796 (F, N)**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The drive waits for communication to be established to execute the safety-relevant motion monitoring functions. Note: In this state, the pulses are safely suppressed. Alarm value (r2124, interpret decimal):
  - 1: Wait for communication to be established to SINUMERIK.
  - 2: Wait for communication to be established to TM54F.
  - 3: Wait for communication to be established to PROFIsafe F-Host.
- **Remedy:** If, after a longer period of time, the message is not automatically withdrawn, the following checks have to be made as appropriate:
  - For communication with SINUMERIK, the following applies:
    - check any other PROFIBUS messages/signals present and remove their cause.
    - check that assignment of the axes on the higher-level control to the drives in the drive unit is correct.
    - check enable signal of the safety-relevant motion monitoring functions for the corresponding axis on the higher-level control and if required, set it.
  - For communication with TM54F, the following applies:
    - check any other messages/signals present for DRIVE-CLiQ communication with the TM54F and remove their cause.
    - check the setting of p10010. All the drive objects controlled by the TM54F must be listed.
  - For communication with PROFIsafe F-Host, the following applies:
    - check any other PROFIsafe communication messages/signals present and evaluate them.
    - check the operating state of the F-Host.
    - check the communication connection to the F Host.
    - check the communication connection to the Motor Module. It must be ensured that when the Control Unit powers up, the Motor Module is connected and at the latest is also switched-on with the Control Unit. Otherwise, if the Motor Module is subsequently inserted or switched-on, a power on must be performed at the Control Unit.
    - See also: p9601 (SI enable, functions integrated in the drive (Control Unit)), p9801 (SI enable, functions integrated in the drive (Motor Module)), p10010 (SI drive object assignment)

**C01797**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** The standstill position saved before powering down does not match the actual position determined at power-up. Message value (r9749, interpret decimal):
  - 1: Axis not referenced.
  - 2: User agreement missing.
Remedy: If safe automatic referencing is not possible the user must issue a user agreement for the new position using the softkey. This means that this position is then designated as safety-relevant.

Note:
SI: Safety Integrated

C01798 SI Motion CU: Test stop running

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The test stop is active.
Remedy: Not necessary.
The message is withdrawn when the test stop is finished.
Note:
SI: Safety Integrated

C01799 SI Motion CU: Acceptance test mode active

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The acceptance test mode is active. The POWER ON signals of the safety-relevant motion monitoring functions can be acknowledged during the acceptance test using the RESET button of the higher-level control.
Remedy: Not necessary.
The message is withdrawn when exiting the acceptance test mode.
Note:
SI: Safety Integrated

F01800 DRIVE-CLiQ: Hardware/configuration error

Message value: %1
Drive object: All objects
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A DRIVE-CLiQ connection fault has occurred.
Fault value (r0949, interpret decimal):
100 ... 107:
Communication via DRIVE-CLiQ socket X100 ... X107 has not been switched to cyclic operation. The cause may be an incorrect structure or a configuration that results in an impossible bus timing.
10:
Loss of the DRIVE-CLiQ connection. The cause may be, for example, that the DRIVE-CLiQ cable was withdrawn from the Control Unit or as a result of a short-circuit for motors with DRIVE-CLiQ. This fault can only be acknowledged in cyclic communication.
11:
Repeated faults when detecting the connection. This fault can only be acknowledged in cyclic communication.
12:
A connection was detected but the node ID exchange mechanism does not function. The reason is probably that the component is defective. This fault can only be acknowledged in cyclic communication.
Remedy:
Re fault value = 100 ... 107:
- ensure that the DRIVE-CLiQ components have the same firmware versions.
- avoid longer topologies for short current controller clock cycles.
For fault value = 10:
- check the DRIVE-CLiQ cables at the Control Unit.
- remove any short-circuit for motors with DRIVE-CLiQ.
- carry out a POWER ON.
For fault value = 11:
- check the electrical cabinet design and cable routing for EMC compliance.
For fault value = 12:
- replace the component involved.
### A01840 SMI: Component found without motor data

**Message value:** Component number: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** An SMI/DQI without motor data has been found (e.g. SMI installed as replacement part).  
Alarm value (r2124, interpret decimal):  
Component number from target topology.  
**Remedy:**  
1. Download the SMI/DQI data (motor/encoder data) from the data backup again (p4690, p4691).  
2. Carry out a POWER ON (power off/on) for this component.  
**Note:**  
DQI: DRIVE-CLiQ Sensor Integrated  
SMI: SINAMICS Sensor Module Integrated  
See also: p4690 (SMI spare part component number), p4691 (SMI spare part save/download data)

### A01900 (F) PB/PN: Configuration telegram error

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** A controller attempts to establish a connection using an incorrect configuring telegram.  
Alarm value (r2124, interpret decimal):  
1: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence are defined in p0978.  
2: Too many PZD data words for output or input to a drive object. The number of possible PZD items in a drive object is determined by the number of indices in r2050/p2051.  
3: Uneven number of bytes for input or output.  
4: Setting data for synchronization not accepted. For more information, see A01902.  
211: Unknown parameterizing block.  
223: Clock synchronization for the PZD interface set in p8815[0] is not permissible. More than one PZD interface is operated in clock synchronism.  
253: PN Shared Device: Illegal mixed configuration of PROFINet and PZD.  
254: PN Shared Device: Illegal double assignment of a slot/subslot.  
255: PN: Configured drive object and existing drive object do not match.  
500: Illegal PROFINet configuration for the interface set in p8815[1]. More than one PZD interface is operated with PROFINet.  
501: PROFINet parameter error (e.g. F_dest).  
502: PROFINet telegram does not match.  
503: PROFINet connection is rejected as long as there is no isochronous connection (p8969).  
**Additional values:**  
Only for internal Siemens troubleshooting.  
**Remedy:** Check the bus configuration on the master and the slave sides.  
Re alarm value = 1, 2:  
- Check the list of the drive objects with process data exchange (p0978).  
**Note:**  
With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange.
Re alarm value = 2:
- Check the number of data words for output and input to a drive object.
Re alarm value = 211:
- Ensure offline version <= online version.
Re alarm value = 223, 500:
- Check the setting in p8839 and p8815.
- Check for inserted but not configured CBE20.
- Ensure that only one PZD interface is operated in clock synchronism or with PROFlsafe.
Re alarm value = 255:
- Check configured drive objects.
Re alarm value = 501:
- Check the set PROFlsafe address (p9610).
Re alarm value = 502:
- Check the set PROFlsafe telegram (p60022, p9611).

Reaction upon F: NONE (OFF1)
Acknowl. upon F: IMMEDIATELY

A01902  PB/PN clock cycle synchronous operation parameterization not permissible
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:
Parameterization for isochronous operation is not permissible.
Alarm value (r2124, interpret decimal):
0: Bus cycle time Tdp < 0.5 ms.
1: Bus cycle time Tdp > 32 ms.
2: Bus cycle time Tdp is not an integer multiple of the current controller clock cycle.
3: Instant of the actual value sensing Ti > Bus cycle time Tdp or Ti = 0.
4: Instant of the actual value sensing Ti is not an integer multiple of the current controller clock cycle.
5: Instant of the setpoint acceptance To >= Bus cycle time Tdp or To = 0.
6: Instant of the setpoint acceptance To is not an integer multiple of the current controller clock cycle.
7: Master application cycle time Tmapc is not an integer multiple of the speed controller clock cycle.
8: Bus reserve bus cycle time Tdp - data exchange time Tdx less than two current controller clock cycles.
10: Instant of the setpoint acceptance To <= data exchange time Tdx + current controller clock cycle
11: Master application cycle time Tmapc > 14 x Tdp or Tmapc = 0.
12: PLL tolerance window Tpll_w > Tpll_w_max.
13: Bus cycle time Tdp is not a multiple of all basic clock cycles p0110[x].
16: For COMM BOARD, the instant in time for the actual value sensing Ti is less than two current controller clock cycles.
Remedy:
- Adapt the bus parameterization Tdp, Ti, To.
- adapt the current and speed controller clock cycle.
Re alarm value = 10:
- Reduce Tdx by using fewer bus participants or shorter telegrams.
Note:
PB: PROFIBUS
PN: PROFINET

F01910 (N, A)  Fieldbus: setpoint timeout
Message value:  -
Drive object:  All objects
Reaction:  Infeed: OFF2 (NONE, OFF1)
Vector: OFF3 (IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:  IMMEDIATELY
Cause:
The reception of setpoints from the fieldbus interface (onboard, PROFIBUS/PROFINET/USS) has been interrupted.
- bus connection interrupted.
- controller switched off.
- controller set into the STOP state.
See also: p2047 (PROFIBUS additional monitoring time)
List of faults and alarms

F01911 (N, A) PB/PN clock cycle synchronous operation clock cycle failure

Message value: -
Drive object: All objects
Reaction: Infeed: OFF1
Vector: OFF1 (OFF3)
Acknowledge: IMMEDIATELY

Causes:
The global control telegram to synchronize the clock cycles has failed - in cyclic operation - for several DP clock cycles or has violated the time grid specified in the parameterizing telegram over several consecutive DP clock cycles (refer to the bus cycle time, Tdp and Tpllw).

Remedy:
- check the physical bus configuration (cable, connector, terminating resistor, shielding, etc.).
- check whether communication was briefly or permanently interrupted.
- check the bus and controller for utilization level (e.g. bus cycle time Tdp was set too short).

Note:
PB: PROFIBUS
PN: PROFINET

Remedy upon N: NONE
Acknowledge upon N: NONE
Remedy upon A: NONE
Acknowledge upon A: NONE

F01912 (N, A) PB/PN clock cycle synchronous operation sign-of-life failure

Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: OFF1
Vector: OFF1 (OFF3)
Acknowledge: IMMEDIATELY

Causes:
The maximum permissible number of errors in the controller sign-of-life (clock synchronous operation) has been exceeded in cyclic operation.

Remedy:
- physically check the bus (cables, connectors, terminating resistor, shielding, etc.).
- correct the interconnection of the controller sign-of-life (p2045).
- check whether the controller correctly sends the sign-of-life (e.g. create a trace with STW2.12 ... STW2.15 and trigger signal ZSW1.3).
- check the permissible telegram failure rate (p0925).
- check the bus and controller for utilization level (e.g. bus cycle time Tdp was set too short).

Reaction upon F: NONE (OFF1)
Acknowl. upon F: IMMEDIATELY

A01921 (F) PROFIBUS: Receive setpoints after To
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Output data of PROFIBUS master (setpoints) received at the incorrect instant in time within the PROFIBUS clock cycle.
Remedy: 
- check bus configuration.
- check parameters for clock cycle synchronization (ensure To > Tdx).
Note:
To: Time of setpoint acceptance
Tdx: Data exchange time

A01930 PB/PN current controller clock cycle clock cycle synch. not equal
Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The current controller clock cycle of all drives must be set the same for the clock cycle synchronous operation.
Alarm value (r2124, interpret decimal):
Number of the drive object with different current controller clock cycle.
Remedy: 
Set current controller clock cycles to identical values (p0115[0]).
Note:
PBM: PROFIBUS
PN: PROFINET
See also: p0115

A01931 PB/PN speed controller clock cycle clock cycle synch. not equal
Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The speed controller clock cycle of all drives must be set the same for the clock cycle synchronous operation.
Alarm value (r2124, interpret decimal):
Number of the drive object with different speed controller clock cycle.
Remedy: 
Set the speed controller clock cycles the same (p0115[1]).
Note:
PBM: PROFIBUS
PN: PROFINET
See also: p0115

A01932 PB/PN clock cycle synchronization missing for DSC
Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: There is no clock synchronization or clock synchronous sign of life and DSC is selected.
Note:
DSC: Dynamic Servo Control
See also: p0922 (IF1 PROFIdrive telegram selection)
Remedy: 
Set clock synchronization across the bus configuration and transfer clock synchronous sign-of-life.
See also: r2064 (PB/PN diagnostics clock cycle synchronism)
### A01940 PB/PN clock cycle synchronism not reached

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. It was not possible to synchronize to the clock cycle specified by the master.  
- the master does not send a clock synchronous global control telegram although clock synchronous operation was selected when configuring the bus.  
- the master is using another clock synchronous DP clock cycle than was transferred to the slave in the parameterizing telegram.  
- at least one drive object has a pulse enable (not controlled from PROFIBUS/PROFINET either).  
**Remedy:**  
- check the master application and bus configuration.  
- check the consistency between the clock cycle input when configuring the slave and clock cycle setting at the master.  
- check that no drive object has a pulse enable. Only enable the pulses after synchronizing the PROFIBUS/PROFINET drives.  
**Note:**  
PB: PROFIBUS  
PN: PROFINET

### A01941 PB/PN clock cycle signal missing when establishing bus communication

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. The global control telegram for synchronization is not being received.  
**Remedy:** Check the master application and bus configuration.  
**Note:**  
PB: PROFIBUS  
PN: PROFINET

### A01943 PB/PN clock cycle signal error when establishing bus communication

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. The global control telegram for synchronization is being irregularly received.  
- the master is sending an irregular global control telegram.  
- the master is using another clock synchronous DP clock cycle than was transferred to the slave in the parameterizing telegram.  
**Remedy:**  
- check the master application and bus configuration.  
- check the consistency between the clock cycle input when configuring the slave and clock cycle setting at the master.  
**Note:**  
PB: PROFIBUS  
PN: PROFINET

### A01944 PB/PN sign-of-life synchronism not reached

**Message value:** -  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram.
Synchronization with the master sign-of-life (STW2.12 ... STW2.15) could not be completed because the sign-of-life is changing differently to how it was configured in the Tmapc time grid.

**Remedy:**
- ensure that the master correctly increments the sign-of-life in the master application clock cycle Tmapc.
- correct the interconnection of the master sign-of-life (p2045).

**Note:**
PB: PROFIBUS
PN: PROFINET

**A01955 CU DRIVE-CLiQ: Synchronization DO not completed**

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance.

Alarm value (r2124, interpret decimal):

Only for internal Siemens troubleshooting.

Remedy: Carry out a POWER ON (power off/on) for all components of the DO.

**A01980 PN: Interruption cyclic connection**

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The cyclic connection to a PROFINET controller is interrupted.

Alarm value (r2124, interpret decimal):

Number of the interrupted connection.

Remedy: Establish the PROFINET connection and activate the PROFINET controller in the cyclic mode.

**A01981 PN: Maximum number of controllers exceeded**

Message value: Info. 1: %1, info. 2: %2

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A controller attempts to establish a connection to the drive, and as a consequence exceeds the permitted number of PROFINET connections.

The alarm disappears automatically after approx. 30 seconds.

Alarm value (r2124, interpret hexadecimal):

yyyyxxxx hex: yyyy = info. 1, xxxx = info. 2

Info 1 = 0: number of RT connections exceeded

Info 1 > 0: number of IRT connections exceeded

Info 2: permitted number of connections

Remedy: Check the configuration of the PROFINET controllers as well as the p8929 setting.

See also: p8929 (PN remote controller number)

**A01982 PROFINET: Second controller missing**

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The PROFINET function "Shared Device" has been activated (p8929 = 2). However, only the connection to a PROFINET controller is present.

Remedy: Check the configuration of the PROFINET controllers as well as the p8929 setting.

See also: p8929 (PN remote controller number)

**A01989 PROFINET: Internal cyclic data transfer error**

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The cyclic actual values and/or setpoints were not transferred within the specified times.
### Faults and alarms

#### List of faults and alarms

- **A01990 (F)**  
  **USS: PZD configuration error**
  - **Message value:** %1  
  - **Drive object:** All objects  
  - **Reaction:** NONE  
  - **Acknowledge:** NONE  
  - **Cause:** The configuration of the process data (PZD) for the USS protocol is incorrect.  
  - **Remedy:** Re-alarm value = 2: Check the amount of USS PZD (p2022) and the maximum PZD amount (r2050/p2051) for the first drive object (p0978[0]).
  - **Reaction upon F:** NONE (OFF1)  
  - **Acknowl. upon F:** IMMEDIATELY

- **A02000**  
  **Function generator: Start not possible**
  - **Message value:** -  
  - **Drive object:** All objects  
  - **Reaction:** NONE  
  - **Acknowledge:** NONE  
  - **Cause:** The function generator has already been started.  
  - **Remedy:** Stop the function generator and restart again if necessary.  
    - **Note:** The alarm is reset as follows:  
    - remove the cause of this alarm.  
    - restart the function generator.  
    - See also: p4800 (Function generator control)

- **A02005**  
  **Function generator: Drive does not exist**
  - **Message value:** %1  
  - **Drive object:** All objects  
  - **Reaction:** NONE  
  - **Acknowledge:** NONE  
  - **Cause:** The drive object specified for connection does not exist.  
    - See also: p4815 (Function generator drive number)  
  - **Remedy:** Use the existing drive object with the corresponding number.  
    - **Note:** The alarm is reset as follows:  
    - remove the cause of this alarm.  
    - restart the function generator.  
    - See also: p4815 (Function generator drive number)

- **A02006**  
  **Function generator: No drive specified for connection**
  - **Message value:** -  
  - **Drive object:** All objects  
  - **Reaction:** NONE  
  - **Acknowledge:** NONE  
  - **Cause:** No drive specified for connection in p4815.  
    - See also: p4815 (Function generator drive number)
List of faults and alarms

Remedy: At least one drive to be connected must be specified in p4815.

Note: The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4815 (Function generator drive number)

<table>
<thead>
<tr>
<th>A02007</th>
<th>Function generator: Drive not SERVO / VECTOR / DC_CTRL</th>

</tr>
<tr>
<td>Cause: The speed setpoint of a drive selected for connection is greater than the value for the standstill detection set using p1226.</td>
<td></td>
</tr>
</tbody>
</table>
Remedy: For all of the drives specified for connection, set the speed setpoints to zero.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02011  Function generator: The actual drive speed is not zero
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The speed actual value of a drive selected for connection is greater than the value for the standstill detection set using p1226.
Remedy: Set the relevant drives to zero speed before starting the function generator.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02015  Function generator: Drive enable signals missing
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The master control and/or enable signals are missing to connect to the specified drive.
See also: p4815 (Function generator drive number)
Remedy: Fetch the master control to the specified drive object and set all enable signals.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02016  Function generator: Magnetizing running
Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: Magnetizing has not yet been completed on a drive object specified for connection.
Alarm value (r2124, interpret decimal):
Number of the drive object involved.
See also: p4815 (Function generator drive number)
Remedy: Wait for magnetizing of the motor (r0056.4).
Note:
The alarm is reset as follows:
- restart the function generator.
See also: r0056 (Status word, closed-loop control)

A02020  Function generator: Parameter cannot be changed
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: This parameter setting cannot be changed when the function generator is active (p4800 = 1).
See also: p4810, p4812, p4813, p4815, p4820, p4821, p4822, p4823, p4824, p4825, p4826, p4827, p4828, p4829
Remedy:  
- stop the function generator before parameterizing (p4800 = 0).
- if required, start the function generator (p4800 = 1).
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4800 (Function generator control)

### A02025 Function generator: Period too short

- **Message value:**
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The value for the period is too short.
  See also: p4821 (Function generator period)
- **Remedy:** Check and adapt the value for the period.
  Note:
The alarm is reset as follows:
  - remove the cause of this alarm.
  - restart the function generator.
  See also: p4821 (Function generator period)

### A02026 Function generator: Pulse width too high

- **Message value:**
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The selected pulse width is too high.
The pulse width must be less than the period duration.
See also: p4822 (Function generator pulse width)
- **Remedy:** Reduce pulse width.
  Note:
The alarm is reset as follows:
  - remove the cause of this alarm.
  - restart the function generator.
  See also: p4821 (Function generator period), p4822 (Function generator pulse width)

### A02030 Function generator: Physical address equals zero

- **Message value:**
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The specified physical address is zero.
  See also: p4812 (Function generator physical address)
- **Remedy:** Set a physical address with a value other than zero.
  Note:
The alarm is reset as follows:
  - remove the cause of this alarm.
  - restart the function generator.
  See also: p4812 (Function generator physical address)

### A02040 Function generator: Illegal value for offset

- **Message value:**
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The value for the offset is higher than the value for the upper limit or lower than the value for the lower limit.
  See also: p4826 (Function generator offset)
Faults and alarms
List of faults and alarms

Remedy: Adjust the offset value accordingly.
Note: The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4826 (Function generator offset), p4828 (Function generator upper limit), p4829 (Function generator lower limit)

A02041 Function generator: Illegal value for bandwidth
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The bandwidth referred to the time slice clock cycle of the function generator has either been set too low or too high.
Depending on the time slice clock cycle, the bandwidth is defined as follows:
Bandwidth_{max} = 1 / (2 \times \text{time slice clock cycle})
Bandwidth_{min} = Bandwidth_{max} / 100000
Example:
Assumption: p4830 = 125 \mu s
\rightarrow Bandwidth_{max} = 1 / (2 \times 125 \mu s) = 4000 \text{ Hz}
\rightarrow Bandwidth_{min} = 4000 \text{ Hz} / 100000 = 0.04 \text{ Hz}
Note:
p4823: Function generator bandwidth
p4830: Function generator time slice clock cycle
See also: p4823 (Function generator bandwidth), p4830 (Function generator time slice cycle)
Remedy: Check the value for the bandwidth and adapt accordingly.
Note: The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02047 Function generator: Time slice clock cycle invalid
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The time slice clock cycle selected does not match any of the existing time slices.
See also: p4830 (Function generator time slice cycle)
Remedy: Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.
Note: The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: r7901 (Sampling times)

A02050 Trace: Start not possible
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The trace has already been started.
See also: p4700 (Trace control)
Remedy: Stop the trace and, if necessary, start again.
### A02055 Trace: Recording time too short

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The trace duration is too short. The minimum is twice the value of the trace clock cycle. See also: p4721 (Trace recording time)
- **Remedy:** Check the selected recording time and, if necessary, adjust.

### A02056 Trace: Recording cycle too short

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The selected recording cycle is shorter than the selected basic clock cycle 0 (p0110[0]). See also: p4720 (Trace recording cycle)
- **Remedy:** Increase the value for the trace cycle.

### A02057 Trace: Time slice clock cycle invalid

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The time slice clock cycle selected does not match any of the existing time slices. See also: p4723 (Trace time slice cycle)
- **Remedy:** Enter an existing time slice clock cycle. The existing time slices can be read out via p7901. See also: r7901 (Sampling times)

### A02058 Trace: Time slice clock cycle for endless trace not valid

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The selected time slice clock cycle cannot be used for the endless trace. See also: p4723 (Trace time slice cycle)
- **Remedy:** Enter the clock cycle of an existing time slice with a cycle time >= 2 ms for up to 4 recording channels or >= 4 ms from 5 recording channels per trace. The existing time slices can be read out via p7901. See also: r7901 (Sampling times)

### A02059 Trace: Time slice clock cycle for 2 x 8 recording channels not valid

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The selected time slice clock cycle cannot be used for more than 4 recording channels. See also: p4723 (Trace time slice cycle)
- **Remedy:** Enter the clock cycle of an existing time slice with a cycle time >= 4 ms or reduce the number of recording channels to 4 per trace. The existing time slices can be read out via p7901. See also: r7901 (Sampling times)
### A02060 Trace: Signal to be traced missing

| Message value: | - |
| Drive object: | All objects |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | - a signal to be traced was not specified.  
- the specified signals are not valid.  
See also: p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3) |
| Remedy: | - specify the signal to be traced.  
- check whether the relevant signal can be traced. |

### A02061 Trace: Invalid signal

| Message value: | - |
| Drive object: | All objects |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | - the specified signal does not exist.  
- the specified signal can no longer be traced (recorded).  
See also: p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3) |
| Remedy: | - specify the signal to be traced.  
- check whether the relevant signal can be traced. |

### A02062 Trace: Invalid trigger signal

| Message value: | - |
| Drive object: | All objects |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | - a trigger signal was not specified.  
- the specified signal does not exist.  
- the specified signal is not a fixed-point signal.  
- the specified signal cannot be used as a trigger signal for the trace.  
See also: p4711 (Trace trigger signal) |
| Remedy: | Specify a valid trigger signal. |

### A02063 Trace: Invalid data type

| Message value: | %1 |
| Drive object: | All objects |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | The specified data type to select a signal using a physical address is invalid.  
See also: p4711 (Trace trigger signal), p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3) |
| Remedy: | Use a valid data type. |

### A02070 Trace: Parameter cannot be changed

| Message value: | - |
| Drive object: | All objects |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | The trace parameter settings cannot be changed when the trace is active.  
See also: p4700, p4710, p4711, p4712, p4713, p4714, p4715, p4716, p4720, p4721, p4722, p4730, p4731, p4732, p4733, p4780, p4781, p4782, p4783, p4789, p4795 |
| Remedy: | - stop the trace before parameterization.  
- if required, start the trace. |
### A02075 Trace: Pretrigger time too long

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  
  The selected pretrigger time must be shorter than the trace time.

  See also: p4721 (Trace recording time), p4722 (Trace trigger delay)

- **Remedy:** Check the pretrigger time setting and change if necessary.

### F02080 Trace: Parameterization deleted due to unit changeover

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:**
  
  The trace parameterization in the drive unit was deleted due to a unit changeover or a change in the reference parameters.

- **Remedy:** Restart trace.

### A02099 Trace: Insufficient Control Unit memory

- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  
  The memory space still available on the Control Unit is no longer sufficient for the trace function.

- **Remedy:**
  
  Reduce the memory required, e.g. as follows:
  - reduce the trace time.
  - increase the trace clock cycle.
  - reduce the number of signals to be traced.

  See also: r4708 (Trace memory space required), r4799 (Trace memory location free)

### A02100 Drive: Computing dead time current controller too short

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  
  The value in p0118 produces a dead time of one clock cycle because it is prior to setpoint availability.

  Possible causes:
  - A parameter backup with a version higher than 4.3 was loaded to a version less than or equal to 4.3.
  - The system properties after replacing a component no longer match the parameter assignment.

  Alarm value (r2134, floating point):

  The minimum value for p0118 where a dead time no longer occurs.

- **Remedy:**
  
  - set p0118 to zero.
  - set p0118 to a value greater than or equal to the alarm value (for p1810.11 = 1)
  - set p0117 (from the device) to an automatic setting (p0117 = 1).
  - check the firmware versions of the components involved.

  See also: p0117 (Current controller computing dead time mode), p0118 (Current controller computing dead time)

### A02150 OA: Application cannot be loaded

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  
  The system was not able to load an OA application.

  Alarm value (r2124, interpret hexadecimal):

  Only for internal Siemens troubleshooting.
### List of faults and alarms

**F02151 (A) OA: Internal software error**

<table>
<thead>
<tr>

</tbody>
</table>
| Reaction:      | Infeed: OFF2 (NONE, OFF1)  
                | Vector: OFF2 (NONE, OFF1, OFF3) |
| Acknowledge:   | IMMEDIATELY (POWER ON) |
| Cause:         | An internal software error has occurred within an OA application.  
                | Fault value (r0949, interpret hexadecimal):  
                | Only for internal Siemens troubleshooting. |
| Remedy:        | - carry out a POWER ON (power off/on) for all components.  
                | - upgrade firmware to later version.  
                | - contact the Hotline.  
                | - replace the Control Unit. |
| Note:          | OA: Open Architecture  
                | See also: r4950, r4955, p4956, r4957 |

**F02152 (A) OA: Insufficient memory**

<table>

</tbody>
</table>
| Cause:         | A fault occurred during execution of action p7770 = 1, 2 for the NVRAM data.  
                | Fault value (r0949, interpret hexadecimal):  
                | yyxx hex: yy = fault cause, xx = application ID  
                | yy = 1:  
                | The action p7770 = 1 is not supported by this version if Drive Control Chart (DCC) is activated for the drive object concerned.  
                | yy = 2:  
                | The data length of the specified application is not the same in the NVRAM and the backup.  
                | yy = 3:  
                | The data checksum in p7774 is not correct. |
### SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A

**List of faults and alarms**

#### F03001 NVRAM checksum incorrect
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:** A checksum error occurred when evaluating the non-volatile data (NVRAM) on the Control Unit. The NVRAM data affected was deleted.
- **Remedy:** Carry out a POWER ON (power off/on) for all components.

#### F03500 (A) TM: Initialization
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1 (OFF2)
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** When initializing the Terminal Modules, the terminals of the Control Unit or the Terminal Board 30, an internal software error has occurred.
  - Fault value (r0949, interpret decimal):
    - y = Only for internal Siemens troubleshooting
    - xxx = component number (p0151)
- **Remedy:**
  - power down/power up the power supply for the Control Unit.
  - check the DRIVE-CLiQ connection.
  - if required, replace the Terminal Module.
  - The Terminal Module should be directly connected to a DRIVE-CLiQ socket of the Control Unit.
  - If the fault occurs again, replace the Terminal Module.

#### A03501 TM: Sampling time change
- **Message value:** -
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The sampling times of the inputs/outputs were changed.
  - This change only becomes valid after the next boot.
- **Remedy:** Carry out a POWER ON.

#### F03505 (N, A) TM: Analog input wire breakage
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1 (NONE, OFF2)
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** The wire-break monitoring for an analog input has responded.
  - The input current of the analog input has exceeded the threshold value parameterized in p4061[x].
  - Index x = 0: Analog input 0 (X522.1 to .3)
  - Index x = 1: Analog input 1 (X522.4 to .5)
  - Fault value (r0949, interpret decimal):
    - y = analog input (0 = analog input 0 (AI 0), 1 = analog input 1 (AI 1))
    - xxx = component number (p0151)
**Note:**
For the following analog input type, the wire breakage monitoring is active:
p4056[x] = 3 (unipolar current input monitored (+4 ... +20 mA)

**Remedy:**
- check the wiring for interruptions.
- Check the magnitude of the injected current - it is possible that the infed signal is too low.
- Check the load resistor (250 Ohm).

**Note:**
The input current measured by the Terminal Module can be read out from r4052[x].
For p4056[x] = 3 (unipolar current input monitored (+4 ... +20 mA)) the following applies:
A current less than 4 mA is not displayed in r4052[x] - but instead r4052[x] = 4 mA is output.

**Reaction upon N:** NONE
**Acknowl. upon N:** NONE
**Reaction upon A:** NONE
**Acknowl. upon A:** NONE

### A03506 (F, N) 24 V power supply missing
**Message value:** %1
**Drive object:** All objects
**Reaction:** NONE
**Acknowledge:** NONE
**Cause:** The 24 V power supply for the digital outputs (X124) is missing.
**Remedy:** Check the terminals for the power supply voltage (X124, L1+, M).

**Reaction upon F:** NONE
**Acknowl. upon F:** IMMEDIATELY (POWER ON)
**Reaction upon N:** NONE
**Acknowl. upon N:** NONE

### A03510 (F, N) TM: Calibration data not plausible
**Message value:** %1
**Drive object:** BJ_INF, CU_G130_DP, CU_G130_PN, CU_G150_DP, CU_G150_PN, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL
**Reaction:** NONE
**Acknowledge:** NONE
**Cause:** During ramp-up, the Terminal Module 31 (TM31) calibration data is read in and checked for plausibility. At least one calibration data point was determined to be invalid.
Alarm value (r2124, interpret binary):
Bit 1: 10 V value, analog input 0 invalid.
Bit 3: 10 V value, analog input 1 invalid.
Bit 4: Offset, analog output 0 invalid.
Bit 5: 10 V value, analog output 0 invalid.
Bit 6: Offset, analog output 1 invalid.
Bit 7: 10 V value, analog input 1 invalid.
**Remedy:**
- power down/power up the power supply for the Control Unit.
- check the DRIVE-CLIQ connection.
**Note:**
If it reoccurs, then replace the module.
In principle, operation could continue.
The analog channel involved possibly does not achieve the specified accuracy.

**Reaction upon F:** Infeed: NONE (OFF1, OFF2)
**Acknowl. upon F:** IMMEDIATELY (POWER ON)
**Reaction upon N:** NONE
**Acknowl. upon N:** NONE
A03510 (F, N)  
CU: Calibration data not plausible  
Message value:  %1  
Drive object:  VECTOR_G  
Reaction:  NONE  
Acknowledge:  NONE  
Cause:  During booting, the calibration data for the analog inputs is read and checked with respect to plausibility. At least one calibration data point was determined to be invalid.  
Remedy:  - power down/power up the power supply for the Control Unit.  
         - check the DRIVE-CLiQ connection.  
         Note:  If it reoccurs, then replace the module.  
         In principle, operation could continue.  
         The analog channel involved possibly does not achieve the specified accuracy.  
Reaction upon F:  Infeed: NONE (OFF1, OFF2)

A03550  
TM: Speed setpoint filter natural frequency > Shannon frequency  
Message value:  -  
Drive object:  All objects  
Reaction:  NONE  
Acknowledge:  NONE  
Cause:  The natural filter frequency of the speed setpoint filter (p1417) is greater than or equal to the Shannon frequency.  
         The Shannon frequency is calculated according to the following formula:  
         \[ \frac{0.5}{p4099[3]} \]  
Remedy:  Reduce the natural frequency of the speed setpoint filter (PT2 low pass) (p1417).  

F03590 (N, A)  
TM: Module not ready  
Message value:  %1  
Drive object:  All objects  
Reaction:  Infeed: OFF2 (NONE)  
         Vector: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
Acknowledge:  IMMEDIATELY (POWER ON)  
Cause:  The Terminal Module involved does not send a ready signal and no valid cyclic data.  
         Fault value (r0949, interpret decimal):  
         Drive object number of the Terminal Module involved.  
Remedy:  - check the 24 V power supply.  
         - check the DRIVE-CLiQ connection.  
         - check whether the sampling time of the drive object involved is not equal to zero (p4099[0]).

| A05002 (N) | Power unit: Air intake overtemperature          | -             | B_INF, VECTOR_G | NONE     | NONE        | The alarm threshold for the air intake overtemperature has been reached. For air-cooled power units, the threshold is 42 °C (hysteresis 2 K). The response is set using p0290. If the air intake temperature increases by an additional 13 K, then fault F30035 is output. | Note:
- Check the following:
- is the ambient temperature within the defined limit values?
- has the fan failed? Check the direction of rotation. |
A05003 (N)  Power unit: Internal overtemperature
Message value:  -
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The alarm threshold for internal overtemperature has been reached.
If the temperature inside the power unit increases by an additional 5 K, then fault F30036 is triggered.
Remedy:  Check the following:
- is the ambient temperature within the defined limit values?
- has the fan failed? Check the direction of rotation.

A05004 (N)  Power unit: Rectifier overtemperature
Message value:  -
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The alarm threshold for the overtemperature of the rectifier has been reached. The response is set using p0290.
If the temperature of the rectifier increases by an additional 5 K, then fault F30037 is triggered.
Remedy:  Check the following:
- is the ambient temperature within the defined limit values?
- have the load conditions and the load duty cycle been appropriately dimensioned?
- has the fan failed? Check the direction of rotation.
- has a phase of the line supply failed?
- is an arm of the supply (incoming) rectifier defective?

A05005  Cooling unit: Cooling medium flow rate too low
Message value:  %1
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  Cooling unit: Alarm - flow rate has fallen below the alarm value
Remedy:  Check the feedback signals and parameter assignment (p0260 ... p0267).
Check the coolant feed.

A05006 (N)  Power unit: Overtemperature thermal model
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The temperature difference between the chip and heat sink has exceeded the permissible limit value (blocksize power units only).
Depending on p0290, an appropriate overload response is initiated.
See also: r0037
Remedy:  Not necessary.
The alarm disappears automatically once the limit value is undershot.
Note:
- If the alarm does not disappear automatically and the temperature continues to rise, this can result in fault F30024.
See also: p0290 (Power unit overload response)
N05007 (A)  Power unit: Overtemperature thermal model (chassis PU)
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The temperature difference between the chip and heat sink has exceeded the permissible limit value (r0293) (chassis power units only).
Depending on p0290, an appropriate overload response is initiated.
See also: r0037, r0293 (Power unit alarm threshold model temperature)
Remedy:  Not necessary.
The alarm disappears automatically once the limit value is undershot.
See also: p0290 (Power unit overload response)
Reaction upon A:  NONE
Acknowl. upon A:  NONE

F05050  Parallel circuit: Pulse enable in spite of pulse inhibit
Message value:  %1
Drive object:  B_INF, VECTOR_G
Reaction:  Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:  IMMEDIATELY
Cause:  A power unit signals that the pulses are enabled although the pulses are inhibited.
Fault value (r0949, interpret decimal):
Number of the power unit involved.
Remedy:  The power unit is defective and must be replaced.

F05051  Parallel circuit: Power unit pulse enable missing
Message value:  %1
Drive object:  B_INF, VECTOR_G
Reaction:  Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:  IMMEDIATELY
Cause:  For one or several power units, the pulses were not able to be enabled.
Fault value (r0949, interpret decimal):
Number of the power unit involved.
Remedy:  - acknowledge power unit faults that are still present.
- inhibit the pulses of the power unit involved (p7001).

A05052 (F)  Parallel circuit: Illegal current dissymmetry
Message value:  %1
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The deviation of the individual currents of the power units exceeds the alarm threshold specified in p7010.
Alarm value (r2124, interpret decimal):
1: Phase U.
2: Phase V.
3: Phase W.
Remedy:  - inhibit the pulses of the faulted power unit (p7001).
- check the connecting cables. Loose contacts can cause current spikes.
- the motor reactors are non-symmetrical or faulty and must be replaced.
- the CTs must be calibrated or replaced.
Reaction upon F:  Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F:  IMMEDIATELY
### List of faults and alarms

**A05053 (F)**  
**Parallel circuit: Inadmissible DC link voltage dissymmetry**  
- **Message value:** -  
- **Drive object:** B_INF, VECTOR_G  
- **Reaction:** NONE  
- **Acknowledge:** NONE  
- **Cause:** The deviation of the DC link voltage measured values exceeds the alarm threshold specified in p7011.  
- **Remedy:**  
  - inhibit the pulses of the faulted power unit (p7001).  
  - check the DC link connecting cables.  
  - the DC link voltage measurement is incorrect and must be calibrated or renewed.  
- **Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
  Vector: NONE (OFF1, OFF2, OFF3, STOP1, STOP2)  
- **Acknowl. upon F:** IMMEDIATELY

**A05054**  
**Parallel circuit: Power unit de-activated**  
- **Message value:** %1  
- **Drive object:** B_INF, VECTOR_G  
- **Reaction:** NONE  
- **Acknowledge:** NONE  
- **Cause:** For the drive object involved, fewer power units connected in parallel are active than exist in the target topology. Operation is only possible at reduced power (power derating).  
- **Remedy:** Re-activate the de-activated power units if required.  
  See also: p0125 (Activate/de-activate power unit components), p0895 (Activate/de-activate power unit components), p0897 (Parking axis selection)

**F05055**  
**Parallel connection: Power units with illegal code numbers**  
- **Message value:** Parameter: %1  
- **Drive object:** B_INF  
- **Reaction:** OFF2 (NONE)  
- **Acknowledge:** IMMEDIATELY  
- **Cause:** The code numbers of the power units are not permissible. For parallel circuit configurations, only power units with identical power unit data may be used. Possible causes:  
  - The code numbers of the power units do not match.  
  For booksize drive units, the following additionally applies:  
  - a parallel connection is not possible for the power units being used.  
  - there are too many power units being used in the parallel connection.  
  Fault value (r0949, interpret decimal): Parameter in which the inadmissible power unit code number was detected.  
- **Remedy:**  
  - Use power units with the same code number.  
  For booksize drive units, the following additionally applies:  
  - use power units which are permitted for a parallel connection.  
  - reduce the number of power units being used in the parallel connection.  

**F05055**  
**Parallel connection: Power units with illegal code numbers**  
- **Message value:** Parameter: %1  
- **Drive object:** VECTOR_G  
- **Reaction:** OFF2 (NONE)  
- **Acknowledge:** IMMEDIATELY  
- **Cause:** The code numbers of the power units do not match. Fault value (r0949, interpret decimal): Parameter in which the first different power unit code number was detected.  
- **Remedy:**  
  - Use power units with the same code number.  
  For parallel circuit configurations, only power units with identical power unit data may be used.
F05056  Parallel circuit: Power unit EPROM versions differ
Message value: Parameter: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The EEPROM versions of the power units do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: Use power units with the same EPROM version.
For parallel circuit configurations, only power units with identical EEPROM versions may be used.

F05057  Parallel circuit: Power unit firmware versions differ
Message value: Parameter: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: The firmware versions of the power units connected in parallel do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: Use power units with the same firmware version.
For parallel circuit configurations, only power units with identical firmware versions may be used.

F05058  Parallel circuit: VSM EEPROM versions differ
Message value: Parameter: %1
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The EEPROM versions of the Voltage Sensing Modules (VSM) do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: For parallel circuit configurations, only Voltage Sensing Modules (VSM) with identical EEPROM versions may be used.

F05059  Parallel circuit: VSM firmware versions differ
Message value: Parameter: %1
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The firmware versions of the Voltage Sensing Module (VSM) do not match.
Fault value (r0949, interpret decimal):
Parameter in which the first different version number was detected.
Remedy: For parallel circuit configurations, only Voltage Sensing Modules (VSM) with identical firmware versions may be used.

F05060  Parallel circuit: Power unit firmware version does not match
Message value: Parameter: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Firmware from version V02.30.01.00 is required when connecting the power units in parallel.
Remedy: Update the firmware of the power units (at least V02.30.01.00).
### F05061 Infeed, number of VSM

**Message value:** %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The number of active Voltage Sensing Modules (VSM) for the drive object infeed with chassis power units is not correct.  
For A_Infeed, each active power unit must be assigned an active VSM also for a parallel circuit configuration.  
For S_Infeed, the active drive object, must be assigned at least one active VSM.  
Fault value (r0949, interpret decimal):  
Number of VSMs that are currently assigned to the drive object.  
**Remedy:** Adapts the number of active Voltage Sensing Modules (VSM).

### F05064 Parallel connection: Pulse synchronization error

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF2 (OFF1, OFF3)  
**Acknowledge:** POWER ON (IMMEDIATELY)  
**Cause:** The pulse synchronization of at least one of the power units connected in parallel is incorrect.  
**Remedy:** Restart the drive system.

### F06000 Infeed: Precharging monitoring time expired

**Message value:** -  
**Drive object:** B_INF  
**Reaction:** OFF2 (OFF1)  
**Acknowledge:** IMMEDIATELY  
**Cause:** After the line contactor closes the power unit does not signal the READY state within the monitoring time (p0857).  
The end of the DC link pre-charging was not able to be completed for one of the following reasons:  
1) There is no line supply voltage connected.  
2) The line contactor/line side switch has not been closed.  
3) The line supply voltage is too low.  
4) Line supply voltage incorrectly set (p0210).  
5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit.  
6) The pre-charging resistors are overheated as the DC link capacitance is too high.  
7) The pre-charging resistors are overheated because when there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link.  
8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module.  
9) The DC link has either a ground fault or a short-circuit.  
10) The pre-charging circuit is possibly defective (only for chassis units).  
See also: p0210 (Drive unit line supply voltage), p0857 (Power unit monitoring time)  
**Remedy:** In general:  
- check the line supply voltage at the connecting terminals.  
- check the line supply voltage setting (p0210).  
- check the monitoring time and, if required, increase (p0857).  
- where relevant, observe additional power unit messages/signals (e.g. F30027).  
- the following applies to booksize units: Wait (approx. 8 min.) until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from the line supply.  
Re 5):  
- carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual).  
Re 6):  
- check the total capacitance of the DC link and reduce in accordance with the maximum permissible DC-link capacitance if necessary (refer to the appropriate Equipment Manual)  
Re 7):  
- interconnect the ready-for-operation signal from the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link  
Re 8):  
- check the connections of the external line contactor. The line contactor must be open during DC-link fast discharge.
Faults and alarms

List of faults and alarms

Re 9):
- check the DC link for ground faults or short circuits.

F06010  Infeed: Power unit EP 24 V missing in operation
Message value: -
Drive object: B_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: In operation, the pulse enable via terminal EP at the Line Module (X21.3, X21.4) was withdrawn.
Note:
EP: Enable Pulses (pulse enable)
Remedy:
- do not open the line side switch in operation - only when the pulses are inhibited.
- check the wiring of terminal EP (X21.3, X21.4) at the Line Module to exclude any poor contacts.

F06100  Infeed: Shutdown due to line supply undervoltage condition
Message value: %1
Drive object: B_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
The filtered (steady-state) value of the line supply voltage is less than the fault threshold (p0283).
Fault condition: \( V_{rms} < p0283 \times p0210 \)
Fault value (r0949, floating point):
Actual steady-state line supply voltage.
Remedy:
- check the line supply.
- check the line supply voltage (p0210).
- check the threshold value (p0283).

A06105 (F)  Infeed: Line supply undervoltage
Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause:
The filtered (steady-state) value of line supply voltage is lower than the alarm threshold (p0282).
Alarm condition: \( V_{rms} < p0282 \times p0210 \)
Alarm value (r2124, floating point):
Actual steady-state line supply voltage.
Remedy:
- check the line supply.
- check the line supply voltage (p0210).
- check the alarm threshold (p0282).
Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F06211  Infeed: Summation current impermissibly high
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
The smoothed sum of the phase currents \((i_1 + i_2 + i_3)\) is impermissibly high. The summed current has exceeded the parameterized threshold for the ground fault monitoring (p0287).
Possible causes:
- there is a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, reactor, filter or motor!
- the current measurement in the power unit is defective.
Fault value (r0949, floating point):
Smoothed total of the phase currents.
Remedy:
- check the line supply for ground faults and remove any that are present.
- check the set threshold for the ground fault monitoring (p0287).
- if required, replace the power unit.
**A06301 (F)**  Infeed: Line supply overvoltage  
**Message value:** Line supply voltage: %1  
**Drive object:** B_INF  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The filtered (steady-state) value of the rms line supply voltage Vrms is higher than the alarm threshold (p0281).  
Alarm condition: Vrms > p0281 * p0210.  
Alarm value (r2124, floating point): Actual steady-state line supply voltage.  
**Remedy:**  
- check the line supply.  
- check the line supply voltage (p0210).  
- check the alarm threshold (p0281).  
See also: p0210 (Drive unit line supply voltage)  
**Reaction upon F:** NONE (OFF1, OFF2)  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  

---  

**F06310 (A)**  Infeed: Supply voltage (p0210) incorrectly parameterized  
**Message value:** Line supply voltage: %1  
**Drive object:** B_INF  
**Reaction:** NONE (OFF1, OFF2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** After pre-charging was completed, the line supply voltage Vrms was calculated using the measured DC link voltage.  
This voltage Vrms is not within the tolerance range of the supply voltage.  
The following applies for the tolerance range: 85 % * p0210 < Vrms < 110 % * p0210  
Fault value (r0949, floating point): Line supply voltage Vrms present.  
See also: p0210 (Drive unit line supply voltage)  
**Remedy:**  
- check the parameterized supply voltage and if required change (p0210).  
- check the line supply voltage.  
See also: p0210 (Drive unit line supply voltage)  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE  

---  

**F06310 (A)**  Supply voltage (p0210) incorrectly parameterized  
**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** NONE (OFF1, OFF2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** For AC/AC drive units, the measured DC voltage lies outside the tolerance range after pre-charging has been completed.  
The following applies for the tolerance range: 1.16 * p0210 < r0070 < 1.6 * p0210  
Note: The fault can only be acknowledged when the drive is powered down.  
See also: p0210 (Drive unit line supply voltage)  
**Remedy:**  
- check the parameterized supply voltage and if required change (p0210).  
- check the line supply voltage.  
See also: p0210 (Drive unit line supply voltage)  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE  

---  

**F06311**  Infeed: Supply voltage (p0210) incorrect  
**Message value:** Line supply voltage: %1  
**Drive object:** B_INF  
**Reaction:** OFF2 (OFF1)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** The line voltage nominal value indicated in p0210 is outside the nominal voltage range of the power unit.
After pre-charging was completed, the actual line supply voltage $V_{\text{rms}}$ was calculated using the measured DC link voltage. This voltage $V_{\text{rms}}$ does not lie within the extended tolerance range of the supply voltage set in p0210.

The following applies for the extended tolerance range: $75 \% \times p0210 < V_{\text{rms}} < 120 \% \times p0210$

Alarm value (r2124, floating point):
- Line supply voltage $V_{\text{rms}}$ present.
  - See also: p0210 (Drive unit line supply voltage)

Remedy:
- check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.
  - See also: p0210 (Drive unit line supply voltage)

| Cause: | In operation, the DC link voltage has dropped to below the alarm threshold. The alarm threshold is obtained from the sum of p0279 and r0296. Possible causes include:
- line supply voltage dip or another line supply fault.
- overload of the infeed.
- for Active Line Module: Controller incorrectly parameterized. |
| Remedy: | - check the line voltage and line supply quality.
- reduce the power drawn, avoid step-like load changes
- for Active Line Module: Adapt the controller parameterization (e.g. automatic line supply identification (p3410 = 4, 5)). |

</table>
| Cause: | The Braking Module signals a fault (1 -> 0) via X21.4 ("booksize" format) or X21.5 ("chassis" format).
This signal is wired to a system digital input and correspondingly interconnected using binector input p3866[0...7]. Possible causes:
- Wiring of the signal or BICO interconnection of the signal source incorrect.
- Overtemperature
- Electronics power supply missing.
- Ground fault/short-circuit.
- Internal component fault. |
| See also: | p3866 (Braking Module fault) |
Remedy: - check binector input p3866[0...7] and the wiring from terminal X21.4 ("booksize" format) or X21.5 ("chassis" format).
- reduce the number of braking operations.
- Check the 24 V power supply of the component.
- Check for a ground fault or short circuit.
- Replace the component if necessary.

Reaction upon F: NONE (OFF2)
Acknowl. upon F: IMMEDIATELY

A06901 Braking Module: Pre-alarm I2t shutdown
Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: The Braking Module "Booksize" format signals "Pre-alarm I2t shutdown" via terminal X21.3.
This signal is wired to a system digital input and correspondingly interconnected using binector input p3865[0...7].
Note: This function is not supported for the "chassis" format.

Remedy: - reduce the number of braking operations.
- check binector input p3865[0...7] and the wiring from terminal X21.3 of the particular Braking Module.

A06904 (N) Braking Module internal is inhibited
Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: The internal Braking Module was inhibited via binector input p3680 = 1 signal.
In the inhibited state, energy cannot be dissipated using the braking resistor.
See also: p3680 (Braking Module internal inhibit)

Remedy: Release the internal Braking Module (BI: p3680 = 0 signal).

Reaction upon N: NONE
Acknowl. upon N: NONE

A06905 Braking Module internal I2t shutdown alarm
Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: The internal Braking Module outputs an alarm due to the high I2t value.
80% of the maximum switch-on duration of the braking resistor has been reached.
Note: This message is also displayed via BO: p3685.
See also: r3685 (Digital Braking Module: Pre-alarm I2t shutdown)

Remedy: Reduce the number of braking operations.

F06906 (A) Braking Module internal fault
Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The internal Braking Module outputs a fault due to overcurrent or an excessively high I2t value and is therefore inhibited.
Note: This message is also displayed via BO: p3686.
Fault value (r0949, interpret bitwise binary):
Bit 0 = 1: I2t exceeded
Bit 1 = 1: overcurrent
See also: r3686 (Digital Braking Module Fault)
Faults and alarms

List of faults and alarms

Remedy: Reduce the number of braking operations.
Reaction upon A: NONE
Acknow. upon A: NONE

F06907 Braking Module internal overtemperature
Message value: -
Drive object: B_INF
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: The temperature sensor connected to the braking resistor signals an overtemperature. The Braking Module is still active. If the overtemperature persists for more than 60 s, fault F06908 is output, and the braking module is switched off.
See also: r3687 (Digital Braking Module pre-alarm overtemperature)
Remedy: - reduce the temperature at the sensor.
- check the temperature sensor connection.

F06908 Braking Module internal overtemperature shutdown
Message value: -
Drive object: B_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: Braking module shut down due to overtemperature at the temperature sensor of the braking resistor. The overtemperature is detected by the sensor for longer than 60 s.
See also: r3688 (Braking Module internal overtemperature shutdown)
Remedy: - reduce the temperature at the sensor.
- check the temperature sensor connection.

F06909 Braking Module internal Vce fault
Message value: %1
Drive object: B_INF
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The dip in the collector-emitter voltage (Vce) results in a Vce fault and shutdown.
See also: r3689 (Digital Braking Module Uce fault)
Remedy: - carry out a POWER ON (power off/on).
- replace the unit.

A06921 (N) Braking resistor phase unsymmetry
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The three resistors of the braking chopper are not symmetrical.
Remedy: - check the feeder cables to the braking resistors.
- If required, increase the value for detecting dissymmetry (p1364).
See also: p1360 (Braking chopper braking resistor cold), p1362 (Braking chopper activation threshold), r1363 (Braking chopper output voltage), p1364 (Braking chopper resistor asymmetry)

F06922 Braking resistor phase failure
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A phase failure for the brake resistor was detected.
Fault value (r0949, interpret decimal):
11: Phase U
12: Phase V
13: Phase W
See also: p3235 (Phase failure signal motor monitoring time)

Remedy:
Check the feeder cables to the braking resistors.
See also: p1360 (Braking chopper braking resistor cold), p1362 (Braking chopper activation threshold), r1363 (Braking chopper output voltage), p1364 (Braking chopper resistor asymmetry)

F07011  Drive: Motor overtemperature
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause:
KTY or no sensor:
The measured motor temperature or model temperature has exceeded the fault threshold (p0605) or the timer (p0606) has elapsed following the alarm threshold (p0604) being exceeded.
The response parameterized in p0610 becomes active.
PTC or bimetallic NC contact:
The response threshold of 1650 Ohm was exceeded or the NC contact opened and the timer (p0606) has expired.
The response parameterized in p0610 becomes active.
Possible causes:
- Motor is overloaded
- motor ambient temperature too high.
- PTC / bimetallic NC contact: Wire breakage or sensor not connected.
Fault value (r0949, interpret decimal):
200: The motor temperature model 1 (I2t) signals an overtemperature (p0612.0 = 1, p0611 > 0).
Number of the temperature channel leading to the message (for SME/TM120 (p0601 = 10, 11)).
See also: p0604, p0605, p0611, p0612
Remedy:
- Reduce the motor load.
- check the ambient temperature and the motor ventilation.
- check the wiring and the connection of the PTC or bimetallic NC contact.
See also: p0604, p0605, p0611, p0612

A07012 (N)  Drive: Motor temperature model 1/3 overtemperature
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The thermal I2t motor model for synchronous motors identified that the alarm threshold was exceeded.
See also: r0034 (Motor utilization), p0605 (Mot_temp_mod 1/2 threshold), p0611 (I2t motor model thermal time constant), p0612 (Mot_temp_mod activation)
Remedy:
- check the motor load and if required, reduce.
- check the motor ambient temperature.
- check the thermal time constant (p0611).
- check the overtemperature fault threshold (p0605), (= alarm threshold for the I2t motor model).
See also: r0034 (Motor utilization), p0605 (Mot_temp_mod 1/2 threshold), p0611 (I2t motor model thermal time constant), p0612 (Mot_temp_mod activation)

A07015  Drive: Motor temperature sensor alarm
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
An error was detected when evaluating the temperature sensor set in p0600 and p0601.
With the fault, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 50 ms after alarm A07015.
Faults and alarms
List of faults and alarms

Possible causes:
- wire breakage or sensor not connected (KTY: R > 1630 Ohm).
- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Alarm value (r2124, interpret decimal):
- if SME/TM120 is selected (p0601 = 10, 11),
  this is the number of the temperature channel leading to the message.
Remedy:
- make sure that the sensor is connected correctly.
- check the parameterization (p0600, p0601).
See also: r0035, p0600 (Motor temperature sensor for monitoring), p0601, p0607 (Temperature sensor fault timer)

F07016  Drive: Motor temperature sensor fault
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:  IMMEDIATELY
Cause:  An error was detected when evaluating the temperature sensor set in p0600 and p0601.
Possible causes:
- wire breakage or sensor not connected (KTY: R > 1630 Ohm).
- measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Note:
If alarm A07015 is present, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 50 ms after alarm A07015.
Fault value (r0949, interpret decimal):
- if SME/TM120 is selected (p0601 = 10, 11),
  this is the number of the temperature channel leading to the message.
See also: p0607 (Temperature sensor fault timer)
Remedy:
- make sure that the sensor is connected correctly.
- check the parameterization (p0600, p0601).
- induction motors: De-activate temperature sensor fault (p0607 = 0).
See also: r0035, p0600 (Motor temperature sensor for monitoring), p0601, p0607 (Temperature sensor fault timer)

F07080  Drive: Incorrect control parameter
Message value:  Parameter: %1
Drive object:  B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The closed-loop control parameters have been parameterized incorrectly (e.g. p0356 = L_spread = 0).
Fault value (r0949, interpret hexadecimal):
The fault value includes the parameter number involved.
The following parameter numbers only occur as fault values for vector drives:
p0310, for synchronous motors: p0341, p0344, p0350, p0357
The following parameter numbers do not occur as fault values for synchronous motors:
p0354, p0358, p0360
See also: p0310, p0311, p0341, p0344, p0350, p0354, p0356, p0357, p0358, p0360, p0400, p0404, p0408, p0640, p1082, p1300
Remedy:
Modify the parameter indicated in the fault value (r0949) (e.g. p0640 = current limit > 0).
See also: p0311, p0341, p0344, p0350, p0354, p0356, p0358, p0360, p0400, p0404, p0408, p0640, p1082

F07082  Macro: Execution not possible
Message value:  Fault cause: %1, supplementary information: %2, preliminary parameter number: %3
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  The macro cannot be executed.
Fault value (r0949, interpret hexadecimal):
cccccbbbaa hex:
ccccc = preliminary parameter number, bb = supplementary information, aa = fault cause
Fault causes for the trigger parameter itself:
19: Called file is not valid for the trigger parameter.
20: Called file is not valid for parameter 15.
21: Called file is not valid for parameter 700.
22: Called file is not valid for parameter 1000.
23: Called file is not valid for parameter 1500.
24: Data type of a TAG is incorrect (e.g. Index, number or bit is not U16).

Fault causes for the parameters to be set:
25: Error level has an undefined value.
26: Mode has an undefined value.
27: A value was entered as string in the tag value that is not "DEFAULT".
31: Entered drive object type unknown.
32: A device was not able to be found for the determined drive object number.
34: A trigger parameter was recursively called.
35: It is not permissible to write to the parameter via macro.
36: Check, writing to a parameter unsuccessful, parameter can only be read, not available, incorrect data type, value range or assignment incorrect.
37: Source parameter for a BICO interconnection was not able to be determined.
38: An index was set for a non-indexed (or CDS-dependent) parameter.
39: No index was set for an indexed parameter.
41: A bit operation is only permissible for parameters with the parameter format DISPLAY_BIN.
42: A value not equal to 0 or 1 was set for a BitOperation.
43: Reading the parameter to be changed by the BitOperation was unsuccessful.
51: Factory setting for DEVICE may only be executed on the DEVICE.
61: The setting of a value was unsuccessful.

Remedy:
- check the parameter involved.
- check the macro file and BICO interconnection.

See also: p0015, p0700, p1000 (Macro Connector Inputs (CI) for speed setpoints), p1500 (Macro Connector Inputs (CI) for torque setpoints)

F07083 Macro: ACX file not found
Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The ACX file (macro) to be executed was not able to be found in the appropriate directory.
Fault value (r0949, interpret decimal):
Parameter number with which the execution was started.
See also: p0015, p0700, p1000 (Macro Connector Inputs (CI) for speed setpoints), p1500 (Macro Connector Inputs (CI) for torque setpoints)
Remedy:
- check whether the file is saved in the appropriate directory on the memory card.
Example:
If p0015 is set to 1501, then the selected ACX file must be located in the following directory:
.../PMACROS/DEVICE/P15/PM001501.ACX

F07084 Macro: Condition for WaitUntil not fulfilled
Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The WaitUntil condition set in the macro was not fulfilled in a certain number of attempts.
Fault value (r0949, interpret decimal):
Parameter number for which the condition was set.
Remedy:
Check and correct the conditions for the WaitUntil loop.
### F07085  Drive: Open-loop/closed-loop control parameters changed

**Message value:** Parameter: %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:**  
Open-loop/closed-loop control parameters have had to be changed for the following reasons:  
1. As a result of other parameters, they have exceeded the dynamic limits.  
2. They cannot be used due to the fact that the hardware detected not having certain features.  
**Fault value (r0949, interpret decimal):**  
Changed parameter number.  
340:  
The motor and control parameters were automatically calculated (p0340 = 1), because the vector control was subsequently activated as configuration (r0108.2).  
See also: p0640 (Current limit), p1082 (Maximum speed), p1300 (Open-loop/closed-loop control operating mode), p1800 (Pulse frequency setpoint)  
**Remedy:** Not necessary.  
It is not necessary to change the parameters as they have already been correctly limited.

### F07086  Units changeover: Parameter limit violation due to reference value change

**Message value:** Parameter: %1  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
A reference parameter was changed in the system. This resulted in the fact that for the parameters involved, the selected value was not able to be written in the per unit notation.  
The values of the parameters were set to the corresponding violated minimum limit/maximum limit or to the factory setting.  
**Possible causes:**  
- the steady-state minimum limit/maximum limit or that defined in the application was violated.  
**Fault value (r0949, parameter):**  
Diagnostics parameter to display the parameters that were not able to be re-calculated.  
**Remedy:**  
Check the adapted parameter value and if required correct.  
See also: r9450 (Reference value change parameter with unsuccessful calculation)

### F07088  Units changeover: Parameter limit violation due to units changeover

**Message value:** Parameter: %1  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
A changeover of units was initiated. This resulted in a violation of a parameter limit  
**Possible causes for the violation of a parameter limit:**  
- When rounding off a parameter corresponding to its decimal places, the steady-state minimum limit or maximum limit was violated.  
- inaccuracies for the data type "FloatingPoint".  
**In these cases, when the minimum limit is violated then the parameter value is rounded up and when the maximum limited is violated the parameter value is rounded down.**  
**Fault value (r0949, interpret decimal):**  
Diagnostics parameter r9451 to display all parameters whose value had to be adapted.  
See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Technological unit selection)  
**Remedy:**  
Check the adapted parameter values and if required correct.  
See also: r9451 (Units changeover adapted parameters)
### A07089 Changing over units: Function module activation is blocked because the units have been changed over

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** An attempt was made to activate a function module. This is not permissible if the units have already been changed over.  
See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units)  
**Remedy:** Restore units that have been changed over to the factory setting.

### F07100 Drive: Sampling times cannot be reset

**Message value:** Parameter: %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** When resetting drive parameter (p0976) sampling times cannot be reset using p0111, p0112, p0115.  
Fault value (r0949, interpret decimal): Parameter whose setting prevents the sampling times being reset.  
See also: r0110 (Basic sampling times)  
**Remedy:**  
- continue to work with the set sampling times.  
- before resetting the drive parameters, set the basic clock cycle p0110[0] to the original value.  
See also: r0110 (Basic sampling times)

### F07110 Drive: Sampling times and basic clock cycle do not match

**Message value:** Parameter: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The parameterized sampling times do not match the basic clock cycle.  
Fault value (r0949, interpret decimal): The fault value specifies the parameter involved.  
See also: r0110, r0111, p0115  
**Remedy:** Enter the current controller sampling times so that they are identical to the basic clock cycle, e.g. by selecting p0112.  
Note which basic clock cycle is selected in p0111.  
The sampling times in p0115 can only be changed manually in the sampling times pre-setting "Expert" (p0112).  
See also: r0110, r0111, p0112, p0115

### A07200 Drive: Master control ON command present

**Message value:** -  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The ON/OFF1 command is present (no 0 signal).  
The command is either influenced via binector input p0840 (current CDS) or control word bit 0 via the master control.  
**Remedy:** Switch the signal via binector input p0840 (current CDS) or control word bit 0 via the master control to 0.

### F07220 (N, A) Drive: Master control by PLC missing

**Message value:** -  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** Irfeed: OFF1 (NONE, OFF2)  
Vector: OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The "master control by PLC" signal was missing in operation.  
- interconnection of the binector input for "master control by PLC" is incorrect (p0854).
Faults and alarms

List of faults and alarms

- the higher-level control has withdrawn the "master control by PLC" signal.
- data transfer via the fieldbus (master/drive) was interrupted.

Remedy:
- check the interconnection of the biector input for "master control by PLC" (p0854).
- check the "master control by PLC" signal and, if required, switch in.
- check the data transfer via the fieldbus (master/drive).

Note:
If the drive should continue to operate after withdrawing "master control by PLC" then fault response must be parameterized to NONE or the message type should be parameterized as alarm.

Remedy:
- check the interconnection of the biector input for "master control by PLC" (p0854).
- check the "master control by PLC" signal and, if required, switch in.
- check the data transfer via the fieldbus (master/drive).

Note:
If the drive should continue to operate after withdrawing "master control by PLC" then fault response must be parameterized to NONE or the message type should be parameterized as alarm.

F07300 (A) Drive: Line contactor feedback signal missing

Message value: -
Drive object: B_INF, VECTOR_G
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY

Cause: - the line contactor was not able to be closed within the time in p0861.
- the line contactor was not able to be opened within the time in p0861.
- the line contactor dropped out during operation
- the line contactor has closed although the drive converter is powered down.

Remedy: - check the setting of p0860.
- check the feedback circuit from the line contactor.
- increase the monitoring time in p0861.

See also: p0860 (Line cont. fdbk sig), p0861 (Line contactor monitoring time)

Reaction upon A: NONE
Acknowl. upon A: NONE

F07311 Bypass motor switch

Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause: Fault value (r0949, interpret bitwise binary):
Bit 1: Switch "Closed" feedback signal missing.
Bit 2: Switch "Open" feedback signal missing.
Bit 3: Switch feedback signal too slow.

After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.

Bit 6: Drive switch feedback signal not consistent with the bypass state.

The drive switch is closed when switching-on or when switching-in the motor.

See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

Remedy: - check the transfer of the feedback signals.
- check the switch.

F07312 Bypass LSS:

Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause: Fault value (r0949, interpret bitwise binary):
Bit 1: Switch "Closed" feedback signal missing.
Bit 2: Switch "Open" feedback signal missing.
List of faults and alarms

Faults and alarms

Bit 3: Switch feedback signal too slow.
After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.

Bit 6: Line Side Switch feedback signal not consistent with the bypass state.
When switching-on or when switching-in the motor, the line side switch is closed without this having been requested from the bypass.
See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

Remedy:
- check the transfer of the feedback signals.
- check the switch.

F07320 Drive: Automatic restart interrupted
Message value: %1
Drive object: B_INF
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause:
- The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt.
- there is no active ON command.
- the monitoring time for the power unit has expired (p0857).
- when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy:
- increase the number of restart attempts (p1211). The actual number of starting attempts is displayed in r1214.
- increase the delay time in p1212 and/or the monitoring time in p1213.
- issue an ON command (p0840).
- either increase or disable the monitoring time of the power unit (p0857).

F07320 Drive: Automatic restart interrupted
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause:
- The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt.
- there is no active ON command.
- the monitoring time for the power unit has expired (p0857).
- when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

- increase the number of restart attempts (p1211). The actual number of starting attempts is displayed in r1214.
- increase the delay time in p1212 and/or the monitoring time in p1213.
- issue an ON command (p0840).
- either increase or disable the monitoring time of the power unit (p0857).
- Reduce the delay time for resetting the start counter p1213[1] so that fewer faults are registered in the time interval.

A07321 Drive: Automatic restart active
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The automatic restart (AR) is active. When the line supply returns and/or the causes of the existing faults are removed the drive is automatically restarted. The pulses are enabled and the motor starts to rotate.
### Faults and alarms

#### List of faults and alarms

**Remedy:**
- the automatic restart (AR) should, if required, be inhibited (p1210 = 0).
- an automatic restart can be directly interrupted by withdrawing the power-on command (BI: p0840).

<td>Drive: DC link voltage maximum controller active</td>
</tr>
</tbody>
</table>

**Message value:**
- A07350 (F)
- A07400 (N)

**Drive object:**
- VECTOR_G
- All objects

**Reaction:**
- OFF2 (NONE, OFF1)
- NONE

**Acknowledge:**
- IMMEDIATELY
- NONE

**Cause:**
- During a flying restart, it was identified that the search current reached is too low. It is possible that the motor is not connected.
- It is not possible to power up with the motor rotating (no flying restart). In the following cases, the "flying restart" function is not supported:
  - Permanent-magnet and separately-excited synchronous motors (PEM, FEM): Operation with U/f characteristic.
  - Permanent-magnet synchronous motor (PEM): Encoderless operation without a Voltage Sensing Module (VSM) being connected.
- The measuring probe is connected to a bi-directional digital input/output and the terminal is set as output.
- The DC link voltage controller has been activated because the upper switch-in threshold has been exceeded (r1242, r1282).

**Remedy:**
- de-activate the "flying restart" function (p1200 = 0).
- change the open-loop/closed-loop control mode (p1300).
- connect a Voltage Sensing Module (VSM) (voltage measurement).
- set the terminal as input (p0728).
- de-select the measuring probe (p0488, p0489, p0580).

### Additional Information

- The ramp-down times are automatically increased in order to maintain the DC link voltage (r0070) within the permissible limits. There is a system deviation between the setpoint and actual speeds.
When the DC link voltage controller is switched out (disabled), this is the reason that the ramp-function generator output is set to the speed actual value.

See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration), p1280 (Vdc controller or Vdc monitoring configuration (U/f))

Remedy:
- If the controller is not to intervene:
  - increase the ramp-down times.
  - switch-off the Vdc_max controller (p1240 = 0 for vector control, p1280 = 0 for U/f control).

If the ramp-down times are not to be changed:
- use a chopper or regenerative feedback unit.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07401 (N)  Drive: DC link voltage maximum controller de-activated
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The Vdc_max controller can no longer maintain the DC link voltage (r0070) below the limit value (r1242, r1282) and was therefore switched out (disabled).
- the line supply voltage is permanently higher than specified for the power unit.
- the motor is permanently in the regenerative mode as a result of a load that is driving the motor.

Remedy:
- check whether the input voltage is within the permissible range.
- check whether the load duty cycle and load limits are within the permissible limits.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07402 (N)  Drive: DC link voltage minimum controller active
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage controller has been activated as the lower switch-in threshold has been undershot (r1246, r1286).

The kinetic energy of the motor is used to buffer the DC link. The drive is therefore braked.

See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration), p1280 (Vdc controller or Vdc monitoring configuration (U/f))

Remedy:
The alarm disappears when power supply returns.

Reaction upon N: NONE
Acknowl. upon N: NONE

F07403 (N, A)  Drive: Lower DC link voltage threshold reached
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The DC link voltage monitoring is active (p1240, p1280 = 5, 6) and the lower DC link voltage threshold (r1246, r1286) was reached in the "Operation" state.

Remedy:
- check the line supply voltage.
- check the infeed.
- adapt the device supply voltage (p0210) or the switch-on level (p1245, p1285).
- disable the DC link voltage monitoring (p1240, p1280 = 0).

Message value:  -  
Drive object:  VECTOR_G  
Reaction:  OFF2 (NONE, OFF1, OFF3)  
Acknowledge:  IMMEDIATELY  
Cause:  The DC link voltage monitoring is active (p1240, p1280 = 4, 6) and the upper DC link voltage threshold (r1242, r1282) was reached in the "Operation" state.  
Remedy:  - check the line supply voltage.  
- check the infeed module  
- adapt the device supply voltage (p0210).  
- disable the DC link voltage monitoring (p1240, p1280 = 0).  

F07405 (N, A)  Drive: Kinetic buffering minimum speed not reached  
Message value:  -  
Drive object:  VECTOR_G  
Reaction:  OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
Acknowledge:  IMMEDIATELY  
Cause:  During kinetic buffering the speed fell below minimum speed (p1257 or p1297 for vector drives with U/f control) and the line supply did not return.  
Remedy:  Check the speed threshold for the Vdc_min controller (kinetic buffering) (p1257, p1297).  
See also:  p1257 (Vdc_min controller speed threshold), p1297 (Vdc_min controller speed threshold (U/f))

Reaction upon A:  NONE  
Acknowl. upon A:  NONE  

F07407  Drive: Vdc reduction not permissible  
Message value:  -  
Drive object:  VECTOR_G  
Reaction:  OFF2  
Acknowledge:  IMMEDIATELY  
Cause:  For chassis power units, the reduction of the line voltage (see r0212.0) is only possible for closed-loop control of the DC link voltage.  
Remedy:  - Activate DC link voltage control for the motor/generator.  
- de-activate line voltage reduction (p0212.0 = 0).  
See also:  p0212 (Power unit configuration)
A07409  Drive: U/f control, current limiting controller active
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The current limiting controller of the U/f control was activated because the current limit was exceeded.
Remedy: The alarm automatically disappears after one of the following measures:
- increase current limit (p0640).
- reduce the load.
- slow down the ramp up to the setpoint speed.

F07410  Drive: Current controller output limited
Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1)
Acknowledge: IMMEDIATELY
Cause: The condition "I_act = 0 and Uq_set_1 longer than 16 ms at its limit" is present and can be caused by the following:
- motor not connected or motor contactor open.
- motor data and motor configuration (star-delta) do not match.
- no DC link voltage present.
- power unit defective.
- the "flying restart" function is not activated.
Remedy: - connect the motor or check the motor contactor.
- check the motor parameterization and the connection type (star-delta).
- check the DC link voltage (r0070).
- check the power unit.
- activate the "flying restart" function (p1200).

F07412  Drive: Commutation angle incorrect (motor model)
Message value: %1
Drive object: VECTOR_G
Reaction: ENCODER (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause: An incorrect commutation angle was detected that can result in a positive coupling in the speed controller.
Possible causes:
- The phase sequence of the output phases for the motor is incorrect (e.g. the phases are interchanged).
- the motor encoder is incorrectly adjusted with respect to the magnet position.
- the motor encoder is damaged.
- the angular commutation offset is incorrectly set (p0431).
- data to calculate the motor model has been incorrectly set (p0356 (motor-stator leakage inductance) and/or p0350 (motor-stator resistance) and/or p0352 (cable resistance).
- the changeover speed for the motor model is too low (p1752). The monitoring function only becomes effective above the changeover speed.
- pole position identification might have calculated an incorrect value when activated (p1982 = 1).
- the motor encoder speed signal is faulted.
- the control loop is instable due to incorrect parameterization.
Fault value (r0949, interpret decimal):
SERVO:
0: The comparison of the pole position angle from the encoder and motor model resulted in an excessively high value (> 80 ° electrical).
1: -
VECTOR:
0: The comparison of the pole position angle from the encoder and motor model resulted in an excessively high value (> 45 ° electrical).
1: The change in the speed signal from the motor encoder has changed by > p0492 within a current controller clock cycle.
Remedy: - Check the phase sequence for the motor, and if required, correct (wiring, p1820).
- if the encoder mounting was changed - re-adjust the encoder.
- replace the defective motor encoder.
Faults and alarms

List of faults and alarms

- correctly set the angular commutation offset (p0431). If required, determine using p1990.
- correctly set the motor stator resistance, cable resistance and motor-stator leakage inductance (p0350, p0352, p0356).
Calculate the cable resistance from the cross-section and length, check the inductance and stator resistance using the motor data sheet, measure the stator resistance, e.g. using a multimeter - and if required, again identify the values using the stationary motor data identification (p1910).
- increase the changeover speed for the motor model (p1752). The monitoring is completely de-activated for p1752 > p1082 (maximum speed).
- with pole position identification activated (p1982 = 1) check the procedure for pole position identification (p1980) and force a new pole position identification procedure by means of de-selection followed by selection (p1982 = 0 -> 1).

Note:
For High Dynamic Motors (1FK7xxx-7xxx), for applications with a higher current, if necessary, the monitoring should be disabled.

F07413  Drive: Commutation angle incorrect (pole position identification)
Message value:  
- Drive object:  VECTOR_G
Reaction:  ENCODER (NONE, OFF2)
Acknowledge:  IMMEDIATELY
Cause:  An incorrect commutation angle was detected that can result in a positive coupling in the speed controller. Within the pole position identification routine (p1982 = 2):
- a difference of > 45° electrical to the encoder angle was determined.
For VECTOR, within the encoder adjustment (p1990 = 2):
- a difference of > 6° electrical to the encoder angle was determined.
Remedy:
- correctly set the angular commutation offset (p0431).
- re-adjust the motor encoder after the encoder has been replaced.
- replace the defective motor encoder.
- check the pole position identification routine. If the pole position identification routine is not suitable for this motor type, then disable the plausibility check (p1982 = 0).

A07416  Drive: Flux controller configuration
Message value:  Parameter: %1, Index: %2, fault cause: %3
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The configuration of the flux control (p1401) is contradictory.
Alarm value (2124, interpret hexadecimal):
ccbbaaa hex
aaaa = Parameter
bb = Index
cc = fault cause
cc = 01 hex = 1 dec:
Quick magnetizing (p1401.6) for soft start (p1401.0).
cc = 02 hex = 2 dec:
Quick magnetizing (p1401.6) for flux build-up control (p1401.2).
cc = 03 hex = 3 dec:
Quick magnetizing (p1401.6) for Rs identification after restart (p0621 = 2).
Remedy:
Re fault cause = 1:
- Shut down soft start (p1401.0 = 0).
- Shut down quick magnetizing (p1401.6 = 0).
Re fault cause = 2:
- De-energize flux build-up control (p1401.2 = 0).
- Shut down quick magnetizing (p1401.6 = 0).
Re fault cause = 3:
- Re-parameterize Rs identification (p0621 = 0, 1)
- Shut down quick magnetizing (p1401.6 = 0).
F07417  Drive: Pulse technique not plausible (motor model)
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF2 (NONE)
Acknowledge:  IMMEDIATELY
Cause:  The evaluation of the test pulse response indicated incorrect values.
Fault value (r0949, interpret decimal):
0:
An impermissible pulse technique configuration was detected during ramp-up.
Possible causes:
- The pulse technique was initially selected when the system powered up (p1750.5 = 1) but the power unit component
  does not support the current oversampling required (see r0192.23). As a consequence, p1750.0 was de-selected
  automatically.
10:
   - The pulse response is repeatedly implausible.
   - Incorrect configuration of the power unit component
   - The power unit component is faulty.
20:
   - For the specified pulse amplitude, the measured pulse response is much higher than the expected value.
   - Strong oscillations have occurred.
   - The motor is short-circuited for high frequencies (output filter).
   - The motor is damaged.
Remedy:
For fault value = 0:
   - Once the pulse technique has been de-selected automatically (p1750.5=0), there are two possible options:
     - acknowledge the fault and save parameter p1750.5 = 0 -> field-oriented control mode to standstill is not used and
       replaced by transition to open-loop control at low speeds.
     - upgrade the power unit firmware (at least V04.30) -> field-oriented control mode to standstill is available.
   - For fault value = 10:
     - With active selection of the pulse technique (p1750.5 = 1):
       - POWER ON (switch-off/switch-on) the Control Unit and the power unit together again.
       - carry out a manual warm restart (p0009 = 30, p0976 = 2, 3).
     - If this does not solve the problem: Replace the power unit component.
   - For fault value = 20:
     - control parameters might have been adjusted (factory setting, commissioning).
     - filters must not be connected between motor and converter/inverter.
     - check the motor.

F07422  Drive: Reference model natural frequency > Shannon frequency
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE (OFF1, OFF2, OFF3)
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The natural filter frequency of the PT2 element for the reference model (p1433) is greater than the Shannon fre-
quency.
The Shannon frequency is calculated according to the following formula: 0.5 / p0115[1]
Remedy:
- reduce the natural frequency of PT2 element for reference model (p1433).
- reduce the speed controller sampling time (p0115[1]).

F07426 (A)  Technology controller actual value limited
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge:  IMMEDIATELY
Cause:  The actual value for the technology controller, interconnected via connector input p2264, has reached a limit.
Faults and alarms

List of faults and alarms

Fault value (r0949, interpret decimal):
1: upper limit reached.
2: lower limit reached.

Remedy:
- adapt the limits to the signal level (p2267, p2268).
- Check the actual value normalization (p0595, p0596).
- Deactivate evaluation of the limits (p2252 bit 3)

See also: p0595 (Technological unit selection), p0596 (Technological unit reference quantity), p2264 (Technology controller actual value), p2267 (Technology controller upper limit actual value), p2268 (Technology controller lower limit actual value)

A07428 (N) Technology controller parameterizing error
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Causes:
The technology controller has a parameterizing error.

Alarm value (r2124, interpret decimal):
1: The parameter value for the upper output limit of the technology controller p2291 is less than the parameter value of the lower output limit p2292.

Remedy:
1: Set p2291 to a higher value than p2292.

See also: p2291 (Technology controller maximum limiting), p2292 (Technology controller minimum limiting)

Reaction upon N: NONE
Acknowl. upon N: NONE

F07434 Drive: It is not possible to change the direction of rotation with the pulses enabled
Message value: -
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause:
A drive data set was selected - with the pulses enabled - which has a different parameterized direction of rotation (p1821).

It is only possible to change the motor direction of rotation using p1821 when the pulses are inhibited.

Remedy:
- change over the drive data set with the pulses inhibited.
- ensure that the changeover to a drive data set does not result in the motor direction of rotation being changed (i.e. for these drive data sets, the same value must be in p1821).

See also: p1821 (Dir of rot)

F07435 (N) Drive: Setting the ramp-function generator for sensorless vector control
Message value: Parameter: %1
Drive object: VECTOR_G
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY

Causes:
During operation with sensorless vector control (r1407.1) the ramp-function generator was stopped (p1141) or bypassed (p1122). An internal setting command of the ramp-function generator output caused the set setpoint speed to be frozen or was not able to be realized.

Remedy:
- de-activate the holding command for the ramp-function generator (p1141).
- do not bypass the ramp-function generator (p1122).
- suppress the fault (p2101, p2119). This is necessary if the ramp-function generator is held using jogging and the speed setpoint is simultaneously inhibited (r0898.6).

Note:
For sensorless vector control it is not practical to read in the main setpoint of the speed control via p1155 or p1160 (p0922). In this case, the main setpoint should be injected before the ramp-function generator (p1070). The reason for this is that the ramp-function generator output is automatically set when transitioning from closed-loop speed controlled into open-loop speed controlled operation.

Reaction upon N: NONE
Acknowl. upon N: NONE
F07439  Drive: Higher current controller dynamic performance not possible
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF2 (NONE)
Acknowledge:  IMMEDIATELY
Cause:  The function "Current controller dynamics higher" (p1810.11 = 1) is selected, however is not supported by the power unit (r0192.27 = 0) or by the safety technology without encoder (9506 = 1, 3).
Fault value (r0949, interpret decimal):
  1:  - firmware of the booksize power unit is not up-to-date.
      - blocksize or S120 combi power unit was used.
  2:  - Encoderless safety technology is used.
Remedy:  In general:
  - Deselect the function "Current controller dynamics higher" (p1810.11 = 0) and if required, set the current, speed and position controller again or calculate (p0340 = 4).
  For fault value = 1:
    - If necessary, upgrade the firmware of the booksize power unit to a later version (version >= 4.4).
    - Use a booksize power unit (version >= 4.4).
  For fault value = 2:
    - If an encoder with Safety position actual values sensing is available (r0458[0...2].19 = 1), reparameterize the encoderless safety technology (p9506 = 1, 3) to safety technology with encoder (p9506 = 0).
    - Set p0340 = 4.
Note:  If the firmware has already been automatically upgraded, then only a POWER ON (switch-off/switch-on) is required.
Remedy:  In general:
  - Deselect the function "Current controller dynamics higher" (p1810.11 = 0) and if required, set the current, speed and position controller again or calculate (p0340 = 4).
  For fault value = 1:
    - If necessary, upgrade the firmware of the booksize power unit to a later version (version >= 4.4).
    - Use a booksize power unit (version >= 4.4).
  For fault value = 2:
    - If an encoder with Safety position actual values sensing is available (r0458[0...2].19 = 1), reparameterize the encoderless safety technology (p9506 = 1, 3) to safety technology with encoder (p9506 = 0).
    - Set p0340 = 4.
See also: r0192 (Power unit firmware properties), p1810 (Modulator configuration), p9506 (SI Motion function specification (Control Unit))

A07440  EPOS: Jerk time is limited
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The calculation of the jerk time $T_r = \max(p2572, p2573) / p2574$ resulted in an excessively high value so that the jerk time is internally limited to 1000 ms.
Note:  The alarm is also output if jerk limiting is not active.
Remedy:  - increase the jerk limiting (p2574).
     - reduce maximum acceleration or maximum deceleration (p2572, p2573).

A07441  LR: Save the position offset of the absolute encoder adjustment
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The status of the absolute encoder adjustment has changed.
In order to permanently save the determined position offset (p2525) it must be saved in a non-volatile fashion (p0971, p0977).
Remedy:  Not necessary.
     - This alarm automatically disappears after the offset has been saved.

F07442 (A)  LR: Multiturn does not match the modulo range
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF1 (OFF2, OFF3)
Acknowledge:  IMMEDIATELY
Cause:  The ratio between the multiturn resolution and the modulo range (p2576) is not an integer number.
This results in the adjustment being set back, as the position actual value cannot be reproduced after power-off/power-on.
Faults and alarms

List of faults and alarms

Remedy: Make the ratio between the multiturn resolution and the modulo range an integer number.

The ratio \( v \) is calculated as follows:

1. Motor encoder without position tracking: 
   \[ v = \frac{(p0421 \times p2506 \times p0433 \times p2505)}{(p0432 \times p2504 \times p2576)} \]

2. Motor encoder with position tracking for the measuring gear:
   \[ v = \frac{(p0412 \times p2506 \times p2505)}{(p2504 \times p2576)} \]

3. Motor encoder with position tracking for the load gear:
   \[ v = \frac{(p2721 \times p2506 \times p0433)}{(p0432 \times p2576)} \]

4. Motor encoder with position tracking for the load and measuring gear:
   \[ v = \frac{(p2721 \times p2506)}{p2576} \]

5. Direct encoder without position tracking:
   \[ v = \frac{(p0421 \times p2506 \times p0433)}{(p0432 \times p2576)} \]

6. Direct encoder with position tracking for the measuring gear:
   \[ v = \frac{(p0412 \times p2506)}{p2576} \]

Note:
With position tracking, it is recommended that \( p0412 \) and \( p2721 \) are changed.
See also: \( p0412 \) (Measuring gear, absolute encoder, rotary, revolutions, virtual), \( p0432 \) (Gearbox factor, encoder revolutions), \( p0433 \) (Gearbox factor, motor/load revolutions), \( p2721 \) (Load gear, rotary absolute encoder, revolutions, virtual).

F07443 (A) LR: Reference point coordinate not in the permissible range

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The reference point coordinate received when adjusting the encoder via connector input p2599 lies outside the half of the encoder range and cannot be set as actual axis position.
Fault value (r0949, interpret decimal):
Maximum permissible value for the reference point coordinate.
Remedy: Set the reference point coordinate to a lower value than specified in the fault value.
Reaction upon A: NONE
Acknowl. upon A: NONE

F07446 (A) Load gear: Position tracking cannot be reset

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The position tracking cannot be reset.
Remedy: Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset position tracking, position (p2720.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).
Reaction upon A: NONE
Acknowl. upon A: NONE

F07447 Load gear: Position tracking, maximum actual value exceeded

Message value: Component number: %1, encoder data set: %2, drive data set: %3
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: When the position tracking of the load gear is configured, the drive/encoder (motor encoder) identifies a maximum possible absolute position actual value (r2723) that can no longer be represented within 32 bits.
Maximum value: \( p0408 \times p2721 \times 2^p0419 \)
Fault value (r0949, interpret hexadecimal):
ccbbaa hex
aa = encoder data set
bb = component number
cc = drive data set
See also: p0408 (Rotary encoder pulse No.), p0419 (Fine resolution absolute value Gx_XIST2 (in bits)), p2721 (Load gear, rotary absolute encoder, revolutions, virtual)

Remedy:
- reduce the fine resolution (p0419).
- reduce the multiturn resolution (p2721).
See also: p0419 (Fine resolution absolute value Gx_XIST2 (in bits)), p2721 (Load gear, rotary absolute encoder, revolutions, virtual)

**F07448 (A)** Load gear: Position tracking, linear axis has exceeded the maximum range

**Message value:** -
**Drive object:** B_INF, ENC, VECTOR_G
**Reaction:**
Infeed: NONE
Vector: OFF1 (NONE, OFF2, OFF3)
**Acknowledge:** IMMEDIATELY
**Cause:**
For a configured linear axis/no modulo axis, the currently effective motor encoder (encoder 1) has exceeded the maximum possible traversing range.
For the configured linear axis, the maximum traversing range is defined to be 64x (+/- 32x) of p0421. It should be read in p2721 and interpreted as the number of load revolutions.
Note:
Only the motor encoder in the currently effective drive data set is monitored here. The actual effective drive data set is displayed in x = r0051 and the corresponding motor encoder is specified in in p0187[x].

**Remedy:**
The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset position tracking, position (p2720.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

**F07449 (A)** Load gear: Position tracking, actual position outside tolerance window

**Message value:** %1
**Drive object:** B_INF, ENC, VECTOR_G
**Reaction:**
Infeed: NONE
Vector: OFF1 (NONE, OFF2, OFF3)
**Acknowledge:** IMMEDIATELY
**Cause:**
When powered down, the currently effective motor encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder.
Note:
Only the motor encoder in the currently effective drive data set is monitored here. The actual effective drive data set is displayed in x = r0051 and the corresponding motor encoder is specified in in p0187[x].
Fault value (r0949, interpret decimal):
Deviation (difference) to the last encoder position in increments of the absolute value after the measuring gear - if one is being used. The sign designates the traversing direction.
Note:
The deviation (difference) found is also displayed in r2724.
See also: p2722 (Load gear, position tracking tolerance window), r2724 (Load gear position difference)

**Remedy:**
Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset position tracking, position (p2720.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).
See also: p0010

**Reaction upon A:** NONE
**Acknowl. upon A:** NONE

List of faults and alarms

A07454  LR: Position actual value preprocessing does not have a valid encoder

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: One of the following problems has occurred with the position actual value preprocessing:
- an encoder is not assigned for the position actual value preprocessing (p2502 = 0).
- an encoder is assigned, but no encoder data set (p0187 = 99 or p0188 = 99 or p0189 = 99).
- an encoder an an encoder data set have been assigned, however, the encoder data set does not contain any
  encoder data (p0400 = 0) or invalid data (e.g. p0408 = 0).
Remedy: Check the encoder for the position actual value preprocessing.
See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189
  (Encoder 3 encoder data set number), p0400 (Encoder type selection)

A07455  EPOS: Maximum velocity limited

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The maximum velocity (p2571) is too high to correctly calculate the modulo correction.
Within the sampling time for positioning (p0115[5]), with the maximum velocity, a maximum of the half modulo length
must be moved through. p2571 was limited to this value.
Remedy: - reduce the maximum velocity (p2571).
- increase the sampling time for positioning (p0115[5]).

A07456  EPOS: Setpoint velocity limited

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The actual setpoint velocity is greater than the parameterized maximum velocity (p2571) and is therefore limited.
Remedy: - check the entered setpoint velocity.
- reduce the velocity override (CI: p2646).
- increase the maximum velocity (p2571).
- check the signal source for the externally limited velocity (CI: p2594).

A07457  EPOS: Combination of input signals illegal

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: An illegal combination of input signals that are simultaneously set was identified.
Alarm value (r2124, interpret decimal):
0: Jog 1 and jog 2 (p2589, p2590).
1: Jog 1 or jog 2 and direct setpoint input/MDI (p2589, p2590, p2647).
2: Jog 1 or jog 2 and start referencing (p2589, p2590, p2595).
3: Jog 1 or jog 2 and activate traversing task (p2589, p2590, p2631).
4: Direct setpoint input/MDI and starting referencing (p2647, p2595).
5: Direct setpoint input/MDI and activate traversing task (p2647, p2631).
6: Start referencing and activate traversing task (p2595, p2631).
Remedy: Check the appropriate input signals and correct.
Faults and alarms

List of faults and alarms

F07458 EPOS: Reference cam not found
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: After starting the search for reference, the axis moved through the maximum permissible distance to search for the reference cam without actually finding the reference cam.
Remedy:
- check the "reference cam" binector input (Bl: p2612).
- check the maximum permissible distance to the reference cam (p2606).
- if axis does not have any reference cam, then set p2607 to 0.

F07459 EPOS: No zero mark
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: After leaving the reference cam, the axis has traversed the maximum permissible distance between the reference cam and zero mark without finding the zero mark.
Remedy:
- check the encoder regarding the zero mark
- check the maximum permissible distance between the reference cam and zero mark (p2609).
- use an external encoder zero mark (equivalent zero mark) (p0495).
See also: p0495 (Equivalent zero mark, input terminal)

F07460 EPOS: End of reference cam not found
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: During the search for reference, when the axis reached the zero mark it also reached the end of the traversing range without detecting an edge at the binector input "reference cam" (Bl: p2612).
Maximum traversing range: -2147483648 [LU] ... -2147483647 [LU]
Remedy:
- check the "reference cam" binector input (Bl: p2612).
- repeat the search for reference.

A07461 EPOS: Reference point not set
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: When starting a traversing block/direct setpoint input, a reference point is not set (r2684.11 = 0).
Remedy: Reference the system (search for reference, flying referencing, set reference point).

A07462 EPOS: Selected traversing block number does not exist
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
A traversing block selected via Bl: p2625 to Bl: p2630 was started via Bl: p2631 = 0/1 edge "Activate traversing task".
- the number of the started traversing block is not contained in p2616[0...n].
- the started traversing block is suppressed.
Alarm value (r2124, interpret decimal):
Number of the selected traversing block that is also not available.
Remedy:
- correct the traversing program.
- select an available traversing block number.
### A07463 (F) EPOS: External block change not requested in the traversing block

| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | For a traversing block with the block change enable CONTINUE_EXTERNAL_ALARM, the external block change was not requested. Alarm value (r2124, interpret decimal): Number of the traversing block. |
| Remedy: | Resolve the reason as to why the edge is missing at binector input (BI: p2632). |
| Reaction upon F: | OFF1 |
| Acknowl. upon F: | IMMEDIATELY |

### F07464 EPOS: Traversing block is inconsistent

| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | OFF1 (OFF2, OFF3) |
| Acknowledge: | IMMEDIATELY |
| Cause: | The traversing block does not contain valid information. Alarm value (r2124, interpret decimal): Number of the traversing block with invalid information. |
| Remedy: | Check the traversing block and where relevant, take into consideration alarms that are present. |

### A07465 EPOS: Traversing block does not have a subsequent block

| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | There is no subsequent block in the traversing block. Alarm value (r2124, interpret decimal): Number of the traversing block with the missing subsequent block. |
| Remedy: | - parameterize this traversing block with the block change enable END. - parameterize additional traversing blocks with a higher block number and for the last block, using the block change enable END. |

### A07466 EPOS: Traversing block number assigned a multiple number of times

| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | The same traversing block number was assigned a multiple number of times. Alarm value (r2124, interpret decimal): Number of the traversing block that was assigned a multiple number of times. |
| Remedy: | Correct the traversing blocks. |

### A07467 EPOS: Traversing block has illegal task parameters

<p>| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | The task parameter in the traversing block contains an illegal value. Alarm value (r2124, interpret decimal): Number of the traversing block with an illegal task parameter. |
| Remedy: | Correct the task parameter in the traversing block. |</p>

Faults and alarms

List of faults and alarms

F07488  EPOS: Relative positioning not possible
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF1 (OFF2, OFF3)
Acknowledge:  IMMEDIATELY
Cause:  In the mode "direct setpoint input/MDI", for continuous transfer (p2649 = 1) relative positioning was selected (BI: p2648 = 0 signal).
Remedy:  Check the control.

A07489  EPOS: Reference point correction outside the window
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  For the function "flying referencing" the difference between the measured position at the measuring probe and the reference point coordinate lies outside the parameterized window.
Remedy:  - check the mechanical system.
- check the parameterization of the window (p2602).

F07490  EPOS: Enable signal withdrawn while traversing
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF1 (OFF2, OFF3)
Acknowledge:  IMMEDIATELY
Cause:  - for a standard assignment, another fault may have occurred as a result of withdrawing the enable signals.
- the drive is in the "switching on inhibited" state (for a standard assignment).
Remedy:  - set the enable signals or check the cause of the fault that first occurred and then result (for a standard assignment).
- check the assignment to enable the basic positioning function.

F07491 (A)  EPOS: STOP cam minus reached
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF3
Acknowledge:  IMMEDIATELY
Cause:  A 0 signal was detected at binector input BI: p2569, i.e. the STOP cam minus was reached.
For a positive traversing direction, the STOP cam minus was reached - i.e. the wiring of the STOP cam is incorrect.
Remedy:  - leave the STOP cam minus in the positive traversing direction and return the axis to the valid traversing range.
- check the wiring of the STOP cam.
Reaction upon A:  NONE
Acknowl. upon A:  NONE

F07492 (A)  EPOS: STOP cam plus reached
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF3
Acknowledge:  IMMEDIATELY
Cause:  A 0 signal was detected at binector input BI: p2570, i.e. the STOP cam plus was reached.
For a negative traversing direction, the STOP cam plus was reached - i.e. the wiring of the STOP cam is incorrect.
Remedy:  - leave the STOP cam plus in the negative traversing direction and return the axis to the valid traversing range.
- check the wiring of the STOP cam.
Reaction upon A:  NONE
Acknowl. upon A:  NONE
F07493  LR: Overflow of the value range for position actual value
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF1 (OFF2, OFF3)
Acknowledge:  IMMEDIATELY
Cause:  The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset.
Fault value (r0949, interpret decimal):
1: The position actual value (r2521) has exceeded the value range.
2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range.
3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.
Note:
For a linear encoder, the following must be maintained:
- \( p0407 \times p2503 / (2^p0418 \times 10^7) < 1 \)
- \( p0407 \times p2503 / (2^p0419 \times 10^7) < 1 \)
Remedy:  If required, reduce the traversing range or position resolution (p2506).
Increase the fine resolution of absolute position actual value (p0419).
Note for fault value = 3:
If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking
   \( p2506 \times p0433 \times p2505 / (p0432 \times p2504) \)
   \( p2506 \times p0433 \times p2505 \times p421 / (p0432 \times p2504) \) for multiturn encoders
2. Motor encoder with position tracking for measuring gear:
   \( p2506 \times p0412 \times p2505 / p2504 \)
3. Motor encoder with position tracking for load gear
   \( p2506 \times p2721 \times p0433 / p0432 \)
4. Motor encoder with position tracking for load and measuring gear
   \( p2506 \times p2721 \)
5. Direct encoder without position tracking
   \( p2506 \times p0433 / p0432 \)
   \( p2506 \times p0433 \times p0421 / p0432 \) for multiturn encoders
6. Direct encoder with position tracking for measuring gear
   \( p2506 \times p0412 \)

F07494  LR: Drive Data Set changeover in operation
Message value:  
Drive object:  VECTOR_G
Reaction:  OFF1 (OFF2, OFF3)
Acknowledge:  IMMEDIATELY
Cause:  A Drive Data Set changeover (DDS) with a change of the mechanical relationships (p2503 ... 2506), direction of rotation (p1821) or the encoder assignment (p2502) was requested in operation.
Note:
DDS: Drive Data Set
Remedy:  To changeover the drive data set, initially exit the "operation" mode.

A07495 (F)  LR: Reference function interrupted
Message value:  
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
Faults and alarms

List of faults and alarms

- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy:
- check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07496 EPOS: Enable not possible
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: It is not possible to enable the basic positioner because at least one signal is missing.
Alarm value (r2124, interpret decimal):
1: EPOS enable missing (BI: p2656).
2: Position actual value, valid feedback signal missing (BI: p2658).
Remedy: Check the appropriate binector inputs and signals.

A07497 LR: Position setting value activated
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The position actual value is set to the value received via CI: p2515while BI: p2514 = 1 signal. A possible system deviation cannot be corrected.
Remedy: Not necessary.
The alarm automatically disappears with BI: p2514 = 0 signal.

A07498 (F) LR: Measuring probe evaluation not possible
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: When evaluating the measuring probe, an error occurred.
Alarm value (r2124, interpret decimal):
6: The input terminal for the measuring probe is not set.
4098: Error when initializing the measuring probe.
4100: The measuring pulse frequency is too high.
> 50000: The measuring clock cycle is not a multiple integer of the position controller clock cycle.
Remedy: De-activate the measuring probe evaluation (BI: p2509 = 0 signal).
Re alarm value = 6:
Set the input terminal for the measuring probe (p0488, p0489 or p2517, p2518).
Re alarm value = 4098:
Check the Control Unit hardware.
Re alarm value = 4100:
Reduce the frequency of the measuring pulses at the measuring probe.
Re alarm value > 50000:
Set the clock cycle ratio of the measuring clock cycle to the position controller clock cycle to an integer multiple.
To do this, the currently effective measuring clock cycle can be determined from the alarm value as follows:
Tmeas [125 µs] = alarm value - 50000
With PROFIBUS, the measuring clock cycle corresponds to the PROFIBUS clock cycle (r2064[1]).
Without PROFIBUS, the measuring clock cycle is an internal cycle time that cannot be influenced.

Reaction upon F: OFF1
Acknowl. upon F: IMMEDIATELY
### F07499 (A) EPOS: Reversing cam approached with the incorrect traversing direction

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF3  
**Acknowledge:** IMMEDIATELY  
**Cause:** The reversing cam MINUS was approached in the positive traversing direction or the reversing cam PLUS was approached in the negative traversing direction.  
**Remedy:** - check the wiring of the reversing cam (Bl: p2613, Bl: p2614).  
- check the traversing direction to approach the reversing cam.  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE

### F07500 Drive: Power unit data set PDS not configured

**Message value:** Drive data set: %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** Only for controlled line supply infeed/regenerative feedback units: The power unit data set was not configured - this means that a data set number was not entered into the drive data set.  
Fault value (r0949, interpret decimal): Drive data set number of p0185.  
**Remedy:** The index of the power unit data set associated with the drive data set should be entered into p0185.

### F07501 Drive: Motor Data Set MDS not configured

**Message value:** Drive data set: %1  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Only for power units: The motor data set was not configured - this means that a data set number was not entered into the associated drive data set.  
Fault value (r0949, interpret decimal): The fault value includes the drive data set number of p0186.  
**Remedy:** The index of the motor data set associated with the drive data set should be entered into p0186.  
See also: p0186 (Motor Data Sets (MDS) number)

### F07502 Drive: Encoder Data Set EDS not configured

**Message value:** Drive data set: %1  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Only for power units: The encoder data set was not configured - this means that a data set number was not entered into the associated drive data set.  
Fault value (r0949, interpret decimal): The fault value includes the drive data set number of p0187, p0188 and p0189.  
The fault value is increased by 100 * encoder number (e.g. for p0189: Fault value 3xx with xx = data set number).  
**Remedy:** The index of the encoder data set associated with the drive data set should be entered into p0187 (1st encoder), p0188 (2nd encoder) and p0189 (3rd encoder).
## F07503  EPOS: STOP cam approached with the incorrect traversing direction

- **Message value**: %1
- **Drive object**: VECTOR_G
- **Reaction**: NONE
- **Acknowledge**: IMMEDIATELY
- **Cause**: The STOP cam MINUS was approached in the positive traversing direction or the STOP cam PLUS was approached in the negative traversing direction.
- **Remedy**: 
  - check the wiring of the STOP cam (Bl: p2569, Bl: p2570).
  - check the traversing direction to approach the STOP cam.

## A07504  Drive: Motor data set is not assigned to a drive data set

- **Message value**: %1
- **Drive object**: B_INF, ENC, VECTOR_G
- **Reaction**: NONE
- **Acknowledge**: NONE
- **Cause**: A motor data set is not assigned to a drive object. All of the existing motor data sets in the drive data sets must be assigned using the MDS number (p0186[0...n]). There must be at least as many drive data sets as motor data sets.
- **Alarm value (r2124, interpret decimal)**: Number of the motor data set that has not been assigned.
- **Remedy**: 
  - check the wiring of the STOP cam (Bl: p2569, Bl: p2570).
  - check the traversing direction to approach the STOP cam.

## A07505  EPOS: Task fixed stop not possible in the U/f/SLVC mode

- **Message value**: %1
- **Drive object**: VECTOR_G
- **Reaction**: NONE
- **Acknowledge**: NONE
- **Cause**: In the U/f/SLVC mode, an attempt was made to execute a traversing block with the "fixed stop" task. This is not possible.
- **Alarm value (r2124, interpret decimal)**: Number of the traversing block with an illegal task parameter.
- **Remedy**: 
  - check the wiring of the STOP cam (Bl: p2569, Bl: p2570).
  - check the traversing direction to approach the STOP cam.
  - change the open-loop/closed-loop control mode (p1300).

## F07509  Drive: Component number missing

- **Message value**: %1
- **Drive object**: B_INF, ENC, VECTOR_G
- **Reaction**: OFF2
- **Acknowledge**: IMMEDIATELY
- **Cause**: A Drive Data Set (DDS) is assigned to a Motor Data Set (MDS) or Encoder Data Set (EDS) that does not have a component number.
- **Alarm value (r2124, interpret decimal)**: nnnnnnmmmxxxyyy
  - nn: Number of the MDS/EDS.
  - mmm: Parameter number of the missing component number.
  - xx: Number of the DDS that is assigned to the MDS/EDS.
  - yyy: Parameter number that references the MDS/EDS.
- **Example**: 
  - p0131[5] = 0: There is no component number set in MDS 5.
  - Alarm value = 0513107186
Remedy: In the drive data sets, no longer assign MDS/EDS using p0186, p0187, p0188, p0189 or set a valid component number.
See also: p0131, p0141, p0142, p0186, p0187, p0188, p0189

F07510 Drive: Identical encoder in the drive data set
Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: More than one encoder with identical component number is assigned to a single drive data set. In one drive data set, it is not permissible that identical encoders are operated together.
Fault value (r0949, interpret decimal):
1000 * first identical encoder + 100 * second identical encoder + drive data set.
Example:
Fault value = 1203 means:
In drive data set 3, the first (p0187[3]) and second encoder (p0188[3]) are identical.
Remedy: Assign the drive data set to different encoders.
See also: p0141 (Encoder interface (Sensor Module) component number), p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)

F07511 Drive: Encoder used a multiple number of times
Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Each encoder may only be assigned to one drive and within a drive must - in each drive data set - either always be encoder 1, always encoder 2 or always encoder 3. This unique assignment has been violated.
Fault value (r0949, interpret decimal):
The two parameters in coded form, that refer to the same component number.
First parameter:
Index: First and second decimal place (99 for EDS, not assigned DDS)
Parameter number: Third decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS not assigned DDS)
Drive number: Fourth and fifth decimal place
Second parameter:
Index: Sixth and seventh decimal place (99 for EDS, not assigned DDS)
Parameter number: Eighth decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS, not assigned DDS)
Drive number: Ninth and tenth decimal place
See also: p0141 (Encoder interface (Sensor Module) component number)
Remedy: Correct the double use of a component number using the two parameters coded in the fault value.

F07512 Drive: Encoder data set changeover cannot be parameterized
Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Using p0141, a changeover of the encoder data set is prepared that is illegal. In this firmware release, an encoder data set changeover is only permitted for the components in the actual topology.
Alarm value (r2124, interpret decimal):
Incorrect EDS data set number.
See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)
Remedy: Every encoder data set must be assigned its own dedicated DRIVE-CLiQ socket. The component numbers of the encoder interfaces (p0141) must have different values within a drive object.
The following must apply:
p0141[0] not equal to p0141[1] not equal to ... not equal to p0141[n]
A07514 (N)  Drive: Data structure does not correspond to the interface module

Message value:  -
Drive object:  B_INF, ENC, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The interface mode "SIMODRIVE 611 universal" was set (p2038 = 1) and the data structure does not correspond to this mode.
The following settings are possible, depending on the number of data sets:
Number of DDS/MDS (p0180/p0130): p0186
1/1: p0186[0] = 0
2/2: p0186[0] = 0, p0186[1] = 1
2/1: p0186[0, 1] = 0
4/2: p0186[0, 1] = 0, p0186[1, 2] = 1
8/4: p0186[0, 1] = 0, p0186[1, 2] = 1, p0186[3, 4] = 2 ... p0186[5, 6] = 3
16/8: p0186[0, 1] = 0, p0186[1, 2] = 1, p0186[3, 4] = 2 ... p0186[14, 15] = 7
32/16: p0186[0, 1] = 0, p0186[1, 2] = 1, p0186[3, 4] = 2 ... p0186[30, 31] = 15
4/1: p0186[0, 1, 2, 3] = 0
8/2: p0186[0, 1, 2, 3] = 0, p0186[4, 5, 6, 7] = 1
16/4: p0186[0, 1, 2, 3] = 0, p0186[4, 5, 6, 7] = 1, p0186[8, 9, 10, 11] = 2, p0186[12, 13, 14, 15] = 3
32/8: p0186[0, 1, 2, 3] = 0, p0186[4, 5, 6, 7] = 1, p0186[8, 9, 10, 11] = 2 ... p0186[28, 29, 30, 31] = 7
8/1: p0186[0,...,7] = 0
16/2: p0186[0,...,7] = 0, p0186[8...15] = 1
32/4: p0186[0,...,7] = 0, p0186[8...15] = 1, p0186[16...23] = 2, p0186[24...31] = 3
16/1: p0186[0,...,15] = 0
32/2: p0186[0,...,15] = 0, p0186[16...31] = 1
32/1: p0186[0,...,31] = 0
9/2: p0186[0,...,7] = 0, p0186[8] = 1
10/2: p0186[0,...,7] = 0, p0186[8, 9] = 1
12/2: p0186[0,...,7] = 0, p0186[8...11] = 1
See also: p0180 (Number of Drive Data Sets (DDS)), p0186 (Motor Data Sets (MDS) number), p2038 (IF1 PROFIdrive STW/ZSW interface mode)

Remedy:  - Check the data structure according to the possible settings mentioned in the cause.
- check the interface mode (p2038).
Reaction upon N:  NONE
Acknowl. upon N:  NONE

F07515  Drive: Power unit and motor incorrectly connected

Message value:  %1
Drive object:  B_INF, ENC, VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY
Cause:  A power unit (via PDS) was assigned to a motor (via MDS) in a drive data set that is not connected in the target topology. It is possible that a motor has not been assigned to the power unit (p0131).
Fault value (r0949, interpret decimal):
Number of the incorrectly parameterized drive data set.

Remedy:  - assign the drive data set to a combination of motor and power unit permitted by the target topology.
- adapt the target topology.
- If required, for a missing motor, recreate the component (drive Wizard).
See also: p0121 (Power unit component number), p0131 (Motor component number), p0186 (Motor Data Sets (MDS) number)
F07516  Drive: Re-commission the data set  
Message value: %1  
Drive object: B_INF, ENC, VECTOR_G  
Reaction: NONE  
Acknowledge: IMMEDIATELY  
Cause: The assignment between the drive data set and motor data set (p0186) or between the drive data set and the encoder data set was modified (p0187). This is the reason that the drive data set must re-commissioned.  
Fault value (r0949, interpret decimal): Drive data set to be re-commissioned.  
Remedy: Commission the drive data set specified in the fault value (r0949).

F07517  Drive: Encoder data set changeover incorrectly parameterized  
Message value: %1  
Drive object: B_INF, ENC, VECTOR_G  
Reaction: OFF2  
Acknowledge: IMMEDIATELY  
Cause: An MDS cannot have different motor encoders in two different DDS.  
The following parameterization therefore results results in an error:  
p0186[0] = 0, p0187[0] = 0  
p0186[0] = 0, p0187[0] = 1  
Alarm value (r2124, interpret decimal): The lower 16 bits indicate the first DDS and the upper 16 bits indicate the second DDS.  
Remedy: If you wish to operate a motor once with one motor encoder and then another time with the other motor encoder, then you must set up two different MDSs, in which the motor data are the same.  
Example:  
p0186[0] = 0, p0187[0] = 0  
p0186[0] = 1, p0187[0] = 1

F07518  Drive: Motor data set changeover incorrectly parameterized  
Message value: %1  
Drive object: B_INF, ENC, VECTOR_G  
Reaction: NONE  
Acknowledge: IMMEDIATELY  
Cause: The system has identified that two motor data sets were incorrectly parameterized.  
Parameter r0313 (calculated from p0314, p0310, p0311), r0315 and p1982 may only have different values if the motor data sets are assigned different motors. p0827 is used to assign the motors and/contactors.  
It is not possible to toggle between motor data sets.  
Alarm value (r2124, interpret hexadecimal): xxxxyyyy:  
xxx: First DDS with assigned MDS, yyyy: Second DDS with assigned MDS  
Remedy: Correct the parameterization of the motor data sets.

A07519  Drive: Motor changeover incorrectly parameterized  
Message value: %1  
Drive object: VECTOR_G  
Reaction: NONE  
Acknowledge: NONE  
Cause: With the setting p0833.0 = 1, a motor changeover via the application is selected. This is the reason that p0827 must have different values in the appropriate motor data set.  
Alarm value (r2124, interpret hexadecimal): xxxxyyyy:  
xxx: First MDS, yyyy: Second MDS  
Remedy: - parameterize the appropriate motor data sets differently (p0827).  
- select the setting p0833.0 = 0 (motor changeover via the drive).
Faults and alarms

List of faults and alarms

A07520  Drive: Motor cannot be changed over
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The motor cannot be changed over.
Alarm value (r2124, interpret decimal):
1: The contactor for the motor that is presently active cannot be opened, because for a synchronous motor, the speed (r0063) is greater than the speed at the start of field weakening (p3048). As long as r0063 > p0348, the current in the motor does not decay in spite of the pulses being suppressed.
2: The "contactor opened" feedback signal was not detected within 1 s.
3: The "contactor closed" feedback signal was not detected within 1 s.
Remedy: Re alarm value = 1:
- Set the speed lower than the speed at the start of field weakening (r0063 < p0348).
Re alarm value = 2, 3:
- Check the feedback signals of the contactor involved.

A07530  Drive: Drive Data Set DDS not present
Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The selected drive data set is not available (p0837 > p0180). The drive data set was not changed over.
See also: p0180, p0820, p0821, p0822, p0823, p0824, r0837
Remedy:
- select the existing drive data set.
- set up additional drive data sets.

A07531  Drive: Command Data Set CDS not present
Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected command data set is not available (p0836 > p0170). The command data set was not changed over.
See also: p0810 (Command data set selection CDS bit 0), p0811 (Command data set selection CDS bit 1), r0836 (Command Data Set CDS selected)
Remedy:
- select the existing command data set.
- set up additional command data sets.

A07541  Drive: Data set changeover not possible
Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The selected drive data set changeover and the assigned motor changeover are not possible and are not carried out.
For synchronous motors, the motor contactor may only be switched for actual speeds less than the speed at the start of field weakening (r0063 < p0348).
See also: r0063 (Speed actual value)
Remedy: Reduce the speed below the speed at the start of field weakening.
### List of faults and alarms

#### A07550 (F, N) Drive: Not possible to reset encoder parameters

**Message value:** %1  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:**  
When carrying out a factory setting (e.g. using p0970 = 1), it was not possible to reset the encoder parameters. The encoder parameters are directly read out of the encoder via DRIVE-CLiQ.  
Alarm value (r2124, interpret decimal):  
Component number of the encoder involved.  
**Remedy:**  
- repeat the operation.  
- check the DRIVE-CLiQ connection.  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE  

#### F07551 Drive encoder: No commutation angle information

**Message value:** Fault cause: %1, drive data set: %2  
**Drive object:** VECTOR_G  
**Reaction:** OFF2 (IASC/DCBRAKE)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:**  
The commutation angle information is missing. This means that synchronous motors cannot be controlled (closed-loop control)  
Fault value (r0949, interpret decimal):  
yyyyxxxx dec: yyyy = fault cause, xxxx = drive data set  
yyyy = 1 dec:  
The motor encoder used does not supply an absolute commutation angle.  
yyyy = 2 dec:  
The selected ratio of the measuring gear does not match the motor pole pair number.  
**Remedy:**  
Re fault cause = 1:  
- check the encoder parameterization (p0404).  
- use an encoder with track C/D, EnDat interface of Hall sensors.  
- use an encoder with sinusoidal A/B track for which the motor pole pair number (r0313) is an integer multiple of the encoder pulse number (p0408).  
- activate the pole position identification routine (p1982 = 1).  
Re fault cause = 2:  
- the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: (p0314 * p0433) / p0432.  
Note:  
For operation with track C/D, this quotient must be less than 8.  
See also: p0402 (Gearbox type selection), p0404 (Encoder configuration effective), p0432 (Gearbox factor, encoder revolutions), p0433 (Gearbox factor, motor/load revolutions)  

#### F07552 (A) Drive encoder: Encoder configuration not supported

**Message value:** Fault cause: %1, component number: %2, encoder data set: %3  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:**  
The requested encoder configuration is not supported. Only bits may be requested in p0404 that are signaled as being supported by the encoder evaluation in r0456.  
Fault value (r0949, interpret decimal):  
ccccbbaa hex: cccc = fault cause, bb = component number, aa = encoder data set  
cccc = 1: encoder sin/cos with absolute track (is supported by SME25).  
cccc = 3: Squarewave encoder (this is supported by SMC30).  
cccc = 4: sin/cos encoder (this is supported by SMC20, SI20, SMI20, SME20, SME25).  
cccc = 10: DRIVE-CLiQ encoder (is supported by DQI).
Faults and alarms

List of faults and alarms

cccc = 12: sin/cos encoder with reference mark (this is supported by SME20).
cccc = 15: Commutation with zero mark for separately-excited synchronous motors with VECTORMV.
cccc = 23: Resolver (this is supported by SMC10, SM16).
cccc = 65535: Other function (compare r0456 and p0404).

See also: p0404 (Encoder configuration effective), r0456 (Encoder configuration supported)

Remedy:
- check the encoder parameterization (p0400, p0404).
- use the matching encoder evaluation (r0456).

Reaction upon A: NONE
Acknowl. upon A: NONE

F07553 (A)  Drive encoder: Sensor Module configuration not supported
Message value:
Encoder data set: %1, first incorrect bit: %2, incorrect parameter: %3

Drive object:
B_INF, ENC, VECTOR_G

Reaction:
Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge:
IMMEDIATELY (POWER ON)

Cause:
The Sensor Module does not support the requested configuration.
For incorrect p0430 (cc = 0), the following applies:
- In p0430 (requested functions), at least 1 bit was set that is not set in r0458 (supported functions) (exception: Bit 19, 28, 29, 30, 31).
- p1982 > 0 (pole position identification requested), but r0458.16 = 0 (pole position identification not supported).
For incorrect p0437 (cc = 1), the following applies:
- In p0437 (requested functions), at least 1 bit was set that is not set in r0459 (supported functions).
Fault value (r0949, interpret hexadecimal):

ddccbbaa hex
aa: encoder data set number
bb: first incorrect bit
cc: incorrect parameter
cc = 0: incorrect parameter is p0430
cc = 1: incorrect parameter is p0437
cc = 2: incorrect parameter is r0459
dd: reserved (always 0)

Remedy:
- check the encoder parameterization (p0430, p0437).
- use the matching encoder evaluation (r0458, r0459).

See also: p0430, p0437, r0458, r0459, p1982

Reaction upon A: NONE
Acknowl. upon A: NONE

F07555 (A)  Drive encoder: Configuration position tracking
Message value:
Component number: %1, encoder data set: %2, drive data set: %3, fault cause: %4

Drive object:
B_INF, ENC, VECTOR_G

Reaction:
Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge:
IMMEDIATELY (POWER ON)

Cause:
For position tracking, the configuration is not supported.
Position tracking can only be activated for absolute encoders.
For linear axes, it is not possible to simultaneously activate the position tracking for load and measuring gears.
Fault value (r0949, interpret hexadecimal):

ddccbbaa hex
aa: encoder data set number
bb: component number
cc: drive data set number
dd = fault cause
dd = 00 hex = 0 dec
An absolute encoder is not being used.
dd = 01 hex = 1 dec
Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM.
dd = 02 hex = 2 dec
For a linear axis, the position tracking was activated for the load and measuring gear.
dd = 03 hex = 3 dec
Position tracking cannot be activated because position tracking with another gear ratio, axis type or tolerance window
has already been detected for this encoder data set.
dd = 04 hex = 4 dec
A linear encoder is being used.
See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration)

Remedy:
- use an absolute encoder.
- if necessary, de-select the position tracking (p0411 for the measuring gear, p2720 for the load gear).
- use a Control Unit with sufficient NVRAM.
- Only activate position tracking of the load gear in the same encoder data set if the gear ratio (p2504, p2505), axis
type (p2720.1) and tolerance window (p2722) are also the same.

F07556 Measuring gear: Position tracking, maximum actual value exceeded
Message value: Component number: %1, encoder data set: %2
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY

Cause:
When the position tracking of the measuring gear is configured, the drive/encoder identifies a maximum possible
absolute position actual value (r0483) that cannot be represented within 32 bits.
Maximum value: p0408 * p0412 * 2^p0419
Fault value (r0949, interpret decimal):
aaaayyxx hex: yy = component number, xx = encoder data set
See also: p0408 (Rotary encoder pulse No.), p0412 (Measuring gear, absolute encoder, rotary, revolutions, virtual),
p0419 (Fine resolution absolute value Gx_XIST2 (in bits))

Remedy:
- reduce the fine resolution (p0419).
- reduce the multiturn resolution (p0412).
See also: p0412 (Measuring gear, absolute encoder, rotary, revolutions, virtual), p0419 (Fine resolution absolute
value Gx_XIST2 (in bits))

A07557 (F) Encoder 1: Reference point coordinate not in the permissible range
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause:
The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the
half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in
the supplementary information.

Remedy:
Set the reference point coordinate less than the value from the supplementary information.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07558 (F) Encoder 2: Reference point coordinate not in the permissible range
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause:
The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the
half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in
the supplementary information.

Remedy:
Set the reference point coordinate less than the value from the supplementary information.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

</tbody>
</table>

### Remedy:
- check the encoder parameterization (p0400, p0404).
- use a Control Unit with sufficient NVRAM.
- if required, de-select position tracking for the incremental encoder (p0411.3 = 0).

### Cause:
An incorrect configuration was identified for the "Absolute position for incremental encoder" function.
Fault cause: 1 (= 01 hex):
The "Absolute value for incremental encoder" function is not supported (r0459.13 = 0).
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
yyxx dec: yy = fault cause, xx = encoder data set
See also: r0459 (Sensor Module properties extended), p4652 (XIST1_ERW reset mode)

### Remedy:
- upgrade the Sensor Module firmware version.
- check the mode (p4652 = 1, 3 requires the property r0459.13 = 1).
- check the mode (p4652 = 1, 3 requires the property r0459.13 = 1).

### Cause:
An encoder error was signaled for encoder 1 via the PROFldrive encoder interface (G1_ZSW.15).
Alarm value (r2124, interpret decimal):
Error code from G1_XIST2, refer to the description regarding r0483.
Note:
This alarm is only output if p0480[0] is not equal to zero.

### Remedy:
Acknowledge the encoder error using the encoder control word (G1_STW.15 = 1).

### Cause:
An encoder error was signaled for encoder 2 via the PROFldrive encoder interface (G2_ZSW.15).
Alarm value (r2124, interpret decimal):
Error code from G2_XIST2, refer to the description regarding r0483.
Note:
This alarm is only output if p0480[1] is not equal to zero.

### Remedy:
Acknowledge the encoder error using the encoder control word (G2_STW.15 = 1).
Faults and alarms

List of faults and alarms

A07567 (F, N)  Drive: Encoder error in PROFIdrive encoder interface 3
Message value:  %1
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  An encoder error was signaled for encoder 3 via the PROFIdrive encoder interface (G3_ZSW.15).
Alarm value (r2124, interpret decimal):
Error code from G3_XIST2, refer to the description regarding r0483.
Note:  This alarm is only output if p0480[2] is not equal to zero.
Remedy:  Acknowledge the encoder error using the encoder control word (G3_STW.15 = 1).
Reaction upon F:  NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:  IMMEDIATELY
Reaction upon N:  NONE
Acknowl. upon N:  NONE

A07569 (F)  Encoder could not be identified
Message value:  -
Drive object:  B_INF, ENC, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  During encoder identification (waiting) with p0400 = 10100, the encoder could not be identified.
Either the wrong encoder has been installed or no encoder has been installed, the wrong encoder cable has been connected or no encoder cable has been connected to the Sensor Module, or the DRIVE-CLiQ component has not been connected to DRIVE-CLiQ.
Note:  Encoder identification must be supported by the encoder and is possible in the following cases:
- Encoder with EnDat interface
- Motor with DRIVE-CLiQ
Remedy:  - check and, if necessary, connect the encoder and/or encoder cable.
- check and, if necessary, establish the DRIVE-CLiQ connection.
- in the case of encoders that cannot be identified (e.g. encoders without EnDat interface), the correct encoder type must be entered in p0400.
Reaction upon F:  Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:  IMMEDIATELY

F07575  Drive: Motor encoder not ready
Message value:  -
Drive object:  B_INF, ENC, VECTOR_G
Reaction:  Infeed: OFF2
Vector: OFF2 (ENCODER)
Acknowledge:  IMMEDIATELY
Cause:  The motor encoder signals that it is not ready.
- initialization of encoder 1 (motor encoder) was unsuccessful.
- the function "parking encoder" is active (encoder control word G1_STW.14 = 1).
- the encoder interface (Sensor Module) is de-activated (p0145).
- the Sensor Module is defective.
Remedy:  Evaluate other queued faults via encoder 1.
### A07576

**Drive: Encoderless operation due to a fault active**

| Message value | - |
| Drive object | VECTOR_G |
| Reaction | NONE |
| Acknowledge | NONE |
| Cause | Encoderless operation is active due to a fault (r1407.13 = 1).  
Note: The behavior for faults has been set to ENCODER fault response in p0491.  
See also: p0491 (Motor encoder fault response ENCODER) |
| Remedy | - remove the cause of a possible encoder fault.  
- carry out a POWER ON (power off/on) for all components. |

### A07577 (F)

**Encoder 1: Measuring probe evaluation not possible**

| Message value | %1 |
| Drive object | VECTOR_G |
| Reaction | NONE |
| Acknowledge | NONE |
| Cause | When evaluating the measuring probe, an error occurred.  
Alarm value (r2124, interpret decimal):  
6: The input terminal for the measuring probe is not set.  
4098: Error when initializing the measuring probe.  
4100: The measuring pulse frequency is too high.  
4200: The PROFIBUS clock cycle is not a multiple of integer of the position controller clock cycle. |
| Remedy | De-activate the measuring probe evaluation (BI: p2509 = 0 signal).  
Re alarm value = 6:  
Set the input terminal for the measuring probe (p0488, p0489 or p2517, p2518).  
Re alarm value = 4098:  
Check the Control Unit hardware.  
Re alarm value = 4100:  
Reduce the frequency of the measuring pulses at the measuring probe.  
Re alarm value = 4200:  
Set the clock cycle ratio between the PROFIBUS clock cycle and the position controller clock cycle to an integer multiple. |

### A07578 (F)

**Encoder 2: Measuring probe evaluation not possible**

| Message value | %1 |
| Drive object | VECTOR_G |
| Reaction | NONE |
| Acknowledge | NONE |
| Cause | When evaluating the measuring probe, an error occurred.  
Alarm value (r2124, interpret decimal):  
6: The input terminal for the measuring probe is not set.  
4098: Error when initializing the measuring probe.  
4100: The measuring pulse frequency is too high.  
4200: The PROFIBUS clock cycle is not a multiple of integer of the position controller clock cycle. |
| Remedy | De-activate the measuring probe evaluation (BI: p2509 = 0 signal).  
Re alarm value = 6:  
Set the input terminal for the measuring probe (p0488, p0489 or p2517, p2518).  
Re alarm value = 4098:  
Check the Control Unit hardware.  
Re alarm value = 4100:  
Reduce the frequency of the measuring pulses at the measuring probe.  
Re alarm value = 4200:  
Set the clock cycle ratio between the PROFIBUS clock cycle and the position controller clock cycle to an integer multiple. |

A07593 (F, N) Encoder 1: Value range for position actual value exceeded
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset.
Fault value (r0949, interpret decimal):
1: The position actual value (r2521) has exceeded the value range.
2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range.
3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.
Remedy: If required, reduce the traversing range or position resolution.
Re alarm value = 3:
- reduce the length unit (LU) per load revolution for rotary encoders (p2506).
- increase the fine resolution of absolute position actual values (p0419).
Reaction upon F: OFF1 (OFF2, OFF3)
Acknow. upon F: IMMEDIATELY

A07595 (F, N) Encoder 3: Value range for position actual value exceeded

Message value: %1

Drive object: VECTOR_G

Reaction: NONE

Acknowledge: NONE

Cause:
The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset. Fault value (r0949, interpret decimal):
1: The position actual value (r2521) has exceeded the value range.
2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range.
3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.

Remedy:
If required, reduce the traversing range or position resolution. Re alarm value = 3:
- reduce the length unit (LU) per load revolution for rotary encoders (p2506).
- increase the fine resolution of absolute position actual values (p0419).

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

A07596 (F) Encoder 1: Reference function interrupted

Message value: -

Drive object: VECTOR_G

Reaction: NONE

Acknowledge: NONE

Cause:
An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy:
- check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

A07597 (F) Encoder 2: Reference function interrupted

Message value: -

Drive object: VECTOR_G

Reaction: NONE

Acknowledge: NONE

Cause:
An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was de-activated (BI: p2508 and BI: p2509 = 0 signal).

Remedy:
- check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.
F07599 (A)  Encoder 1: Adjustment not possible
Message value: Drive data set: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.
Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.

For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
   \[ p2906 \times p0433 \times p2505 / (p0432 \times p2504) \]
   \[ p2906 \times p0433 \times p2505 \times p0421 / (p0432 \times p2504) \] for multiturn encoders
2. Motor encoder with position tracking for measuring gear:
   \[ p2906 \times p0412 \times p2505 / p2504 \]
3. Motor encoder with position tracking for load gear:
   \[ p2906 \times p2721 \times p0433 / p0432 \]
4. Motor encoder with position tracking for load and measuring gear:
   \[ p2906 \times p2721 \]
5. Direct encoder without position tracking:
   \[ p2906 \times p0433 / p0432 \]
   \[ p2906 \times p0433 \times p0421 / p0432 \] for multiturn encoders
6. Direct encoder with position tracking for measuring gear:
   \[ p2906 \times p0412 \]

Reaction upon A: NONE
Acknow. upon A: NONE

F07600 (A)  Encoder 2: Adjustment not possible
Message value: Drive data set: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.
Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:

1. Motor encoder without position tracking:
   \[ p_{2506} \times p_{0433} \times p_{2505} / (p_{0432} \times p_{2504}) \]
   \[ p_{2506} \times p_{0433} \times p_{2505} \times p_{0421} / (p_{0432} \times p_{2504}) \] for multiturn encoders

2. Motor encoder with position tracking for measuring gear:
   \[ p_{2506} \times p_{0412} / p_{2504} \]

3. Motor encoder with position tracking for load gear:
   \[ p_{2506} \times p_{2721} \times p_{0433} / p_{0432} \]

4. Motor encoder with position tracking for load and measuring gear:
   \[ p_{2506} \times p_{2721} \]

5. Motor encoder with position tracking:
   \[ p_{2506} \times p_{0412} / p_{0432} \] for multiturn encoders

6. Direct encoder without position tracking:
   \[ p_{2506} \times p_{0433} / p_{0432} \]
   \[ p_{2506} \times p_{0433} \times p_{0421} / p_{0432} \]

7. Direct encoder with position tracking for measuring gear:
   \[ p_{2506} \times p_{0412} \]

Reaction upon A: NONE
Acknowled. upon A: NONE

F07601 (A) Encoder 3: Adjustment not possible

Message value: Drive data set: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY

Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.

Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.

For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:

1. Motor encoder without position tracking:
   \[ p_{2506} \times p_{0433} \times p_{2505} / (p_{0432} \times p_{2504}) \]
   \[ p_{2506} \times p_{0433} \times p_{2505} \times p_{0421} / (p_{0432} \times p_{2504}) \] for multiturn encoders

2. Motor encoder with position tracking for measuring gear:
   \[ p_{2506} \times p_{0412} / p_{2504} \]

3. Motor encoder with position tracking for load gear:
   \[ p_{2506} \times p_{2721} \times p_{0433} / p_{0432} \]

4. Motor encoder with position tracking for load and measuring gear:
   \[ p_{2506} \times p_{2721} \]

5. Motor encoder with position tracking:
   \[ p_{2506} \times p_{0412} / p_{0432} \] for multiturn encoders

6. Direct encoder without position tracking:
   \[ p_{2506} \times p_{0433} / p_{0432} \]
   \[ p_{2506} \times p_{0433} \times p_{0421} / p_{0432} \]

7. Direct encoder with position tracking for measuring gear:
   \[ p_{2506} \times p_{0412} \]

Reaction upon A: NONE
Acknowled. upon A: NONE

F07800 Drive: No power unit present

Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY

Cause: The power unit parameters cannot be read or no parameters are stored in the power unit.
It is possible that the DRIVE-CLiQ cable between the Control Unit and power unit is interrupted or defective.

Note: This fault also occurs if an incorrect topology was selected in the commissioning software and this parameterization is then downloaded to the Control Unit.
See also: r0200 (Power unit code number actual)
Remedy:
- carry out a POWER ON (power off/on) for all components.
- check the DRIVE-CLiQ cable between the Control Unit and power unit.
- Check the power unit and replace if necessary.
- check the Control Unit, and if required replace it.
- after correcting the topology, the parameters must be again downloaded using the commissioning software.

F07801 Drive: Motor overcurrent
Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The permissible motor limit current was exceeded.
- effective current limit set too low.
- current controller not correctly set.
- UIf operation: Up ramp was set too short or the load is too high.
- UIf operation: Short-circuit in the motor cable or ground fault.
- UIf operation: Motor current does not match current of power unit.
- Switch to rotating motor without flying restart function (p1200).
Note:
Limit current = 2 x minimum (p0640, 4 x p0305 x p0306) >= 2 x p0305 x p0306
Remedy:
- check the current limits (p0640).
- vector control: Check the current controller (p1715, p1717).
- UIf control: Check the current limiting controller (p1340 ... p1346).
- increase the up ramp (p1120) or reduce the load.
- check the motor and motor cables for short-circuit and ground fault.
- check the motor for the star-delta configuration and rating plate parameterization.
- check the power unit and motor combination.
- Choose "flying restart" function (p1200) if switched to rotating motor.

F07802 Drive: Infeed or power unit not ready
Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: After an internal power-on command, the infeed or drive does not signal ready.
- monitoring time is too short.
- DC link voltage is not present.
- associated infeed or drive of the signaling component is defective.
- supply voltage incorrectly set.
Remedy:
- increase the monitoring time (p0857).
- ensure that there is a DC link voltage. Check the DC link busbar. Enable the infeed.
- replace the associated infeed or drive of the signaling component.
- check the line supply voltage setting (p0210).
See also: p0857 (Power unit monitoring time)

A07805 (N) Infeed: Power unit overload I2t
Message value: -
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: Alarm threshold for I2t overload (p0294) of the power unit exceeded.
Remedy:
- reduce the continuous load.
- adapt the load duty cycle.
Reaction upon N: NONE
Acknowl. upon N: NONE
A07805 (N)  Drive: Power unit overload I²t
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: Alarm threshold for I²t overload (p0294) of the power unit exceeded. The response parameterized in p0290 becomes active. See also: p0290 (Power unit overload response)
Remedy: - reduce the continuous load.
- adapt the load duty cycle.
- check the assignment of the rated currents of the motor and Motor Module.
Reaction upon N: NONE
Acknowl. upon N: NONE

F07807  Drive: Short-circuit/ground fault detected
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: A phase-phase short-circuit or ground fault was detected at the motor-side output terminals of the converter. Fault value (r0949, interpret decimal):
1: Short-circuit, phases U-V
2: Short-circuit, phases U-W
3: Short-circuit, phases V-W
4: Ground fault with overcurrent
1xxxx: Ground fault with current in phase U detected (xxxx = component of the current in phase V in per mille)
2xxxx: Ground fault with current in phase V detected (xxxx = component of the current in phase U in per mille)
Note: Also when interchanging the line and motor cables is identified as a motor-side short circuit. Connecting to a motor that is either not de-energized or partially de-energized is possibly detected as ground fault.
Remedy: - check the motor-side converter connection for a phase-phase short-circuit.
- rule-out interchanged line and motor cables.
- check for a ground fault.
For a ground fault:
- do not enable the pulses when connecting to a rotating motor without the "Flying restart" function activated (p1200).
- increase the de-energization time (p0347).
- If required, deactivate the monitoring (p1901).

F07808 (A)  HF damping module: damping not ready
Message value: New message: %1
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: When switching on or in the switched-on state, the HF damping module does not return a ready signal.
Remedy: - Check the DRIVE-CLiQ wiring to the HF damping module.
- check the 24 V supply voltage.
- if required, replace the HF damping module.
Note: HF Damping Module
Reaction upon A: NONE
Acknowl. upon A: NONE
F07810  Drive: Power unit EEPROM without rated data
Message value:  -
Drive object:  B_INF, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  No rated data are stored in the power unit EEPROM.
See also: p0205 (Power unit application), r0206 (Rated power unit power), r0207 (Rated power unit current), r0208 (Rated power unit line supply voltage), r0209 (Power unit, maximum current)
Remedy:  Replace the power unit or inform Siemens Customer Service.

F07815  Drive: Power unit has been changed
Message value:  Parameter: %1
Drive object:  B_INF
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  The code number of the actual power unit does not match the saved number. This only occurs if the comparator in p9906 or p9908 is not at 2 (low) or 3 (minimum). Fault value (r0949, interpret decimal):
Number of the incorrect parameter.
See also: r0200 (Power unit code number actual), p0201 (Power unit code number)
Remedy:  Connect the original power unit and power up the Control Unit again (POWER ON) or set p0201 to r0200 and exit commissioning with p0010 = 0.
For infeeds, the following applies:
Line reactors or line filters must be used that are specified for the new power unit. A line supply and DC link identification routine (p3410 = 5) must then be carried out. It is not possible to change the power unit without re-commissioning the system if the type of infeed (A_Infeed, B_Infeed, S_Infeed), the type of construction/design (booksize, chassis) or the voltage class differ between the old and new power units.
For inverters, the following applies:
If the new power unit is accepted, then if required, the current limit (p0640) can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same).
If not only the power unit is changed, but also the motor, then the motor must be re-commissioned (e.g. using p0010 = 1). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ.
See also: r0200 (Power unit code number actual)

F07815  Drive: Power unit has been changed
Message value:  Parameter: %1
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  The code number of the actual power unit does not match the saved number. This only occurs if the comparator in p9906 or p9908 is not at 2 (low) or 3 (minimum). Fault value (r0949, interpret decimal):
Number of the incorrect parameter.
See also: r0200 (Power unit code number actual), p0201 (Power unit code number)
Remedy:  - Connect the original power unit and switch on the Control Unit again (POWER ON).
- Set p0201 to r0200 and exit commissioning with p0010 = 0.
Note:
If the power unit type was changed (see r0203) or the motor replaced, then the motor must be recommissioned (e.g. using p0010 = 1, p3900 = 3, p1900 = 1, 2). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ.
If the new power unit is accepted, then if required, the current limit p0640 can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same).
If the comparison stage in p9906 is set to 2, 3, then commissioning can be exited (p0010 = 0) and the fault acknowledged. This procedure is not recommended for different power unit types.
See also: r0200 (Power unit code number actual)
Faults and alarms

List of faults and alarms

A07820  Drive: Temperature sensor not connected
Message value:  %1
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The temperature sensor for monitoring the motor temperature, specified in p0600, is not available.
Alarm value (r2124, interpret decimal):
1: p0601 = 10 (SME), but in p0600 - not evaluated via encoder is selected.
2: p0600 = 10 (BICO), but the signal source (p0603) is not interconnected.
3: p0601 = 11 (BICO), but in p0600 - not evaluated via BICO interconnection is selected (20 or 21).
4: p0601 = 11 (BICO) and p4610-p4613 > 0, but the associated signal source (p0608, p0609) is not interconnected.
5: Component with sensor evaluation not present or has been removed in the meantime.
6: Evaluation via Motor Module not possible (r0192.21).
Remedy:  Re alarm value = 1:
- In p0600 set an encoder with temperature sensor.
Re alarm value = 2:
- interconnect p0603 with the temperature signal.
Re alarm value = 3, 4:
- set the available temperature sensor (p0600, p0601).
- set p4610 ... p4613 = 0 (no sensor), or interconnect p0608 or p0609 with an external temperature signal.
Re alarm value = 5:
- connect the component with the temperature sensor. Check the DRIVE-CLiQ connection.
Re alarm value = 6:
- update the Motor Module firmware. Connect temperature sensor via encoder.
See also: p0600 (Motor temperature sensor for monitoring), p0601

A07825 (N)  Drive: Simulation mode activated
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The simulation mode is activated.
The drive can only be powered up if the DC link voltage is less than 40 V.
Remedy:  Not necessary.
The alarm automatically disappears if simulation mode is de-activated with p1272 = 0.
Reaction upon N:  NONE
Acknowl. upon N:  NONE

F07826  Drive: DC link voltage for simulation operation too high
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY
Cause:  The simulation mode is activated and the DC link voltage is greater than the permissible value of 40 V.
Remedy:  - switch out (disable) simulation mode (p1272 = 0) and acknowledge the fault.
- reduce the input voltage in order to reach a DC link voltage below 40 V.

F07840  Drive: Infeed operation missing
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF2 (NONE)
Acknowledge:  IMMEDIATELY
Cause:  The signal "infeed operation" is not present although the enable signals for the drive have been present for longer
than the parameterized monitoring time (p0857).
- infeed not operational.
- interconnection of the binector input for the ready signal is either incorrect or missing (p0864).
- infeed is presently carrying out a line supply identification routine.
Faults and alarms

List of faults and alarms

Remedy: 
- bring the infeed into an operational state.
- check the interconnection of the binector input for the signal "infeed operation" (p0864).
- increase the monitoring time (p0857).
- wait until the infeed has completed the line supply identification routine.

See also: p0857 (Power unit monitoring time), p0864 (Infeed operation)

F07841 (A) Drive: Infeed operation withdrawn

Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY

Cause: The signal "infeed operation" was withdrawn in operation.
- interconnection of the binector input for the signal "infeed operation" is either incorrect or missing (p0864).
- the enable signals of the infeed were disabled.
- due to a fault, the infeed withdraws the signal "infeed operation".

Remedy: 
- check the interconnection of the binector input for the "infeed operation" signal (p0864).
- check the enable signals of the infeed and if required, enable.
- remove and acknowledge an infeed fault.

Note:
If this drive is intended to back up the DC link regeneratively, then the fault response must be parameterized for NONE, OFF1 or OFF3, so that the drive can continue to operate even after the infeed fails.

A07850 (F) External alarm 1

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE

**Remedy:** Eliminate the causes of this fault.  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE
F07890 Internal voltage protection / internal armature short-circuit with STO active
Message value: -
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The internal armature short-circuit (p1231 = 4) is not possible as Safe Torque Off (STO) is enabled. The pulses cannot be enabled.
Remedy: Switch out the internal armature short-circuit (p1231=0) or de-activate Safe Torque Off (p9501 = 0).
Note: STO: Safe Torque Off / SH: Safe standstill

A07899 (N) Drive: Stall monitoring not possible
Message value: Parameter: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: Stall monitoring is not possible, because a change was made into the open-loop speed controlled mode before the wait time p2177 had expired. This situation can only occur, if the following conditions apply:
p1300 = 20
p2177 > p1758
p1750.2 = 0
p1750.8 = 0
Remedy:
- Deactivate the changeover into open-loop speed controlled operation when operating at the torque limit (p1750.6 = 0).
Condition:
No slow reversing through the open-loop speed controlled operating range p1755 within the time p1758 when operating at the torque limit.
- shorten the stall detection wait time (p2177 < p1758).
- Activate closed-loop controlled operation from standstill and higher (p1750.2 = 1).
Condition:
There is no active load, for example, a hoisting gear
- Use an operating mode with encoder (p1300 = 21).

F07900 (N, A) Drive: Motor blocked
Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: Motor has been operating at the torque limit longer than the time specified in p2177 and below the speed threshold in p2175. This signal can also be initiated if the speed actual value is oscillating and the speed controller output repeatedly goes to its limit. If the simulation mode is enabled (p1272 = 1) and the closed-loop control with speed encoder activated (p1300 = 21), then the inhibit signal is generated if the encoder signal is not received from a motor that is driven with the torque setpoint of the closed-loop control.
See also: p2175 (Motor blocked speed threshold), p2177 (Motor blocked delay time)
Remedy:
- check that the motor can freely move.
- check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539.
- check the parameter, message "Motor blocked" and if required, correct (p2175, p2177).
- check the inversion of the actual value (p0410).
- check the motor encoder connection.
- check the encoder pulse number (p0408).
- for SERVO with encoderless operation and motors with low power ratings (< 300 W), increase the pulse frequency (p1800).
- after de-selecting the "Basic positioner" (EPOS) function mode, check the motoring (p1528) and regenerative (p1529) torque limit and modify again.
- in the simulation mode and operation with speed encoder, the power unit to which the motor is connected must be powered up and must be supplied with the torque setpoint of the simulated closed-loop control. Otherwise, change over to encoderless control (see p1300).

**F07901**  
**Drive: Motor overspeed**

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF2 (IASC/DCBRAKE)  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
The maximum permissible speed was either positively or negatively exceeded.  
The maximum permissible positive speed is formed as follows: Minimum (p1082, CI: p1085) + p2162  
The maximum permissible negative speed is formed as follows: Maximum (p1082, CI: 1088) - p2162  
**Remedy:**  
The following applies for a positive direction of rotation:  
- check r1084 and if required, correct p1082, CI:p1085 and p2162.  
The following applies for a negative direction of rotation:  
- check r1087 and if required, correct p1082, CI:p1088 and p2162.  
Activate pre-control of the speed limiting controller (p1401.7 = 1).  
Increase the hysteresis for the overspeed signal p2162. This upper limit is dependent upon the maximum motor speed p0322 and the maximum speed p1082 of the setpoint channel.

**F07902 (N, A)**  
**Drive: Motor stalled**

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
The system has identified that the motor has stalled for a time longer than is set in p2178.  
Fault value (r0949, interpret decimal):  
1: Stall detection using r1408.11 (p1744 or p0492).  
2: Stall detection using r1408.12 (p1745).  
3: Stall detection using r0056.11 (only for separately excited synchronous motors).  
See also: p1744 (Motor model speed threshold stall detection), p2178 (Motor stalled delay time)  
**Remedy:**  
It should always be carefully ensured that the motor data identification (p1910) as well as the rotating measurement (p1960) were carried out (also refer to r3925). For synchronous motors with encoder, the encoder must have been adjusted (p1990).  
For closed-loop speed and torque control with speed encoder, the following applies:  
- check the speed signal (interrupted cable, polarity, pulse number, broken encoder shaft).  
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the same motor that is controlled for the data set changeover.  
If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased. For resolvers with a high signal ripple, for example p0492 should be increased and the speed signal smoothed (p1441, p1442).

For closed-loop speed and torque control without speed encoder, the following applies:  
- Check whether the drive stalls solely due to the load in controlled mode (r1750.0) or when the speed setpoint is still zero. If so, increase the current setpoint via p1610 or set p1750.2 = 1 (sensorless vector control to standstill for passive loads).  
- If the motor excitation time (p0346) was significantly reduced and the drive stalls when it is switched on and run immediately, p0346 should be increased again or quick magnetizing selected (p1401).  
- check the current limits (p0640, r0067, r0289). If the current limits are too low, then the drive cannot be magnetized.  
- check the current controller (p1715, p1717) and the speed adaptation controller (p1764, p1767). If the dynamic response was significantly reduced, then this should be increased again.

- If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased.
The following generally apply for closed-loop and torque control:
- Check whether the motor cables are disconnected.
- If the fault occurs with fault value 2 when the motor accelerates very quickly to the field weakening range, the deviation between the flux setpoint and flux actual value can be reduced and, in turn, the message prevented, by reducing p1596.

For separately-excited synchronous motors (closed-loop control with speed encoder), the following applies:
- check the speed signal (interrupted cable, polarity, pulse number).
- ensure the correct motor parameterization (rating plate and equivalent circuit diagram parameters).
- check the excitation equipment and the interface to the closed-loop control.
- encoder the highest possible dynamic response of the closed-loop excitation current control.
- check the speed control for any tendency to oscillate and if resonance effects occur, use a bandstop filter.
- do not exceed the maximum speed (p2162).

If there is no fault, then the delay time can be increased (p2178).

A07903 Drive: Motor speed deviation
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The absolute value of the speed difference from the two setpoints (p2151, p2154) and the speed actual value (r2169) exceeds the tolerance threshold (p2163) longer than tolerated (p2164, p2166).
Possible causes could be:
- the load torque is greater than the torque setpoint.
- when accelerating, the torque/current/power limit is reached. If the limits are not sufficient, then it is possible that the drive has been dimensioned too small.
- for closed-loop torque control, the speed setpoint does not track the speed actual value.
- for active Vdc controller.

Remedy:
- increase p2163 and/or p2166.
- increase the torque/current/power limits.
- for closed-loop torque control: The speed setpoint should track the speed actual value.
- de-activate alarm with p2149.0 = 0.

A07904 (N) External armature short-circuit: Contactor feedback signal "Closed" missing
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: When closing, the contactor feedback signal (p1235) did not issue the signal "Closed" (r1239.1 = 1) within the monitoring time (p1236).

Remedy:
- check that the contactor feedback signal is correctly connected (p1235).
- check the logic of the contactor feedback signal (r1239.1 = 1: "Closed", r1239.1 = 0: "Open").
- increase the monitoring time (p1236).
- if required, set the external armature short-circuit without contactor feedback signal (p1231 = 2).
F07905 (N, A)  
External armature short-circuit: Contactor feedback signal "Open" missing

F07906  
Armature short-circuit / internal voltage protection: Parameterization error

Message value:  
Fault cause: %1, motor data set: %2

Drive object:  
VECTOR_G

Reaction:  
OFF2

Acknowledge:  
IMMEDIATELY

Cause:  
The armature short-circuit is incorrectly parameterized.

 Fault value (r0949, interpret decimal):
zzzzyyxx: zzzz = fault cause, xx = motor data set
zzzz = 0001 hex = 1 dec:
A permanent-magnet synchronous motor has not been selected.
zzzz = 0002 hex = 2 dec:
No induction motor selected.
zzzz = 0065 hex = 101 dec:
External armature short-circuit: Output (r1239.0) not wired.
zzzz = 0066 hex = 102 dec:
External armature short-circuit with contactor feedback signal: No feedback signal connected (Bl:p1235).
zzzz = 0067 hex = 103 dec:
External armature short-circuit without contactor feedback signal: Wait time when opening (p1237) is 0.
zzzz = 00C9 hex = 201 dec:
Internal voltage protection: The maximum output current of the Motor Module (r0209) is less than 1.8 x motor short-circuit current (r0331).
zzzz = 00CA hex = 202 dec:
Internal voltage protection: A Motor Module in booksize or chassis format is not being used.
zzzz = 00CB hex = 203 dec:
Internal voltage protection: The motor short-circuit current (p0320) is greater than the maximum motor current (p0323).
zzzz = 00CC hex = 204 dec:
Internal voltage protection: The activation (p1231 = 4) is not given for all motor data sets with synchronous motors (p0300 = 2xx, 4xx).

Remedy:  
For fault value = 1:
- an armature short-circuit / voltage protection is only permissible for permanent-magnetic synchronous motors. The highest position of the motor type in p0300 must either be 2 or 4. 
For fault value = 101:
- the contactor for the external armature short-circuit configuration should be controlled using output signal r1239.0. 
The signal can, e.g. be connected to an output terminal via binector input p0738. Before this fault can be acknowledged, p1231 must be set again. 
For fault value = 102:
- if the external armature short-circuit with contactor feedback signal (p1231 = 1) is selected, this feedback signal must be connected to an input terminal (e.g. r722.x) and then connected to Bl: p1235. 
- alternatively, the external armature short-circuit without contactor feedback signal (p1231 = 2) can be selected. 
For fault value = 103:
- if the external armature short-circuit without contactor feedback signal (p1231 = 2) is selected, then a delay time must be parameterized in p1237. This time must always be greater than the actual contactor opening time, as otherwise the Motor Module would be short-circuited!
For fault value = 201:
- a Motor Module with a higher maximum current or a motor with a lower short-circuit current must be used. The maximum Motor Module current must be higher than 1.8 x short-circuit current of the motor.

For fault value = 202:
- for internal voltage protection, use a Motor Module in booksize or chassis format.

For fault value = 203:
- for internal voltage protection, only use short-circuit proof motors.

For fault value = 204:
- The internal voltage protection must either be activated for all motor data sets with synchronous motors (p0300 = 2xx, 4xx) (p1231 = 3) or it must be de-activated for all motor data sets (p1231 not equal to 3). This therefore ensures that the protection cannot be accidentally withdrawn as a result of a data set changeover. The fault can only be acknowledged if this condition is fulfilled.

**F07907 Internal armature short-circuit: Motor terminals are not at zero potential after pulse suppression**

**Message value:**
- 1

**Drive object:**
VECTOR_G

**Reaction:**
NONE

**Acknowledge:**
IMMEDIATELY

**Cause:**
The function "Internal voltage protection" (p1231 = 3) was activated.
The following must be observed:
- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)! It is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to continually conduct 180% short-circuit current (r0331) of the motor (r0289).
- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.
- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.
- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.
- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

**Remedy:**
Not necessary.
This a note for the user.

**A07908 Internal armature short-circuit active**

**Message value:**
- 1

**Drive object:**
VECTOR_G

**Reaction:**
NONE

**Acknowledge:**
NONE

**Cause:**
The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal armature short-circuit is selected (p1231 = 4);

**Remedy:**
For synchronous motors, the armature short-circuit braking is activated with binector input p1230 = 1 signal.
See also: p1230 (Armature short-circuit / DC braking activation), p1231 (Armature short-circuit / DC braking configuration)

**F07909 Internal voltage protection: De-activation only effective after POWER ON**

**Message value:**
- 1

**Drive object:**
VECTOR_G

**Reaction:**
NONE

**Acknowledge:**
POWER ON

**Cause:**
The de-activation of the internal voltage protection (p1231 not equal to 3) only becomes effective after POWER ON. The status signal r1239.6 = 1 indicates that the internal voltage protection is ready.

**Remedy:**
Not necessary.
This a note for the user.
### A07910 (N) Drive: Motor overtemperature

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:**  
- KTY or no sensor:  
  The measured motor temperature or temperature of motor temperature model 2 has exceeded the alarm threshold (p0604, p0616). The response parameterized in p0610 becomes active.  
- PTC or bimetallic NC contact:  
  The response threshold of 1650 Ohm was exceeded or the NC contact opened.  
- Alarm value (r2124, interpret decimal):  
  - SME not selected in p0601:  
    11: No output current reduction.  
    12: Output current reduction active.  
  - SME or TM120 selected in p0601 (p0601 = 10, 11):  
    this is the number of the temperature channel leading to the message.  
  See also: p0604 (Mot_temp_mod 1/KTY alarm threshold), p0610 (Motor overtemperature response)  
**Remedy:**  
- check the motor load.  
- check the motor ambient temperature and cooling.  
- check PTC or bimetallic NC contact.  
  See also: p0612 (Mot_temp_mod activation), p0625 (Motor ambient temperature), p0626 (Motor overtemperature, stator core), p0627 (Motor overtemperature, stator winding), p0628 (Motor overtemperature rotor winding)

**Acknowledge upon N:** NONE

### F07913 Excitation current outside the tolerance range

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
The difference between the excitation current actual value and setpoint has exceeded the tolerance:  
\[ \text{abs}(r1641 - r1626) > p3201 + p3202 \]  
The cause of this fault is again reset for \( \text{abs}(r1641 - r1626) < p3201 \).  
**Remedy:**  
- check the parameterization (p1640, p3201, p3202).  
- check the interfaces to the excitation equipment (r1626, p1640).  
- check the excitation equipment.  

### F07914 Flux out of tolerance

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
The difference between the flux actual value and setpoint has exceeded the tolerance:  
\[ \text{abs}(r0084 - r1598) > p3204 + p3205 \]  
The cause of this fault is again reset for \( \text{abs}(r0084 - r1598) < p3204 \).  
The fault is only issued after the delay time in p3206 has expired.  
**Remedy:**  
- check the parameterization (p3204, p3205).  
- check the interfaces to the excitation equipment (r1626, p1640).  
- check the excitation equipment.  
- check the flux control (p1590, p1592, p1597).  
- check the control for oscillation and take the appropriate counter measures (e.g. optimize the speed control loop, parameterize a bandstop filter).
### A07918 (N) Three-phase setpoint generator operation selected/active

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Only for separately excited synchronous motors (p0300 = 5):  
The actual open-loop/closed-loop control mode is I/f control (open-loop) with a fixed current (p1300 = 18).  
The speed is entered via the setpoint channel and the current setpoint is given by the minimum current (p1620).  
It must be ensured that in this mode, the control dynamic performance is very limited. This is the reason that longer ramp-up times should be set for the setpoint speed than for normal operation.  
See also: p1620 (Stator current, minimum)  
**Remedy:** Select another open-loop/closed-loop control mode  
See also: p1300 (Open-loop/closed-loop control operating mode)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

### A07920 Drive: Torque/speed too low

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** NONE

**Cause:** The torque deviates from the torque/speed envelope characteristic (too low).  
See also: p2181 (Load monitoring response)  
**Remedy:** - check the connection between the motor and load.  
- adapt the parameterization corresponding to the load.

### A07921 Drive: Torque/speed too high

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The torque deviates from the torque/speed envelope characteristic (too high).  
**Remedy:** - check the connection between the motor and load.  
- adapt the parameterization corresponding to the load.

### A07922 Drive: Torque/speed out of tolerance

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The torque deviates from the torque/speed envelope characteristic.  
**Remedy:** - check the connection between the motor and load.  
- adapt the parameterization corresponding to the load.

### F07923 Drive: Torque/speed too low

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The torque deviates from the torque/speed envelope characteristic (too low).  
**Remedy:** - check the connection between the motor and load.  
- adapt the parameterization corresponding to the load.
### List of faults and alarms

#### F07924 Drive: Torque/speed too high
- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** OFF1 (NONE, OFF2, OFF3)
- **Acknowledge:** IMMEDIATELY
- **Cause:** The torque deviates from the torque/speed envelope characteristic (too high).
- **Remedy:**
  - check the connection between the motor and load.
  - adapt the parameterization corresponding to the load.

#### F07925 Drive: Torque/speed out of tolerance
- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** OFF1 (NONE, OFF2, OFF3)
- **Acknowledge:** IMMEDIATELY
- **Cause:** The torque deviates from the torque/speed envelope characteristic.
- **Remedy:**
  - check the connection between the motor and load.
  - adapt the parameterization corresponding to the load.

#### A07927 DC braking active
- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The motor is braked with DC current. DC braking is active.
  1) A message with response DCBRK is active. The motor is braked with the braking current set in p1232 for the duration set in p1233. If the standstill threshold p1226 is undershot, then braking is prematurely canceled.
  2) DC braking has been activated at binector input p1230 with the DC braking set (p1230 = 4). Braking current p1232 is injected until this binector input becomes inactive.
- **Remedy:** Not necessary. The alarm automatically disappears once DC braking has been executed.

#### F07928 Internal voltage protection initiated
- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal voltage protection is selected (p1231 = 3).
- **Remedy:** If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module automatically decides - using the DC link voltage - as to whether the armature short-circuit should be activated. The armature short-circuit is activated and response OFF2 is initiated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the armature short-circuit is withdrawn. If the motor is still in a critical speed range, the armature short-circuit is re-activated once the DC link voltage exceeds the threshold of 800 V. If the autonomous (independent) internal voltage protection is active (r1239.5 = 1) and the line supply returns (450 V < DC link voltage < 800 V), the armature short-circuit is withdrawn after 3 minutes.

#### F07930 Drive: Brake control error
- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** OFF1 (NONE, OFF2, OFF3)
- **Acknowledge:** IMMEDIATELY
- **Cause:** The Control Unit has detected a brake control error.
Fault value (r0949, interpret decimal):
- 10, 11: Fault in "open holding brake" operation.
  - No brake connected or wire breakage (check whether brake releases for p1278 = 1).
  - Ground fault in brake cable.
- 20: Fault in "brake open" state.
  - Short-circuit in brake winding.
- 30, 31: Fault in "close holding brake" operation.
  - No brake connected or wire breakage (check whether brake releases for p1278 = 1).
  - Short-circuit in brake winding.
- 40: Fault in "brake closed" state.
- 50: Fault in the brake control circuit of the Control Unit or communication fault between Control Unit and Motor Module (brake control diagnostics).
- 80: When using the Safe Brake Adaptor (SBA), a fault has occurred in the brake control of the Control Unit.
- 90: Brake released for service purposes (X4).

Note:
The following causes may apply to fault values:
- motor cable is not shielded correctly.
- defect in control circuit of the Motor Module.
See also: p1278 (Brake control, diagnostics evaluation)

Remedy:
- check the motor holding brake connection.
- for a parallel connection, check the setting of the power unit data set to control the holding brake (p7015).
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLIQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.
Operation with Safe Brake Module:
- check the Safe Brake Modules connection.
- replace the Safe Brake Module.
Operation with Safe Brake Module (SBA):
- check the SBA connection and if required, replace the SBA.
See also: p1215 (Motor holding brake configuration), p1278 (Brake control, diagnostics evaluation)

A07931 (F, N) Brake does not open

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: This alarm is output for r1229.4 = 1.
See also: p1216 (Motor holding brake, opening time), r1229 (Motor holding brake status word)
Remedy:
- check the functionality of the motor holding brake.
- check the feedback signal (p1223).

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A07932 Brake does not close

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: This alarm is output for r1229.5 = 1.
For r1229.5 = 1, OFF1/OFF3 are suppressed to prevent the drive accelerating by a load that drives the motor - whereby OFF2 remains effective.
See also: p1217 (Motor holding brake closing time), r1229 (Motor holding brake status word)
Remedy:
- check the functionality of the motor holding brake.
- check the feedback signal (p1222).
F07934 (N) Drive: S120 Combi motor holding brake configuration

Message value: %1
Drive object: VECTOR_G
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A connected motor holding brake has been detected with an S120 Combi. However, this brake has not been assigned to just one Combi feed drive and, therefore, brake control is not configured (correctly). It is also not permitted to assign the brake to the spindle.
Fault value (r0949, interpret decimal):
0: No motor holding brake is assigned (p1215 = 0 or 3 on all S120 Combi feed drives).
1: More than one motor holding brake has been assigned (p1215 = 1 or 2 on more than one S120 Combi feed drive) - or there is more than one DRIVE-CLiQ motor with motor holding brake.
2: Brake was accidentally assigned to the spindle (p1215 = 1); this is not permitted.
3: An attempt was made to enable the function "Safe brake control" (SBC, p9602 = p9802 = 1) for the spindle. This is not permitted.
Remedy: Check whether the motor holding brake has been assigned to one S120 Combi feed drive exclusively (p1215 = 1 or 2) and not the spindle.
The fault will only be withdrawn once the motor holding brake has been assigned to just one of the S120 Combi feed drives and not the spindle (p1215 = 1 or 2 for this one drive). From this point, the motor holding brake will be controlled by this drive.
See also: p1215 (Motor holding brake configuration)

F07935 (N) Drive: Incorrect motor holding brake configuration

Message value: %1
Drive object: VECTOR_G
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: An incorrect motor holding brake configuration was detected.
Fault value (r0949, interpret decimal):
0: A motor holding brake was detected where the brake control has not been configured (p1215 = 0).
The brake control configuration was set to "motor holding brake the same as sequence control" (p1215 = 1) (only when commissioning for the first time).
For a chassis unit with Safe Brake Adapter (SBA), the interconnection p9621 = r9872.3 was established (only when commissioning for the first time).
For a parallel connection, the power unit was set in p7015, to which the motor holding brake is connected (only when commissioning for the first time).
1: A motor holding brake was detected where the brake control has not been configured (p1215 = 0).
The brake control configuration was left at "No motor holding brake available" (p1215 = 0).
11: The identification had detected more than one motor holding brake for a parallel connection.
12: For the parallel connection, in p0121 there is no valid component number for the power unit data set that is set in p7015.
13: With the "Safe brake control" (SBC) function activated, an attempt was made to change the value in p7015.
14: For a parallel connection, the power units set in p7015 cannot be addressed.
Remedy: For fault value = 0:
- No remedy required.
For fault value = 1:
- If required change the motor holding brake configuration (p1215 = 1, 2).
- If this fault value unexpectedly occurs, then the motor connections should be checked in order to rule out that they have been interchanged.
For fault value = 11:
For a parallel connection, only connect one motor holding brake.
For fault value = 12:
Check the setting of the power unit data set for a parallel connection (p7015).
For fault value = 13:
Before changing p7015, deactivate the "Safe brake control" function (SBC) (p9602).
For fault value = 14:
Check whether the power unit supports the brake control for a parallel connection (r9771.14).
Check whether there is a DRIVE-CLIQ communication error between the Control Unit and the power unit involved
and, if required, carry out a diagnostics routine for the faults identified.

Acknowl. upon N: NONE

F07937 (N)  Drive: Speed deviation between motor model and external speed
Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: The absolute value of the speed difference from the two actual values (r2169, r1443) exceeds the tolerance threshold (p3236) for longer than permitted (p3238).
Possible causes:
- the interconnection or scaling of the external encoder signal is incorrect (p1440, p2000).
- speed encoder for external encoder signal faulty.
- encoder signal's polarity or gain incorrect.
- smoothing time constant for model speed for monitoring too high (p2157).
- smoothing time constant or threshold values for monitoring too low (p3236, p3238).
See also: p2149 (Monitoring configuration)
Remedy:
- check that the external speed matches the motor speed (p1440, r1443).
- check the polarity of the external speed (r1443).
- check the interconnection of the connector input and the scaling of the signal (p1440, p2000).
Reaction upon N: NONE
Acknowl. upon N: NONE

F07940  Sync-line-drive: Synchronizing error
Message value: -
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: After synchronization has been completed, the phase difference (r3808) is greater than the threshold value, phase synchronism (p3813).
OFF1 or OFF3 response, while the closed-loop phase control is active (r3819.6 = 1) or synchronism reached (r3819.2 = 1).
Enable signal withdrawn (p3802 = 0), while the closed-loop phase control was active (r3819.6 = 1).
Remedy:
If required increase the threshold value phase synchronism (p3813) for synchronizing the line supply to the drive.
Before OFF1 or OFF3, complete synchronizing (r03819 = 0).
Before withdrawing the enable signal (p3802 = 0), reach synchronism (r3819.2 = 1).
See also: p3813 (Sync-line-drive phase synchronism threshold value)

A07941  Sync-line-drive: Target frequency not permissible
Message value: Parameter: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The target frequency is outside the permissible value range.
Alarm value (r2124, interpret decimal):
1084: Target frequency greater than the positive speed limit, f_sync > f_max (r1084).
1087: Target frequency less than the negative speed limit, f_sync < f_min (r1087).
Remedy:
Fulfill the conditions for the target frequency for line-drive synchronization.
See also: r1084 (Speed limit positive effective), r1087 (Speed limit negative effective)
### A07942  Sync-line-drive: Setpoint frequency is completely different than the target frequency

- **Message value:** 
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** There is a considerable difference between the setpoint frequency and the target frequency \((f_{\text{set}} \neq f_{\text{target}})\). The deviation that can be tolerated is set in p3806.
- **Remedy:** The alarm automatically disappears after the difference that can be tolerated between the setpoint and target frequencies \((p3806)\) is reached.
  
  See also: p3806 (Sync-line-drive frequency difference threshold value)

### A07943  Sync-line-drive: Synchronization not permitted

- **Message value:** Parameter: %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** Synchronization is not permitted.
  
  - Alarm value \((r2124,\) interpret decimal):
    - 1300: The control mode \((p1300)\) has not been set to encoderless closed-loop speed control or U/f characteristic.
    - 1910: Motor data identification activated.
    - 1960: Speed controller optimization activated.
    - 1990: Encoder adjustment activated.
    - 3801: Voltage Sensing Module (VSM) not found.
    - 3845: Friction characteristic record activated.
- **Remedy:** Fulfill the conditions for the line-drive synchronization.
  
  - Re alarm value = 1300:
    - Set the control mode \((p1300)\) to encoderless closed-loop speed control \((p1300 = 20)\) or U/f characteristic \((p1300 = 0 \ldots 19)\).
    - Re alarm value = 1910:
      - Exit the motor data identification routine \((p1910)\).
    - Re alarm value = 1960:
      - Exit the speed controller optimization routine \((p1960)\).
    - Re alarm value = 1990:
      - Exit the encoder adjustment \((p1990)\).
    - Connect the Voltage Sensing Module (VSM), assign it to the synchronizing drive \((\text{see p9910, p0151})\) and enter the drive object number of the synchronizing drive in \(p3801\). When connecting the VSM to a neighboring drive object, ensure that the same current controller clock cycle \(p0115[0]\) exists as the one in the synchronizing drive.
    - Re alarm value = 3845:
      - Exit the friction characteristic record \((p3845)\).

### F07950 (A)  Drive: Incorrect motor parameter

- **Message value:** Parameter: %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY
- **Cause:**
  - The motor parameters were incorrectly entered while commissioning \((\text{e.g. } p0300 = 0, \text{ no motor})\)
  - The braking resistor \((p6811)\) has still not been parameterized - commissioning cannot be completed.
- **Fault value \((r0949,\) interpret decimal):
  - The following motor parameters can be incorrect for fault value 307:
    - \(p0304, p0305, p0307, p0308, p0309\)
  - See also: \(p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0316, p0320, p0322, p0323\)
- **Remedy:**
  - Compare the motor data with the rating plate data and if required, correct.
  - See also: \(p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0316, p0320, p0322, p0323\)
- **Reaction upon A:** NONE
- **Acknowl. upon A:** NONE
**F07955**  
**Drive: Motor has been changed**

Message value: Parameter: %1  
Drive object: VECTOR_G  
Reaction: NONE  
Acknowledge: IMMEDIATELY  

**Cause:**  
The code number of the actual motor with DRIVE-CLiQ does not match the saved number.  
Fault value (r0949, interpret decimal):  
Number of the incorrect parameter.  
See also: p0301 (Motor code number selection), r0302 (Motor code number of motor with DRIVE-CLiQ)

**Remedy:**  
Connect the original motor, power up the Control Unit again (POWER ON) and exit quick commissioning with p0010 = 0.  
Or set p0300 = 10000 (load the parameters from the motor with DRIVE-CLiQ) and re-commission.  
Quick commissioning (p0010 = 1) is automatically exited with p3900 > 0.  
If quick commissioning was exited with p0010 = 0, then an automatic controller calculation (p0340 = 1) is not carried out.

**F07956 (A)**  
**Drive: Motor code does not match the list (catalog) motor**

Message value: %1  
Drive object: VECTOR_G  
Reaction: NONE  
Acknowledge: IMMEDIATELY  

**Cause:**  
The motor code of the connected motor with DRIVE-CLiQ does not match the possible list motor types (see selection in p0300).  
The connected motor with DRIVE-CLiQ might not be supported by this firmware version.  
Fault value (r0949, interpret decimal):  
Motor code of the connected motor with DRIVE-CLiQ.  
Note:  
The first three digits of the motor code generally correspond to the list motor type.

**Remedy:**  
Use a motor with DRIVE-CLiQ and the matching motor code.

**A07960**  
**Drive: Incorrect friction characteristic**

Message value: Parameter: %1  
Drive object: VECTOR_G  
Reaction: NONE  
Acknowledge: NONE  

**Cause:**  
The friction characteristic is incorrect.  
Alarm value (r2124, interpret decimal):  
1538:  
The friction torque is greater than the maximum from the upper effective torque limit (p1538) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value.  
1539:  
The friction torque is less than the minimum from the lower effective torque limit (p1539) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value.  
3820 ... 3829:  
Incorrect parameter number. The speeds entered in the parameters for the friction characteristic do not correspond to the following condition:  
0.0 < p3820 < p3821 < ... < p3829 <= p0322 or p0322 = 0  
Therefore the output of the friction characteristic (r3841) is set to zero.  
3830 ... 3839:  
Incorrect parameter number. The torques entered in the parameters for the friction characteristic do not correspond to the following condition:  
0 <= p3830, p3831 ... p3839 <= p0333  
Therefore the output of the friction characteristic (r3841) is set to zero.  
See also: r3840 (Friction characteristic, status word)

**Remedy:**  
Fulfill the conditions for the friction characteristic.  
Re alarm value = 1538:  
Check the upper effective torque limit (e.g. in the field weakening range).
Faults and alarms

List of faults and alarms

Re alarm value = 1539:
Check the lower effective torque limit (e.g. in the field weakening range).
Re alarm value = 3820 ... 3839:
Fulfill the conditions to set the parameters of the friction characteristic.
If the motor data (e.g. the maximum speed p0322) are changed during commissioning (p0010 = 1, 3), then the technological limits and threshold values, dependent on this, must be re-calculated by selecting p0340= 5).

A07961
Drive: Friction characteristic record activated
Message value: 
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The automatic friction characteristic record is activated.
The friction characteristic is recorded at the next power-on command.
Remedy: Not necessary.
The alarm disappears automatically after the friction characteristic record has been successfully completed or the record is de-activated (p3845 = 0).

F07963
Drive: Friction characteristic record interrupted
Message value: Parameter: %1
Drive object: VECTOR_G
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: The conditions to record the friction characteristic are not fulfilled.
Fault value (r0949, interpret decimal):
0046: Missing enable signals (r0046).
1082: The highest speed value to be approached (p3829) is greater than the maximum speed (p1082).
1084: The highest speed value to be approached (p3829) is greater than the maximum speed (r1084, p1083, p1085).
1087: The highest speed value to be approached (p3829) is greater than the maximum speed (r1087, p1086, p1088).
1110: Friction characteristic record, negative direction selected (p3845) and negative direction inhibited (p1110).
1111: Friction characteristic record, positive direction selected (p3845) and positive direction inhibited (p1111).
1198: Friction characteristic record selected (p3845 > 0) and negative (p1110) and positive directions (p1111) inhibited (r1198).
1300: The control mode (p1300) has not been set to closed-loop speed control.
1755: For encoderless closed-loop control (p1300 = 20), the lowest speed value to be approached (p3820) is less than or equal to the changeover speed, open-loop controlled operation (p1755).
1910: Motor data identification activated.
1960: Speed controller optimization activated.
3820 ... 3829: Speed (p382x) cannot be approached.
3840: Friction characteristic incorrect.
3845: Friction characteristic record de-selected.
Remedy:
Fulfill the conditions to record the friction characteristic.
Re fault value = 0046:
- establish missing enable signals.
Re fault value = 1082, 1084, 1087:
- Select the highest speed value to be approached (p3829) less than or equal to the maximum speed (p1082, r1084, r1087).
- Re-calculate the speed points along the friction characteristic (p0340 = 5).
For fault value = 1110:
- Select the friction characteristic record, positive direction (p3845).
For fault value = 1111:
- Select the friction characteristic record, negative direction (p3845).
For fault value = 1198:
- Enable the permitted direction (p1110, p1111, r1198).
For fault value = 1300:
- Set the control mode (p1300) on the closed-loop speed control (p1300 = 20, 21).
For fault value = 1755:
- For encoderless closed-loop speed control (p1300 = 20) select the lowest speed value to be approached (p3820) greater than the changeover speed of open-loop controlled operation (p1755).
- Re-calculate the speed points along the friction characteristic (p0340 = 5).
For fault value = 1910:
- Exit the motor data identification routine (p1910).
For fault value = 1960:
- Exit the speed controller optimization routine (p1960).
Re fault value 3820 ... 3829:
- check the load at speed p382x.
- check the speed signal (r0063) for oscillation at speed p382x. Check the settings of the speed controller if applicable.
For fault value = 3840:
- Make the friction characteristic error-free (p3820 ... p3829, p3830 ... p3839, p3840).
For fault value = 3845:
- Activate the friction characteristic record (p3845).

---

**F07967 Drive: Automatic encoder adjustment incorrect**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** OFF2 (NONE, OFF1)
- **Acknowledge:** IMMEDIATELY
- **Cause:** A fault has occurred during the automatic encoder adjustment or the pole position identification. Only for internal Siemens troubleshooting.
- **Remedy:** Carry out a POWER ON.

---

**F07968 Drive: Lq-Ld measurement incorrect**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** A fault has occurred during the Lq-Ld measurement.
  Fault value (r0949, interpret decimal):
  10: Stage 1: The ratio between the measured current and zero current is too low.
  12: Stage 1: The maximum current was exceeded.
  15: Second harmonic too low.
  16: Drive converter too small for the measuring technique.
  17: Abort due to pulse inhibit.
- **Remedy:**
  For fault value = 10:
  Check whether the motor is correctly connected.
  Replace the power unit involved.
  De-activate technique (p1909).
  For fault value = 12:
  Check whether motor data have been correctly entered.
  De-activate technique (p1909).
  For fault value = 16:
  De-activate technique (p1909).
  For fault value = 17:
  Repeat technique.

---

**F07969 Drive: Incorrect pole position identification**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** A fault has occurred during the pole position identification routine.
  Fault value (r0949, interpret decimal):
  1: Current controller limited
  2: Motor shaft locked
  4: Encoder speed signal not plausible.
  10: Stage 1: The ratio between the measured current and zero current is too low.
  11: Stage 2: The ratio between the measured current and zero current is too low.
  12: Stage 1: The maximum current was exceeded.
  13: Stage 2: The maximum current was exceeded.
List of faults and alarms

14: Current difference to determine the +d axis too low.
15: Second harmonic too low.
16: Drive converter too small for the measuring technique.
17: Abort due to pulse inhibit.
18: First harmonic too low.
20: Pole position identification requested with the motor shaft rotating and activated "flying restart" function.

Remedy:

For fault value = 1:
- Check whether the motor is correctly connected.
- Check whether motor data have been correctly entered.
- Replace the Motor Module involved.

For fault value = 2:
- Open the motor holding brake (p1215 = 2) and bring the motor into a no-load condition.
- Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.
- Check whether the motor pole pair number is correct (p0314).

For fault value = 4:
- Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.
- Check whether the motor pole pair number is correct (p0314).

For fault value = 10:
- When selecting p1980 = 4: Increase the value for p0325.
- When selecting p1980 = 1: Increase the value for p0329.
- Check whether the motor is correctly connected.
- Replace the Motor Module involved.

For fault value = 11:
- Increase the value for p0329.
- Check whether the motor is correctly connected.
- Replace the Motor Module involved.

For fault value = 12:
- When selecting p1980 = 4: Reduce the value for p0325.
- When selecting p1980 = 1: Reduce the value for p0329.
- Check whether motor data have been correctly entered.

For fault value = 13:
- Reduce the value for p0329.
- Check whether motor data have been correctly entered.

For fault value = 14:
- Increase the value for p0329.
- Motor not sufficiently anisotropic, change the technique (p1980 = 1 or 10).

For fault value = 15:
- Increase the value for p0325.
- Motor not sufficiently anisotropic, change the technique (p1980 = 1 or 10).

For fault value = 16:
- De-activate technique (p1982).

For fault value = 17:
- Repeat technique.

For fault value = 18:
- Increase the value for p0329.
- Saturation not sufficient, change the technique (p1980 = 10).

For fault value = 20:
- Before carrying out a pole position identification routine ensure that the motor shaft is absolutely stationary (zero speed).

---

F07970 Drive: Automatic encoder adjustment incorrect

Message value: %1
Drive object: VECTOR_G
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause:
A fault has occurred during the automatic encoder adjustment.
Fault value (r0949, interpret decimal):
1: Current controller limited
2: Motor shaft locked.
4: Encoder speed signal not plausible.
5: Deselect U/f (p1300) or deactivate encoder calibration (p1990).
10: Stage 1: The ratio between the measured current and zero current is too low.
11: Stage 2: The ratio between the measured current and zero current is too low.
12: Stage 1: The maximum current was exceeded.
13: Stage 2: The maximum current was exceeded.
14: Current difference to determine the +d axis too low.
15: Second harmonic too low.
16: Drive converter too small for the measuring technique.
17: Abort due to pulse inhibit.

Remedy:
For fault value = 1:
Check whether the motor is correctly connected.
Check whether motor data have been correctly entered.
Replace the power unit involved.
For fault value = 2:
Open the motor holding brake (p1215 = 2) and bring the motor into a no-load condition.
For fault value = 4:
Check whether the speed actual value inversion is correct (p0410.0).
Check whether the motor is correctly connected.
Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct.
Check whether the motor pole pair number is correct (p0314).
For fault value = 5:
Deselect U/f (p1300) or deactivate encoder calibration (p1990).
For fault value = 10:
Increase the value for p0325.
Check whether the motor is correctly connected.
Replace the power unit involved.
For fault value = 11:
Increase the value for p0329.
Check whether the motor is correctly connected.
Replace the power unit involved.
For fault value = 12:
Reduce the value for p0325.
Check whether motor data have been correctly entered.
For fault value = 13:
Reduce the value for p0329.
Check whether motor data have been correctly entered.
For fault value = 14:
Increase the value for p0329.

Cause:  The zero mark must be evaluated in order to adjust the encoder. 
        It is expected that a speed or torque setpoint is entered. 
        See also: p1990 (Encoder adjustment, determine angular commutation offset)
Remedy:  Not necessary. 
        The alarm disappears once the zero mark has been detected.
Reaction upon N:  NONE
Acknowl. upon N:  NONE

A07976  Drive: Fine encoder calibration activated
Message value:  Parameter: %1
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The alarm indicates the phases of the fine encoder calibration using an alarm value. 
        Alarm value (interpret decimal):
        1: Fine encoder calibration active.
        2: Rotating measurement started (set the setpoint speed > 40 % rated motor speed)
        3: Rotating measurement lies within the speed and torque range.
        4: Rotating measurement successful: pulse inhibit can be initiated to accept the values.
        5: Fine encoder calibration is calculated.
        10: Speed too low, rotating measurement interrupted.
        12: Torque too high, rotating measurement interrupted.
        See also: p1905 (Parameter tuning selection)
Remedy:  Re alarm value = 10: 
        Increase the speed.
        Re alarm value = 12: 
        Bring the drive into a no-load condition.

A07980  Drive: Rotating measurement activated
Message value:  -
Drive object:  VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The rotating measurement (automatic speed controller optimization) is activated. 
        The rotating measurement is carried out at the next power-on command. 
        See also: p1960 (Rotating measurement selection)
Remedy:  Not necessary. 
        The alarm disappears automatically after the speed controller optimization has been successfully completed or for 
        the setting p1900 = 0.

A07981  Drive: Enable signals for the rotating measurement missing

</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>VECTOR_G</td>
</tr>
<tr>
<td>Reaction:</td>
<td>OFF1 (NONE, OFF2)</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY</td>
</tr>
</tbody>
</table>
| Cause:         | A fault has occurred during the encoder test. Fault value (r0949, interpret decimal):  
1: The speed did not reach a steady-state condition.  
2: The speed setpoint was not able to be approached as the minimum limiting is active.  
3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.  
4: The speed setpoint was not able to be approached as the maximum limiting is active.  
5: The encoder does not supply a signal.  
6: Incorrect polarity.  
7: Incorrect pulse number.  
8: Noise in the encoder signal or speed controller unstable.  
9: Voltage Sensing Module (VSM) incorrectly connected. |
| Remedy:        | For fault value = 1:  
- check the motor parameters.  
- carry out a motor data identification routine (p1910).  
- if required, reduce the dynamic factor (p1967 < 25 %).  
For fault value = 2:  
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).  
For fault value = 3:  
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).  
For fault value = 4:  
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).  
For fault value = 5:  
- check the encoder connection. If required, replace the encoder.  
For fault value = 6:  
- check the connection assignment of the encoder cable. Adapt the polarity (p0410).  
For fault value = 7:  
- adapt the pulse number (p0408).  
For fault value = 8:  
- check the encoder connection and encoder cable. It is possible that there is a problem associated with the ground connection.  
- reduce the dynamic response of the speed controller (p1460, p1462 and p1470, p1472).  
For fault value = 9:  
- check the connections of the Voltage Sensing Module (VSM).  
Note:  
The encoder test can be switched out (disabled) using p1959.0. See also: p1959 (Rotating measurement configuration) |

### F07983  
**Drive:** Rotating measurement saturation characteristic

<table>
<thead>
<tr>

<tr>
<td>Reaction:</td>
<td>OFF1 (NONE, OFF2)</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY</td>
</tr>
</tbody>
</table>
| Cause:         | A fault has occurred while determining the saturation characteristic. Fault value (r0949, interpret decimal):  
1: The speed did not reach a steady-state condition.  
2: The rotor flux did not reach a steady-state condition.  
3: The adaptation circuit did not reach a steady-state condition.  
4: The adaptation circuit was not enabled.  
5: Field weakening active.  
6: The speed setpoint was not able to be approached as the minimum limiting is active.  
7: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.  
8: The speed setpoint was not able to be approached as the maximum limiting is active.  
9: Several values of the determined saturation characteristic are not plausible.  
10: Saturation characteristic could not be sensibly determined because load torque too high. |
Faults and alarms

List of faults and alarms

Remedy:

For fault value = 1:
- the total drive moment of inertia is far higher than that of the motor (p0341, p0342). De-select rotating measurement (p1960), enter the moment of inertia p0342, re-calculate the speed controller p0340 = 4 and repeat the measurement.
Re fault value = 1 ... 2:
- increase the measuring speed (p1961) and repeat the measurement.
Re fault value = 1 ... 4:
- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).
For fault value = 5:
- the speed setpoint (p1961) is too high. Reduce the speed.
For fault value = 6:
- adapt the speed setpoint (p1961) or minimum limiting (p1080).
For fault value = 7:
- adapt the speed setpoint (p1961) or suppression (skip) bandwidths (p1091 ... p1094, p1101).
For fault value = 8:
- adapt the speed setpoint (p1961) or maximum limit (p1082, p1083 and p1086).
Re fault value = 9, 10:
- the measurement was carried out at an operating point where the load torque is too high. Select a more suitable operating point, either by changing the speed setpoint (p1961) or by reducing the load torque. The load torque may not be varied while making measurements.
Note:
The saturation characteristic identification routine can be disabled using p1959.1.
See also: p1959 (Rotating measurement configuration)

F07984 Drive: Speed controller optimization, moment of inertia

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause:
A fault has occurred while identifying the moment of inertia.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The speed setpoint was not able to be approached as the minimum limiting is active.
3. The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
4. The speed setpoint was not able to be approached as the maximum limiting is active.
5: It is not possible to increase the speed by 10% as the minimum limiting is active.
6: It is not possible to increase the speed by 10% as the suppression (skip) bandwidth is active.
7: It is not possible to increase the speed by 10% as the maximum limiting is active.
8: The torque difference after the speed setpoint step is too low in order to be able to still reliably identify the moment of inertia.
9: Too few data to be able to reliably identify the moment of inertia.
10: After the setpoint step, the speed either changed too little or in the incorrect direction.
11: The identified moment of inertia is not plausible.

Remedy:
For fault value = 1:
- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).
Re fault value = 2, 5:
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).
Re fault value = 3, 6:
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).
Re fault value = 4, 7:
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).
For fault value = 8:
- the total drive moment of inertia is far higher than that of the motor (refer to p0341, p0342). De-select rotating measurement (p1960), enter the moment of inertia p0342, re-calculate the speed controller p0340 = 4 and repeat the measurement.
For fault value = 9:
- check the moment of inertia (p0341, p0342). After the change, re-calculate (p0340 = 3 or 4).
For fault value = 10:
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.

Note:
The moment of inertia identification routine can be disabled using p1959.2.
See also: p1959 (Rotating measurement configuration)

F07985 Drive: Speed controller optimization (oscillation test)

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause:
A fault has occurred during the vibration test.
Fault value (r0949, interpret decimal):
1: The speed did not reach a steady-state condition.
2: The speed setpoint was not able to be approached as the minimum limiting is active.
3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
4: The speed setpoint was not able to be approached as the maximum limiting is active.
5: Torque limits too low for a torque step.
6: No suitable speed controller setting was found.

Remedy:
For fault value = 1:
- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).
For fault value = 2:
- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).
For fault value = 3:
- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).
For fault value = 4:
- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).
For fault value = 5:
- increase the torque limits (e.g. p1520, p1521).
For fault value = 6:
- reduce the dynamic factor (p1967).
- disable the vibration test (p1959.4 = 0) and repeat the rotating measurement.
See also: p1959 (Rotating measurement configuration)

F07986 Drive: Rotating measurement ramp-function generator

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2)
Acknowledge: IMMEDIATELY
Cause:
During the rotating measurements, problems with the ramp-function generator occurred.
Fault value (r0949, interpret decimal):
1: The positive and negative directions are inhibited.

Remedy:
For fault value = 1:
Enable the direction (p1110 or p1111).

A07987 Drive: Rotating measurement, no encoder available

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
No encoder available. The rotating measurement was carried out without encoder.

Remedy:
Connect encoder or select p1960 = 1, 3.

<td>Drive: Rotating measurement leakage inductance (q-axis)</td>
<td>%1</td>
<td>VECTOR_G</td>
<td>OFF1 (NONE, OFF2)</td>
<td>IMMEDIATELY</td>
<td>An error has occurred while measuring the dynamic leakage inductance. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The speed setpoint was not able to be approached as the minimum limiting is active. 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 4: The speed setpoint was not able to be approached as the maximum limiting is active. 5: The 100% flux setpoint was not reached. 6: No Lq measurement possible because field weakening is active. 7: Speed actual value exceeds the maximum speed p1082 or 75% of the rated motor speed. 8: Speed actual value is below 2% of the rated motor speed.</td>
<td>For fault value = 1: - check the motor parameters. - if required, reduce the dynamic factor (p1967 &lt; 25%). For fault value = 2: - adapt the speed setpoint (p1965) or adapt the minimum limit (p1080). For fault value = 3: - adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101). For fault value = 4: - adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086). For fault value = 5: - flux setpoint p1570 = 100% and current setpoint p1610 = 0% kept during the Lq measurement. For fault value = 6: - reduce the regenerative load so that the drive does not reach field weakening when accelerating. - reduce p1965 so that the q leakage inductance is recorded at lower speeds. For fault value = 7: - increase p1082 if this is technically permissible. - reduce p1965 so that the q leakage inductance is recorded at lower speeds. For fault value = 8: - reduce the load when motoring so that the drive is not braked. - increase p1965 so that the measurement may be taken at higher speeds. Note: The measurement of the q leakage inductance can be disabled using p1959.5. If only p1959.5 is set, then only this measurement is carried out if p1960 is set to 1, 2 and the drive is powered up. See also: p1959 (Rotating measurement configuration)</td>

<td>F07990</td>
<td>Drive: Incorrect motor data identification</td>
<td>%1</td>
<td>VECTOR_G</td>
<td>OFF2 (NONE, OFF1)</td>
<td>IMMEDIATELY</td>
<td>A fault has occurred during the identification routine. Fault value (r0949, interpret decimal): 1: Current limit value reached. 2: Identified stator resistance lies outside the expected range 0.1 ... 100% of Zn.</td>
<td></td>
</tr>
</tbody>
</table>
List of faults and alarms

3: Identified rotor resistance lies outside the expected range 0.1 ... 100% of Zn. Separately excited synchronous motors: damping resistance outside 1.0 ... 15% of Zn.
4: Identified stator reactance lies outside the expected range 50 ... 900% of Zn. Separately excited synchronous motors: stator reactance outside 20 ... 500% of Zn.
5: Identified magnetizing reactance lies outside the expected range 50 ... 900% of Zn. Separately excited synchronous motors: magnetizing reactance outside 20 ... 500% of Zn.
6: Identified rotor time constant lies outside the expected range 10 ms ... 5 s. Separately-excited synchronous motors: damping time constant outside of 5 ms ... 1 s.
7: Identified total leakage reactance lies outside the expected range 4 ... 100% of Zn.
8: Identified stator leakage reactance lies outside the expected range 2 ... 50% of Zn. Separately excited synchronous motors: stator leakage reactance outside 2 ... 40% of Zn.
9: Identified rotor leakage reactance lies outside the expected range 2 ... 50% of Zn. Separately excited synchronous motors: damping leakage reactance outside 1.5 ... 20% of Zn.
10: Motor has been incorrectly connected.
11: Motor shaft rotates.
12: Ground fault detected.
20: Identified threshold voltage of the semiconductor devices lies outside the expected range 0 ... 10 V.
30: Current controller in voltage limiting.
40: At least one identification contains errors. The identified parameters are not saved to prevent inconsistencies.
50: The selected sampling time is too low for the motor identification (p0115[0]).

Note: Percentage values are referred to the rated motor impedance:

\[ Z_n = \frac{V_{mot,nom}}{\sqrt{3}} / \frac{I_{mot,nom}}{\sqrt{3}} \]

Remedy:

Re fault value = 1 ... 40:
- check whether motor data have been correctly entered in p0300, p0304 ... p0311.
- is there an appropriate relationship between the motor power rating and that of the Motor Module? The ratio of the Motor Module to the rated motor current should not be less than 0.5 and not be greater than 4.
- check configuration (star-delta).
Re fault value = 11 in addition:
- Deactivate oscillation monitoring (p1909.7 = 1).
For fault value = 2:
- for parallel circuits, check the motor winding system in p7003. If, for power units connected in parallel, a motor is specified with a single-winding system (p7003 = 0), although a multi-winding system is being used, then a large proportion of the stator resistance is interpreted as feeder cable resistance and entered in p0352.
Re fault value = 4, 7:
- check whether inductances are correctly set in p0233 and p0353.
- check whether motor has been correctly connected (star-delta).
- Set p1909.0 = 1.
For fault value = 12:
- check the power cable connections.
- check the motor.
- check the CT.
For fault value = 50:
- Perform a motor data identification with a higher sampling time, and after this, change to the required higher sampling time (p0115[0]).

A07991 (N) Drive: Motor data identification activated

Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The motor data identification routine is activated.
The motor data identification routine is carried out at the next power-on command.
If rotating measurement is selected (see p1900, p1960), it will not be possible to save the parameter assignment. Once motor data identification has been completed or de-activated, the option to save the parameter assignment will be made available again.
See also: p1910 (Motor data identification selection)

Remedy: Not necessary.
The alarm automatically disappears after the motor data identification routine has been successfully completed or for the setting p1900 = 0.

Reaction upon N: NONE
Acknowl. upon N: NONE

Vector: OFF1 (OFF2, OFF3)

**Acknowl.:** IMMEDIATELY

**Cause:** COMM BOARD did not accept the send-configuration data.

Fault value (r0949, interpret decimal):
Return value of the send-configuration data check.

**Remedy:** Check the send configuration data.

**Reaction upon A:** NONE

**Acknowl. upon A:** NONE

**A08511 (F)**  
**COMM BOARD: Receive configuration data invalid**

**Message value:** %1

**Drive object:** All objects

**Reaction:** NONE

**Acknowl.:** NONE

**Cause:** The drive unit did not accept the receive configuration data.

Alarm value (r2124, interpret decimal):
Return value of the receive configuration data check.

1: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence are defined in p0978.
2: Too many PZD data words for output or input to a drive object. The number of possible PZD items in a drive object is determined by the number of indices in r2050/p2051 for PZD IF1, and in r8850/p8851 for PZD IF2.
3: Uneven number of bytes for input or output.
4: Setting data for synchronization not accepted. For more information, see A01902.
5: Cyclic operation not active.
17: CBE20 Shared Device: Configuration of the F-CPU has been changed.
223: Illegal clock synchronization for the PZD interface set in p8815[0].
500: Illegal PROFlsafe configuration for the interface set in p8815[1].
501: PROFlsafe parameter error (e.g. F_dest).
503: PROFlsafe connection is rejected as long as there is no isochronous connection (p8969).

**Remedy:** Check the receive configuration data.

**Reaction upon A:** NONE

**Acknowl. upon A:** NONE

**Remedy values:**
- Re alarm value = 2:
  - Check the list of the drive objects with process data exchange (p0978). With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange.
  - Check the number of data words for output and input to a drive object.
- Re alarm value = 17:
  - CBE20 Shared Device: Unplug/plug A-CPU.
- Re alarm value = 223, 500:
  - Check the setting in p8839 and p8815.
  - Ensure that only one PZD interface is operated in clock synchronism or with PROFlsafe.
- Re alarm value = 501:
  - Check the set PROFlsafe address (p9610).

**Reaction upon F:** Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

**Acknowl. upon F:** IMMEDIATELY

| A08560    | **IE: Syntax error in configuration file**       | -             | All objects  | NONE     | NONE        | A syntax error has been detected in the ASCII configuration file for the Industrial Ethernet interface (X127). The saved configuration file has not been loaded. Note: IE: Industrial Ethernet | - Check the interface configuration (p8900 and following), correct if necessary, and activate (p8905 = 1).  
- Save the parameters for interface configuration (e.g. p8905 = 2)  
or  
- Reconfigure the station via the "Edit Ethernet node" screen form (e.g. with STARTER commissioning software). See also: p8905 (IE Interface configuration) |
| A08561    | **IE: Consistency error affecting adjustable parameters** | -             | All objects  | NONE     | NONE        | A consistency error was detected when activating the configuration (p8905 = 1) for the Industrial Ethernet interface (X127). The currently set configuration has not been activated. Possible causes:  
- IP address, subnet mask or default gateway is not correct  
- IP address or station name used twice in the network  
- station name contains invalid characters, etc. Note: IE: Industrial Ethernet | See also: p8900 (IE Name of Station), p8901 (IE IP Address of Station), p8902 (IE Default Gateway of Station), p8903 (IE Subnet Mask of Station)  
Remedy:  
- Check the required interface configuration (p8900 and following), correct if necessary, and activate (p8905 = 1).  
or  
- Reconfigure the station via the "Edit Ethernet node" screen form (e.g. with STARTER commissioning software). See also: p8905 (IE Interface configuration) |
| A08562    | **PROFINET: Syntax error in configuration file** | -             | All objects  | NONE     | NONE        | A syntax error has been detected in the ASCII configuration file for the onboard PROFINET interface. The saved configuration file has not been loaded. | - Check the interface configuration (p8920 and following), correct if necessary, and activate (p8925 = 1).  
- Save the parameters for interface configuration (e.g. p8925 = 2).  
or  
- Reconfigure the station via the "Edit Ethernet node" screen form (e.g. with STARTER commissioning software). See also: p8925 (PN interface configuration) |
| A08563    | **PROFINET: Consistency error affecting adjustable parameters** | -             | All objects  | NONE     | NONE        | A consistency error was detected when activating the configuration (p8925 = 1) for the onboard PROFINET interface. The currently set configuration has not been activated. Possible causes:  
- IP address, subnet mask or default gateway is not correct |
- IP address or station name used twice in the network
- station name contains invalid characters, etc.

See also: p8920 (PN Name of Station), p8921 (PN IP address of station), p8922 (PN Default Gateway of Station), p8923 (PN Subnet Mask of Station)

**Remedy:**
- Check the required interface configuration (p8940 and following), correct if necessary, and activate (p8945 = 1).
- Reconfigure the station via the "Edit Ethernet node" screen form (e.g. with STARTER commissioning software).
- See also: p8925 (PN interface configuration)

<td>IMMEDIATELY</td>
</tr>
</tbody>
</table>
| **Cause:** | A CAN communications error has occurred. Fault value (r0949, interpret decimal):
1. The error counter for the send telegrams has exceeded the BUS OFF value 255. The bus disables the CAN controller.
- bus cable short circuit.
- incorrect baud rate.
- incorrect bit timing.
2. The master no longer interrogated the CAN node status longer than for its "life time". The "life time" is obtained from the "guard time" (p8604[0]) multiplied by the "life time factor" (p8604[1]).
- bus cable interrupted.
- bus cable not connected.
- incorrect baud rate.
- incorrect bit timing.
- master fault. |

SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A
### Faults and alarms

**List of faults and alarms**

Note:
The fault response can be set as required using p8641.
See also: p8604 (CAN node guarding), p8641 (CAN Abort Connection Option Code)

**Remedy:**
- check the bus cable
- check the baud rate (p8622).
- check the bit timing (p8623).
- check the master.
The CAN controller must be manually restarted with **p8608 = 1** after the cause of the fault has been resolved!
See also: p8608 (CAN Clear Bus Off Error), p8622 (CAN bit rate), p8623 (CAN Bit Timing selection)

**Reaction upon A:** NONE
**Acknowl. upon A:** NONE

</table>
| Cause: | A CANopen NMT state transition from "operational" to "pre-operational" or after "stopped". Fault value (r0949, interpret decimal):
1: CANopen NMT state transition from "operational" to "pre-operational".
2: CANopen NMT state transition from "operational" to "stopped". |
| Note: | In the NMT state "pre-operational", process data cannot be transferred and in the NMT state "stopped", no process data and no service data can be transferred. |
| Remedy: | Not necessary. |
| Acknowledge the fault and continue operation. |

| F08702 (A) CAN: RPDO Timeout | - |
| Message value: | - |
| Drive object: | All objects |
| Reaction: | Infeed: OFF2 (NONE, OFF1) |
| | Vector: OFF3 (NONE, OFF1, OFF2) |
| Acknowledge: | IMMEDIATELY |
| Cause: | The monitoring time of the CANopen RPDO telegram has expired because the bus connection was either interrupted or the CANopen Master was switched-off. See also: p8699 (CAN: RPDO monitoring time) |
| Remedy: | - check the bus cable |
| | - check the master. |
| | - If required, increase the monitoring time (p8699). |
| Reaction upon A: | NONE |
| Acknowl. upon A: | NONE |

| F08703 (A) CAN: Maximum number of drive objects exceeded | - |
| Message value: | - |
| Drive object: | All objects |
| Reaction: | Infeed: OFF2 (NONE, OFF1) |
| | Vector: OFF3 (NONE, OFF1, OFF2) |
| Acknowledge: | IMMEDIATELY |
| Cause: | The maximum number of 8 drive objects with the "CAN" function module was exceeded. |
| Note: | In the CANopen standard only a maximum of 8 drive objects are defined for each CANopen slave. |
| Remedy: | - New commissioning of maximum 8 drive objects with the "CAN" function module in the topology. |
| | - For the drive objects, if required, deselect the "CAN" function module (r0108.29). |
| Reaction upon A: | NONE |
| Acknowl. upon A: | NONE |

</tr>
</tbody>
</table>
Faults and alarms

List of faults and alarms

- TPDO: 6041 hex, 6061 hex, 6063 hex, 6069 hex, 606B hex, 606C hex, 6074 hex; 5810 hex - 581F hex; 5830 hex - 5837 hex
- Only sub-index 0 of the specified objects can be mapped.

Note:
As long as A08755 is present, the COB-ID cannot be set to valid.

A08756 CAN: Number of mapped bytes exceeded

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The number of bytes of the mapped objects exceeds the telegram size for net data. A max. of 8 bytes is permissible.
Remedy: Map fewer objects or objects with a smaller data type.
See also: p8710, p8711, p8712, p8713, p8714, p8715, p8716, p8717, p8730, p8731, p8732, p8733, p8734, p8735, p8736, p8737

A08757 CAN: Set COB-ID invalid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: For online operation, the appropriate COB-ID must be set invalid before mapping.
Example:
Mapping for RPDO 1 should be changed (p8710[0]).
--> set p8700[0] = C00006E0 hex (invalid COB-ID)
--> set p8710[0] as required.
--> p8700[0] enter a valid COB-ID
Remedy: Set the COB-ID to invalid.

A08758 CAN: Number of PDO channels too low

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The number of PDO channels in p8740 has either been set to 0 or too low.
See also: p8740 (CAN channel distribution)
Remedy: The number of channels set in p8740 must be greater than or equal to the number of PDOs.
There are 2 possibilities:
Increase the number of channels in p8740 and confirm the selection using p8741.
Reduce the number of PDOs by setting the COB-ID to invalid.
See also: p8740 (CAN channel distribution), p8741 (CAN PDO configuration acknowledgement)

A08759 CAN: PDO COB-ID already available

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An existing PDO COB-ID was allocated.
Remedy: Select another PDO COB-ID.

A08800 PROFIlenergy energy-saving mode active

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The PROFIlenergy energy-saving mode is active
Faults and alarms

List of faults and alarms

A08802  PROFlenergy not possible to switch off incremental encoder supply
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  The incremental encoder is used for the closed-loop position control. This means that its power supply cannot be switched off during the PROFlenergy energy-saving mode, otherwise it would lose its position actual value.
Alarm value (r2124, interpret decimal):
- Encoder number

Remedy:  The alarm automatically disappears when the energy-saving mode is exited.
Note:  After receiving the PROFlenergy command "End_Pause" via PROFINET, the energy-saving mode is exited.

A13000  License not adequate
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  - for the drive unit, the options that require a license are being used but the licenses are not sufficient.
- an error occurred when checking the existing licenses.
Alarm value (r2124, interpret decimal):
- 0:  The existing license is not sufficient.
- 1:  An adequate license was not able to be determined as the memory card with the required licensing data was withdrawn in operation.
- 2:  An adequate license was not able to be determined as there is no licensing data available on the memory card.
- 3:  An adequate license was not able to be determined as there is a checksum error in the license key.
- 4:  An internal error occurred when checking the license.

Remedy:  Re alarm value = 0:
- Additional licenses are required and these must be activated (p9920, p9921).
Re alarm value = 1:
- With the system powered down, re-insert the memory card that matches the system.
Re alarm value = 2:
- Enter and activate the license key (p9920, p9921).
Re alarm value = 3:
- Compare the license key (p9920) entered with the license key on the certificate of license.
- Re-enter the license key and activate (p9920, p9921).
Re alarm value = 4:
- carry out a POWER ON.
- upgrade firmware to later version.
- contact the Hotline.

A13001  Error in license checksum
Message value:  -
Drive object:  All objects
Reaction:  NONE
Acknowledge:  NONE
Cause:  When checking the checksum of the license key, an error was detected.
Remedy: Compare the license key (p9920) entered with the license key on the certificate of license. Re-enter the license key and activate (p9920, p9921).

### F13009 Licensing OA application not licensed
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1
- **Acknowledge:** IMMEDIATELY
- **Cause:** At least one OA application which is under license does not have a license.
  - Note: Refer to r4955 and p4955 for information about the installed OA applications.
- **Remedy:**
  - enter and activate the license key for OA applications under license (p9920, p9921).
  - if necessary, de-activate unlicensed OA applications (p4956).
  See also: p9920 (Licensing, enter license key), p9921 (Licensing, activate license key)

### F13010 Licensing function module not licensed
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1
- **Acknowledge:** IMMEDIATELY
- **Cause:** At least one function module which is under license does not have a license.
  - Fault value (r0949, interpret hexadecimal):
    - Bit x = 1: The corresponding function module does not have a license.
  - Note: Refer to p0108 or r0108 for the assignment between the bit number and function module.
- **Remedy:**
  - enter and activate the license key for function modules under license (p9920, p9921).
  - if necessary, de-activate unlicensed function modules (p0108, r0108).
  See also: p9920 (Licensing, enter license key), p9921 (Licensing, activate license key)

### F13100 Know-how protection: Copy protection error
- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** OFF1
- **Acknowledge:** IMMEDIATELY
- **Cause:** The know-how protection with copy protection for the memory card is active.
  - An error has occurred when checking the memory card.
  - Fault value (r0949, interpret decimal):
    - 0: A memory card is not inserted.
    - 2: An invalid memory card is inserted.
    - 3: The memory card is being used in another Control Unit.
    - 12: An invalid memory card is inserted (OEM input incorrect, p7769).
    - 13: The memory card is being used in another Control Unit (OEM input incorrect, p7759).
  - Note: In general, the copy protection can only be changed when know-how protection is deactivated.
- **Remedy:**
  - For fault value = 0:
    - Insert the correct memory card and carry out POWER ON.
  - For fault value = 2, 3, 12, 13:
    - contact the responsible OEM.
    - Deactivate copy protection (p7765) and acknowledge the fault (p3981).
    - Deactivate know-how protection (p7766-p7768) and acknowledge the fault (p3981).
  - Note: KHP: Know-How Protection
  See also: p3981 (Faults, acknowledge drive object), p7765 (KHP memory card copy protection)
F13101  Know-how protection: Copy protection cannot be activated
Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: An error occurred when attempting to activate the copy protection for the memory card.
Fault value (r0949, interpret decimal):
0: A memory card is not inserted.
Note:
KHP: Know-How Protection
Remedy:
- insert the memory card and carry out POWER ON.
- Try to activate copy protection again (p7765).
See also: p7765 (KHP memory card copy protection)

F13102  Know-how protection: Consistency error of the protected data
Message value: %1
Drive object: All objects
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: An error was identified when checking the consistency of the protected files. As a consequence, the project on the memory card cannot be run.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex: yyyy = object number, xxxx = fault cause
xxxx = 1:
A file has a checksum error.
xxxx = 2:
The files are not consistent with one another.
Note:
KHP: Know-How Protection
Remedy:
- Replace the project on the memory card.
- Restore the factory setting and download again.

F30001  Power unit: Overcurrent
Message value: Fault cause: %1 bin
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit has detected an overcurrent condition.
- closed-loop control is incorrectly parameterized.
- motor has a short-circuit or fault to ground (frame).
- U/f operation: Rated motor current is significantly greater than that of the Motor Module.
- infeed: High post-charging currents for overload when motoring and DC link voltage dip.
- infeed: Short-circuit currents at power-up due to the missing line reactor.
- power cables are not correctly connected.
- the power cables exceed the maximum permissible length.
- power unit defective.
- line phase interrupted.
Additional causes for a parallel switching device (r0108.15 = 1):
- a power unit has tripped (powered down) due to a ground fault.
- the closed-loop circulating current control is either too slow or has been set too fast.
Fault value (r0949, interpret bitwise binary):
Bit 0: Phase U.
Bit 1: Phase V.
Bit 2: Phase W.
Bit 3: Overcurrent in the DC link.
Note:
Fault value = 0 means that the phase with overcurrent is not recognized (e.g. for blocksize device).
Faults and alarms

List of faults and alarms

Remedy:
- check the motor data - if required, carry out commissioning.
- check the motor circuit configuration (star/delta).
- U/f operation: Increase up ramp.
- U/f operation: Check the assignment of the rated currents of the motor and Motor Module.
- infeed: Check the line supply quality.
- infeed: Reduce the motor load.
- infeed: Check the correct connection of the line filter and the line commutating reactor.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.
- replace power unit.
- check the line supply phases.
For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).

F30002 Power unit: DC link voltage, overvoltage
Message value: %1
Drive object: B_INF
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit has detected overvoltage in the DC link.
- motor regenerates too much energy.
- device connection voltage too high.
- when operating with a Voltage Sensing Module (VSM), the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
- line phase interrupted.
Fault value (r0949, interpret decimal):
DC link voltage at the time of trip [0.1 V].
Remedy:
- increase the ramp-down time
- activate the DC link voltage controller
- use a brake resistor or Active Line Module
- increase the current limit of the infeed or use a larger module (for the Active Line Module)
- check the device supply voltage
- check and correct the phase assignment at the VSM and at the power unit
- check the line supply phases.
See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)

F30002 Power unit: DC link voltage, overvoltage
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit has detected overvoltage in the DC link.
- motor regenerates too much energy.
- device connection voltage too high.
- when operating with a Voltage Sensing Module (VSM), the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
- line phase interrupted.
Fault value (r0949, interpret decimal):
DC link voltage at the time of trip [0.1 V].
Remedy:
- increase the ramp-down time
- activate the DC link voltage controller
- use a brake resistor or Active Line Module
- increase the current limit of the infeed or use a larger module (for the Active Line Module)
- check the device supply voltage
- check and correct the phase assignment at the VSM and at the power unit
- check the line supply phases.
- set the rounding times (p1130, p1136). This is particularly recommended in U/f operation to relieve the DC link voltage controller with rapid ramp-down times of the ramp-function generator.
See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)
### F30003
**Power unit: DC link voltage, undervoltage**

- **Message value:**
  - 
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:**
  - The power unit has detected an undervoltage condition in the DC link.
  - line supply failure
  - line supply voltage below the permissible value.
  - line supply infeed failed or interrupted.
  - line phase interrupted.
- **Note:**
  - The monitoring threshold for undervoltage in the DC link is indicated in r0296.
- **Remedy:**
  - check the line supply voltage
  - check the line supply infeed and observe the fault messages relating to it (if there are any)
  - check the line supply phases.
  - check the line supply voltage setting (p0210).
  - booksize units: check the setting of p0278.
- **Note:**
  - The ready signal for the infeed (r0863) must be interconnected to the associated drive inputs (p0864).
  - See also: p0210 (Drive unit line supply voltage)

### F30004
**Power unit: Overtemperature heat sink AC inverter**

- **Message value:** %1
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:**
  - The temperature of the power unit heat sink has exceeded the permissible limit value.
  - insufficient cooling, fan failure.
  - overload.
  - ambient temperature too high.
  - pulse frequency too high.
- **Fault value (r0949):**
  - Temperature [1 bit = 0.01 °C]
- **Remedy:**
  - check whether the fan is running.
  - check the fan elements.
  - check whether the ambient temperature is in the permissible range.
  - check the motor load.
  - reduce the pulse frequency if this is higher than the rated pulse frequency.
- **Note:**
  - This fault can only be acknowledged after this alarm threshold for alarm A05000 has been undershot.
  - See also: p1800 (Pulse frequency setpoint)

### F30005
**Power unit: Overload I²t**

- **Message value:** %1
- **Drive object:** B_INF
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:**
  - The power unit was overloaded (r0036 = 100 %).
  - the permissible rated power unit current was exceeded for an inadmissibly long time.
  - the permissible load duty cycle was not maintained.
- **Fault value (r0949, interpret decimal):**
  - I²t [100 % = 16384]
- **Remedy:**
  - reduce the continuous load.
  - adapt the load duty cycle.
  - check the motor and power unit rated currents.
- **See also:** r0036 (Power unit overload I²t), r0206 (Rated power unit power), p0307 (Rated motor power)
Faults and alarms

List of faults and alarms

F30005  Power unit: Overload I2t
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit was overloaded (r0036 = 100 %).
- the permissible rated power unit current was exceeded for an inadmissibly long time.
- the permissible load duty cycle was not maintained.
Fault value (r0949, interpret decimal):
I2t [100 % = 16384].
Remedy:
- reduce the continuous load.
- adapt the load duty cycle.
- check the motor and power unit rated currents.
- increase p0294
See also: r0036 (Power unit overload I2t), r0206 (Rated power unit power), p0307 (Rated motor power)

F30006  Power unit: Thyristor Control Board
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The Thyristor Control Board (TCB) of the Basic Line Module signals a fault.
- there is no line supply voltage.
- the line contactor is not closed.
- the line supply voltage is too low.
- line supply frequency outside the permissible range (45 ... 66 Hz).
- there is a DC link short-circuit.
- there is a DC link short-circuit (during the pre-charging phase).
- voltage supply for the Thyristor Control Board outside the nominal range (5 ... 18 V) and line voltage >30 V.
- there is an internal fault in the Thyristor Control Board.
Remedy: The faults must be saved in the Thyristor Control Board and must be acknowledged. To do this, the supply voltage of the Thyristor Control Board must be switched out for at least 10 s!
- check the line supply voltage
- check or energize the line contactor.
- check the monitoring time and, if required, increase (p0857).
- if required, observe additional power unit messages/signals.
- check the DC link regarding short-circuit or ground fault.
- evaluate diagnostic LEDs for the Thyristor Control Board.

F30008  Power unit: Sign-of-life error cyclic data
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The Control Unit has not punctually updated the cyclic setpoint telegram. The number of consecutive sign-of-life errors has exceeded the fault threshold (p7789).
Remedy:
- check the electrical cabinet design and cable routing for EMC compliance
- for projects with the VECTOR drive object, check whether p0117 = 6 has been set on the Control Unit.
- increase the fault threshold (p7789).
See also: p0117 (Current controller computing dead time mode)
A30010 (F)  Power unit: Sign-of-life error cyclic data
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: A DRIVE-CLIQ communication error has occurred between the Control Unit and the power unit involved. The cyclic setpoint telegrams of the Control Unit were not received on time by the power unit for at least one clock cycle.
Remedy: Check the electrical cabinet design and cable routing for EMC compliance.
Reaction upon F: Infeed: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F30011  Power unit: Line phase failure in main circuit
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY
Cause: At the power unit, the DC link voltage ripple has exceeded the permissible limit value. Possible causes:
- A line phase has failed.
- The 3 line phases are inadmissibly unsymmetrical.
- The fuse of a phase of a main circuit has ruptured.
- A motor phase has failed.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy: - check the main circuit fuses.
- Check whether a single-phase load is distorting the line voltages.
- check the motor feeder cables.

F30012  Power unit: Temperature sensor heat sink wire breakage
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: The connection to a heat sink temperature sensor in the power unit is interrupted. Fault value (r0949, interpret hexadecimal):
Bit 0: Module slot (electronics slot)
Bit 1: Air intake
Bit 2: Inverter 1
Bit 3: Inverter 2
Bit 4: Inverter 3
Bit 5: Inverter 4
Bit 6: Inverter 5
Bit 7: Inverter 6
Bit 8: Rectifier 1
Bit 9: Rectifier 2
Remedy: Contact the manufacturer.

F30013  Power unit: Temperature sensor heat sink short-circuit
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: The heat sink temperature sensor in the power unit is short-circuited.
Fault value (r0949, interpret hexadecimal):
Bit 0: Module slot (electronics slot)
Bit 1: Air intake
Bit 2: Inverter 1
Bit 3: Inverter 2
Bit 4: Inverter 3
Bit 5: Inverter 4
Bit 6: Inverter 5
Bit 7: Inverter 6
Bit 8: Rectifier 1
Bit 9: Rectifier 2

Remedy: Contact the manufacturer.

F30015 (N, A) Power unit: Phase failure motor cable
Message value: -
Drive object: VECTOR_G
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: A phase failure in the motor feeder cable was detected.
The signal can also be output in the following cases:
- The motor is correctly connected, but the drive has stalled in U/f control. In this case, a current of 0 A is possibly measured in one phase due to asymmetry of the currents.
- the motor is correctly connected, however the closed-speed control is instable and therefore an oscillating torque is generated.
Note: Chassis power units do not feature phase failure monitoring.
Remedy: - check the motor feeder cables.
- increase the ramp-up or ramp-down time (p1120) if the drive has stalled in U/f control.
- check the speed controller settings.
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A30016 (N) Power unit: Load supply switched out
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage is too low.
Alarm value (r2124, interpret decimal):
DC link voltage at the time of trip [0.1 V].
Remedy: - switch on load supply.
- check the line supply if necessary.
Reaction upon N: NONE
Acknowl. upon N: NONE

F30017 Power unit: Hardware current limit has responded too often
Message value: Fault cause: %1 bin
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The hardware current limitation in the relevant phase (see A30031, A30032, A30033) has responded too often. The number of times the limit has been exceeded depends on the design and type of power unit.
For infeed units, the following applies:
- closed-loop control is incorrectly parameterized.
- load on the infeed is too high.
- Voltage Sensing Module incorrectly connected.
### List of faults and alarms

- line reactor missing or the incorrect type.
- power unit defective.

The following applies to Motor Modules:
- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Fault value \( r0949 \), interpret binary:

<table>
<thead>
<tr>
<th>Bit 0: Phase U</th>
<th>Bit 1: Phase V</th>
<th>Bit 2: Phase W</th>
</tr>
</thead>
</table>

**Remedy:**

For infeed units, the following applies:
- check the controller settings and reset and identify the controller if necessary (\( p0340 = 2 \), \( p3410 = 5 \))
- reduce the load and increase the DC-link capacitance or use a higher-rating infeed if necessary
- check the connection of the optional Voltage Sensing Module
- check the connection and technical data of the line reactor
- check the power cables for short-circuit or ground fault.
- replace power unit.

The following applies to Motor Modules:
- check the motor data and if required, recalculate the controller parameters (\( p0340 = 3 \)). As an alternative, run a motor data identification (\( p1910 = 1 \), \( p1960 = 1 \)).
- check the motor circuit configuration (star-delta).
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.
- replace power unit.

---

**F30020 Power unit: Configuration not supported**

**Message value:** fault cause: %1, additional information: %2

**Drive object:** B_INF, VECTOR_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A configuration is requested that is not supported by the power unit.

Fault value \( r0949 \), interpret hexadecimal:

- \( \text{yyy} \text{xxxx} \) hex: \( \text{xxxx} \) = fault cause, \( \text{yyyy} \) = additional information (siemensintern)

- \( \text{xxx} = 0 \): Autonomous operation is requested but is not supported.
- \( \text{xxx} = 2 \): A PM260 has been detected with PS-ASIC version 2. This combination is not supported.
- \( \text{xxx} = 3 \): Initialization was not able to be successfully completed. It is possible that the Control Unit was withdrawn from the power module before or during power-up.
- \( \text{xxx} = 4 \): The combination of power unit and Control Unit or Control Unit Adapter is not supported.
- \( \text{xxx} = 5 \): The higher current controller dynamic performance is not supported.

**Remedy:**

- for fault cause = 0:
  - If required, deactivate an active internal voltage protection (\( p1231 \)).
- for fault cause = 1:
  - Update the Control Unit firmware or change the DRIVE-CLiQ topology.
- for fault cause = 2:
  - Replace the power unit with a PM260 with PS-ASIC version 3 (or higher).
- for fault cause = 3, 4:
  - Insert a Control Unit or Control Unit Adapter (CUAxx) on an appropriate Power Module and perform a POWER ON for the Control Unit or the Control Units Adapter.
- for fault cause = 5:
  - use a booksize format power unit.
  - for a Double Motor Module operate the two drive controls with the same current controller sampling time (\( p0115[0] \)). Otherwise, the higher current controller dynamics can only be activated on the drive with the longer sampling time.
  - If required, de-select the higher current controller dynamic performance (\( p1810.11 = 0 \)). After deselecting the computing dead time, recalculate the controller gains (\( p0340 = 4 \)). If required, optimize the speed controller.

See also: \( p0115 \), \( p1231 \), \( p1810 \)
F30021 Power unit: Ground fault
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Power unit has detected a ground fault.
- ground fault in the power cables.
- winding fault or ground fault at the motor.
- CT defective.
Additional cause for CU310/CUA31:
- when the brake is applied, this causes the hardware DC current monitoring to respond.
Additional cause for parallel switching devices (r0108.15 = 1):
- the closed-loop circulating current control is either too slow or has been set too fast.
Fault value (r0949, interpret decimal):
Absolute value, total current amplitude [20479 = r0209 x 1.4142].
Note:
For power units, a ground fault is also emulated in r3113.5.
Remedy:
- check the power cable connections.
- check the motor.
- check the CT.
The following applies additionally for CU310/CUA31:
- check the cables and contacts of the brake connection (a wire is possibly broken).
For parallel switching devices (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).
See also: p0287 (Ground fault monitoring thresholds)

F30022 Power unit: Monitoring U_ce
Message value: Fault cause: %1 bin
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: POWER ON
Cause: In the power unit, the monitoring of the collector-emitter voltage (U_ce) of the semiconductor has responded.
Possible causes:
- fiber-optic cable interrupted.
- power supply of the IGBT gating module missing.
- short-circuit at the power unit output.
- defective semiconductor in the power unit.
Fault value (r0949, interpret binary):
Bit 0: Short-circuit in phase U
Bit 1: Short circuit in phase V
Bit 2: Short-circuit in phase W
Bit 3: Light transmitter enable defective
Bit 4: U_ce group fault signal interrupted
See also: r0949 (Fault value)
Remedy:
- check the fiber-optic cable and if required, replace.
- check the power supply of the IGBT gating module (24 V).
- check the power cable connections.
- select the defective semiconductor and replace.

F30024 Power unit: Overtemperature thermal model
Message value: -
Drive object: B_INF
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The temperature difference between the heat sink and chip has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
See also: r0037

**Remedy:**
- adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.

**F30024** **Power unit: Overtemperature thermal model**

**Message value:** -

**Drive object:** VECTOR_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** The temperature difference between the heat sink and chip has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
See also: r0037

**Remedy:**
- adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.
- if DC braking is active: reduce braking current (p1232).

**F30025** **Power unit: Chip overtemperature**

**Message value:** %1

**Drive object:** B_INF, VECTOR_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** The chip temperature of the semiconductor has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.

*Fault value (r0949, interpret decimal):*

Temperature difference between the heat sink and chip [0.01 °C].

**Remedy:**
- adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.

**Notice:**
This fault can only be acknowledged after this alarm threshold for alarm A05001 has been undershot.

Faults and alarms

List of faults and alarms

F30027 Power unit: Precharging DC link time monitoring

Message value: Enable signals: %1, Status: %2
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause: The power unit DC link was not able to be pre-charged within the expected time.
1) There is no line supply voltage connected.
2) The line contactor/line side switch has not been closed.
3) The line supply voltage is too low.
4) Line supply voltage incorrectly set (p0210).
5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit.
6) The pre-charging resistors are overheated as the DC link capacitance is too high.
7) The pre-charging resistors are overheated because there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link.
8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module.
9) The DC link has either a ground fault or a short-circuit.
10) The pre-charging circuit is possibly defective (only for chassis units).
11) Infeed is defective and/or fuse has ruptured in the Motor Module (only Booksise units).

Fault value (r0949, interpret binary):
yyyyyyyy hex:
yyyy = power unit state
0: Fault status (wait for OFF and fault acknowledgement).
1: Restart inhibit (wait for OFF).
2: Overvoltage condition detected -> change into the fault state.
3: Undervoltage condition detected -> change into the fault state.
4: Wait for bridging contactor to open -> change into the fault state.
5: Wait for bridging contactor to open -> change into restart inhibit.
6: Commissioning.
7: Ready for pre-charging.
8: Pre-charging started, DC link voltage less than the minimum switch-on voltage.
9: Pre-charging, DC link voltage end of pre-charging still not detected.
10: Wait for the end of the de-bounce time of the main contactor after pre-charging has been completed.
11: Pre-charging completed, ready for pulse enable.
12: It was detected that the STO terminal was energized at the power unit.
xxxx = Missing internal enable signals, power unit (inverted bit-coded, FFFF hex -> all internal enable signals available)
Bit 0: Power supply of the IGBT gating shut down.
Bit 1: Ground fault detected.
Bit 2: Peak current intervention.
Bit 3: I2t exceeded.
Bit 4: Thermal model overtemperature calculated.
Bit 5: (heat sink, gating module, power unit) overtemperature measured.
Bit 6: Reserved.
Bit 7: Overvoltage detected.
Bit 8: Power unit has completed pre-charging, ready for pulse enable.
Bit 9: STO terminal missing.
Bit 10: Overcurrent detected.
Bit 11: Armature short-circuit active.
Bit 12: DRIVE-CLIQ fault active.
Bit 13: Vce fault detected, transistor de-saturated due to overcurrent/short-circuit.
Bit 14: Undervoltage detected.

Remedy: In general:
- check the line supply voltage at the input terminals.
- check the line supply voltage setting (p0210).
For booksise drive units, the following applies:
- wait (approx. 8 minutes) until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from the line supply.
Re 5):
- carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual).
Re 6):
- check the total capacitance of the DC link and reduce in accordance with the maximum permissible DC-link capacitance if necessary (refer to the appropriate Equipment Manual)
Re 7):
- interconnect the ready-for-operation signal from the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link
Re 8):
- check the connections of the external line contactor. The line contactor must be open during DC-link fast discharge.
Re 9):
- check the DC link for ground faults or short circuits.
Re 11):
- Check the DC link voltage of the infeed (r0070) and Motor Modules (r0070).
If the DC link voltage generated by the infeed (or external) is not displayed for the Motor Modules (r0070), then a fuse has ruptured in the Motor Module.
See also: p0210 (Drive unit line supply voltage)

### A30031 Power unit: Hardware current limiting, phase U

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Hardware current limit for phase U responded. The pulsing in this phase is inhibited for one pulse period.  
- closed-loop control is incorrectly parameterized.  
- fault in the motor or in the power cables.  
- the power cables exceed the maximum permissible length.  
- motor load too high  
- power unit defective.  
**Note:** Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.  
**Remedy:**  
- check the motor data and if required, recalculate the control parameters (p0340 = 3). As an alternative, run a motor data identification (p1910 = 1, p1960 = 1).  
- check the motor circuit configuration (star/delta).  
- check the motor load.  
- check the power cable connections.  
- check the power cables for short-circuit or ground fault.  
- check the length of the power cables.

### A30032 Power unit: Hardware current limiting, phase V

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Hardware current limit for phase V responded. The pulsing in this phase is inhibited for one pulse period.  
- closed-loop control is incorrectly parameterized.  
- fault in the motor or in the power cables.  
- the power cables exceed the maximum permissible length.  
- motor load too high  
- power unit defective.  
**Note:** Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.  
**Remedy:**  
Check the motor data and if required, recalculate the control parameters (p0340 = 3). As an alternative, run a motor data identification (p1910 = 1, p1960 = 1).  
- check the motor circuit configuration (star/delta).  
- check the motor load.  
- check the power cable connections.  
- check the power cables for short-circuit or ground fault.  
- check the length of the power cables.

Faults and alarms

List of faults and alarms

**F30040 Power unit: Undervolt 24 V**

Message value: %1

Drive object: B_INF, VECTOR_G

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: Failure of the 24 V power supply for the power unit.
- The undervoltage threshold was undershot for longer than 3 ms.
- Fault value (r0949, interpret decimal): 24 V voltage [0.1 V].

Remedy: - Check the power supply of the power unit.
- carry out a POWER ON (power off/on) for the component.

**A30041 (F) Power unit: Undervoltage 24 V alarm**

Message value: %1

Drive object: B_INF

Reaction: NONE

Acknowledge: NONE

Cause: For the power unit power supply, the lower threshold has been violated.
- Alarm value (r2124, interpret hexadecimal): Only for internal Siemens troubleshooting.

Remedy: - Check the power supply of the power unit.
- carry out a POWER ON (power off/on) for the component.

**A30041 (F) Power unit: Undervoltage 24 V alarm**

Message value: %1

Drive object: VECTOR_G

Reaction: NONE

Acknowledge: NONE

Cause: For the power unit power supply, the lower threshold has been violated.
- Alarm value (r2124, interpret decimal): 24 V voltage [0.1 V].

Remedy: - Check the power supply of the power unit.
- carry out a POWER ON (power off/on) for the component.

**A30042 Power unit: Fan operating time reached or exceeded**

Message value: %1

Drive object: B_INF, VECTOR_G

Reaction: NONE

Acknowledge: NONE

Cause: The maximum operating time of the fan in the power unit is set in p0252.
This message indicates the following:
- Fault value (r0949, interpret decimal):
  - 0: The maximum fan operating time is 500 hours.
  - 1: The maximum fan operating time has been exceeded.

Remedy: Replace the fan in the power unit and reset the operating hours counter to 0 (p0251 = 0).
See also: p0251 (Operating hours counter power unit fan), p0252 (Maximum operating time power unit fan)
### List of faults and alarms

#### F30043  Power unit: Overvolt 24 V
- **Message value:** %1
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** POWER ON
- **Cause:** For the power unit power supply, the upper threshold has been violated. Fault value (r0949, interpret decimal):
  - 24 V voltage [0.1 V].
- **Remedy:** Check the power supply of the power unit.

#### A30044 (F)  Power unit: Overvoltage 24 V alarm
- **Message value:** %1
- **Drive object:** B_INF
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** For the power unit power supply, the upper threshold has been violated. Alarm value (r2124, interpret decimal):
  - 24 V voltage [0.1 V].
- **Remedy:** Check the power supply of the power unit.
- **Reaction upon F:**
  - Infeed: NONE (OFF1, OFF2)
  - Vector: NONE (OFF1, OFF2, OFF3)
- **Acknowl. upon F:** IMMEDIATELY (POWER ON)

#### A30044 (F)  Power unit: Overvoltage 24 V alarm
- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** For the power unit power supply, the upper threshold has been violated. Alarm value (r2124, interpret decimal):
  - 24 V voltage [0.1 V].
- **Remedy:** Check the power supply of the power unit.
- **Reaction upon F:**
  - Infeed: NONE (OFF1, OFF2)
  - Vector: NONE (OFF1, OFF2, OFF3)
- **Acknowl. upon F:** IMMEDIATELY (POWER ON)

#### F30045  Power unit: Supply undervoltage
- **Message value:** %1
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** Power supply fault in the power unit.
  - The voltage monitor signals an undervoltage fault on the module.
  - The following applies for CU31x:
    - the voltage monitoring on the DAC board signals an undervoltage fault on the module.
- **Remedy:**
  - Check the power supply of the power unit.
  - carry out a POWER ON (power off/on) for the component.
  - replace the module if necessary.
### A30046 (F) Power unit: Undervoltage, alarm

**Message value:** %1  
**Drive object:** B_INF  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Before the last restart, a problem occurred at the power unit power supply.  
- the voltage monitor in the internal FPGA of the PSA signals an undervoltage fault on the module.  
**Remedy:**  
- check the 24 V DC voltage supply to power unit.  
- carry out a POWER ON (power off/on) for the component.  
- replace the module if necessary.  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Ackow. upon F:** IMMEDIATELY (POWER ON)

### A30046 (F) Power unit: Undervoltage, alarm

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Before the last restart, a problem occurred at the power unit power supply.  
- the voltage monitor in the internal FPGA of the PSA signals an undervoltage fault on the module.  
**Remedy:**  
- check the 24 V DC voltage supply to power unit.  
- carry out a POWER ON (power off/on) for the component.  
- replace the module if necessary.  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Ackow. upon F:** IMMEDIATELY (POWER ON)

### F30047 Cooling unit: Cooling medium flow rate too low

**Message value:** %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The flowrate of the cooling unit has fallen below the fault threshold.  
**Remedy:**  
- Check the feedback signals and parameter assignment (p0260 ... p0267).  
- Check the coolant feed.

### A30048 Power unit: External fan faulty

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The feedback signal from the external fan indicates a fault.  
- fan faulty, blocked.  
- feedback signal inaccurate.  
**Remedy:**  
- check the external fan and replace if necessary.  
- if you are using an external fan with feedback, check its wiring (X12.2 or X13.2).  
**Note:**  
If you are using an external fan without feedback, check that the feedback terminal wiring on the power unit is connected to ground and make this connection if necessary (X12.1/2 or X13.1/2).

### Fault F30061 (A) Bridging contactor monitoring

**Message value:** Fault cause: %1 bin  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2 (NONE, OFF1)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** A feedback signal for the bypass contactor is interconnected and the monitoring activated. After switching-in/switching-out the contactor, a correct feedback signal was not received within the monitoring time set in p0255[1].  
Fault value (r0949, interpret binary):  
- Bit 0: The time set in p0255[1] was exceeded when switching-in/switching-out the contactor.  
- Bit 1: The bypass contactor was opened in operation.  
- Bit 2: The bypass contactor was switched-in in the OFF state or during pre-charging.  
**Remedy:**  
- Check the monitoring time setting (p0255[1]).  
- Check the contactor wiring and activation.  
- Replace the contactor.  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE

### Fault F30070 Cycle requested by the power unit module not supported

**Message value:** %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A cycle is requested that is not supported by the power unit.  
Fault value (r0949, interpret hexadecimal):  
- 0: The current control cycle is not supported.  
- 1: The DRIVE-CLiQ cycle is not supported.  
- 2: Internal timing problem (clearance between RX and TX instants too low).  
- 3: Internal timing problem (TX instant too early).  
**Remedy:** The power unit only supports the following cycles:  
- 62.5 µs, 125 µs, 250 µs and 500 µs  
For fault value = 0:  
- Set a permitted current control cycle.  
For fault value = 1:  
- Set a permitted DRIVE-CLiQ cycle.  
Re fault value = 2, 3:  
- Contact the manufacturer (you may have an incompatible firmware version).

### Fault F30071 No new actual values received from the power unit module

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The number of actual value telegrams from the power unit module that have failed has exceeded the permissible number.  
**Remedy:** Check the interface (adjustment and locking) to the power unit module.

### Fault F30072 Setpoints are no longer being transferred to the power unit

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The following applies for CU31x and CUA31:  
More than one setpoint telegram was not able to be transferred to the power unit module.  
**Remedy:** The following applies for CU31x and CUA31:  
- Check the interface (adjustment and locking) to the power unit module.
### A30073 (N) Actual value/setpoint preprocessing no longer synchronous

<table>

<td>Communication with the power unit module is no longer in synchronism with the current control cycle.</td>
</tr>
<tr>
<td>Remedy:</td>
<td>Wait until synchronization is re-established.</td>
</tr>
</tbody>
</table>

### F30074 (A) Communication error between the Control Unit and Power Module

<table>
<thead>
<tr>
<th>Message value:</th>
<th>%1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>B_INF, VECTOR_G</td>
</tr>
<tr>
<td>Reaction:</td>
<td>NONE</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY</td>
</tr>
<tr>
<td>Cause:</td>
<td>Communications between the Control Unit (CU) and Power Module (PM) via the interface no longer possible. The CU may have been withdrawn or is incorrectly inserted. Fault value (r0949, interpret hexadecimal): 0 hex: The Control Unit was withdrawn from the Power Module during operation. 1 hex: The Control Unit was withdrawn from the Power Module during operation, although the encoderless safe motion monitoring functions are enabled. This is not supported. After re-inserting the Control Unit in operation, communications to the Power Module no longer possible. 20A hex: The Control Unit was inserted on a Power Module, which has another code number. 20B hex: The Control Unit was inserted on a Power Module, which although it has the same code number, has a different serial number. 601 hex: The Control Unit was inserted on a Power Module, whose power/performance class (chassis unit) is not supported.</td>
</tr>
<tr>
<td>Remedy:</td>
<td>Reinsert the Control Unit (CU) or the Control Unit adapter (CUAxx) onto the original Power Module and continue operation. If required, carry out a POWER ON for the CU and/or the CUA.</td>
</tr>
</tbody>
</table>

### F30080 Power unit: Current increasing too quickly

<table>
<thead>
<tr>
<th>Message value:</th>
<th>Fault cause: %1 bin</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>All objects</td>
</tr>
<tr>
<td>Reaction:</td>
<td>OFF2</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>IMMEDIATELY</td>
</tr>
<tr>
<td>Cause:</td>
<td>The power unit has detected an excessive rate of rise in the overvoltage range. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - U/f operation: Up ramp set too low. - U/f operation: rated current of motor much greater than that of power unit. - infeed: High discharge and post-charging currents for voltage dip. - infeed: High post-charging currents for overload when motoring and DC link voltage dip. - infeed: Short-circuit currents at power-up due to the missing line reactor. - power cables are not correctly connected. - power cables exceed the maximum permissible length. - power unit defective. Additional causes for a parallel switching device (r0108.15 = 1): - a power unit has tripped (powered down) due to a ground fault. - the closed-loop circulating current control is either too slow or has been set too fast.</td>
</tr>
<tr>
<td>Reaction upon A:</td>
<td>NONE</td>
</tr>
<tr>
<td>Acknowl. upon A:</td>
<td>NONE</td>
</tr>
</tbody>
</table>
Fault value (r0949, interpret bitwise binary):
Bit 0: Phase U.
Bit 1: Phase V.
Bit 2: Phase W.

Remedy:
- check the motor data - if required, carry out commissioning.
- check the motor circuit configuration (star-delta)
- U/f operation: Increase up ramp.
- U/f operation: Check assignment of rated currents of motor and power unit.
- infeed: Check the line supply quality.
- infeed: Reduce the motor load.
- infeed: Correct connection of the line reactor.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.
- replace power unit.

For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).

F30081 Power unit: Switching operations too frequent

Message value: Fault cause: %1 bin
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause:
The power unit has executed too many switching operations for current limitation.
- closed-loop control is incorrectly parameterized.
- motor has a short-circuit or fault to ground (frame).
- U/f operation: rated current of motor much greater than that of power unit.
- infeed: High discharge and post-charging currents for voltage dip.
- infeed: High post-charging currents for overload when motoring and DC link voltage dip.
- infeed: Short-circuit currents at power-up due to the missing line reactor.
- power cables are not correctly connected.
- power cables exceed the maximum permissible length.
- power unit defective.

Additional causes for a parallel switching device (r0108.15 = 1):
- a power unit has tripped (powered down) due to a ground fault.
- the closed-loop circulating current control is either too slow or has been set too fast.

Fault value (r0949, interpret bitwise binary):
Bit 0: Phase U.
Bit 1: Phase V.
Bit 2: Phase W.

Remedy:
- check the motor data - if required, carry out commissioning.
- check the motor circuit configuration (star-delta)
- U/f operation: Increase up ramp.
- U/f operation: Check assignment of rated currents of motor and power unit.
- infeed: Check the line supply quality.
- infeed: Reduce the motor load.
- infeed: Correct connection of the line reactor.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.
- replace power unit.

For a parallel switching device (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).

<td>IMMEDIATELY (POWER ON)</td>
<td>The &quot;Safety Integrated&quot; function integrated in the drive in the Motor Module (MM) has detected a fault and initiated STOP A (pulse suppression via the safety shutdown path of the Motor Module). - forced checking procedure of the safety shutdown path of the Motor Module unsuccessful. - subsequent response to fault F30611 (defect in a monitoring channel).</td>
<td></td>
</tr>
</tbody>
</table>
Fault value (r0949, interpret decimal):
0: Stop request from the Control Unit.
1005: Pulses suppressed although STO not selected and there is no internal STOP A present.
1010: Pulses enabled although STO is selected or an internal STOP A is present.
1020: Internal software error in the "Internal voltage protection" function. The "internal voltage protection" function is withdrawn. A STOP A that cannot be acknowledged is initiated.
9999: Subsequent response to fault F30611.

Remedy:
- select Safe Torque Off and de-select again.
- replace the Motor Module involved.
For fault value = 1020:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- replace the Motor Module.
For fault value = 9999:
- carry out diagnostics for fault F30611.

Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

F30611 SI MM: Defect in a monitoring channel
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The "Safety Integrated" function integrated in the drive in the Motor Module (MM) has detected a fault in the cross-wise data comparison between the Control Unit (CU) and MM and initiated a STOP F.
As a result of this fault, after the parameterized transition has expired (p9858), fault F30600 is output (SI MM: STOP A initiated).

Fault value (r0949, interpret decimal):
0: Stop request from the Control Unit.
1 ... 999:
Number of the cross-compared data that resulted in this fault. This number is also displayed in r9895.
1: SI monitoring clock cycle (r9780, r9880).
2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.
3: SI SGE changeover tolerance time (p9650, p9850).
4: SI transition period STOP F to STOP A (p9658, p9858).
5: SI enable Safe Brake Control (p9602, p9802).
6: SI Motion enable, safety-relevant functions (p9501, internal value).
7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).
8: SI PROFIsafe address (p9610, p9810).
9: SI debounce time for STO/SBC/SS1 (MM) (p9651, p9851).
10: SI delay time for pulse suppression for ESR (p9697, p9897).
11: SI Safe Brake Adapter mode, BICO interconnection (p9621, p9821).
12: SI Safe Brake Adapter relay ON time (p9622[0], p9822[0]).
13: SI Safe Brake Adapter relay OFF time (p9622[1], p9822[1]).
14: SI PROFIsafe telegram selection (p9611, p9811).
1000: Watchdog timer has expired.

Within the time of approx. 5 x p9650, alternatively, the following was defined:
- Too many switching operations have occurred at the EP terminal of the Motor Module.
- Via PROFIsafe/TM54F, STO was too frequently initiated (also as subsequent response).
- Safe pulse cancellation (r9723.9) was too frequently initiated (also as subsequent response).
1001, 1002: Initialization error, change timer / check timer.
1950: Module temperature outside the permissible temperature range.
1951: Module temperature not plausibile.
2000: Status of the STO selection on the Control Unit and Motor Module are different.
2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.
2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different (status of the timer in p9650/p9850).
Faults and alarms

List of faults and alarms

6000 ... 6999:
Error in the PROFIsafe control.
For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.
The significance of the individual message values is described in safety message C01711.

Remedy:

- check the cross data comparison that resulted in a STOP F.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 6:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

For fault value = 1000:
- check the wiring of the safety-relevant inputs (SGE) on the Control Unit (contact problems).
- PROFIsafe: Remove contact problems/faults at the PROFINET controller.
- check the wiring of the failsafe inputs at the TM54F (contact problems).

Re fault value = 1001, 1002:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 2000, 2001, 2002:
- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the cause of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace the Motor Module involved.

Re fault value = 6000 ... 6999:
Refer to the description of the message values in safety message C01711.

Note:
CU: Control Unit
EP: Enable Pulses (pulse enable)
ESR: Extended Stop and Retract
MM: Motor Module
SGE: Safety-relevant input
SI: Safety Integrated
SMM: Safe Motion Monitoring
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill

N30620 (F, A) SI MM: Safe Torque Off active
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The function "Safe Torque Off" (STO) of the basic functions was selected on the Motor Module (MM) via the input terminal and is active.
Note:
- This message does not result in a safety stop response.
- This message is not output when STO is selected using the Extended Functions.
Remedy: Not necessary.
Note:
MM: Motor Module
SI: Safety Integrated
SMM: Safe Motion Monitoring
STO: Safe Torque Off / SH: Safe standstill

Reaction upon F: OFF2
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon A: NONE
Acknowl. upon A: NONE
N30621 (F, A)  SI MM: Safe Stop 1 active

Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The "Safe Stop 1" function (SS1) was selected on the Motor Module (MM) and is active.
Note: This message does not result in a safety stop response.
Remedy: Not necessary.
Note:
MM: Motor Module
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)

F30625  SI MM: Sign-of-life error in safety data

Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The "Safety Integrated" function integrated in the drive on the Motor Module (MM) has detected an error in the sign-of-life of the safety data between the Control Unit (CU) and MM and initiated a STOP A.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- a time slice overflow of the safety software has occurred.
- The enable of the safety functions in both monitoring channels is inconsistent (p9601 = 0, p9801 <> 0).
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
- select Safe Torque Off and de-select again.
- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- de-select all drive functions that are not absolutely necessary.
- reduce the number of drives.
- check the electrical cabinet design and cable routing for EMC compliance
- Check the enable of the safety functions for both of the monitoring channels and if required, correct (p9601, p9801).
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F30630  SI MM: Brake control error

Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The "Safety Integrated" function integrated in the drive on the Motor Module (MM) has detected a brake control error and initiated a STOP A.
Fault value (r0949, interpret decimal):
10:
Fault in "open holding brake" operation.
- Parameter p1278 incorrectly set.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Ground fault in brake cable.
Faults and alarms

List of faults and alarms

30:
Fault in "close holding brake" operation.
- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).
- Short-circuit in brake winding.

40:
Fault in "brake closed" state.

60, 70:
Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).

81: Safe Brake Adapter: Fault in "brake closed" state.
82: Safe Brake Adapter: Fault in "open brake" state.
83: Safe Brake Adapter: Fault in "close brake" state.
84,85:
Safe Brake Adapter: Fault in the brake control circuit of the Control Unit or communication fault between Control Unit and Motor Module (brake control).

Note:
The following causes may apply to fault values:
- motor cable is not shielded correctly.
- defed in control circuit of the Motor Module.
- check parameter p1278 (for SBC, only p1278 = 0 is permissible).
- select Safe Torque Off and de-select again.
- check the motor holding brake connection.
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLIQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.

Remedy:
Operation with Safe Brake Module or Safe Brake Adapter:
- check the Safe Brake Module or Safe Brake Adapter connection.
- Replace the Safe Brake Module or Safe Brake Adapter.

Note:
MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated

F30631  Brake control: external release active
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For service purposes, the brake is supplied with voltage at terminal X4.1.
Remedy: Remove the power supply at terminal X4.1.

A30640 (F)  SI MM: Fault in the shutdown path of the second channel
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The Motor Module has detected a communication error with the higher-level control or the TM54F to transfer the safety-relevant information or there is a communication error between Motor Modules connected in parallel.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
For the higher-level control, the following applies:
- check the PROFIsafe address in the higher-level control and Motor Modules and if required, align.
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
For TM54F, carry out the following steps:
- start the copy function for the node identifier (p9700 = 1D hex).
- acknowledge hardware CRC (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

For a parallel connection, the following applies:
- check the PROFIsafe address in the Control Unit and Motor Module and if required, align.
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

The following generally applies:
- upgrade the Motor Module software.

Note:
MM: Motor Module
SI: Safety Integrated
See also: p9810 (SI PROFIsafe address (Motor Module))

<td>%1</td>
<td>B_INF, VECTOR_G</td>
<td>OFF2</td>
<td>IMMEDIATELY (POWER ON)</td>
<td>The &quot;Safety Integrated&quot; function on the Motor Module requires an acceptance test. Note: This fault results in a STOP A that can be acknowledged. Fault value (r0949, interpret decimal): 130: Safety parameters for the Motor Module not available. Note: This fault value is always output when Safety Integrated is commissioned for the first time. 1000: Reference and actual checksum in the Motor Module are not identical (booting). - as a result of the changed current controller sampling time (p0115[0]), the clock cycle time for the Safety Integrated Basic Functions (r9880) was adapted. - at least one checksum-checked piece of data is defective. - Safety parameters set offline and loaded into the Control Unit. 2000: Reference and actual checksum on the Motor Module are not identical (commissioning mode). - reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898). 2003: Acceptance test is required as a safety parameter has been changed. 3003: Acceptance test is required as a hardware-related safety parameter has been changed. 9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.</td>
</tr>
</tbody>
</table>
Faults and alarms

List of faults and alarms

Remedy:

For fault value = 130:
- carry out safety commissioning routine.

For fault value = 1000:
- check the Safety Integrated Basic Functions (r9880) and adapt the reference checksum (p9899).
- again carry out safety commissioning routine.
- replace the memory card or Control Unit.
- Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate settings).

For fault value = 2000:
- check the safety parameters in the Motor Module and adapt the reference checksum (p9899).
- again carry out safety commissioning routine.
- replace the memory card or Control Unit.
- Using STARTER, activate the safety parameters for the drive involved (change settings, copy parameters, activate settings).

For fault value = 2003, 2005:
- check the safety parameters in the Motor Module and adapt the reference checksum (p9899).

For fault value = 2003:
- carry out the function checks for the modified hardware and generate an acceptance report.

The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
SINAMICS S120 Function Manual Safety Integrated

For fault value = 9999:
- carry out diagnostics for the other safety-related fault that is present.

Note:
MM: Motor Module
SI: Safety Integrated
See also: p9799 (SI reference checksum SI parameters (Control Unit)), p9899 (SI reference checksum SI parameters (Motor Module))

F30651 SI MM: Synchronization with Control Unit unsuccessful

Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The "Safety Integrated" function integrated in the drive is requesting synchronization of the safety time slices on the Control Unit and Motor Module. This synchronization routine was unsuccessful.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Note:
MM: Motor Module
SI: Safety Integrated

F30652 SI MM: Illegal monitoring clock cycle

Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The Safety Integrated monitoring clock cycle cannot be maintained due to the communication conditions requested in the system.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- if fault F01652 simultaneously occurs, apply the remedy/countermeasure described there.
- Upgrade the firmware of the Motor Module to a later version.
List of faults and alarms

Note:
MM: Motor Module
SI: Safety Integrated

F30655  SI MM: Align monitoring functions
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: IMMEDIATELY (POWER ON)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An error has occurred when aligning the Safety Integrated monitoring functions on the Control Unit (CU) and Motor Module (MM). Control Unit and Motor Module were not able to determine a common set of supported SI monitoring functions.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- Safety Integrated software releases on the Control Unit and Motor Module are not compatible with one another.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy:
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- check the electrical cabinet design and cable routing for EMC compliance
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F30656  SI MM: Motor Module parameter error
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: When accessing the Safety Integrated parameters for the Motor Module (MM) in the non-volatile memory, an error has occurred.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
129: safety parameters for the Motor Module corrupted.
- drive with enabled safety functions was possibly copied offline using the commissioning software and the project downloaded.
131: Internal software error on the Control Unit.
255: Internal Motor Module software error.
Remedy:
- re-commission the safety functions.
- upgrade the Control Unit software.
- upgrade the Motor Module software.
- replace the memory card or Control Unit.
For fault value = 129:
- activate the safety commissioning mode (p0010 = 95).
- adapt the PROFIsafe address (p9610).
- start the copy function for SI parameters (p9700 = D0 hex).
- acknowledge data change (p9701 = DC hex).
- exit the safety commissioning mode (p0010 = 0).
- save all parameters (p0977 = 1 or "copy RAM to ROM").
- carry out a POWER ON (power off/on) for all components.
Note:
MM: Motor Module
SI: Safety Integrated
### F30657 SI CU: PROFIsafe telegram number invalid

**Message value:**
- 

**Drive object:**
VECTOR_G

**Reaction:**
OFF2

**Acknowledge:**
POWER ON

**Cause:**
The PROFIsafe telegram number set in p9811 is not valid.
When PROFIsafe is enabled (p9801.3 = 1), then a telegram number greater than zero must be entered in p9811.
Note:
This fault does not result in a safety stop response.
See also: p9611 (SI PROFIsafe telegram selection (Control Unit)), p60022 (PROFIsafe telegram selection)

**Remedy:**
Check the telegram number setting (p9811).

### F30659 SI MM: Write request for parameter rejected

**Message value:**
%1

**Drive object:**
B_INF, VECTOR_G

**Reaction:**
OFF2

**Acknowledge:**
IMMEDIATELY (POWER ON)

**Cause:**
The write request for one or several Safety Integrated parameters on the Motor Module (MM) was rejected.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
10: An attempt was made to enable the STO function although this cannot be supported.
11: An attempt was made to enable the SBC function although this cannot be supported.
13: An attempt was made to enable the SS1 function although this cannot be supported.
14: An attempt was made to enable the safe motion monitoring function with the higher-level control, although this cannot be supported.
15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported.
16: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different.
18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported.
19: For ESR, an attempt was made to enable the delay for pulse suppression, although this cannot be supported.
33: An attempt was made to enable the motion monitoring functions without selection integrated in the drive (p9601.5, p9801.5), although this cannot be supported.
See also: r9771 (SI common functions (Control Unit)), r9871 (SI common functions (Motor Module)

**Remedy:**
Re fault value = 10, 11, 13, 14, 15, 16, 18, 19:
- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
For fault value = 33:
- Deselect motion monitoring functions without selection integrated in drive (p9601.5, p9801.5) and select safety functions that are supported (see p9771/p9871),
or:
- use a Motor Module that supports the required function.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

**Note:**
CU: Control Unit
ESR: Extended Stop and Retract
MM: Motor Module
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
STO: Safe Torque Off / SH: Safe standstill
## List of faults and alarms

### F30662  Error in internal communications

| Message value: | %1 |
| Drive object:  | B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G |
| Reaction:      | OFF2 |
| Acknowledge:   | POWER ON |
| Cause:         | A module-internal communication error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting. |
| Remedy:        | - carry out a POWER ON (power off/on).  
                  - upgrade firmware to later version.  
                  - contact the Hotline. |

### F30664  Error while booting

| Message value: | %1 |
| Drive object:  | B_INF, ENC, HUB, TB30, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G |
| Reaction:      | OFF2 |
| Acknowledge:   | POWER ON |
| Cause:         | An error has occurred during booting. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting. |
| Remedy:        | - carry out a POWER ON (power off/on).  
                  - upgrade firmware to later version.  
                  - contact the Hotline. |

### F30665  SI MM: System is defective

| Message value: | %1 |
| Drive object:  | VECTOR_G |
| Reaction:      | OFF2 |
| Acknowledge:   | IMMEDIATELY |
| Cause:         | A system defect was detected before the last boot or in the actual one. The system might have been rebooted (reset). Fault value (r0949, interpret hexadecimal): 200000 hex, 400000 hex:  
                  - Fault in the actual booting/operation.  
                  - parameters p9500 and p9300 are not the same (if Safety message C30711 is displayed at the same time). Additional values:  
                  - defect before the last time that the system booted. |
| Remedy:        | - carry out a POWER ON (power off/on).  
                  - upgrade firmware to later version.  
                  - contact the Hotline.  
                  For fault value = 2:  
                  - check parameters p9500 and p9300 to see if they are the same (if Safety message C30711 is displayed at the same time).  
                  Re fault value = 400000 hex:  
                  - ensure that the Control Unit is connected to the Power Module. |

### A30666 (F)  SI Motion MM: Steady-state (static) 1 signal at the F-DI for safety-relevant acknowledgement

| Message value: | - |
| Drive object:  | VECTOR_G |
| Reaction:      | NONE |
| Acknowledge:   | NONE |
| Cause:         | A logical 1 signal is present at the F-DI configured in p10106 for more than 10 seconds. If, at the F-DI no acknowledgment was performed for safe acknowledgment, then a steady-state logical and 0 signal must be present. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.
Faults and alarms

Remedy: Set the fail-safe digital input (F-DI) to a logical 0 signal (p10106).
Note: F-DI: Failsafe Digital Input

Reaction upon F: NONE

Acknowl. upon F: IMMEDIATELY

F30672 SI CU: Control Unit software incompatible
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Control Unit software does not support the safe drive-based motion monitoring function.
Note: This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy: - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module (F01655, F30655) and if required, carry out diagnostics for the faults involved.
- use a Control Unit that supports the safe motion monitoring function.
- upgrade the Control Unit software.
Note: SI: Safety Integrated

F30674 SI Motion MM: Safety function not supported by PROFIsafe telegram
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: POWER ON
Cause: The monitoring function enabled in p9301 and p9801 is not supported by the currently set PROFIsafe telegram (p9811).
Note: This fault does not result in a safety stop response.
Fault value (r0949, interpret bitwise binary):
Bit 24 = 1: Transfer SLS (SG) limit value via PROFIsafe not supported (p9301.24).
Bit 25 = 1: Transfer safe position via PROFIsafe is not supported (p9301.25).

Remedy: - deselect the monitoring function involved (p9301, p9801).
- set the matching PROFIsafe telegram (p9811).
Note: SI: Safety Integrated
SLS: Safely-Limited Speed
SP: Safe Position

F30680 SI Motion MM: Checksum error safety monitoring functions
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The actual checksum calculated by the Motor Module and entered in r9398 over the safety-relevant parameters does not match the reference checksum saved in p9399 at the last machine acceptance.
Safety-relevant parameters have been changed or a fault is present.
Note: This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
0: Checksum error for Si parameters for motion monitoring.
1: Checksum error for Si parameters for component assignment.
Remedy:
- check the safety-relevant parameters and if required, correct.
- set the reference checksum to the actual checksum.
- execute the function "Copy RAM to ROM".
- perform a POWER ON if safety parameters requiring a POWER ON have been modified.
- carry out an acceptance test.

**F30681 SI Motion MM: Incorrect parameter value**

**Message value:**
Parameter: %1, supplementary information: %2

**Drive object:** VECTOR_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** The parameter cannot be parameterized with this value.

Note:
This message does not result in a safety stop response.
Fault value (r0949, interpret decimal): yyyyxxxx dec:

- yyyy = supplementary information,
- xxxx = parameter
- yyyy = 0: no additional information available.
- xxxx = 9301: It is not permissible to enable the function "<nx hysteresis and filtering" (p9301.16) in conjunction with the function "extended functions without selection" (p9801.5).
- xxxx = 9385: For Safety encoderless and synchronous motor, p9385 must be set to 4.
- yyyy = 9801:
  - yyyy = 1: If motion monitoring functions integrated in the drive (p9801.2 = 1) and extended functions without selection (p9801.5 = 1) are activated, then PROFIsafe (p9801.3 = 1) is not possible.
  - yyyy = 2: Extended functions without selection (p9801.5 = 1) are enabled, without enabling motion monitoring functions integrated in the drive (p9801.2).
  - yyyy = 3: Onboard F-DI are enabled, without enabling motion monitoring functions integrated in the drive (p9801.2).
  - yyyy = 5: Transfer of the SLS limit value via PROFIsafe (p9301.24) has been enabled, without enabling PROFIsafe.
  - yyyy = 6: Transfer of the safe position via PROFIsafe (p9301.25) has been enabled, without enabling PROFIsafe.

**Remedy:**
- correct the parameter (if required, also on the CU side, p9601).

- If the encoder parameters (p9526/p9326) have different values, start the copy function for SI parameters on the drive (p9700 = 57 hex).
- yyyy = 9301: Correct parameters p9501.16 and p9301.16, or deselect the extended functions without selection (p9801.5).
- yyyy = 9317: Further, p9316.0 should be checked.
- yyyy = 9801:
  - yyyy = 1: Only enable motion monitoring functions integrated in the drive (p9801.2 = 1) and extended functions without selection (p9801.5 = 1) – or only PROFIsafe (p9801.3 = 1).
  - yyyy = 2, 3: Enable motion monitoring functions integrated in the drive (p9801.2 = 1).
  - yyyy = 5: To transfer the SLS limit values via PROFIsafe (p9301.24 = 1), also enable PROFIsafe (p9801.3 = 1) and motion monitoring functions integrated in the drive (p9801.2 = 1).
  - yyyy = 6: For the safe position via PROFIsafe (p9301.25 = 1), also enable PROFIsafe (p9801.3 = 1) and motion monitoring functions integrated in the drive (p9801.2 = 1).
F30682  SI Motion MM: Monitoring function not supported
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The monitoring function enabled in p9301, p9501, p9601, p9801, p9307 or p9507 is not supported in this firmware version.
Note:  This message does not result in a safety stop response.
Fault value (r0949, interpret decimal):
1: Monitoring function SLP not supported (p9301.1).
2: Monitoring function SCA not supported (p9301.7 and p9301.8 ... 15).
3: Monitoring function SLS override not supported (p9301.5).
4: Monitoring function external ESR activation not supported (p9301.4).
5: Monitoring function F-DI in PROFIsafe not supported (p9301.30).
6: Enable actual value synchronization not supported (p9301.3).
12: This Control Unit does not support operation of safety functions with a higher-level control (e.g. SINUMERIK).
24: Monitoring function SDI not supported.
26: Hysteresis and filtering for SSM monitoring function without an encoder not supported (p9301.16).
27: This hardware does not support onboard F-DI and F-DO.
30: The firmware version of the Motor Module is older than the version of the Control Unit.
33: Safety functions without selection not supported (p9601.5, p9801.5).
34: This module does not support safe position via PROFIsafe.
36: Function "SS1 without OFF3" not supported.
Remedy:  - de-select the monitoring function involved (p9301, p9501, p9601, p9801, p9307, p9507).
- Upgrade the Motor Module firmware.
Note:
ESR: Extended Stop and Retract

F30683  SI Motion MM: SOS/SLS enable missing
Message value:  -
Drive object:  VECTOR_G
Reaction:  OFF2
Acknowledge:  IMMEDIATELY (POWER ON)
Cause:  The safety-relevant basic function "SOS/SLS" is not enabled in p9301 although other safety-relevant monitoring functions are enabled.
Note:  This message does not result in a safety stop response.
Remedy:  Enable the function "SOS/SLS" (p9301.0) and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9301 (SI Motion enable safety functions (Motor Module))

</table>
| Cause: | For the function "Safely-Limited Position" (SE), a lower value is in p9534 than in p9535.  
Note:  
This fault does not result in a safety stop response.  
Fault value (r0949, interpret decimal):  
1: Limit values SLP1 interchanged.  
2: Limit values SLP2 interchanged. |
| Remedy: | Correct the limit values in p9534 and p9535 and carry out a POWER ON.  
Note:  
SI: Safety Integrated  
SLP: Safely-Limited Position / SE: Safe software limit switches |

| **F30685** | SI Motion MM: Safely-Limited Speed limit value too high |
| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | OFF2 |
| Acknowledge: | IMMEDIATELY (POWER ON) |
| Cause: | The limit value for the function "Safely-Limited Speed" (SLS) is greater than the speed that corresponds to an encoder limit frequency of 500 kHz.  
Note:  
This message does not result in a safety stop response.  
Fault value (r0949, interpret decimal):  
Maximum permissible speed. |
| Remedy: | Correct the limit values for SLS and carry out a POWER ON.  
Note:  
SI: Safety Integrated  
SLS: Safely-Limited Speed / SG: Safely reduced speed  
See also: p9331 (SI Motion SLS limit values (Motor Module)) |

| **F30688** | SI Motion MM: Actual value synchronization not permissible |
| Message value: | - |
| Drive object: | VECTOR_G |
| Reaction: | OFF2 |
| Acknowledge: | IMMEDIATELY (POWER ON) |
| Cause: | - It is not permissible to enable actual value synchronization for a 1-encoder system.  
- It is not permissible to simultaneously enable actual value synchronization and a monitoring function with absolute reference (SCA/SLP).  
- It is not permissible to simultaneously enable actual value synchronization and safe position via PROFIsafe.  
Note:  
This fault results in a STOP A that cannot be acknowledged. |
| Remedy: | - Either select the "actual value synchronization" function or parameterize a 2-encoder system.  
- Either de-select the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON.  
- Either deselect the "actual value synchronization" function or do not enable "Safe position via PROFIsafe".  
Note:  
SCA: Safe Cam / SN: Safe software cam  
SI: Safety Integrated  
SLP: Safely-Limited Position / SE: Safe software limit switches  
SP: Safe Position

### F30692
**SI Motion MM: Parameter value not permitted for encoderless**

- **Message value:** Parameter: %1
- **Drive object:** VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:**
  The parameter cannot be parameterized with this value if encoderless motion monitoring functions have been parameterized in p9306.
  
  Note:
  This message does not result in a safety stop response.
  
  Fault value (r0949, interpret decimal):
  Parameter number with the incorrect value.
  
  See also: p9301 (SI Motion enable safety functions (Motor Module))

- **Remedy:**
  Correct the parameter value or de-select encoderless motion monitoring functions.
  
  See also: p9301 (SI Motion enable safety functions (Motor Module)), p9501 (SI Motion enable safety functions (Control Unit))

### A30693 (F)
**SI MM: Safety parameter settings changed, warm restart/POWER ON required**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  Safety parameters have been changed; these will only take effect following a warm restart or POWER ON.
  
  Notice:
  All changed parameters of the safety motion monitoring functions will only take effect following a warm restart or POWER ON.
  
  Alarm value (r2124, interpret decimal):
  Parameter number of the safety parameter which has changed, necessitating a warm restart or POWER ON.

- **Remedy:**
  - carry out a warm restart (p0009 = 30, p0976 = 2, 3).
  - carry out a POWER ON (power off/on) for all components.

  Note:
  Before performing an acceptance test, a POWER ON must be carried out for all components.

- **Reaction upon F:** NONE (OFF1, OFF2, OFF3)
- **Acknowl. upon F:** POWER ON

### C30700
**SI Motion MM: STOP A initiated**

- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:**
  The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit).
  
  Possible causes:
  - stop request from the Control Unit.
  - pulses not suppressed after a parameterized time (p9357) after test stop selection.
  - subsequent response to the message C30706 “SI Motion MM: SAM/SBR limit exceeded”.
  - subsequent response to the message C30714 “SI Motion MM: Safely-Limited Speed exceeded”.
  - subsequent response to the message C30701 “SI Motion MM: STOP B initiated”.
  - subsequent response to the message C01715 “SI Motion CU: Safely-limited position exceeded”.
  - subsequent response to the message C30716 “SI Motion MM: tolerance for safe motion direction exceeded”.

- **Remedy:**
  - remove the cause to the fault on the Control Unit.
  - check the value in p9357, if required, increase the value.
  - check the shutdown path of the Control Unit (check DRIVE-CLiQ communication).
  - carry out a diagnostics routine for message C30706.
  - carry out a diagnostics routine for message C30714.
  - carry out a diagnostics routine for message C30701.
  - carry out a diagnostics routine for message C30715.
  - carry out a diagnostics routine for message C30716.
  - replace the Motor Module/Power Module
  - replace Control Unit.

  This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SAM: Safe Acceleration Monitor (safe acceleration monitoring)
SBR: Safe Brake Ramp (safe brake ramp monitoring)
SI: Safety Integrated

### C30701
**SI Motion MM: STOP B initiated**

**Message value:** -
**Drive object:** VECTOR_G
**Reaction:** NONE (OFF3)
**Acknowledge:** IMMEDIATELY (POWER ON)
**Cause:**
The drive is stopped via a STOP B (braking along the OFF3 ramp).
As a result of this fault, after the time parameterized in p9356 has expired or after the speed threshold parameterized in p9360 has been fallen below, message C30700 "SI Motion MM: STOP A initiated" is output.
Possible causes:
- stop request from the Control Unit.
- subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded".
- subsequent response to the message C30711 "SI Motion MM: Defect in a monitoring channel".
- subsequent response to the message C30707 "SI Motion MM: tolerance for safe operating stop exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C30716 "SI Motion MM: tolerance for safe motion direction exceeded".

**Remedy:**
- remove the cause to the fault on the Control Unit.
- carry out a diagnostics routine for message C30714.
- carry out a diagnostics routine for message C30711.
- carry out a diagnostics routine for message C30707.
- carry out a diagnostics routine for message C30715.
- carry out a diagnostics routine for message C30716.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.

### C30706
**SI Motion MM: SAM/SBR limit exceeded**

**Message value:** -
**Drive object:** VECTOR_G
**Reaction:** NONE
**Acknowledge:** IMMEDIATELY (POWER ON)
**Cause:**
Motion monitoring functions with encoder (p9306 = 0) or encoderless with set acceleration monitoring (p9306 = 3):
SAM - safe acceleration monitoring. After initiating STOP B (SS1) or STOP C (SS2), the speed has exceeded the selected tolerance.
Motion monitoring functions encoderless with set brake ramp monitoring (p9306 = 1):
SBR - Safe brake ramp monitoring. After initiating STOP B (SS1) or SLS changeover to the lower speed stage, the speed has exceeded the selected tolerance.
- via F-DI or PROFIsafe.
The drive is shut down by the message C30700 "SI Motion MM: STOP A initiated".

**Remedy:**
Check the braking behavior and, if necessary, adapt the tolerance for the "SAM" function or modify the parameter settings for the "SBR" function.
This message can be acknowledged without a POWER ON as follows:
- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
Note:
SAM: Safe Acceleration Monitor (safe acceleration monitoring)
SBR: Safe Brake Ramp (safe ramp monitoring)
SI: Safety Integrated
See also: p9348, p9381, p9382, p9383, p9648

### C30707
**SI Motion MM: Tolerance for safe operating stop exceeded**

**Message value:** -
**Drive object:** VECTOR_G
**Reaction:** NONE
**Acknowledge:** IMMEDIATELY (POWER ON)
**Cause:**
The actual position has distanced itself further from the target position than the standstill tolerance.
The drive is shut down by the message C30701 "SI Motion MM: STOP B initiated".
Remedy: - check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9530 (SI Motion standstill tolerance (Control Unit))

C30708  SI Motion MM: STOP C initiated
Message value: -
Drive object: VECTOR_G
Reaction: STOP2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via a STOP C (braking along the OFF3 ramp).
"Safe Operating Stop" (SOS) is activated after the parameterized time has expired.
Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C30716 "SI Motion MM: tolerance for safe motion direction exceeded".
See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))
Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for messages C30714, C30715, C30716.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C30709  SI Motion MM: STOP D initiated
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via a STOP D (braking along the path).
"Safe Operating Stop" (SOS) is activated after the parameterized time has expired.
Possible causes:
- stop request from the Control Unit.
- subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C30716 "SI Motion MM: tolerance for safe motion direction exceeded".
See also: p9353 (SI Motion transition time STOP D to SOS (Motor Module)), p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))
Remedy: - remove the cause of the fault at the control.
- carry out a diagnostics routine for messages C30714, C30715, C30716.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

C30710  SI Motion MM: STOP E initiated
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive is stopped via a STOP E (retraction motion).
"Safe Operating Stop" (SOS) is activated after the parameterized time has expired.
Possible causes:
- stop request from the higher-level control.
- subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded".
- subsequent response to the message C01715 "SI Motion CU: Safely-limited position exceeded".
- subsequent response to the message C30716 "SI Motion MM: tolerance for safe motion direction exceeded".
See also: p9354 (SI Motion transition time STOP E to SOS (Motor Module)), p9554 (SI Motion transition time STOP E to SOS (SBH) (Control Unit))

**Remedy:**
- remove the cause of the fault at the control.
- carry out a diagnostics routine for messages C30714, C30715, C30716.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.

**Note:**
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop

### C30711
#### SI Motion MM: Defect in a monitoring channel

**Message value:** %1
**Drive object:** VECTOR_G
**Reaction:** NONE
**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:**
When cross-comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.

If at least one monitoring function is active, then after the parameterized timer has expired, the message C30701 "SI Motion: STOP B initiated" is output. The message is output with message value 1031 when the Sensor Module hardware is replaced.

The following message values may also occur in the following cases if the cause that is explicitly mentioned does not apply:
- differently parameterized cycle times (p9500/p9300, p9511/p9311).
- differently parameterized axis types (p9502/p9302).
- excessively fast cycle times (p9500/p9300, p9511/p9311).
- incorrect synchronization.

**Message value (r9749, interpret decimal):**

- The significance of the individual message values is described in safety message C01711 of the Control Unit.
- Number of the cross-compared data that resulted in this message.
- 0 ... 999:
  - 1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.
  - 1001: Initialization error of watchdog timer.
  - 1003: Reference tolerance exceeded.
  - When the user agreement is set, the difference between the new reference point that has been determined after power up (absolute encoder) or reference point approach (distance-coded or incremental measuring system) and the safe actual position (saved value + traversing distance) is greater than the reference tolerance (p9344). In this case, the user agreement is withdrawn.
  - 1011: Acceptance test status between the monitoring channels differ.
  - 1012: Plausibility violation of the actual value from the encoder.
  - 1020: Cyc. communication failure between the monit. cycles.
  - 1021: Cyc. communication failure between the monit. channel and Sensor Module.
  - 1023: Error in the effectiveness test in the DRIVE-CLIQ encoder.
  - 1030: Encoder fault detected from another monitoring channel.
  - 1031: Data transfer error between the monitoring channel and the Sensor Module (p9526/p9326).
  - 1040: Pulses suppressed with active encoderless monitoring functions.
  - 1041: Current absolute value too low (encoderless)
  - 1042: Current/voltage plausibility error
  - 1043: Too many acceleration phases
  - 1044: Actual current values plausibility error.
  - 1045: CRC of the standstill position incorrect.
- 5000 ... 5140: PROFIsafe message values.
  - For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.
- 6000 ... 6166: PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).
  - For these fault values, the failsafe control signals (failsafe values) are transferred to the safety functions.
Faults and alarms

List of faults and alarms

7000 ... 7002:
Message values of the "Safe position via PROFIsafe" function.
See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

Remedy:
- Perform safe acknowledgment, set the user agreement in both monitoring channels simultaneously (within 2 s).
- check the mechanical system of the axis. It is possible that the axis was shifted when switched-off, and the last saved actual position no longer corresponds with the new actual position after the system has been powered up again.
- Increase the tolerance for the actual value comparison when referencing (p9344).
Then check the actual values, perform a POWER ON and set the user agreement again.

Re message value = 1004:
For 1., the following applies: Perform safe acknowledgment. Set the user agreement again.
For 2., the following applies: Perform safe acknowledgment. Only set the user agreement again if the axis has been referenced.

Re message value = 1030:
- check the encoder connection.
- if required, replace the encoder.

Re message value = 1031:
- start the copy function for the node identifier on the drive (p9700 = 1D hex).
- acknowledge the hardware CRC on the drive (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following always applies:
- check the encoder connection.
- if required, replace the encoder.

Re message value = 1040:
- de-select encoderless monitoring functions, select and de-select STO.
- if monitoring function is active, issue "SLS" pulse enable within 5 s of de-selecting STO.

Re other message values:
- the significance of the individual message values is described in safety message C01711.

Note:
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))

---

C30712 SI Motion MM: Defect in F-IO processing

Message value: %1
Drive object: VECTOR_G

Reaction: IMMEDIATELY (POWER ON)

Cause:
When cross checking and comparing the two monitoring channels, the drive detected a difference between parameters or results of the F-IO processing and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.
The safety message C30711 with message value 0 is also displayed due to initiation of STOP F.
If at least one monitoring function is active, the safety message C30701 "SI Motion: STOP B initiated" is output after the parameterized timer has expired.

Message value (r9749, interpret decimal):
Number of the cross-compared data that resulted in this message.
Refer to the description of the message values in safety message C01712.

Remedy:
- check parameterization in the parameters involved and correct if required.
- ensure equality by copying the SI data to the second channel and then carry out an acceptance test.
- check monitoring clock cycle for equality (p9500, p9300).

Note:
This message can be acknowledged via F-DI or PROFIsafe.
See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))
C30714   SI Motion MM: Safely-Limited Speed exceeded
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive had moved faster than that specified by the velocity limit value (p9331). The drive is stopped as a result of the configured stop response (p9363).
Message value (r9749, interpret decimal):
100: SLS1 exceeded.
200: SLS2 exceeded.
300: SLS3 exceeded.
400: SLS4 exceeded.
1000: Encoder limit frequency exceeded.
Remedy:
- check the traversing/motion program in the control.
- check the limits for "SLS" function and if required, adapt (p9331).
Note:
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9331 (SI Motion SLS limit values (Motor Module)), p9363 (SI Motion SLS stop response (Motor Module))

C30715   SI Motion MM: Safely-limited position exceeded
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The axis has moved past a parameterized position that is monitored by the "SLP" function.
Message value (r9749, interpret decimal):
10: SLP1 violated.
20: SLP2 violated.
Remedy:
- check the traversing/motion program in the control.
- check the limits for "SLP" function and if required, adapt (p9534, p9535).
This message can be acknowledged as follows:
- motion monitoring functions with SINUMERIK: Via the machine control panel
Note:
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
See also: p9334 (SI Motion SLP upper limit values (Motor Module)), p9335 (SI Motion SLP lower limit values (Motor Module))

C30716   SI Motion MM: Tolerance for safe motion direction exceeded
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The tolerance for the "safe motion direction" function was exceeded. The drive is stopped as a result of the configured stop response (p9366).
Message value (r9749, interpret decimal):
0: Tolerance for the "safe motion direction positive" function exceeded.
1: Tolerance for the "safe motion direction negative" function exceeded.
Remedy:
- check the traversing/motion program in the control.
- check the tolerance for "SDI" function and if required, adapt (p9364).
This message can be acknowledged as follows:
- Deselect the "SDI" function and select again.
- Perform a safe acknowledgment via F-DI or PROFIsafe.
### Faults and alarms

**List of faults and alarms**

Note:
SDI: Safe Direction (safe motion direction)
SI: Safety Integrated
See also: p9364 (SI Motion SDI tolerance (Motor Module)), p9365 (SI Motion SDI delay time (Motor Module)), p9366 (SI Motion SDI stop response (Motor Module))

#### C30730

**SI Motion MM: Reference block for dynamic safely limited speed invalid**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:**
The reference block transferred via PROFIsafe is negative.
A reference block is used to generate a referred velocity limit value based on the reference quantity "Velocity limit value SLS1" (p9331[0]).
The drive is stopped as a result of the configured stop response (p9363[0]).
Message value (%9749, interpret decimal):
requested, invalid reference block.

- **Remedy:**
In the PROFIsafe telegram, input data S_SLS_LIMIT_IST must be corrected.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.

Note:
SI: Safety Integrated
SLS: Safely-Limited Speed

#### C30770

**SI Motion MM: Discrepancy error affecting the fail-safe inputs/outputs**

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:**
The fail-safe digital inputs/digital outputs (F-DI/F-DO) show a different state longer than that parameterized in p10002 / p10102.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
xxxx: Discrepancy error for fail-safe digital inputs (F-DI).
Bit 0: Discrepancy error for F-DI 0
Bit 1: Discrepancy error for F-DI 1
...
yyyy: Discrepancy error for fail-safe digital outputs (F-DO).
Bit 0: Discrepancy error for F-DO 0
...

Note:
If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.

- **Remedy:**
- check the wiring of the F-DI (contact problems).

Note:
This message can be acknowledged via F-DI or PROFIsafe.
Discrepancy errors of an F-DI can only be completely acknowledged if safe acknowledgement was carried out once the cause of the error was resolved (p10006 or acknowledgment via PROFIsafe). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state internally.
For cyclic switching operations at the F-DI, it may be necessary to adapt the discrepancy time to the switching frequency.
If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.
p10002 < (tp / 2) - td (discrepancy time must be less than half the period minus the actual discrepancy time)
p10002 >= p9500 (discrepancy time must be no less than P9500)
p10002 > td (discrepancy time must be greater than the switch discrepancy time which may actually apply)

If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.

Note:
When debounce p10017 is active, the discrepancy time is directly specified by the debounce time.
If the period of a cyclic switching pulse has the order of magnitude of twice the debounce time, then the following formulas should be checked.

\[
p10002 < p10017 + 1 \text{ ms} - td \\
p10002 > td \\
p10002 >= p9500
\]

**Example:**
For a 12 ms SI sampling cycle and a switching frequency of 110 ms (p10017 = 0), the maximum discrepancy time which can be set is as follows:

\[
p10002 <= (110/2 \text{ ms}) - 12 \text{ ms} = 43 \text{ ms}
\]

Rounded-off, p10002 <= 36 ms is obtained (since the discrepancy time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if the result is not an exact multiple of an SI sampling cycle).

**Note:**
F-DI: Failsafe Digital Input
F-DO: Failsafe Digital Output

### A30772
**SI Motion MM: Test stop failsafe inputs/outputs active**

| Message value | - |
| Drive object | VECTOR_G |
| Reaction | NONE |
| Acknowledge | NONE |
| Cause | The test stop for the fail-safe digital inputs (F-DI) and/or fail-safe digital outputs (F-DO) is presently being performed. |
| Remedy | The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop. |

### F30773
**SI Motion MM: Test stop fault Motor Module**

| Message value | %1 |
| Drive object | VECTOR_G |
| Reaction | NONE |
| Acknowledge | IMMEDIATELY (POWER ON) |
| Cause | A fault has occurred on the MM side during the test stop for the fail-safe outputs. |
| Fault value (r0949, interpret hexadecimal): | RRRRWVXYZ hex: |
| R: Reserved. | |
| V: Actual state of the DO channel concerned (see X) on the CU (corresponds to the states read back from the hardware, bit 0 = DO 0, bit 1 = DO 1, etc.). | |
| W: Required state of the DO channel concerned (see X, bit 0 = DO 0, bit 1 = DO 1, etc.). | |
| X: DO channels involved, which indicate an error (bit 0 = DO 0, bit 1 = DO 1, etc.). | |
| Y: Reason for the test stop fault. | |
| Z: State of the test stop in which the fault has occurred. | |
| Y = 1: MM side in incorrect test stop state (internal fault). | |
| Y = 2: Expected states of the DOs were not fulfilled (CU305: readback via DI 22 / CU240 readback DI 2). | |
| Y = 3: Incorrect timer state on CU side (internal fault) | |
| Y = 4: Expected states of the diag DOs were not fulfilled (CU305: internal readback on MM channel). | |
| Y = 5: Expected states of the second diag DOs were not fulfilled (CU305: internal readback on CU channel). | |
| X and V indicate the DI or Diag-DO state dependent upon the reason for the fault (2, 4 or 5). | |
| In the event of multiple test stop faults, the first one that occurred is shown. | |
| Z: Test stop state and associated test actions | |
| Z = 0 ... 3: Synchronization phase of test stop between CU and Motor Module no switching operations | |
| Z = 4: DO + OFF and DO - OFF | |
| Z = 5: Check to see if states are as expected | |
| Z = 6: DO + ON and DO - ON | |
| Z = 7: Check to see if states are as expected | |
| Z = 8: DO + OFF and DO - ON | |
| Z = 9: Check to see if states are as expected | |
| Z = 10: DO + ON and DO - OFF | |
| Z = 11: Check to see if states are as expected | |
Z = 12: DO + OFF and DO - OFF
Z = 13: Check to see if states are as expected
Z = 14: End of test stop

Diag expected states in table format:
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4
5: 0/-/-/1
7: 0/-/-/0
9: 0/-/-/0
11: 1/-/-/1
13: 0/-/-/1

Second diag expected states in table format:
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4
5: -/-/-/1
7: -/-/-/0
9: -/-/-/1
11: -/-/-/0
13: -/-/-/1

Di expected states in table format:
Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4
5: -/1/1/-
7: -/0/0/-
9: -/0/1/-
11: -/0/1/-
13: -/1/1/-

Example:
Fault F01773 (CU) is signaled with fault value = 0001_0127 and fault F30773 (MM) is signaled with fault value 0000_0127.
This means that in state 7 (Z = 7) the state of the external readback signal was not set correctly (Y = 2) after DO-0
(X = 1) was switched to ON/ON.
Fault value 0001_0127 indicates that 0 was expected (W = 0) and 1 (V = 1) was read back from the hardware.
Fault value 0000_0127 on the MM indicates that the states were as expected.
In the case of fault F30773, W and V are always identical; a value of 0 always means that 0 was expected at the
readback input but was not present on the other channel (CU).

Remedy: Check the wiring of the F-DOs and restart the test stop.
Note: The fault is withdrawn if the test stop is successfully completed.
In the event of multiple test stop faults, the first one that occurred is shown.
Once the test stop has been restarted the next queued test stop fault will be signaled (if there is one).

C30797 SI Motion MM: Axis not safely referenced
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The standstill position saved before powering down does not match the actual position determined at power-up.
Message value (r9749, interpret decimal):
1: Axis not referenced.
2: User agreement missing.
Remedy: If safe automatic referencing is not possible the user must issue a user agreement for the new position using the
softkey. This mean that this position is then designated as safety-relevant.
Note:
SI: Safety Integrated

C30798 SI Motion MM: Test stop running
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The test stop is active.
Remedy: Not necessary.
The message is withdrawn when the test stop is finished.
### List of faults and alarms

#### C30799
**SI Motion MM: Acceptance test mode active**
- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** The acceptance test mode is active. The POWER ON signals of the safety-relevant motion monitoring functions can be acknowledged during the acceptance test using the acknowledgement functions of the higher-level control.
- **Remedy:** Not necessary. The message is withdrawn when exiting the acceptance test mode.

#### N30800 (F)
**Power unit: Group signal**
- **Message value:** -
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** NONE
- **Cause:** The power unit has detected at least one fault.
- **Remedy:** Evaluate the other messages that are presently available.

#### F30801
**Power unit DRIVE-CLiQ: Sign-of-life missing**
- **Message value:** Component number: %1, fault cause: %2
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. The computing time load might be too high. Fault cause:
  - 10 (= 0A hex):
    - The sign-of-life bit in the receive telegram is not set.
  - Note regarding the message value:
    - The individual information is coded as follows in the message value (r0949/r2124):
      - 0000yyxx hex: yy = component number, xx = error cause
- **Remedy:**
  - check the electrical cabinet design and cable routing for EMC compliance
  - remove DRIVE-CLiQ components that are not required.
  - de-select functions that are not required.
  - if required, increase the sampling times (p0112, p0115).
  - replace the component involved.

#### F30802
**Power unit: Time slice overflow**
- **Message value:** -
- **Drive object:** B_INF, VECTOR_G
- **Reaction:** OFF2
- **Acknowledge:** IMMEDIATELY
- **Cause:** A time slice overflow has occurred.
- **Remedy:**
  - carry out a POWER ON (power off/on) for all components.
  - upgrade firmware to later version.
  - contact the Hotline.

</table>
Fault cause:
1 (= 01 hex):
Checksum error (CRC error).
2 (= 02 hex):
Telegram is shorter than specified in the length byte or in the receive list.
3 (= 03 hex):
Telegram is longer than specified in the length byte or in the receive list.
4 (= 04 hex):
The length of the receive telegram does not match the receive list.
5 (= 05 hex):
The type of the receive telegram does not match the receive list.
6 (= 06 hex):
The address of the component in the telegram and in the receive list do not match.
7 (= 07 hex):
A SYNC telegram is expected - but the received telegram is not a SYNC telegram.
8 (= 08 hex):
No SYNC telegram is expected - but the received telegram is one.
9 (= 09 hex):
The error bit in the receive telegram is set.
16 (= 10 hex):
The receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance.
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F30835  Power unit DRIVE-CLiQ: Cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause:
A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. The nodes do not send and receive in synchronism.
Fault cause:
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON.
- replace the component involved.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F30836  Power unit DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause:
A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. Data were not able to be sent.
Fault cause:
65 (= 41 hex):
Telegram type does not match send list.
Note regarding the message value:
### F30837 Power unit DRIVE-CLiQ: Component fault

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex): Error in the telegram header.  
**Remedy:**  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).  
- check the electrical cabinet design and cable routing for EMC compliance  
- if required, use another DRIVE-CLiQ socket (p9904).  
- replace the component involved.

### F30845 Power unit DRIVE-CLiQ: Cyclic data transfer error

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned.  
Fault cause:  
11 (= 0B hex): Synchronization error during alternating cyclic data transfer.  
**Remedy:**  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).  
- check the electrical cabinet design and cable routing for EMC compliance  
- if required, use another DRIVE-CLiQ socket (p9904).  
- replace the component involved.

### F30850 Power unit: Internal software error

**Message value:** %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** Infeed: OFF1 (NONE, OFF2)  
Vecor: OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** POWER ON  
**Cause:** An internal software error has occurred in the power unit.  
Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.  
**Remedy:**  
- replace power unit.  
- if required, upgrade the firmware in the power unit.  
- contact the Hotline.
**F30851**  
**Power unit DRIVE-CLiQ (CU): Sign-of-life missing**

**Message value:**  
Component number: %1, fault cause: %2

**Drive object:**  
B_INF, VECTOR_G

**Reaction:**  
Infeed: OFF2 (NONE, OFF1)  
Vector: OFF2 (NONE, OFF1, OFF3)

**Acknowledge:**  
IMMEDIATELY

**Cause:**  
A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.  
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.  
Fault cause:
10 (= 0A hex):  
The sign-of-life bit in the receive telegram is not set.  
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

**Remedy:**  
Upgrade the firmware of the component involved.

---

**A30853**  
**Power unit: Sign-of-life error cyclic data**

**Message value:**  
-

**Drive object:**  
B_INF, VECTOR_G

**Reaction:**  
NONE

**Acknowledge:**  
NONE

**Cause:**  
The power unit has detected that the cyclic setpoint telegrams of the Control Unit have not been updated on time. At least two sign-of-life errors have occurred within the window set in p7788.

**Remedy:**  
- check the electrical cabinet design and cable routing for EMC compliance  
- reduce the size of the window (p7788) for monitoring.

---

**F30860**  
**Power unit DRIVE-CLiQ (CU): Telegram error**

**Message value:**  
Component number: %1, fault cause: %2

**Drive object:**  
B_INF, VECTOR_G

**Reaction:**  
OFF2

**Acknowledge:**  
IMMEDIATELY

**Cause:**  
A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.  
Fault cause:
1 (= 01 hex):  
Checksum error (CRC error).  
2 (= 02 hex):  
Telegram is shorter than specified in the length byte or in the receive list.  
3 (= 03 hex):  
Telegram is longer than specified in the length byte or in the receive list.  
4 (= 04 hex):  
The length of the receive telegram does not match the receive list.  
5 (= 05 hex):  
The type of the receive telegram does not match the receive list.  
6 (= 06 hex):  
The address of the power unit in the telegram and in the receive list do not match.  
9 (= 09 hex):  
The error bit in the receive telegram is set.  
16 (= 10 hex):  
The receive telegram is too early.  
17 (= 11 hex):  
CRC error and the receive telegram is too early.  
18 (= 12 hex):  
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.  
19 (= 13 hex):  
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.  
20 (= 14 hex):  
The length of the receive telegram does not match the receive list and the receive telegram is too early.  
21 (= 15 hex):  
The type of the receive telegram does not match the receive list and the receive telegram is too early.
Faults and alarms

List of faults and alarms

22 (= 16 hex):
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
25 (= 19 hex):
The error bit in the receive telegram is set and the receive telegram is too early.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F30875  Power unit DRIVE-CLiQ (CU): Supply voltage failed
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.
Fault cause: 9 (= 09 hex):
The power supply voltage for the components has failed.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON (power off/on).
- check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the power supply for the DRIVE-CLiQ component.

F30885  CU DRIVE-CLiQ (CU): Cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, VECTOR_G
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. The nodes do not send and receive in synchronism.
Fault cause: 26 (= 1A hex):
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.
98 (= 62 hex):
Error at the transition to cyclic operation.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)
### F30886 PU DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. Data were not able to be sent.  
Fault cause:  
65 (= 41 hex):  
Telegram type does not match send list.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON.

### F30887 Power unit DRIVE-CLiQ (CU): Component fault

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component (power unit) involved. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex):  
Error in the telegram header.  
35 (= 23 hex):  
Receive error: The telegram buffer memory contains an error.  
66 (= 42 hex):  
Send error: The telegram buffer memory contains an error.  
67 (= 43 hex):  
Send error: The telegram buffer memory contains an error.  
96 (= 60 hex):  
Response received too late during runtime measurement.  
97 (= 61 hex):  
Time taken to exchange characteristic data too long.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts,...).  
- check the electrical cabinet design and cable routing for EMC compliance  
- if required, use another DRIVE-CLiQ socket (p9904).  
- replace the component involved.

### F30895 PU DRIVE-CLiQ (CU): Alternating cyclic data transfer error

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, TM150, TM31, VECTOR_G  
**Reaction:**  
Infeed: OFF2 (NONE, OFF1)  
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.  
Fault cause:  
11 (= 0B hex):  
Synchronization error during alternating cyclic data transfer.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON.

<th>New message: %1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>B_INF, VECTOR_G</td>
</tr>
<tr>
<td>Reaction:</td>
<td>NONE</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>NONE</td>
</tr>
</tbody>
</table>
| Cause:         | An alarm occurred on the power unit that cannot be interpreted by the Control Unit firmware.  
                  This can occur if the firmware on this component is more recent than the firmware on the Control Unit.  
                  Alarm value (r2124, interpret decimal):  
                  Alarm number.  
                  Note:  
                  If required, the significance of this new alarm can be read about in a more recent description of the Control Unit. |
| Remedy:        | - replace the firmware on the power unit by an older firmware version (r0128).  
                  - upgrade the firmware on the Control Unit (r0018). |
Faults and alarms

List of faults and alarms

F31100 (N, A) Encoder 1: Zero mark distance error

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.

The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal):

Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable

Reaction upon A: NONE
Acknowl. upon A: NONE

F31101 (N, A) Encoder 1: Zero mark failed

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT
Cause: The 1.5 x parameterized zero mark distance was exceeded.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal):

Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).

See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- when p0437.1 is active, check p4686.
- replace the encoder or encoder cable

See also: p0491 (Motor encoder fault response ENCODER)
Remedy:

For \( yyy = 0 \):

Re fault value, bit 0 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLIQ socket: Replace the motor.

Re fault value, bit 1 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLIQ socket: Replace the motor.

Re fault value, bit 2 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLIQ socket: Replace the motor.

Re fault value, bit 3 = 1:
5 V power supply voltage fault.
When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
When a motor encoder with a direct DRIVE-CLIQ connection is used: Replace the motor.

Re fault value, bit 4 = 1:
5 V power supply voltage fault.
When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
When using a motor with DRIVE-CLIQ: Replace the motor.

Re fault value, bit 5 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLIQ socket: Replace the motor.

Re fault value, bit 6 = 1:
The battery must be changed (only for encoders with battery back-up).
For \( yyy = 1 \):
Encoder is defective. Replace encoder.

Remedy:

For \( yyy = 0 \):

Re fault value, bit 0 = 1:
In the case of an EnDat encoder, F31111 may provide further details.

Reaction upon A: NONE
Acknowl. upon A: NONE

F31115 (N, A) Encoder 1: Amplitude error track A or B (\( A^2 + B^2 \))

Message value: A track: %1, B-track: %2
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE
Vector: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of \( A^2 + B^2 \)) for encoder 1 exceeds the permissible tolerance.
Fault value (r0949, interpret hexadecimal):
\( yyyyxxxx \) hex:
\( yyyy \) = Signal level, track B (16 bits with sign).
\( xxxx \) = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV ±25%/+20%).
The response thresholds are < 170 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e.g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
The following applies to measuring systems without their own bearing system:
- adjust the scanning head and check the bearing system of the measuring wheel.
The following applies for measuring systems with their own bearing system:
- ensure that the encoder housing is not subject to any axial force.

Reaction upon A: NONE
Acknow. upon A: NONE

F31117 (N, A) Encoder 1: Inversion error signals A/B/R
Message value: Fault cause: %1 bin
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE
Vector: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: IMMEDIATELY
Cause: For a square-wave encoder (bipolar, double ended) signals A*, B* and R* are not inverted with respect to signals A, B and R.
Fault value (r0949, interpret binary):
Bits 0 ... 15: Only for internal Siemens troubleshooting.
Bit 16: Error track A.
Bit 17: Error track B.
Bit 18: Error track R.

Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), CU32, and CU310, the following applies:
A square-wave encoder without track R is used and track monitoring (p0405.2 = 1) is activated.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- Check the encoder/cable.
- Does the encoder supply signals and the associated inverted signals?

Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), the following applies:
- check the setting of p0405 (p0405.2 = 1 is only possible if the encoder is connected at X520).
- For a square-wave encoder without track R, the following jumpers must be set for the connection at X520 (SMC30) or X23 (CU32, CU310):
  - pin 10 (reference signal R) <-> pin 7 (encoder power supply, ground)
  - pin 11 (reference signal R inverted) <-> pin 4 (encoder power supply)

Reaction upon N: NONE

Reaction upon A: NONE
Acknowl. upon A: NONE

F31118 (N, A) Encoder 1: Speed difference outside the tolerance range

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE
Vector: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT

Cause:
For an HTL/TTL encoder, the speed difference has exceeded the value in p0492 over several sampling cycles.
The change to the averaged speed actual value - if applicable - is monitored in the current controller sampling time.
Encoder 1 is used as motor encoder and can be effective has fault response to change over to encoderless operation.

Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
See also: p0491 (Motor encoder fault response ENCODER), p0492

Remedy:
- check the tachometer feeder cable for interruptions.
- check the grounding of the tachometer shielding.
- if required, increase the maximum speed difference per sampling cycle (p0492).

Message value: Fault cause: %1 bin
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE
Vector: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT

Cause:
A power supply fault was detected for encoder 1.
Fault value (r0949, interpret binary):
Bit 0: Undervoltage condition on the sense line.
Bit 1: Overcurrent condition for the encoder power supply.
Bit 2: Overcurrent condition for encoder power supply on cable resolver excitation negative.
Bit 3: Overcurrent condition for encoder power supply on cable resolver excitation positive.
Bit 4: The 24 V power supply through the Power Module (PM) is overloaded.
Bit 5: Overcurrent at the EnDat connection of the converter.
Faults and alarms

List of faults and alarms

Bit 6: Overvoltage at the EnDat connection of the converter.
Bit 7: Hardware fault at the EnDat connection of the converter.

Note:
If the encoder cables 6FX2002-2EQ00-... and 6FX2002-2CH00-... are interchanged, this can result in the encoder being destroyed because the pins of the operating voltage are reversed.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
Re fault value, bit 0 = 1:
- correct encoder cable connected?
- check the plug connections of the encoder cable.
- SMC30: Check the parameterization (p0404.22).
Re fault value, bit 1 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable
Re fault value, bit 2 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable
Re fault value, bit 3 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable
Re fault value, bit 5 = 1:
- Measuring unit correctly connected at the converter?
- Replace the measuring unit or the cable to the measuring unit.
Re fault value, bit 6, 7 = 1:
- Replace the defective EnDat 2.2 converter.

F31122 Encoder 1: Internal power supply voltage faulty

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: NONE
Vector: ENCODER
Acknowledge: IMMEDIATELY
Cause: Fault in internal reference voltage of ASICs for encoder 1.
Fault value (r0949, interpret decimal):
1: Reference voltage error.
2: Internal undervoltage.
3: Internal overvoltage.
Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.
### List of faults and alarms

#### F31123 (N, A)  Encoder 1: Signal level A/B unipolar outside tolerance

**Message value:** Fault cause: %1 bin  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** Infeed: NONE  
Vector: ENCODER (IASC/DCBRAKE, NONE)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The unipolar level (AP/AN or BP/BN) for encoder 1 is outside the permissible tolerance.  
Fault value (r0949, interpret binary):  
Bit 0 = 1: Either AP or AN outside the tolerance.  
Bit 16 = 1: Either BP or BN outside the tolerance.  
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.  
The response thresholds are < 1700 mV and > 3300 mV.  
**Note:**  
The signal level is not evaluated unless the following conditions are satisfied:  
- Sensor Module properties available (r0459.31 = 1).  
- Monitoring active (p0437.31 = 1).  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.  
- check the plug connections and contacts of the encoder cable.  
- check the short-circuit of a signal cable with mass or the operating voltage.  
- replace the encoder cable.

#### F31125 (N, A)  Encoder 1: Amplitude error track A or B overcontrolled

**Message value:** A track: %1, B-track: %2  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** Infeed: NONE  
Vector: ENCODER (IASC/DCBRAKE, NONE)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The amplitude of track A or B for encoder 1 exceeds the permissible tolerance band.  
Fault value (r0949, interpret hexadecimal):  
yyyyxxxx hex:  
yyyy = Signal level, track B (16 bits with sign).  
xxxx = Signal level, track A (16 bits with sign).  
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (600 mV -25/+20 %).  
The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.  
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.  
Note for sensors modules for resolvers (e. g. SMC10):  
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.  
A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.  
**Note:**  
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- check that the encoder cables and shielding are routed in compliance with EMC.  
- replace the encoder or encoder cable.

### F31126 (N, A) Encoder 1: Amplitude AB too high

| Message value: | Amplitude: %1, Angle: %2 |
| Drive object: | B_INF, ENC, VECTOR_G |
| Reaction: | Infeed: NONE |
| Acknowledge: | PULSE INHIBIT |
| Cause: | The amplitude (root of $A^2 + B^2$ or $|A| + |B|$) for encoder 1 exceeds the permissible tolerance. |
| Fault value (r0949, interpret hexadecimal): |
| yyyy = Angle |
| xxx = Amplitude, i.e. root from $A^2 + B^2$ (16 bits without sign) |
| The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25%/+20%). |
| The response threshold for $(|A| + |B|)$ is $> 1120$ mV or the root of $(A^2 + B^2) > 955$ mV. |
| A signal level of 500 mV peak value corresponds to the numerical value of 299A hex = 10650 dec. |
| The angle 0...FFFF hex corresponds to 0...360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B. |
| Note: |
| The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module. |
| See also: p0491 (Motor encoder fault response ENCODER) |
| Remedy: |
| - check that the encoder cables and shielding are routed in compliance with EMC. |
| - replace the encoder or encoder cable |
| Reaction upon N: | NONE |
| Acknowl. upon N: | NONE |
| Reaction upon A: | NONE |
| Acknowl. upon A: | NONE |

### F31129 (N, A) Encoder 1: Position difference, hall sensor/track C/D and A/B too large

| Message value: | %1 |
| Drive object: | B_INF, ENC, VECTOR_G |
| Reaction: | Infeed: NONE |
| Acknowledge: | PULSE INHIBIT |
| Cause: | The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical. |
| One period of track C/D corresponds to 360 ° mechanical. |
| One period of the Hall signal corresponds to 360 ° electrical. |
| The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough. |
| After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A31429. |
| Fault value (r0949, interpret decimal): |
| For track C/D, the following applies: |
| Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °). |
| For Hall signals, the following applies: |
| Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °). |
| See also: p0491 (Motor encoder fault response ENCODER) |
| Remedy: |
| - track C or D not connected. |
| - correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D. |
| - check that the encoder cables are routed in compliance with EMC. |
| - check the adjustment of the Hall sensor. |
| Reaction upon N: | NONE |

<tr>
<td>Reaction:</td>
<td>Infed: NONE Vector: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)</td>
</tr>
<tr>
<td>Acknowledge:</td>
<td>PULSE INHIBIT</td>
</tr>
<tr>
<td>Cause:</td>
<td>Absolute encoder: When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected. Limit value for the deviation: - EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 &gt; 2 quadrants, EQN 1325 &gt; 50 quadrants). - other encoders: 15 pulses = 60 quadrants. Incremental encoder: When the zero pulse is passed, a deviation in the incremental position was detected. For equidistant zero marks, the following applies: - The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark. For distance-coded zero marks, the following applies: - the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair. Fault value (r0949, interpret decimal): Deviation in quadrants (1 pulse = 4 quadrants). See also: p0491 (Motor encoder fault response ENCODER)</td>
</tr>
<tr>
<td>Remedy:</td>
<td>- check that the encoder cables are routed in compliance with EMC. - check the plug connections - replace the encoder or encoder cable - check whether the coding disk is dirty or there are strong ambient magnetic fields. - adapt the parameter for the clearance between zero marks (p0425). - if message output above speed threshold, reduce filter time if necessary (p0438).</td>
</tr>
</tbody>
</table>
### F31135 Encoder 1: Fault when determining the position

- **Message value:** Fault cause: %1 bin
- **Drive object:** B_INF, ENC, VECTOR_G
- **Reaction:** Infeed: NONE
  Vector: ENCODER (IASC/DCBRAKE, NONE)
- **Acknowledge:** PULSE INHIBIT
- **Cause:**
The DRIVE-CLiQ encoder supplies status information via bits in an internal status/fault word. Some of these bits cause this fault to be triggered. Other bits are status displays. The status/fault word is displayed in the fault value.

Fault value (r0949, interpret binary):
- Bit 0: F1 (safety status display)

F31160 (N, A) Encoder 1: Analog sensor channel A failed
Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: ENCODER (NONE)
Vector: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The input voltage of the analog sensor is outside the permissible limits.
Fault value (r0949, interpret decimal):
1: Input voltage outside detectable measuring range.
2: Input voltage outside the measuring range set in (p4673).
3: The absolute value of the input voltage has exceeded the range limit (p4676).
Remedy: For fault value = 1:
- check the output voltage of the analog sensor.
For fault value = 2:
- check the voltage setting for each encoder period (p4673).
For fault value = 3:
- check the range limit setting and increase it if necessary (p4676).

A31400 (F, N) Encoder 1: Alarm threshold zero mark distance error

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that
if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the
system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Alarm value (r2124, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Fault cause: %1 bin

Drive object:
B_INF, ENC, VECTOR_G

Reaction:
NONE

Acknowledge:
NONE

Cause:
Serial communication protocol transfer error between the encoder and evaluation module.
Alarm value (r2124, interpret binary):
Bit 0: Alarm bit in the position protocol.
Bit 1: Incorrect quiescent level on the data line.
Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
Bit 5: Internal error in the serial driver: An illegal mode command was requested.
Bit 6: Timeout when cyclically reading.
Bit 8: Protocol is too long (e.g. > 64 bits).
Bit 9: Receive buffer overflow.
Bit 10: Frame error when reading twice.
Bit 11: Parity error.
Bit 12: Data line signal level error during the monoflop time.

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace encoder.

Reaction upon F:

A31411 (F, N) Encoder 1: Absolute encoder signals internal alarms

Message value:
Fault cause: %1 bin, additional information: %2

Drive object:
B_INF, ENC, VECTOR_G

Reaction:
NONE

Acknowledge:
NONE

Cause:
The absolute encoder fault word includes alarm bits that have been set.
Alarm value (r2124, interpret binary):

yyyyyyyy hex: yyyy = supplementary information, xxxx = fault cause
yyyy = 0:
Bit 0: Frequency exceeded (speed too high).
Bit 1: Temperature exceeded.
Bit 2: Control reserve, lighting system exceeded.
Bit 3: Battery discharged.
Bit 4: Reference point passed.
yyyy = 1:
Bit 0: Signal amplitude outside the control range.
Bit 1: Error multturn interface
Faults and alarms

List of faults and alarms

Bit 2: Internal data error (singleturn/multiturn not with single steps).
Bit 3: Error EEPROM interface.
Bit 4: SAR_converter error.
Bit 5: Fault for the register data transfer.
Bit 6: Internal error identified at the error pin (nErr).
Bit 7: Temperature threshold exceeded or fallen below.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: Replace encoder.

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

A31412 (F, N) Encoder 1: Error bit set in the serial protocol

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowled: NONE

Cause: The encoder sends a set error bit via the serial protocol.
Alarm value (r2124, interpret binary):
Bit 0: Fault bit in the position protocol.
Bit 1: Alarm bit in the position protocol.

Remedy: - carry out a POWER ON (power off/on) for all components.
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace encoder.

Reaction upon F: Infeed: NONE (OFF1, OFF2)

Reaction upon N: NONE

Acknowl. upon N: NONE

A31414 (F, N) Encoder 1: Amplitude error track C or D (C^2 + D^2)

Message value: C track: %1, D track: %2
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowled: NONE

Cause: The amplitude (C^2 + D^2) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track D (16 bits with sign).
xxxx = Signal level, track C (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

Note: If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.

Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- check the Hall sensor box

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowl. upon F: IMMEDIATELY
A31415 (F, N)  Encoder 1: Amplitude alarm track A or B (A^2 + B^2)

Message value:  
Amplitude: %1, Angle: %2

Drive object:  
B_INF, ENC, VECTOR_G

Reaction:  
NONE

Acknowledge:  
NONE

Cause:  
The amplitude (root of A^2 + B^2) for encoder 1 exceeds the permissible tolerance.

Alarm value (r2124, interpret hexadecimal):

- yyyy = Angle  
- xxxx = Amplitude, i.e. root from A^2 + B^2 (16 bits without sign)

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).

The response threshold is < 230 mV (observe the frequency response of the encoder).

A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec.

The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.

Note:  
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

See also: p0491 (Motor encoder fault response ENCODER)

Remedy:  
- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- if the coding disk is soiled or the lighting aged, replace the encoder.

Reaction upon F:  
Infeed: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY

Reaction upon N:  
NONE

Acknowl. upon N: NONE

A31418 (F, N)  Encoder 1: Speed difference per sampling rate exceeded

Message value:  
%1

Drive object:  
B_INF, ENC, VECTOR_G

Reaction:  
NONE

Acknowledge:  
NONE

Cause:  
For an HTL/TTL encoder, the speed difference between two sampling cycles has exceeded the value in p0492.

The change to the averaged speed actual value - if applicable - is monitored in the current controller sampling time.

Alarm value (r2124, interpret decimal):

- Only for internal Siemens troubleshooting.

See also: p0492

Remedy:  
- check the tachometer feeder cable for interruptions.
- check the grounding of the tachometer shielding.
- if required, increase the setting of p0492.

Reaction upon F:  
Infeed: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY

Reaction upon N:  
NONE

Acknowl. upon N: NONE
## A31419 (F, N) Encoder 1: Track A or B outside tolerance

**Message value:** %1  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The amplitude/phase/offset correction for track A or B is at the limit.  
Amplitude error correction: Amplitude B / Amplitude A = 0.78 ... 1.27  
Phase: <84 degrees or >96 degrees  
SMC20: Offset correction: +/-140 mV  
SMC10: Offset correction: +/-650 mV  
Alarm value (r2124, interpret hexadecimal):  
xxxx1: Minimum of the offset correction, track B  
xxxx2: Maximum of the offset correction, track B  
xx1xx: Minimum of the offset correction, track A  
xx2xx: Maximum of the offset correction, track A  
x1xxx: Minimum of the phase error correction  
x2xxx: Maximum of the phase error correction  
1xxxx: Minimum of the cubic correction  
2xxxx: Maximum of the cubic correction  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- check mechanical mounting tolerances for encoders without their own bearings (e.g. toothed-wheel encoders).  
- check the plug connections (also the transition resistance).  
- check the encoder signals.  
- replace the encoder or encoder cable  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY

**Acknowl. upon N:** NONE

## A31421 (F, N) Encoder 1: Coarse position error

**Message value:** %1  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.  
Alarm value (r2124, interpret decimal):  
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.  
**Remedy:**  
- For a standard encoder with cable, contact the manufacturer where relevant.  
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY  
**Reaction upon N:** NONE

Faults and alarms

List of faults and alarms

For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.

Alarm value (r2124, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- Clean coding disk or remove strong magnetic fields.

A31432 (F, N) Encoder 1: Rotor position adaptation corrects deviation
Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: For track A/B, pulses have been lost or too many have been counted. These pulses are presently being corrected.
Alarm value (r2124, interpret decimal):
Last measured deviation of zero mark in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check encoder limit frequency.
- adapt the parameter for the distance between zero marks (p0424, p0425).

### A31443 (F, N) Encoder 1: Unipolar CD signal level outside specification

**Message value:** Fault cause: %1 bin  
**Drive object:** B-INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:**  
The unipolar level (CP/CN or DP/DN) for encoder 1 is outside the permissible tolerance.  
Alarm value (r2124, interpret binary):  
Bit 0 = 1: Either CP or CN outside the tolerance.  
Bit 16 = 1: Either DP or DN outside the tolerance.  
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.  
The response thresholds are < 1700 mV and > 3300 mV.  
Note:  
The signal level is not evaluated unless the following conditions are satisfied:  
- Sensor Module properties available (r0459.31 = 1).  
- Monitoring active (p0437.31 = 1).  
See also: p0491 (Motor encoder fault response ENCODER)  
**Remedy:**  
- check that the encoder cables and shielding are routed in compliance with EMC.  
- check the plug connections and contacts of the encoder cable.  
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?  
- replace the encoder cable.  
**Reaction upon F:** Infeed: NONE

### A31460 (N) Encoder 1: Analog sensor channel A failed

**Message value:** %1  
**Drive object:** B-INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:**  
The input voltage of the analog sensor is outside the permissible limits.  
Alarm value (r2124, interpret decimal):  
1: Input voltage outside detectable measuring range.  
2: Input voltage outside measuring range set in p4673.  
3: The absolute value of the input voltage has exceeded the range limit (p4676).  
**Remedy:**  
Re alarm value = 1:  
- check the output voltage of the analog sensor.  
Re alarm value = 2:  
- check the voltage setting for each encoder period (p4673).  
Re alarm value = 3:  
- check the range limit setting and increase it if necessary (p4676).  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

### A31461 (N) Encoder 1: Analog sensor channel B failed

**Message value:** %1  
**Drive object:** B-INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:**  
The input voltage of the analog sensor is outside the permissible limits.  
Alarm value (r2124, interpret decimal):  
1: Input voltage outside detectable measuring range.  
2: Input voltage outside measuring range set in (p4675).  
3: The absolute value of the input voltage has exceeded the range limit (p4676).  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE
Faults and alarms

List of faults and alarms

**Remedy:**

Re alarm value = 1:
- check the output voltage of the analog sensor.
Re alarm value = 2:
- check the voltage setting for each encoder period (p4675).
Re alarm value = 3:
- check the range limit setting and increase it if necessary (p4676).

**A31462 (N) Encoder 1: Analog sensor, no channel active**

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: Channel A and B are not activated for the analog sensor.
Remedy:
- activate channel A and/or channel B (p4670).
- check the encoder configuration (p0404.17).
See also: p4670 (Analog sensor configuration)

Reaction upon N: NONE
Acknowl. upon N: NONE

**A31463 (N) Encoder 1: Analog sensor position value exceeds limit value**

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The position value has exceeded the permissible range of -0.5 ... +0.5.
Alarm value (r2124, interpret decimal):
1: Position value from the LVDT sensor.
2: Position value from the encoder characteristic.
Remedy:
Re alarm value = 1:
- Check the LVDT ratio (p4678).
- check the reference signal connection at track B.
Re alarm value = 2:
- check the coefficients of the characteristic (p4663 ... p4666).

Reaction upon N: NONE
Acknowl. upon N: NONE

**A31470 (F, N) Encoder 1: Soiling detected**

Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: In the case of the alternative encoder system interface on the Sensor Module Cabinet 30 (SMC30), encoder soiling is signaled via a 0 signal at terminal X521.7.
Remedy:
- check the plug connections
- replace the encoder or encoder cable

Reaction upon F: Infeed: NONE (OFF1, OFF2)

F31500 (N, A)  Encoder 1: Position tracking traversing range exceeded

Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: OFF1 (NONE, OFF2)
Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421.
For p0411.3 = 1, the maximum traversing range for the configured linear axis is pre-set (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).
Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F31501 (N, A)  Encoder 1: Position tracking encoder position outside tolerance window

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: OFF1 (NONE, OFF2)
Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: When powered down, the drive/encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder.
Fault value (r0949, interpret decimal): Deviation (difference) to the last encoder position in increments of the absolute value.
The sign designates the traversing direction.
Note: The deviation (difference) found is also displayed in r0477.
See also: p0413 (Measuring gear, position tracking tolerance window), r0477 (Measuring gear, position difference)
Remedy: Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).

**F31802 (N, A) Encoder 1: Time slice overflow**

**Message value:** %1
**Drive object:** B_INF, ENC, VECTOR_G
**Reaction:**
- Infeed: OFF2 (NONE)
- Vector: ENCODER (IASC/DCBRAKE, NONE)
**Acknowledge:** IMMEDIATELY
**Cause:** A time slice overflow has occurred in encoder 1.
Fault value (r0949, interpret hexadecimal):
- \( yx \) hex: \( y \) = function involved (Siemens-internal fault diagnostics), \( x \) = time slice involved
- \( x = 9 \):
  - Time slice overflow of the fast (current controller clock cycle) time slice.
- \( x = A \):
  - Time slice overflow of the average time slice.
- \( x = C \):
  - Time slice overflow of the slow time slice.
\( yx = 3E7 \):
  - Timeout when waiting for SYNO (e.g. unexpected return to non-cyclic operation).

**Remedy:**
- Increase the current controller sampling time

**Note:**
For a current controller sampling time = 31.25 μs, use an SMx20 with order number 6SL3055-0AA00-5xA3.

**F31804 (N, A) Encoder 1: Checksum error**

**Message value:** %1
**Drive object:** B_INF, ENC, VECTOR_G
**Reaction:**
- Infeed: OFF2 (NONE)
- Vector: ENCODER (IASC/DCBRAKE, NONE)
**Acknowledge:** POWER ON (IMMEDIATELY)
**Cause:** A checksum error has occurred when reading-out the program memory on the Sensor Module.
Fault value (r0949, interpret hexadecimal):
- yyyyxxxx hex
- yyyy: Memory area involved.
- xxxx: Difference between the checksum at POWER ON and the actual checksum.

See also: p0491 (Motor encoder fault response ENCODER)

**Remedy:**
- carry out a POWER ON (power off/on).
- upgrade firmware to later version (\( >= V2.6 \) HF3, \( >= V4.3 \) SP2, \( >= V4.4 \)).
- check whether the permissible ambient temperature for the component is maintained.
- replace the Sensor Module.

  - Vector: ENCODER (IASC/DCBRAKE, NONE)
- **Acknowledge:** PULSE INHIBIT
- **Cause:**
  - The encoder was not successfully initialized.
  - Fault value (r0949, interpret hexadecimal):
    - Bit 0, 1: Encoder initialization with the motor rotating has failed (deviation involving coarse and fine position in encoder pulses/4).
    - Bit 2: Mid-voltage matching for track A unsuccessful.
    - Bit 3: Mid-voltage matching for track B unsuccessful.
    - Bit 4: Mid-voltage matching for acceleration input unsuccessful.
    - Bit 5: Mid-voltage matching for track safety A unsuccessful.
    - Bit 6: Mid-voltage matching for track safety B unsuccessful.
    - Bit 7: Mid-voltage matching for track C unsuccessful.
    - Bit 8: Mid-voltage matching for track D unsuccessful.
    - Bit 9: Mid-voltage matching for track R unsuccessful.
    - Bit 10: The difference in mid-voltages between A and B is too great (> 0.5 V)
    - Bit 11: The difference in mid-voltages between C and D is too great (> 0.5 V)
    - Bit 12: The difference in mid-voltages between safety A and safety B is too great (> 0.5 V)
    - Bit 13: The difference in mid-voltages between A and safety B is too great (> 0.5 V)
    - Bit 14: The difference in mid-voltages between B and safety A is too great (> 0.5 V)
    - Bit 15: The standard deviation of the calculated mid-voltages is too great (> 0.3 V)
    - Bit 16: Internal fault - fault when reading a register (CAFE)
    - Bit 17: Internal fault - fault when writing a register (CAFE)
    - Bit 18: Internal fault: No mid-voltage matching available
    - Bit 19: Internal error - ADC access error.
    - Bit 20: Internal error - no zero crossover found.
    - Bit 21: Error while initializing the EnDat 2.2 measuring unit.
    - Bit 22: Error when reading out the data from the EnDat 2.2 measuring unit.
    - Bit 30: EEPROM checksum of the EnDat 2.2 measuring unit incorrect.
    - Bit 31: Data of the EnDat 2.2 measuring unit inconsistent.
- **Note:**
  - Bit 0, 1: Up to 6SL3055-0AA00-5*A0
  - Bits 2 ... 20: 6SL3055-0AA00-5*A1 and higher
  - See also: p0491 (Motor encoder fault response ENCODER)
Remedy: Acknowledge fault.
If the fault cannot be acknowledged:
  Bits 2 ... 9: Check encoder power supply.
  Bits 2 ... 14: Check the corresponding cable.
  Bit 15 with no other bits: Check track R, check settings in p0404.
  Bit 28: Check the cable between the EnDat 2.2 converter and the measuring unit.
  Bit 29 ... 31: Replace the defective measuring unit.

Acknowl. upon A: NONE

A31811 (F, N) Encoder 1: Encoder serial number changed

Message value: -
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The serial number of the motor encoder of a synchronous motor has changed. The change was only checked for encoders with serial number (e.g. EnDat encoders) and build-in motors (e.g. p0300 = 401) or third-party motors (p0300 = 2).
  Cause 1:
  - The encoder was replaced.
  Cause 2:
  - A third-party, built-in or linear motor was re-commissioned.
  Cause 3:
  - The motor with integrated and adjusted encoder was replaced.
  Cause 4:
  - The firmware was updated to a version that checks the encoder serial number.

Note:
With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).
When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).
Proceed as follows to hide serial number monitoring:
  - set the following serial numbers for the corresponding Encoder Data Set: p0441= FF, p0442 = 0, p0443 = 0, p0444 = 0, p0445 = 0.
  - parameterize F07414 as message type N (p2118, p2119).
See also: p0491 (Motor encoder fault response ENCODER)

Remedy: Re causes 1, 2:
  Carry out an automatic adjustment using the pole position identification routine. Acknowledge fault. Initiate the pole position identification routine with p1990 = 1. Then check that the pole position identification routine is correctly executed.
SERVO:
  If a pole position identification technique is selected in p1980, and if p0301 does not contain a motor type with an encoder adjusted in the factory, then p1990 is automatically activated.
  or
  Set the adjustment via p0431. In this case, the new serial number is automatically accepted.
  or
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.
Re causes 3, 4:
  Accept the new serial number with p0440 = 1.

### A31903 (F, N) Encoder 1: I2C-BUS error occurred

**Message value:** %1  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Error when operating the internal I2C bus.  
**Remedy:**  
- replace the Sensor Module.  
- if required, upgrade the firmware in the Sensor Module.  
- contact the Hotline.  
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)  
Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

### F31905 (N, A) Encoder 1: Parameterization error

**Message value:** Parameter: %1, supplementary information: %2  
**Drive object:** B_INF, ENC, VECTOR_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A parameter of encoder 1 was detected as being incorrect. It is possible that the parameterized encoder type does not match the connected encoder. The parameter involved can be determined as follows:  
- determine the parameter number using the fault value (r0949).  
- determine the parameter index (p0187).  
**Fault value:** (r0949, interpret decimal):  
- yyyy = supplementary information, xxxx = parameter  
- xxxx = 421:  
  - For an EnDat/SSI encoder, the absolute position in the protocol must be less than or equal to 30 bits.  
  - yyyy = 0:  
    - No information available.  
    - yyyy = 1:  
      - The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).  
    - yyyy = 2:  
      - A code number for an identified encoder has been entered into p0400, however, no identification was carried out. Please start a new encoder identification.  
    - yyyy = 3:  
      - A code number for an identified encoder has been entered into p0400, however, no identification was carried out. Please select a listed encoder in p0400 with a code number < 10000.  
    - yyyy = 4:  
      - This component does not support SSI encoders (p0404.9 = 1) without track A/B.  
    - yyyy = 5:  
      - For SQW encoder, value in p4686 greater than in p0425.  
    - yyyy = 6:  
      - DRIVE-CLIQ encoder cannot be used with this firmware version.  
    - yyyy = 7:  
      - For an SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks.  
    - yyyy = 8:  
      - The motor pole pair width is not supported by the linear scale being used.  
    - yyyy = 9:  
      - The length of the position in the EnDat protocol may be a maximum of 32 bits.  
    - yyyy = 10:  
      - The connected encoder is not supported.  
See also: p0491 (Motor encoder fault response ENCODER)
Remedy:
- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number = 314:
- check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000).

F31912 Encoder 1: Device combination is not permissible

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: Infeed: ENCODER (NONE)
Vector: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause:
The selected device combination is not supported.
Fault value (r0949, interpret decimal):
1003: The connected measuring unit cannot be operated with the EnDat 2.2 converter. For instance, the measuring unit has a pulse number/resolution of $2^n$.
1005: The type of measuring unit (incremental) is not supported by the EnDat 2.2 converter.
1006: The maximum duration (31.25 µs) of the EnDat transfer was exceeded.
2001: The set combination of current controller cycle, DP cycle and Safety cycle is not supported by the EnDat 2.2 converter.
2002: The resolution of the linear measuring unit does not match the pole pair width of the linear motor

Remedy:
Re fault value = 1003, 1005, 1006:
- Use a measuring unit that is permissible.
For fault value = 2001:
- Set a permissible cycle combination (if required, use standard settings).
For fault value = 2002:
- Use a measuring unit with a lower resolution (p0422).

A31915 (F, N) Encoder 1: Configuration error

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The configuration for encoder 1 is incorrect.
Alarm value (r2124, interpret decimal):
1: Re-parameterization between fault/alarm is not permissible.
419: When the fine resolution Gx_XIST2 is configured, the encoder identifies a maximum possible absolute position actual value (r0483) that can no longer be represented within 32 bits.

Remedy:
Re alarm value = 1:
No re-parameterization between fault/alarm.
Re alarm value = 419:
Reduce the fine resolution (p0419) or deactivate the monitoring (p0437.25), if the complete multiturn range is not required.

Reaction upon F: Infeed: NONE (OFF1, OFF2)

### A31920 (F, N)  Encoder 1: Temperature sensor fault

| Message value: | Fault cause: %1, channel number: %2 |
| Drive object:  | B_INF, ENC, VECTOR_G |
| Reaction:      | NONE |
| Acknowledge:   | NONE |
| Cause:         | When evaluating the temperature sensor, an error occurred. |
Fault cause:
1 (= 01 hex):
Wire breakage or sensor not connected (KTY: R > 1630 Ohm).
2 (= 02 hex):
Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).

Additional values:
Only for internal Siemens troubleshooting.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
000yyxx hex: yy = channel number, xx = error cause
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- check that the encoder cable is the correct type and is correctly connected.
- check the temperature sensor selection in p0600 to p0603.
- replace the Sensor Module (hardware defect or incorrect calibration data).

Reaction upon F: Infeed: NONE (OFF1, OFF2)

A31930 (N) Encoder 1: Data logger has saved data

Message value: 

Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: For the activated function "Data logger" (p0437.0 = 1) a fault has occurred with the Sensor Module. This alarm indicates that the diagnostics data corresponding to the fault was saved on the memory card.
The diagnostics data is saved in the following folder:
/USER/SINAMICS/DATA/SMTRC00.BIN
...
/USER/SINAMICS/DATA/SMTRC07.BIN
/USER/SINAMICS/DATA/SMTRCIDX.TXT
The following information is contained in the TXT file:
- Display of the last written BIN file.
- Number of write operations that are still possible (from 10000 downwards).
Note: Only Siemens can evaluate the BIN files.

Remedy:
Not necessary.
The alarm disappears automatically.
The data logger is ready to record the next fault case.

Reaction upon N: NONE
Acknowl. upon N: NONE

A31940 (F, N) Encoder 1: Spindle sensor S1 voltage incorrect

Message value: %1

Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: The voltage of analog sensor S1 is outside the permissible range.
Fault value (r0949, interpret decimal):
Signal level from sensor S1.
Note: A signal level of 500 mV corresponds to the numerical value 500 dec.

Remedy:
- Check the clamped tool.
- Check the tolerance and if required, adapt (p5040).
- Check the thresholds and if required, adapt (p5041).
- Check analog sensor S1 and connections.
Faults and alarms

List of faults and alarms

F31950 Encoder 1: Internal software error

Message value: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: ENCODER (OFF2)
Acknowledge: POWER ON
Cause: An internal software error has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

Remedy:
- If necessary, upgrade the firmware in the Sensor Module to a later version.
- contact the Hotline.

A31999 (F, N) Encoder 1: Unknown alarm

Message value: New message: %1
Drive object: B_INF, ENC, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: A alarm has occurred on the Sensor Module for encoder 1 that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Alarm number.
Alarm value (r2124, interpret decimal):
Note:
If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:
- replace the firmware on the Sensor Module by an older firmware version (r0148).
- upgrade the firmware on the Control Unit (r0018).

F32100 (N, A) Encoder 2: Zero mark distance error

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that
if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the
system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable.
### Encoder 2: Zero mark failed

**Message value:** %1

**Drive object:** VECTOR_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** PULSE INHIBIT

**Cause:** The 1.5 x parameterized zero mark distance was exceeded. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal): Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections.
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- when p0437.1 is active, check p4686.
- replace the encoder or encoder cable.

### Encoder 2: Amplitude error, track R

**Message value:** R track: %1

**Drive object:** VECTOR_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY

**Cause:** The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 2. The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is undershot. Fault value (r0949, interpret hexadecimal):

- yyyyxxxx hex: yyyy = 0, xxxx = Signal level, track R (16 bits with sign)
  - The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV.
  - The response threshold for the differential signal level of the encoder is < -1600 mV.
  - A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

**Note:**
- The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module.
- The fault value can only be represented between -32767 ... 32767 dec (-770 ... 770 mV).
- The signal level is not evaluated unless the following conditions are satisfied:
  - Sensor Module properties available (r0459.31 = 1).
  - Monitoring active (p0437.31 = 1).

**Remedy:**
- check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts of the encoder cable.
- check whether the zero mark is connected and the signal cables RP and RN have been connected correctly.
- replace the encoder cable.
- if the coding disk is soiled or the lighting aged, replace the encoder.
### F32110 (N, A) Encoder 2: Serial communications error

<table>
<thead>
<tr>
<th>Message value:</th>
<th>Fault cause: %1 bin</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object:</td>
<td>VECTOR_G</td>
</tr>
<tr>
<td>Reaction:</td>
<td>OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)</td>

<tr>
<td>Acknowledge:</td>
<td>PULSE INHIBIT</td>
</tr>
<tr>
<td>Cause:</td>
<td>Serial communication protocol transfer error between the encoder and evaluation module.</td>
</tr>
</tbody>
</table>

Fault value (r0949, interpret binary):
- Bit 0: Alarm bit in the position protocol.
- Bit 1: Incorrect quiescent level on the data line.
- Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
- Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
- Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
- Bit 5: Internal error in the serial driver: An illegal mode command was requested.
- Bit 6: Timeout when cyclically reading.
- Bit 7: Timeout for the register communication.
- Bit 8: Protocol is too long (e.g. > 64 bits).
- Bit 9: Receive buffer overflow.
- Bit 10: Frame error when reading twice.
- Bit 11: Parity error.
- Bit 12: Data line signal level error during the monoflop time.
- Bit 13: Data line incorrect.
- Bit 14: Fault for the register communication.

**Remedy:**

- **Re fault value, bit 0 = 1:**
  - Enc defect F31111 may provide additional details.
- **Re fault value, bit 1 = 1:**
  - Incorrect encoder type / replace the encoder or encoder cable.
- **Re fault value, bit 2 = 1:**
  - Incorrect encoder type / replace the encoder or encoder cable.
- **Re fault value, bit 3 = 1:**
  - EMC / connect the cable shield, replace the encoder or encoder cable.
- **Re fault value, bit 4 = 1:**
  - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
- **Re fault value, bit 5 = 1:**
  - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
- **Re fault value, bit 6 = 1:**
  - Update Sensor Module firmware.
- **Re fault value, bit 7 = 1:**
  - Incorrect encoder type / replace the encoder or encoder cable.
- **Re fault value, bit 8 = 1:**
  - Check parameterization (p0429.2).
- **Re fault value, bit 9 = 1:**
  - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
- **Re fault value, bit 10 = 1:**
  - Check parameterization (p0429.2, p0449).
- **Re fault value, bit 11 = 1:**
  - Check parameterization (p0436).
- **Re fault value, bit 12 = 1:**
  - Check parameterization (p0429.6).
- **Re fault value, bit 13 = 1:**
  - Check data line.
- **Re fault value, bit 14 = 1:**
  - Incorrect encoder type / replace the encoder or encoder cable.

**Acknowl. upon A:** NONE
F32111 (N, A) Encoder 2: Absolute encoder internal fault

Message value: Fault cause: %1 bin, additional information: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The absolute encoder fault word supplies fault bits that have been set.
Fault value (r0949, interpret binary):
yyyyxxxx hex: yyyy = supplementary information, xxxx = fault cause
yyyy = 0:
Bit 0: Lighting system failed.
Bit 1: Signal amplitude too low.
Bit 2: Position value incorrect.
Bit 3: Encoder power supply overvoltage condition.
Bit 4: Encoder power supply undervoltage condition.
Bit 5: Encoder power supply overcurrent condition.
Bit 6: The battery must be changed.
yyyy = 1:
Bit 0: Signal amplitude outside the control range.
Bit 1: Error multiturn interface
Bit 2: Internal data error (singleturn/multiturn not with single steps).
Bit 3: Error EEPROM interface.
Bit 4: SAR converter error.
Bit 5: Fault for the register data transfer.
Bit 6: Internal error identified at the error pin (nErr).
Bit 7: Temperature threshold exceeded or fallen below.

Remedy: For yyyy = 0:
Re fault value, bit 0 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 1 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 2 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 3 = 1:
5 V power supply voltage fault.
When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
When a motor encoder with a direct DRIVE-CLiQ connection is used: Replace the motor.
Re fault value, bit 4 = 1:
5 V power supply voltage fault.
When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
When using a motor with DRIVE-CLiQ: Replace the motor.
Re fault value, bit 5 = 1:
Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
Re fault value, bit 6 = 1:
The battery must be changed (only for encoders with battery back-up).
For yyyy = 1:
Encoder is defective. Replace encoder.

F32117 (N, A)  Encoder 2: Inversion error signals A/B/R

Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a square-wave encoder (bipolar, double ended) signals A*, B* and R* are not inverted with respect to signals A, B and R.
Fault value (r0949, interpret binary):
Bits 0 … 15: Only for internal Siemens troubleshooting.
Bit 16: Error track A.
Bit 17: Error track B.
Bit 18: Error track R.
Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), CUA32, and CU310, the following applies:
A square-wave encoder without track R is used and track monitoring (p0405.2 = 1) is activated.
Remedy:
- Check the encoder/cable.
- Does the encoder supply signals and the associated inverted signals?
Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), the following applies:
- check the setting of p0405 (p0405.2 = 1 is only possible if the encoder is connected at X520).
For a square-wave encoder without track R, the following jumpers must be set for the connection at X520 (SMC30) or X23 (CUA32, CU310):
- pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)
- pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

F32118 (N, A)  Encoder 2: Speed difference outside the tolerance range

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: For an HTL/TTL encoder, the speed difference has exceeded the value in p0492 over several sampling cycles.
The change to the averaged speed actual value - if applicable - is monitored in the current controller sampling time.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
See also: p0492
Remedy:
- check the tachometer feeder cable for interruptions.
- check the grounding of the tachometer shielding.
- if required, increase the maximum speed difference per sampling cycle (p0492).

F32120 (N, A)  Encoder 2: Power supply voltage fault

Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: A power supply fault was detected for encoder 2.
Fault value (r0949, interpret binary):
Bit 0: Undervoltage condition on the sense line.
Bit 1: Overcurrent condition for the encoder power supply.
Bit 2: Overcurrent condition for encoder power supply on cable resolver excitation negative.
Faults and alarms

List of faults and alarms

- Bit 3: Overcurrent condition for encoder power supply on cable resolver excitation positive.
- Bit 4: The 24 V power supply through the Power Module (PM) is overloaded.
- Bit 5: Overcurrent at the EnDat connection of the converter.
- Bit 6: Overvoltage at the EnDat connection of the converter.
- Bit 7: Hardware fault at the EnDat connection of the converter.

Note:
If the encoder cables 6FX2002-2EQ00-.... and 6FX2002-2CH00-.... are interchanged, this can result in the encoder being destroyed because the pins of the operating voltage are reversed.

Remedy:
- Re fault value, bit 0 = 1:
  - correct encoder cable connected?
  - check the plug connections of the encoder cable.
  - SMC30: Check the parameterization (p0404.22).
- Re fault value, bit 1 = 1:
  - correct encoder cable connected?
  - replace the encoder or encoder cable
- Re fault value, bit 2 = 1:
  - correct encoder cable connected?
  - replace the encoder or encoder cable
- Re fault value, bit 3 = 1:
  - correct encoder cable connected?
  - replace the encoder or encoder cable
- Re fault value, bit 5 = 1:
  - Measuring unit correctly connected at the converter?
  - Replace the measuring unit or the cable to the measuring unit.
- Re fault value, bit 6, 7 = 1:
  - Replace the defective EnDat 2.2 converter.

F32121 (N, A) Encoder 2: Coarse position error

- Message value: -
- Drive object: VECTOR_G
- Reaction: OFF1 (NONE, OFF2, OFF3)
- Acknowledge: PULSE INHIBIT
- Cause: For the actual value sensing, an error was detected on the module.
  As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
- Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F32122 Encoder 2: Internal power supply voltage faulty

- Message value: %1
- Drive object: VECTOR_G
- Reaction: ENCODER
- Acknowledge: IMMEDIATELY
- Cause: Fault in internal reference voltage of ASICs for encoder 2.
  Fault value (r0949, interpret decimal):
  1: Reference voltage error.
  2: Internal undervoltage.
  3: Internal overvoltage.
- Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.
### F32123 (N, A) Encoder 2: Signal level A/B unipolar outside tolerance

**Message value:** Fault cause: %1 bin  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:**  
- The unipolar level (AP/AN or BP/BN) for encoder 2 is outside the permissible tolerance.  
- Fault value (r0949, interpret binary):  
  - Bit 0 = 1: Either AP or AN outside the tolerance.  
  - Bit 16 = 1: Either BP or BN outside the tolerance.  
- The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.  
- The response thresholds are < 1700 mV and > 3300 mV.  
**Note:**  
- The signal level is not evaluated unless the following conditions are satisfied:  
  - Sensor Module properties available (r0459.31 = 1).  
  - Monitoring active (p0437.31 = 1).  
**Remedy:**  
- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.  
- check the plug connections and contacts of the encoder cable.  
- check the short-circuit of a signal cable with mass or the operating voltage.  
- replace the encoder cable.

### F32125 (N, A) Encoder 2: Amplitude error track A or B overcontrolled

**Message value:** A track: %1, B-track: %2  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:**  
- The amplitude of track A or B for encoder 2 exceeds the permissible tolerance band.  
- Fault value (r0949, interpret hexadecimal):  
  - yyyyxxxx hex:  
    - yyyy = Signal level, track B (16 bits with sign).  
    - xxxx = Signal level, track A (16 bits with sign).  
- The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).  
- The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.  
- A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.  
- Note: The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.  
**Remedy:**  
- check that the encoder cables and shielding are routed in compliance with EMC.  
- replace the encoder or encoder cable  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE

### F32126 (N, A) Encoder 2: Amplitude AB too high

**Message value:** Amplitude: %1, Angle: %2  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** PULSE INHIBIT  
**Cause:**  
- The amplitude (root of A^2 + B^2 or |A| + |B|) for encoder 2 exceeds the permissible tolerance.
Faults and alarms

List of faults and alarms

Fault value (r0949, interpret hexadecimal):

\[
\text{yyyyyyyy hex:}
\]

\[
\text{yyyy = Angle}
\]

\[
\text{xxxx = Amplitude, i.e. root from } A^2 + B^2 (16 \text{ bits without sign})
\]

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).

The response threshold for \(|A| + |B|\) is > 1120 mV or the root of \((A^2 + B^2) > 955 \text{ mV.}\)

A signal level of 500 mV peak value corresponds to the numerical value of \(299A\) hex = 10650 dec.

The angle 0 \(\ldots\) FFFF hex corresponds to 0 \(\ldots\) 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.

Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

Remedy:
- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F32129 (N, A) Encoder 2: Position difference, hall sensor/track C/D and A/B too large

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.

One period of track C/D corresponds to 360 ° mechanical.

One period of the Hall signal corresponds to 360 ° electrical.

The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.

After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A32429.

Fault value (r0949, interpret decimal):

For track C/D, the following applies:

Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).

For Hall signals, the following applies:

Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy:
- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F32130 (N, A) Encoder 2: Zero mark and position error from the coarse synchronization

Message value: Angular deviation, electrical: %1, angle, mechanical: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out.

When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical.

When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical.
Fault value (r0949, interpret hexadecimal):

\[ \text{yyyyxxxx hex} \]

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- if the Hall sensor is used as an equivalent for track C/D, check the connection.
- Check the connection of track C or D.
- replace the encoder or encoder cable

**Cause:**
Absolute encoder:
When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected.

Limit value for the deviation:
- EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants).
- other encoders: 15 pulses = 60 quadrants.

Incremental encoder:
When the zero pulse is passed, a deviation in the incremental position was detected.

For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have \( n \) times the distance referred to the first zero mark.

For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.

Fault value (r0949, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check whether the coding disk is dirty or there are strong ambient magnetic fields.
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).

**Fault value (r0949, interpret binary):**

---

**A32400 (F, N) Encoder 2: Alarm threshold zero mark distance error**

**Message value:** %1

**Drive object:** VECTOR_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:**
- The measured zero mark distance does not correspond to the parameterized zero mark distance.
- For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
- The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
- Alarm value (r2124, interpret decimal):
  - Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
  - The sign designates the direction of motion when detecting the zero mark distance.

**Remedy:**
- Check that the encoder cables are routed in compliance with EMC.
- Check the plug connections.
- Check the encoder type (encoder with equidistant zero marks).
- Adapt the parameter for the distance between zero marks (p0424, p0425).
- Replace the encoder or encoder cable.

**Reaction upon F:** NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

**Acknowl. upon F:** IMMEDIATELY

Reaction:  NONE
Acknowledge:  NONE
Cause:  Serial communication protocol transfer error between the encoder and evaluation module.
Alarm value (r2124, interpret binary):
Bit 0: Alarm bit in the position protocol.
Bit 1: Incorrect quiescent level on the data line.
Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
Bit 5: Internal error in the serial driver: An illegal mode command was requested.
Bit 6: Timeout when cyclically reading.
Bit 8: Protocol is too long (e.g. > 64 bits).
Bit 9: Receive buffer overflow.
Bit 10: Frame error when reading twice.
Bit 11: Parity error.
Bit 12: Data line signal level error during the monoplot time.

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace encoder.

**Reaction upon F:** NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

**Encoder 2: Absolute encoder signals internal alarms**

**Message value:** Fault cause: %1 bin, additional information: %2
**Drive object:** VECTOR_G
**Reaction:** NONE
**Acknowledge:** NONE

**Cause:** The absolute encoder fault word includes alarm bits that have been set. Alarm value (r2124, interpret binary):
- yyyy = supplementary information, xxxx = fault cause
- yyyy = 0:
  - Bit 0: Frequency exceeded (speed too high).
  - Bit 1: Temperature exceeded.
  - Bit 2: Control reserve, lighting system exceeded.
  - Bit 3: Battery discharged.
  - Bit 4: Reference point passed.
- yyyy = 1:
  - Bit 0: Signal amplitude outside the control range.
  - Bit 1: Error multiturn interface
  - Bit 2: Internal data error (singleturn/multiturn not with single steps).
  - Bit 3: Error EEPROM interface.
  - Bit 4: SAR converter error.
  - Bit 5: Fault for the register data transfer.
  - Bit 6: Internal error identified at the error pin (nErr).
  - Bit 7: Temperature threshold exceeded or fallen below.

**Remedy:** Replace encoder.
**Reaction upon F:** NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
**Acknowl. upon F:** IMMEDIATELY
**Reaction upon N:** NONE

**Acknowl. upon N:** NONE
Faults and alarms

List of faults and alarms

A32414 (F, N) Encoder 2: Amplitude error track C or D (C^2 + D^2)
Message value: C track: %1, D track: %2
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The amplitude (C^2 + D^2) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track D (16 bits with sign).
xxxx = Signal level, track C (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note: If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.
Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- check the Hall sensor box

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A32415 (F, N) Encoder 2: Amplitude alarm track A or B (A^2 + B^2)
Message value: Amplitude: %1, Angle: %2
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The amplitude (root of A^2 + B^2) for encoder 2 exceeds the permissible tolerance.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Angle
xxxx = Amplitude, i.e. root from A^2 + B^2 (16 bits without sign)
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is < 230 mV (observe the frequency response of the encoder).
A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec.
The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.
Note for sensors modules for resolvers (e.g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms).
A signal level of 2900 mV peak value corresponds to the numerical value 3333 hex = 13107 dec.
Note: The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
Remedy:
- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- if the coding disk is soiled or the lighting aged, replace the encoder.

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Reaction upon N: NONE
Acknow. upon N: NONE

A32421 (F, N) Encoder 2: Coarse position error
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
Faults and alarms

List of faults and alarms

Alarm value (r2124, interpret decimal):
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

Remedy:
- Re alarm value = 3:
  - For a standard encoder with cable, contact the manufacturer where relevant.
  - correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A32422 (F, N) Encoder 2: Pulses per revolution square-wave encoder outside tolerance bandwidth

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
This alarm is triggered with active square-wave encoder PPR correction and re-parameterized fault 31131 if the accumulator contains larger values than p4683 or p4684.
The zero mark distance for zero mark monitoring is set in p0425 (rotary encoder).
Alarm value (r2124, interpret decimal):
accumulated differential pulses in encoder pulses.

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A32429 (F, N) Encoder 2: Position difference, hall sensor/track C/D and A/B too large

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.
Alarm value (r2124, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy:
- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

A32431 (F, N) Encoder 2: Deviation, position incremental/absolute too large
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: When the zero pulse is passed, a deviation in the incremental position was detected.
For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have
  n times the distance referred to the first zero mark.
For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have
  the expected distance to the first zero mark pair.
Alarm value (r2124, interpret decimal):
Deviation in quadrants (1 pulse = 4 quadrants).
Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- Clean coding disk or remove strong magnetic fields.

### A32443 (F, N) Encoder 2: Unipolar CD signal level outside specification

**Message value:** Fault cause: %1 bin  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE

**Cause:** The unipolar level (CP/CN or DP/DN) for encoder 2 is outside the permissible tolerance.  
Alarm value (r2124, interpret binary):  
- Bit 0 = 1: Either CP or CN outside the tolerance.  
- Bit 16 = 1: Either DP or DN outside the tolerance.  
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.  
The response thresholds are < 1700 mV and > 3300 mV.  
**Note:**  
The signal level is not evaluated unless the following conditions are satisfied:  
- Sensor Module properties available (r0459.31 = 1).  
- Monitoring active (p0437.31 = 1).

**Remedy:**  
- check that the encoder cables and shielding are routed in compliance with EMC.  
- check the plug connections and contacts of the encoder cable.  
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?  
- replace the encoder cable.

**Reaction upon F:** NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY  
**Reaction upon N:** NONE

### A32460 (N) Encoder 2: Analog sensor channel A failed

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE

**Cause:** The input voltage of the analog sensor is outside the permissible limits.  
Alarm value (r2124, interpret decimal):  
1: Input voltage outside detectable measuring range.  
2: Input voltage outside measuring range set in p4673.  
3: The absolute value of the input voltage has exceeded the range limit (p4676).

**Remedy:**  
- Re alarm value = 1:  
  - check the output voltage of the analog sensor.  
- Re alarm value = 2:  
  - check the voltage setting for each encoder period (p4673).  
- Re alarm value = 3:  
  - check the range limit setting and increase it if necessary (p4676).

**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

### A32461 (N) Encoder 2: Analog sensor channel B failed

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE

**Cause:** The input voltage of the analog sensor is outside the permissible limits.  
Alarm value (r2124, interpret decimal):  
1: Input voltage outside detectable measuring range.  
2: Input voltage outside the measuring range set in (p4675).  
3: The absolute value of the input voltage has exceeded the range limit (p4676).

**Remedy:**  
- Re alarm value = 1:  
  - check the output voltage of the analog sensor.  
- Re alarm value = 2:  
  - check the voltage setting for each encoder period (p4675).
List of faults and alarms

Re alarm value = 3:
- check the range limit setting and increase it if necessary (p4676).

Reaction upon N: NONE

A32462 (N) Encoder 2: Analog sensor, no channel active
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: Channel A and B are not activated for the analog sensor.
Remedy: - activate channel A and/or channel B (p4670).
- check the encoder configuration (p0404.17).
See also: p4670 (Analog sensor configuration)

Reaction upon N: NONE
Acknowl. upon N: NONE

A32463 (N) Encoder 2: Analog sensor position value exceeds limit value
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The position value has exceeded the permissible range of -0.5 ... +0.5.
Alarm value (r2124, interpret decimal):
1: Position value from the LVDT sensor.
2: Position value from the encoder characteristic.
Remedy: Re alarm value = 1:
- Check the LVDT ratio (p4678).
- check the reference signal connection at track B.
Re alarm value = 2:
- check the coefficients of the characteristic (p4663 ... p4666).

Reaction upon N: NONE
Acknowl. upon N: NONE

A32470 (F, N) Encoder 2: Soiling detected
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: In the case of the alternative encoder system interface on the Sensor Module Cabinet 30 (SMC30), encoder soiling is signaled via a 0 signal at terminal X521.7.
Remedy: - check the plug connections
- replace the encoder or encoder cable

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

F32500 (N, A) Encoder 2: Position tracking traversing range exceeded
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421.
For p0411.3 = 1, the maximum traversing range for the configured linear axis is pre-set (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

Remedy:
The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

Reaction upon N: NONE

Reaction upon A: NONE
Acknowl. upon A: NONE

F32501 (N, A) Encoder 2: Position tracking encoder position outside tolerance window
Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: When powered down, the drive/encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder. Fault value (r0949, interpret decimal):
Deviation (difference) to the last encoder position in increments of the absolute value.
The sign designates the traversing direction.
Note: The deviation (difference) found is also displayed in r0477.
See also: p0413 (Measuring gear, position tracking tolerance window), r0477 (Measuring gear, position difference)
Remedy: Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).
See also: p0010

Faults and alarms

List of faults and alarms

Fault value (r0949, interpret hexadecimal):
yx hex: y = function involved (Siemens-internal fault diagnostics), x = time slice involved
x = 9:
  Time slice overflow of the fast (current controller clock cycle) time slice.
x = A:
  Time slice overflow of the average time slice.
x = C:
  Time slice overflow of the slow time slice.
yx = 3E7:
  Timeout when waiting for SYNO (e.g. unexpected return to non-cyclic operation).

Remedy:
  Increase the current controller sampling time

Note:
  For a current controller sampling time = 31.25 µs, use an SMx20 with order number 6SL3055-0AA00-5xA3.

Faults and alarms

List of faults and alarms

Proceed as follows to hide serial number monitoring:
- set the following serial numbers for the corresponding Encoder Data Set: p0441 = FF, p0442 = 0, p0443 = 0, p0444 = 0, p0445 = 0.

Remedy:
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.

F32813 Encoder 2: Hardware logic unit failed

Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT

Cause:
The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.
Fault value (r0949, interpret binary):
Bit 0: ALU watchdog has responded.
Bit 1: ALU has detected a sign-of-life error.

Remedy:
Replace encoder.

F32820 (N, A) Encoder 2 DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY

Cause:
A DRIVE-CLiQ communication error has occurred from the Control Unit to the encoder concerned.
Fault cause:
1 (= 01 hex): Checksum error (CRC error).
2 (= 02 hex): Telegram is shorter than specified in the length byte or in the receive list.
3 (= 03 hex): Telegram is longer than specified in the length byte or in the receive list.
4 (= 04 hex): The length of the receive telegram does not match the receive list.
5 (= 05 hex): The type of the receive telegram does not match the receive list.
6 (= 06 hex): The address of the component in the telegram and in the receive list do not match.
7 (= 07 hex): A SYNC telegram is expected - but the received telegram is not a SYNC telegram.
8 (= 00 hex):
No SYNC telegram is expected - but the received telegram is one.
9 (= 09 hex):
The error bit in the receive telegram is set.
16 (= 10 hex):
The receive telegram is too early.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F32896 (N, A) Encoder 2 DRIVE-CLiQ (CU): Inconsistent component properties

Message value:
Component number: %1

Drive object:
VECTOR_G

Reaction:
OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge:
IMMEDIATELY

Cause:
The properties of the DRIVE-CLiQ component (Sensor Module for encoder 2), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.

Remedy:
- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F32905 (N, A) Encoder 2: Parameterization error

Message value: Parameter: %1, supplementary information: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: A parameter of encoder 2 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.
The parameter involved can be determined as follows:
- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).
Fault value (r0949, interpret decimal):

- yyyy = supplementary information, xxxx = parameter
  xxxx = 421:
  For an EnDat/SSI encoder, the absolute position in the protocol must be less than or equal to 30 bits.
  yyyy = 0:
  No information available.
  yyyy = 1:
  The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).
  yyyy = 2:
  A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
  Please start a new encoder identification.
  yyyy = 3:
  A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
  Please select a listed encoder in p0400 with a code number < 10000.

Note:

- yyyy = 0:
  No information available.
- yyyy = 1:
  The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).
- yyyy = 2:
  A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
  Please start a new encoder identification.
- yyyy = 3:
  A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
  Please select a listed encoder in p0400 with a code number < 10000.
Faults and alarms

List of faults and alarms

yyyy = 4:
This component does not support SSI encoders (p0404.9 = 1) without track A/B.

yyyy = 5:
For SQW encoder, value in p4686 greater than in p0425.

yyyy = 6:
DRIVE-CLiQ encoder cannot be used with this firmware version.

yyyy = 7:
For an SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks.

yyyy = 8:
The motor pole pair width is not supported by the linear scale being used.

yyyy = 9:
The length of the position in the EnDat protocol may be a maximum of 32 bits.

yyyy = 10:
The connected encoder is not supported.

Remedy:
- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re-parameter number = 314:
- check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "meas-
 uring gear ratio" must be less than or equal to 1000 ((r6313 * p0433) / p0432 <= 1000).

F32912 Encoder 2: Device combination is not permissible

Message value:
%1

Drive object:
VECTOR_G

Reaction:
ENCODER (IASC/DCBRAKE, NONE)

Acknowledge:
PULSE INHIBIT

Cause:
The selected device combination is not supported.
Fault value (r0949, interpret decimal):
1003:
The connected measuring unit cannot be operated with the EnDat 2.2 converter. For instance, the measuring unit
has a pulse number/resolution of 2^n.
1005:
The type of measuring unit (incremental) is not supported by the EnDat 2.2 converter.
1006:
The maximum duration (31.25 µs) of the EnDat transfer was exceeded.
2001:
The set combination of current controller cycle, DP cycle and Safety cycle is not supported by the EnDat 2.2 con-
verter.
2002:
The resolution of the linear measuring unit does not match the pole pair width of the linear motor

Remedy:
Re fault value = 1003, 1005, 1006:
- Use a measuring unit that is permissible.
For fault value = 2001:
- Set a permissible cycle combination (if required, use standard settings).
For fault value = 2002:
- Use a measuring unit with a lower resolution (p0422).

A32915 (F, N) Encoder 2: Configuration error

Message value:
%1

Drive object:
VECTOR_G

Reaction:
NONE

Acknowledge:
NONE

Cause:
The configuration for encoder 2 is incorrect.
Alarm value (r2124, interpret decimal):
1:
Re-parameterization between fault/alarm is not permissible.
When the fine resolution Gx_XIST2 is configured, the encoder identifies a maximum possible absolute position actual value (r0483) that can no longer be represented within 32 bits.

**Remedy:**
- Re alarm value = 1:
  - No re-parameterization between fault/alarm.
- Re alarm value = 419:
  - Reduce the fine resolution (p0419) or deactivate the monitoring (p0437.25), if the complete multiturn range is not required.

**Reaction upon F:** NONE (IASC/DCBRAKE)

**Acknowl. upon F:** IMMEDIATELY

**Reaction upon N:** NONE

**Acknowl. upon N:** NONE

---

**F32916 (N, A) Encoder 2: Parameterization fault**

**Message value:** Parameter: %1, supplementary information: %2

**Drive object:** VECTOR_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** IMMEDIATELY

**Cause:** A parameter of encoder 2 was detected as being incorrect.
- It is possible that the parameterized encoder type does not match the connected encoder.
- The parameter involved can be determined as follows:
  - determine the parameter number using the fault value (r0949).
  - determine the parameter index (p0187).
- Fault value (r0949, interpret decimal):
  - Parameter number.

**Note:**
- This fault is only output for encoders where r0404.10 = 1 or r0404.11 = 1. It corresponds to A32905 with encoders where r0404.10 = 0 and r0404.11 = 0.

**Remedy:**
- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.

**Reaction upon N:** NONE

**A32920 (F, N) Encoder 2: Temperature sensor fault**

**Message value:** Fault cause: %1, channel number: %2

**Drive object:** VECTOR_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** When evaluating the temperature sensor, an error occurred.
- Fault cause:
  1 (= 01 hex): Wire breakage or sensor not connected (KTY: R > 1630 Ohm).
  2 (= 02 hex): Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).

**Additional values:**
- Only for internal Siemens troubleshooting.
- Note regarding the message value:
  - The individual information is coded as follows in the message value (r0949/r2124):
    - 0000yyxx hex: yy = channel number, xx = error cause

**Remedy:**
- check that the encoder cable is the correct type and is correctly connected.
- check the temperature sensor selection in p0600 to p0603.
- replace the Sensor Module (hardware defect or incorrect calibration data).

**Reaction upon F:** NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

### A32930 (N)  Encoder 2: Data logger has saved data

**Message value:**
-  
**Drive object:**
  VECTOR_G  
**Reaction:**
  NONE  
**Acknowledge:**
  NONE  
**Cause:**
For the activated function "Data logger" (p0437.0 = 1) a fault has occurred with the Sensor Module. This alarm indicates that the diagnostics data corresponding to the fault was saved on the memory card.

The diagnostics data is saved in the following folder:

```
/USER/SINAMICS/DATA/SMTRC00.BIN
...
/USER/SINAMICS/DATA/SMTRC07.BIN
/USER/SINAMICS/DATA/SMTRCIDX.TXT
```

The following information is contained in the TXT file:
- Display of the last written BIN file.
- Number of write operations that are still possible (from 10000 downwards).

**Note:**
Only Siemens can evaluate the BIN files.

**Remedy:**
- Not necessary.
- The alarm disappears automatically.
- The data logger is ready to record the next fault case.

**Reaction upon N:**
NONE  
**Acknowl. upon N:**

### F32950  Encoder 2: Internal software error

**Message value:**
%1  
**Drive object:**
VECTOR_G  
**Reaction:**
ENCODER (OFF2)  
**Acknowledge:**
POWER ON  
**Cause:**
An internal software error has occurred.

Fault value (r0949, interpret decimal):
Information about the fault source.

**Note:**
Only for internal Siemens troubleshooting.

**Remedy:**
- If necessary, upgrade the firmware in the Sensor Module to a later version.
- contact the Hotline.
A32999 (F, N)  Encoder 2: Unknown alarm
Message value: New message: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: A alarm has occurred on the Sensor Module for encoder 2 that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Alarm value (r2124, interpret decimal):
Alarm number.
Note: If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.
Remedy:
- replace the firmware on the Sensor Module by an older firmware version (r0148).
- upgrade the firmware on the Control Unit (r0018).
Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F33100 (N, A)  Encoder 3: Zero mark distance error
Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.
Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
  . check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable
Reaction upon N: NONE
Acknowl. upon N: NONE

F33101 (N, A)  Encoder 3: Zero mark failed
Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The 1.5 x parameterized zero mark distance was exceeded.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal):
Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).
Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
  . check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
### Faults and alarms

#### List of faults and alarms

- **F33103 (N, A)**  
  **Encoder 3: Amplitude error, track R**

  **Message value:**  
  R track: %1

  **Drive object:**  
  VECTOR_G

  **Reaction:**  
  OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

  **Acknowledge:**  
  IMMEDIATELY

  **Cause:**  
  The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 3. The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is undershot.

  **Fault value (r0949, interpret hexadecimal):**  
  yyyyxxxx hex: yyyy = 0, xxxx = Signal level, track R (16 bits with sign)

  The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV.

  The response threshold for the differential signal level of the encoder is < -1600 mV.

  A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

  **Note:**
  The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module.

  The fault value can only be represented between -32767 ... 32767 dec (-770 ... 770 mV).

  The signal level is not evaluated unless the following conditions are satisfied:
  - Sensor Module properties available (r0459.31 = 1).
  - Monitoring active (p0437.31 = 1).

  **Remedy:**
  - check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range
  - check that the encoder cables and shielding are routed in compliance with EMC.
  - check the plug connections and contacts of the encoder cable.
  - check whether the zero mark is connected and the signal cables RP and RN have been connected correctly
  - replace the encoder cable.
  - if the coding disk is soiled or the lighting aged, replace the encoder.

  **Drive object:**  
  VECTOR_G

  **Reaction:**  
  OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

  **Acknowledge:**  
  PULSE INHIBIT

  **Cause:**  
  Serial communication protocol transfer error between the encoder and evaluation module.

  **Fault value (r0949, interpret binary):**
  - Bit 0: Alarm bit in the position protocol.
  - Bit 1: Incorrect quiescent level on the data line.
  - Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
  - Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
  - Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
  - Bit 5: Internal error in the serial driver: An illegal mode command was requested.
  - Bit 6: Timeout when cyclically reading.
  - Bit 7: Timeout for the register communication.
  - Bit 8: Protocol is too long (e.g. > 64 bits).
  - Bit 9: Receive buffer overflow.
  - Bit 10: Frame error when reading twice.
  - Bit 11: Parity error.
  - Bit 12: Data line signal level error during the monoflop time.

  **Reaction upon N:** NONE  
  **Acknowl. upon N:** NONE  
  **Reaction upon A:** NONE  
  **Acknowl. upon A:** NONE
Bit 13: Data line incorrect.
Bit 14: Fault for the register communication.

**Remedy:**
- Re fault value, bit 0 = 1:
  - Enc defect F31111 may provide additional details.
- Re fault value, bit 1 = 1:
  - Incorrect encoder type / replace the encoder or encoder cable.
- Re fault value, bit 2 = 1:
  - Incorrect encoder type / replace the encoder or encoder cable.
- Re fault value, bit 3 = 1:
  - EMC / connect the cable shield, replace the encoder or encoder cable.
- Re fault value, bit 4 = 1:
  - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
- Re fault value, bit 5 = 1:
  - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
- Re fault value, bit 6 = 1:
  - Update Sensor Module firmware.
- Re fault value, bit 7 = 1:
  - Incorrect encoder type / replace the encoder or encoder cable.
- Re fault value, bit 8 = 1:
  - Check parameterization (p0429.2).
- Re fault value, bit 9 = 1:
  - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.
- Re fault value, bit 10 = 1:
  - Check parameterization (p0429.2, p0449).
- Re fault value, bit 11 = 1:
  - Check parameterization (p0436).
- Re fault value, bit 12 = 1:
  - Check parameterization (p0429.6).

The absolute encoder fault word supplies fault bits that have been set. Fault value (r0949, interpret binary):

- yyyyxxxx hex: yyyy = supplementary information, xxxx = fault cause
- yyyy = 0:
  - Bit 0: Lighting system failed.
  - Bit 1: Signal amplitude too low.
  - Bit 2: Position value incorrect.
  - Bit 3: Encoder power supply overvoltage condition.
  - Bit 4: Encoder power supply undervoltage condition.
  - Bit 5: Encoder power supply overcurrent condition.
  - Bit 6: The battery must be changed.
- yyyy = 1:
  - Bit 0: Signal amplitude outside the control range.
  - Bit 1: Error multiturn interface
  - Bit 2: Internal data error (singleturn/multiturn not with single steps).
  - Bit 3: Error EEPROM interface.
  - Bit 4: SAR converter error.
  - Bit 5: Fault for the register data transfer.
Faults and alarms

List of faults and alarms

Bit 6: Internal error identified at the error pin (nErr).
Bit 7: Temperature threshold exceeded or fallen below.

Remedy:

For $yyyy = 0$:
- Re fault value, bit 0 = 1:
  Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
- Re fault value, bit 1 = 1:
  Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
- Re fault value, bit 2 = 1:
  Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
- Re fault value, bit 3 = 1:
  5 V power supply voltage fault.
  When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
- Re fault value, bit 4 = 1:
  5 V power supply voltage fault.
  When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
- Re fault value, bit 5 = 1:
  Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
- Re fault value, bit 6 = 1:
  The battery must be changed (only for encoders with battery back-up).
For $yyyy = 1$:
- Encoder is defective. Replace encoder.

F33112 (N, A) Encoder 3: Error bit set in the serial protocol

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The encoder sends a set error bit via the serial protocol.
Fault value ($r0949$, interpret binary):
- Bit 0: Fault bit in the position protocol.

Remedy:
- For fault value, bit 0 = 1:
  In the case of an EnDat encoder, F31111 may provide further details.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F33115 (N, A) Encoder 3: Amplitude error track A or B ($A^2 + B^2$)

Message value: A track: %1, B-track: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of $A^2 + B^2$) for encoder 3 exceeds the permissible tolerance.
Fault value ($r0949$, interpret hexadecimal):
- yyyy = Signal level, track B (16 bits with sign).
- xxxx = Signal level, track A (16 bits with sign).

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 170 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e.g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
The following applies to measuring systems without their own bearing system:
- adjust the scanning head and check the bearing system of the measuring wheel.
The following applies for measuring systems with their own bearing system:
- ensure that the encoder housing is not subject to any axial force.

**F33116 (N, A) Encoder 3: Amplitude error monitoring track A + B**
**Message value:** A track: %1, B-track: %2
**Drive object:** VECTOR_G
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
**Acknowledge:** IMMEDIATELY
**Cause:**
The amplitude of the rectified encoder signals A and B and the amplitude from the roots of A^2 + B^2 for encoder 3 are not within the tolerance bandwidth.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:

yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response thresholds are < 130 mV (observe the frequency response of the encoder) and > 955 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).

**F33117 (N, A) Encoder 3: Inversion error signals A/B/R**
**Message value:** Fault cause: %1 bin
**Drive object:** VECTOR_G
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
**Acknowledge:** IMMEDIATELY
**Cause:**
For a square-wave encoder (bipolar, double ended) signals A*, B* and R* are not inverted with respect to signals A, B and R.
Fault value (r0949, interpret binary):
Bits 0 ... 15: Only for internal Siemens troubleshooting.
Bit 16: Error track A.
Bit 17: Error track B.
Bit 18: Error track R.
Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), CU32, and CU310, the following applies:
A square-wave encoder without track R is used and track monitoring (p0405.2 = 1) is activated.

Remedy:
- Check the encoder/cable.
- Does the encoder supply signals and the associated inverted signals?

Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), the following applies:
- check the setting of p0405 (p0405.2 = 1 is only possible if the encoder is connected at X520).
For a square-wave encoder without track R, the following jumpers must be set for the connection at X520 (SMC30) or X23 (CU32, CU310):
- pin 10 (reference signal R) <-> pin 7 (encoder power supply, ground)
- pin 11 (reference signal R inverted) <-> pin 4 (encoder power supply)

F33118 (N, A)  Encoder 3: Speed difference outside the tolerance range
Message value:  %1
Drive object:  VECTOR_G
Reaction:  OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledgment:  PULSE INHIBIT
Cause:  For an HTL/TTL encoder, the speed difference has exceeded the value in p0492 over several sampling cycles.
The change to the averaged speed actual value - if applicable - is monitored in the current controller sampling time.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
See also:  p0492
Remedy:
- check the tachometer feeder cable for interruptions.
- check the grounding of the tachometer shielding.
- if required, increase the maximum speed difference per sampling cycle (p0492).

F33120 (N, A)  Encoder 3: Power supply voltage fault
Message value:  Fault cause: %1 bin
Drive object:  VECTOR_G
Reaction:  OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledgment:  PULSE INHIBIT
Cause:  A power supply fault was detected for encoder 3.
Fault value (r0949, interpret binary):
Bit 0: Undervoltage condition on the sense line.
Bit 1: Overcurrent condition for the encoder power supply.
Bit 2: Overcurrent condition for encoder power supply on cable resolver excitation negative.
Bit 3: Overcurrent condition for encoder power supply on cable resolver excitation positive.
Bit 4: The 24 V power supply of the Power Module (PM) is overloaded.
Bit 5: Overcurrent at the EnDat connection of the converter.
Bit 6: Overvoltage at the EnDat connection of the converter.
Bit 7: Hardware fault at the EnDat connection of the converter.
Note:
If the encoder cables 6FX2002-2EQ00-.... and 6FX2002-2CH00-.... are interchanged, this can result in the encoder being destroyed because the pins of the operating voltage are reversed.
Remedy:
- check fault value, bit 0 = 1:
- correct encoder cable connected?
- check the plug connections of the encoder cable.
- SMC30: Check the parameterization (p0404.22).
Re fault value, bit 1 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable
Re fault value, bit 2 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable
Re fault value, bit 3 = 1:
- correct encoder cable connected?
- replace the encoder or encoder cable
Re fault value, bit 5 = 1:
- Measuring unit correctly connected at the converter?
- Replace the measuring unit or the cable to the measuring unit.
Re fault value, bit 6, 7 = 1:
- Replace the defective EnDat 2.2 converter.

F33121 (N, A) Encoder 3: Coarse position error
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: For the actual value sensing, an error was detected on the module. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F33122 Encoder 3: Internal power supply voltage faulty
Message value: %1
Drive object: VECTOR_G
Reaction: ENCODER
Acknowledge: IMMEDIATELY
Cause: Fault in internal reference voltage of ASICs for encoder 3.
Fault value (r0949, interpret decimal):
1: Reference voltage error.
2: Internal undervoltage.
3: Internal overvoltage.
Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F33123 (N, A) Encoder 3: Signal level A/B unipolar outside tolerance
Message value: Fault cause: %1 bin
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The unipolar level (AP/AN or BP/BN) for encoder 3 is outside the permissible tolerance.
Fault value (r0949, interpret binary):
Bit 0 = 1: Either AP or AN outside the tolerance.
Bit 16 = 1: Either BP or BN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV. The response thresholds are < 1700 mV and > 3300 mV.
Faults and alarms

List of faults and alarms

Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).

Remedy:
- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
- check the plug connections and contacts of the encoder cable.
- check the short-circuit of a signal cable with mass or the operating voltage.
- replace the encoder cable.

F33125 (N, A)  Encoder 3: Amplitude error track A or B overcontrolled
Message value: A track: %1, B-track: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The amplitude of track A or B for encoder 3 exceeds the permissible tolerance band.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
  yyyy = Signal level, track B (16 bits with sign).
  xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note: The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
Remedy:
- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable

F33126 (N, A)  Encoder 3: Amplitude AB too high
Message value: Amplitude: %1, Angle: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of A^2 + B^2 or |A| + |B|) for encoder 3 exceeds the permissible tolerance.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
  yyyy = Angle
  xxxx = Amplitude, i.e. root from A^2 + B^2 (16 bits without sign)
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold for (|A| + |B|) is > 1120 mV or the root of (A^2 + B^2) > 955 mV.
A signal level of 500 mV peak value corresponds to the numerical value of 299A hex = 10650 dec.
The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
Remedy:
- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable
### F33129 (N, A) Encoder 3: Position difference, hall sensor/track C/D and A/B too large

**Message value:** %1

**Drive object:** VECTOR_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

**Acknowledge:** PULSE INHIBIT

**Cause:**
The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.

One period of track C/D corresponds to 360 ° mechanical.

One period of the Hall signal corresponds to 360 ° electrical.

The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.

After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A33429.

**Fault value (r0949, interpret decimal):**

For track C/D, the following applies:

- Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).

For Hall signals, the following applies:

- Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

**Remedy:**
- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

### F33130 (N, A) Encoder 3: Zero mark and position error from the coarse synchronization

**Message value:** Angular deviation, electrical: %1, angle, mechanical: %2

**Drive object:** VECTOR_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** PULSE INHIBIT

**Cause:**
After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out.

When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical.

When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical.

**Fault value (r0949, interpret hexadecimal):** yyyyxxxx hex

yyyy: Determined mechanical zero mark position (can only be used for track C/D).

xxxx: Deviation of the zero mark from the expected position as electrical angle.

Scaling: 32768 dec = 180 °

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- if the Hall sensor is used as an equivalent for track C/D, check the connection.
- Check the connection of track C or D.
- replace the encoder or encoder cable
### F33131 (N, A)

**Message value:** %1

**Drive object:** VECTOR_G

**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

**Acknowledge:** PULSE INHIBIT

**Cause:** Absolute encoder:

When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected.

Limit value for the deviation:
- EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants).
- other encoders: 15 pulses = 60 quadrants.

Incremental encoder:

When the zero pulse is passed, a deviation in the incremental position was detected.

For equidistant zero marks, the following applies:
- The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.

For distance-coded zero marks, the following applies:
- the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.

Fault value (r0949, interpret decimal):

Deviation in quadrants (1 pulse = 4 quadrants).

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check whether the coding disk is dirty or there are strong ambient magnetic fields.
- adapt the parameter for the clearance between zero marks (p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).

### A33400 (F, N) Encoder 3: Alarm threshold zero mark distance error

| Message value: | %1 |
| Drive object: | VECTOR_G |
| Reaction: | NONE |
| Acknowledge: | NONE |
| Cause: | The measured zero mark distance does not correspond to the parameterized zero mark distance. |
|         | For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. |
|         | The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). |
|         | Alarm value (r2124, interpret decimal): |
|         | Last measured zero mark distance in increments (4 increments = 1 encoder pulse). |
|         | The sign designates the direction of motion when detecting the zero mark distance. |
| Remedy: | - Check that the encoder cables are routed in compliance with EMC. |
|         | - Check the plug connections. |
|         | - Check the encoder type (encoder with equidistant zero marks). |
|         | - Adapt the parameter for the distance between zero marks (p0424, p0425). |
|         | - Replace the encoder or encoder cable |

A33410 (F, N) Encoder 3: Serial communications

Message value: Fault cause: %1 bin

Drive object: VECTOR_G

Reaction: NONE

Acknowledge: NONE

Cause: Serial communication protocol transfer error between the encoder and evaluation module.
Alarm value (r2124, interpret binary):
Bit 0: Alarm bit in the position protocol.
Bit 1: Incorrect quiescent level on the data line.
Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).
Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.
Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.
Bit 5: Internal error in the serial driver: An illegal mode command was requested.
Bit 6: Timeout when cyclically reading.
Bit 8: Protocol is too long (e.g. > 64 bits).
Bit 9: Receive buffer overflow.
Bit 10: Frame error when reading twice.
Bit 11: Parity error.
Bit 12: Data line signal level error during the monoflop time.

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace encoder.
List of faults and alarms

### A33414 (F, N) Encoder 3: Amplitude error track C or D (C² + D²)

**Message value:**
C track: %1, D track: %2

**Drive object:**
VECTOR_G

**Reaction:**
NONE

**Acknowledge:**
NONE

**Cause:**
The amplitude (C² + D²) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.

Alarm value (r2124, interpret hexadecimal):
- yyyy = Signal level, track D (16 bits with sign).
- xxxx = Signal level, track C (16 bits with sign).

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV ±25%/+20 %).
The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.

Note:
If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.

**Remedy:**
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- check the Hall sensor box

**Reaction upon F:**
NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

**Acknowl. upon F:**

### A33415 (F, N) Encoder 3: Amplitude alarm track A or B (A² + B²)

**Message value:**
Amplitude: %1, Angle: %2

**Drive object:**
VECTOR_G

**Reaction:**
NONE

**Acknowledge:**
NONE

**Cause:**
The amplitude (root of A² + B²) for encoder 3 exceeds the permissible tolerance.

Alarm value (r2124, interpret hexadecimal):
- yyyy = Angle
- xxxx = Amplitude, i.e. root from A² + B² (16 bits without sign)

The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV ±25%/+20 %).
The response threshold is < 230 mV (observe the frequency response of the encoder).
A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec.
The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is present at the negative zero crossover of track B.

Note for sensors modules for resolvers (e.g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms).
A signal level of 2900 mV peak value corresponds to the numerical value 3333 hex = 13107 dec.

Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

**Remedy:**
- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range.
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).
- if the coding disk is soiled or the lighting aged, replace the encoder.

**Reaction upon F:**
NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

**Acknowl. upon F:**

<td>For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.</td>
</tr>
</tbody>
</table>
Alarm value (r2124, interpret decimal):
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

Remedy:
- Re alarm value = 3:
- For a standard encoder with cable, contact the manufacturer where relevant.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY

Acknowl. upon N: NONE

A33422 (F, N) Encoder 3: Pulses per revolution square-wave encoder outside tolerance bandwidth

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The measured zero mark distance does not correspond to the parameterized zero mark distance.
This alarm is triggered with active square-wave encoder PPR correction and re-parameterized fault 31131 if the accumulator contains larger values than p4683 or p4684.
The zero mark distance for zero mark monitoring is set in p0425 (rotary encoder).

Alarm value (r2124, interpret decimal):
accumulated differential pulses in encoder pulses.

Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A33429 (F, N) Encoder 3: Position difference, hall sensor/track C/D and A/B too large

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical.
One period of track C/D corresponds to 360 ° mechanical.
One period of the Hall signal corresponds to 360 ° electrical.
The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough.

Alarm value (r2124, interpret decimal):
For track C/D, the following applies:
Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °).
For Hall signals, the following applies:
Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °).

Remedy:
- track C or D not connected.
- correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D.
- check that the encoder cables are routed in compliance with EMC.
- check the adjustment of the Hall sensor.

Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY

A33431 (F, N)  Encoder 3: Deviation, position incremental/absolute too large

- **Message value:** %1
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** When the zero pulse is passed, a deviation in the incremental position was detected. For equidistant zero marks, the following applies:
  - The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark.
  - The first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair.
- **Alarm value (r2124, interpret decimal):** Deviation in quadrants (1 pulse = 4 quadrants).
- **Remedy:**
  - check that the encoder cables are routed in compliance with EMC.
  - check the plug connections
  - replace the encoder or encoder cable
  - clean coding disk or remove strong magnetic fields.
- **Reaction upon F:** NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

### A33443 (F, N) Encoder 3: Unipolar CD signal level outside specification

**Message value:** Fault cause: %1 bin  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The unipolar level (CP/CN or DP/DN) for encoder 3 is outside the permissible tolerance.  
Alarm value (r2124, interpret binary):  
Bit 0 = 1: Either CP or CN outside the tolerance.  
Bit 16 = 1: Either DP or DN outside the tolerance.  
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV. The response thresholds are < 1700 mV and > 3300 mV.  
**Note:** The signal level is not evaluated unless the following conditions are satisfied:  
- Sensor Module properties available (r0459.31 = 1).  
- Monitoring active (p0437.31 = 1).  
**Remedy:**  
- check that the encoder cables and shielding are routed in compliance with EMC.  
- check the plug connections and contacts of the encoder cable.  
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?  
- replace the encoder cable.  
**Reaction upon F:** NONE (IASC/DCCBRK, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY  
**Reaction upon N:** NONE

### A33460 (N) Encoder 3: Analog sensor channel A failed

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The input voltage of the analog sensor is outside the permissible limits.  
Alarm value (r2124, interpret decimal):  
1: Input voltage outside detectable measuring range.  
2: Input voltage outside measuring range set in p4673.  
3: The absolute value of the input voltage has exceeded the range limit (p4676).  
**Remedy:**  
Re alarm value = 1:  
- check the output voltage of the analog sensor.  
Re alarm value = 2:  
- check the voltage setting for each encoder period (p4673).  
Re alarm value = 3:  
- check the range limit setting and increase it if necessary (p4676).  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

---

### A33461 (N) Encoder 3: Analog sensor channel B failed

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The input voltage of the analog sensor is outside the permissible limits.  
Alarm value (r2124, interpret decimal):  
1: Input voltage outside detectable measuring range.  
2: Input voltage outside the measuring range set in (p4675).  
3: The absolute value of the input voltage has exceeded the range limit (p4676).  
**Remedy:**  
Re alarm value = 1:  
- check the output voltage of the analog sensor.  
Re alarm value = 2:  
- check the voltage setting for each encoder period (p4675).
Faults and alarms

A33462 (N) Encoder 3: Analog sensor, no channel active
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: Channel A and B are not activated for the analog sensor.
Remedy: - activate channel A and/or channel B (p4670).
- check the encoder configuration (p0404.17).
See also: p4670 (Analog sensor configuration)
Reaction upon N: NONE
Acknowl. upon N: NONE

A33463 (N) Encoder 3: Analog sensor position value exceeds limit value
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The position value has exceeded the permissible range of -0.5 ... +0.5.
Alarm value (r2124, interpret decimal):
1: Position value from the LVDT sensor.
2: Position value from the encoder characteristic.
Remedy: Re alarm value = 1:
- Check the LVDT ratio (p4678).
- check the reference signal connection at track B.
Re alarm value = 2:
- check the coefficients of the characteristic (p4663 ... p4666).
Reaction upon N: NONE
Acknowl. upon N: NONE

A33470 (F, N) Encoder 3: Soiling detected
Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: In the case of the alternative encoder system interface on the Sensor Module Cabinet 30 (SMC30), encoder soiling
is signaled via a 0 signal at terminal X521.7.
Remedy: - check the plug connections
- replace the encoder or encoder cable
Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

F33500 (N, A) Encoder 3: Position tracking traversing range exceeded
Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible
traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/ 32x) of p0421. For p0411.3 = 1, the maximum traversing range for the configured linear axis is pre-set (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).

The fault should then be acknowledged and the absolute encoder adjusted.

F33501 (N, A) Encoder 3: Position tracking encoder position outside tolerance window

Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: When powered down, the drive/encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder. Fault value (r0949, interpret decimal):
Deviation (difference) to the last encoder position in increments of the absolute value.
The sign designates the traversing direction.
Note: The deviation (difference) found is also displayed in r0477.
See also: p0413 (Measuring gear, position tracking tolerance window), r0477 (Measuring gear, position difference)
Remedy: Reset the position tracking as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).
See also: p0010

F33502 (N, A) Encoder 3: Encoder with measuring gear, without valid signals

Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The encoder with measuring gear no longer provides any valid signals.
Remedy: It must be ensured that all of the encoders, with mounted measuring gear, provide valid actual values in operation.

F33503 (N, A) Encoder 3: Position tracking cannot be reset

Message value: -
Drive object: VECTOR_G
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The position tracking for the measuring gear cannot be reset.
Faults and alarms

List of faults and alarms

Remedy:
The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- de-select encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

F33802 (N, A) Encoder 3: Time slice overflow
Message value: %1
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A time slice overflow has occurred in encoder 3.
Fault value (r0949, interpret hexadecimal):
yx hex: y = function involved (Siemens-internal fault diagnostics), x = time slice involved
  x = 9:
  Time slice overflow of the fast (current controller clock cycle) time slice.
  x = A:
  Time slice overflow of the average time slice.
  x = C:
  Time slice overflow of the slow time slice.
y = 3E7:
  Timeout when waiting for SYNO (e.g. unexpected return to non-cyclic operation).

Remedy: Increase the current controller sampling time
Note: For a current controller sampling time = 31.25 µs, use an SMx20 with order number 6SL3055-0AA00-5xA3.

### F33806 (N, A) Encoder 3: Initialization error

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)  
**Acknowledge:** PULSE INHIBIT  
**Cause:** The encoder was not successfully initialized.  

Fault value (r0949, interpret hexadecimal):  
- Bit 0, 1: Encoder initialization with the motor rotating has failed (deviation involving coarse and fine position in encoder pulses/4).  
- Bit 2: Mid-voltage matching for track A unsuccessful.  
- Bit 3: Mid-voltage matching for track B unsuccessful.  
- Bit 4: Mid-voltage matching for acceleration input unsuccessful.  
- Bit 5: Mid-voltage matching for track safety A unsuccessful.  
- Bit 6: Mid-voltage matching for track safety B unsuccessful.  
- Bit 7: Mid-voltage matching for track C unsuccessful.  
- Bit 8: Mid-voltage matching for track D unsuccessful.  
- Bit 9: Mid-voltage matching for track R unsuccessful.  
- Bit 10: The difference in mid-voltages between A and B is too great (> 0.5 V)  
- Bit 11: The difference in mid-voltages between C and D is too great (> 0.5 V)  
- Bit 12: The difference in mid-voltages between safety A and safety B is too great (> 0.5 V)  
- Bit 13: The difference in mid-voltages between A and safety B is too great (> 0.5 V)  
- Bit 14: The difference in mid-voltages between B and safety A is too great (> 0.3 V)  
- Bit 15: The standard deviation of the calculated mid-voltages is too great (> 0.3 V)  
- Bit 16: Internal fault - fault when reading a register (CAFE)  
- Bit 17: Internal fault - fault when writing a register (CAFE)  
- Bit 18: Internal fault: No mid-voltage matching available  
- Bit 19: Internal error - ADC access error.  
- Bit 20: Internal error - no zero crossover found.  
- Bit 28: Error while initializing the EnDat 2.2 measuring unit.  
- Bit 29: Error when reading out the data from the EnDat 2.2 measuring unit.  
- Bit 30: EEPROM checksum of the EnDat 2.2 measuring unit incorrect.  
- Bit 31: Data of the EnDat 2.2 measuring unit inconsistent.  

**Remedy:**  
- Acknowledge fault.  
- If the fault cannot be acknowledged:  
  - Bits 2 ... 9: Check encoder power supply.  
  - Bits 2 ... 14: Check the corresponding cable.  
  - Bit 15 with no other bits: Check track R, check settings in p0404.  
  - Bit 28: Check the cable between the EnDat 2.2 converter and the measuring unit.  
  - Bit 29 ... 31: Replace the defective measuring unit.

### F33811 (N, A) Encoder 3: Encoder serial number changed

**Message value:** -  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (NONE, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The encoder serial number has changed. The change is only checked for encoders with serial number (e.g. EnDat encoders).  
  - The encoder was replaced.  

**Note:**  
With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).  
When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).
Proceed as follows to hide serial number monitoring:
- set the following serial numbers for the corresponding Encoder Data Set: p0441 = FF, p0442 = 0, p0443 = 0, p0444 = 0, p0445 = 0.

**Remedy:**
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.

Faults and alarms

List of faults and alarms

8 (= 08 hex):
No SYNC telegram is expected - but the received telegram is one.

9 (= 09 hex):
The error bit in the receive telegram is set.

16 (= 10 hex):
The receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F33835 (N, A) Encoder 3 DRIVE-CLiQ: Cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the encoder concerned. The nodes do not send and receive in synchronism.
Fault cause:
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON.
- replace the component involved.

Faults and alarms

List of faults and alarms

10000: OEM memory of the EnDat encoder contains data that cannot be interpreted.
11000 ... 11499: Descriptive data from EEPROM incorrect.
11500 ... 11899: Calibration data from EEPROM incorrect.
11900 ... 11999: Configuration data from EEPROM incorrect.
12000 ... 12008: Communication with AD converter faulted.
16000: DRIVE-CLiQ encoder initialization application error.
16001: DRIVE-CLiQ encoder initialization ALU error.
16002: DRIVE-CLiQ encoder HISI / SISI initialization error.
16003: DRIVE-CLiQ encoder safety initialization error.
16004: DRIVE-CLiQ encoder internal system error.

Remedy:
- replace the Sensor Module.
- if required, upgrade the firmware in the Sensor Module.
- contact the Hotline.

F33860 (N, A) Encoder 3 DRIVE-CLiQ (CU): Telegram error
Message value: Component number: %1, fault cause: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Sensor Module (encoder 3) involved to the Control Unit. Fault cause:
1 (= 01 hex):
Checksum error (CRC error).
2 (= 02 hex):
Telegram is shorter than specified in the length byte or in the receive list.
3 (= 03 hex):
Telegram is longer than specified in the length byte or in the receive list.
4 (= 04 hex):
The length of the receive telegram does not match the receive list.
5 (= 05 hex):
The type of the receive telegram does not match the receive list.
6 (= 06 hex):
The address of the power unit in the telegram and in the receive list do not match.
9 (= 09 hex):
The error bit in the receive telegram is set.
List of faults and alarms

16 (= 10 hex):
The receive telegram is too early.
17 (= 11 hex):
CRC error and the receive telegram is too early.
18 (= 12 hex):
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
19 (= 13 hex):
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
20 (= 14 hex):
The length of the receive telegram does not match the receive list and the receive telegram is too early.
21 (= 15 hex):
The type of the receive telegram does not match the receive list and the receive telegram is too early.
22 (= 16 hex):
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
25 (= 19 hex):
The error bit in the receive telegram is set and the receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).

F33887 (N, A) Encoder 3 DRIVE-CLiQ (CU): Component fault
Message value: Component number: %1, fault cause: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: Fault detected on the DRIVE-CLiQ component involved (Sensor Module for encoder 3). Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex): Error in the telegram header.
96 (= 60 hex): Response received too late during runtime measurement.
97 (= 61 hex): Time taken to exchange characteristic data too long.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F33895 (N, A) Encoder 3 DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Sensor Module (encoder 3) involved to the Control Unit.
Fault cause: 11 (= 0B hex):
Synchronization error during alternating cyclic data transfer.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F33896 (N, A) Encoder 3 DRIVE-CLiQ (CU): Inconsistent component properties
Message value: Component number: %1
Drive object: VECTOR_G
Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: The properties of the DRIVE-CLiQ component (Sensor Module for encoder 3), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.

Remedy:
- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).
### List of faults and alarms

#### F33899 (N, A) Encoder 3: Unknown fault

**Message value:** New message: %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** A fault occurred on the Sensor Module for encoder 3 that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit.  
**Fault value (r0949, interpret decimal):** Fault number.  
**Note:** If required, the significance of this new fault can be read about in a more recent description of the Control Unit.  
**Remedy:**  - replace the firmware on the Sensor Module by an older firmware version (r0148).  - upgrade the firmware on the Control Unit (r0018).  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE  
**Reaction upon A:** NONE  
**Acknowl. upon A:** IMMEDIATELY

#### A33902 (F, N) Encoder 3: SPI-BUS error occurred

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** Error when operating the internal SPI bus.  
**Fault value (r0949, interpret hexadecimal):** Only for internal Siemens troubleshooting.  
**Remedy:**  - replace the Sensor Module.  - if required, upgrade the firmware in the Sensor Module.  - contact the Hotline.

| F33905    | Encoder 3: Parameterization error                | %1, supplementary information: %2 | VECTOR_G     | OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2) | IMMEDIATELY     | A parameter of encoder 3 was detected as being incorrect. It is possible that the parameterized encoder type does not match the connected encoder. The parameter involved can be determined as follows:  
- determine the parameter number using the fault value (r0949).  
- determine the parameter index (p0187).  
Fault value (r0949, interpret decimal):  
%1 = supplementary information, %2 = parameter  
%2 = 421:  
For an EnDat/SSI encoder, the absolute position in the protocol must be less than or equal to 30 bits.  
%1 = 0:  
No information available.  
%1 = 1:  
The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).  
%1 = 2:  
A code number for an identified encoder has been entered into p0400, however, no identification was carried out. Please start a new encoder identification.  
%1 = 3:  
A code number for an identified encoder has been entered into p0400, however, no identification was carried out. Please select a listed encoder in p0400 with a code number < 10000.  
%1 = 4:  
This component does not support SSI encoders (p0404.9 = 1) without track A/B.  
%1 = 5:  
For SQW encoder, value in p4686 greater than in p0425.  
%1 = 6:  
DRIVE-CLiQ encoder cannot be used with this firmware version.  
%1 = 7:  
For an SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks.  
%1 = 8:  
The motor pole pair width is not supported by the linear scale being used.  
%1 = 9:  
The length of the position in the EnDat protocol may be a maximum of 32 bits.  
%1 = 10:  
The connected encoder is not supported.  
- check whether the connected encoder type matches the encoder that has been parameterized.  
- correct the parameter specified by the fault value (r0949) and p0187.  
- re parameter number = 314;  
- check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000). |
| F33912    | Encoder 3: Device combination is not permissible  | %1            | VECTOR_G     | ENCODER (IASC/DCBRAKE, NONE)      | PULSE INHIBIT   | The selected device combination is not supported.  
Fault value (r0949, interpret decimal):  
1003: The connected measuring unit cannot be operated with the EnDat 2.2 converter. For instance, the measuring unit has a pulse number/resolution of 2^n.  
1005: The type of measuring unit (incremental) is not supported by the EnDat 2.2 converter. |
Faults and alarms

List of faults and alarms

1006:
The maximum duration (31.25 µs) of the EnDat transfer was exceeded.

2001:
The set combination of current controller cycle, DP cycle and Safety cycle is not supported by the EnDat 2.2 converter.

2002:
The resolution of the linear measuring unit does not match the pole pair width of the linear motor

Remedy:
Re fault value = 1003, 1005, 1006:
- Use a measuring unit that is permissible.
For fault value = 2001:
- Set a permissible cycle combination (if required, use standard settings).
For fault value = 2002:
- Use a measuring unit with a lower resolution (p0422).

A33915 (F, N) Encoder 3: Configuration error
Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The configuration for encoder 3 is incorrect.
Alarm value (r2124, interpret decimal):
1: Re-parameterization between fault/alarm is not permissible.
419: When the fine resolution Gx_XIST2 is configured, the encoder identifies a maximum possible absolute position actual value (r0483) that can no longer be represented within 32 bits.

Remedy:
Re alarm value = 1:
No re-parameterization between fault/alarm.
Re alarm value = 419:
Reduce the fine resolution (p0419) or deactivate the monitoring (p0437.25), if the complete multiturn range is not required.

Reaction upon F: NONE (IASC/DCBRAKE)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

F33916 (N, A) Encoder 3: Parameterization fault
Message value: Parameter: %1, supplementary information: %2
Drive object: VECTOR_G
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: A parameter of encoder 3 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.
The parameter involved can be determined as follows:
- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).
Fault value (r0949, interpret decimal):
Parameter number.
Note:
This fault is only output for encoders where r0404.10 = 1 or r0404.11 = 1. It corresponds to A33905 with encoders where r0404.10 = 0 and r0404.11 = 0.

Remedy:
- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.

Reaction upon N: NONE

Reaction upon A: NONE
Acknowl. upon A: NONE
A33920 (F, N) Encoder 3: Temperature sensor fault

Message value: Fault cause: %1, channel number: %2
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: When evaluating the temperature sensor, an error occurred.
Fault cause:
1 (= 01 hex):
Wire breakage or sensor not connected (KTY: R > 1630 Ohm).
2 (= 02 hex):
Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Additional values:
Only for internal Siemens troubleshooting.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
000Oyxx hex: yy = channel number, xx = error cause

Remedy:
- check that the encoder cable is the correct type and is correctly connected.
- check the temperature sensor selection in p0600 to p0603.
- replace the Sensor Module (hardware defect or incorrect calibration data).

A33930 (N) Encoder 3: Data logger has saved data

Message value: -
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: For the activated function "Data logger" (p0437.0 = 1) a fault has occurred with the Sensor Module. This alarm indicates that the diagnostics data corresponding to the fault was saved on the memory card.
The diagnostics data is saved in the following folder:
/USER/SINAMICS/DATA/SMTRC00.BIN
... /USER/SINAMICS/DATA/SMTRC07.BIN
/USER/SINAMICS/DATA/SMTRCIDX.TXT
The following information is contained in the TXT file:
- Display of the last written BIN file.
- Number of write operations that are still possible (from 10000 downwards).
Note:
Only Siemens can evaluate the BIN files.

Remedy:
Not necessary.
The alarm disappears automatically.
The data logger is ready to record the next fault case.

Reaction upon N: NONE
Acknowl. upon N: NONE

A33940 (F, N) Encoder 3: Spindle sensor S1 voltage incorrect

Message value: %1
Drive object: VECTOR_G
Reaction: NONE
Acknowledge: NONE

Cause: The voltage of analog sensor S1 is outside the permissible range.
Fault value (r0949, interpret decimal):
Signal level from sensor S1.
Note:
A signal level of 500 mV corresponds to the numerical value 500 dec.

<td>Cause</td>
<td>A alarm has occurred on the Sensor Module for encoder 3 that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Alarm value (r2124, interpret decimal): Alarm number. Note: If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.</td>
</tr>
<tr>
<td>Remedy</td>
<td>- replace the firmware on the Sensor Module by an older firmware version (r0148). - upgrade the firmware on the Control Unit (r0018).</td>
</tr>
</tbody>
</table>

### F34207 (N, A)  VSM: Temperature fault threshold exceeded

<table>
<thead>
<tr>
<th>Message value</th>
<th>%1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive object</td>
<td>B_INF, VECTOR_G</td>
</tr>
<tr>
<td>Reaction</td>
<td>Infeed: OFF2 (NONE, OFF1) Vector: NONE</td>
</tr>
<tr>
<td>Acknowledge</td>
<td>IMMEDIATELY (POWER ON)</td>
</tr>
<tr>
<td>Cause</td>
<td>The temperature (r3666) measured using the Voltage Sensing Module (VSM) has exceeded the threshold value (p3668). Note: This fault can only be initiated if the temperature evaluation was activated (p3665 = 2 for a KTY sensor or p3665 = 1 for a PTC sensor). Fault value (r0949, interpret decimal): yyyy dec: yy: Component number of the component which detected the fault.</td>
</tr>
<tr>
<td>Remedy</td>
<td>- check the fan. - reduce the power.</td>
</tr>
</tbody>
</table>

### Remedy:
- Check the clamped tool.
- Check the tolerance and if required, adapt (p5040).
- Check the thresholds and if required, adapt (p5041).
- Check analog sensor S1 and connections.
**A34211 (F, N)**  
**VSM: Temperature alarm threshold exceeded**  
**Message value:** %1  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The temperature (r3666) measured using the Voltage Sensing Module (VSM) has exceeded the threshold value (p3667).  
Alarm value (r2124, interpret decimal):  
The hundred-thousands and ten-thousands position specifies the component number of the VSM which detected the fault.  
**Remedy:**  
- check the fan.  
- reduce the power.  
**Reaction upon F:**  
Infeed: NONE (OFF1, OFF2)  
Vector: NONE  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

**N34800 (F)**  
**VSM: Group signal**  
**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Acknowledge:** NONE  
**Cause:** The Voltage Sensing Module (VSM) has detected at least one fault.  
**Remedy:** Evaluates other actual messages.  
**Reaction upon F:**  
Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Acknowl. upon F:** IMMEDIATELY

**F34801**  
**VSM DRIVE-CLiQ: Sign-of-life missing**  
**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2, OFF3)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module (VSM).  
Fault cause:  
10 (= 0A hex):  
The sign-of-life bit in the receive telegram is not set.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the DRIVE-CLiQ connection.  
- replace the Voltage Sensing Module (VSM).
Faults and alarms

List of faults and alarms

Fault cause:
10 (= 0A hex):
The sign-of-life bit in the receive telegram is not set.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- check the DRIVE-CLiQ connection.
- replace the component involved.

F34802 VSM: Time slice overflow

Message value: -
Drive object: B_INF, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A time slice overflow has occurred on the Voltage Sensing Module.
Remedy:
- replace the Voltage Sensing Module.

F34803 VSM: Memory test

Message value: -
Drive object: B_INF, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: An error has occurred during the memory test on the Voltage Sensing Module.
Remedy:
- check whether the permissible ambient temperature for the Voltage Sensing Module is being maintained.
- replace the Voltage Sensing Module.

F34804 (N, A) VSM: CRC

Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A checksum error has occurred when reading-out the program memory on the Voltage Sensing Module (VSM).
Remedy:
- check whether the permissible ambient temperature for the component is maintained.
- replace the Voltage Sensing Module.

Reaction upon N: NONE
Acknow. upon N: NONE
Reaction upon A: NONE
Acknow. upon A: NONE

F34805 VSM: EPROM checksum error

Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: Internal parameter data is corrupted.
Fault value (r0949, interpret hexadecimal):
01: EEPROM access error.
02: Too many blocks in the EEPROM.
Remedy:
- check whether the permissible ambient temperature for the component is maintained.
- replace the Voltage Sensing Module (VSM).
**F34806**

**VSM: Initialization**

**Message value:** -

**Drive object:** B_INF, VECTOR_G

**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2, OFF3)

**Acknowledge:** IMMEDIATELY

**Cause:** For the Voltage Sensing Module (VSM), a fault has occurred while initializing.

**Remedy:** Replace the Voltage Sensing Module.

---

**A34807 (F, N)**

**VSM: Sequence control time monitoring**

**Message value:** -

**Drive object:** B_INF, VECTOR_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** Error, timeout in the sequence control on the Voltage Sensing Module (VSM).

**Remedy:** Replace the Voltage Sensing Module.

**Reaction upon F:** NONE

**Acknowl. upon F:** IMMEDIATELY (POWER ON)

**Reaction upon N:** NONE

**Acknowl. upon N:** NONE

---

**F34820**

**VSM DRIVE-CLiQ: Telegram error**

**Message value:** Component number: %1, fault cause: %2

**Drive object:** B_INF, VECTOR_G

**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module involved.  
Fault cause:  
1 (= 01 hex): Checksum error (CRC error).  
2 (= 02 hex): Telegram is shorter than specified in the length byte or in the receive list.  
3 (= 03 hex): Telegram is longer than specified in the length byte or in the receive list.  
4 (= 04 hex): The length of the receive telegram does not match the receive list.  
5 (= 05 hex): The type of the receive telegram does not match the receive list.  
6 (= 06 hex): The address of the component in the telegram and in the receive list do not match.  
7 (= 07 hex): A SYNC telegram is expected - but the received telegram is not a SYNC telegram.  
8 (= 08 hex): No SYNC telegram is expected - but the received telegram is one.  
9 (= 09 hex): The error bit in the receive telegram is set.  
16 (= 10 hex): The receive telegram is too early.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxxy hex: yy = component number, xx = error cause

**Remedy:**  
- carry out a POWER ON (power off/on).  
- check the electrical cabinet design and cable routing for EMC compliance  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).  
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)
Faults and alarms

List of faults and alarms

F34835  VSM DRIVE-CLiQ: Cyclic data transfer error
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, VECTOR_G
Reaction:  Infeed: OFF2 (NONE, OFF1)
           Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause:  A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module involved.
The nodes do not send and receive in synchronism.
Fault cause:
33 (= 21 hex):  The cyclic telegram has not been received.
34 (= 22 hex):  Timeout in the telegram receive list.
64 (= 40 hex):  Timeout in the telegram send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON.
- replace the component involved.

F34836  VSM DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, VECTOR_G
Reaction:  Infeed: OFF2 (NONE, OFF1)
           Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause:  A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module. Data were not able to be sent.
Fault cause:
65 (= 41 hex):  Telegram type does not match send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
Carry out a POWER ON.

F34837  VSM DRIVE-CLiQ: Component fault
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, VECTOR_G
Reaction:  Infeed: OFF2 (NONE, OFF1)
           Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause:  Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex):  Error in the telegram header.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
## List of faults and alarms

- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

### F34845  VSM DRIVE-CLiQ: Cyclic data transfer error

| Message value | Component number: %1, fault cause: %2 |
| Drive object  | B_INF, VECTOR_G                        |
| Reaction      | Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2) |
| Acknowledge   | IMMEDIATELY                             |
| Cause         | A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module (VSM). Fault cause: 11 (= 0B hex): Synchronization error during alternating cyclic data transfer. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause |
| Remedy        | Carry out a POWER ON. See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave) |

### F34850  VSM: Internal software error

| Message value | %1 |
| Drive object  | B_INF, VECTOR_G                        |
| Reaction      | Infeed: OFF1 (NONE, OFF2) Vector: OFF1 (NONE, OFF2, OFF3) |
| Acknowledge   | POWER ON                                |
| Cause         | An internal software error in the Voltage Sensing Module (VSM) has occurred. Fault value (r0949, interpret decimal): 1: Background time slice is blocked. 2: Checksum over the code memory is not OK. |
| Remedy        | - replace the Voltage Sensing Module (VSM). - if required, upgrade the firmware in the Voltage Sensing Module. - contact the Hotline. |

### F34851  VSM DRIVE-CLiQ (CU): Sign-of-life missing

| Message value | Component number: %1, fault cause: %2 |
| Drive object  | B_INF, TM150, TM31, VECTOR_G           |
| Reaction      | Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2) |
| Acknowledge   | IMMEDIATELY                             |
| Cause         | A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit. The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit. Fault cause: 10 (= 0A hex): The sign-of-life bit in the receive telegram is not set. Note regarding the message value: The individual information is coded as follows in the message value (r0949/r2124): 0000yyxx hex: yy = component number, xx = error cause |
| Remedy        | Upgrade the firmware of the component involved. |

### F34860  VSM DRIVE-CLiQ (CU): Telegram error

| Message value | Component number: %1, fault cause: %2 |
| Drive object  | B_INF, TM150, TM31, VECTOR_G           |
| Reaction      | Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2) |
| Acknowledge   | IMMEDIATELY                             |
| Cause         | A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit. |

Faults and alarms

List of faults and alarms

Fault cause:
1 (= 01 hex):
Checksum error (CRC error).
2 (= 02 hex):
Telegram is shorter than specified in the length byte or in the receive list.
3 (= 03 hex):
Telegram is longer than specified in the length byte or in the receive list.
4 (= 04 hex):
The length of the receive telegram does not match the receive list.
5 (= 05 hex):
The type of the receive telegram does not match the receive list.
6 (= 06 hex):
The address of the power unit in the telegram and in the receive list do not match.
9 (= 09 hex):
The error bit in the receive telegram is set.
16 (= 10 hex):
The receive telegram is too early.
17 (= 11 hex):
CRC error and the receive telegram is too early.
18 (= 12 hex):
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
19 (= 13 hex):
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
20 (= 14 hex):
The length of the receive telegram does not match the receive list and the receive telegram is too early.
21 (= 15 hex):
The type of the receive telegram does not match the receive list and the receive telegram is too early.
22 (= 16 hex):
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
25 (= 19 hex):
The error bit in the receive telegram is set and the receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance.
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F34875 VSM DRIVE-CLiQ (CU): Supply voltage failed

Message value:
Component number: %1, fault cause: %2

Drive object:
B_INF, TM150, TM31, VECTOR_G

Reaction: OFF2

Acknowledge:
IMMEDIATELY

Cause:
The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.
Fault cause:
9 (= 09 hex):
The power supply voltage for the components has failed.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the power supply for the DRIVE-CLiQ component.
### F34885 VSM DRIVE-CLiQ (CU): Cyclic data transfer error

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, TM150, TM31, VECTOR_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit.  
The nodes do not send and receive in synchronism.  
Fault cause:  
26 (= 1A hex): Sign-of-life bit in the receive telegram not set and the receive telegram is too early.  
33 (= 21 hex): The cyclic telegram has not been received.  
34 (= 22 hex): Timeout in the telegram receive list.  
64 (= 40 hex): Timeout in the telegram send list.  
98 (= 62 hex): Error at the transition to cyclic operation.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the power supply voltage of the component involved.  
- carry out a POWER ON.  
- replace the component involved.  
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

### F34886 VSM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, TM150, TM31, VECTOR_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit.  
Data were not able to be sent.  
Fault cause:  
65 (= 41 hex): Telegram type does not match send list.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- carry out a POWER ON.

### F34887 VSM DRIVE-CLiQ (CU): Component fault

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, TM150, TM31, VECTOR_G  
**Reaction:** Infeed: OFF2 (NONE, OFF1)  
Vector: NONE (OFF1, OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component (Voltage Sensing Module) involved. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex): Error in the telegram header.  
Faults and alarms

List of faults and alarms

66 (= 42 hex):
Send error: The telegram buffer memory contains an error.
67 (= 43 hex):
Send error: The telegram buffer memory contains an error.
96 (= 60 hex):
Response received too late during runtime measurement.
97 (= 61 hex):
Time taken to exchange characteristic data too long.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F34895 VSM DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module involved (VSM) to the Control Unit.
Fault cause:
11 (= 0B hex):
Synchronization error during alternating cyclic data transfer.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy: Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F34896 VSM DRIVE-CLiQ (CU): Inconsistent component properties
Message value: Component number: %1
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: The properties of the DRIVE-CLiQ component (Voltage Sensing Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.
Remedy:
- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F34899 (N, A) VSM: Unknown fault
Message value: New message: %1
Drive object: B_INF, VECTOR_G
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A fault occurred on the Voltage Sensing Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.

**Remedy:**
- replace the firmware on the Voltage Sensing Module by an older firmware version (r0158).
- upgrade the firmware on the Control Unit (r0018).

**Reaction upon N:** NONE
**Acknowl. upon N:** NONE
**Reaction upon A:** NONE

**Message value:**
**Drive object:** VECTOR_G
**Reaction:** NONE
**Acknowledge:** NONE
**Cause:** An error has occurred when accessing the module-internal I2C bus.
**Remedy:** Replace the Terminal Module.
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)
**Vector:** NONE
**Acknowl. upon F:** IMMEDIATELY (POWER ON)
**Reaction upon N:** NONE
**Acknowl. upon N:** NONE

**A34904 (F, N) VSM: EEPROM**
**Message value:**
**Drive object:** B_INF, VECTOR_G
**Reaction:** NONE
**Acknowledge:** NONE
**Cause:** An error has occurred accessing the non-volatile memory on the Terminal Module.
**Remedy:** Replace the Voltage Sensing Module (VSM).
**Reaction upon F:** Infeed: NONE (OFF1, OFF2)
**Vector:** NONE
**Acknowl. upon F:** IMMEDIATELY (POWER ON)
**Reaction upon N:** NONE
**Acknowl. upon N:** NONE
A34905 (F, N)  VSM: Parameter access
Message value: -
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The Control Unit attempted to write an illegal parameter value to the Voltage Sensing Module (VSM).
Remedy: - check whether the firmware version of the VSM (r0158) matches the firmware version of Control Unit (r0018).
- if required, replace the Voltage Sensing Module.
Note: The firmware versions that match each other are in the readme.txt file on the memory card.
Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

A34920 (F, N)  VSM: Temperature sensor fault
Message value: %1
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: When evaluating the temperature sensor, an error occurred.
Alarm value (r2124, interpret decimal):
1: Wire breakage or sensor not connected (KTY: R > 1630 Ohm).
2: Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Remedy: - make sure that the sensor is connected correctly.
- replace the sensor.
Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F34950  VSM: Internal software error
Message value: %1
Drive object: VECTOR_G
Reaction: OFF2
Acknowledge: POWER ON
Cause: An internal software error in the Voltage Sensing Module (VSM) has occurred.
Fault value (r0949, interpret decimal):
Information about the fault source.
Only for internal Siemens troubleshooting.
Remedy: - If necessary, upgrade the firmware in the Voltage Sensing Module to a later version.
- contact the Hotline.

A34999 (F, N)  VSM: Unknown alarm
Message value: New message: %1
Drive object: B_INF, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: A fault occurred on the Voltage Sensing Module (VSM) an alarm has occurred that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Alarm value (r2124, interpret decimal):
Alarm number.
List of faults and alarms

Note:
If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.

Remedy:
- replace the firmware on the Voltage Sensing Module by an older firmware version (r0148).
- upgrade the firmware on the Control Unit (r0018).

Reaction upon F:
Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)
Action upon N: NONE

F35000 TM54F: Sampling time invalid
Message value: %1
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: POWER ON
Cause: The set sampling time is invalid.
- not a multiple integer of the DP clock cycle.
Fault value (r0949, floating point):
Recommended valid sampling time.
Remedy: Adapt the sampling time (e.g. set the recommended valid sampling time).
See also: p10000 (SI sampling time)

F35001 TM54F: Parameter value invalid
Message value: %1
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The entered value is invalid.
Fault value (r0949, interpret decimal):
Parameter number with the invalid value.
Remedy: Correct the parameter value.

F35002 TM54F: Commissioning not possible
Message value: %1
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The commissioning mode activation was rejected because the pulses had not been suppressed for at least one drive belonging to the TM54F.
Fault value (r0949, interpret decimal):
Drive object number of the first drive found without pulse suppression.
Remedy: Set pulse suppression for the drive specified in the fault value.

F35003 TM54F: Acknowledgement on the Control Unit is required
Message value: -
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A fault on the Terminal Module 54F (TM54) was acknowledged using the safe acknowledgement (P10006).
An additional acknowledgement is also required at the Control Unit.
Remedy: Acknowledge the fault at the Control Unit.
### F35011 TM54F: Drive object number assignment illegal

| Message value | %1 |
| Drive object | B_INF, TM54F_MA, TM54F_SL, VECTOR_G |
| Reaction | NONE |
| Acknowledge | IMMEDIATELY (POWER ON) |
| Cause | A drive object number was assigned twice. Each drive object number can be assigned only once. |
| Remedy | Correct the assignment of the drive object numbers. See also: p10010 (SI drive object assignment) |

### A35012 TM54F: Test stop active

| Message value | - |
| Drive object | B_INF, TM54F_MA, TM54F_SL, VECTOR_G |
| Reaction | NONE |
| Acknowledge | NONE |
| Cause | The test stop for the Terminal Module 54F (TM54F) is presently being executed. Note: Fault F35013 is output if a fault occurs during the test stop. |
| Remedy | The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop. |

### F35013 TM54F: Test stop error

| Message value | %1 |
| Drive object | B_INF, TM54F_MA, TM54F_SL, VECTOR_G |
| Reaction | NONE |
| Acknowledge | IMMEDIATELY (POWER ON) |
| Cause | An error was detected when carrying out the test stop on the TM54F. Failsafe control signals (failsafe values) are transferred to the safety functions. Fault value (0949, interpret hexadecimal): 
```
aaaabbbc hex:
aaaa: DO or F-DI (dependent on test step cc), where the expected state was not assumed (bit 0 = F-DI 0 or F-DO 0, bit 1 = F-DI 1 or F-DO 1, etc.).
bb: Fault cause
bb = 01 hex: Internal fault.
bb = 02 hex: Fault when comparing the switching signals of the two channels (F-DI or DI).
bb = 03 hex: Internal fault.
bb = 04 hex: Fault when comparing the switching signals of the two channels (Diag-DO).
cc: State of the test stop in which the fault has occurred. The display format is as follows:
Slave fault state: (test actions)(test actions) | corresponding step for the master: (test actions)(test actions) | Description |
00 hex: (L1+OFF)(L2+ON) | 0A hex: ( ) | Synchronization / switching step
0A hex: (L1+OFF)(L2+ON) | 15 hex: ( ) | Wait step
15 hex: (L1+OFF)(L2+OFF) | 20 hex: ( ) | F-DI 0 ... 4 check for 0 V 2.) Switch step to new level
20 hex: (L1+OFF)(L2+OFF) | 2B hex: ( ) | Wait step
2B hex: (L1+ON)(L2+ON) | 36 hex: ( ) | 1.) F-DI 5 ... 9 check for 0 V 2.) Switch step to new level
36 hex: (DO OFF)( ) | 41 hex: (DO OFF)( ) | Wait step / switching step
41 hex: (DO OFF)( ) | 4C hex: (DO OFF)( ) | Wait step
4C hex: (DO ON)( ) | 57 hex: (DO ON)( ) | 1.) Check diag-DO or diag-DI 2.) Switch step to new level
57 hex: (DO ON)( ) | 62 hex: (DO ON)( ) | Wait step
62 hex: (DO OFF)( ) | 6D hex: (DO ON)( ) | 1.) Check diag-DO or diag-DI 2.) Switch step
6D hex: (DO OFF)( ) | 78 hex: (DO ON)( ) | Wait step
78 hex: (DO ON)( ) | 83 hex: (DO OFF)( ) | 1.) Check diag-DO or diag-DI 2.) Switch step
83 hex: (DO ON)( ) | 8E hex: (DO OFF)( ) | Wait step
8E hex: (DO OFF)( ) | 99 hex: (DO OFF)( ) | 1.) Check diag-DO or diag-DI 2.) Switch step
99 hex: (DO OFF)( ) | A4 hex: (DO OFF)( ) | Wait step
A4 hex: (DO OFF)( ) | AF hex: (DO OFF)( ) | Check Diag-DO or Diag-DI
AF hex: (DO original state)( ) | C5 hex: (DO original state)( ) | Switching step |
``` |
The expected states to be checked depend on the parameterized test mode (p10047).

The display format is as follows:

Test step (SL MA): Expected Diag-DO mode 1 | Expected DI 20 ... 23 mode 2 | Expected DI 20 ... 23 mode 3

(4C hex 57 hex): Diag-DO = 0 V | DI = 24 V | DI = 24 V

(62 hex 6D hex): Diag-DO = 0 V | DI = 0 V | DI = 0 V

(78 hex 83 hex): Diag-DO = 0 V | DI = 0 V | DI = 24 V

(8E hex 99 hex): Diag-DO = 24 V | DI = 0 V | DI = 24 V

(A4 hex AF hex): Diag-DO = 0 V | DI = 24 V | DI = 24 V

Example:

If an error with fault causes bb = 02 hex or 04 hex occurs in a test stop step, the test action for the fault took place in the previous test stop step. The expected states are tested in the next step.

Master signals fault value 0001_04AF and slave signals fault value 0001_04A4.

aaaa = 1 --> F-DO 0 is involved.

bb = 04 hex --> the test of the Diag-DO was unsuccessful.

cc = The expected states were tested in test stop step AF on the master and A4 on the slave.

The expected state Diag-DO = 0 V was checked in the table, i.e. Diag-DO was at 0 V instead of the expected 24 V. The associated test action took place in the previous step (99 hex DO OFF, A4 hex DO OFF). Both DOs were switched to OFF.

Remedy:

Check the wiring of the F-DIs and F-DOs and restart the test stop.

Note:

The fault is withdrawn if the test stop is successfully completed.

For fault value = CCCCCCCC hex, DDDDDDDD hex, EEEEEEEE hex the following applies:

These fault values occur together with fault F35152. In this case, all parameters for the test stop should be checked.

You should also check whether the firmware version of the TM54F matches that of the Control Unit.

You also need to check p10001, p10017, p10046 and p10047.

A POWER ON must be carried out after correcting the parameters.
List of faults and alarms

yyyy yyyy bin: Motor Module replaced or a DRIVE-CLiQ cable of a Motor Module not inserted.
Bit 8 = 1: Motor Module from drive 1 was replaced or does not communicate.
- Bit 13 = 1: Motor Module from drive 6 was replaced or does not communicate.
Note:
When this fault is present, none of the drives listed in the fault value, which have drive-based motion monitoring functions operating with TM54F, are enabled.
For fault value = 0:
The number of drive objects specified in p10010 is not equal to the number of drives that have drive-based motion monitoring functions that have been enabled.
See also: p10010 (SI drive object assignment)

Remedy:
For all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).
Check as to whether F35051 is also output and remove the cause.
Check whether each drive object number is listed only once in the indices of p10010.
Note:
If a drive was deactivated and activated without first having established the DRIVE-CLiQ connection, then this alarm is also output.
When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
For SINUMERIK, the following applies:
HMI supports the replacement of components with Safety functions (operating area "Diagnostics" --> Softkey "Alarm list" --> Softkey "Confirm SI HW" etc.).
The precise procedure is given in the following document:
SINUMERIK Function Manual Safety Integrated

---

A35016  TM54F: Net data communication with drive not established
Message value: -
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause:
The cyclic net data communication within the Terminal Module 54F (TM54F) is still not active.
This message is output after the TM54F master and TM54F slave have booted and is automatically withdrawn as soon as communications have been established.
If a drive does not communicate with the TM54F, then none of the drives parameterized in p10010 are enabled.
Remedy:
When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following always applies:
- for all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).
- check whether fault F35150 is present and if required, remove the cause of the fault.
See also: r10055 (SI TM54F communication status drive-specific)

---

F35040  TM54F: 24 V undervoltage
Message value: Fault cause: %1 bin
Drive object: B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause:
For the 24 V power supply for the Terminal Module 54F (TM54F) an undervoltage condition was detected.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret binary):
Bit 0 = 1: Power supply undervoltage at connection X524.
Bit 1 = 1: Power supply undervoltage at connection X514.
Remedy:
- check the 24 V DC power supply for the TM54F.
- carry out safe acknowledgement (p10006).
F35043  TM54F: 24 V overvoltage

Message value:  -
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  For the 24 V power supply for the Terminal Module 54F (TM54F) an overvoltage condition was detected.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Remedy:  - check the 24 V DC power supply for the TM54F.
- carry out safe acknowledgement (p10006).

F35051  TM54F: Defect in a monitoring channel

Message value:  %1
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  The Terminal Module 54F (TM54F) has identified an error in the crosswise data comparison between the two control channels.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret hexadecimal):
aaaaabbc hex
aaaa: A value greater than zero indicates an internal software error.
bb: Data to be cross-compared that resulted in the error.
b = 00 hex: p10000
b = 01 hex: p10001
b = 02 hex: p10002
b = 03 hex: p10006

bb = D4 ... D5 drive group 4 SLP parameter p10032 ... p10033
bb = D6 initialize retraction
bb = D7 retraction, SLP
cc: Index of the data to be cross-compared that resulted in the error.

Remedy:
Carry out the following steps on the TM54F:
- activate the safety commissioning mode (p0010 = 95).
- start the copy function for SI parameters (p9700 = 57 hex).
- acknowledge complete data change (p9701 = AC hex).
- exit the safety commissioning mode (p0010 = 0).
- save all parameters (p0977 = 1).
- carry out safe acknowledgement (p10006).
For an internal software error (aaaa > 0):
- For TM54F, upgrade the firmware to a later version.
- contact the Hotline.
- replace the TM54F.

F35052 (A)  TM54F: Internal hardware error
Message value:  %1
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal software/hardware error has been detected on the Terminal Module 54F (TM54F).
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
- check the electrical cabinet design and cable routing for EMC compliance
- upgrade TM54F firmware to more recent version.
- contact the Hotline.
- replace the TM54F.

Reaction upon A: NONE
Acknow. upon A: NONE

F35053  TM54F: Temperature fault threshold exceeded
Message value:  %1
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The temperature measured using the temperature sensing on the TM54F has exceeded the threshold value to initiate this fault.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
- allow the TM54F to cool down.
- carry out safe acknowledgement (p10006).
A35054  TM54F: Temperature alarm threshold exceeded
Message value:  %1
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The temperature measured using the temperature sensing on the TM54F has exceeded the threshold value to initiate this alarm.
Remedy:  - allow the TM54F to cool down.
         - carry out safe acknowledgement (p10006).

A35075 (F)  TM54F: Error during internal communication
Message value:  %1
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  An internal communications error has occurred in the Terminal Module 54F (TM54F). This alarm is also output:
- If TM54F exists and no safety function of the TM54F has yet been parameterized.
- If p10000 of the TM54F master is not set the same as p10000 of the TM54F slave.
Alarm value (r2124, interpret decimal):
Only for internal Siemens diagnostics.
Remedy:  If TM54F exists and no safety function has yet been parameterized:
- Not necessary. The alarm disappears automatically after a safety function of the TM54F has been parameterized. For p10010 from the TM54F master not equal to the TM54F slave:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
For internal communication errors:
- check the electrical cabinet design and cable routing for EMC compliance
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.

A35080 (F)  TM54F: Checksum error safety parameters
Message value:  %1
Drive object:  B_INF, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  NONE
Acknowledge:  NONE
Cause:  The calculated checksum entered in r10004 over the safety-relevant parameters does not match the reference checksum saved in p10005 at the last machine acceptance.
Fault value (r9949, interpret binary):
Bit 0 = 1: Checksum error for functional SI parameters.
Bit 1 = 1: Checksum error for SI parameters for component assignment.
Remedy:  - check the safety-relevant parameters and if required, correct.
         - set the reference checksum to the actual checksum.
         - acknowledge the hardware replacement.
         - carry out a POWER ON (power off/on).
         - carry out an acceptance test.

SINAMICS G130/G150 List Manual (LH2), 01/2012, A5E03263479A
### A35081 (F)

**TM54F: Static (steady state) 1 signal at the F-DI for safety-relevant acknowledgement**

**Message value:**

- 

**Drive object:**

B_INF, TM54F_MA, TM54F_SL, VECTOR_G

**Reaction:**

NONE

**Acknowledge:**

NONE

**Cause:**

A logical 1 signal is present at the F-DI configured in p10006 for more than 10 seconds. If, at the F-DI no acknowledgment was performed for safe acknowledgment, then a steady-state logical and 0 signal must be present. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.

**Remedy:**

Set the fail-safe digital input (F-DI) to a logical 0 signal (p10006). Note:

F-DI: Failsafe Digital Input

**Reaction upon F:**

NONE

**Acknowl. upon F:**

IMMEDIATELY

### F35150

**TM54F: Communication error**

**Message value:**

%1

**Drive object:**

B_INF, TM54F_MA, TM54F_SL, VECTOR_G

**Reaction:**

NONE

**Acknowledge:**

IMMEDIATELY (POWER ON)

**Cause:**

A communication error between the TM54F master and Control Unit or between the TM54F slave and the Motor Module was detected.

Fault value (r0949, interpret hexadecimal):

Only for internal Siemens troubleshooting.

**Remedy:**

When replacing a Motor Module, carry out the following steps:

- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

The following always applies:

- check the electrical cabinet design and cable routing for EMC compliance
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.

### F35151

**TM54F: Discrepancy error**

**Message value:**

%1

**Drive object:**

B_INF, TM54F_MA, TM54F_SL, VECTOR_G

**Reaction:**

NONE

**Acknowledge:**

IMMEDIATELY

**Cause:**

The safety input terminals or output terminals show a different state longer than that parameterized in p10002. Fault value (r0949, interpret hexadecimal):

```
yyyyxxxx hex
```

*xxxx:* The safety-relevant input terminals F-DI indicate a discrepancy.

Bit 0: Discrepancy for F-DI 0

```
Bit 9: Discrepancy for F-DI 9
```

*yyyy:* The safety-relevant output terminals F-DO indicate a discrepancy.

Bit 0: Discrepancy for F-DO 0

```
... Bit 3: Discrepancy for F-DO 3
```

**Note:**

If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs. The following options are available to analyze all of the discrepancy errors:

- Using the commissioning software, evaluate the input states and output states of the TM54F. All discrepancy errors are displayed here.
- Compare parameters p10051 and p10052 from the TM54F master and TM54F slave for discrepancy.
**Remedy:**

Check the wiring of the corresponding F-DI (contact problems).

Discrepancy errors in the fail-safe digital inputs (F-DI) can only be completely acknowledged if, after the cause of the error was resolved, safe acknowledgement was carried out (see p10006). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state internally.

For cyclic switching operations at the fail-safe digital inputs (F-DI), it may be necessary to adapt the discrepancy time to the switching frequency:

- If the period of a cyclic switching pulse has the order of magnitude of double the value of p10002, then the following formulas must be checked.
  - p10002 < (tp / 2) - td (discrepancy time must be less than half the period minus the actual discrepancy time)
  - p10002 >= p10000 (discrepancy time must be no less than p10000)
  - p10002 > td (discrepancy time must be greater than the switch discrepancy time which may actually apply)

  td: possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p10000).
  tp: period for a switching operation in ms.

- For cyclic switching operations and when debounce (p10017) is active, the discrepancy time is directly specified by the debounce time.

  If the period of a cyclic switching pulse has the order of magnitude of twice the debounce time, then the following formulas should be checked.
  - p10002 < p10017 + 1ms - td
  - p10002 > td
  - p10002 >= p10000

**Example:**

If the SI sampling cycle is 12 ms and the switching frequency is 110 ms (p10017 = 0), the maximum discrepancy time which can be set is as follows:

p10002 <= 110/2 ms - 12 ms = 48 ms --> rounded-off, the following is obtained p10002 <= 36 ms

Since the discrepancy time can only be accepted as a whole SI sampling time, the value will need to be rounded up or down to a whole SI sampling time value if it is not an exact integer multiple of an SI sampling time.

F-DI: Failsafe Digital Input
F-DO: Failsafe Digital Output

---

**F35152**

**TM54F: Internal software error**

**Message value:** %1

**Drive object:** B_INF, TM54F_MA, TM54F_SL, VECTOR_G

**Reaction:** NONE

**Acknowledge:** IMMEDIATELY

**Cause:** An internal software error has occurred in the Terminal Module 54F (TM54F).

The fail-safe digital inputs and digital outputs (F-DI, F-DO) on the TM54F have been set to the safe state.

Fault value (r0949, interpret decimal):

Only for internal Siemens troubleshooting.

Note:

F-DI: Failsafe Digital Input
F-DO: Failsafe Digital Output

**Remedy:**

Check that the firmware version of the TM54F matches the Control Unit's firmware version.

The automatic firmware update must be activated in the project.

Note:

This signal will also appear, for example, in conjunction with fault F35013. In this case you should check all the parameters for the test stop on the TM54F (p10001, p10003, p10007, p10041, p10046, p10047). In this case, a POWER ON is required after the parameters have been corrected.

---

**A35200 (F, N)**

**TM: Calibration data**

**Message value:** %1

**Drive object:** B_INF, TM150, TM31, VECTOR_G

**Reaction:** NONE

**Acknowledge:** NONE

**Cause:** An error was detected in the calibration data of the Terminal Module.

Alarm value (r2124, interpret decimal):

*ddcbaa dec: dd = component number, c = AI/AO, b = fault type, aa = number*

- c = 0: analog input (AI, Analog Input)
- c = 1: analog output (AO, Analog Output)
- b = 0: No calibration data available.
- b = 1: Offset too high (> 100 mV).
Faults and alarms

List of faults and alarms

Remedy:
- carry out a POWER ON (power off/on) for all components.
- Replace the component if necessary.

Reaction upon F: NONE

F35207 (N, A) TM: Temperature fault/alarm threshold channel 0 exceeded
Message value: %1
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction:
Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
For the temperature evaluation via the Terminal Module (TM), at least one of the following conditions to initiate this fault is fulfilled:
- alarm threshold has been exceeded longer than that set in the timer (p4102[0], p4103[0]).
  or
- fault threshold exceeded (p4102[1]).
Note:
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[0] = 1, 4), the following applies:
  - if r4101[0] > 1650 ohms, the temperature r4105[0] = 250 °C
  - if r4101[0] <= 1650 ohms, the temperature r4105[0] = -50 °C
The temperature actual value is displayed via connector output r4105[0] and can be interconnected.
Notice:
This fault only causes the drive to shut down if there is at least one BICO interconnection between the drive and the Terminal Module.
Fault value (r0949, interpret decimal):
Temperature actual value at the time of initiation [0.1 °C].
Remedy:
- allow the temperature sensor to cool down to below p4102[1] - hysteresis (5 K, for TM150, can be set using p4118[0]).
  or
- if required, set the fault response to NONE (p2100, p2101).

F35221 (N, A) TM: Setpoint - actual value deviation, outside the tolerance range

Message value: -
Drive object: B_INF, TM31, VECTOR_G
Reaction: Infeed: OFF1 (NONE, OFF2)
Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The deviation between the setpoint and the output signals (track A/B) exceeds the tolerance of +/-3 %. The deviation between the internal and external measured value is too high.
Remedy: - reduce the basic clock cycle (p0110, p0111).
- replace the module.

Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

A35222 (F, N) TM: Encoder pulse number not permissible

Message value: %1
Drive object: B_INF, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The encoder pulse number entered does not match the permissible pulse number from a hardware perspective. Fault value (r0949, interpret decimal):
1: Encoder pulse number is too high.
2: Encoder pulse number is too low.
4: Encoder pulse number is less than the zero mark offset (p4426).
Remedy: - enter the encoder pulse number in the permissible range (p0408).
- if necessary, replace TM41 SAC with TM41 DAC.
Note:
TM41 SAC: order no. = 6SL3055-0AA00-3PA0
TM41 DAC: order no. = 6SL3055-0AA00-3PA1
The following applies for TM41 SAC:
- minimum/maximum value for p0408: 1000/8192
The following applies for TM41 DAC:
- minimum/maximum value for p0408: 1000/16384
See also: p0408 (Rotary encoder pulse No.)

Reaction upon F: Infeed: OFF1 (NONE, OFF2)

Reaction upon N: NONE
Acknowl. upon N: NONE

A35223 (F, N) TM: Zero mark offset not permissible

Message value: %1
Drive object: B_INF, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The entered zero mark offset is not permissible.
Fault value (r0949, interpret decimal):
1: Zero mark offset is too high.

**Remedy:** Enter the zero mark offset in the permissible range (p4426).

**Reaction upon F:** Infeed: OFF1 (NONE, OFF2)
Vector: OFF1 (NONE, OFF2, OFF3)

**Acknowl. upon F:** IMMEDIATELY (POWER ON)

**Reaction upon N:** NONE

**Acknowl. upon N:** NONE

---

**F35230**

**TM: Hardware fault**

**Message value:** %1

**Drive object:** B_INF, TM150, TM31, VECTOR_G

**Reaction:** Infeed: OFF1 (NONE, OFF2)
Vector: NONE

**Acknowledge:** POWER ON

**Cause:** The Terminal Module (TM) used has signaled internal errors.
Signals from this module may not be evaluated because they are very likely to be incorrect.

**Remedy:** If required, replace the Terminal Module.

---

**F35233**

**DRIVE-CLiQ component does not support function**

**Message value:** %1

**Drive object:** B_INF, TM150, TM31, VECTOR_G

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A function requested by the Control Unit is not supported by a DRIVE-CLiQ component.

Fault value (r0949, interpret decimal):
1: Terminal Module 31 does not support the function "Timer for temperature evaluation" (X522.7/8, p4103 > 0.000).
4: The improved actual value resolution is not supported (p4401.4).
5: The improved setpoint resolution is not supported (p4401.5).
6: The residual value handling in the setpoint channel cannot be deactivated (p4401.6).
7: Output frequencies greater than 750 kHz cannot be activated (p4401.7).

**Remedy:**
- De-activate timer for temperature evaluation (X522.7/8) (p4103 = 0.000).
- Use Terminal Module 31 and the relevant firmware version to enable the "Timer for temperature evaluation" function (Order No. 6SL3055-0AA00-3AA1, firmware version 2.6 and higher).
See also: p4103

---

**F35400 (N, A)**

**TM: Temperature fault/alarm threshold channel 4 exceeded**

**Message value:** %1

**Drive object:** B_INF, TM150, VECTOR_G

**Reaction:** Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3)

**Acknowledge:** IMMEDIATELY (POWER ON)

**Cause:** For the temperature evaluation via the Terminal Module 150 (TM150), at least one of the following conditions to initiate this fault is fulfilled:
- alarm threshold has been exceeded longer than that set in the timer (p4102[8], p4103[4]).
- fault threshold exceeded (p4102[9]).

**Note:**
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[4] = 1, 4), the following applies:

The temperature actual value is displayed via connector output r4105[4] and can be interconnected.

**Notice:**
This fault only causes the drive to shut down if there is at least one BICO interconnection between the drive and the Terminal Module.

**Fault value (r0949, interpret decimal):**
Temperature actual value at the time of initiation [0.1 °C].
Faults and alarms

F35405 (N, A) TM: Temperature fault/alarm threshold channel 9 exceeded
Message value: %1
Drive object: B_INF, TM150, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For the temperature evaluation via the Terminal Module 150 (TM150), at least one of the following conditions to initiate this fault is fulfilled:
- alarm threshold has been exceeded longer than that set in the timer (p4102[18], p4103[9]).
or
- fault threshold exceeded (p4102[19]).

Note:
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[9] = 1, 4), the following applies:
- if r4101[9] > 1650 ohms, the temperature r4105[9] = 250 °C
- if r4101[9] <= 1650 ohms, the temperature r4105[9] = -50 °C
The temperature actual value is displayed via connector output r4105[9] and can be interconnected.

Notice:
This fault only causes the drive to shut down if there is at least one BICO interconnection between the drive and the Terminal Module.

Fault value (r0949, interpret decimal):
Temperature actual value at the time of initiation [0.1 °C].

Remedy:
- allow the temperature sensor to cool down to below p4102[19] - hysteresis (p4118[9]).
- if required, set the fault response to NONE (p2100, p2101).

F35406 (N, A) TM: Temperature fault/alarm threshold channel 10 exceeded
Message value: %1
Drive object: B_INF, TM150, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For the temperature evaluation via the Terminal Module 150 (TM150), at least one of the following conditions to initiate this fault is fulfilled:
- alarm threshold has been exceeded longer than that set in the timer (p4102[20], p4103[10]).
or
- fault threshold exceeded (p4102[21]).

Note:
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[10] = 1, 4), the following applies:
- if r4101[10] > 1650 ohms, the temperature r4105[10] = 250 °C
- if r4101[10] <= 1650 ohms, the temperature r4105[10] = -50 °C
The temperature actual value is displayed via connector output r4105[10] and can be interconnected.

Notice:
This fault only causes the drive to shut down if there is at least one BICO interconnection between the drive and the Terminal Module.

Fault value (r0949, interpret decimal):
Temperature actual value at the time of initiation [0.1 °C].
Remedy:
- allow the temperature sensor to cool down to below p4102[21] - hysteresis (p4118[10]).
- if required, set the fault response to NONE (p2100, p2101).

F35820  TM DRIVE-CLiQ: Telegram error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the Terminal Module involved.
Fault cause:
1 (= 01 hex): Checksum error (CRC error).
2 (= 02 hex): Telegram is shorter than specified in the length byte or in the receive list.
3 (= 03 hex): Telegram is longer than specified in the length byte or in the receive list.
4 (= 04 hex): The length of the receive telegram does not match the receive list.
5 (= 05 hex): The type of the receive telegram does not match the receive list.
6 (= 06 hex): The address of the component in the telegram and in the receive list do not match.
7 (= 07 hex): A SYNC telegram is expected - but the received telegram is not a SYNC telegram.
8 (= 08 hex): No SYNC telegram is expected - but the received telegram is one.
9 (= 09 hex): The error bit in the receive telegram is set.
16 (= 10 hex): The receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35835  TM DRIVE-CLiQ: Cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the Terminal Module involved. The nodes do not send and receive in synchronism.
Fault cause:
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON.
- replace the component involved.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35836  TM DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  OFF1 (OFF2)
Acknowledge:  IMMEDIATELY
Cause:  A DRIVE-CLiQ communication error has occurred from the Terminal Module to the encoder involved. Data were not able to be sent.
Fault cause:
65 (= 41 hex):
Telegram type does not match send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON.

F35837  PTM DRIVE-CLiQ: Component fault
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  OFF1 (OFF2)
Acknowledge:  IMMEDIATELY
Cause:  Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex):
Error in the telegram header.
35 (= 23 hex):
Receive error: The telegram buffer memory contains an error.
66 (= 42 hex):
Send error: The telegram buffer memory contains an error.
67 (= 43 hex):
Send error: The telegram buffer memory contains an error.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F35845  TM DRIVE-CLiQ: Cyclic data transfer error
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction:  OFF1 (OFF2)
Acknowledge:  IMMEDIATELY
Cause:  A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the encoder involved.
Faults and alarms

List of faults and alarms

Fault cause:
11 (= 0B hex):
Synchronization error during alternating cyclic data transfer.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Carry out a POWER ON.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35850  TM: Internal software error
Message value: %1
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: Infeed: OFF1 (NONE, OFF2)
Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge: POWER ON
Cause:
An internal software error in the Terminal Module (TM) has occurred.
Fault value (r0949, interpret decimal):
1: Background time slice is blocked.
2: Checksum over the code memory is not OK.

Remedy:
- replace the Terminal Module (TM).
- if required, upgrade the firmware in the Terminal Module.
- contact the Hotline.

F35851  TM DRIVE-CLiQ (CU): Sign-of-life missing
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause:
A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
Fault cause:
10 (= 0A hex):
The sign-of-life bit in the receive telegram is not set.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Upgrade the firmware of the component involved.

F35860  TM DRIVE-CLiQ (CU): Telegram error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause:
A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.
Fault cause:
1 (= 01 hex):
Checksum error (CRC error).
2 (= 02 hex):
Telegram is shorter than specified in the length byte or in the receive list.
3 (= 03 hex):
Telegram is longer than specified in the length byte or in the receive list.
4 (= 04 hex):
The length of the receive telegram does not match the receive list.
5 (= 05 hex):
The type of the receive telegram does not match the receive list.
6 (= 06 hex):
The address of the power unit in the telegram and in the receive list do not match.
9 (= 09 hex):
The error bit in the receive telegram is set.
List of faults and alarms

16 (= 10 hex):
The receive telegram is too early.

17 (= 11 hex):
CRC error and the receive telegram is too early.

18 (= 12 hex):
The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.

19 (= 13 hex):
The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.

20 (= 14 hex):
The length of the receive telegram does not match the receive list and the receive telegram is too early.

21 (= 15 hex):
The type of the receive telegram does not match the receive list and the receive telegram is too early.

22 (= 16 hex):
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.

25 (= 19 hex):
The error bit in the receive telegram is set and the receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35875 TM DRIVE-CLiQ (CU): Supply voltage failed

Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause:
The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.
Fault cause:
9 (= 09 hex):
The power supply voltage for the components has failed.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON (power off/on).
- check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the power supply for the DRIVE-CLiQ component.

F35885 TM DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause:
A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit.
The nodes do not send and receive in synchronism.
Fault cause:
26 (= 1A hex):
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.
98 (= 62 hex):
Error at the transition to cyclic operation.
Faults and alarms

List of faults and alarms

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35886 TM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit. Data were not able to be sent.
Fault cause:
32 (= 20 hex): Error in the telegram header.
96 (= 60 hex): Response received too late during runtime measurement.
97 (= 61 hex): Time taken to exchange characteristic data too long.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F35887 TM DRIVE-CLiQ (CU): Component fault
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: Fault detected on the DRIVE-CLiQ component (Terminal Module) involved. Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex): Error in the telegram header.
96 (= 60 hex): Response received too late during runtime measurement.
97 (= 61 hex): Time taken to exchange characteristic data too long.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F35895 TM DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module involved (TM) to the Control Unit. Fault cause:
11 (= 0B hex): Synchronization error during alternating cyclic data transfer.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Carry out a POWER ON.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35896 TM DRIVE-CLiQ (CU): Inconsistent component properties

Message value: Component number: %1
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: The properties of the DRIVE-CLiQ component (Terminal Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.
Remedy:
- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F35899 (N, A) TM: Unknown fault

Message value: New message: %1
Drive object: B_INF, TM150, TM31, TM54F_MA, TM54F_SL, VECTOR_G
Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A fault has occurred on the Terminal Module that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.
Remedy:
- replace the firmware on the Terminal Module by an older firmware version (r0158).
- upgrade the firmware on the Control Unit (r0018).

A35903 (F, N) TM: I2C bus error occurred

Message value: -
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: An error has occurred while accessing the internal I2C bus of the Terminal Module.
Remedy: Replace the Terminal Module.
Reaction upon F: NONE

A35904 (F, N) TM: EEPROM
Message value: -
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: An error has occurred accessing the non-volatile memory on the Terminal Module.
Remedy: Replace the Terminal Module.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

A35905 (F, N) TM: Parameter access
Message value: -
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The Control Unit attempted to write an illegal parameter value to the Terminal Module.
Remedy: - check whether the firmware version of the Terminal Module (r0158) matches the firmware version of Control Unit (r0018).
- if required, replace the Terminal Module.
Note: The firmware versions that match each other are in the readme.txt file on the memory card.

A35906 (F, N) TM: 24 V power supply missing
Message value: %1
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The 24 V power supply for the digital outputs is missing.
Alarm value (r2124, interpret hexadecimal):
01: TM17 24 V power supply for DI/DO 0 ... 7 missing.
02: TM17 24 V power supply for DI/DO 8 ... 15 missing.
04: TM15 24 V power supply for DI/DO 0 ... 7 (X520) missing.
08: TM15 24 V power supply for DI/DO 8 ... 15 (X521) missing.
10: TM15 24 V power supply for DI/DO 16 ... 23 (X522) missing.
20: TM41 24 V power supply for DI/DO 0 ... 3 missing.
Remedy: Check the terminals for the power supply voltage (L1+, L2+, L3+, M or +24 V_1 for TM41).

A35910 (F, N) TM: Module overtemperature
Message value: -
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The temperature in the module has exceeded the highest permissible limit.
Remedy: - reduce the ambient temperature.
- replace the Terminal Module.

Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

A35911 (F, N) TM: Clock synchronous operation sign-of-life missing
Message value: -
Drive object: B_INF, TM150, TM31, VECTOR_G
Reaction: NONE
Acknowledge: NONE
Cause: The maximum permissible number of errors in the master sign-of-life (clock synchronous operation) has been exceeded in cyclic operation.
When the alarm is output, the module outputs are reset up to the next synchronization.
Remedy: - check the physical bus configuration (terminating resistor, shielding, etc.).
- check the interconnection of the master sign-of-life (r4201 via p0915).
- check whether the master correctly sends the sign-of-life (e.g. set up a trace with r4201.12 ... r4201.15 and trigger signal r4301.9).
- check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short).

**F36802 (N, A) Hub: Time slice overflow**

- **Message value:** %1
- **Drive object:** B_INF, HUB, VECTOR_G
- **Reaction:** Infeed: OFF2 (NONE)
  Vector: NONE
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** A time slice overflow has occurred on the DRIVE-CLiQ Hub Module.
  Fault value (r0949, interpret decimal):
  xx: Time slice number xx
- **Remedy:**
  - Reduce the current controller frequency.
  - Carry out a POWER ON (power off/on) for all components.
  - Upgrade firmware to later version.
  - Contact the Hotline.

---

**F36804 (N, A) Hub: Checksum error**

- **Message value:** %1
- **Drive object:** B_INF, HUB, VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** IMMEDIATELY (POWER ON)
- **Cause:** A checksum error has occurred when reading out the program memory on the DRIVE-CLiQ Hub Module.
  Alarm value (r2124, interpret hexadecimal):
  Difference between the checksum at POWER ON and the actual checksum.
- **Remedy:**
  - Check whether the permissible ambient temperature for the component is maintained.
  - Replace the DRIVE-CLiQ Hub Module.

---

**A36805 (F, N) Hub: EEPROM checksum incorrect**

- **Message value:** %1
- **Drive object:** B_INF, HUB, VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The internal parameter data on the DRIVE-CLiQ Hub Module is incorrect.
  Alarm value (r2124, interpret hexadecimal):
  01: EEPROM access error.
  02: Too many blocks in the EEPROM.
- **Remedy:**
  - Check whether the permissible ambient temperature for the component is maintained.
  - Replace the DRIVE-CLiQ Hub Module.

### F36836 Hub DRIVE-CLiQ: Send error for DRIVE-CLiQ data

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the DRIVE-CLiQ Hub Module involved. Data were not able to be sent.  
Fault cause:  
65 (= 41 hex): Telegram type does not match send list.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON.

### F36837 Hub DRIVE-CLiQ: Component fault

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.  
Fault cause:  
32 (= 20 hex): Error in the telegram header.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts,...).  
- check the electrical cabinet design and cable routing for EMC compliance  
- if required, use another DRIVE-CLiQ socket (p9904).  
- replace the component involved.

### F36845 Hub DRIVE-CLiQ: Cyclic data transfer error

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the DRIVE-CLiQ Hub Module involved.  
Fault cause:  
11 (= 0B hex): Synchronization error during alternating cyclic data transfer.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON.  
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)
## F36851 Hub DRIVE-CLiQ (CU): Sign-of-life missing

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, TM150, TM31, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit. The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.  
**Fault cause:**  
10 (= 0A hex): The sign-of-life bit in the receive telegram is not set.  
**Note regarding the message value:**  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Upgrade the firmware of the component involved.

## F36860 Hub DRIVE-CLiQ (CU): Telegram error

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, TM150, TM31, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.  
**Fault cause:**  
1 (= 01 hex): Checksum error (CRC error).  
2 (= 02 hex): Telegram is shorter than specified in the length byte or in the receive list.  
3 (= 03 hex): Telegram is longer than specified in the length byte or in the receive list.  
4 (= 04 hex): The length of the receive telegram does not match the receive list.  
5 (= 05 hex): The type of the receive telegram does not match the receive list.  
6 (= 06 hex): The address of the power unit in the telegram and in the receive list do not match.  
9 (= 09 hex): The error bit in the receive telegram is set.  
16 (= 10 hex): The receive telegram is too early.  
17 (= 11 hex): CRC error and the receive telegram is too early.  
18 (= 12 hex): The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.  
19 (= 13 hex): The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.  
20 (= 14 hex): The length of the receive telegram does not match the receive list and the receive telegram is too early.  
21 (= 15 hex): The type of the receive telegram does not match the receive list and the receive telegram is too early.  
22 (= 16 hex): The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.  
25 (= 19 hex): The error bit in the receive telegram is set and the receive telegram is too early.  
**Note regarding the message value:**  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- carry out a POWER ON (power off/on).  
- check the electrical cabinet design and cable routing for EMC compliance  
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
### Faults and alarms

#### List of faults and alarms

**F36875**  
**HUB DRIVE-CLiQ (CU): Supply voltage failed**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, TM150, TM31, VECTOR_G  
**Reaction:** OFF1 (OFF2)  
**Acknowledge:** IMMEDIATELY  
**Cause:** The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.  
Fault cause:  
9 (= 09 hex): The power supply voltage for the components has failed.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- carry out a POWER ON (power off/on).  
- check the power supply voltage wiring for the DRIVE-CLiQ component (interrupted cable, contacts, ...).  
- check the dimensioning of the power supply for the DRIVE-CLiQ component.

**F36885**  
**Hub DRIVE-CLiQ (CU): Cyclic data transfer error**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, TM150, TM31, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to the Control Unit.  
The nodes do not send and receive in synchronism.  
Fault cause:  
26 (= 1A hex): Sign-of-life bit in the receive telegram not set and the receive telegram is too early.  
33 (= 21 hex): The cyclic telegram has not been received.  
34 (= 22 hex): Timeout in the telegram receive list.  
64 (= 40 hex): Timeout in the telegram send list.  
98 (= 62 hex): Error at the transition to cyclic operation.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:**  
- check the supply voltage of the component involved.  
- carry out a POWER ON.  
- replace the component involved.

**F36886**  
**Hub DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data**

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** B_INF, HUB, TM150, TM31, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.  
Data were not able to be sent.  
Fault cause:  
65 (= 41 hex): Telegram type does not match send list.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** Carry out a POWER ON.
F36887  Hub DRIVE-CLiQ (CU): Component fault
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, HUB, TM150, TM31, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  Fault detected on the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module) involved. Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex): Error in the telegram header.
96 (= 60 hex): Response received too late during runtime measurement.
97 (= 61 hex): Time taken to exchange characteristic data too long.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F36895  Hub DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value:  Component number: %1, fault cause: %2
Drive object:  B_INF, HUB, TM150, TM31, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
Fault cause:
11 (= 0B hex): Synchronization error during alternating cyclic data transfer.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F36896  Hub DRIVE-CLiQ (CU): Inconsistent component properties
Message value:  Component number: %1
Drive object:  B_INF, HUB, TM150, TM31, VECTOR_G
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  The properties of the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced.
Fault value (r0949, interpret decimal):
Component number.
Remedy:
- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).
### F36899 (N, A)  Hub: Unknown fault

**Message value:** New message: %1  
**Drive object:** B_INF, HUB, VECTOR_G  
**Reaction:** Infed: NONE (OFF1, OFF2)  
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowledge:** IMMEDIATELY (POWER ON)  
**Cause:** A fault occurred on the DRIVE-CLiQ Hub Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Fault value (r0949, interpret decimal): Fault number.  
Note: If required, the significance of this new fault can be read about in a more recent description of the Control Unit.  
**Remedy:**  
- replace the firmware on the DRIVE-CLiQ Hub Module with older firmware (r0158).  
- upgrade the firmware on the Control Unit (r0018).  

**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE

### F36950  Hub: Internal software error

**Message value:** %1  
**Drive object:** VECTOR_G  
**Reaction:** OFF2 (NONE)  
**Acknowledge:** POWER ON  
**Cause:** An internal software error has occurred. Fault value (r0949, interpret decimal): Information about the fault source. Only for internal Siemens troubleshooting.  
**Remedy:**  
- if required, upgrade the firmware in the DRIVE-CLiQ hub module to a more recent version.  
- contact the Hotline.

### A36999 (F, N)  Hub: Unknown alarm

**Message value:** New message: %1  
**Drive object:** B_INF, HUB, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** An alarm occurred on the DRIVE-CLiQ Hub Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Alarm value (r2124, interpret decimal): Alarm number.  
Note: If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.  
**Remedy:**  
- replace the firmware on the DRIVE-CLiQ Hub Module with older firmware (r0158).  
- upgrade the firmware on the Control Unit (r0018).  

**Reaction upon F:** Infed: NONE (OFF1, OFF2)  
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)  
**Acknowl. upon F:** IMMEDIATELY (POWER ON)  
**Reaction upon N:** NONE  
**Acknowl. upon N:** NONE

### F40000  Fault at DRIVE-CLiQ socket X100

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** A fault has occurred at the drive object at the DRIVE-CLiQ socket X100.
Fault value (r0949, interpret decimal):
First fault that has occurred for this drive object.

Remedy:
Evaluate the fault buffer of the specified object.

F40001  Fault at DRIVE-CLiQ socket X101
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  A fault has occurred at the drive object at the DRIVE-CLiQ socket X101.
Fault value (r0949, interpret decimal):
First fault that has occurred for this drive object.
Remedy:
Evaluate the fault buffer of the specified object.

F40002  Fault at DRIVE-CLiQ socket X102
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  A fault has occurred at the drive object at the DRIVE-CLiQ socket X102.
Fault value (r0949, interpret decimal):
First fault that has occurred for this drive object.
Remedy:
Evaluate the fault buffer of the specified object.

F40003  Fault at DRIVE-CLiQ socket X103
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  A fault has occurred at the drive object at the DRIVE-CLiQ socket X103.
Fault value (r0949, interpret decimal):
First fault that has occurred for this drive object.
Remedy:
Evaluate the fault buffer of the specified object.

F40004  Fault at DRIVE-CLiQ socket X104
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  A fault has occurred at the drive object at the DRIVE-CLiQ socket X104.
Fault value (r0949, interpret decimal):
First fault that has occurred for this drive object.
Remedy:
Evaluate the fault buffer of the specified object.

F40005  Fault at DRIVE-CLiQ socket X105
Message value:  %1
Drive object:  All objects
Reaction:  NONE
Acknowledge:  IMMEDIATELY
Cause:  A fault has occurred at the drive object at the DRIVE-CLiQ socket X105.
Fault value (r0949, interpret decimal):
First fault that has occurred for this drive object.
Remedy:
Evaluate the fault buffer of the specified object.

### A40105  Alarm at DRIVE-CLiQ socket X105

**Message value:** %1  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** An alarm has occurred at the drive object at the DRIVE-CLiQ socket X105.  
Alarm value (%2124, interpret decimal):  
First alarm that has occurred for this drive object.  
**Remedy:** Evaluate the alarm buffer of the specified object.

### F40799  CX32: Configured transfer end time exceeded

**Message value:** -  
**Drive object:** All objects  
**Reaction:** NONE  
**Acknowledge:** IMMEDIATELY  
**Cause:** The configured transfer end time when transferring the cyclic actual values was exceeded.  
**Remedy:** - carry out a POWER ON (power off/on) for all components.  
- contact the Hotline.

### F40801  CX32 DRIVE-CLiQ: Sign-of-life missing

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved.  
Fault cause:  
10 (= 0A hex):  
The sign-of-life bit in the receive telegram is not set.  
Note regarding the message value:  
The individual information is coded as follows in the message value (r0949/r2124):  
0000yyxx hex: yy = component number, xx = error cause  
**Remedy:** - carry out a POWER ON (power off/on).  
- replace the component involved.  
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

### F40820  CX32 DRIVE-CLiQ: Telegram error

**Message value:** Component number: %1, fault cause: %2  
**Drive object:** All objects  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved.  
Fault cause:  
1 (= 01 hex):  
Checksum error (CRC error).  
2 (= 02 hex):  
Telegram is shorter than specified in the length byte or in the receive list.  
3 (= 03 hex):  
Telegram is longer than specified in the length byte or in the receive list.  
4 (= 04 hex):  
The length of the receive telegram does not match the receive list.  
5 (= 05 hex):  
The type of the receive telegram does not match the receive list.  
6 (= 06 hex):  
The address of the component in the telegram and in the receive list do not match.  
7 (= 07 hex):  
A SYNC telegram is expected - but the received telegram is not a SYNC telegram.  
8 (= 08 hex):  
No SYNC telegram is expected - but the received telegram is one.
Faults and alarms

List of faults and alarms

9 (= 09 hex):
The error bit in the receive telegram is set.

16 (= 10 hex):
The receive telegram is too early.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F40825  CX32 DRIVE-CLiQ: Supply voltage failed
Message value:  Component number: %1, fault cause: %2
Drive object:   All objects
Reaction:      OFF1 (OFF2)
Acknowledge:   IMMEDIATELY
Cause:         The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.
Fault cause:
9 (= 09 hex):
The power supply voltage for the components has failed.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON (power off/on).
- check the supply voltage wiring of the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the DRIVE-CLiQ component power supply.

F40835  CX32 DRIVE-CLiQ: Cyclic data transfer error
Message value:  Component number: %1, fault cause: %2
Drive object:   All objects
Reaction:      OFF2
Acknowledge:   IMMEDIATELY
Cause:         A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved. The nodes do not send and receive in synchronism.
Fault cause:
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON (power off/on).
- replace the component involved.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F40836  CX32 DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value:  Component number: %1, fault cause: %2
Drive object:   All objects
Reaction:      OFF2
Acknowledge:   IMMEDIATELY
Cause:         A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved. Data were not able to be sent.
Fault cause:
65 (= 41 hex):
Telegram type does not match send list.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Carry out a POWER ON (power off/on).

F40837 CX32 DRIVE-CLiQ: Component fault
Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause:
Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex):
Error in the telegram header.
35 (= 23 hex):
Receive error: The telegram buffer memory contains an error.
66 (= 42 hex):
Send error: The telegram buffer memory contains an error.
67 (= 43 hex):
Send error: The telegram buffer memory contains an error.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F40845 CX32 DRIVE-CLiQ: Cyclic data transfer error
Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause:
A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved.
Fault cause:
11 (= 0B hex):
Synchronization error during alternating cyclic data transfer.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Carry out a POWER ON (power off/on).
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F40851 CX32 DRIVE-CLiQ (CU): Sign-of-life missing
Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY

Cause:
A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
Fault cause:
10 (= 0A hex):
The sign-of-life bit in the receive telegram is not set.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Faults and alarms

List of faults and alarms

Remedy: Upgrade the firmware of the component involved.

### F40860 CX32 DRIVE-CLiQ (CU): Telegram error

**Message value:** Component number: %1, fault cause: %2

**Drive object:** All objects

**Reaction:** OFF2

**Acknowledge:** IMMEDIATELY

**Cause:** A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.

Fault cause:
- 1 (= 01 hex): Checksum error (CRC error).
- 2 (= 02 hex): Telegram is shorter than specified in the length byte or in the receive list.
- 3 (= 03 hex): Telegram is longer than specified in the length byte or in the receive list.
- 4 (= 04 hex): The length of the receive telegram does not match the receive list.
- 5 (= 05 hex): The type of the receive telegram does not match the receive list.
- 6 (= 06 hex): The address of the power unit in the telegram and in the receive list do not match.
- 9 (= 09 hex): The error bit in the receive telegram is set.
- 16 (= 10 hex): The receive telegram is too early.
- 17 (= 11 hex): CRC error and the receive telegram is too early.
- 18 (= 12 hex): The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
- 19 (= 13 hex): The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
- 20 (= 14 hex): The length of the receive telegram does not match the receive list and the receive telegram is too early.
- 21 (= 15 hex): The type of the receive telegram does not match the receive list and the receive telegram is too early.
- 22 (= 16 hex): The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
- 25 (= 19 hex): The error bit in the receive telegram is set and the receive telegram is too early.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause

**Remedy:**
- carry out a POWER ON (power off/on).
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

### F40875 CX32 DRIVE-CLiQ (CU): Supply voltage failed

**Message value:** Component number: %1, fault cause: %2

**Drive object:** All objects

**Reaction:** OFF1 (OFF2)

**Acknowledge:** IMMEDIATELY

**Cause:** The DRIVE-CLiQ communication from the DRIVE-CLiQ component involved to the Control Unit signals that the supply voltage has failed.

Fault cause:
- 9 (= 09 hex): The power supply voltage for the components has failed.

Note regarding the message value:

The individual information is coded as follows in the message value (r0949/r2124):

0000yyxx hex: yy = component number, xx = error cause
Remedy:
- carry out a POWER ON (power off/on).
- check the supply voltage wiring of the DRIVE-CLiQ component (interrupted cable, contacts, ...).
- check the dimensioning of the DRIVE-CLiQ component power supply.

F40885  CX32 DRIVE-CLiQ (CU): Cyclic data transfer error
Message value:  Component number: %1, fault cause: %2
Drive object:  All objects
Reaction:  OFF2
Acknowledge: IMMEDIATELY
Cause:  A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit. The nodes do not send and receive in synchronism.
Fault cause:
26 (= 1A hex):
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
33 (= 21 hex):
The cyclic telegram has not been received.
34 (= 22 hex):
Timeout in the telegram receive list.
64 (= 40 hex):
Timeout in the telegram send list.
98 (= 62 hex):
Error at the transition to cyclic operation.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
- check the power supply voltage of the component involved.
- carry out a POWER ON (power off/on).
- replace the component involved.
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F40886  CX32 DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data
Message value:  Component number: %1, fault cause: %2
Drive object:  All objects
Reaction:  OFF2
Acknowledge: IMMEDIATELY
Cause:  A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit. Data were not able to be sent.
Fault cause:
65 (= 41 hex):
Telegram type does not match send list.
Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause
Remedy:
carry out a POWER ON (power off/on).

F40887  CX32 DRIVE-CLiQ (CU): Component fault
Message value:  Component number: %1, fault cause: %2
Drive object:  All objects
Reaction:  OFF2
Acknowledge: IMMEDIATELY
Cause:  Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
Fault cause:
32 (= 20 hex):
Error in the telegram header.
35 (= 23 hex):
Receive error: The telegram buffer memory contains an error.
66 (= 42 hex):
Send error: The telegram buffer memory contains an error.
67 (= 43 hex):
Send error: The telegram buffer memory contains an error.
Faults and alarms

List of faults and alarms

96 (= 60 hex):
Response received too late during runtime measurement.
97 (= 61 hex):
Time taken to exchange characteristic data too long.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F40895
CX32 DRIVE-CLiQ (CU): Cyclic data transfer error

Message value:
Component number: %1, fault cause: %2

Drive object:
All objects

Reaction:
OFF2

Acknowledge:
IMMEDIATELY

Cause:
A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
Fault cause:
11 (= 0B hex):
Synchronization error during alternating cyclic data transfer.

Note regarding the message value:
The individual information is coded as follows in the message value (r0949/r2124):
0000yyxx hex: yy = component number, xx = error cause

Remedy:
Carry out a POWER ON (power off/on).
See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F49150
Cooling unit: Fault occurred

Message value:
- 

Drive object:
B_INF, VECTOR_G

Reaction:
OFF2

Acknowledge:
IMMEDIATELY

Cause:
The cooling unit signals a general fault.

Remedy:
- check the wiring between the cooling unit and the input terminal (Terminal Module).
- check the external control device for the cooling unit.
See also: p0266 (Cooling unit, feedback signals, signal source)

F49151
Cooling unit: Conductivity has exceeded the fault threshold

Message value:
- 

Drive object:
B_INF, VECTOR_G

Reaction:
OFF2

Acknowledge:
IMMEDIATELY

Cause:
The conductivity of the cooling liquid has exceeded the selected fault threshold (p0269[2])
See also: p0261 (Cooling unit, starting time 2), p0262 (Cooling unit, fault conductivity delay time), p0266 (Cooling unit, feedback signals, signal source)

Remedy:
Check the device to de-ionize the cooling liquid.

F49152
Cooling unit: ON command feedback signal missing

Message value:
- 

Drive object:
B_INF, VECTOR_G

Reaction:
OFF2

Acknowledge:
IMMEDIATELY

Cause:
The feedback signal of the ON command of the cooling unit is missing.
- after the ON command, the feedback signal has not been received within the selected starting time (p0260).
- the feedback signal has failed in operation.
See also: p0260 (Cooling unit, starting time 1), r0267 (Cooling unit status word)

Remedy:
- check the wiring between the cooling unit and the input terminal (Terminal Module).
- check the external control device for the cooling unit.
### F49153 Cooling unit: Liquid flow too low

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The drive converter cooling unit signals that the cooling liquid flow is too low.  
- after the ON command, the feedback signal has not been received within the selected starting time (p0260).  
- in operation, the feedback signal has failed for longer than the permitted failure time (p0263).  
See also: p0260 (Cooling unit, starting time 1), p0263 (Cooling unit fault liquid flow, delay time), r0267 (Cooling unit status word)  
**Remedy:**  
- check the wiring between the cooling unit and the input terminal (Terminal Module).  
- check the external control device for the cooling unit.

### F49154 (A) Cooling unit: Liquid leak is present

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The liquid leakage monitoring function has responded.  
**Caution:**  
If this fault is re-parameterized as an alarm then using other monitoring functions it must be ensured that when cooling water is lost, the drive is powered down!  
See also: r0267 (Cooling unit status word)  
**Remedy:**  
- check the cooling system for leaks in the cooling circuit.  
- check the wiring of the input terminal (Terminal Module) used to monitor leaking fluid.  
**Reaction upon A:** NONE  
**Acknowl. upon A:** NONE

### F49155 Cooling unit: Power Stack Adapter, firmware version too old

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** POWER ON  
**Cause:** The firmware version in the Power Stack Adapter (PSA) is too old and does not support the liquid cooling.  
**Remedy:** Upgrade the firmware. Check EEPROM data.

### F49156 Cooling unit: Cooling liquid temperature has exceeded the fault threshold

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** OFF2  
**Acknowledge:** IMMEDIATELY  
**Cause:** The cooling liquid intake temperature has exceeded the permanently set fault threshold.  
**Remedy:** Check the cooling system and the ambient conditions.

### A49170 Cooling unit: Alarm has occurred

**Message value:** -  
**Drive object:** B_INF, VECTOR_G  
**Reaction:** NONE  
**Acknowledge:** NONE  
**Cause:** The cooling unit signals a general alarm.  
**Remedy:**  
- check the wiring between the cooling unit and the input terminal (Terminal Module).  
- check the external control device for the cooling unit.
**Faults and alarms**

**List of faults and alarms**

</tbody>
</table>
### A49201 (F) Excitation group signal alarm

- **Message value:** -
- **Drive object:** VECTOR_G
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:** The "excitation group signal alarm" signal is present.
- **Remedy:** Check the excitation equipment.
- **Reaction upon F:** NONE
- **Acknowl. upon F:** IMMEDIATELY

### A50001 (F) COMM BOARD: Alarm 1

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  - CBE20:
    - A PROFINET controller attempts to establish a connection using an incorrect configuring telegram. The "Shared Device" function has been activated (p8829 = 2).
    - Alarm value (r2124, interpret decimal):
      - 10: A CPU sends a PROFIsafe telegram.
      - 11: F CPU sends a PZD telegram.
      - 12: F CPU without an A CPU.
      - 13: F CPU with more PROFIsafe subslots than activated with p9601.3.
      - 14: F CPU with fewer PROFIsafe subslots than activated with p9601.3.
      - 15: PROFIsafe telegram of the F-CPU does not match the setting in p60022.
  - See also: p8829 (CBE20 remote controller number), p9601 (SI enable, functions integrated in the drive (Control Unit))
- **Remedy:**
  - CBE20:
    - Check the configuration of the PROFINET controllers as well as the p8829 and p9601.3 setting.
- **Reaction upon F:**
  - Infeed: NONE (OFF1, OFF2)
  - Vector: NONE (OFF1, OFF2, OFF3)
- **Acknowl. upon F:** IMMEDIATELY

### A50002 (F) COMM BOARD: Alarm 2

- **Message value:** %1
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  - In the case of CBE20 SINAMICS Link:
    - A specific telegram word (send) is being used twice.
  - Alarm value (r2124, interpret decimal):
    - Telegram word used twice
  - See also: p8871 (SINAMICS Link send telegram word PZD)
- **Remedy:**
  - In the case of CBE20 SINAMICS Link:
    - Correct the parameter assignment.
  - See also: p8871 (SINAMICS Link send telegram word PZD)
- **Reaction upon F:**
  - Infeed: NONE (OFF1, OFF2)
  - Vector: NONE (OFF1, OFF2, OFF3)
- **Acknowl. upon F:** IMMEDIATELY

### A50003 (F) COMM BOARD: Alarm 3

- **Message value:** Info. 1: %1, info. 2: %2
- **Drive object:** All objects
- **Reaction:** NONE
- **Acknowledge:** NONE
- **Cause:**
  - In the case of CBE20 SINAMICS Link:
    - A specific telegram word (receive) is being used twice.
**Faults and alarms**

**List of faults and alarms**

Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex: yyyy = info. 1, xxxx = info. 2
Info. 1 (decimal) = Address of sender
Info. 2 (decimal) = Receive telegram word
See also: p8870 (SINAMICS Link receive telegram word PZD), p8872 (SINAMICS Link address receive PZD)

**Remedy:**
In the case of CBE20 SINAMICS Link:
correct the parameter assignment.

**Reaction upon F:**
Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

**Acknowl. upon F:** IMMEDIATELY

<tr>
<td><strong>Acknowledge:</strong></td>
<td>NONE</td>
</tr>
</tbody>
</table>

**Cause:**
In the case of CBE20 SINAMICS Link:
Telegram word (receive) and address of sender inconsistent. Both values have to be either equal to zero or not equal to zero.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex: yyyy = info. 1, xxxx = info. 2
Info. 1 (decimal) = Drive object number from p8870, p8872
Info. 2 (decimal) = Index from p8870, p8872
See also: p8870 (SINAMICS Link receive telegram word PZD), p8872 (SINAMICS Link address receive PZD)

**Remedy:**
In the case of CBE20 SINAMICS Link:
correct the parameter assignment.

**Reaction upon F:**
Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

**Acknowl. upon F:** IMMEDIATELY

<tr>
<td><strong>Reaction:</strong></td>
<td>NONE</td>
</tr>
<tr>
<td><strong>Acknowledge:</strong></td>
<td>NONE</td>
</tr>
</tbody>
</table>

**Cause:**
In the case of CBE20 SINAMICS Link:
The parameter assignment indicates that the sender and the receiver are one and the same. This is not permitted.
Alarm value (r2124, interpret hexadecimal):
yyyyxxxx hex: yyyy = info. 1, xxxx = info. 2
Info. 1 (decimal) = Drive object number from p8872
Info. 2 (decimal) = Index from p8872
See also: p8836 (SINAMICS Link address), p8872 (SINAMICS Link address receive PZD)
List of faults and alarms

Remedy: In the case of CBE20 SINAMICS Link:
Correct the parameter assignment. All p8872[index] must be set to a value not equal to p8836.

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

A50010 (F) COMM BOARD: Alarm 10

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE

Cause: PROFINET Name of Station is invalid.
Remedy: CBE20:
Correct the name of the station (p8940) and activate (p8945 = 2).
See also: p8940 (CBE20 Name of Station)

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

A50020 (F) COMM BOARD: Alarm 20

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE

Cause: CBE20: The PROFINET "Shared Device" function has been activated (p8829 = 2). However, only the connection to a PROFINET controller is present.
See also: p8829 (CBE20 remote controller number)
Remedy: CBE20: Check the configuration of the PROFINET controllers, as well as the p8829 setting.

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

The following list contains some of the safety-related documentation available.
Index

Numbers
1020  Explanation of the symbols (Part 1), 2-981
1021  Explanation of the symbols (Part 2), 2-982
1022  Explanation of the symbols (Part 3), 2-983
1030  Handling BICO technology, 2-984
1510  CU320-2 input/output terminals, 2-986
1520  PROFldrive, 2-987
1530  Internal control/status words, data sets, 2-988
1550  Setpoint channel, 2-989
1680  Vector control, encoder evaluations (position, speed, temperature), 2-990
1690  Vector control, V/f control, 2-991
1700  Vector control, speed control and generation of the torque limits, 2-992
1710  Vector control, current control, 2-993
1750  Monitoring functions, faults, alarms, 2-994
1773  Basic Infeed, 2-995
1790  Terminal Board 30 (TB30), 2-996
1840  Terminal Module 31 (TM31), 2-997
1850  Terminal Module 54F (TM54F), 2-998
2120  CU320-2 digital inputs, electrically isolated (DI 0 ... DI 3, DI 16, DI 17), 2-1000
2121  CU320-2 digital inputs, electrically isolated (DI 4 ... DI 7, DI 20, DI 21), 2-1001
2130  CU320-2 digital inputs/outputs, bidirectional (DI/DO 8 ... DI/DO 9), 2-1002
2131  CU320-2 digital inputs/outputs, bidirectional (DI/DO 10 ... DI/DO 11), 2-1003
2132  CU320-2 digital inputs/outputs, bidirectional (DI/DO 12 ... DI/DO 13), 2-1004
2133  CU320-2 digital inputs/outputs, bidirectional (DI/DO 14 ... DI/DO 15), 2-1005
2211  CU_LINK data transfer, 2-1007
2410  PROFlBUS (PB) / PROFINET (PN), addresses and diagnostics, 2-1010
2415  Standard telegrams and process data 1, 2-1011
2416  Standard telegrams and process data 2, 2-1012
2419  Manufacturer-specific telegrams and process data 1, 2-1013
2420  Manufacturer-specific telegrams and process data 2, 2-1014
2421  Manufacturer-specific telegrams and process data 3, 2-1015
2422  Manufacturer-specific telegrams and process data 4, 2-1016
2423 Manufacturer-specific/free telegrams and process data, 2-1017
2425 STW1_BM control word metal industry interconnection, 2-1018
2426 STW2_BM control word metal industry interconnection, 2-1019
2427 E_STW1_BM control word infeed metal industry interconnection, 2-1020
2428 ZSW1_BM status word metal industry interconnection, 2-1021
2429 ZSW2_BM status word metal industry interconnection, 2-1022
2430 E_ZSW1_BM status word infeed metal industry interconnection, 2-1023
2439 PZD receive signals, interconnection, profile-specific, 2-1024
2440 PZD receive signals, interconnection, manufacturer-specific, 2-1025
2441 STW1 control word interconnection (p2038 = 2), 2-1026
2442 STW1 control word interconnection (p2038 = 0), 2-1027
2444 STW2 control word interconnection (p2038 = 0), 2-1028
2447 E_STW1 control word infeed interconnection, 2-1029
2449 PZD send signals, interconnection, profile-specific, 2-1030
2450 PZD send signals, interconnection, manufacturer-specific, 2-1031
2451 ZSW1 status word interconnection (p2038 = 2), 2-1032
2452 ZSW1 status word interconnection (p2038 = 0), 2-1033
2454 ZSW2 status word interconnection (p2038 = 0), 2-1034
2457 E_ZSW1 status word infeed interconnection, 2-1035
2468 IF1 receive telegram, free interconnection via BICO (p0922 = 999), 2-1036
2470 IF1 send telegram, free interconnection via BICO (p0922 = 999), 2-1037
2472 IF1 status words, free interconnection, 2-1038
2481 IF1 receive telegram, free interconnection via BICO (p0922 = 999), 2-1039
2483 IF1 send telegram, free interconnection via BICO (p0922 = 999), 2-1040
2485 IF2 receive telegram, free interconnection via BICO, 2-1041
2487 IF2 send telegram, free interconnection, 2-1042
2489 IF2 status words, free interconnection, 2-1043
2491 IF2 receive telegram, free interconnection, 2-1044
2493 IF2 send telegram, free interconnection, 2-1045
2495 CU_STW1 control word 1, Control Unit interconnection, 2-1046
2496 CU_ZSW1 status word 1, Control Unit interconnection, 2-1047
2497 A_DIGITAL interconnection, 2-1048
2498 E_DIGITAL interconnection, 2-1049
2499 A_DIGITAL_1 interconnection, 2-1050
2500 E_DIGITAL_1 interconnection, 2-1051

  Calculated, 1-19
  Can be changed, 1-18
  Data type, 1-20
  Description, 1-26
  Dynamic index, 1-21
  Expert list, 1-26
  Full name, 1-14
  Function, 1-26
  Index, 1-13, 1-26
  Linked parameter, 1-13
  List of all parameters, 1-31
  List of parameters for
    command data sets, 1-951
  List of parameters for
    drive data sets, 1-953
  List of parameters for
    encoder data sets, 1-961
  List of parameters for
    motor data sets, 1-962
  List of parameters for
    power unit data sets, 1-965
  Name, 1-14
  Not for motor type, 1-25
  Number, 1-13
  Number range, 1-28
  P group, 1-22
  Safety notices, 1-27
  Scaling, 1-25
  Short name, 1-14
  Unit, 1-22
  Unit group, 1-22
  Unit selection, 1-22
  Values, 1-26
Password for access level 4, 1-19
PDS, Power unit Data Set, 1-21, 2-1157, 2-1162
PID controller (p0108.16 = 1), 2-1137
Power unit data sets, 2-1157
Process data, 2-1008
Product information, Preface-5
PROFIdrive, 2-1008
pxxxx, 1-13

R
Ramp-function generator, 2-1096
Reaction to faults, 3-1203
Relay outputs, 2-1182
Resetting faults, 3-1208
rxxxx, 1-13
Index

S
Safety Integrated
  Basic Functions, 2-1073
  Extended functions, 2-1080
Safety notices (parameter), 1-27
Scaling, 1-25
Search tools for manual, Preface-7
Sequence control, 2-1065
Servo control
  Encoder evaluation, 2-1105
Setpoint channel, 2-1096
Signal path in function diagrams, 2-981
Signals, 2-1143
Skip frequency bands, 2-1096
Speed control
  Vector, 2-1108
  Speed signals, 2-1143
Status words
  Internal, 2-1052
  Standard telegrams, 2-1008
STOP1, 3-1204
STOP2, 3-1204
Support, Preface-7
Support Request, Preface-7
Synchronization, 2-1136

T
T - Ready for operation state, 1-18
Target group, Preface-6
Technical Support, Preface-7
Technology controller (p0108.16 = 1), 2-1137
Technology functions, 2-1131
Telegrams, 2-1008
Temperature evaluation
  Terminal Module 150 (TM150), 2-1192
  Terminal Module 31 (TM31), 2-1182
Terminal Board 30 (TB30), 2-1170
Terminal Module 150 (TM150), 2-1192
Terminal Module 31 (TM31), 2-1182
Terminals
  Control Unit 320-2 (CU320-2), 2-999
  Terminal Board 30 (TB30), 2-1170
  Terminal Module 31 (TM31), 2-1182
Thermal monitoring, 2-1143
Torque signals, 2-1143
Triggering when messages are issued (r2129), 2-1151

U
U - Operation state, 1-18
Unit (parameter), 1-22
Usage phases, Preface-6

V
V/f control
  Vector, 2-1115
Values (parameter), 1-26
Vector control
  Current setpoint filter, 2-1122
  Droop, 2-1109
  Encoder evaluation, 2-1105
  Field weakening characteristic, Id
    setpoint, 2-1125
  Flux control, 2-1119
  Iq and Id controller, 2-1123
  Kp_n-/Tn_n adaptation, 2-1112
  Resonance damping and slip
    compensation, 2-1116
  Speed control configuration, 2-1118
  Speed controller with/without encoder, 2-1111
  Table of contents, 2-1108
  Torque setpoint, 2-1113
  V/f characteristic, 2-1115
  Vdc_max controller and Vdc_min
    controller, 2-1114, 2-1117
Version
  List of all parameters, 1-31
  List of faults and alarms, 3-1212
  List of parameters for
    command data sets, 1-951
  List of parameters for
    drive data sets, 1-953
  List of parameters for
    encoder data sets, 1-961
  List of parameters for
    motor data sets, 1-962
  List of parameters for
    power unit data sets, 1-965
Voltage Sensing Module (VSM)
  Analog inputs, 2-1196
  Sensor monitoring KTY/PTC, 2-1196
  Temperature evaluation, 2-1196

W
Warning
  General information, 3-1202
