Digitalization and Communication
Apps for Process Instrumentation

**SITRANS SAM IQ**

**Overview**
SITRANS SAM IQ (Smart Asset Management) is an app that applies diagnostics and monitoring to field device data.

**Benefits**
- One application for all field devices and protocols
- Increase plant uptime by avoiding upcoming device failures
- Reduce of maintenance costs through event driven maintenance
- Increase transparency of measurement reliability
- Assurance of product and process quality

**Application**
With the smart asset management app, SITRANS SAM IQ, you can make unused, but valuable, data available. SITRANS SAM IQ will manage all your field device data, with comprehensive possibilities of diagnostics and monitoring.

By monitoring the health state of each field device and event-based device management, SITRANS SAM IQ reduces upcoming device failures. Moreover, device-specific diagnostics of process values and customized multi-parameter dashboards allow you to validate device measurements and optimize your processes.

**Design**
The cloud based version of SITRANS SAM IQ is updated automatically. The annual license includes the update service.

**Application versions**

Apps for Process Instrumentation

SITRANS mobile IQ

Overview

SITRANS mobile IQ is an app that gives you easy access to SITRANS field devices via your smartphone or tablet.

Benefits

- Commissioning and parameterization of field devices.
- Displays device status and measurement values.
- Helps with identifying errors and troubleshooting in case of failures.
- Direct link to manuals, certificates, FAQs, and much more.

Application

Commissioning and parameterization of field devices:

- **Device list**
  All supported devices in the environment are displayed.
- **Device Cockpit**
  Overview of the connected device, device status, and current measured values.
- **Setup**
  Commissioning and parameterization of the device, including graphical support.
- **Charts**
  History of selected measurement and diagnostic values.

Mode of operation

**Mobile devices / operating systems**

SITRANS mobile IQ is compatible with supported Android and iOS mobile devices.

SITRANS mobile IQ uses a Bluetooth interface to communicate with the field devices. Your mobile device must have a Bluetooth interface, version 4.2 or better.

Currently supported field devices are listed on SIOS (http://www.siemens.com/osSITRANSmobileIQ) and in the App Store and Google Play. Additional field devices are in preparation and require a new installation of the App on your mobile device. Only the listed field devices are compatible with SITRANS mobile IQ.

**Data connection:** internet connection is required to access additional information such as manuals of supported field devices.

Integration

© Siemens 2020
SITRANS store IQ is a Siemens MindSphere based application used to monitor and manage inventories in process and discrete industries.

Benefits
- Manage entire inventory network from a central location.
- Reduce overhead required to monitor and plan stock levels.
- Avoid unnecessary downtime and cost associated with unexpected shortages.
- Increase transparency of measurement reliability.

Application
Inventory management is a necessary task in virtually every value chain. Inventories are required whenever material is processed, produced, or assembled. SITRANS store IQ is an inventory management app based on Siemens MindSphere, that records measurements and data from various types of instrumentation, including a level device at a process tank or scales mounted in storage shelves. SITRANS store IQ also monitors auxiliary measurements, helping to better characterize inventories, for example, with temperature readings or binaries.

SITRANS store IQ records readings and visualizes them in a customizable way, offering structuring with hierarchies, map views, and graph views. The acquired data can be used to create proactive alarms via email or SMS, exactly as required for your application. The SITRANS store IQ app can be used on a desktop computer or mobile device.

SITRANS store IQ application includes:
- Monitored assets
  - Entry: 3
  - Small: 10
  - Medium: 100

License type
- Subscription with 12-month initial subscription term. The 12 month subscription will renew automatically if not cancelled 60 days before the end of the first subscription term.

License upgrade options
- Asset upgrade
  - Additional monitored assets: 10
  - Additional data ingest rate: 0.1 kB/s
  - Additional data storage: 0.5 GB
SITRANS store IQ is based on MindSphere and supports various possibilities to onboard instrumentation devices and acquire data. The figure shows several integration examples.
**Overview**

SITRANS DTM provides an easy way for Field Device Tool (FDT)/Device Type Manager (DTM) users to parameterize Siemens Instruments using international standards.

**Benefits**

- Same look and feel for all Siemens field instruments
- Support for Quick start wizards and other dialog boxes
- Quick overview using table and tree views
- Online and offline configuration
- Conformity to IEC profiles for HART and PROFIBUS

**Application**

Electronic Device Description (EDD) is a proven way to describe the behavior and functionality of field instruments and other automation components.

For many years, EDD-based tools such as SIMATIC PDM from Siemens or handheld communicator have been used successfully in the process industry. Some years ago, an additional technology called FDT / DTM with the same approach was introduced to the market. To support the FDT DTM Technology for Siemens devices, the software SITRANS DTM has been developed which combines both technologies, EDD and FDT.

SITRANS DTM uses EDDs as the device description and provides the DTM interface to allow the integration of our field instruments into FDT-frame applications.

The following field instruments are currently available in SITRANS DTM:

- SITRANS TH300 HART
- SITRANS TH400 PA
- SITRANS P300 HART
- SITRANS P DSIII HART
- SITRANS P F M MAGFLO MAG6000 DP/PA
- SITRANS F C MASSFLO MASS6000 PA/PA
- SITRANS PROBE LU HART 6 m, 12 m
- SITRANS LR200 HART, PA
- SITRANS LR250 HART, PA
- SITRANS LR260 HART, PA
- SITRANS LR560 HART, PA
- SIPART PS2 HART, PA

Additionally, the SIPART PS2 FF has a DTM.

Overview

SIMATIC PDM (Process Device Manager) is a universal, vendor-independent tool for the configuration, parameter assignment, commissioning, diagnostics and servicing of intelligent field devices (sensors and actuators) and field components (remote I/Os, multiplexers, control-room devices, compact controllers), which in the following sections will be referred to simply as devices.

With one software product, SIMATIC PDM enables users to work with over 4,000 devices and device variants from Siemens and over 200 other manufacturers worldwide on a single homogeneous user interface.

The user interface satisfies the requirements of the VDI/VDE GMA 2187 and IEC 65/349/CD directives. Parameters and functions for all supported devices are displayed in a consistent and uniform fashion independent of their communications interface. Even complex devices with several hundred parameters can be represented clearly and processed quickly. Using SIMATIC PDM it is very easy to navigate in highly complex stations such as remote I/Os and even connected field devices.

From the viewpoint of device integration, SIMATIC PDM is the most powerful open process device manager on the global market. Devices not previously supported can be integrated in SIMATIC PDM by importing their device description packages (either EDD or FDI). This provides security for your investment and saves you investment costs, training expenses and follow-up costs.

SIMATIC PDM supports the operative system management in particular through:

- Uniform representation and operation of devices
- Uniform representation of diagnostics information
- Indicators for preventive maintenance and servicing
- Detection of changes in the project and device
- Increasing the operational reliability
- Reducing the investment, operating and maintenance costs
- Quantity options for
  - Transfer of parameters between devices
  - Transfer of parameter sets to the devices
  - Export and import functions
  - Diagnostics update
Digitalization and Communication
Field Device Instrumentation

SIMATIC PDM

Overview (continued)

SIMATIC PDM can be used extremely flexibly and tailored to a specific task for field device service:

- Single-point station for point-to-point connection to field devices
- Local service and parameter assignment station with connection to fieldbus segments
- Central service and parameter assignment station with connection to plant bus
- Central HART service and parameter assignment station for HART multiplexers and WirelessHART field devices
- Integrated into the stand-alone SIMATIC PDM Maintenance Station
- Integrated into the SIMATIC PCS 7 process control system

Maintenance personnel can assign field device parameters at mobile and stationary workstations with SIMATIC PDM. Practically every workstation integrated in the production plant can be used for configuration. Service personnel are thus able to work directly at the location of the field device, while data is stored centrally in the engineering station or maintenance station. This leads to a significant shortening of maintenance and travel times. Additional device-independent system functions support higher-level maintenance stations for creating progress lists for work and servicing.

When a maintenance station is configured in the SIMATIC PCS 7 process control system, SIMATIC PDM is integrated into it and transmits parameter data, diagnostic information and processing information. You can switch directly to the SIMATIC PDM views from the diagnostics faceplates in the maintenance station to perform diagnostics and work on the device in more detail.

A SIMATIC PDM user administration system based on SIMATIC Logon is used to assign various roles with defined function privileges to users. These function privileges refer to SIMATIC PDM system functions, e.g. writing to the device.

For all devices integrated with device description packages, SIMATIC PDM provides a range of information for display and further processing on the maintenance station, for example:

- Device type information (electronic rating plate)
- Detailed diagnostics information (manufacturer information, information on error diagnostics and troubleshooting, further documentation)
- Results of internal condition monitoring functions
- Status information (for example local configuration changes), device test completed
- Information on changes (audit trail report)
- Parameter information

SIMATIC PDM product structure

● Product component is part of the product package
o Optional product component for the product package, order additive
- Product component is not relevant for the product package or not available
1) For TAG definition, see "Design" section under "SIMATIC PDM TAGs"
2) In combination with SIMATIC PDM Integration in STEP 7/PCS 7
3) In combination with SIMATIC PDM Server

Customer-oriented product structure

The customer-oriented product structure of SIMATIC PDM provides optimal support for the named main use cases and enables you to adapt the scope of functions and performance to your individual requirements. The product range is organized as follows:

SIMATIC PDM Stand alone product packages

- SIMATIC PDM Single Point, a minimum configuration for single device handling
- SIMATIC PDM Basic for local service and parameter assignment stations as well as basic configuration for individual product package with optional product components
- SIMATIC PDM Service for local service and parameter assignment stations
- SIMATIC PDM Stand alone Server for central service and parameter assignment stations, e.g. for various plant units

SIMATIC PDM system-integrated product packages

- SIMATIC PDM S7 for local SIMATIC S7 engineering and service stations
- Various configurations for central SIMATIC PCS 7 engineering and service stations:
  - SIMATIC PDM PCS 7
  - SIMATIC PDM PCS 7 Server (enables device parameter assignment and diagnostics on clients of the PCS 7 engineering station and PCS 7 Maintenance Station)
  - SIMATIC PDM PCS 7-FF (supports the FOUNDATION Fieldbus H1)

In some circumstances, the product packages can be expanded with optional product components (for details, see the Design section).

**SIMATIC PDM Overview of Functions and Features**

- ● Product component is part of the product package
- ○ Optional product component for the product package, order additive
  - – Product component is not relevant for the product package or not available
**Digitalization and Communication**

**Field Device Instrumentation**

**SIMATIC PDM**

### Design (continued)

#### SIMATIC PDM Stand alone product packages

**SIMATIC PDM Single Point V9.1**

This minimum configuration with handheld functionality is intended for handling exactly one field device via point-to-point coupling. It cannot be expanded with functions or with SIMATIC PDM TAG or SIMATIC PDM 1 Client licenses. Upgrading to a different product variant, e.g. SIMATIC PDM Basic, or a different product version is also not possible.

Supported communication types:
- PROFIBUS DP/PA
- HART communication (modem, RS 232 and via PROFIBUS/PROFINET)
- Modbus
- Ethernet
- PROFINET

The functionality is matched accordingly. The device functions are supported as defined in the device description, for example: 
- Managing the device library and unlimited device selection
- Parameter assignment and diagnostics according to the device description
- Exporting and importing of parameter data
- Device identification
- Lifelist
- Printing the parameter list

**SIMATIC PDM Basic V9.1**

SIMATIC PDM Basic is for local service and parameter assignment stations on any computers (IPC/notebook) with local connection to bus segments or direct connection to the device.

Supported communication types:
- PROFIBUS DP/PA
- HART communication (modem, RS 232 and via PROFIBUS/PROFINET)
- Modbus
- Ethernet
- PROFINET

SIMATIC PDM Basic is equipped with all basic functions required for operation and parameter assignment of devices. That is, compared to SIMATIC PDM Single Point, it has the following additional functions:
- EDD-based diagnostics in the lifelist
- Memory function (only exporting and importing of parameter data)
- Report function
- Communication with HART field devices via remote I/Os

As a basic block for an individual configuration, SIMATIC PDM Basic can be expanded with all functional SIMATIC PDM options (PDM Routing only in combination with PDM Integration in STEP 7/PCS 7 required) as well as with cumulative sets of 10, 100 or 1 000 SIMATIC PDM TAGs. Without TAG expansion, SIMATIC PDM Basic is suitable for projects with up to 4 TAGs. SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

The SIMATIC PDM Extended option allows the activation of additional SIMATIC PDM system functions (for details, see SIMATIC PDM Extended V9.1 under "Optional product components").

**SIMATIC PDM Service V9.1**

With this product package for extended service, local service and parameter assignment stations can be realized on any type of computer (IPC/notebook) with a local connection to a bus segment or direct connection to field devices.

It comprises:
- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- 50 SIMATIC PDM TAGs

Like SIMATIC PDM Basic, SIMATIC PDM Service can be expanded with all functional SIMATIC PDM options (PDM Routing only in combination with PDM Integration in STEP 7/PCS 7 required) as well as with cumulative SIMATIC PDM TAGs (sets of 10, 100 or 1 000) (see "Optional product components"). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option. It is permitted to upgrade to another product version.

Note: For use of gateways and for PROFINET or Ethernet communication with field devices, SIMATIC PDM TAG licenses are charged for according to the objects configured in the process device plant view as follows:
- 10 SIMATIC PDM TAGs per S7 DSGW (data record gateway) with one PROFIBUS subnet
- 20 SIMATIC PDM TAGs per S7 DSGW with more than one PROFIBUS subnet
- 10 TAGs per IE/PB Link
- 1 TAG per field device (except in the case of special specifications)

**SIMATIC PDM stand-alone server V9.1**

With the SIMATIC PDM Stand alone Server product package, you can establish central service and parameter assignment stations that operate according to the client/server principle. Portals opened on licensed SIMATIC PDM clients (SIMATIC PDM sessions) enable handling of production plant field devices via the SIMATIC PDM server on the plant bus assigned via registration. The product package can be used multiple times within a plant, e.g. for various plant units. It comprises:
- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM Server
- 2 × SIMATIC PDM 1 Client
- 100 SIMATIC PDM TAGs

SIMATIC PDM Stand alone Server can be expanded with all functional SIMATIC PDM options (PDM Routing only in combination with PDM Integration in STEP 7/PCS 7 required) as well as with cumulative sets of 10, 100 or 1 000 SIMATIC PDM TAGs and SIMATIC PDM 1-client licenses (see "Optional product components"). The portals opened on these clients (SIMATIC PDM sessions) must also be licensed with the SIMATIC PDM 1-client licenses (besides the SIMATIC PDM clients). For details about this, refer to "SIMATIC PDM 1 Client" under "Optional product components". For user management of the SIMATIC PDM clients, the SIMATIC Logon product is also required. It is possible to upgrade to another product version.

Note: For use of gateways and for PROFINET or Ethernet communication with field devices, SIMATIC PDM TAG licenses are charged according to the objects configured in the process device plant view (for details, see corresponding note under SIMATIC PDM Service V9.1).
**Design (continued)**

**SIMATIC PDM system-integrated product packages**

**SIMATIC PDM S7 V9.1**

The SIMATIC PDM S7 product package designed for use in a SIMATIC S7 configuration environment is intended for setup of a local SIMATIC S7 engineering and service station. It requires the installation of STEP 7 V5.5+SP4. It includes:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- 100 SIMATIC PDM TAGs

SIMATIC PDM S7 can be expanded with the functional options SIMATIC PDM Routing, SIMATIC PDM Communication FOUNDATION Fieldbus, SIMATIC PDM Server, and SIMATIC PDM HART Server as well as with cumulative SIMATIC PDM TAGs (sets of 10, 100 or 1,000) (see “Optional product components”). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

**SIMATIC PDM PCS 7 V9.1**

The SIMATIC PDM PCS 7 product package suitable for use in a SIMATIC PCS 7 configuration environment is intended for use in a central SIMATIC PCS 7 engineering and service station. It comprises:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- SIMATIC PDM Routing
- 100 SIMATIC PDM TAGs

SIMATIC PDM PCS 7 can be expanded with the functional options SIMATIC PDM Communication FOUNDATION Fieldbus and SIMATIC PDM Server as well as with cumulative SIMATIC PDM TAGs (sets of 10, 100 or 1,000) (see “Optional product components”). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

**SIMATIC PDM PCS 7 Server V9.1**

Instead of SIMATIC PDM PCS 7, the SIMATIC PDM PCS 7 Server product package expanded with the functional option SIMATIC PDM Communication FOUNDATION Fieldbus as well as with cumulative sets of 10, 100 or 1,000 SIMATIC PDM TAGs and SIMATIC PDM 1-Client licenses (see “Optional product components”). The portals opened on these clients (SIMATIC PDM sessions) must also be licensed with the SIMATIC PDM 1-client licenses (besides the SIMATIC PDM clients). For details about this, refer to “SIMATIC PDM 1 Client” under “Optional product components”.

**SIMATIC PDM PCS 7-FF V9.1**

Instead of SIMATIC PDM PCS 7, the SIMATIC PDM PCS 7-FF product package expanded with the functional option SIMATIC PDM Communication FOUNDATION Fieldbus option can also be used for a central SIMATIC PCS 7 engineering and service station. This additionally supports parameter assignment of field devices on FOUNDATION Fieldbus H1. Components of SIMATIC PDM PCS 7-FF are:

- SIMATIC PDM Basic (incl. 4 SIMATIC PDM TAGs)
- SIMATIC PDM Extended
- SIMATIC PDM integration in STEP 7/PCS 7
- SIMATIC PDM Routing
- SIMATIC PDM Communication FOUNDATION Fieldbus
- 100 SIMATIC PDM TAGs

SIMATIC PDM PCS 7-FF V9.1 can be expanded with the functional option SIMATIC PDM Server as well as with cumulative sets of 10, 100 or 1,000 SIMATIC PDM TAGs (see “Optional product components”). SIMATIC PDM 1 Client licenses (sets of 1) can also be added in combination with the SIMATIC PDM Server option.

**Optional product components**

**SIMATIC PDM Extended V9.1 option**

The SIMATIC PDM Extended option enables you to unlock other system functions for SIMATIC PDM Basic and SIMATIC PDM, for example:

- Change log
- Calibration report
- Extended information in the Lifelist
- Export and import functions
- Print functions
- Document manager
- Comparison function
- Group operations
- Setting device IDs

This functionality is already integrated in the following product packages: SIMATIC PDM Stand alone Server, SIMATIC PDM S7, SIMATIC PDM PCS 7, SIMATIC PDM PCS 7 Server and SIMATIC PDM PCS 7-FF.

**SIMATIC PDM Integration option in STEP 7/PCS 7 V9.1**

This option is used for the integration of SIMATIC PDM in a SIMATIC S7 or SIMATIC PCS 7 configuration environment. SIMATIC PDM can then be started directly from the hardware configurator (HW Config) in STEP 7/SIMATIC PCS 7.

This functionality is already integrated in the product packages of category “SIMATIC PDM system-integrated” (SIMATIC PDM S7, SIMATIC PDM PCS 7, SIMATIC PDM PCS 7 Server, and SIMATIC PDM PCS 7-FF).
Siemens PDM 1 Client (version-independent)

Siemens PDM 1 Client is a cumulative single-client license for Siemens PDM configurations with Siemens PDM server, for example Siemens PDM stand-alone server or Siemens PDM // PCS 7 server. The license is used to activate registered Siemens PDM clients and Siemens PDM sessions (opened portals) on these clients.

Each "Siemens PDM 1 Client" license activates one Siemens PDM client with one Siemens PDM session. A Siemens PDM session is defined as one opened portal together with the parameter views of the field devices opened from the portal. Each additional simultaneously opened Siemens PDM session on this client requires its own "Siemens PDM 1 Client" license. For larger projects, up to 30 registered Siemens PDM Clients are possible.

The "Siemens PDM 1 Client" license must be transferred to the computer with the Siemens PDM Server. The Siemens PDM Standalone Server product package comes with 2 "Siemens PDM 1 Client" licenses.

Siemens PDM Software Media Package V9.1

The current Siemens PDM installation software is offered without a license in the form of the Siemens PDM Software Media Package. Purchasing of corresponding software licenses is necessary to unlock the product-specific functionalities.

With Siemens PDM product packages, a Siemens PDM Software Media Package is supplied together with each ordering item when supplied via goods delivery (not with optional product components). Further Siemens PDM Software Media Packages must be ordered separately as required.

The software of the Siemens PDM Media Package without a license can be used for demonstration purposes in demo mode. The Siemens PDM functionality is limited as follows in demo mode:

- Stand alone mode
- Storage functions disabled
- Export and import functions disabled
- Expanded functionality disabled
- Communication functions restricted

Information on ordering and delivery

Installation software for the Siemens PDM is provided in the form of a software media package. Software media packages and product-specific software licenses are separate packages, which are not merged into a single delivery unit for a goods delivery.

The number of delivered software media packages can be determined by the number of ordered items. You can find more information under "Delivery form package" in the "Software Media and Logistics" chapter, "PCS 7 Software Packages" section of the ST PCS 7 catalog.
Digitalization and Communication
Field Device Instrumentation

SIMATIC PDM

Function

**SIMATIC PDM, parameter view and trend window**

**SIMATIC PDM core functions**
- Creation of project-specific device libraries
- Adjustment and modification of device parameters
- Comparing (e.g. project and device data)
- Plausibility testing of data input
- Device identification and testing
- Device status indication (operating modes, interrupts, states)
- Simulation
- Diagnostics (standard, detailed)
- Export/import (parameter data, logs, documents)
- Management (e.g. networks and PCs)
- Commissioning functions, e.g. measuring circuit tests of device data
- Lifecycle management functions, e.g. for device replacement
- Global and device-specific modification logbook for user operations (audit trail)
- Device-specific calibration reports
- Graphic presentations of echo envelope curves, trend displays, valve diagnosis results etc.
- Presentation of incorporated manuals
- Document manager for integration of up to 10 multimedia files

Integration

**Device integration**

SIMATIC PDM supports all devices defined by the Electronic Device Description (EDD) and devices described by Field Device Integration Technology (FDI Technology V1.2). EDD is standardized to EN 50391 and IEC 61804. Internationally it is the most widely used standardized technology for device integration. At the same time, it is the guideline of the established organizations for
- PROFIBUS and PROFINET (PI – PROFIBUS & PROFINET International)
- HART (FCG: Field Communication Group)
- Foundation Fieldbus (FCG: Field Communication Group)

The devices are integrated directly in SIMATIC PDM through a company-specific EDD or through the libraries of the FCG. To achieve improved transparency, they can be managed in project-specific device libraries.

Field devices are described in the EDD or FDI device description packages in terms of functionality and construction using the Electronic Device Description Language (EDDL). Using this description, SIMATIC PDM automatically creates its user interfaces with the specific device data. By simply importing the manufacturer’s device-specific device description packages, you can update existing devices and integrate further devices in SIMATIC PDM.

**Technical support**

If you wish to use devices which cannot be found in the SIMATIC PDM device description library, we would be pleased to help you integrate them.

Support Request

You can request support by service specialists at Technical Support by using a “Support Request” on the Internet:

### Minimum configuration

- **SIMATIC PDM Single Point V9.1** including 1 TAG; product package for operation and configuration of one field device, communication via PROFIBUS DP/PA, HART (modem, RS 232, PROFIBUS/PROFINET), Modbus, Ethernet or PROFINET.
- Additional functions or SIMATIC PDM TAGs are not possible.
- 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user.
- Without SIMATIC PCS 7 Software Media Package.

### Basic configuration for individual product package as well as local service and parameter assignment stations

- **SIMATIC PDM Basic V9.1** including 4 TAGs; product package for operation and configuration of field devices and components, communication via PROFIBUS DP/PA, HART (modem, RS 232, PROFIBUS/PROFINET), Modbus, Ethernet or PROFINET.
- 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user.
- Without SIMATIC PCS 7 Software Media Package.

### Configuration for local service and parameter assignment station

- **SIMATIC PDM Service V9.1** Product package for service and measuring circuit tests on a local service station, with:
  - SIMATIC PDM Basic incl. 4 TAGs
  - 50 TAGs
  - 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), floating license for 1 user.
  - Without SIMATIC PCS 7 Software Media Package.

### Basic delivery and online delivery

- **Licence key on USB flash drive and Certificate of License, bundle with 1 x SIMATIC PDM Software Media Package per order item.**

### Configuration for central service and parameter assignment station

- **SIMATIC PDM stand-alone server V9.1** Product package for service and device management in plant units, with:
  - SIMATIC PDM Basic incl. 4 TAGs
  - SIMATIC PDM Extended
  - SIMATIC PDM Server
  - 2 x SIMATIC PDM 1 Client
  - 100 TAGs
  - 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information), single license for 1 installation.

## More information

### Update/Upgrade

Projects with SIMATIC PDM V7.0 can only be upgraded to version 9.1 by first upgrading to version 8.0. Two upgrade packages are offered for SIMATIC PDM V8.x/V9.0:

- SIMATIC PDM Upgrade Package Basic\(^1\) (with/without SIMATIC PDM HART Server option in each case) for configurations based on:
  - SIMATIC PDM Basic
  - SIMATIC PDM Service
  - SIMATIC PDM S7
  - SIMATIC PDM PCS 7

- SIMATIC PDM Upgrade Package Complete\(^1\) for configurations based on:
  - SIMATIC PDM PCS 7 Server
  - SIMATIC PDM PCS 7-FF

\(^1\) Optional product components for SIMATIC PDM such as PDM Extended, PDM Integration in STEP 7/PCS 7, PDM Server and PDM Communication FOUNDATION Fieldbus are each included in a product package listed in the SIMATIC PDM Upgrade Package Basic or SIMATIC PDM Upgrade Package Complete and are implicitly authorized to be updated via the corresponding license. The SIMATIC PDM Upgrade Package Complete is required for use of the product components PDM Server or PDM Communication FOUNDATION Fieldbus.

For more information, see the section "Update/upgrade packages", "Updates/upgrades asynchronous to the PCS 7 version" - "Upgrades SIMATIC PDM".

### SIMATIC PDM Software Media Package
- **SIMATIC PDM Software Media Package V9.1**
  - Installation software without license, 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information)
  - Without SIMATIC PCS 7 Software Media Package
  - Note: Can only be used in conjunction with a valid license or in demo mode!
- Goods delivery
  - SIMATIC PDM and device library software on DVD
- Online delivery
  - SIMATIC PDM and device library software download
Note: Email address required!

- **6ES7658-3GX68-0YT8**
- **6ES7658-3GX68-0YG8**

### SIMATIC PDM Software Media Package V9.1
- **SIMATIC PDM Software Media Package V9.1**
  - Installation software without license, 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information)
  - Without SIMATIC PCS 7 Software Media Package
  - Note: Can only be used in conjunction with a valid license or in demo mode!
- Goods delivery
  - SIMATIC PDM and device library software on DVD
- Online delivery
  - SIMATIC PDM and device library software download
Note: Email address required!

- **6ES7658-3GX68-0YT8**
- **6ES7658-3GX68-0YG8**

### SIMATIC PDM Software Media Package
- **SIMATIC PDM Software Media Package V9.1**
  - Installation software without license, 6 languages (English, German, French, Italian, Spanish, Chinese), software class A, runs on Windows 7 Ultimate 64-bit, Windows 10 Enterprise 2015 LTSB 64-bit, Windows Server 2012 R2 Standard 64-bit or Microsoft Windows Server 2016 Standard 64-bit (see SIMATIC PDM V9.1 Readme for latest information)
  - Without SIMATIC PCS 7 Software Media Package
  - Note: Can only be used in conjunction with a valid license or in demo mode!
- Goods delivery
  - SIMATIC PDM and device library software on DVD
- Online delivery
  - SIMATIC PDM and device library software download
Note: Email address required!

- **6ES7658-3GX68-0YT8**
- **6ES7658-3GX68-0YG8**

Existing installations based on SIMATIC PDM V6.x or V8.x/V9.0 (including SP in each case) can be upgraded straight to V9.1 with upgrade packages.
Digitalization and Communication

SITRANS Library

Overview

The SITRANS Library for SIMATIC PCS 7 V8.0 and higher extends the standard functionality of the SIMATIC PCS 7 Advanced Process Library (APL) with technological blocks and faceplates for device-specific functions of the SITRANS field devices.

Benefits

The SITRANS Library allows you to easily operate all device functions, such as the dosing of the SITRANS F M MAG6000, in a single faceplate. It also supports operator control and monitoring via Touch Panels as well as the integration of SIMATIC S 7 applications (only SITRANS F M MAG6000). The SITRANS Library is based on the modern design of the Advanced Process Library (APL). Together with the APL, the SITRANS Library enables you to create harmonic overall solutions with a consistent look & feel and optimum use of the functions of the SITRANS field devices in many industries.

It helps accelerate the engineering process, reduces the time-to-market, and simplifies process control. In addition, operator functions (such as "dosing") and process-related diagnostic information (such as empty pipe detection and flow direction) are provided.

Note:
SITRANS Library can only be used in combination with SIMATIC PCS 7 V8.0 or higher.

Application

The SITRANS Library is best used in combination with SIMATIC PCS 7 and SITRANS field devices.

A current list of SITRANS field devices and the supported SIMATIC PCS 7 versions is available at https://support.industry.siemens.com/cs/ww/de/view/85285872

The SITRANS Library can be used for all core sectors of the process industry. These are:
- Chemical industry
- Pharmaceutical industry
- Water and wastewater
- Glass and solar
- Oil & gas
- Food and beverage industry
- Minerals and mining

Design

The product structure is geared toward the operational environment in the SIMATIC PCS 7 process control system. Consequently, SITRANS Library is offered in the form of an engineering component:
- SITRANS Library engineering software with engineering license
- SITRANS Library Runtime license for one automation project (SIMATIC PCS 7 automation systems of all designs and S7-300 controllers)

The SITRANS Library product component enables you to perform configuration work on a SIMATIC PCS 7 engineering station.

The SITRANS Library product component allows you to run blocks from a library on an automation system.

When using function blocks from SITRANS Library in SIMATIC PC 7 automation systems, please note that SIMATIC PCS 7 AS Runtime POs are also booked.

Function

SITRANS Library for SIMATIC PCS 7/SIMATIC S7

Sublibrary for the functional expansion of the SIMATIC PCS 7 Advanced Process Library with:
- Function blocks and faceplates for SITRANS field devices
- Function blocks and faceplates for S7-400 and SIMATIC S7-300 with WinCC

The function blocks are configured in CFC.

Operator control and monitoring from a panel is configured with the panel interface blocks for the SITRANS F M MAG 6000 DP. Taking operating rights and hierarchical operating concepts (multi-control room operation) into consideration, the technological function can then be operated from both an operator station and a Touch Panel.

For detailed information on which field devices, which systems and system versions are supported as well as on the free download, see:
https://support.industry.siemens.com/cs/ww/de/view/85285872

SITRANS CC240 is the industrial gateway connecting HART devices (via SITRANS MX300 multiplexer) to the IT environment.

**Benefits**

- Reads out data from HART devices, including versions 5, 6, and 7.
- Reads data from existing installations or stand alone.
- Uses an onboard web application for configuration and asset monitoring purposes.
- Publishes data using OPC UA information model based on Namur Open Architecture.
- Publishes data to Siemens MindSphere using MindConnect Library.
- Publishes data via a .csv file export function.

**Application**

*When used in combination with SITRANS MX300, SITRANS CC240 can:*

- Establish a second data channel to existing installations to read out identification, diagnostic and configuration parameters.
- Provide data from process field devices to the IT environment using standard technologies such as OPC UA.
- Connect process field devices to Siemens Mindsphere, for example, to provide SITRANS store IQ with inventory management data.

SITRANS CC240

7MP2200-1CC15-2AA0

The Industrial gateway that connects up to 8 SITRANS MX300 with up to 64 HART field devices.
**Overview**

SITRANS MX300 is a HART multiplexer for use with the industrial gateway SITRANS CC240. Used in combination, these devices can read and acquire data from HART networks of up to 64 instruments.

**Benefits**

- Connect up to 8 HART devices of revisions 5, 6, or 7, in any combination.
- Combine up to 8 SITRANS MX300 devices with one SITRANS CC240, using the backplane connection to conveniently read up to 64 HART devices.
- Operate each channel selectively in slave mode (where there is an existing HART master) or in stand-alone mode (where there is no existing HART master), configurable using switches, 250 Ω for connection in series to the field devices or no load for the connection in parallel.
- Galvanically isolated channels allow the device to interface with different networks.
- Supports HART multidrop.
- Small footprint supports retrofitting of existing installations.

**Application**

*When used in combination with SITRANS CC240, SITRANS MX300 can:*

- Establish a second data channel for existing HART installations to read out identification, diagnostic and configuration parameters.
- Establish a physical connection to the HART device, ensuring proper handling of the HART communication protocol and avoid communication conflicts with additional HART masters that may be present on the 4 to 20 mA loop.

#### Input ranges (rated values)

| Input resistance (0 ... 20 mA) | 250 Ω, switchable |
| Input resistance (4 ... 20 mA)  | 250 Ω, switchable |

#### Ambient conditions

| Ambient temperature during operation | -40 ... +50 °C (-40 ... +122 °F) |
| Horizontal installation             | -40 ... +60 °C (-40 ... +140 °F) |
| Vertical installation               | -40 ... +50 °C (-40 ... +122 °F) |
| Relative humidity                   | Tested according to IEC 60068-2-78, IEC 60068-2-30 |
| Operation                           | 5 ... 80 % at 30 °C (86 °F) |
| Storage/transport                   | 5 ... 80 % at 25 ... 55 °C (77 ... 131 °F) (no condensation) |

#### Design

| Dimensions (W x H x D) | 144 x 90 x 53 mm (5.7 x 3.5 x 2.1 inch) |
| Weight                | 100 g (0.2 lb), without connectors |
| Enclosure             | Plastic enclosure |
|                      | Resistant to vibrations and shocks |
|                      | High electromagnetic compatibility, suitable for industrial environments |
| Degree and class of protection | IP20 |

#### Cable length

| Shielded, max          | 200 m |

#### Electrical isolation

| Between the channels   | Yes  |
| Between the channels and backplane bus/RS 485 | Yes |
| Between the channels and load voltage L+ | Yes |
| Isolation tested       | 1 500 V DC/1 min., type test |

#### EMC¹

| Interference immunity against discharge of static electricity | ± 4 kV contact discharge acc. to IEC 61000-4-2 |
|                                                               | ± 8 kV air discharge acc. to IEC 61000-4-2 |

### SITRANS MX300

#### Interference immunity against high-frequency electromagnetic fields

- Interference immunity against high-frequency radiation
  - 10 V/m for 80 ... 1 000 MHz, 80 % AM acc. to IEC 61000-4-3
  - 3 V/m for 1.4 ... 2 GHz, 80 % AM acc. to IEC 61000-4-3
  - 1 V/m for 2 ... 2.7 GHz, 80 % AM acc. to IEC 61000-4-3
  - 10 V for 150 kHz ... 80 MHz, 80 % AM acc. to IEC 61000-4-6

#### Interference immunity to cable-borne interference

- Interference immunity on supply cables
  - ± 2 kV acc. to IEC 61000-4-4, burst
  - ± 1 kV acc. to IEC 61000-4-5, surge
  - ± 2 kV acc. to IEC 61000-4-5, surge, length > 30 m
  - ± 2 kV in accordance with IEC 61000-4-8, burst, length > 30 m

#### Interference immunity against voltage surge

- Asymmetric interference
  - ± 1 kV acc. to IEC 61000-4-5, surge
  - ± 1 kV acc. to IEC 61000-4-5, surge

#### Interference immunity to magnetic fields at 50 Hz

- 100 A/m, to IEC 61000-4-8

#### Emission of conducted and non-conducted interference

- Interference emission via line/AC current cables

#### Supply voltage

- Isolated power supply
  - 24 V DC (9 ... 35 V) via backplane connector (limit 35 V)
- Rated value
  - 24 V DC
- Permissible range, lower limit
  - 9 V DC
- Permissible range, upper limit
  - 35 V DC
- Reverse polarity protection
  - Yes

#### Certificates and approvals

<table>
<thead>
<tr>
<th>General</th>
<th>CE</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>cULUS (in preparation)</td>
</tr>
</tbody>
</table>

#### Communication

- 8 x 4/20 mA HART input
- 1 x RS 485 interface via backplane connector

¹ EMC standards meet immunity requirements for industrial environments
² If there are voltage peaks on the power supply lines, use a protective device such as a varistor (MOV) ÜMOV = Urated x 1.2 (BLITZDUCTOR BVT AVD 24 (918 422) or compatible).

**HART multiplexer, 8 channels to connect up to 8 HART devices, 24 V DC supply voltage, rail mounting.**
**Overview**

HART is a widely used communication standard for field devices. HART devices are specified by the FieldComm Group.

The HART standard expands the analog 4 to 20 mA signal to modulated, industry-tested, digital signal transmission.

**Benefits**

- Tried-and-tested analog measured value transmission
- Simultaneous digital communication with bidirectional data transfer
- Possibility to transfer multiple measured variables from a field device (e.g. diagnostics, maintenance and process information)
- Connection to higher-level systems such as PROFINET DP
- Easy installation and commissioning

**Benefits in connection with SIMATIC PDM**

- Manufacturer-neutral operation of all HART devices through standardized parameter sets
- HART field devices described by HART DLL are integrated in SIMATIC PDM via the FieldComm catalog. HART-DD (Device Description) in SIMATIC PDM standardized, manufacturer-neutral and very widely used. Additional field devices are integrated in SIMATIC PDM via EDD (Electronic Device Description)
- Simple operation and commissioning of field devices, even in usage locations that are difficult to access
- Advanced diagnostics, evaluating and logging functions

**Application**

Devices can be connected in different ways:

- Through the distributed I/O
  - SIMATIC ET 200M, ET 200SP
  - SIMATIC ET 200iSP with the HART modules
  - or with analog modules 4 to 20 mA and HART Handheld Communicator,
- via a HART modem with which a point-to-point connection between the PC or Engineering System and the HART device can be established
- via HART multiplexers which are contained in the HART server of the HCF.

**Integration**

Siemens field devices listed in this catalog for process automation that can be controlled with HART:

**Measuring instruments for pressure**
- SITRANS P300
- SITRANS P310
- SITRANS P320
- SITRANS P3 DS III
- SITRANS P410

**Electropneumatic positioners**
- SIPART PS2

**Power supply units and isolation amplifiers**
- SITRANS I
Overview

Today, distributed automation solutions based on open fieldbuses are standard in many areas of the manufacturing industry and in process engineering. It is only with fieldbuses that the functional benefits of digital communication can be put to full use, e.g. better resolution of measured values, diagnostics options and remote parameterization.

Today, PROFIBUS is the most successful open fieldbus with a large installed base for a wide range of applications. Standardization according to IEC 61158 / EN 50170 provides you with future protection for your investment.

Benefits

- Fully modular system, from the sensor through to the control level, permits new plant concepts
- Problem-free exchangeability of field devices, including from different manufacturers, that comply with the standard profile
- Networking of transmitters, valves, actuators, etc.
- Implementation of intrinsically safe applications through use of the field bus in hazardous areas
- Easy installation of 2-wire cables for joint power supply and data transfer
- Reduced cabling costs through savings of material and installation time
- Reduced configuration costs through central, simple engineering of the field devices (PROFIBUS PA and HART with SIMATIC PDM, also with multi-vendor support)
- Fast and error-free installation
- Lower service costs thanks to simpler wiring and plant structure plus extensive diagnostics options
- Greatly reduced commissioning costs through simplified loop check
- Scaling/digitizing of the measured value in the field device already, hence no rescaling necessary in SIMATIC PCS 7

Application

PROFIBUS is suitable for fast communication with distributed I/O (PROFIBUS DP) in production automation as well as for communication tasks in process automation (PROFIBUS PA). It is the first fieldbus system that meets the demands of both areas with identical communication services.

The transfer technology of PROFIBUS PA is tailored to the requirements of the process industry. The standardized communication services guarantee interoperability between multi-vendor field devices and remote configuration of the field devices during operation.

With SIMATIC PDM (Process Device Manager), a universal tool that is not manufacturer-specific and is used for configuring, parameterizing, commissioning and diagnosing intelligent process devices on PROFIBUS, a variety of process devices of different manufacturers can be configured using a uniform graphic user interface.

PROFIBUS PA can be used both in standard environments and in hazardous areas. For use in hazardous areas, PROFIBUS PA and all connected devices have to be designed with type of protection Ex [i].

The uniform protocol of PROFIBUS DP and PROFIBUS PA enables the linking of both networks and thus the combination of timing performance and intrinsically safe transmission technology.

Function

PROFIBUS PA expands PROFIBUS DP with process-level components for direct connection of actuators and sensors. With PROFIBUS PA, the RS 485 transmission method is replaced by a different transmission method optimized for intrinsically safe applications. Both methods are standardized internationally in IEC 61158.

PROFIBUS PA uses the same communication protocol as DP; communication services and frames are identical.

With PROFIBUS PA, the information and energy supply for supplying the field devices can be conducted via a 2-wire cable.

Integration

Siemens field devices for process automation listed in this catalog that can be controlled with PROFIBUS:

**PROFIBUS PA**

- Measuring instruments for pressure
  - SITRANS P300
  - SITRANS P DS III
  - SITRANS P410
- Measuring instruments for temperature
  - SITRANS TH400
- Flow meters
  - SITRANS FM MAG 6000 19” / IP67
  - SITRANS FM MAG 6000 I / I Ex
  - SITRANS FM TRANSMAG 2
  - SITRANS FC MASS 6000 19” / IP67 / Ex d
  - SITRANS FUS060
- Level meters
  - Pointek CLS 200
  - Pointek CLS 300
  - SITRANS Probe LU
  - SITRANS LR200
  - SITRANS LR250
  - SITRANS LR260
  - SITRANS LR460
- Electropneumatic positioners
  - SIPART PS2
- Acoustic sensors for pump monitoring
  - SITRANS DA400

**PROFIBUS DP**

- Measuring instruments for temperature
  - SITRANS TO500
- Flow meters
  - SITRANS FM MAG 6000 19” / IP67
  - SITRANS FM MAG 6000 I
  - SITRANS FC MASS 6000 19” / IP67
  - SIFLOW FC070 (via ET 200M)
- Level meters
  - HydroRanger 200
  - MultiRanger 100/200
  - SITRANS LU 01, LU 02, LU 10
- Acoustic sensors for pump monitoring
  - SITRANS DA400
Overview

Today, distributed automation solutions based on open field buses are state-of-the-art in large areas of the process engineering industry. It is only with fieldbuses that the functional benefits of digital communication can be put to full use, e.g. better resolution of measured values, diagnostics options and remote parameterization.

Like PROFIBUS PA, the FF bus (FOUNDATION Fieldbus) is an open field bus with a large installed base for a wide range of application. Standardization according to IEC 61158 / EN 50170 provides you with future protection for your investment.

Benefits

- A uniform modular system from the sensor to the connection to the control level enables new plant concepts
- Problem-free exchangeability of field devices, including from different manufacturers, that comply with the standard profile
- Networking of transmitters, valves, actuators, etc.
- Implementation of intrinsically safe applications through use of the field bus in hazardous areas
- Easy installation of 2-wire cables for joint energy supply and data transfer
- Reduced cabling costs through savings of material and installation time
- Reduced configuration costs through central, simple engineering of the field devices, also cross-vendor
- Fast and error-free installation
- Lower service costs thanks to simpler wiring and plant structure plus extensive diagnostics options
- Greatly reduced commissioning costs through simplified loop check
- Scaling/digitizing of the measured values in the field device already, hence no rescaling necessary in SIMATIC PCS 7

Function

FOUNDATION Fieldbus enables the direct connection of actuators and sensors.

FOUNDATION Fieldbus is based on a transfer optimized for intrinsically safe application. The transfer technology is internationally standardized in IEC 61158.

For FOUNDATION Fieldbus the data and energy supply for the field devices can be directed through a 2-wire cable.

FOUNDATION Fieldbus enables device-to-device communication ("control in the field").

Integration

Siemens field devices for process automation which are listed in this catalog and can be controlled using Foundation Fieldbus:

- Measuring instruments for pressure
  - SITRANS P300
  - SITRANS P DS III
  - SITRANS P410
- Measuring instruments for temperature
  - SITRANS TH400
- Electropneumatic positioners
  - SIPART PS2
- Flow meters
  - SITRANS FM MAG 6000
  - SITRANS FM MAG 6000 I / I Ex
  - SITRANS FC MASS 6000
- Level meters
  - SITRANS LR250

Application

The transfer technology of the FOUNDATION Fieldbus is tailored to the needs of the process industry. Interoperability between field devices from different manufacturers and remote parameterization of the field devices during operation are guaranteed by the standardized communication services.

FOUNDATION Fieldbus can just as readily be used in standard environments as in hazardous areas. For use in hazardous areas, FOUNDATION Fieldbus and all connected devices have to be designed with type of explosion protection Ex [i].
