Catalog D 34 · August 2021

Dear Customer,

SIEMENS

We are pleased to present you with the new edition of Catalog D 34 · August 2021. The catalog provides a comprehensive overview of the new SIMATIC MICRO-DRIVE drive system for safety extra low-voltage.

SIMATIC MICRO-DRIVE is an extremely versatile, system-integrated and safety-related drive system which covers a wide range of applications in the protective extra-low voltage range. The system comprises the SIMATIC MICRO-DRIVE PDC Drives (ProfiDriveControl) and SIMATIC MICRO-DRIVE TM Drives – the new drive controller modules for SIMATIC ET 200SP – as well as flexibly applicable motors and plug-in cables.

Suitable control systems from the SIMATIC portfolio from Siemens optimally round off the motion control functions of this future-proof solution.

The products listed in this catalog are also included in the Industry Mall. Please contact your local Siemens office for additional information.

Up-to-date information about SIMATIC MICRO-DRIVE is available on the internet at: www.siemens.com/micro-drive

You can access our Industry Mall on the internet at www.siemens.com/industrymall

Your personal contact will be glad to receive your suggestions and recommendations for improvement. You can find your contact in our contact person database at www.siemens.com/automation-contact

We hope that you will enjoy using Catalog D 34 · August 2021 as a selection and ordering reference document and wish you every success with our products and solutions.

With kind regards,

Frank Golüke Vice President General Motion Control Siemens AG, Digital Industries, Motion Control

The products and systems described in this catalog are manufactured/distributed under application of a certified quality management system in accordance with EN ISO 9001 (Certified Registration No. 001323 QM15). The certificate is recognized by all IQNet countries.

Digital Enterprise

The building blocks that ensure everything works together perfectly in the digital enterprise

Digitalization is already changing all areas of life and existing business models. It is placing greater pressure on industry while at the same time creating new business opportunities. Today, thanks to scalable solutions from Siemens, companies can already become a digital enterprise and ensure their competitiveness.

Industry faces tremendous challenges

Reduce time-to-market

Today manufacturers have to bring products to market at an ever-increasing pace despite the growing complexity of these products. In the past, a major manufacturer would push aside a small one, but now it is a fast manufacturer that overtakes a slow one.

Boost flexibility

Consumers want customized products, but at a price they would pay for a mass-produced item. That only works if production is more flexible than ever before.

Improve quality

To ensure a high level of quality while meeting legal requirements, companies have to establish closed quality loops and enable the traceability of products.

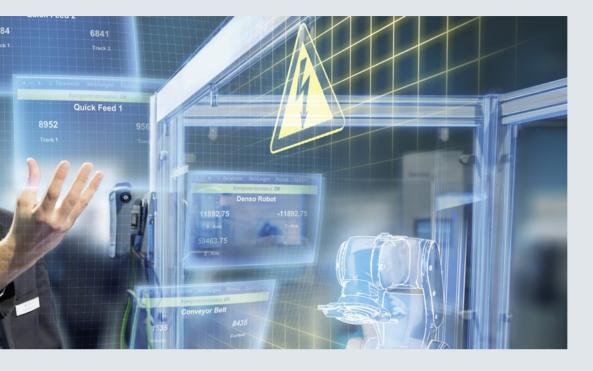

Boost efficiency

Today the product itself needs to be sustainable and environmentally friendly, while energy efficiency in production has become a competitive advantage.

Increase security

Increasing networking escalates the threat to production facilities of cyberattacks. Today more than ever, companies need suitable security measures.

The digital enterprise has already become a reality

To fully benefit from all the advantages of digitalization, companies first have to achieve complete consistency of their data. Fully digitally integrated business processes, including those of suppliers, can help to create a digital representation of the entire value chain. This requires

- the integration of industrial software and automation,
- expansion of the communication networks,
- security in automation,
- and the use of business-specific industrial services.

MindSphere The cloud-based open IoT operating system from Siemens

With MindSphere, Siemens offers a costeffective and scalable cloud platform as a service (PaaS) for the development of applications. The platform, designed as an open operating system for the Internet of Things, makes it possible to improve the efficiency of plants by collecting and analyzing large volumes of production data.

Totally Integrated Automation (TIA) Where digitalization becomes reality

Totally Integrated Automation (TIA) ensures the seamless transition from the virtual to the real world. It already encompasses all the necessary conditions for transforming the benefits of digitalization into true added value. The data that will form the digital twin for actual production is generated from a common base.

Integrated Drive Systems

Faster on the market and in the black with Integrated Drive Systems

Integrated Drive Systems are Siemens' trendsetting answer to the high degree of complexity that characterizes drive and automation technology today. The world's only true one-stop solution for entire drive systems is characterized in particular by its threefold integration: Horizontal, vertical, and lifecycle integration ensure that every drive system component fits seamlessly into the whole system, into any automation environment, and even into the entire lifecycle of a plant.

The outcome is an optimal workflow – from engineering all the way to service that entails more productivity, increased efficiency, and better availability. That's how Integrated Drive Systems reduce time to market and time to profit.

Horizontal integration

Integrated drive portfolio: The core elements of a fully integrated drive portfolio are frequency converters, motors, couplings, and gear units. At Siemens, they're all available from a single source. Perfectly integrated, perfectly interacting. For all power and performance classes. As standard solutions or fully customized. No other player in the market can offer a comparable portfolio. Moreover, all Siemens drive components are perfectly matched, so they are optimally interacting.

You can boost the availability of your application or plant to up to

Vertical integration

Thanks to **vertical integration**, the complete drive train is seamlessly integrated in the entire automation environment – an important prerequisite for production with maximum value added. Integrated Drive Systems are part of Totally Integrated Automation (TIA), which means that they are perfectly embedded into the system architecture of the entire industrial production process. This enables optimal processes through maximum communication and control.

With TIA Portal you can cut your engineering time by up to

30%

Lifecycle integration

Lifecycle integration adds the factor of time: Software and service are available for the entire lifecycle of an Integrated Drive System. That way, important optimization potential for maximum productivity, increased efficiency, and highest availability can be leveraged throughout the system's lifecycle – from planning, design, and engineering to operation, maintenance, and all the way even to modernization.

With Integrated Drive Systems, assets become important success factors. They ensure shorter time to market, maximum productivity and efficiency in operation, and shorter time to profit. With Integrated Drive Systems you can reduce your maintenance costs by up to © Siemens 2021

Overview

SIMATIC MICRO-DRIVE drive system, PDC Drives, PDC100, PDC100F, PDC600F, PDC1000 V1 variants

Drive controller modules for ET200SP SIMATIC MICRO-DRIVE F-TM StepDrive ST, ServoDrive HF and ServoDrive ST

First-class drive system in the protective extra-low voltage range

The requirements for motion control tasks in automation are ever increasing and are becoming more and more multi-faceted and complex. Digitalization is bringing about new solution approaches, regardless of the industry or application.

Fit for digitalization with SIMATIC MICRO-DRIVE

The SIMATIC MICRO-DRIVE drive system allows you to make a perfect entry into the world of digitalization. Thanks to Totally Integrated Automation (TIA), converters and motors are completely integrated into the Siemens automation environment and can be easily selected using the TIA Selection Tool and configured using the TIA Portal. A wide range of tools for the complete machine building cycle ensures efficient engineering and fast commissioning. Machine data is made available through MindSphere, the cloud-based, open IoT operating system from Siemens.

Well designed, flexible and fit for the future

SIMATIC MICRO-DRIVE is an extremely versatile, seamless and safety-oriented drive system that covers a wide range of applications in the protective extra-low voltage range.

It comprises the SIMATIC MICRO-DRIVE PDC Drives and TM Drives, as well as versatile EC motors and plug-in cables. The right controllers from the SIMATIC portfolio from Siemens optimally round out the motion control functions of this futureproof solution.

The F-TM StepDrive ST completes the portfolio within the range of controlling stepper motors.

In combination with EC Motors and stepper motors up to 280 W the F-TM ServoDrive HF allows positioning and speed control in very confined spaces. The triple overload capability and the support of BiSS-C Multiturn encoders extend the scope of applications.

Can be combined with motors and plug-in cables from selected Siemens Product Partners

To ensure that all of the requirements in drive technology are met in the best way possible, the SIMATIC MICRO-DRIVE drive system is compatible with individual and supplementary motors (Dunkermotoren, ebm-papst) and plug-in cables (Harting, KnorrTec) from well-established Siemens Product Partners. This allows an optimal combination of suitable products from proven product partners for the individual application.

Strong in classic and innovative applications

SIMATIC MICRO-DRIVE is the ideal drive in numerous application areas. The system stands out when executing positioning tasks in production and manufacturing as well as in innovative application domains. Examples include drives for storage and retrieval machine shuttles and high bay racking systems, driverless transport systems as well as medical applications such as safely and reliably moving MRT examination tables and automatically aligning ceiling-mounted devices in radiographic applications.

System overview

System overview

Overview

For all applications

Moving

Energy-efficient and rugged solutions for basic conveyor technology with roller or chain conveyors, for hoisting gear and elevators – as well as for storage and retrieval machines – and always with Safety Integrated on board.

Processing

Ideal solution for continuous processes with simple speed and torque accuracy, for example with extruders, centrifuges, agitators an all types of production machines – motion control, isochronous communication (only for SIMATIC MICRO-DRIVE PDC Drives) and Safety Integrated.

Positioning

SIMATIC MICRO-DRIVE is the solution for

24/48 V DC applications: The positioning of individual axes and even the coordinated interpolation of several axes – such as in complex robotic applications – can be achieved easily.

Simple commissioning of SIMATIC MICRO-DRIVE PDC Drives through One Button Tuning and TIA Portal (V15 SP1 or higher)

Commissioning and engineering are possible with TIA Portal (V15 SP1 or higher). The tool for configuration, commissioning and diagnostics has been optimized with regard to the consistent utilization of the TIA Portal advantages – one shared work environment for PLC, HMI and drives.

For more information, see the Engineering tools section.

Safety Integrated

The integrated safety functions provide highly effective, application-oriented protection for personnel and machinery (terms as defined in IEC 61800-5-2).

The following Safety Integrated functions are included (not all of the functions are included in all of the drive controllers):

- Safe Torque Off (STO) 1)
- Safe Stop 1 (SS1, only for failsafe variants, e.g. PDC100F)
- Safely-Limited Speed (SLS, only for failsafe variants, e.g. PDC100F)
- New function: Safely-Limited Torque (SLT, only for failsafe variants)
- Monitoring of motor current and torque during operation by means of safely-limited torque
- Safe Speed Monitor (SSM, only for failsafe variants, e.g. PDC100F)

The Safety Integrated functions are fully integrated into the drive system (only for failsafe variants, e.g. PDC100F).

The Safety Integrated functions are implemented electronically and therefore require no additional installation effort or space in the control cabinet. Furthermore, the costs are considerably lower than for externally implemented monitoring functions.

The Safety Integrated functions can be easily put into operation via the TIA Portal (V15 SP1 or higher) and activation through a SIMATIC controller via PROFIsafe.

Perfect combination with SIMATIC S7-1500, SIMATIC S7-1500 T-CPU, SIMATIC ET 200SP Open Controller via PROFINET or SIMATIC ET 200SP

Communication with the higher-level control takes place via PROFINET. For optimal interaction between the controller and the SIMATIC MICRO-DRIVE drive system, SIMATIC S7-1200, SIMATIC S7-1500, SIMATIC S7-1500 T-CPU, SIMATIC ET 200SP Open Controller can be used as the control system.

The SIMATIC MICRO-DRIVE PDC Drives features an integrated PROFINET IRT communication interface with a communication cycle of up to 1 ms for connecting to a control system.

Standardized protocols for linking to a higher-level control with RT and IRT are supported – the PROFIdrive profile for positioning mode and the PROFIsafe profile for safety-oriented communication. Functions such as Shared Device, ring redundancy, and PROFIenergy are also possible.

All from a single source: Through the use of Motion Control functionalities in the controller, the combination of converter and SIMATIC S7 automation system or a controller allows ideally harmonized engineering. As a result, commissioning times are shortened.

Technology objects and Motion Control blocks of the higher-level controller provide numerous possibilities of motion, such as continuous operation, positioning, synchronous operation, coordinated motion of multiple axes, cam disks, or interpolation.

Siemens offers tested SIMATIC PLC/HMI application examples for connection of the drive system to a SIMATIC control system:

www.siemens.com/sinamics-applications

Further information on the SIMATIC S7-1500, SIMATIC S7-1500 T-CPU controllers and SIMATIC ET 200SP Open Controller is available in the ST 70 Catalog and on the internet at

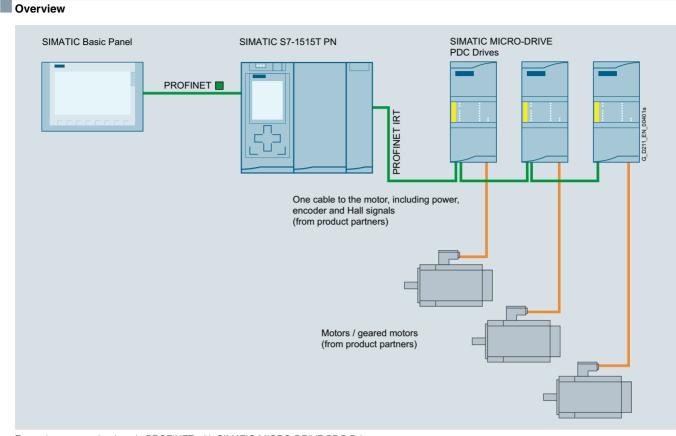

www.siemens.com/simatic-s7-1500

System overview

Example: communication via PROFINET with SIMATIC MICRO-DRIVE PDC Drives

System overview

System overview

Connection example: SIMATIC MICRO-DRIVE drive system, PDC Drives, PDC100 variant

Can be used worldwide

In addition to the usual approvals, the UL approval for the North American market has also been requested for the SIMATIC MICRO-DRIVE drive system. Thus, the SIMATIC MICRO-DRIVE drive system is available for worldwide use.

Further information

Detailed information on the SIMATIC MICRO-DRIVE drive system, including the latest technical documentation (brochures, tutorials, dimensional drawings, certificates, equipment manuals and operating instructions), is available on the internet at:

www.siemens.com/micro-drive

and also via the TIA Selection Tool:

www.siemens.com/tia-selection-tool

System overview

Overview

Legal framework

Machine manufacturers and manufacturing plants must ensure that their machines or plants cannot cause danger due to malfunctions in addition to the general risks of electric shock, heat or radiation.

In Europe, for example, compliance with the Machinery Directive 2006/42/EC is legally stipulated by the EU Directive on Safety and Health at Work. In order to ensure compliance with this directive, it is recommended that the corresponding harmonized European standards are applied. This triggers the "assumption of conformity" and gives manufacturers and operators the legal security in terms of compliance with both national regulations and EU directives. The machine manufacturer uses the CE marking to document the compliance with all relevant directives and regulations in the free movement of goods.

Safety-related standards

Functional safety is specified in various standards. For example, EN ISO 12100 specifies standards pertaining to machine safety (risk assessment and risk reduction). IEC 61508 specifies basic requirements for electronic and programmable safety-related systems. EN 62061 (only applicable for electrical and electronic control systems) and EN ISO 13849-1, which has replaced EN 954-1, define the functional and safety-related requirements of safety-oriented control systems

The above-mentioned standards define different safety requirements that the machine has to satisfy in accordance with the risk, frequency of a dangerous situation, probability of occurrence and the opportunities for recognizing impending danger.

- EN ISO 13849-1: Performance Level PL a ... e; Category B, 1 ... 4
- EN 62061: Safety Integrity Level SIL 1 ... 3

Trend toward integrated safety systems

The trend toward greater complexity and higher modularity of machines has seen a shift in safety functions away from the classical central safety functions (for example, shutdown of the complete machine using a main disconnecting means) and into the machine control system and the drives. This is often accompanied by a significant increase in productivity because the equipping times are shortened. Depending on the type of machine, it may even be possible to continue manufacturing other parts while equipping is in progress.

Integrated safety functions act much faster than those of a conventional design. The safety of a machine is increased further with Safety Integrated. Furthermore, thanks to the faster method of operation, safety measures controlled by integrated safety systems are perceived as less of a hindrance by the machine operator, therefore significantly reducing the motivation to consciously bypass safety functions.

Function

The safety functions integrated in SIMATIC MICRO-DRIVE are described below.

Safety functions integrated in the SIMATIC MICRO-DRIVE drives (integrated in the failsafe variants, e.g. PDC100F)

The large number of safety functions integrated in the SIMATIC MICRO-DRIVE drive system in combination with the sensors and safety control required for the safety function contribute to the implementation of highly effective, practical personnel and machine protection.

They comply with the requirements of the following safety categories:

- PL d and Category 3 according to EN ISO 13849-1
- SIL 2 according to IEC 61508 and IEC 61800-5-2

The Safety Integrated functions are generally certified by independent institutes. You can obtain the corresponding test certificates and manufacturer's declarations from your Siemens contacts

The integrated safety functions that are currently available are described below. Their functional safety satisfies the requirements defined in the international standard IEC 61800-5-2 for variable-speed drive systems.

The safety functions integrated into the SIMATIC MICRO-DRIVE drive system can be roughly divided into two categories:

- Functions for safely stopping a drive Safe Torque Off (STO)
- Safe Stop 1 (SS1)
- · Functions for safely monitoring the motion of a drive Safely-Limited Speed (SLS)
 - Safely-Limited Torque (SLT
 - Safe Speed Monitor (SSM)

System overview

Safety Integrated

Function

Safe Torque Off (STO)

The STO function is the most common and basic drive-integrated safety function. It ensures that no torque-generating energy can continue to affect a motor and prevents unintentional start-ups.

Effect

This function is a mechanism that prevents the drive from restarting unexpectedly, in accordance with EN 60204-1, Section 5.4. The STO function suppresses the drive pulses (corresponds to Stop Category 0 according to EN 60204-1). The drive is reliably torque-free. This state is monitored internally in the drive.

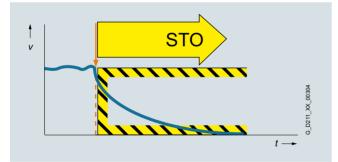

Application

STO has the immediate effect that the drive cannot supply any torque-generating energy. STO can be used wherever the drive will naturally reach a standstill due to load torque or friction in a sufficiently short time or when "coasting down" of the drive will not have any relevance for safety.

STO makes it possible for persons to work safely when the protective door is open (restart interlock) and is used on machines/installations with moving axes, e.g. on handling or conveyor systems.

Customer benefits

Some of the advantages of the Safety Integrated Function STO over conventional safety technology with electromechanical switchgear include the elimination of separate components as well as of the work that would be required to wire and service them, i.e. no wearing parts as a result of the electronic shutdown. Because of the fast electronic switching times, the function provides a shorter reaction time than the conventional solution comprising electromechanical components. When STO is triggered, the converter remains connected to the network and can be fully diagnosed.

Safe Stop 1 (SS1)

The SS1 function causes a motor to stop rapidly and safely and switches the motor to torque-free mode after coming to a stand-still by activating STO.

Effect

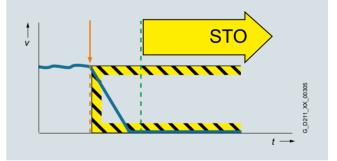

The SS1 function can safely stop the drive in accordance with EN 60204-1, Stop Category 1. When the SS1 function is selected, the drive brakes autonomously along a quick stop ramp and automatically activates the Safe Torque Off functions when the set safe delay time has expired.

Application

The SS1 function is used when, in the event of a safety-relevant incident, the drive must stop as quickly as possible with a subsequent transition into the STO state (e.g. EMERGENCY STOP). It is thus used to bring large centrifugal masses to a stop as quickly as possible for the safety of the operating personnel, or to brake motors at high speeds as quickly as possible. Examples of typical applications are saws, grinding machine spindles, centrifuges, winders and storage and retrieval machines.

Customer benefits

The targeted stopping of a drive by means of SS1 reduces the risk of danger, increases the productivity of a machine, and allows the safety clearances in a machine to be reduced. The principle is to bring the drive actively to a standstill, compared with just using the STO function. Complex mechanical brakes that are susceptible to wear are not normally required to brake the motor.

System overview

Safety Integrated

Function

Safely-Limited Speed (SLS)

The SLS function monitors the drive to ensure that it does not exceed a preset speed or velocity limit.

Effect

The SLS function monitors the drive against a parameterized speed limit. Four different limit values can be selected. The speed setpoint is not influenced independently. After SLS has been selected, the higher-level control must bring the drive down below the selected speed limit within a parameterizable time. If the speed limit is exceeded, a customizable drive-integrated fault reaction occurs.

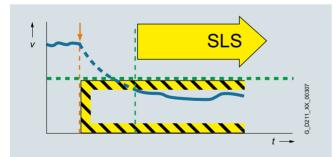

The SLS limit stage 1 can be multiplied by a factor that is transferred in 16-bit resolution via PROFIsafe. This allows an almost unlimited number of limits to be specified.

Application

The SLS function is used if people are in the danger zone of a machine and their safety can only be guaranteed by reduced speed. Typical application cases include those in which an operator must enter the danger zone of the machine for the purposes of maintenance or setting up, such as a winder in which the material is manually threaded by the operator. To prevent injury to the operator, the roller may only spin at a safely reduced speed. SLS is often also used as part of a two-stage safety concept. While a person is in a less critical zone, the SLS function is activated, and the drives are only stopped in a smaller area with higher potential risk. SLS can be used not only for operator protection, but also for machinery protection, e.g. if a maximum speed must not be exceeded.

Customer benefits

The SLS function can contribute to a significant reduction in downtime, or greatly simplify or even accelerate setup. The overall effect achieved is a higher availability of the machine. Moreover, external components such as speed monitors can be omitted.

Safely-Limited Torque (SLT)

The SLT function monitors the current/torque of a motor.

Effect

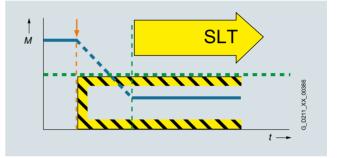

The SLT function allows the torque to be reduced within a defined period of time. If the torque exceeds the SLT monitoring limit, the drive responds with a "Safe Stop". The stop responses STO or SS1 can be specified via parameters.

Application

In the simplest case, this function is used for force limiting when opening and closing a protective door on a machine.

Customer benefits

The SLT function avoids the use of external hardware for measuring and limiting the force and the associated wiring effort.

System overview

Safety Integrated

Function

Safe Speed Monitor (SSM)

The SSM function warns when a drive is working below an adjustable speed limit. As long as it remains below the threshold, the function issues a safety-related signal.

Effect

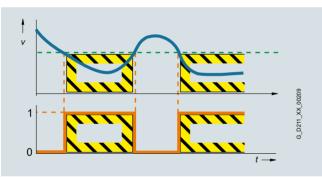

If a speed value drops below a parameterized limit, a safetyrelated signal is generated. This can, for example, be processed in a safety controller to respond to the event by programming, depending on the situation.

Application

With the SSM function, in the simplest case, a safety door can be unlocked if the speed drops below a non-critical level. Another typical example is that of a centrifuge that may be filled only when it is operating below a configured speed limit.

Customer benefits

Unlike SLS, there is no drive-integrated fault reaction when the speed limit is exceeded. The safe feedback can be evaluated in a safety control unit, allowing the user to respond appropriately to the situation.

Activation of the Safety Integrated Functions

The STO safety function for SIMATIC MICRO-DRIVE can be activated via terminals, e.g. for use of a conventional safety circuit.

For standalone safety solutions for small to medium sized applications, it is frequently sufficient that the various sensing components are directly hardwired to the drive.

For integrated safety solutions, the safety-relevant sequences are generally processed and coordinated in the fail-safe SI-MATIC controller. In this case, the system components communicate via the PROFINET fieldbus. The safety functions are controlled via the safe PROFIsafe communication protocol.

The SIMATIC MICRO-DRIVE drives can be easily integrated into the plant or system topology.

PROFIsafe (only for the failsafe variants, e.g. PDC100F)

SIMATIC MICRO-DRIVE drives support the PROFIsafe profile based on PROFINET.

PROFIsafe is an open communications standard that supports standard and safety-related communication over the same communication path (wired or wireless). A second, separate bus system is therefore not necessary. The telegrams that are sent are continually monitored to ensure safety-relevant communication.

Possible errors such as telegrams that have been lost, repeated or received in the incorrect sequence are avoided. This is done by consecutively numbering the telegrams in a safety-relevant fashion, monitoring their reception within a defined time and transferring an ID for transmitter and receiver of a telegram. A CRC (cyclic redundancy check) data security mechanism is also used.

The operating principle of Safety Integrated

Two independent switch-off signal paths

Two independent switch-off signal paths are available. All switch-off signal paths are low active. This ensures that the system is always switched to a safe state if a component fails or in the event of cable breakage. If a fault is discovered in the switch-off signal paths, the STO or SS1 function (depending on parameter settings) is activated and a system restart inhibited.

Two-channel monitoring structure

All the main hardware and software functions for Safety Integrated are implemented in two independent monitoring channels (e.g. switch-off signal paths, data management, data comparison). A cyclic crosswise comparison of the safety-relevant data in the two monitoring channels is carried out.

The monitoring functions in each monitoring channel work on the principle that a defined state must prevail before each action is carried out and a specific acknowledgement must be made after each action. If these expectations of a monitoring channel are not fulfilled, the drive coasts to a standstill (two channel) and an appropriate message is output.

Safe actual value sensing with encoder

The safe actual value sensing is based on the redundant evaluation of the differential incremental tracks A/B that supply HTL/TTL and the three Hall-effect sensors integrated in the motor.

All EC motors of the Siemens Product Partners with IQ encoder and Hall-effect sensors can be used for all of the safety functions of the SIMATIC MICRO-DRIVE drive system.

Communication > PROFINET

Overview

PROFINET – the Ethernet standard for automation

PROFINET is the world's leading Industrial Ethernet standard for automation with more than 40 million nodes installed worldwide.

PROFINET makes companies more successful, because it speeds up processes and raises both productivity and plant availability.

Flexibility	Efficiency	Performance
Tailor-made plant concepts	Optimal use of resources	Increased productivity
Industrial Wireless LAN	One cable for everything	Speed
Safety	Device/network diagnostics	High precision
Flexible topologies	Energy efficiency	Large quantity structures
Open standard	Simple wiring	High transmission rate
Web tools	Fast device replacement	Redundancy
Expandability	Ruggedness/stability	Fast start-up

1

System overview

Overview

Flexibility

Short response times and optimized processes are the basic requirements for competitiveness in global markets because the product lifecycles are becoming shorter and shorter.

PROFINET ensures maximum flexibility in plant structures and production processes, and it enables you to implement innovative machine and plant concepts. For example, mobile devices can also be integrated at locations that are difficult to access.

Flexible topologies

In addition to the linear structure characterized by the established fieldbuses, PROFINET also enables the use of star, tree and ring structures. This is made possible by switching technology via active network components, such as Industrial Ethernet switches and media converters, or by integrating switch functionality into the field devices. This results in increased flexibility in the planning of machines and plants, as well as savings in cabling.

The PROFINET network can be installed without any specialist knowledge at all and meets all requirements that are relevant to the industrial environment. The "PROFINET Installations Guidelines" assist manufacturers and users with network planning, installation and commissioning. Symmetrical copper cables or RFI-resistant fiber-optic cables are used, depending on the application. Devices from different manufacturers are easily connected via standardized and rugged plug-in connectors (up to IP65/IP67 degree of protection).

By integrating switch functionality into the devices, linear topologies can be created that are directly oriented toward an existing machine or plant structure. This reduces cabling overhead and cuts down on components such as external switches.

IWLAN

PROFINET also supports wireless communication with Industrial Wireless LAN, thus opening up new fields of application. For example, technologies subject to wear, such as trailing cables, can be replaced and automated guided vehicle systems and mobile operator panels can be used.

Safety

The PROFIsafe safety profile, which has been tried and tested with PROFIBUS and which permits the transmission of standard and safety-related data on a single bus cable, can also be used with PROFINET. No special network components are necessary for fail-safe communication, which means that standard switches and standard network transitions can continue to be used without any restrictions. In addition, fail-safe communication is equally possible via Industrial Wireless LAN (IWLAN).

Open standard

PROFINET, the open multi-vendor standard

(IEC 61158/IEC 61784), is supported by PROFIBUS and PROF-INET International (PI). It stands for maximum transparency, open IT communication, network security and simultaneous realtime communication.

Thanks to its openness, PROFINET provides the basis for a standardized automation network in the plant, to which all other machines and devices can be connected. Even the integration of existing plant components, for example using PROFIBUS, presents no problems due to the use of network transitions.

Use of web tools

Thanks to the unrestricted support of TCP/IP, PROFINET permits the use of standard web services such as web servers. Irrespective of the tool used, information from the automation level can be accessed from virtually any location using a commercially available internet browser. This considerably simplifies commissioning and diagnostics. Users can then decide for themselves how much openness to the IT world they want to allow for their machine or plant. This means that PROFINET can be used simply as an isolated plant network or connected via appropriate security modules, such as the SCALANCE S modules, to the office network or the internet. In this way, new remote maintenance concepts or the high-speed exchange of production data become possible.

Expandability

On the one hand, PROFINET facilitates the integration of existing systems and networks without any great effort. In this way, PROFINET safeguards investments in existing plant components that communicate via PROFIBUS and other fieldbuses such as AS-Interface. On the other hand, additional PROFINET nodes can be added at any time. By using additional network components, network infrastructures can be expanded using cabling or wireless methods – even while the plant is operating.

Efficiency

Greater global competition means that companies must use their resources economically and efficiently. This applies in particular to production. This is where PROFINET ensures greater efficiency. Simple engineering guarantees fast commissioning, while reliable devices ensure a high level of plant availability. Comprehensive diagnostic and maintenance concepts help to reduce plant downtimes and keep maintenance costs to a minimum.

One cable for everything

PROFINET permits simultaneous fieldbus communication with isochronous mode and standard IT communication (TCP/IP) on one cable. This real-time communication for the transmission of user/process data and diagnostic data takes place on a single cable. Specific profile communication (PROFIsafe and PROFIdrive) can be integrated without any additional cabling. This solution offers a wide scope of functions at a low level of complexity.

Device and network diagnostics

By retaining the tried and tested PROFIBUS device model, the same diagnostics information is available with PROFINET. In addition, module-specific and channel-specific data can also be read out from the devices during device diagnosis, enabling faults to be located quickly and easily. Apart from the availability of device information, the reliability of network operation has top priority in the network management.

In existing networks the Simple Network Management Protocol (SNMP) has established itself as the de facto standard for the maintenance and monitoring of the network components and their functions. PROFINET uses this standard and gives users the opportunity to maintain their networks with tools that are familiar to them, such as the SINEMA Server network management software.

For easier maintenance of PROFINET devices, both on-site and remotely via a secure VPN connection, application-specific websites can be set up on the web server of the field devices using the familiar HTML standard.

System overview

Communication > PROFINET

Overview

Simple wiring

Particularly stringent demands are made on the installation of cables in the industrial environment. In addition, there is a requirement to set up industry-standard networks in the shortest possible time without any special knowledge.

With FastConnect, Siemens offers a high-speed installation system that meets all of these requirements. FastConnect is the standard-compliant, industry-standard cabling system consisting of cables, connectors and assembly tools for PROFINET networks. The time required for connecting terminals is minimized by the simple installation method using just a single tool, while installation errors are prevented by the practical color-coding. Both copper cables and glass fiber optic cables can be easily assembled on site in this way.

Fast device replacement

PROFINET devices are identified by means of a name assigned during configuration. When replacing a defective device, a new device can be recognized from its topology information by the IO controller and a new name can be assigned to it automatically. This means that no engineering tool is necessary for the replacement of equipment.

This mechanism can even be used for the initial commissioning of a complete system. This speeds up commissioning, particularly in the case of series machines.

Ruggedness

An automation network must be able to withstand most external sources of interference. The use of Switched Ethernet prevents faults in one section of the network from affecting the entire plant network. For areas that are particularly prone to radio frequency interference (RFI), PROFINET allows the use of fiber optic cables.

Performance

Productivity and product quality determine the level of success in the market. Precise motion control, dynamic drives, highspeed controllers and the deterministic synchronization of devices are therefore key factors in achieving superior production. They facilitate high production rates and optimum product quality at the same time.

Speed and precision

Fast motion control applications demand precise and deterministic exchange of data. This is implemented by means of drive controllers using isochronous real time (IRT).

With IRT and isochronous mode, PROFINET permits fast and deterministic communication. This synchronizes the various cycles of a system (input, network, CPU processing and output), even in the case of parallel TCP/IP traffic. The short cycle times of PROFINET make it possible to raise the productivity of machines and plants and to guarantee the product quality and high level of precision.

The standardized PROFIdrive profile permits vendor-independent communication between CPUs and drives.

Large quantity structures

The use of PROFINET makes it possible to overcome the existing restrictions regarding the scope of machines and systems that can be implemented. In one network, several different controllers can interact with their assigned field devices. The number of field devices per PROFINET network is virtually unlimited – the entire range of IP addresses is available.

High data rate

By using 100 Mbit/s in full duplex mode, PROFINET achieves a significantly higher data rate than previous fieldbuses. This means that other plant data can be transmitted over TCP/IP without any problems, in addition to the process data. PROFINET therefore meets the combined industrial demands for simultaneously transmitting high-speed IO data and large volumes of data for additional sections of the application. Even the transmission of large volumes of data, such as that from cameras, has no adverse effect on the speed and precision of the IO data transmission, thanks to PROFINET mechanisms.

Media redundancy

A higher plant availability can be achieved with a redundant installation (ring topology). The media redundancy can be implemented not only with the aid of external switches, but also by means of integrated PROFINET interfaces. Using the media redundancy protocol (MRP), reconfiguration times of 200 ms can be achieved. If the communication is interrupted in just one part of the ring installation this means that a plant standstill is prevented and any necessary maintenance or repair work can be performed without any time pressure.

For motion control applications, PROFINET with IRT in ring topologies offers extended media redundancy for planned duplication (MRPD) which operates in a bumpless mode without any reconfiguration time. If communication is interrupted (e.g. a cable break) the process can continue operating without interruption.

Benefits

- PROFINET is the open Industrial Ethernet standard for automation
- PROFINET is based on Industrial Ethernet
- PROFINET uses TCP/IP and IT standards
- PROFINET is real-time Ethernet
- PROFINET enables seamless integration of fieldbus systems
- PROFINET supports fail-safe communication via PROFIsafe and also via IWLAN

System overview

Communication > PROFIdrive

One drive profile – different application classes

The integration of drives into automation solutions depends very strongly on the particular drive application. In order to be able to address the complete, huge bandwidth of drive applications – from basic frequency converters up to synchronized multi-axis systems with a high dynamic performance – using just one profile, PROFIdrive defines six application classes, to which most drive applications can be assigned:

- Class 1 standard drives (pumps, fans, agitators, etc.)
- Class 2 standard drives with technological functions
- Class 3 positioning drives
- Class 4 motion control drives with central, higher-level motion control intelligence and the patented "Dynamic Servo Control" positioning concept
- Class 5 motion control drives with central, higher-level motion control intelligence and position setpoint interface
- Class 6 motion control drives with distributed motion control intelligence integrated in the drives

Design

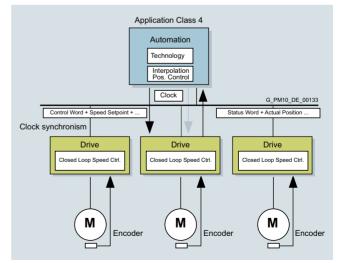

The device model of PROFIdrive

PROFIdrive defines a device model comprising function modules, which interoperate inside the device and which reflect the intelligence of the drive system. These modules have objects assigned to them which are described in the profile and are defined with respect to their functions. The overall functionality of a drive is therefore described through the sum of its parameters.

In contrast to other drive profiles, PROFIdrive defines only the access mechanisms to the parameters as well as a subset of profile parameters (approx. 30) such as the fault buffer, drive control and device identification.

All other parameters are vendor-specific which gives drive manufacturers great flexibility with respect to implementing control functions. The elements of a parameter are accessed acyclically over data records.

As a communication protocol, PROFIdrive uses DP-V0, DP-V1, and the DP-V2 expansions for PROFIBUS including the functions "Slave-to-Slave Communication" and "Isochronous Operation", or PROFINET IO with real-time classes RT and IRT.

Overview

PROFIdrive – the standardized drive interface for PROFINET and PROFIBUS

PROFIdrive defines the device behavior and technique to access internal device data for electric drives connected to PROF-INET and PROFIBUS – from basic frequency converters up to high-performance servo controllers.

It describes in detail the practical use of communication functions – slave-to-slave communication, equidistance and clock cycle synchronization (isochronous mode) in drive applications. In addition, it specifies all device characteristics which influence interfaces connected to a controller over PROFINET or PROFI-BUS. This also includes the state machine (sequence control), the encoder interface, scaling of values, definition of standard telegrams, access to drive parameters etc.

The PROFIdrive profile supports both central as well as distributed motion control concepts.

What are profiles?

For devices and systems used in automation technology, profiles define properties and modes of behavior. This allows manufacturers and users to define common standards. Devices and systems that comply with such a cross-manufacturer profile, are interoperable on a fieldbus and, to a certain degree, can be interchanged.

Are there different types of profiles?

A distinction is made between what are known as application profiles (general or specific) and system profiles:

- Application profiles (also device profiles) predominantly refer to devices (e.g. drives) and include an agreed selection regarding bus communication as well as specific device applications.
- System profiles describe classes of systems, including master functionality, program interfaces and integration resources.

Is PROFIdrive fit for the future?

PROFIdrive has been specified by the PROFIBUS and PROF-INET International (PI) user organization, and is specified as a standard that is fit for the future through standard IEC 61800-7.

The basic philosophy: Keep it simple

The PROFIdrive profile tries to keep the drive interface as simple as possible and free from technology functions. As a result, referencing models as well as the functionality and performance of the PROFINET/PROFIBUS master have either no or only little influence on the drive interface. © Siemens 2021

PDC Drives

Overview

- SIMATIC MICRO-DRIVE PDC Drives (ProfiDriveControl)
- Available in the variants: Standard (PDCxxx), Failsafe (PDCxxxF)

Variant	Power	Device width
Standard		
PDC100	100 W	50 mm
PDC600	600 W	90 mm
PDC1000 V1	1000 W	90 mm
Failsafe		
PDC100F	100 W	50 mm
PDC600F	600 W	90 mm

PDC Drives, PDC100F variant

Function

Basic functions (for standard PDC for all PDC Drives)

- PROFIdrive profile via PROFINET
- Hardware STO
- Digital inputs and outputs
- PDC100 and PDC100F with integrated braking chopper
- PROFINET line-capable (2 × PROFINET ports)
- PROFINET Shared Device
- TTL/HTL Hall signals
- In addition to standard PDC for PDCxxxF variants
- Extended Safety drive functions STO, SS1, SLT¹, SLS² and SSM² via PROFIsafe

Selection and ordering data

TM Drives

Overview

SIMATIC MICRO-DRIVE F-TM ServoDrive HF with Base Unit

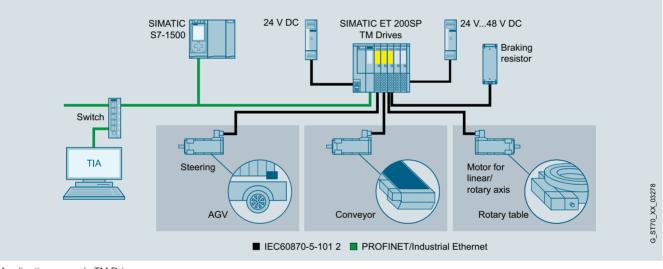

In combination with EC Motors and stepper motors up to 280 W the new ET 200SP technology module F-TM ServoDrive HF allows positioning and speed control in very confined spaces. The triple overload capability and the support of BiSS-C multi-turn encoders extend the scope of applications of the TM Drive family.

Engineering in the TIA Portal stands for consistency in a single tool. This facilitates drive dimensioning, commissioning and servicing.

The new drive system consists of:

- The F-TM ServoDrive HF as a new member of the SIMATIC MICRO-DRIVE family,
- The BaseUnit (U0),
- Motors with gearbox for flexible use and
- · Connecting cables.

Further information on the distributed I/O system SIMATIC ET 200SP is available in the ST 70 Catalog and on the internet at www.siemens.com/et200sp

SIMATIC MICRO-DRIVE drive system TM Drives

Overview

In combination with EC motors, the new ET 200SP technology module F-TM ServoDrive ST allows positioning and speed control of EC motors up to 280 W in very confined spaces.

Engineering in the TIA Portal stands for consistency in a single tool. This facilitates drive dimensioning, commissioning and servicing.

The new drive system consists of

- The F-TM ServoDrive ST as a new member of the SIMATIC MICRO-DRIVE family
- The BaseUnit (U0)
- Motors with gearbox for flexible use and
- · Connecting cables.

Further information on the distributed I/O system SIMATIC ET 200SP is available in the ST 70 Catalog and on the internet at www.siemens.com/et200sp

TM Drives

Overview

The new ET 200SP technology module F-TM StepDrive ST allows positioning and speed control of stepper motors up to 10 A peak current in very confined spaces.

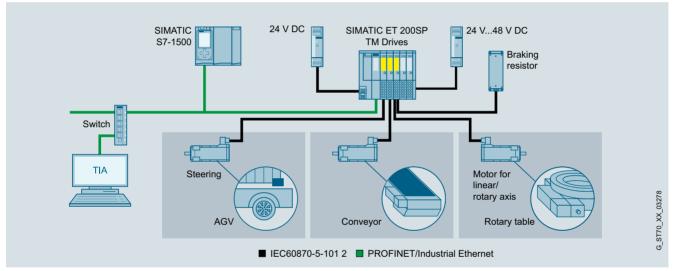

Engineering in the TIA Portal stands for consistency in a single tool. This facilitates drive dimensioning, commissioning and servicing.

The new drive system consists of

- The F-TM StepDrive ST as a new member of the SIMATIC MICRO-DRIVE family
- The BaseUnit (U0)

Further information on the distributed I/O system SIMATIC ET 200SP is available in the ST 70 Catalog and on the internet at www.siemens.com/et200sp

Motors/gear units and connection systems from Siemens Product Partners

Overview

Motors/gear units and connection systems from Siemens Product Partners

Note

Siemens Product Partners are third-party companies outside of Siemens AG and its associated companies. Information and descriptions of products from the Siemens Product Partners are non-binding and are the responsibility of the Siemens Product Partner. These products are independently manufactured by the respective, responsible Siemens Product Partner and are sold and delivered by said partner according to its business and delivery terms.

Insofar as it is not compulsory by law, Siemens assumes no liability or warranty for these products or for the connection to these products of the Siemens Product Partners. Please also note the information on the exclusion of liability/use of hyperlinks (see More information).

Motors/gear units

Motor from ebm-papst and motor from Dunkermotoren

- Fully compatible motors and geared motors for SIMATIC MICRO-DRIVE
- From the portfolios of the Siemens Product Partners¹⁾ <u>Dunkermotoren</u> and <u>ebm-papst</u>
- Various combinations are available with the following components:
 - Motor
 - Planetary gearbox
 - Hall-effect sensors
 - Encoder (incremental encoder)
 - Optionally with holding brake
- Individual motor-gearbox combinations for the quick configuration during the bidding phase (not for series purchasing) can be ordered via the Siemens Industry Mall
- Complete sets can be ordered via the web shops of the Siemens Product Partners: https://www.dunkermotoren.com/simatic-micro-drive

https://idt-config.ebmpapst.com/simatic-micro-drive

Delivery time of preferred types

Preferred types are components from Siemens Product Partners that will be shipped within 5 work days. The shipping time must be added to the delivery time. Availabil-

ity of the individual components is a prerequisite.

Connection system

KnorrTec plug-in cable for SIMATIC MICRO-DRIVE

- Fully compatible plug-in cables for SIMATIC MICRO-DRIVE
 - From the portfolios of the Siemens Product Partners¹⁾ HARTING and Knorr<u>Tec</u>
- Pre-assembled at both ends
- Different versions available for different requirements
- Individual cable lengths for the quick configuration during the bidding phase (not for series purchasing) can be ordered via the Siemens Industry Mall
- Complete sets can be ordered via the web shops of the Siemens Product Partners: www.harting.com/US/en/solutions/siemens-product-partnersimatic-micro-drive

Motors/gear units and connection systems from Siemens Product Partners

ebm-papst motors/gear units

Overview

ebm-papst motors ECI-42.40-K1-PP42.2, ECI-63.20-K1-PP63.1, ECI-63.60-K1 for SIMATIC MICRO-DRIVE

- Motors for SIMATIC MICRO-DRIVE from the Siemens Product Partner <u>ebm-papst</u>
- Motors with 24 V or 48 V supply voltage
- With and without mounted planetary gearbox and mounted IQ encoder (single-turn)
- · Hall-effect sensors

Without broke

- · Optionally with holding brake
- Degree of protection IP54 (motors without gearbox) or degree of protection IP50 (motors with gearbox)

Selection and ordering data

Motors for SIMATIC MICRO-DRIVE from the Siemens Product Partner ebm-papst

Motors with article numbers including the prefix "EBM:" can be ordered directly from Siemens for quick configuration during the bidding phase. Motors with article numbers without the prefix "EBM:" can be ordered directly from the Product Partner.

Motors/gear units and connection systems from Siemens Product Partners

Dunkermotoren motors/gear units

Overview

Dunkermotoren motors BG45x30, BG65Sx50, BG95x40 without gear unit for SIMATIC MICRO-DRIVE

- Motors for SIMATIC MICRO-DRIVE from the Siemens Product Partner Dunkermotoren
- Motors with 24 V or 40 V/48 V supply voltage
- With mounted planetary gearbox and mounted IQ encoder (single-turn absolute encoder)
- Hall-effect sensors
- Optionally with holding brake
- Degree of protection IP65 (motors and gearboxes)

The TIA Selection Tool can be used for the technical dimensioning of the drive axis. This allows users to specify the motion and load conditions. The dimensioning tool provides recommendations for the various possible motor-gearbox combinations and the usable PDC Drives with power specification.

All technical data of the drive combinations can be found on the SIMATIC MICRO-DRIVE web pages of the Siemens Product Partners.

For Dunkermotoren:

www.dunkermotoren.com/simatic-micro-drive

Motors/gear units and connection systems from Siemens Product Partners

Dunkermotoren motors/gear units

Selection and ordering data

Motors for SIMATIC MICRO-DRIVE from the Siemens Product Partner Dunkermotoren

Motors with article numbers including the prefix "DUN:" can be ordered directly from Siemens for quick configuration during the bidding phase. Motors with article numbers without the prefix "DUN:" can be ordered directly from the Product Partner.

plauing phase.

Motors/gear units and connection systems from Siemens Product Partners

KnorrTec connection systems

Overview

- KnorrTec plug-in cables for SIMATIC MICRO-DRIVE
- Can be used for drives of the Siemens Product Partners Dunkermotoren and ebm-papst
- Versions for simple industrial applications:
 - Silicone-free

 - Flame resistance according to IEC 60332 (20 s)
 Temperature range -30 ... +80 °C (not moving) or -5 ... +80 °C (moving)

- Designs for demanding industrial applications:
 Highly flexible suitable for cable carriers

 - Oil-resistant according to EN 60811-404
 - UL/CSA-listed components
 - Halogen-free
 - Silicone-free UV-resistant
- Generally good chemical resistance
 Hydrolysis and microbe-resistant
- Flame resistance according to UL758/1581
- (horizontal + FT2) and EN 60332-2-2 (20 s) Temperature_range -45 ... +80 °C (not moving) or
- -25 ... +80 °C (moving)

Motors/gear units and connection systems from Siemens Product Partners

Harting connection systems

Overview

- HARTING plug-in cables for SIMATIC MICRO-DRIVE
- Can be used for drives of the Siemens Product Partners Dunkermotoren and ebm-papst
- Versions for simple industrial applications:
 - Silicone-free, virtually oil-resistant
 - Flame resistance according to IEC 60332-1 (20 s)
 - Temperature range -30 ... +80 °C (not moving) or -5 ... +80 °C (moving)

- Designs for demanding industrial applications:
 - Highly flexible suitable for cable carriers
 - Oil-resistant according to EN 60811-404
 - UL/CSA-certified
 - Halogen-free
 - Silicone-free
- UV-resistant
- Generally good chemical resistance
- Hydrolysis and microbe-resistant
- Flame resistance according to UL758/1581

Overview

The TIA Selection Tool is available for selecting the individual drive components. Drive dimensioning can also be carried out there with program support, comparable to the SIZER engineering tool.

Functions in the TIA Selection Tool

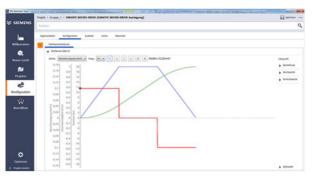

Component selection - Axis overview of the selected components

Dimensioning - Selection of the application

You can find information about the TIA Selection Tool at: www.siemens.com/tst

Currently, these functions are only available in the offline version: www.siemens.com/tia-selection-tool-standalone

Dimensioning - Traversing profile editor with graphical and tabular input

SITRAIN – Digital Industry Academy

Time for learning

Today's demands on our knowledge are every bit as diverse and dynamic as our profession itself. We keep learning more and longer – for our work, for our career and for ourselves. Advancing digitalization entails new topics and is also changing the way we absorb and process knowledge. SITRAIN – Digital Industry Academy offers the right source of knowledge here, which we can use anytime in just the way we need it. The time for learning is now.

Knowledge for every need

With its three areas – SITRAIN open, SITRAIN access and SITRAIN personal – SITRAIN offers you an all-encompassing range of options for an ongoing expansion of your knowledge and skills, suited for every type of learner. And SITRAIN uses advancing digitalization to continuously expand content and offer new training methods.

SITRAIN – Digital Industry Academy Customer Support Germany

Tel.: +49 911 895-7575 Email: sitrain.digital.industry.academy.de@siemens.com

Knowledge you can always find

SITRAIN open bundles useful information, worthwhile data and up-to-date expert knowledge about Siemens products for industry. Search it anytime, find anything – and always the right stuff.

Knowledge that gets you ahead

SITRAIN access is learning in the digital age. It offers you individualized ways to build your knowledge and access to exclusive digital training courses. Take advantage of sustainable learning success with a wide range of learning methods. Improve your skills – whether working in groups with others, or by yourself. Whenever, wherever and however you need to.

Knowledge you can experience

We all want to learn from the best. And SITRAIN personal's training courses let you benefit from our well-practiced trainers' expert knowledge, along with direct access to our training equipment. That's the best way to convey knowledge – whether at your company or in our training classrooms.

Services and documentation

SIMATIC MICRO-DRIVE training case

The SIMATIC MICRO-DRIVE training case contains the following components

- F-TM ServoDrive ST
- PDC Drives, PDC100F variant
- ebm-papst ECI42.20 motor, with angle disc, without gear unit, without brake
- KnorrTec cable
- 4 buttons for digital inputs and 2 LED lamps for digital outputs for PDC100F
- Prepared for S7-1500 PLC.

The SIMATIC MICRO-DRIVE training case is supplied in the form of a stackable Tanos Systainer case.

Overview

The SIMATIC F-TM ServoDrive ST Starter Kit with Article No. 6BK1637-6AB00-0BU0 includes

- SIMATIC MICRO-DRIVE F-TM ServoDrive ST
- SIMATIC ET 200SP PROFINET IM 155-6PN ST Interface Module
- SIMATIC ET 200SP BaseUnit type U0
- All-in-one plug-in cable CSD_LAiO2, length 1.5 m
- ebm-papst motor ECI42.20 24 V

Selection and ordering data

Description		

SIMATIC F-TM ServoDrive ST Starter Kit	6BK1637-6AB00-0BU0

Scope of supply:

- SIMATIC MICRO-DRIVE F-TM ServoDrive ST
- SIMATIC ET 200SP PROFINET IM 155-6PN ST
- Interface Module SIMATIC ET 200SP
- BaseUnit type U0
- All-in-one plug-in cable CSD_LAiO2, length 1.5 m
- ebm-papst motor ECI42.20 24 V

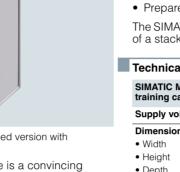

SIMATIC MICRO-DRIVE, training case, advanced version with F-TM ServoDrive ST

The SIMATIC MICRO-DRIVE training case is a convincing demonstration system thanks to its compact design.

It is suitable for direct customer presentations as well as for tests in technical departments. It enables the functions of SIMATIC MICRO-DRIVE to be demonstrated and tested quickly Selection and ordering data and easily.

Keep your business running and shaping your digital future - with Industry Services

Optimizing the productivity of your equipment and operations can be a challenge, especially with constantly changing market conditions. Working with our service experts makes it easier. We understand your industry's unique processes and provide the services needed so that you can better achieve your business goals.

You can count on us to maximize your uptime and minimize your downtime, increasing your operations' productivity and reliability. When your operations have to be changed quickly to meet a new demand or business opportunity, our services give you the flexibility to adapt. Of course, we take care that your production is protected against cyber threats. We assist in keeping your operations as energy and resource efficient as possible and reducing your total cost of ownership. As a trendsetter, we ensure that you can capitalize on the opportunities of digitalization and by applying data analytics to enhance decision making: You can be sure that your plant reaches its full potential and retains this over the longer lifespan. You can rely on our highly dedicated team of engineers, technicians and specialists to deliver the services you need – safely, professionally and in compliance with all regulations. We are there for you, where you need us, when you need us.

Industry Services

Industry Services – Portfolio overview

Overview

Digital Industry Services make your industrial processes transparent to gain improvements in productivity, asset availability, and energy efficiency.

Production data is generated, filtered and translated with intelligent analytics to enhance decision-making.

This is done whilst taking data security into consideration and with continuous protection against cyber-attack threats.

www.siemens.com/global/en/products/services/industry/ digital-industry-services.html

Training Services

From the basics and advanced to specialist skills, SITRAIN courses provide expertise right from the manufacturer – and encompass the entire spectrum of Siemens products and systems for the industry.

Worldwide, SITRAIN courses are available wherever you need a training course in more than 170 locations in over 60 countries.

https://support.industry.siemens.com/cs/ww/en/sc/2226

Industry Online Support site for comprehensive information, application examples, FAQs and support requests.

Technical and Engineering Support for advice and answers for all inquiries about functionality, handling, and fault clearance. The Service Card as prepaid support for value added services such as Priority Call Back or Extended Support offers the clear advantage of quick and easy purchasing.

Information & Consulting Services, e.g. SIMATIC System Audit; clarity about the state and service capability of your automation system or Lifecycle Information Services; transparency on the lifecycle of the products in your plants.

https://support.industry.siemens.com/cs/ww/en/sc/2235

Spare Parts Services are available worldwide for smooth and fast supply of spare parts – and thus optimal plant availability. Genuine spare parts are available for up to ten years. Logistic experts take care of procurement, transport, custom clearance, storage and order management. Reliable logistics processes ensure that components reach their destination as needed.

Since not all spare parts can be kept in stock at all times, Siemens offers a preventive measure for spare parts provisioning on the customer's premises with optimized **Spare Parts Packages** for individual products, custom-assembled drive components and entire integrated drive trains – including risk consulting.

Asset Optimization Services help you design a strategy for parts supply where your investment and carrying costs are reduced and the risk of obsolescence is avoided.

https://support.industry.siemens.com/cs/ww/en/sc/2110

Overview (continued)

Repair Services are offered on-site and in regional repair centers for fast restoration of faulty devices' functionality.

Also available are extended repair services, which include additional diagnostic and repair measures, as well as emergency services.

https://support.industry.siemens.com/cs/ww/en/sc/2154

Provide a cost-effective solution for the expansion of entire plants, optimization of systems or upgrading existing products to the latest technology and software, e.g. migration services for automation systems.

Service experts support projects from planning through commissioning and, if desired over the entire extended lifespan, e.g. Retrofit for Integrated Drive Systems for an extended lifetime of your machines and plants.

https://support.industry.siemens.com/cs/ww/en/sc/2286

Siemens specialists are available globally to provide expert field and maintenance services, including commissioning, functional testing, preventive maintenance and fault clearance. All services can be included in customized service agreements with defined reaction times or fixed maintenance intervals.

https://support.industry.siemens.com/cs/ww/en/sc/2265

A technical Service Program or Agreement enables you to easily bundle a wide range of services into a single annual or multiyear agreement.

You pick the services you need to match your unique requirements or fill gaps in your organization's maintenance capabilities.

Programs and agreements can be customized as KPI-based and/or performance-based contracts.

https://support.industry.siemens.com/cs/ww/en/sc/2275

Industry Services

Online Support

Overview

Siemens Industry and Online Support with some 1.7 million visitors per month is one of the most popular web services provided by Siemens. It is the central access point for comprehensive technical know-how about products, systems and services for automation and drives applications as well as for process industries.

In connection with the challenges and opportunities related to digitalization you can look forward to continued support with innovative offerings.

1. General Provisions

By using this catalog you can purchase products (hardware, software and services) described therein from Siemens Aktiengesellschaft subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in European Union

For customers with a seat or registered office in European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for stand-alone software products and software products forming a part of a product or project, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or registered Office in Germany"¹) and/or
- for consulting services the "Allgemeine Geschäftsbedingungen für Beratungsleistungen der Division DF – Deutschland" (available only in German) and/or
- for other services, the "Supplementary Terms and Conditions for Services ("BL")¹ and/or
- for other supplies the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹).

In case such supplies should contain Open Source Software, the conditions of which shall prevail over the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹¹, a notice will be contained in the scope of delivery in which the applicable conditions for Open Source Software are specified. This shall apply mutatis mutandis for notices referring to other third party software components.

1.2 For customers with a seat or registered office outside European Union

For customers with a seat or registered office outside European Union, the following terms and conditions apply subordinate to T&C:

- for products, which include specific terms and conditions in the description text, these specific terms and conditions shall apply and subordinate thereto,
- for consulting services the "Standard Terms and Conditions for Consulting Services of the Division DF for Customers with a Seat or Registered Office Outside of Germany"¹ and/or
- for other services the "International Terms & Conditions for Services"¹⁾ supplemented by "Software Licensing Conditions"¹⁾ and/or
- for other supplies of hard- and software the "International Terms & Conditions for Products⁽¹⁾ supplemented by "Software Licensing Conditions⁽¹⁾

1.3 For customers with master or framework agreement

To the extent our supplies and/or services offered are covered by an existing master or framework agreement, the terms and conditions of that agreement shall apply instead of T&C.

2. Prices

The prices are in ${\ensuremath{\varepsilon}}$ (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

An exact explanation of the metal factor can be downloaded at:

https://mall.industry.siemens.com/legal/ww/en/ terms_of_trade_en.pdf

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a onemonth buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog – especially with regard to data, dimensions and weights given – these are subject to change without prior notice.

 The text of the Terms and Conditions of Siemens AG can be downloaded at https://mall.industry.siemens.com/legal/ww/en/ terms_of_trade_en.pdf

4. Export Regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export may be subject to license. We shall indicate in the delivery details whether licenses are required under German, European and US export lists.

Our products are controlled by the U.S. Government (when labeled with "ECCN" unequal "N") and authorized for export only to the country of ultimate destination for use by the ultimate consignee or end-user(s) herein identified. They may not be resold, transferred, or otherwise disposed of, to any other country or to any person other than the authorized ultimate consignee or end-user(s), either in their original form or after being incorporated into other items, without first obtaining approval from the U.S. Government or as otherwise authorized by U.S. law and regulations. Products labeled with "AL" unequal "N" are subject to European / national export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Products without label, with label "AL:N" / "ECCN:N", or label "AL:9X99999" / "ECCN: 9X9999" may require authorization from responsible authorities depending on the final end-use, or the destination.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you shall comply with all applicable national and international (re-)export control regulations. In any event of such transfer of goods, works and services you shall comply with the (re-) export control regulations of the Federal Republic of Germany, of the European Union and of the United States of America.

Prior to any transfer of goods, works and services provided by us to a third party you shall in particular check and guarantee by appropriate measures that

- there will be no infringement of an embargo imposed by the European Union, by the United States of America and/ or by the United Nations by such transfer, by brokering of contracts concerning those goods, works and services or by provision of other economic resources in connection with those goods, works and services, also considering the limitations of domestic business and prohibitions of by-passing those embargos;
- such goods, works and services are not intended for use in connection with armaments, nuclear technology or weapons, if and to the extent such use is subject to prohibition or authorization, unless required authorization is provided;
- the regulations of all applicable Sanctioned Party Lists of the European Union and the United States of America concerning the trading with entities, persons and organizations listed therein are considered.

If required to enable authorities or us to conduct export control checks, you, upon request by us, shall promptly provide us with all information pertaining to the particular end customer, the particular destination and the particular intended use of goods, works and services provided by us, as well as any export control restrictions existing.

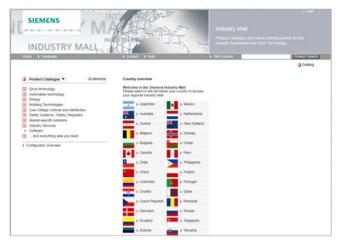

You acknowledge that under the EU embargo regulations against Iran, Syria and Russia respectively the sale of certain listed goods and related services is subject to authorization by the competent export control authorities of the European Union. If (i) the goods or services ordered by you are destined for Iran, Syria or Russia, and (ii) the contract for our supplies and/or services is subject to prior authorization of the competent export control authorities of the European Union, the contract between you and us shall come into force in this respect only upon granting of such authorization.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.

Industry Mall, downloading and ordering catalogs

Easy product selection and ordering: Industry Mall

Industry Mall

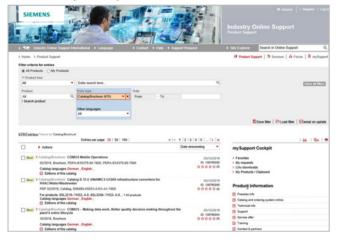

The Industry Mall is a Siemens AG Internet ordering platform. It provides you with online access to a comprehensive product spectrum that is presented in an informative, well-organized way.

Powerful search functions help you select the required products, while configurators enable you to configure complex product and system components quickly and easily. CAx data are also available for you to use.

Data transfer allows the entire procedure, from selection through ordering to tracking and tracing, to be carried out online. Availability checks, individual customer discounting, and quotation preparation are also possible.

Subject to changes and errors. The information given in this document only contains general descriptions and/or performance features which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products. The requested performance features are binding only when they are expressly agreed upon in the concluded contract.

All product designations may be trademarks or other rights of Siemens AG, its affiliated companies or other companies whose use by third parties for their own purposes could violate the rights of the respective owner.

Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit https://www.siemens.com/industrialsecurity

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under https://www.siemens.com/industrialsecurity
