## Legal information

### Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

#### DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

#### WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

#### CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

#### NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

### Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions.

Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

### Proper use of Siemens products

Note the following:

#### WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

### Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

### Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

# Preface

## Purpose of the documentation

This manual supplements the system manual ET 200SP distributed I/O system (<http://support.automation.siemens.com/WW/view/en/58649293>).

Functions that generally relate to the system are described in this manual.

The information provided in this manual and in the system/function manuals supports you in commissioning the system.

## Changes compared to previous version

Changes described in this manual, compared to the edition 07/2014:

- 3-wire connection for voltage output
- Derating trend for current output for modules as of hardware version FS 06.

## Conventions

CPU: When the term "CPU" is used in this manual, it applies to the CPUs of the S7-1500 automation system as well as to the CPUs/interface modules of the distributed I/O system ET 200SP.

STEP 7: In this documentation, "STEP 7" is used as a synonym for all versions of the configuration and programming software "STEP 7 (TIA Portal)".

Please also observe notes marked as follows:

---

### Note

A note contains important information on the product described in the documentation, on the handling of the product or on the section of the documentation to which particular attention should be paid.

---

## Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, solutions, machines, equipment and/or networks. They are important components in a holistic industrial security concept. With this in mind, Siemens' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered. You can find more information about industrial security on the Internet (<http://www.siemens.com/industrialsecurity>).

To stay informed about product updates as they occur, sign up for a product-specific newsletter. You can find more information on the Internet (<http://support.automation.siemens.com>).

# Documentation guide

The documentation for the SIMATIC ET 200SP distributed I/O system is arranged into three areas.

This arrangement enables you to access the specific content you require.

## Basic information

The system manual describes in detail the configuration, installation, wiring and commissioning of the SIMATIC ET 200SP. distributed I/O system. The STEP 7 online help supports you in the configuration and programming.

## Device information

Product manuals contain a compact description of the module-specific information, such as properties, wiring diagrams, characteristics and technical specifications.

### General information

The function manuals contain detailed descriptions on general topics regarding the SIMATIC ET 200SP distributed I/O system, e.g. diagnostics, communication, Web server, designing interference-free controllers.

You can download the documentation free of charge from the Internet (<http://w3.siemens.com/mcms/industrial-automation-systems-simatic/en/manual-overview/tech-doc-et200/Pages/Default.aspx>).

Changes and supplements to the manuals are documented in a Product Information.

You can download the product information free of charge from the Internet (<https://support.industry.siemens.com/cs/us/en/view/73021864>).

### Manual Collection ET 200SP

The Manual Collection contains the complete documentation on the SIMATIC ET 200SP distributed I/O system gathered together in one file.

You can find the Manual Collection on the Internet (<http://support.automation.siemens.com/WW/view/en/84133942>).

### "mySupport"

With "mySupport", your personal workspace, you make the most of your Industry Online Support.

In "mySupport" you can store filters, favorites and tags, request CAx data and put together your personal library in the Documentation area. Furthermore, your data is automatically filled into support requests and you always have an overview of your current requests.

You need to register once to use the full functionality of "mySupport".

You can find "mySupport" in the Internet (<https://support.industry.siemens.com/My/ww/en>).

### "mySupport" - Documentation

In the Documentation area of "mySupport", you have the possibility to combine complete manuals or parts of them to make your own manual.

You can export the manual in PDF format or in an editable format.

You can find "mySupport" - Documentation in the Internet (<http://support.industry.siemens.com/My/ww/en/documentation>).

## "mySupport" - CAx Data

In the CAx Data area of "mySupport", you can have access to the latest product data for your CAx or CAe system.

You configure your own download package with a few clicks.

In doing so you can select:

- Product images, 2D dimension drawings, 3D models, internal circuit diagrams, EPLAN macro files
- Manuals, characteristics, operating manuals, certificates
- Product master data

You can find "mySupport" - CAx Data in the Internet  
(<http://support.industry.siemens.com/my/ww/en/CAxOnline>).

## Application examples

The application examples support you with various tools and examples for solving your automation tasks. Solutions are shown in interplay with multiple components in the system - separated from the focus in individual products.

You can find the application examples on the Internet  
(<https://support.industry.siemens.com/sc/ww/en/sc/2054>).

## TIA Selection Tool

With the TIA Selection Tool, you can select, configure and order devices for Totally Integrated Automation (TIA).

This tool is the successor of the SIMATIC Selection Tool and combines the known configurators for automation technology into one tool.

With the TIA Selection Tool, you can generate a complete order list from your product selection or product configuration.

You can find the TIA Selection Tool on the Internet  
(<http://w3.siemens.com/mcms/topics/en/simatic/tia-selection-tool>).

## SIMATIC Automation Tool

You can use the SIMATIC Automation Tool to run commissioning and maintenance activities simultaneously on various SIMATIC S7 stations as a bulk operation independently of the TIA Portal.

The SIMATIC Automation Tool provides a multitude of functions:

- Scanning of a PROFINET/Ethernet network and identification of all connected CPUs
- Address assignment (IP, subnet, gateway) and station name (PROFINET device) to a CPU
- Transfer of the data and the programming device/PC time converted to UTC time to the module
- Program download to CPU
- Operating mode switchover RUN/STOP
- Localization of the CPU by means of LED flashing
- Reading out CPU error information
- Reading the CPU diagnostic buffer
- Reset to factory settings
- Updating the firmware of the CPU and connected modules

You can find the SIMATIC Automation Tool on the Internet  
(<https://support.industry.siemens.com/cs/ww/en/view/98161300>).

## PRONETA

With SIEMENS PRONETA (PROFINET network analysis), you analyze the plant network during commissioning. PRONETA features two core functions:

- The topology overview independently scans PROFINET and all connected components.
- The IO check is a fast test of the wiring and the module configuration of a system.

You can find SIEMENS PRONETA on the Internet  
(<https://support.industry.siemens.com/cs/ww/en/view/67460624>).

# 2

## Product overview

### 2.1 Properties

#### Article number

6ES7135-6HD00-0BA1

#### View of the module

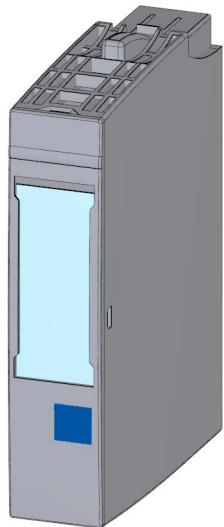

Image 2-1 View of the module AQ 4xU/I ST

## Properties

The module has the following technical properties:

- Analog output module with 4 outputs
  - For current output and
  - voltage output
- Output range for current output:
  - $\pm 20$  mA, resolution 16 bits including sign
  - 0 to 20 mA, resolution 15 bits
  - 4 to 20 mA, resolution 14 bits
- Output range for voltage output:
  - $\pm 10$  V, resolution 16 bits including sign
  - $\pm 5$  V, resolution 15 bits including sign
  - 0 to 10 V, resolution 15 bits
  - 1 to 5 V, resolution 13 bits
- Electrically isolated from supply voltage L+
- Configurable diagnostics per module

The module supports the following functions:

- Firmware update
- I&M identification data
- Configuration in RUN
- PROFenergy

Table 2- 1 Version dependencies of other module functions

| Function     | Product version of the module as of | Firmware version of the module as of |
|--------------|-------------------------------------|--------------------------------------|
| Value status | 1                                   | V1.1.0                               |

You can configure the module with STEP 7 (TIA Portal) and with a GSD file.

## Accessories

The following accessories must be ordered separately:

- Labeling strips
- Color identification labels
- Reference identification label
- Shield connector

## See also

You will find additional information on the accessories in the ET 200SP distributed I/O system (<http://support.automation.siemens.com/WW/view/en/58649293>) system manual.

# Wiring up

## 3.1 Terminal assignment

### General terminal assignment

Table 3- 1 Terminal assignment

| 5  | Q <sub>0-</sub> | 6                         | Q <sub>1-</sub> |  |                       |                            |
| 7  | Q <sub>2-</sub> | 8                         | Q <sub>3-</sub> |  |                       |                            |
| 9  | S <sub>0+</sub> | 10                        | S <sub>1+</sub> |  |                       |                            |
| 11   | S <sub>2+</sub> | 12                        | S <sub>3+</sub> |  |                       |                            |
| 13   | S <sub>0-</sub> | 14                        | S <sub>1-</sub> |  |                       |                            |
| 15   | S <sub>2-</sub> | 16                        | S <sub>3-</sub> |  |                       |                            |
| L+   | 24 VDC          | M                         | M               | <ul style="list-style-type: none"> <li>Q<sub>n+</sub>: Analog output voltage/current (positive), channel n</li> <li>Q<sub>n-</sub>: Analog output voltage/current (negative), channel n</li> <li>S<sub>n+</sub>: Sensor line positive, channel n</li> <li>S<sub>n-</sub>: Sensor line negative, channel n</li> </ul> |                       |                            |
| Voltage 2-wire connection                                |                 | Voltage 3-wire connection |                 | Voltage 4-wire connection  | Current               |                            |
|  |                 |                           |                 |  |                       |                            |

<sup>1</sup> Usable BaseUnit types, can be identified by the last two digits of the article number.

### Note

The first BaseUnit of a station must be a light-colored BaseUnit. Also keep this in mind during the configuration.

You will find additional information on the BaseUnit types in the ET 200SP distributed I/O system (<http://support.automation.siemens.com/WW/view/en/58649293>) system manual.

## 3.2 Schematic circuit diagram

### Schematic circuit diagram

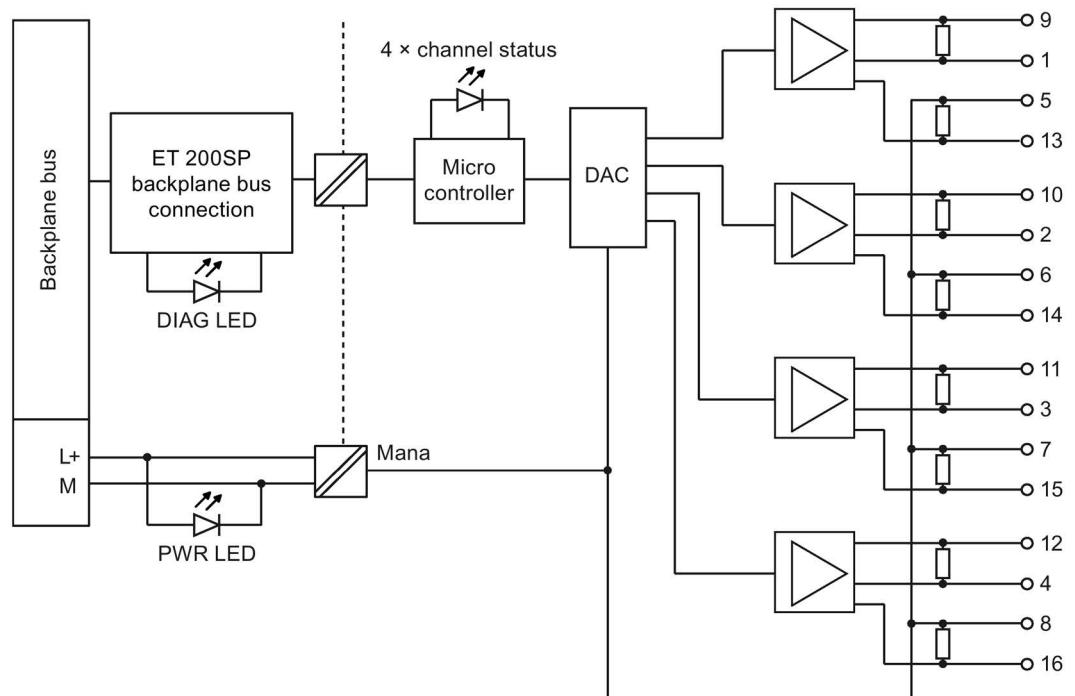

Image 3-1 Schematic circuit diagram for AQ 4xU/I ST

# Parameters/address space

# 4

## 4.1 Output ranges

The analog output module AQ 4xU/I ST has the following measuring ranges:

Table 4- 1 Output ranges

| Output type | Output ranges | Resolution             |
|-------------|---------------|------------------------|
| Current     | $\pm 20$ mA   | 16 bits including sign |
|             | 0 to 20 mA    | 15 bits                |
|             | 4 to 20 mA    | 14 bits                |
| Voltage     | $\pm 10$ V    | 16 bits including sign |
|             | $\pm 5$ V     | 15 bits including sign |
|             | 0 to 10 V     | 15 bits                |
|             | 1 to 5 V      | 13 bits                |

The tables of the output ranges, overflow, overrange, etc. can be found in section Representation of analog values (Page 34).

## 4.2 Parameters

### Parameters of the AQ 4xU/I ST

The effective range of the parameters depends on the type of configuration. The following configurations are possible:

- Central operation with an S7-1500 CPU
- Distributed operation on PROFINET IO in an ET 200SP system
- Distributed operation on PROFIBUS DP in an ET 200SP system

When assigning parameters in the user program, use the "WRREC" instruction to transfer the parameters to the module using the data records; refer to the section Parameter assignment and structure of the parameter data record (Page 31).

The following parameter settings are possible:

Table 4- 2 Settable parameters and their defaults (GSD file)

| Parameters                                 | Value range  | Default           | Configuration in RUN | Effective range with configuration software, e.g. STEP 7 (TIA Portal) |                      |
|--|--|-------------------|----------------------|---|----------------------|
|  |  |                   |                      | GSD file PROFINET IO  | GSD file PROFIBUS DP |
| Diagnostics<br>No supply voltage L+        | <ul style="list-style-type: none"> <li>• Disable</li> <li>• Enable</li> </ul>  | Disable           | yes                  | Module  | Module               |

| Reaction to CPU STOP                       | <ul style="list-style-type: none"> <li>• Turn off</li> <li>• Keep last value</li> <li>• Output substitute value</li> </ul>   | Turn off          | yes                  | Channel   | Module               |

| Parameters       | Value range   | Default                                | Configuration in RUN | Effective range with configuration software, e.g. STEP 7 (TIA Portal) |                      |
|------------------|---|--|----------------------|---|----------------------|
|                  |   |  |                      | GSD file PROFINET IO  | GSD file PROFIBUS DP |
| Substitute value | For permissible substitute values for the various output ranges, see appendix Parameter data record (Page 30), Substitute values → Codes for substitute value table | 0                                      | yes                  | Channel   | Channel              |
| Potential group  | <ul style="list-style-type: none"> <li>• Use potential group of the left module</li> <li>• Allow new potential group</li> </ul>                                     | Use potential group of the left module | no                   | Module  | Module               |

<sup>1</sup> no diagnostics detection between -0.5 V and +0.5 V (no short-circuit detection)

<sup>2</sup> no diagnostics detection between -3 mA and +3 mA (no wire break detection)

---

### Note

#### Unused channels

"Disable" the unused channels in the parameter assignment. This improves the temperature characteristics of the module, see Derating, section Technical specifications (Page 25).

A disabled channel always returns the value "no current or voltage".

---

## 4.3      Explanation of the parameters

### Diagnostics no supply voltage L+

Enabling of the diagnostics for no or insufficient supply voltage L+.

### Diagnostics: Short-circuit

Enabling of the diagnostics when a short-circuit of the actuator supply occurs.

### Diagnostics overflow

Enabling of the diagnostics when the output value exceeds the overrange.

### Diagnostics underflow

Enabling of the diagnostics when the output value exceeds the overrange, falls below the minimum output value or reaches underflow.

### Diagnostics wire break

Enabling of the diagnostics if the line to the actuator is broken.

### Output type / output range

See section Output ranges (Page 16)

### Reaction to CPU STOP

Determines the behavior of the module at CPU STOP.

### Substitute value

The substitute value is the value that the module outputs in case of a CPU STOP.

### Potential group

Specifies that a BaseUnit with voltage supply feed-in is located in this slot (see system manual ET 200SP Distributed I/O System (<http://support.automation.siemens.com/WW/view/en/58649293>)).

## 4.4 Address space

### Configuration options

The following configurations are possible:

- Configuration 1: Without value status
- Configuration 2: With value status

### Evaluating the value status

If you enable the value status for the analog module, an additional byte is occupied in the input address space. Bits 0 to 3 in this byte are assigned to a channel. They provide information about the validity of the analog value.

Bit = 1: There are no faults/errors on the module.

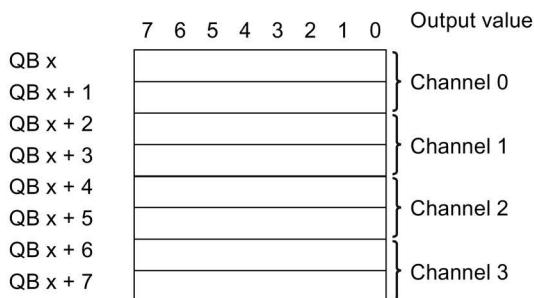

Bit = 0: Channel is disabled or there is a fault/error on the module.

If a fault/error occurs on a channel with this module, the value status for all channels is 0.

### Address space

The following figure shows the assignment of the address space for the AQ 4×U/I ST with value status (Quality Information (QI)). The addresses for the value status are only available if the value status is enabled.

Assignment in the process image output (PIQ)

Assignment in the process image input (PII)

## Interrupts/diagnostics alarms

### 5.1 Status and error display

#### LED display

The figure below shows the LED displays of the AQ 4xU/I ST.

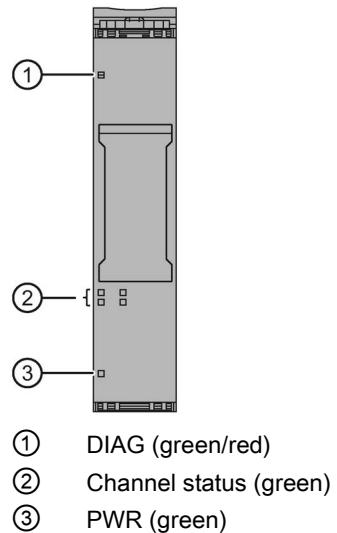

Image 5-1 LED display

**Meaning of the LED displays**

The following tables show the meaning of the status and error displays. Measures for dealing with diagnostics alarms can be found in the section Diagnostics alarms (Page 24).

**DIAG LED**

Table 5- 1    DIAG LED fault/error display

| DIAG LED  | Meaning  |
|---|--|
|  off     | Backplane bus supply of the ET 200SP not OK          |
|  Flashes | Module parameters not assigned                       |
|  on      | Module parameters assigned and no module diagnostics |
|  Flashes | Module parameters assigned and module diagnostics    |

**Channel status LED**

Table 5- 2    Status display of the channel status LED

| Channel status LED  | Meaning          |
|---|------------------|
|  off | Channel disabled |
|  on  | Channel enabled  |

**PWR LED**

Table 5- 3    Status display of the PWR LED

| PWR LED   | Meaning                   |
|---|---------------------------|
|  off | No supply voltage L+      |
|  on  | Supply voltage L+ present |

## 5.2 Interrupts

The analog output module AQ 4×U/I ST supports diagnostic interrupts.

### Diagnostics interrupt

The module generates a diagnostics interrupt for the following events:

- Channel temporarily unavailable
- Short-circuit (voltage)
- Overtemperature
- Line break (current)
- High limit violated
- Low limit violated
- Error
- Parameter assignment error
- No load voltage

## 5.3 Diagnostics alarms

A diagnostics alarm is output for each diagnostics event and the DIAG LED on the module flashes. The diagnostics alarms can, for example, be read from the diagnostics buffer of the CPU. You can evaluate the error codes with the user program.

Table 5- 4 Diagnostics alarms, their meaning and how to deal with them

| Diagnostics alarm               | Error code      | Meaning   | Remedy   |
|---------------------------------|-----------------|---|--|
| Channel temporarily unavailable | 1F <sub>H</sub> | Firmware being updated. The module is currently not performing any outputs.   | –  |
|                                 |                 | The channel is currently being calibrated.  |  |
| Short-circuit                   | 1 <sub>H</sub>  | Short-circuit of the actuator supply  | Correct the process wiring   |
| Overtemperature                 | 4 <sub>H</sub>  | Thermal overload of the I/O module  | Correct the process wiring   |
| Wire break                      | 6 <sub>H</sub>  | Actuator circuit impedance too high.  | Use a different actuator type or wire differently, e.g. use cables with a larger cross-section                                   |
|                                 |                 | Wire break between the module and actuator  | Connect the cable  |
|                                 |                 | Channel not connected (open)  | <ul style="list-style-type: none"> <li>• Disable the channel ("output type" parameter)</li> <li>• Connect the channel</li> </ul> |
| High limit violated             | 7 <sub>H</sub>  | The output value specified by the user program exceeds the overrange.   | Correct the output value   |
| Low limit violated              | 8 <sub>H</sub>  | The output value specified by the user program is below the underrange.   | Correct the output value   |
| Error                           | 9 <sub>H</sub>  | Internal module error occurred.   | Replace module   |
| Parameter assignment error      | 10 <sub>H</sub> | <ul style="list-style-type: none"> <li>• The module cannot evaluate parameters for the channel.</li> <li>• Incorrect parameter assignment.</li> </ul> | Correct the parameter assignment   |
| No load voltage                 | 11 <sub>H</sub> | No or insufficient supply voltage L+  | <ul style="list-style-type: none"> <li>• Check supply voltage L+ on the BaseUnit</li> <li>• Check BaseUnit type</li> </ul>       |

| Address space per module, max.                               | 8 bytes; + 1 byte for QI information |

## Technical specifications

### 6.1 Technical specifications

|  | <b>6ES7135-6HD00-0BA1</b>        |
|--|----------------------------------|
| <b>Analog outputs</b>  |                                  |
| Number of analog outputs   | 4                                |
| Voltage output, short-circuit current, max.                                    | 45 mA                            |
| Cycle time (all channels), min.  | 5 ms                             |
| <b>Output ranges, voltage</b>  |                                  |
| 0 to 10 V  | Yes; 15 bits                     |
| 1 to 5 V   | Yes; 13 bits                     |
| -5 to +5 V   | Yes; 15 bits including sign      |
| -10 to +10 V   | Yes; 16 bits including sign      |
| <b>Output ranges, current</b>  |                                  |
| 0 to 20 mA   | Yes; 15 bits                     |
| -20 to +20 mA  | Yes; 16 bits including sign      |
| 4 to 20 mA   | Yes; 14 bits                     |
| <b>Connection of actuators</b>   |                                  |
| for voltage output two-wire connection   | Yes                              |
| for voltage output three-wire connection                                       | Yes                              |
| for voltage output four-wire connection  | Yes                              |
| for current output two-wire connection   | Yes                              |
| <b>Load resistance (in nominal range of the output)</b>                        |                                  |
| For voltage outputs, min.  | 2 kΩ                             |
| For voltage outputs, capacitive load, max.                                     | 1 µF                             |
| For current outputs, max.  | 500 Ω                            |
| For current outputs, inductive load, max.                                      | 1 mH                             |
| <b>Destruction limit for externally applied voltages and currents</b>          |                                  |
| Voltages at the outputs  | 30 V                             |
| <b>Cable length</b>  |                                  |
| Cable length shielded, max.  | 1000 m; 200 m for voltage output |
| <b>Analog value formation</b>  |                                  |
| <b>Oscillation time</b>  |                                  |
| For resistive load   | 0.1 ms                           |
| For capacitive load  | 1 ms                             |
| For inductive load   | 0.5 ms                           |
| <b>Errors/accuracies</b>   |                                  |
| Linearity error (in relation to output range), (+/-)                           | ±0.03 %                          |
| Temperature error (in relation to output range), (+/-)                         | 0.005 %/K                        |
| Crosstalk between outputs, min.  | -50 dB                           |
| Repeat accuracy in settled state at 25 °C (in relation to output range), (+/-) | ±0.05 %                          |
| <b>Operational limit in the entire temperature range</b>                       |                                  |
| Voltage in relation to output range, (+/-)                                     | ±0.5 %                           |
| Current in relation to output range, (+/-)                                     | ±0.5 %                           |

|  | 6ES7135-6HD00-0BA1                |
|--|-----------------------------------|
| <b>Basic error limit (operational limit at 25 °C)</b>          |                                   |
| Voltage in relation to output range, (+/-)                     | ±0.3 %                            |
| Current in relation to output range, (+/-)                     | ±0.3 %                            |
| <b>Interrupts/diagnostics/status information</b>               |                                   |
| Substitute values can be applied                               | Yes                               |
| <b>Interrupts</b>  |                                   |
| Diagnostics interrupt  | Yes                               |
| <b>Diagnostics alarms</b>                                      |                                   |
| Diagnostics  | Yes                               |
| Monitoring of supply voltage                                   | Yes                               |
| Wire break   | Yes                               |
| Short-circuit  | Yes                               |
| Overflow/underflow   | Yes                               |
| <b>Diagnostics display LED</b>                                 |                                   |
| Monitoring of the supply voltage (PWR LED)                     | Yes; green LED                    |
| Channel status display   | Yes; green LED                    |
| For module diagnostics   | Yes; green/red LED                |
| <b>Electrical isolation</b>                                    |                                   |
| <b>Electrical isolation of channels</b>                        |                                   |
| Between the channels   | No                                |
| Between the channels and the backplane bus                     | Yes                               |
| Between the channels and the supply voltage of the electronics | Yes                               |
| <b>Permitted potential difference</b>                          |                                   |
| Between different circuits                                     | 75 VDC / 60 VAC (basic isolation) |
| <b>Insulation</b>  |                                   |
| Insulation tested with   | 707 VDC (type test)               |
| <b>Environmental conditions</b>                                |                                   |
| <b>Operating temperature</b>                                   |                                   |
| Horizontal installation, min.                                  | 0 °C                              |
| Horizontal installation, max.                                  | 60 °C                             |
| Vertical installation, min.                                    | 0 °C                              |
| Vertical installation, max.                                    | 50 °C                             |
| <b>Dimensions</b>  |                                   |
| Width  | 15 mm                             |
| <b>Weights</b>   |                                   |
| Weight, approx.  | 31 g                              |

# Parameter data record

A

## A.1 Dependencies when configuring with GSD file

When configuring the module with a GSD file, remember that the settings of some parameters are dependent on each other.

### Configuring with a PROFINET GSD file

The table lists the properties and their dependencies on the output type and output range for PROFINET.

| Output type | Output range | Diagnostics          |                    |          |           |            | Reaction to CPU STOP | Substitute value |
|-------------|--------------|----------------------|--------------------|----------|-----------|------------|----------------------|------------------|
|             |              | No supply voltage L+ | Short-circuit to M | Overflow | Underflow | Wire break |                      |                  |
| deactivated | *            | *                    | *                  | *        | *         | *          | *                    | *                |
| Voltage     | ±5 V         | x                    | x                  | x        | x         | -          | x                    | x                |
|             | ±10 V        | x                    | x                  | x        | x         | -          | x                    | x                |
|             | 1..5 V       | x                    | x                  | x        | x         | -          | x                    | x                |
|             | 0..10 V      | x                    | x                  | x        | x         | -          | x                    | x                |
| Current     | ±20 mA       | x                    | -                  | x        | x         | x          | x                    | x                |
|             | 0..20 mA     | x                    | -                  | x        | x         | x          | x                    | x                |
|             | 4..20 mA     | x                    | -                  | x        | x         | x          | x                    | x                |

x = Property is allowed, - = Property is not allowed, \* = Property is not relevant

### Configuring with a PROFIBUS GSD file

The table lists the properties and their dependencies on the output type and output range for PROFIBUS.

| Output type | Output range | Diagnostics          |                    |                        |            | Reaction to CPU STOP | Substitute value |
|-------------|--------------|----------------------|--------------------|------------------------|------------|----------------------|------------------|
|             |              | No supply voltage L+ | Short-circuit to M | Overflow/<br>Underflow | Wire break |                      |                  |
| deactivated | *            | *                    | *                  | *                      | *          | *                    | *                |
| Voltage     | ±5 V         | x                    | x                  | x                      | -          | x                    | x                |
|             | ±10 V        | x                    | x                  | x                      | -          | x                    | x                |
|             | 1..5 V       | x                    | x                  | x                      | -          | x                    | x                |
|             | 0..10 V      | x                    | x                  | x                      | -          | x                    | x                |
| Current     | ±20 mA       | x                    | -                  | x                      | x          | x                    | x                |
|             | 0..20 mA     | x                    | -                  | x                      | x          | x                    | x                |
|             | 4..20 mA     | x                    | -                  | x                      | x          | x                    | x                |

x = Property is allowed, - = Property is not allowed, \* = Property is not relevant

## A.2 Parameter assignment and structure of the parameter data record

### Parameter assignment in the user program

The module can be re-configured in RUN (for example, the voltage or current values of selected channels can be changed in RUN without having an effect on the other channels).

### Changing parameters in RUN

The "WRREC" instruction is used to transfer the parameters to the module using data record 128. The parameters set in STEP 7 are not changed in the CPU, which means that the parameters set in STEP 7 will be valid again after a restart.

### Output parameter STATUS

If errors occur when transferring parameters with the "WRREC" instruction, the module continues operation with the previous parameter assignment. The STATUS output parameter contains a corresponding error code.

You will find a description of the "WRREC" instruction and the error codes in the STEP 7 online help.

### Structure of data record 128

---

#### Note

Channel 0 contains the diagnostics for the entire module.

---

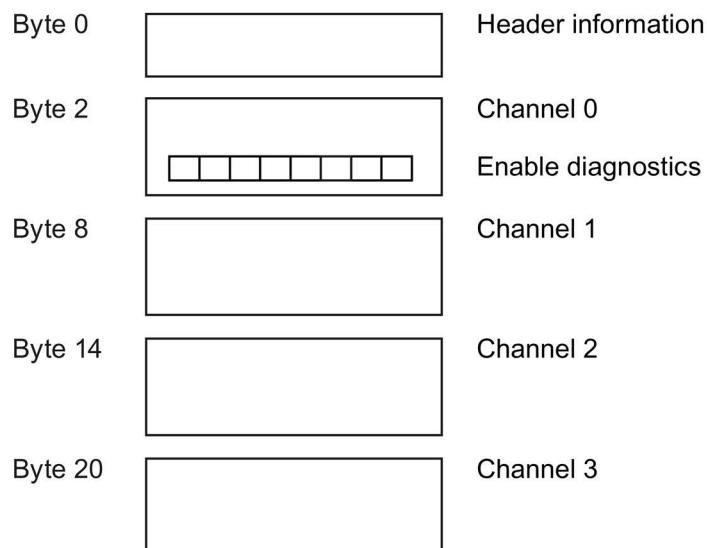

Image A-1 Structure of data record 128

## Header information

The figure below shows the structure of the header information.

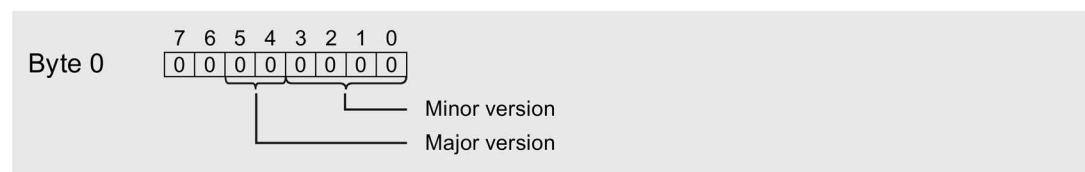

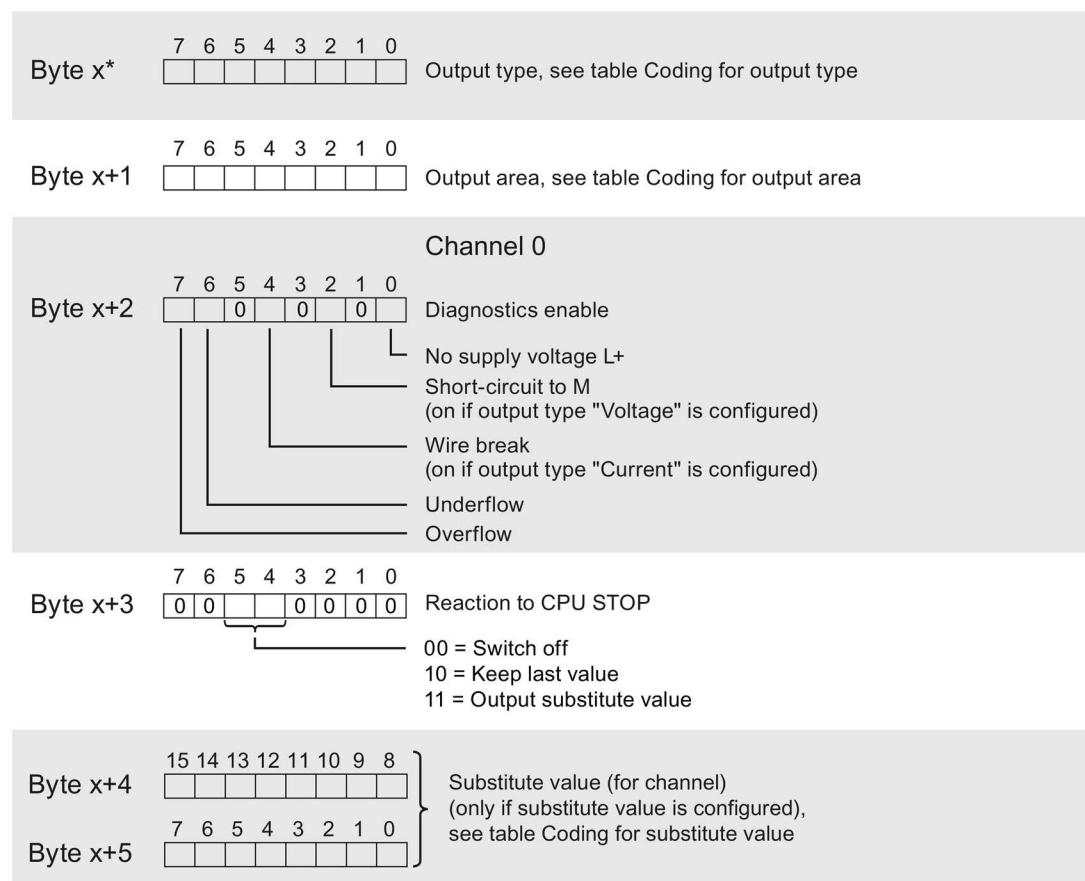

Image A-2    Header information

## Parameters

The figure below shows the structure of the parameters for channels 0 to 3.

You enable a parameter by setting the corresponding bit to "1".

\* x = 2 + (channel number × 6); channel number = 0 to 3

Image A-3    Structure byte x up to x+5 for the channel 0 to 3

## Codes for output type

The following table contains the codes for the output types of the analog output module. You enter this coding in byte x (see previous figure).

Table A- 1 Codes for output type

| Output type | Coding    |
|-------------|-----------|
| Deactivated | 0000 0000 |
| Voltage     | 0000 0001 |
| Current     | 0000 0011 |

## Codes for output range

The following table contains the codes for the output ranges of the analog output module. You enter these codes in byte x+1 of data record 128 (see previous figure).

Table A- 2 Codes for output range

| Output range   | Coding    |
|----------------|-----------|
| <b>Voltage</b> |           |
| ±10 V          | 0000 0000 |
| ±5 V           | 0000 0001 |
| 0 to 10 V      | 0000 0010 |
| 1 to 5 V       | 0000 0011 |
| <b>Current</b> |           |
| ±20 mA         | 0000 0000 |
| 0 to 20 mA     | 0000 0001 |
| 4 to 20 mA     | 0000 0010 |

## Codes for substitute value

The following table contains the codes for the substitute values. You enter these codes in bytes x+4 and x+5 (see previous figure).

| Output range   | Permissible substitute value |
|----------------|------------------------------|
| <b>Voltage</b> |                              |
| ±10 V          | -32512 to 32511              |
| ±5 V           | -32512 to 32511              |
| 0 to 10 V      | 0 to 32511                   |
| 1 to 5 V       | -6912 to 32511               |
| <b>Current</b> |                              |
| ±20 mA         | -29031 to 29030              |
| 0 to 20 mA     | 0 to 29030                   |
| 4 to 20 mA     | -692 to 29376                |

# Representation of analog values

# B

This appendix describes the analog values for all output ranges that you can use with the analog module AQ 4xU/I ST.

## Measured value resolution

The digitized analog value is the same for all output values at the same nominal range. Analog values are output as fixed point numbers in two's complement.

In the following table, you will find the representation of the binary analog values and the associated decimal or hexadecimal units of the analog values.

The resolutions 14, 15 and 16 bits including sign are shown. Each analog value is entered in the ACCU left-justified. The bits marked with "x" are set to "0".

Table B- 1 Possible resolutions of the analog values

| Resolution in bits | Values  |             | Analog value       |                 |
|--------------------|---------|-------------|--------------------|-----------------|
|                    | Decimal | Hexadecimal | High byte          | Low byte        |
| 14                 | 4       | 4H          | Sign 0 0 0 0 0 0 0 | 0 0 0 0 0 1 x x |
| 15                 | 2       | 2H          | Sign 0 0 0 0 0 0 0 | 0 0 0 0 0 0 1 x |
| 16                 | 1       | 1H          | Sign 0 0 0 0 0 0 0 | 0 0 0 0 0 0 0 1 |

## B.1 Representation of output ranges

In the following tables, you can find the digitized representation of the bipolar and unipolar range output ranges. The resolution is 16 bits.

Table B- 2 Bipolar output ranges

| Dec. value | Output value in % | Data word       |                 |                 |                 |                 |                 |                |                |                |                |                |                |                |                |                |                |   |                      | Range |
|------------|-------------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|---|----------------------|-------|
|            |                   | 2 <sup>15</sup> | 2 <sup>14</sup> | 2 <sup>13</sup> | 2 <sup>12</sup> | 2 <sup>11</sup> | 2 <sup>10</sup> | 2 <sup>9</sup> | 2 <sup>8</sup> | 2 <sup>7</sup> | 2 <sup>6</sup> | 2 <sup>5</sup> | 2 <sup>4</sup> | 2 <sup>3</sup> | 2 <sup>2</sup> | 2 <sup>1</sup> | 2 <sup>0</sup> |   |                      |       |
| ≥32512     | 117.589           | 0               | 1               | 1               | 1               | 1               | 1               | 1              | 0              | 1              | 1              | 1              | 1              | 1              | 1              | 1              | 1              | 1 | Maximum output value |       |
| 32511      | 117.589           | 0               | 1               | 1               | 1               | 1               | 1               | 1              | 0              | 1              | 1              | 1              | 1              | 1              | 1              | 1              | 1              | 1 | Overrange            |       |
| 27649      | 100.004           | 0               | 1               | 1               | 0               | 1               | 1               | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 1 |                      |       |
| 27648      | 100.000           | 0               | 1               | 1               | 0               | 1               | 1               | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0 | Nominal range        |       |
| 1          | 0.003617          | 0               | 0               | 0               | 0               | 0               | 0               | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 0              | 1 |                      |       |
