Soft starting from basic to the most demanding applications

Since motors play a critical role in processes, their performance must be both optimal and dependable without failure. Siemens 3RE47 enclosed soft starters help to ensure that! They help limit the starting current and torque to best fit the application. The motor is adjusted to the load of the driven machine by means of stepless control of the voltage supply. Mechanical equipment is accelerated softly which improves process performance, reduces wear and tear and extends life of equipment. Furthermore, brownouts, current spikes and other disturbances to the electrical grid are minimized.

The comprehensive range of the 3RE47 enclosed soft starters offers the appropriate smart alternative for nearly every application, from basic to the most demanding motor requirements. They are shipped ready for installation, simple to commission, flexible to integrate and built to withstand harsh environments.

3RE47 Common features and general ratings

All three performance levels of the 3RE47 family of enclosed soft starters share the common features listed below.

- Pre-engineered package ready to install and run
- 200 - 600 V operational voltage
- 24 and 120 V AC control circuit with control power transformer included
- Internal bypass contactor for minimum power loss
- Motor overload protection
- Coated printed circuit boards
- Local and remote reset
- Terminal block for field connections of control circuit
- Enclosure NEMA types 1/12, 3R/4 and 4X 316 stainless steel
- Optional oversized enclosures for extra mounting panel space
- Circuit breaker, fusible disconnect and no disconnect
- Metal disconnect handle
- Factory installed options for convenience
- Field accessories for flexibility
- Listed as Service Entrance Equipment
- High short circuit current ratings up to 100k Amps
- 400 °C (1040 °F) ambient operating temperature
- cULus Listed

3RE470 Basic performance enclosed soft starter

The 3RE470 Basic Performance enclosed soft starter powered with the SIRIUS 3RW40 open soft starter is suitable for soft starting and stopping of three-phase asynchronous motors. The device can be used for drives with an output of between 5 and 75HP @ 480V. Optional thermistor motor protection provides full motor protection. With its modern hybrid switching technology via its integral bypass contactor, the device offers efficient switching for long-term, energy-saving use.

- Powered with SIRIUS 3RW40 open soft starter
- Up to 75HP @ 480V (600V ratings also available)
- Operational current up to 98 A
- Soft starting and stopping
- Current limiting
- Refer to page 7 for a complete list of features

3RE471 General performance enclosed soft starter

The 3RE471 General Performance enclosed soft starter powered with the SIRIUS 3RW52 open soft starter is the ideal solution for standard applications. With ideal three-phase motor control, they cover the performance range from 7.5 to 400HP @ 480V. The standard feature HMI module, plug-in communication modules (PROFINET, PROFIBUS, EtherNet/IP and Modbus) and either an analog output (standard) or thermistor motor protection (optional) ensure maximum flexibility. With its modern hybrid switching technology via its integral bypass contactor, the device offers efficient switching for long-term, energy-saving use.

- Powered with SIRIUS 3RW52 open soft starter
- Operational current up to 416 A
- Up to 400HP @ 480V (600V ratings also available)
- TIA integration optional
- Plug-in communication modules for PROFINET, PROFIBUS, EtherNet/IP and Modbus
- Standard feature HMI module (high feature HMI module optional)
- Current limiting
- Analog output
- Soft torque for reduced mechanical loading and optimum pump stop
- Parameterization using potentiometers
- Refer to page 7 for a complete list of features

3RE472 High performance enclosed soft starter

Equipped with the utmost functionality, the 3RE472 High Performance enclosed soft starter powered with the SIRIUS 3RW55 open soft starter confidently handles even difficult starting and stopping operations. Thanks to innovative torque control, the device can be used for drives with an output of between 7.5 to 1000HP @ 480V. The functions have been specially designed to offer maximum user friendliness. The high feature HMI (with color display, local interface and a slot for micro SD memory card) and plug-in communication modules (PROFINET, PROFIBUS, EtherNet/IP and Modbus) ensure maximum flexibility. With its modern hybrid switching technology via its integral bypass contactor, the device offers efficient switching for long-term, energy-saving use.

- Powered with SIRIUS 3RW55 open soft starter
- Operational current up to 1130 A
- Up to 1000HP @ 480V (600V ratings also available)
- TIA integration optional
- Plug-in communication modules for PROFINET, PROFIBUS, EtherNet/IP and Modbus
- High feature HMI module with color display, local interface and slot for a micro SD memory card
- Extended protection functions
- Automatic parameterization for simple commissioning and reliability even under changing load conditions
- Pump stop for reduced mechanical loading and optimum pump stop control
- Refer to page 7 for a complete list of features

Values of the 3RE47 enclosed soft starter

The 3RE47 provides these additional values to the customer

1. Cost savings

Internal bypass contactor, as standard, for reduced components and minimum power loss. Direct wiring from utility power lines without an intermediate disconnect due to UL rating as Service Entrance Equipment.

2. Reliability and sustained life of product

100% of soft starters undergo strict testing at the factory to ensure proper function. Electronics safeguarded against extreme environments by a protective coating. Rated for severe starting at 350% rated motor amps for 30 seconds. Enclosures strictly sized for proper heat dissipation ensuring fewer run-time disruptions and maximum life of electronic components. Fully gasketed door to help keep damaging contaminants out. Heavy-duty disconnect switch with double break switch action to reduce arcing and extend lifespan of switch.

3. Safety

High fault interrupting ratings up to 100kA at 600V. Built-in Safe Torque Off without additional components. Heavy-duty disconnect switch with visible blades and line side shield to guard personnel from contact with live parts.

4. Ease of installation and commissioning

Ideally sized enclosure to pull and terminate large power conductors and for field installing additional components. Terminal block for quick field connection minimizes installation cost and time. Streamlined installation with HMI digital display. Micro SD memory slot for quick downloading and uploading of parameter set for quick commissioning and to duplicate multiple starters. Automatic parameterization adapts to motor conditions optimizing performance and reliability.

5. Assurance and protection of equipment

Pump control for reduced water hammer as well as cleaning / deragging. 24/7 remote monitoring and control via optional communication modules for PROFINET, PROFIBUS, EtherNet/IP and Modbus protocols.

Disclaimer – The aforementioned values may not necessarily apply to every model. Please review the literature to determine which specific values apply to each model.

Ordering information

Choose a model (performance level)

Referring to the application and feature charts on the preceding pages, select the model (performance level) of the soft starter that best suits the required application.

Though not required to select an enclosed soft starter, it is recommended to first select the model and frame size of the open soft starter (i.e. 3RW5213) via the Simulation Tool for Soft Starters (STS). By inputting specific environmental, motor, and load data, the tool can recommend the open soft starter most suited for a specific application. Further details on the STS is given on this page.

Select a product

Once the model (performance level) is chosen, select the 3RE47 enclosed starter catalog number from the selection tables associated with the performance level of the soft starter. The selection tables include reference to the open soft starter if the STS was used to determine the model (performance level).

As optional, select factory modifications from the Factory Modifications and Accessories selection tables starting on page 28.

Configure a product

Instead of manually selecting a product, it may be configured with one of the configuration tools below. From the configurator, the product may also be added to your quote or order.

Compas go to https://www.compas.siemens-info.com/mCompas/Compas/ManageJob#/!

Industry Mall go to <https://mall.industry.siemens.com/mall/en/us/Catalog/Configurators>

Order a product without configuring it

If a catalog number is known, it may be directly entered into the [Industry Mall](#) ordering system. Simply enter the catalog number into the product search.

A catalog number with optional modification codes may also be directly entered. The following format must be used: <catalog number><-Z> <mod code 1><+mod code 2><+mod code 3>.

For example, 3RE47113NB430AA0-Z A01+F00+N01

Review technical data

Review the technical data starting on page 30 to check for constraints. Consult with the Siemens Application Engineering group componentsae.ic@siemens.com with any concerns.

Simulation Tool for Soft Starters (STS)

The Simulation Tool for Soft Starters (STS) provides a convenient means of designing soft starters using a simple, quick and easy-to-use interface.

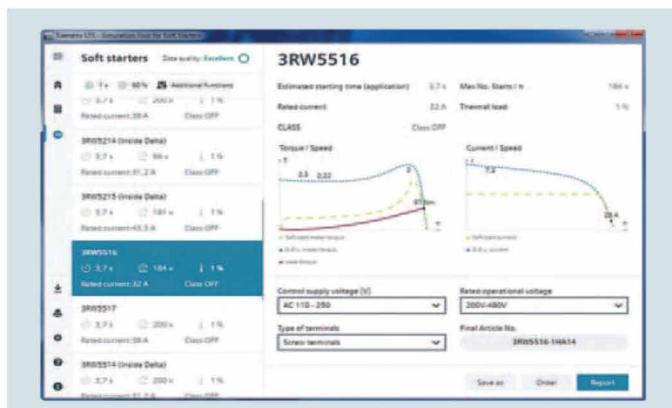

Entering the motor and load data will simulate the application and prompts suggestions for suitable soft starters.

Link to the free download of the

[Simulation Tool for Soft Starters \(STS\)](#)

- * Simple, quick and user-friendly interface
- Detailed and up-to-date Siemens motor database, including IE3/IE4 motors
- Simulation of heavy starting up to Class 30
- Update-capable (e.g. motors, load types, functions)

- Fast simulations with minimum input data
- Immediate, graphical curve charts of start operations with limit values
- Table view of suitable soft starters for the application

Everything at a glance: Simulation and results list.

Operational voltage

Control voltage

① Oversized enclosures are required for certain factory modifications as indicated starting on page ???. Oversized enclosures may also be ordered for additional panel space to accommodate field installed components.

② Internally supplied with CPT.

Selection tables for 3RE47 factory modifications and accessories

Pilot devices

Device	Factory installed Mod code	Field installed Catalog number
Start-Stop push buttons, momentary	A01	49SAP05
Emergency Stop push button	A15	NA
Hand-Off-Auto selector switch	A03	49SAS01
Off-On selector switch	A04	49SAS04
HOA switch and Start push button	A16	NA

Pilot lights

Red ON	24 V AC 120 V AC	F00	49SPLOBRJ 49SPLOBRF
Green OFF	24 V AC 120 V AC	F08	49SPLOAGJ 49SPLOAGF
Amber Fault	24 V AC 120 V AC	F10	N/A N/A

HMI modules

Device	Performance level	Factory installed Mod code	Field installed Catalog number
Standard featured HMI mounted on soft starter	Basic (3RE470) General (3RE471) High (3RE472)	NA (Standard)	NA
Standard featured HMI mounted on enclosure door	Basic (3RE470) General (3RE471) High (3RE472)	NA H00 NA	NA NA
High featured HMI mounted on soft starter	Basic (3RE470) General (3RE471) High (3RE472)	NA H02 (Standard)	NA NA
High featured HMI mounted on enclosure door	Basic (3RE470) General (3RE471) High (3RE472)	NA H01 H01	NA NA

Control power transformer – 100 VA extra capacity

Field installed Mod code

C00

Networking / Communication

Device	Performance level	Factory installed Mod code	Field installed Catalog number
PROFIBUS communication	General (3RE471), High (3RE472)	N01	3RW5950-0CH00
Standard PROFINET communication	General (3RE471), High (3RE472)	N02	3RW5980-0CS00
High Feature PROFINET communication	High (3RE472)	N03	3RW5980-0CP00
Ethernet/IP communication	General (3RE471), High (3RE472)	N04	3RW5980-0CE00
Modbus RTU communication	General (3RE471), High (3RE472)	N05	3RW5980-0CR00
Modbus TCP communication	General (3RE471), High (3RE472)	N06	3RW5980-0CT00

Note: ① 30 mm devices with brushed aluminum legend plates. Pilot lights include LED bulbs.

Selection tables for 3RE47 factory modifications and accessories (continued)

Control relay – 2 NO and 2 NC (contacts are customer wired)

	Control voltage	Factory installed Mod code	Field installed Catalog number
	24 V AC	R22	3RH2122-1AB00
	120 V AC	R22	3RH2122-1AK60

Isolation contactor

	Oversized enclosure required	Factory installed Mod code
	Yes	K03

Emergency bypass starter with selector switch

	Oversized enclosure required	Factory installed Mod code
	Yes	K04

Thermistor motor protection

Performance level	Factory installed Mod code
Basic (3RE470) 24 V control only	V11
General (3RE471) Ø	V11
High (3RE472)	(Standard)

Lug kit

Description	Performance level	Field installed Catalog number
For connecting field installed power conductors to soft starter line / load busbars. Each kit includes three (3) lug assemblies.	3RE4713 and 3RE4723	3RE49030JAA
	3RE4714 and 3RE4724	3RE49030JAB
	3RE4725	3RE49030JAC

Failsafe – Safe torque Off

	Description	Performance Level	Factory installed Mod code
	Integrated fail-safe digital input for directly connecting the emergency stop, and thus covers SIL 1 STO applications	High (3RE472)	X01

Surge protective device – Type 2 100kA per phase

	Description	Oversized enclosure required	Factory installed Mod code
	Provides protection for electronic loads	Yes	S02

Space heater with thermostat

		Description	Factory installed Mod code
		Protects components within the enclosure from condensation when the unit is not running	E01

Special modification undefined

Description	Factory installed Mod code
Specify special modification within the order notes	Y00

More accessories for open soft starters

3RW40, see Industrial Controls Catalog, page 7/92

3RW52, see Industrial Controls Catalog, page 7/69

3RW55, see Industrial Controls Catalog, page 7/34

Note: ② Thermistor motor protection with 3RE471 is optional in lieu of standard analog output. Both thermistor motor protection and analog output together is not available.

Technical Data

The soft starters may be used in isolated supply networks (IT systems) up to 600 V AC. For long starting times it is recommended to have a PTC sensor or temperature switch in the motor.

This also applies for the ramp-down modes torque control, pump stop and DC braking, because during the ramp-down time in these modes, an additional current loading applies in contrast to free ramp-down. No capacitive elements are permitted in the motor feeder between the SIRIUS 3RW soft starter and the motor (e.g. no reactive-power compensation equipment). In addition, neither static systems for reactive-power compensation nor dynamic PFC (Power Factor Correction) must be operated in parallel during starting and ramp-down of the soft starter. This is important to prevent faults arising on the compensation equipment and/or the soft starter. Please observe the maximum starts per hour specified in the technical specifications.

When three-phase motors are switched on, voltage drops occur as a rule on starters of all types (direct-on-line starters, wye-delta starters, soft starters). The infeed transformer must always be sized such that the voltage dip when starting the motor remains within the permissible tolerance. If the infeed transformer is sized with only a small margin, it is best for the control voltage to be supplied from a separate circuit (independently of the main voltage) in order to avoid the potential switching off of the soft starter. For sizing soft starters, we recommend our Simulation Tool for Soft Starters (STS), see page 8. Recommended parameters for the initial commissioning of our soft starters are listed in every report of our Simulation Tool for Soft Starters (STS). In addition, our High Performance soft starters provide support by means of their commissioning wizards.

The rated operating temperature of the enclosed starter is 40 degree C (104 degree F) ambient to the outside of the enclosure. Consult with the Siemens Application Engineering group componentsae.ic@siemens.com if the ambient temperature for an application exceeds the rated temperature.

* Max starts at class 20E is greater than at class 10E. This is due to the derating of the starter current necessary to obtain class 20E.

For enclosed soft starters, the maximum starts per hour indicated in this table takes precedence over what may be indicated for the corresponding open soft starter. Consult with Siemens Application Engineering group @componentsae.ic@siemens.com if the maximum starts per hour for an application exceeds that indicated in this table.

SERVICE ENTRANCE PROVISIONS

FOR SERVICE ENTRANCE PURPOSES IN THE U.S. ONLY, THE CONTROLLER IS INTENDED FOR 4-WIRE, 3 PHASE SYSTEM (GROUNDED CENTER POINT OF WYE OR GROUNDED MID POINT OF ONE PHASE OF DELTA), WITHOUT PROVISIONS FOR A LOAD NEUTRAL AND THE LOAD IS CONNECTED LINE-TO-LINE. WHEN SERVICE ENTRANCE CONDUCTORS SIZED 4/0 AWG - 350 KCMIL ARE USED, REPLACE PROVIDED GROUND LUG WITH ILSCO LUG T3A2-350N OR EQUIVALENT.
