Use of application examples

Application examples illustrate the solution of automation tasks through an interaction of several components in the form of text, graphics and/or software modules. The application examples are a free service by Siemens AG and/or a subsidiary of Siemens AG ("Siemens"). They are non-binding and make no claim to completeness or functionality regarding configuration and equipment. The application examples merely offer help with typical tasks; they do not constitute customer-specific solutions. You yourself are responsible for the proper and safe operation of the products in accordance with applicable regulations and must also check the function of the respective application example and customize it for your system.

Siemens grants you the non-exclusive, non-sublicensable and non-transferable right to have the application examples used by technically trained personnel. Any change to the application examples is your responsibility. Sharing the application examples with third parties or copying the application examples or excerpts thereof is permitted only in combination with your own products. The application examples are not required to undergo the customary tests and quality inspections of a chargeable product; they may have functional and performance defects as well as errors. It is your responsibility to use them in such a manner that any malfunctions that may occur do not result in property damage or injury to persons.

Disclaimer of liability

Siemens shall not assume any liability, for any legal reason whatsoever, including, without limitation, liability for the usability, availability, completeness and freedom from defects of the application examples as well as for related information, configuration and performance data and any damage caused thereby. This shall not apply in cases of mandatory liability, for example under the German Product Liability Act, or in cases of intent, gross negligence, or culpable loss of life, bodily injury or damage to health, non-compliance with a guarantee, fraudulent non-disclosure of a defect, or culpable breach of material contractual obligations. Claims for damages arising from a breach of material contractual obligations shall however be limited to the foreseeable damage typical of the type of agreement, unless liability arises from intent or gross negligence or is based on loss of life, bodily injury or damage to health. The foregoing provisions do not imply any change in the burden of proof to your detriment. You shall indemnify Siemens against existing or future claims of third parties in this connection except where Siemens is mandatorily liable.

By using the application examples you acknowledge that Siemens cannot be held liable for any damage beyond the liability provisions described.

Other information

Siemens reserves the right to make changes to the application examples at any time without notice. In case of discrepancies between the suggestions in the application examples and other Siemens publications such as catalogs, the content of the other documentation shall have precedence.

The Siemens terms of use (<https://support.industry.siemens.com>) shall also apply.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place. For additional information on industrial security measures that may be implemented, please visit <https://www.siemens.com/industrialsecurity>.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed at: <http://www.siemens.com/industrialsecurity>.

1 Introduction

1.1 Overview

In today's world, simulation is the state of the art for verifying, testing, commissioning, and maintaining automation software. Therefore, the simulation software must offer maximum flexibility in terms of connection to different PLCs.

There are two approaches to connecting PLCs to simulation environments:

- Hardware-in-the-loop (HiL): Here, this is simulated together with a real PLC
- Software-in-the-loop (SiL): Is a purely software-based solution approach. Here, simulation is performed in conjunction with an emulated PLC.

The simulation software SIMIT SP offers a variety of built-in possibilities for the connection of SIEMENS PLCs. Therefore, with the HiL approach, you can integrate Profinet- and Profibus-based control systems into the simulation by using the Simit UNIT. SIMIT SP SIMIT also offers you the option of integrating emulated PLCs natively. An overview of all couplings that SIMIT SP makes available to you is shown in the following table.

Table 1-1

Category	Coupling	Description
Emulated controllers	S7-PLCSIM	S7-PLCSIM for S7-Classic S7-300 or S7-400 family
	S7-PLCSIM Advanced	TIA Portal, S7-1500 family
	Virtual Controller	SIMATIC Controller type S7-300 or S7-400 (including R and H functionalities)
Hardware controller	SIMIT Unit	Hardware-in-the-loop setups based on PROFINET or PROFIBUS
Default	OPC UA	Client and server
	OPC DA	Client and server
	SHM	Shared memory, use of common system memory for data exchange
Co-simulation	Mechatronic Concept Designer	Direct coupling to NX-MCD, including synchronization mechanism
	gProms	Coupling for gPROMS software based on OPC UA

This application example shows you how you can also couple a SIMATIC S7-1200 Controller with the SIMIT SP simulation software using the SiL approach.

1.2 Functionality

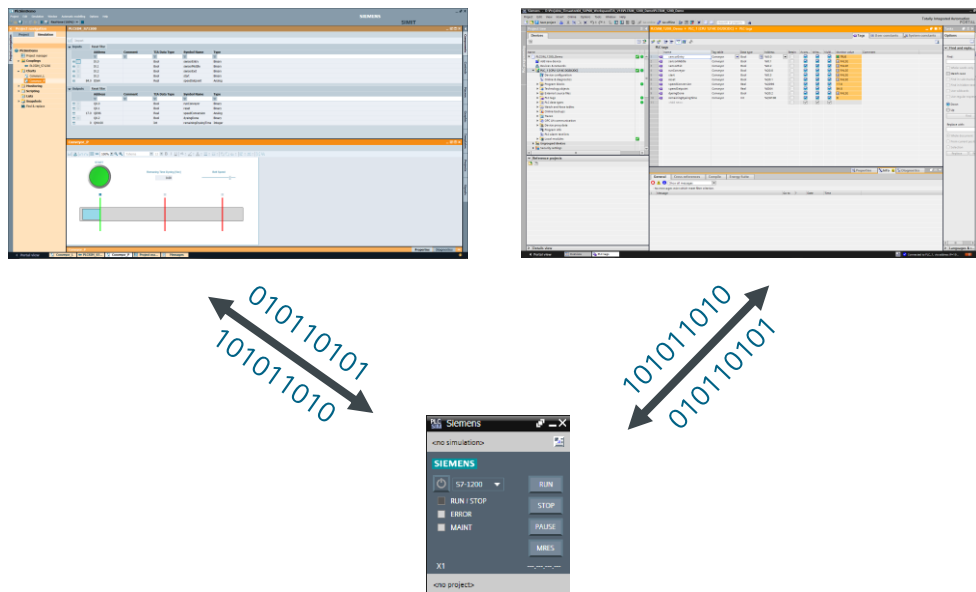

SIMIT SP offers a wide range of coupling options for exchanging data with controllers or other applications. If these existing couplings are not sufficient, you can program additional couplings using a programming interface described by SIMIT SP and integrate them into SIMIT SP.

The coupling between SIMIT SP and an emulated SIMATIC S7-1200 controller is based on this mechanism: external coupling.

The emulation of the SIMATIC S7-1200 is handled by the S7-PLCSIM software integrated in the TIA Portal.

This application example helps you to integrate the developed external coupling into SIMIT SP and to use it in your simulation environment.

Figure 1-1

1.3 Components Used

The following hardware and software components were used to create this application example:

Table 1-2

Component	Quantity	Article number	Note
TIA Portal V16.0	1	6ES7822-1AA06-0YA5	-
S7-PLCSIM V16.0	1	-	-
SIMIT SP V10.2	1	6DL8913-0AK00-0AB5	-
S7-PLCSIM coupling V1.0	1	-	-

This application example consists of the following components:

Table 1-3

Documentation	109794472_SIMIT_PLCSIM_S7_1200_DOC_v10_en.pdf	This document
TIA Portal V16 Project	109794472_SIMIT_PLCSIM_S7_1200_PROJ_v10.zip	TIA Portal sample project
SIMIT SP V10.2 Project	109794472_SIMIT_PLCSIM_S7_1200_DEMO_v10.zip	SIMIT SP sample project
S7-PLCSIM Coupling	109794472_SIMIT_PLCSIM_S7_1200_CODE_v10.zip	Folder with external coupling

2 Engineering

2.1 Installation

It must be installed in order to access to the coupling between S7-PLCSIM and SIMIT SP within SIMIT SP. To do this, you need to perform the following steps. SIMIT SP has not yet been started.

1. Navigate to the installation directory of SIMIT. This is normally "C:\Program Files (x86)\Siemens\Automation\SIMIT\SIMIT SF".
2. Within this directory, create the "Couplings" folder.

Note

If you are already using other external couplings in SIMIT SP, this step is obsolete.

3. Copy the folder "S7-PLCSIM_S71200" into the "Couplings" folder. The folder "S7-PLCSIM_S71200" is part of the application example.

Figure 2-1

2.2 Operation

2.2.1 TIA Portal – Exporting a Tag Table

Before you start configuring the coupling, it is necessary to export the tag table from your TIA Portal project. To do this, open the TIA Portal project "S7-PLCSIMDemo.zap16" enclosed with the application example.

Display and export all tags contained in the project.

Note

If no suitable hardware has been configured for the address range of the tag, it is not possible to control the signal from the simulation

Figure 2-2

	Name	Tag table	Data type	Address	Retain	Acces...	Writa...	...
1	sensorEntry	Conveyor	Bool	%I0.0	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
2	sensorMiddle	Conveyor	Bool	%I0.1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
3	sensorExit	Conveyor	Bool	%I0.2	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
4	runConveyor	Conveyor	Bool	%Q0.0	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
5	start	Conveyor	Bool	%I0.3	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
6	reset	Conveyor	Bool	%Q0.1	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

12	test5	Conveyor	Bool	%Q0.5	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
13	test6	Conveyor	Bool	%Q0.6	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
14	test7	Conveyor	Bool	%Q0.7	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
15	test3	Conveyor	Bool	%Q0.3	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
16	testI4	Conveyor	Bool	%I0.4	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
17	testI5	Conveyor	Bool	%I0.5	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	
18	testI6	Conveyor	Bool	%I0.6	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	

2.2.2 SIMIT – Coupling Configuration

The external coupling is available after the installation in SIMIT.
To configure the coupling, start SIMTI SP.

1. Open the SIMIT archive "S7-PLCSIMDemo.simarc" contained in the application example.

Figure 2-3

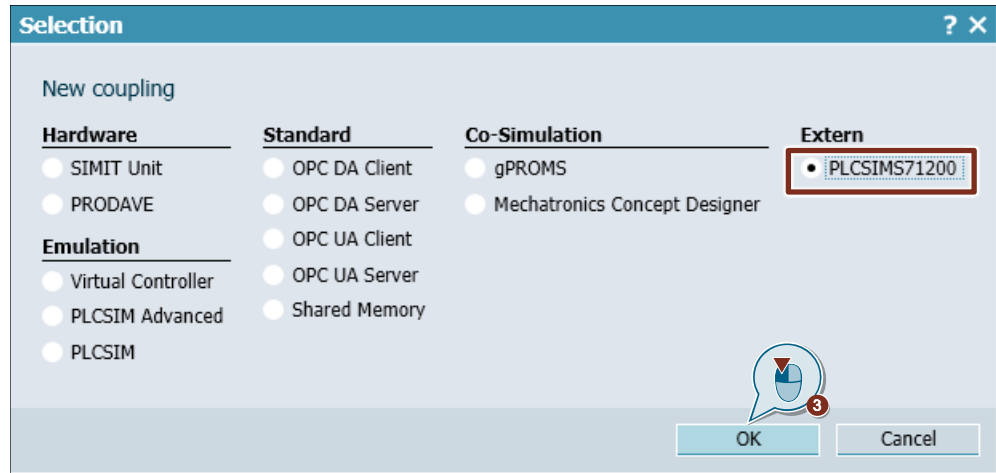

2. Create a new coupling in the opened simulation project.

Figure 2-4

3. Create the coupling "PLCSIMS71200" by selecting the coupling in the selection window and confirm the selection with OK.

Figure 2-5

Note

The displayed name of the coupling is derived from the name of the folder located in the "Couplings" configuration directory.

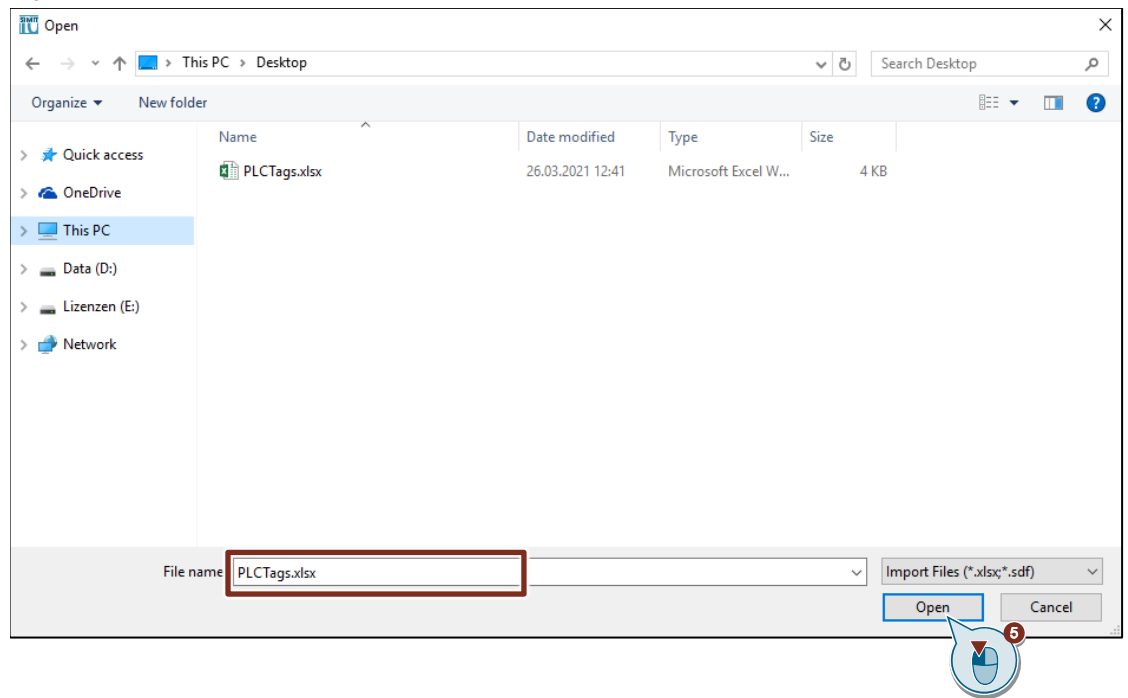

4. After you have created the coupling, it opens automatically. Click the "Import" button in the opened coupling.

Figure 2-6

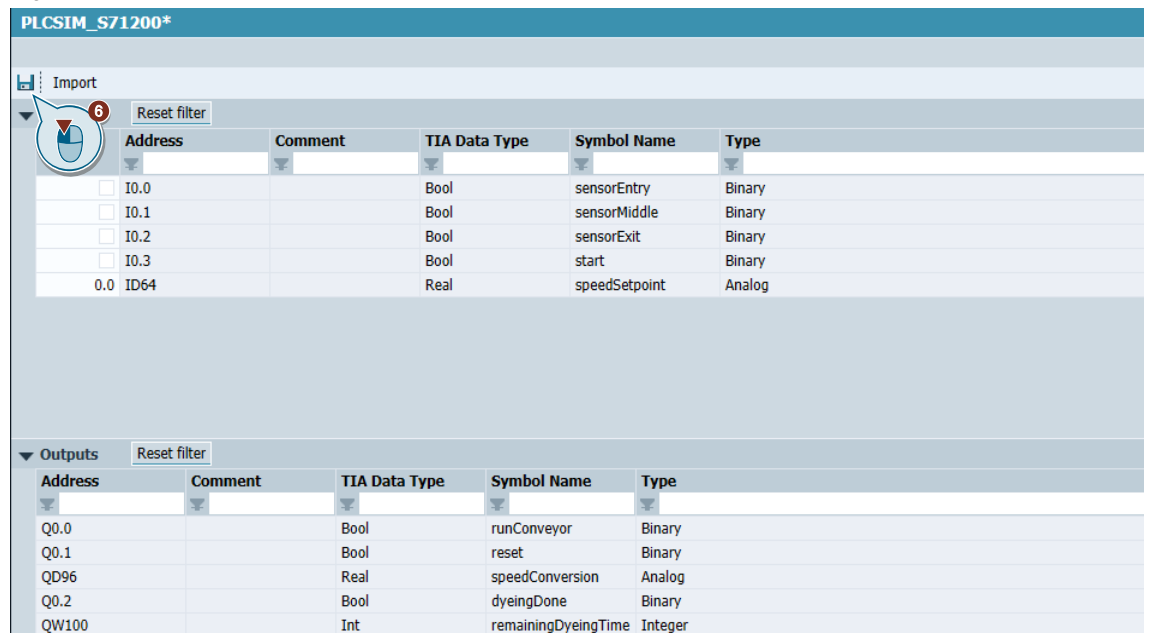

5. Select the Excel file exported in [2.2.1](#) and load the PLC tags to SIMIT.

Figure 2-7

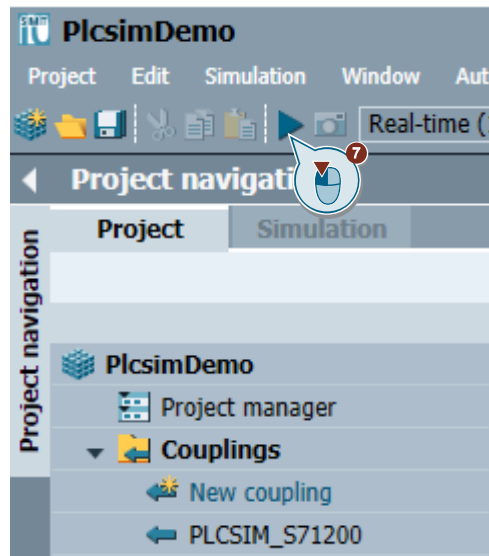

6. Save the coupling.

Figure 2-8

7. Start the simulation

Figure 2-9

Note SIMIT SP starts the S7-PLCSIM instance for you in the background. No S7-PLCSIM instance must be started in advance.

Note A maximum of two S7-PLCSIM instances can be started.

2.2.3 TIA Portal – Downloading the Automation Program

After the initial configuration, or after each change in your automation project, you must download the project.

Proceed here as usual.

Note After a S7-PLCSIM instance has been started, the PG/PC interface S7-PLCSIM is statically defined.

Note The configuration of the S7-PLCSIM instance is stored persistently.

2.2.4 SIMIT – Controlling the Simulation

Now open the simulation diagram "Conveyor_P" in your SIMIT project "S7-PLCSIMDemo". On this, you will find an operating screen for a conveyor belt.

Start the conveyor belt to test the external coupling.

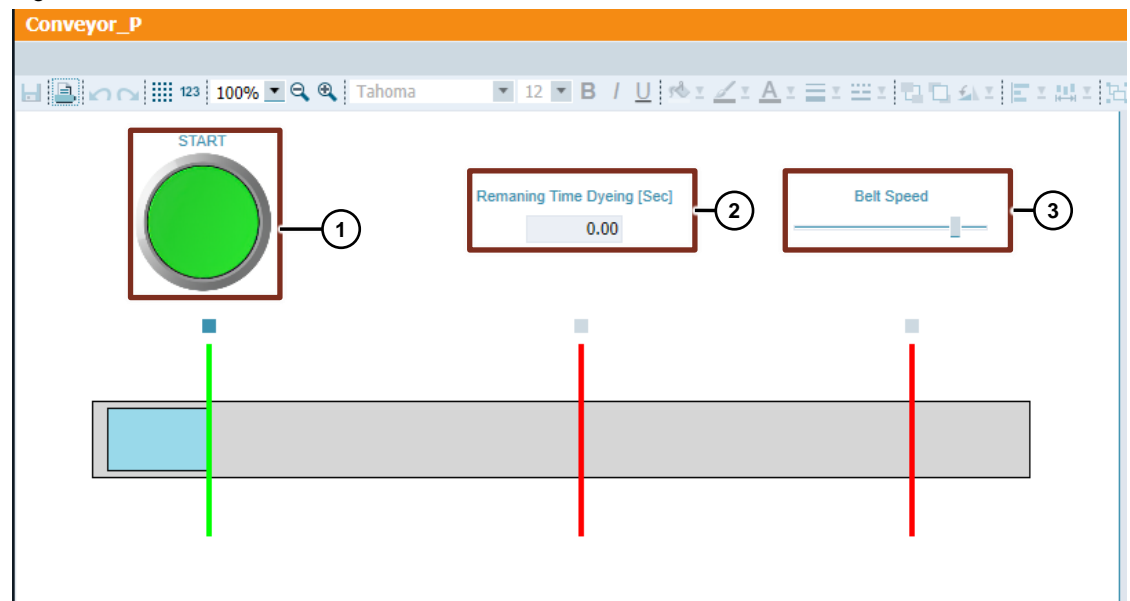

The conveyor belt works as follows:

An object is transported from the left side (the entrance of the conveyor belt) to the right side (the exit of the conveyor belt). There are three light boxes on the conveyor belt: at the entrance, in the middle, and at the end of the conveyor belt. If the light barrier at the input is triggered, the start button (1) can be pressed. The conveyor belt is started and runs until the middle light barrier is triggered. The object will now be dyed. The remaining time (2) until the dyeing process is completed is displayed in SIMIT. As soon as the dyeing process is completed, the conveyor belt starts again and the object moves towards the exit. The conveyor belt runs until the object has left the conveyor belt.

After the object has left the conveyor belt, the simulation is reset.

Furthermore, it is possible to change the speed of the conveyor belt (3). A slider is available in the simulation for this purpose.

Figure 2-10

Note You have already loaded the automation project for the conveyor belt shown in Section [2.2.3](#) to the emulated SIMATIC S7-1200.

Note Furthermore, you can observe all tags and the automation logic in the TIA Portal as usual.

3 Restrictions for S7-PLCSIM

A maximum of two S7-PLCSIM instances can be started on one PC.

Note

Here, not only the instances started by SIMIT SP are counted, but all instances running on the PC.

S7-PLCSIM for the S7-1200 does not simulate the following technology modules and technology objects.

- Count
- PID
- Motion control

More details about the limitations of S7-PLCSIM can be found in the [S7-PLCSIM Manual](#).

4 Appendix

4.1 Service and support

Industry Online Support

Do you have any questions or need assistance?

Siemens Industry Online Support offers round the clock access to our entire service and support know-how and portfolio.

The Industry Online Support is the central address for information about our products, solutions and services.

Product information, manuals, downloads, FAQs, application examples and videos – all information is accessible with just a few mouse clicks:

support.industry.siemens.com

Technical Support

The Technical Support of Siemens Industry provides you fast and competent support regarding all technical queries with numerous tailor-made offers – ranging from basic support to individual support contracts.

Please send queries to Technical Support via Web form:

support.industry.siemens.com/cs/my/src

SITRAIN – Digital Industry Academy

We support you with our globally available training courses for industry with practical experience, innovative learning methods and a concept that's tailored to the customer's specific needs.

For more information on our offered trainings and courses, as well as their locations and dates, refer to our web page:

siemens.com/sitrain

Service offer

Our range of services includes the following:

- Plant data services
- Spare parts services
- Repair services
- On-site and maintenance services
- Retrofitting and modernization services
- Service programs and contracts

You can find detailed information on our range of services in the service catalog web page:

support.industry.siemens.com/cs/sc

Industry Online Support app

You will receive optimum support wherever you are with the "Siemens Industry Online Support" app. The app is available for iOS and Android:

support.industry.siemens.com/cs/ww/en/sc/2067

4.2 Industry Mall

The Siemens Industry Mall is the platform on which the entire Siemens Industry product portfolio is accessible. From the selection of products to the order and the delivery tracking, the Industry Mall enables the complete purchasing processing – directly and independently of time and location:

mall.industry.siemens.com
