SINUMERIK 840D sl | Differences regarding SIMATIC PLC

This entry is from the Siemens Industry Online Support. The general terms of use (http://www.siemens.com/terms_of_use) apply.

Caution

The functions and solutions described in this article confine themselves to the realization of the automation task predominantly. Please take into account furthermore that corresponding protective measures have to be taken up in the context of Industrial Security when connecting your equipment to other parts of the plant, the enterprise network or the Internet. Further information can be found under the Content-ID 50203404.

Question

A SIMATIC PLC is integrated in the SINUMERIK 840D sl, the versions can be seen in the following overview:

- NCU7x0.2 – S7 CPU 317-2DP (FW 2.1)
- NCU7x0.2 PN – S7 CPU 319-3PN/DP (FW 2.7)
- NCU7x0.3 PN – S7 CPU 317-3PN/DP (FW 3.2 and FW 3.2+) – S7 CPU 319-3PN/DP (FW 3.2 and FW 3.2+)

The PLC integrated in SINUMERIK behaves in an almost identical fashion to the SIMATIC PLC. The properties of the communication services together with an overview of the differences between the two systems are shown in the following.

Which differences in the communication services exist between the SIMATIC PLC and the SINUMERIK PLC?

Answer

To fully answer this question, follow the handling instructions and notes listed in this document.

1 Direct synchronous access NCK ↔ PLC

The particular bus system can be directly and synchronously accessed from the NCK (Numerical Control Kernel). This allows synchronous I/O accesses (FastIO) to be directly processed in the NC program.

7 CP integration of NCU 7x0

To connect the Ethernet interface within the NCU to the S7 PLC, the integrated CP 840D sl can be used. The special SINUMERIK FC AG_SEND / AG_RECV (FC1005 / FC1006) handles the data exchange from the Ethernet CP transmitted via a configured connection data.

The CP 840D sl supports the following functions and data amount:

Function	Connection	Engineering	PLC-End point	Size	Diagnosis
AG-Send	TCP/IP	NETPRO	FC 1005	8 kByte	NCM-Tool
"	UDP	"	"	240Byte	"
"	ISO on TCP	"	"	240Byte	"
AG-Receive	TCP/IP	NETPRO	FC 1006	8 kByte	NCM-Tool
"	UDP	"	"	240Byte	"
"	ISO on TCP	"	"	240Byte	"

Hint

For the transmission of UDP data 240 bytes are available. If a larger quantity structure is needed the connection can be used directly via the S7-PLC interface X150 (T-Send/Recv).
