Legal information

Warning notice system

This Manual contains information which you must observe to ensure your own personal safety as well as to avoid material damage. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to equipment damage have no safety alert symbol. Depending on the hazard level, warnings are indicated in a descending order as follows:

 DANGER
indicates that death or serious injury will result if proper precautions are not taken.
 WARNING
indicates that death or serious injury could result if proper precautions are not taken.
 CAUTION
indicates that minor personal injury can result if proper precautions are not taken.
NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one level of danger is simultaneously applicable, the warning notice for the highest level is used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified personnel

The product/system described in this documentation may only be operated by **personnel qualified** for the specific task in accordance with the relevant documentation for the specific task, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

 WARNING
Siemens products are only permitted to be used for the applications listed in the catalog and in the associated technical documentation. If third-party products and components are used, then they must be recommended or approved by Siemens. These products can only function correctly and safely if they are transported, stored, set up, mounted, installed, commissioned, operated and maintained correctly. The permissible ambient conditions must be adhered to. Notices in the relevant documentation must be observed.

Trademarks

All names identified with ® are registered trademarks of Siemens AG. Any other names used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of liability

We have checked the contents of this publication for consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. The information given in this document is reviewed at regular intervals and any corrections that might be necessary are made in the subsequent editions.

Preface

SINAMICS documentation

The SINAMICS documentation is structured according to the following categories:

- General documentation/catalogs
- Manufacturer/service documentation

Additional information

Information on the following topics is available under the link:

- Ordering documentation/overview of documentation
- Additional links to download documents
- Using documentation online (find and search in manuals/information).

<http://www.siemens.com/motioncontrol/docu>

Please send any questions about the technical documentation (e. g. suggestions for improvement, corrections) to the following e-mail address:

docu.motioncontrol@siemens.com

My Documentation Manager

Information on how to produce individual contents for your own machine documentation based on Siemens contents is available under the link:

<http://www.siemens.com/mdm>

Training

Information about SITRAIN (Siemens Training on products, systems and solutions for automation) is available under the following link:

<http://www.siemens.com/sitrain>

FAQs

You can find Frequently Asked Questions in the Service&Support pages under Product Support:

<http://support.automation.siemens.com>

SINAMICS

You can find information on SINAMICS at:

<http://www.siemens.com/sinamics>

Target group

This documentation is intended for machine manufacturers, commissioning engineers, and service personnel who use the SINAMICS drive system.

Benefits

This documentation contains the comprehensive information about parameters, function diagrams and faults and alarms required to commission and service the system.

This manual should be used in addition to the other manuals and tools provided for the product.

Standard scope

The scope of the functionality described in this document can differ from that of the drive system that is actually supplied.

- It may be possible for other functions not described in this documentation to be executed in the drive system. However, no claim can be made regarding the availability of these functions when the equipment is first supplied or in the event of servicing.
- Functions that are not available in a particular product version of the drive system may be described in the documentation. The functionality of the supplied drive system should only be taken from the ordering documentation.
- Extensions or changes made by the machine manufacturer must be documented by the machine manufacturer.

For reasons of clarity, this documentation does not contain all of the detailed information on all of the product types, and cannot take into consideration every conceivable type of installation, operation and service/maintenance.

Search guides

The following guides are provided to help you locate information in this manual:

1. Table of contents
 - Table of contents for the complete manual (Page 9)
 - Table of contents for function diagrams (Page 2067)
2. List of abbreviations (Page 3307)
3. References (Page 3316)
4. Index (Page 3319)

Technical Support

Country-specific telephone numbers for technical support are provided at the following Internet address:

<http://www.siemens.com/automation/service&support>

EC Declaration of Conformity

The EC Declaration of Conformity for the EMC Directive can be found on the Internet at:
<http://support.automation.siemens.com/WW/view/de/21901735/134200>

Alternatively, you can contact the Siemens office in your region in order to obtain the EC Declaration of Conformity.

Compliance with the General Data Protection Regulation

Siemens respects the principles of data protection, in particular the data minimization rules (privacy by design).

For this product, this means:

The product does not process neither store any person-related data, only technical function data (e.g. time stamps). If the user links these data with other data (e.g. shift plans) or if he stores person-related data on the same data medium (e.g. hard disk), thus personalizing these data, he has to ensure compliance with the applicable data protection stipulations.

Fundamental safety instructions

Content

1.1	General safety instructions	14
1.2	Warranty and liability for application examples	14
1.3	Security information	15

1.1 General safety instructions

 WARNING
Danger to life if the safety instructions and residual risks are not observed
If the safety instructions and residual risks in the associated hardware documentation are not observed, accidents involving severe injuries or death can occur.
<ul style="list-style-type: none">• Observe the safety instructions given in the hardware documentation.• Consider the residual risks for the risk evaluation.

 WARNING
Malfunctions of the machine as a result of incorrect or changed parameter settings
As a result of incorrect or changed parameterization, machines can malfunction, which in turn can lead to injuries or death.
<ul style="list-style-type: none">• Protect the parameterization against unauthorized access.• Handle possible malfunctions by taking suitable measures, e.g. emergency stop or emergency off.

1.2 Warranty and liability for application examples

Application examples are not binding and do not claim to be complete regarding configuration, equipment or any eventuality which may arise. Application examples do not represent specific customer solutions, but are only intended to provide support for typical tasks.

As the user you yourself are responsible for ensuring that the products described are operated correctly. Application examples do not relieve you of your responsibility for safe handling when using, installing, operating and maintaining the equipment.

1.3 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that can be implemented, please visit:

Industrial security (<https://www.siemens.com/industrialsecurity>)

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed at:

Industrial security
(<https://new.siemens.com/global/en/products/services/cert.html#Subscriptions>).

Further information is provided on the Internet:

Industrial Security Configuration Manual
(<https://support.industry.siemens.com/cs/ww/en/view/108862708>)

WARNING

Unsafe operating states resulting from software manipulation

Software manipulations (e.g. viruses, trojans, malware or worms) can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- Keep the software up to date.
- Incorporate the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation or machine.
- Make sure that you include all installed products into the holistic industrial security concept.
- Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.
- On completion of commissioning, check all security-related settings.

Parameters

2

Content

2.1	Overview of parameters	18
2.2	List of parameters	39
2.3	Parameters for data sets	2031
2.4	Parameters for write protection and know-how protection	2059

2.1 Overview of parameters

2.1.1 Explanation of the list of parameters

Basic structure of the parameter descriptions

The data in the following example have been chosen at random. The description of a parameter includes as a maximum the information listed below. Some of the information is optional.

The "List of parameters (Page 39)" has the following structure:

----- **Start of example** -----

pxxxx[0...n]	BICO: Full parameter name / abbreviated name			
Drive object (function module)	Can be changed: C1(x), C2(x), U, T	Calculated: CALC_MOD_REG	Access level: 2	
	Data type: Unsigned32 / Integer16	Dyn. index: CDS, p0170	Func. diagram: 8070	
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505	
	Not for motor type: ASM	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [Nm]	10.00 [Nm]	0.00 [Nm]	
Description:	Text			
Value:	0: Name and meaning of value 0 1: Name and meaning of value 1 2: Name and meaning of value 2 etc.			
Recommendation:	Text			
Index:	[0] = Name and meaning of index 0 [1] = Name and meaning of index 1 [2] = Name and meaning of index 2 etc.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Name and meaning of bit 0	Yes	no
	01	Name and meaning of bit 1	Yes	no
	02	Name and meaning of bit 2	Yes	no
		etc.		
Dependency:	Text Refer to: pxxxx, rxxxx Refer to: Fxxxx, Axxxx			
Danger:	Warning:	Caution:	Safety notices with a warning triangle	
				
Notice:	Safety notice without a warning triangle			
Note:	Information that might be useful.			

----- **End of example** -----

The individual pieces of information are described in detail below.

pxxxx[0...n] Parameter number

The parameter number is made up of a "p" or "r", followed by the parameter number and the index or bit array (optional).

Examples of representation in the parameter list:

- p... Adjustable parameters (read and write parameters)
- r... Display parameters (read only)
- p0918 Adjustable parameter 918
- p0099[0...3] Adjustable parameter 99, indices 0 to 3
- p1001[0...n] Adjustable parameter 1001, indices 0 to n (n = configurable)
- r0944 Display parameter 944
- r2129.0...15 Display parameter 2129 with bit array from bit 0 (smallest bit) to bit 15 (largest bit)

Other examples of the notation in the documentation:

- p1070[1] Adjustable parameter 1070, index 1
- p2098[1].3 Adjustable parameter 2098, index 1 bit 3
- r0945[2](3) Display parameter 945, index 2 of drive object 3
- p0795.4 Adjustable parameter 795, bit 4

The following applies to adjustable parameters:

The parameter value "when shipped" is specified under "Factory setting" with the relevant unit in square parentheses. The value can be adjusted within the range defined by "Min" and "Max".

The term "linked parameterization" is used in cases where changes to adjustable parameters affect the settings of other parameters.

Linked parameterization can occur, for example, as a result of the following actions and parameters:

- Executing macros
p0015, p0700, p1000, p1500
- Setting the PROFIBUS telegram (BICO interconnection)
p0922
- Setting component lists
p0230, p0300, p0301, p0400
- Automatically calculating and pre-assigning
p0112, p0340, p0578, p3900
- Restoring the factory settings
p0970

The following applies to display parameters:

The fields "Min", "Max" and "Factory setting" are specified with a dash "-" and the relevant unit in square parentheses.

Note

The parameter list can contain parameters that are not visible in the expert lists of the particular commissioning software (e. g. parameters for trace functions).

BICO: Full parameter name / abbreviated name

The following abbreviations can appear in front of the BICO parameter name:

- **BI:** Binector Input
This parameter is used for selecting the source of a digital signal.
- **BO:** Binector output
This parameter is available as a digital signal for interconnection with other parameters.
- **CI:** Connector Input
This parameter is used for selecting the source of an "analog" signal.
- **CO:** Connector output
This parameter is available as an "analog" signal for interconnection with other parameters.
- **CO/BO:** Connector/Binector Output
This parameter is available as an "analog" and digital signal for interconnection with other parameters.

Note

A BICO input (BI/CI) cannot be interconnected with just any BICO output (BO/CO, signal source).

When interconnecting a BICO input using the commissioning software, only the corresponding possible signal sources are listed.

Function diagrams 1020 ... 1030 explain the symbols for BICO parameters and how to deal with BICO technology.

Drive object (function module)

A drive object (DO) is an independent, "self-contained" functional unit that has its own parameters and, in some cases, faults and alarms.

When carrying out commissioning using the commissioning software, you can select/deselect additional functions and their parameters by activating/deactivating function modules accordingly.

Note

References: SINAMICS S120 Function Manual Drive Functions

The parameter list specifies the associated drive object and function module for each individual parameter.

Examples:

- p1070 CI: Main setpoint
SERVO (extended setpoint), VECTOR
The parameter is available only in association with drive object SERVO with the "Extended setpoint channel" function module or with drive object VECTOR irrespective of activated function modules.
- p1055 BI: Jog bit 0
SERVO, VECTOR
The parameter is available in association with drive objects SERVO and VECTOR irrespective of activated function modules, i.e. it is also available with every activated function module belonging to the respective drive object.

A parameter can belong to one, several, or all drive objects.

The following information relating to "Drive object" and "Function module" can be displayed under the parameter number:

Table 2-1 Data in the "Drive object (function module)" field

Drive object (function module)	Type	Significance
All objects	-	This parameter is used by all drive objects.
A_INF	10	Active Infeed closed-loop control Closed-loop controlled, self-commutated infeed/regenerative feedback unit for generating a constant DC-link voltage
A_INF (supplementary control)	-	Active Infeed with "Additional controls" function module (r0108.3)
A_INF (line transformer)	-	Active Infeed with "Line transformer" function module (r0108.4).
A_INF (rec)	-	Active Infeed with "Recorder" function module (r0108.5).
A_INF (dynamic line buffering)	-	Active Infeed with "Dynamic line buffering" function module (r0108.7).
A_INF (cos phi)		Active Infeed with "cosine phi" function module (r0108.10).
A_INF (line droop control)	-	Active Infeed with "Line droop control" function module (r0108.12).
A_INF (parallel)	-	Active Infeed with "Parallel connection" function module (r0108.15).
A_INF (master/slave)	-	Active Infeed with "Master/Slave" function module (r0108.19).
A_INF (SW_sts)	-	Active Infeed with "Software gating set" function module (r0108.20).
A_INF (Brk Mod Ext)	-	Active Infeed with "Braking Module external" function module (r0108.26).
A_INF (Cooling unit)	-	Active Infeed with "Cooling unit" function module (r0108.28)
A_INF (PN CBE20)	-	Active Infeed with "PROFINET CBE20" function module (r0108.31).
B_INF	30	Basic Infeed closed loop control Unregulated line infeed unit (without regenerative feedback) for rectifying the line voltage of the DC link.
B_INF (rec)	-	Basic Infeed with "Recorder" function module (r0108.5).
B_INF (parallel)	-	Basic Infeed with "Parallel connection" function module (r0108.15).
B_INF (Brk Mod Ext)	-	Basic Infeed with "Braking Module external" function module (r0108.26).
B_INF (Cooling unit)	-	Basic Infeed with "Cooling unit" function module (r0108.28)

2 Parameters

2.1 Overview of parameters

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Significance
B_INF (PN CBE20)	-	Basic Infeed with "PROFINET CBE20" function module (r0108.31).
CU_I	3	Control Unit SINAMICS Integrated (only SIMOTION D4x5-2).
CU_I_D410	201	Control Unit SINAMICS Integrated for SIMOTION D410-2.
CU_LINK	254	Object for Controller Extension 32 (CX32)
CU_NX_CX	4	Controller Extension for boosting the processing performance
CU_S_AC_DP	2	Control Unit SINAMICS S120 AC Drive with PROFIBUS interface.
CU_S_AC_PN	3	Control Unit SINAMICS S120 AC Drive with PROFINET interface.
CU_S120_DP	6	Control Unit SINAMICS S120 with PROFIBUS interface.
CU_S120_DP (CAN)	-	Control Unit SINAMICS S120 with PROFIBUS interface and function module "CAN" (p0108.29).
CU_S120_DP (COMM BOARD)	-	Control Unit SINAMICS S120 with PROFIBUS interface and "COMM BOARD" function module (p0108.30).
CU_S120_DP (PN CBE20)	-	Control Unit SINAMICS S120 with PROFIBUS interface and "PROFINET CBE20" function module (p0108.31).
CU_S120_PN	4	Control Unit SINAMICS S120 with PROFINET interface.
CU_S120_PN (CAN)	-	Control Unit SINAMICS S120 with PROFINET interface and function module "CAN" (p0108.29).
CU_S120_PN (COMM BOARD)	-	Control Unit SINAMICS S120 with PROFINET interface and "COMM BOARD" function module (p0108.30).
CU_S120_PN (PN CBE20)	-	Control Unit SINAMICS S120 with PROFINET interface and "PROFINET CBE20" function module (p0108.31).
CU_S150_DP	7	Control Unit SINAMICS S150 with PROFIBUS interface.
CU_S150_DP (CAN)	-	Control Unit SINAMICS S150 with PROFIBUS interface and function module "CAN" (p0108.29).
CU_S150_DP (COMM BOARD)	-	Control Unit SINAMICS S150 with PROFIBUS interface and "COMM BOARD" function module (p0108.30).
CU_S150_DP (PN CBE20)	-	Control Unit SINAMICS S150 with PROFIBUS interface and "PROFINET CBE20" function module (p0108.31).
CU_S150_PN	5	Control Unit SINAMICS S150 with PROFINET interface.
CU_S150_PN (CAN)	-	Control Unit SINAMICS S150 with PROFINET interface and function module "CAN" (p0108.29).
CU_S150_PN (COMM BOARD)	-	Control Unit SINAMICS S150 with PROFINET interface and "COMM BOARD" function module (p0108.30).
CU_S150_PN (PN CBE20)	-	Control Unit SINAMICS S150 with PROFINET interface and "PROFINET CBE20" function module (p0108.31).
ENC	300	Object for a DRIVE-CLiQ encoder.
ENC (lin_encoder)	300	Object for a DRIVE-CLiQ encoder with "Linear encoder" function module (r0108.12).
ENC (PN CBE20)	300	Object for a DRIVE-CLiQ encoder with function module "PROFINET CBE20" (r0108.31).
HLA	70	Hydraulic linear drive.

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Significance
HLA (ESR)	-	Hydraulic linear drive with "Extended Stop and Retract" function module (r0108.9).
HLA (PN CBE20)	-	Hydraulic linear drive with function module "PROFINET CBE20" (r0108.31).
HUB	150	DRIVE-CLiQ Hub Module.
R_INF	21	Renewable Infeed Control Closed-loop controlled, self-commutated infeed/regenerative feedback unit for generating a constant DC-link voltage
R_INF (additional ctrl)	-	Renewable Infeed with "Additional controls" function module (r0108.3)
R_INF (line transformer)	-	Renewable Infeed with "Line transformer" function module (r0108.4).
R_INF (rec)	-	Renewable Infeed with "Recorder" function module (r0108.5).
R_INF (dynamic line buffering)	-	Renewable Infeed with "Dynamic line buffering" function module (r0108.7).
R_INF (cos phi)	-	Renewable Infeed with "cosine phi" function module (r0108.10).
R_INF (line droop control)	-	Renewable Infeed with "Line droop control" function module (r0108.12).
R_INF (parallel)	-	Renewable Infeed with "Parallel connection" function module (r0108.15).
R_INF (master/slave)	-	Renewable Infeed with "Master/Slave" function module (r0108.19).
R_INF (SW_sts)	-	Renewable Infeed with "Software gating unit" function module (r0108.20).
R_INF (Brk Mod Ext)	-	Renewable Infeed with "Braking Module external" function module (r0108.26).
R_INF (Cooling unit)	-	Renewable Infeed with "Cooling unit" function module (r0108.28)
R_INF (PN CBE20)	-	Renewable Infeed with "PROFINET CBE20" function module (r0108.31).
S_INF	20	Smart Infeed control Unregulated line infeed/feedback unit for generating the DC-link voltage.
S_INF (rec)	-	Smart Infeed with "Recorder" function module (r0108.5).
S_INF (parallel)	-	Smart Infeed with "Parallel connection" function module (r0108.15).
S_INF (Brk Mod Ext)	-	Smart Infeed with "Braking Module external" function module (r0108.26).
S_INF (Cooling unit)	-	Smart Infeed with "Cooling unit" function module (r0108.28).
S_INF (PN CBE20)	-	Smart Infeed with "PROFINET CBE20" function module (r0108.31).
SERVO	11	Servo drive.
SERVO (ext M_reg)	-	Servo drive with "Extended torque control" function module (r0108.1).
SERVO (pos ctrl)	-	Servo drive with "Closed-loop position control" function module (r0108.3).
SERVO (EPOS)	-	Servo drive with "Basic positioner" function module (r0108.4).
SERVO (rec)	-	Servo drive with "Recorder" function module (r0108.5).
SERVO (DSC spline)	-	Servo drive with function module "DSC with Spline" (r0108.6).
SERVO (APC)	-	Servo drive with "Advanced Positioning Control (APC)" function module (r0108.7).
SERVO (ext setp)	-	Servo drive with "Extended setpoint channel" function module (r0108.8).
SERVO (ESR)	-	Servo drive with "Extended Stop and Retract" function module (r0108.9).
SERVO (J_estimator/OBT)	-	Servo drive with function module "Moment of inertia estimator/OBT" (r0108.10).

2 Parameters

2.1 Overview of parameters

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Significance
SERVO (Spin_diag)	-	Servo drive with "Spindle diagnostics" function module (r0108.11). This function module can only be used in conjunction with a Sensor Module Integrated 24 (SMI24).
SERVO (Lin)	-	Servo drive with "Linear motor" function module (r0108.12).
SERVO (Safety rot)	-	Servo drive with "Safety rotary axis" function module (r0108.13).
SERVO (ext brake)	-	Servo drive with "Extended brake control" function module (r0108.14)
SERVO (Tech_ctrl)	-	Servo drive with "Technology controller" function module (r0108.16).
SERVO (ext msg)	-	Servo drive with "Extended messages/monitoring functions" function module (r0108.17).
SERVO (AVS/APC-ECO)	-	Servo drive with function module "Active Vibration Suppression (AVS/APC-ECO)" (r0108.19).
SERVO (ext I_set_filt)	-	Servo drive with "Extended current setpoint filter" function module (r0108.21).
SERVO (cogging_M_comp)	-	Servo drive with "cogging torque compensation" function module (r0108.22).
SERVO (Dig IO)	-	Servo drive for SINAMICS S120M with "Digital inputs-/outputs" function module (r0108.23)
SERVO (Cooling unit)	-	Servo drive with "Cooling unit" function module (r0108.28).
SERVO (CAN)	-	Servo drive with "CAN" function module (r0108.29).
SERVO (J_estimator)	-	Servo drive with "Moment of inertia estimator" function module (r0108.30).
SERVO (PN CBE20)	-	Servo drive with "PROFINET CBE20" function module (r0108.31).
SERVO (ctrl_par adapt)	-	Servo drive with "Controller parameter adaptation" function module (r0171.29).
SERVO_AC	-	Servo drive for SINAMICS S120 AC Drive.
SERVO_I_AC	-	Servo drive for SINAMICS Integrated in SIMOTION D410-2.
TB30	100	Terminal Board 30.
TM120	207	Terminal Module 120.
TM15	203	Terminal Module 15 (SIMOTION D4xx-2 only).
TM150	208	Terminal Module 150.
TM15DI_DO	204	Terminal Module 15 (for SINAMICS).
TM17	202	Terminal Module 17 (SIMOTION D4xx-2 only).
TM31	200	Terminal Module 31.
TM41	201	Terminal Module 41.
TM54F_MA	205	Terminal Module 54F Master.
TM54F_SL	206	Terminal Module 54F Slave.
VECTOR	12	Vector drive.
VECTOR (n/M)	-	Vector drive with "Closed-loop speed/torque control" function module (r0108.2).
VECTOR (pos ctrl)	-	Vector drive with "Position control" function module (r0108.3).
VECTOR (EPOS)	-	Vector drive with "Basic positioner" function module (r0108.4).
VECTOR (rec)	-	Vector drive with "Recorder" function module (r0108.5).

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Significance
VECTOR (J_estimator/OBT)	-	Vector drive with function module "Moment of inertia estimator/OBT" (r0108.10).
VECTOR (Safety rot)	-	Vector drive with "Safety rotary axis" function module (r0108.13).
VECTOR (ext brake)	-	Vector drive with "Extended brake control" function module (r0108.14).
VECTOR (parallel)	-	Vector drive with "Parallel connection" function module (r0108.15).
VECTOR (tech_ctrl)	-	Vector drive with "Technology controller" function module (r0108.16).
VECTOR (ext mess.)	-	Vector drive with "Extended messages/monitoring functions" function module (r0108.17).
VECTOR (F3E)	-	Vector drive with "F3E power unit" function module (r0108.26). The power unit is the PM250 for CU310-2 CRANES.
VECTOR (Cooling unit)	-	Vector drive with "Cooling unit" function module (r0108.28).
VECTOR (CAN)	-	Vector drive with "CAN" function module (r0108.29).
VECTOR (PN CBE20)	-	Vector drive with "PROFINET CBE20" function module (r0108.31).
VECTOR_AC	-	Vector drive for SINAMICS S120 AC Drive.
VECTOR_I_AC	-	Vector drive for SINAMICS Integrated in SIMOTION D410-2.

Note

The drive object type is used to identify the drive objects in the drive system (e. g. r0107, r0975[1]).

Can be changed

The "-" sign indicates that the parameter can be changed in any object state and that the change will be effective immediately.

The information "C1(x), C2(x), T, U" ((x): optional) means that the parameter can be changed only in the specified drive unit state and that the change will not take effect until the unit switches to another state. This can be a single state or multiple states.

The following states are available:

- C1(x) Device commissioning C1: Commissioning 1
Device is being commissioned (p0009 > 0).
Pulses cannot be enabled.
The parameter can only be changed for the following device commissioning settings (p0009 > 0):
 - C1: Can be changed for all settings p0009 > 0.
 - C1(x): Can be changed only when p0009 = x.A modified parameter value does not take effect until the device commissioning mode is exited with p0009 = 0.

- C2(x) Drive object commissioning C2: Commissioning 2
Drive commissioning is in progress (p0009 = 0 and p0010 > 0).
Pulses cannot be enabled.
The parameter can only be changed in the following drive commissioning settings (p0010 > 0):
 - C2: Can be changed for all settings p0010 > 0.
 - C2(x): Can only be changed for the settings p0010 = x.A modified parameter value does not take effect until drive commissioning mode is exited with p0010 = 0.

- U Operation U: Run
Pulses are enabled.

- T Ready T: Ready to run
The pulses are not enabled and the state "C1(x)" or "C2(x)" is not active.

Note

Parameter p0009 is CU-specific (belongs to the Control Unit).

Parameter p0010 is drive-specific (belongs to each drive object).

The operating state of individual drive objects is displayed in r0002.

Calculated

Specifies whether the parameter is influenced by automatic calculations.

The calculation attribute defines which activities influence the parameter.

The following attributes exist:

- CALC_MOD_ALL
 - p0340 = 1
 - Project download with commissioning software and send from p0340 = 3
- CALC_MOD_CON
 - p0340 = 1, 3, 4
- CALC_MOD_EQU
 - p0340 = 1, 2
- CALC_MOD_LIM_REF
 - p0340 = 1, 3, 5
 - p0578 = 1
- CALC_MOD_REG
 - p0340 = 1, 3

Note

For p3900 > 0, p0340 = 1 is also called automatically.

After p1910 = 1, p0340 = 3 is also called automatically.

Access level

Specifies the minimum access level required to be able to display and change the relevant parameter. The required access level can be set using p0003.

The system uses the following access levels:

- 1: Standard
- 2: Extended
- 3: Expert
- 4: Service

Note

Parameter p0003 is CU-specific (belongs to the Control Unit).

A higher access level will also include the functions of the lower levels.

Data type

The information on the data type can consist of the following two items (separated by a slash):

- First item
Data type of the parameter.
- Second item (for binector or connector input only)
Data type of the signal source to be interconnected (binector/connector output).

Parameters can have the following data types:

- Integer8 I8 8-bit integer number
- Integer16 I16 16-bit integer number
- Integer32 I32 32-bit integer number
- Unsigned8 U8 8 bits without sign
- Unsigned16 U16 16 bits without sign
- Unsigned32 U32 32 bits without sign
- FloatingPoint32 Float 32-bit floating point number

Depending on the data type of the BICO input parameter (signal sink) and BICO output parameter (signal source), the following combinations are possible when creating BICO interconnections:

Table 2-2 Possible combinations of BICO interconnections

BICO output parameter	BICO input parameter			
	CI parameter			BI parameter
	Unsigned32 / Integer16	Unsigned32 / Integer32	Unsigned32 / FloatingPoint32	Unsigned32 / Binary
CO: Unsigned8	x	x	–	–
CO: Unsigned16	x	x	–	–
CO: Integer16	x	x	r2050, r8850	–
CO: Unsigned32	x	x	–	–
CO: Integer32	x	x	r2060, r8860	–
CO: FloatingPoint32	x	x	x	–
BO: Unsigned8	–	–	–	x
BO: Unsigned16	–	–	–	x
BO: Integer16	–	–	–	x
BO: Unsigned32	–	–	–	x
BO: Integer32	–	–	–	x
BO: FloatingPoint32	–	–	–	–
Legend: x : BICO interconnection permitted –: BICO interconnection not permitted rxxxx: BICO interconnection is only permitted for the specified CO parameters				

Dynamic index

For parameters with a dynamic index [0...n], the following information is specified here:

- Data set (if available).
- Parameter for the number of indices (n = number - 1).

The following information can be contained in this field:

- "CDS, p0170" (Command Data Set, CDS count)

Example:

p1070[0] → main setpoint [command data set 0]

p1070[1] → main setpoint [command data set 1], etc.

- "DDS, p0180" (Drive Data Set, DDS count)
- "EDS, p0140" (Encoder Data Set, EDS count)
- "MDS, p0130" (Motor Data Set, MDS count)
- "PDS, p0120" (Power unit Data Set, PDS count)
- "p2615" (traversing blocks count)

Data sets can only be created and deleted when p0010 = 15.

Note

Information on the data sets can be taken from the following references:

References: SINAMICS S120 Function Manual Drive Functions
Chapter "Data sets"

Function diagram

The parameter is included in this function diagram. The structure of the parameter function and its relationship with other parameters is shown in the specified function diagram.

P group (only when accessing via BOP (Basic Operator Panel))

Specifies the functional group to which this parameter belongs. The required parameter group can be set via p0004.

Note

Parameter p0004 is CU-specific (belongs to the Control Unit).

Unit, unit group and unit selection

The standard unit of a parameter is specified in square brackets after the values for "Min", "Max", and "Factory setting".

For parameters where the unit can be switched over, the specifications for "Unit group" and "Unit selection" determine the group to which this parameter belongs and with which parameter the unit can be changed over.

Example:

Unit group: 7_1, unit selection: p0505

The parameter belongs to unit group 7_1 and the unit can be changed over using p0505.

Note

Detailed information on changing over units can be found in the following references:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions

References: /BA3/ SINAMICS S150 Operating Instructions

All the potential unit groups and possible unit selections are listed below.

Table 2-3 Unit groups (p0100)

Unit group	Unit selection for p0100 =		Reference variable for %
	0	1	
7_4	Nm	lbf ft	-
8_4	N	lbf	-
14_2	W	HP	-
14_6	kW	HP	-

Table 2-6 Unit group (p0595)

Unit group	Unit selection for p0595 =		Reference variable for %
	Value	Unit	
9_1	The values that can be set and the technological units are shown in p0595.		

Parameter values

Min	Minimum value of the parameter [unit]
Max	Maximum value of the parameter [unit]
Factory setting	Value when delivered [unit]
	In the case of a binector/connector input, the signal source of the default BICO interconnection is specified. A non-indexed connector output is assigned the index [0].
	A different value may be displayed for certain parameters (e.g. p1800) at the initial commissioning stage or when establishing the factory settings.
	Reason:
	The setting of these parameters is determined by the operating environment of the Control Unit (e. g. depending on converter type, macro, power unit).

Note

For SINAMICS G150/G130/S150, the macros and their settings are provided in the following documentation:

References: SINAMICS G150/G130/S150 Operating Instructions

Not for motor type

Specifies for which motor type this parameter has no significance

ASM	: Induction motor
PMSM	: Permanent-magnet synchronous motor
REL	: Reluctance motor textiles / SIEMOSYN motor
RESM	: Synchronous reluctance motor
SESM	: Separately-excited synchronous motor

Normalization

Specification of the reference variable with which a signal value is automatically converted for a BICO interconnection.

The following reference variables are available:

- p2000 ... p2007: Reference speed, reference voltage, etc.
- PERCENT: 1.0 = 100 %
- 4000H: 4000 hex = 100 % (wort) or 4000 0000 hex = 100 % (double word)
- p0514: specific normalization

Refer to the description for p0514[0...9] and p0515[0...19] to p0524[0...19]

Expert list

Specifies whether this parameter is available in the expert list of the specified drive objects in the commissioning software.

1. Parameter exists in the expert list.
- 0: Parameter does not exist in the expert list.

NOTICE
Users assume full responsibility for using parameters marked "Expert list: 0" (parameter does not exist in the expert list).
These parameters and their functionalities have not been tested and no further user documentation is available for them (e. g. description of functions). Moreover, no support is provided for these parameters by "Technical Support" (hotline).

Description

Explanation of the function of a parameter.

Values

Lists the possible values of a parameter.

Recommendation

Information about recommended settings.

Index

The name and meaning of each individual index is specified for indexed parameters.

The following applies to the values (Min, Max, Factory setting) of indexed adjustable parameters:

- Min, Max:
The adjustment range and unit apply to all indices.
- Factory setting:
When all indices have the same factory setting, index 0 is specified with the unit to represent all indices.
When the indices have different factory settings, they are all listed individually with the unit.

Bit array

For parameters with bit arrays, the following information is provided about each bit:

- Bit number and signal name
- Meaning for signal states 1 and 0
- Function diagram (optional)
The signal is shown in this function diagram.

Dependency

Conditions that must be fulfilled in conjunction with this parameter. Also includes special effects that can occur between this parameter and others.

Where necessary, "See also:" indicates the following information:

- List of other relevant parameters to be considered.
- List of faults and alarms to be considered.

Safety instructions

Important information that must be observed to avoid the risk of physical injury or material damage.

Information that must be observed to avoid any problems.

Information that the user may find useful.

Danger

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Warning

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Caution

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Notice

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Note

Information that the user may find useful.

2.1.2 Number ranges of parameters

Note

The following number ranges represent an overview for all of the parameters available for the SINAMICS drive family.

The parameters for the product described in this List Manual are described in detail in "List of parameters (Page 39)".

Parameters are grouped into the following number ranges:

Table 2-7 Number ranges for SINAMICS

Range		Description
From	To	
0000	0099	Display and operation
0100	0199	Commissioning
0200	0299	Power section
0300	0399	Motor
0400	0499	Encoder
0500	0599	Technology and units, motor-specific data, probes
0600	0699	Thermal monitoring, maximum current, operating hours, motor data, central probe
0700	0799	Control Unit terminals, measuring sockets
0800	0839	CDS, DDS data sets, motor changeover
0840	0879	Sequence control (e.g. signal source for ON/OFF1)
0880	0899	ESR, parking, control and status words
0900	0999	PROFIBUS/PROFIdrive
1000	1199	Setpoint channel (e.g. ramp-function generator)
1200	1299	Functions (e.g. motor holding brake)
1300	1399	U/f control
1400	1799	Closed-loop control
1800	1899	Gating unit
1900	1999	Power unit and motor identification
2000	2009	Reference values
2010	2099	Communication (fieldbus)
2100	2139	Faults and alarms
2140	2199	Signals and monitoring
2200	2359	Technology controller
2360	2399	Staging, hibernation
2500	2699	Position control (LR) and basic positioning (EPOS)
2700	2719	Reference values, display

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
2720	2729	Load gearbox
2800	2819	Logic operations
2900	2930	Fixed values (e. g. percentage, torque)
3000	3099	Motor identification results
3100	3109	Real-time clock (RTC)
3110	3199	Faults and alarms
3200	3299	Signals and monitoring
3400	3659	Infeed closed-loop control
3660	3699	Voltage Sensing Module (VSM), Braking Module internal
3700	3779	Advanced Positioning Control (APC)
3780	3819	Synchronization
3820	3849	Friction characteristic
3850	3899	Functions (e. g. long stator)
3900	3999	Management
4000	4599	Terminal Board, Terminal Module (e. g. TB30, TM31)
4600	4699	Sensor Module
4700	4799	Trace
4800	4849	Function generator
4950	4999	OA application
5000	5169	Spindle diagnostics
5200	5230	Current setpoint filter 5 ... 10 (r0108.21)
5400	5499	System droop control (e. g. shaft generator)
5500	5599	Dynamic grid support (solar)
5600	5614	PROFenergy
5900	6999	SINAMICS GM/SM/GL/SL
7000	7499	Parallel connection of power units
7500	7599	SINAMICS SM120
7700	7729	External messages
7770	7789	NVRAM, system parameters
7800	7839	EEPROM read/write parameters
7840	8399	Internal system parameters
8400	8449	Real-time clock (RTC)
8500	8599	Data and macro management
8600	8799	CAN bus
8800	8899	Communication Board Ethernet (CBE), PROFIdrive

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
8900	8999	Industrial Ethernet, PROFINET, CBE20
9000	9299	topology
9300	9399	Safety Integrated
9400	9499	Parameter consistency and storage

2.2 List of parameters

Product: SINAMICS S120/S150, Version: 5206900, Language: eng
 Objects: CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB, CU_LINK

r0002	Control Unit operating display / CU op_display		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 117	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Operating display for the Control Unit (CU).		
Value:	0: Operation 10: Ready 20: Wait for run-up 25: Wait for automatic FW update of DRIVE-CLiQ components 31: Commissioning tool download active 33: Remove/acknowledge topology error 34: Exit commissioning mode 35: Carry out first commissioning 70: Initialization 80: Reset active 99: Internal software error 101: Specify topology 111: Insert drive object 112: Delete drive object 113: Change drive object number 114: Change component number 115: Run parameter download 117: Delete component		
Notice:	For several missing enable signals, the corresponding value with the highest number is displayed.		

r0002	Drive operating display / Drv op_display		
HLA	Can be changed: - Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 250	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Operating display for the drive.		
Value:	0: Operation - everything enabled 10: Operation - set "enable setpoint" = "1" (p1142, p1152) 12: Operation - RFG frozen, set "RFG start" = "1" (p1141) 13: Operation - set "enable RFG" = "1" (p1140) 14: Operation - shutoff valve opens, SS2, STOP C 16: Operation - withdraw braking with OFF1 using "ON/OFF1" = "1" 17: Operation - braking with OFF3 can only be interrupted with OFF2 18: Operation - brake on fault, remove fault, acknowledge 21: Ready for operation - set "Enable operation" = "1" (p0852) 23: Ready - set "System pressure available" = "1" (p0864) 31: Ready for switching on - set "ON/OFF1" = "0/1" (p0840) 35: Switching on inhibited - carry out first commissioning (p0010) 41: Switching on inhibited - set "ON/OFF1" = "0" (p0840) 42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845) 43: Switching on inhibited - set "OC/OFF3" = "1" (p0848, p0849) 44: Switching on inhibited - supply STO terminal w/ 24 V (hardware) 45: Switching on inhibited - rectify fault, acknowledge fault, STO 46: Switching on inhibited - exit commissioning mode (p0009, p0010)		

2 Parameters

2.2 List of parameters

60: Drive object deactivated/not operational
70: Initialization
200: Wait for booting/partial booting
250: Device signals a topology error

Dependency:

Refer to: r0046

Notice:

For several missing enable signals, the corresponding value with the highest number is displayed.

Note:

OC: Operating condition
EP: Enable Pulses (pulse enable)
RFG: Ramp-function generator
COMM: Commissioning
MotID: Motor data identification
SS2: Safe Stop 2
STO: Safe Torque Off

-

Description:

Operating display for the drive.

Value:

0: Operation - everything enabled
10: Operation - set "enable setpoint" = "1" (p1142, p1152)
11: Operation - set "enable speed controller" = "1" (p0856)
12: Operation - RFG frozen, set "RFG start" = "1" (p1141)
13: Operation - set "enable RFG" = "1" (p1140)
14: Oper. - MotID, excit. running and/or brake opens, SS2, STOP C
15: Operation - open brake (p1215)
16: Operation - withdraw braking with OFF1 using "ON/OFF1" = "1"
17: Operation - braking with OFF3 can only be interrupted with OFF2
18: Operation - brake on fault, remove fault, acknowledge
19: Operation - armature short-circ./DC brake act. (p1230, p1231)
21: Ready for operation - set "Enable operation" = "1" (p0852)
22: Ready for operation - de-magnetizing running (p0347)
23: Ready for operation - set "Infeed operation" = "1" (p0864)
31: Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: Switching on inhibited - carry out first commissioning (p0010)
41: Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
43: Switching on inhibited - set "OC/OFF3" = "1" (p0848, p0849)
44: Switching on inhibited - supply STO terminal w/ 24 V (hardware)
45: Switching on inhibited - rectify fault, acknowledge fault, STO
46: Switching on inhibited - exit commissioning mode (p0009, p0010)
60: Drive object deactivated/not operational
70: Initialization
200: Wait for booting/partial booting
250: Device signals a topology error

Dependency:

Refer to: r0046

Notice:

For several missing enable signals, the corresponding value with the highest number is displayed.

Note:

OC: Operating condition
EP: Enable Pulses (pulse enable)
RFG: Ramp-function generator
COMM: Commissioning
MotID: Motor data identification
SS2: Safe Stop 2
STO: Safe Torque Off

r0002		Infeed operating display / INF op_display

Description:	Operating display for Terminal Board 30 (TB30).		
Value:	0: Module in cyclic operation 40: Module not in cyclic operation 60: Fault 70: Initialization 80: Reset active 120: Module deactivated 200: Wait for run-up 250: Device signals a topology error		
Notice:	For several missing enable signals, the corresponding value with the highest number is displayed.		

r0002	TM54F operating display / TM54F op_display		
TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-
Description:	Operating display for Terminal Module 54F (TM54F).		
Value:	0: Module in cyclic operation 40: Module not in cyclic operation 50: Alarm 60: Fault 70: Initialization 120: Module deactivated 200: Wait for booting/partial booting 250: Device signals a topology error		
r0002	Encoder DO operating display / Enc DO op_disp		
ENC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-
Description:	Operating display for encoder drive object.		
Value:	0: Encoder in cyclic operation 35: Carry out first commissioning (p0010) 45: Remove fault cause, acknowledge fault 46: Exit commissioning mode (p0009, p0010) 60: Encoder deactivated 200: Wait for booting/partial booting 250: Device signals a topology error		
Notice:	For several missing enable signals, the corresponding value with the highest number is displayed.		
r0002	DRIVE-CLiQ Hub Module operating display / Hub op_display		
HUB	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-
Description:	Operating display for the DRIVE-CLiQ Hub Module.		
Value:	0: Module in cyclic operation 40: Module not in cyclic operation 50: Alarm 60: Fault 70: Initialization 120: Module deactivated 200: Wait for booting/partial booting 250: Device signals a topology error		
Notice:	For several missing enable signals, the corresponding value with the highest number is displayed.		

p0003	BOP access level / BOP acc_level		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1, U, T Data type: Integer16 P-Group: All groups Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1

Description: Sets the access level for reading and writing parameters via the Basic Operator Panel (BOP).

Value:

- 1: Standard
- 2: Extended
- 3: Expert
- 4: Service

Note: A higher set access level also includes the lower one.

Access level 1 (standard):
Parameters for simplest possible operations.

Access level 2 (extended):
Parameters to operate the basic functions of the drive unit.

Access level 3 (experts):
Expert know-how is required for these parameters (e.g. BICO parameterization).

Access level 4 (service):
For these parameters, it is necessary that authorized service personnel enter the appropriate password (p3950).

p0004	BOP display filter / BOP disp_filter		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C2(1), U, T Data type: Integer16 P-Group: All groups Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 99	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the display filter for parameters with the Basic Operator Panel (BOP).

Value:

- 0: All parameters
- 1: Displays, signals
- 2: Power unit
- 3: Motor
- 4: Encoder/position encoder
- 5: Technology/units
- 7: Digital inputs/outputs, commands, sequence control
- 8: Analog inputs/outputs
- 10: Setpoint channel/ramp-fct generator
- 12: Functions
- 13: U/f control
- 14: Control
- 15: Data sets
- 17: Basic positioner
- 18: Gating unit
- 19: Motor identification
- 20: Communication
- 21: Faults, alarms, monitoring functions
- 25: Position control
- 28: Free function blocks
- 47: Trace and function generator
- 50: Technology Extensions
- 90: Topology
- 95: Safety Integrated
- 98: Command Data Sets (CDS)
- 99: Drive Data Sets (DDS)

Dependency: Refer to: p0003

Notice: The display filter via p0004 provides precise filtering and displays the corresponding parameters only when p0009 and p0010 = 0.

Note: The set access level via p0003 is also relevant for the display filter via p0004.

Examples (assumption: p0009 = p0010 = 0):

p0003 = 1, p0004 = 3

--> Only the parameters for the motor with access level 1 are displayed.

p0003 = 2, p0004 = 3

--> Only the parameters for the motor with access levels 1 and 2 are displayed.

p0005[0...1]	BOP operating display selection / BOP op_disp sel		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 2 [1] 0
Description:	Sets the parameter number and parameter index for display for p0006 = 2, 4 for the Basic Operator Panel (BOP). Examples for the SERVO drive object: p0005[0] = 21, p0005[1] = 0: Actual speed smoothed (r0021) p0005[0] = 25, p0005[1] = 0: Output voltage smoothed (r0025)		
Index:	[0] = Parameter number [1] = Parameter index		
Dependency:	Refer to: p0006		
Note:	Procedure: 1. The parameter number to be displayed should be set in index 0. Only the monitoring parameters (read-only parameters) can be set that actually exist for the actual drive object. If the set parameter number is not indexed, or if there is an index in index 1 that lies outside the valid range of the set parameter, then index 1 is automatically set to 0. 2. The index that belongs to the parameter set in index 0 should be set in index 1. The permissible changes in index 1 always depend on the parameter number set in index 0.		

p0006	BOP operating display mode / BOP op_disp mode		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, HLA, TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 4	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4
Description:	Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".		
Value:	4: p0005		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p0005
Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.
 Mode 4 is available for all drive objects.

p0006	BOP operating display mode / BOP op_ disp mode		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4
Description:	Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".		
Value:	0: Operation --> r0021, otherwise r0020 <--> r0021 1: Operation --> r0021, otherwise r0020 2: Operation --> p0005, otherwise p0005 <--> r0020 3: Operation --> r0002, otherwise r0002 <--> r0020 4: p0005		
Dependency:	Refer to: p0005		
Note:	Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object. Mode 4 is available for all drive objects.		

p0007	BOP background lighting / BOP lighting		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: - Min 0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [s]
Description:	Sets the delay time until the background lighting of the Basic Operator Panel (BOP) is switched off. If no keys are actuated, then the background lighting automatically switches itself off after this time has expired.		
Note:	p0007 = 0: Background lighting is always switched on (factory setting).		

p0008	BOP drive object after booting / BOP DO after boot		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the required drive object that is active at the Basic Operator Panel (BOP) after booting.		
Note:	The value from p0008 initializes the display on the Basic Operator Panel (BOP) at the top left after booting. The drive object Control Unit is selected using the value 1.		

p0009	Device commissioning parameter filter / Dev com par_filt		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1, T Data type: Integer16 P-Group: All groups Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the device and basic drive commissioning. By appropriately setting this parameter, those parameters are filtered that can be written into in the various commissioning steps.		

Value:	<p>0: Ready</p> <p>1: Device configuration</p> <p>2: Defining the drive type/function module</p> <p>3: Drive base configuration</p> <p>4: Data set base configuration</p> <p>29: Device download</p> <p>30: Parameter reset</p> <p>50: Install Technology Extension</p> <p>55: Install Technology Extension</p> <p>101: Topology input</p> <p>111: Insert drive object</p> <p>112: Delete drive object</p> <p>113: Change drive object number</p> <p>114: Change component number</p> <p>115: Parameter download</p> <p>117: Delete component</p> <p>10000: Ready (asynchronous)</p>
Notice:	<p>For p0009 = 0:</p> <p>The check and the calculation can take a longer period of time, so that in the worst case scenario, communication with the commissioning tool is interrupted. As a consequence, alternatively p0009 = 10000 can be used.</p> <p>For p0009 = 10000:</p> <p>After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.</p>
Note:	<p>The drives can only be switched on outside the device commissioning (the inverter enabled). In this case, p0009 must be 0 (Ready) and the individual drive objects must have already gone into operation (p0010).</p> <p>p0009 = 0: ready</p> <p>When changing into this state, the device configuration is checked and commissioning completed (a new start can be initiated).</p> <p>p0009 = 1: Device configuration</p> <p>At the first commissioning of the device, after booting, the device is in the "device configuration" state. To start the internal automatic first commissioning of the drive unit, p0009 should be set to 0 (Ready) after the ID for the actual topology (r0098) was transferred into the ID for the target topology (p0099). To do this, it is sufficient to set a single index value of p0099[x] the same as r0098[x]. Before the device has been completely commissioned, no other parameter can be changed. After the first commissioning was carried out, in this state, when required, other basic device configuration parameters can be adapted (e.g. the basic sampling time in p0110).</p> <p>p0009 = 2: Defines the drive type / function module</p> <p>In this state, the drive object types and/or the function modules can be changed or selected for the individual drive objects. To do this, the drive object type can be set using p0107[0...15] and the function can be set using p0108[0...15] (refer to p0101[0...15]).</p> <p>p0009 = 3: Drive basic configuration</p> <p>In this state, after the device has been commissioned for the first time, basic changes can be made for the individual drive objects (e.g. sampling times in p0111, p0112, p0115 and the number of data sets in p0120, p0130, p0140, p0170, p0180).</p> <p>p0009 = 4: Data set basic configuration</p> <p>In this state, after the device has been commissioned for the first time, for the individual drive objects changes can be made regarding the assignment of the components (p0121, p0131, p0141, p0151, p0161) to the individual data sets and the assignment of the power unit, motor and encoder to the drive data sets (p0185, ...).</p> <p>p0009 = 29: Device download</p> <p>In the case of a download via the commissioning tool, the device is automatically brought into this state. After the download has been completed, p0009 is automatically set to 0 (ready). It is not possible to manually set p0009 to this value.</p> <p>p0009 = 30: Parameter reset</p> <p>In order to bring the complete unit into the "first commissioning" state or to load the parameters saved using p0977, to start, p0009 must be set to this value. p0976 can then be changed to the required value.</p> <p>p0009 = 50: configure Technology Extension</p> <p>After the device has been commissioned for the first time, in this state, Technology Extensions can be activated/deactivated for the individual drive objects (p4956).</p> <p>p0009 = 55: install Technology Extension</p> <p>Technology Extensions can be installed/uninstalled in this state.</p> <p>p0009 = 101: Topology input</p> <p>In this state, the DRIVE-CLiQ target topology can be entered using p9902 and p9903.</p>

2 Parameters

2.2 List of parameters

p0009 = 111: Insert drive object

This state allows a new drive object to be inserted using p9911.

p0009 = 112: Delete drive object

This state allows existing drive objects to be deleted using p9912 after the device has been commissioned for the first time.

p0009 = 113: Change drive object number

This state allows the drive object number of existing drive objects to be changed using p9913 after the device has been commissioned for the first time.

p0009 = 114: Change component number

This state allows the component number of existing components to be changed using p9914 after the device has been commissioned for the first time.

p0009 = 115: Parameter download

This state allows the complete device and drive commissioning using the parameter services.

p0009 = 117: Delete component

This state allows components to be deleted using p9917 after the device has been commissioned for the first time.

p0009 = 10000: ready (asynchronous)

When changing into this state, internally p0009 is set = 0. Additional calculations and checks are carried out in the background (asynchronously).

p0010		Drive commissioning parameter filter / Drv com par_filt		
HLA	Can be changed: C2(1), T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: All groups	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	10000	1	
Description:	Sets the parameter filter to commission a drive.			
	Setting this parameter filters out the parameters that can be written into in the various commissioning steps.			
Value:	0: Ready 1: Quick commissioning 2: Valve commissioning 3: Cylinder commissioning 4: Encoder commissioning 5: Technological application/units 11: Function modules 15: Data sets 17: Basic positioner commissioning 25: Position control commissioning 29: Only Siemens internal 30: Parameter reset 95: Safety Integrated commissioning 10000: Ready with immediate feedback signal			
Note:	The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0. By setting p3900 to a value other than 0, the quick commissioning is completed, and this parameter is automatically reset to 0. Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.			

p0010		Drive commissioning parameter filter / Drv com par_filt		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1), T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: 2800, 2818	
	P-Group: All groups	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	10000	1	
Description:	Sets the parameter filter to commission a drive.			
	Setting this parameter filters out the parameters that can be written into in the various commissioning steps.			

Value:	0: Ready 1: Quick commissioning 2: Power unit commissioning 3: Motor commissioning 4: Encoder commissioning 5: Technological application/units 15: Data sets 17: Basic positioner commissioning 25: Position control commissioning 29: Only Siemens internal 30: Parameter reset 95: Safety Integrated commissioning 10000: Ready with immediate feedback signal
Notice:	For p0010 = 10000 the following applies: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.
Note:	The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0. By setting p3900 to a value other than 0, the quick commissioning is completed, and this parameter is automatically reset to 0. Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1. p0010 = 10000 corresponds to p0010 = 0. Unlike with p0010 = 0, the parameter modification is applied immediately and the calculations are made in the background. Further parameter modifications cannot be made while the calculations are being performed.

p0010 Infeed commissioning parameter filter / INF com par_filt

A_INF, S_INF, R_INF, B_INF	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	1

Description: Sets the parameter filter to commission an infeed unit.
Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

Value:	0: Ready 1: Quick commissioning 2: Power unit commissioning 5: Technological application/units 29: Only Siemens internal 30: Parameter reset
---------------	---

Note: The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.
For p3900 not equal to 0, at the end of the quick commissioning, this parameter is automatically reset to 0.
Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM120 commissioning parameter filter / TM120 com par_filt

TM120	Can be changed: C2(1), T	Calculated: -	Access level: 1

CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: Unsigned16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Acknowledges the password for the Basic Operator Panel (BOP).		
Dependency:	Refer to: p0011, p0013		
p0013[0...49]	BOP user-defined list / BOP list		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Unsigned16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the required parameters to read and write via the Basic Operator Panel (BOP). Activation: 1. p0003 = 3 (expert). 2. p0013[0...49] = requested parameter number. 3. If required, enter p0011 = password in order to prevent non-authorized deactivation. 4. p0016 = 1 --> activates the selected user-defined list. Deactivation/change: 1. p0003 = 3 (expert). 2. If required, p0012 = p0011, in order to be authorized to change or deactivate the list. 3. If required p0013[0...49] = required parameter number. 4. p0016 = 1 --> activates the modified user-defined list. 5. p0003 = 0 --> deactivates the user-defined list.		
Dependency:	Refer to: p0009, p0011, p0012, p0976		

2 Parameters

2.2 List of parameters

Note: The following parameters can be read and written on the Control Unit drive object:

- p0003 (access stage)
- p0009 (device commissioning, parameter filter)
- p0012 (BOP password acknowledgment (p0013))

The following applies for the user-defined list:

- password protection is only available on the drive object Control Unit and is valid for all of the drive objects.
- p0013 cannot be included in the user-defined list for all drive objects.
- p0003, p0009, p0011, p0012, p0976 cannot, for the drive object Control Unit, be included in the user-defined list.
- the user-defined list can be cleared and deactivated "restore factory setting".

A value of 0 means: Entry is empty.

p0015	Macro drive unit / Macro drv unit		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S120_DP, CU_I_D410	Can be changed: C1 Data type: Unsigned32 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Runs the corresponding macro files. The selected macro file must be available on the memory card/device memory. Example: p0015 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0700, p1000, p1500, r8570		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0. When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.

Description:	Runs the corresponding macro files. The selected macro file must be available on the memory card/device memory. Example: p0015 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0700, p1000, p1500, r8570		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0. When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.		

p0015	Macro drive object / Macro DO		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM15DI_DO, TM120, TM150	Can be changed: C2(1) Data type: Unsigned32 P-Group: Commands Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Runs the corresponding macro files. The selected macro file must be available on the memory card/device memory. Example: p0015 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0700, p1000, p1500, r8570		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0. When executing a specific macro, the corresponding programmed settings are made and become active. No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!		
Note:	The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.		
p0016	Activate BOP user-defined list / BOP user list act		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: C1, U, T Data type: Integer16 P-Group: All groups Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting for activating/deactivating the user-defined list for the Basic Operator Panel (BOP). If p0016 = 1, then it is only possible to access parameters in the parameter list (p0013).		
Value:	0: BOP user-defined list deactivated 1: BOP user-defined list activated		
Dependency:	Refer to: p0011, p0012, p0013		
Note:	The user-defined list can only be deactivated with p0011 = p0012		
r0018	Control Unit firmware version / CU FW version		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the firmware version of the Control Unit.		
Dependency:	Refer to: r0128, r0148, r0158, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The velocity setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0021 **CO: Actual velocity smoothed / v_act smth**

HLA	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]

Description: Display and connector output for the smoothed actual value of the piston velocity.

Dependency: Refer to: r0022, r0063

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The velocity actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

r0021 **CO: Actual speed smoothed / n_act smth**

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4700, 4710
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the smoothed actual value of the motor speed.

Dependency: Refer to: r0022, r0063

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

r0021 **CO: Actual velocity smoothed / v_act smth**

SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4700, 4710
	P-Group: Displays, signals	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]

Description: Display and connector output for the smoothed actual value of the motor velocity.

Dependency: Refer to: r0022, r0063

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The velocity actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

r0021 **CO: Actual speed smoothed / n_act smth**

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6799
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the smoothed actual value of the motor speed.

Frequency components from the slip compensation (for induction motors) are not included.

Dependency: Refer to: r0022, r0063

2 Parameters

2.2 List of parameters

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

r0022	Actual velocity smoothed / v_act smth		
HLA	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the smoothed actual value of the piston velocity.		
Dependency:	Refer to: r0021, r0063		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The velocity actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).		

r0022	Speed actual value rpm smoothed / n_ActV rpm smth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4700, 4710
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the smoothed actual value of the motor speed. r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.		
Dependency:	Refer to: r0021, r0063		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).		

r0022	Actual velocity smoothed / v_act smth		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4700, 4710
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the smoothed actual value of the motor velocity.		
Dependency:	Refer to: r0021, r0063		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The velocity actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).		

r0022	Speed actual value rpm smoothed / n_ActV rpm smth		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 6799 Unit selection: - Expert list: 1 Factory setting - [rpm]
Description:	Displays the smoothed actual value of the motor speed. Frequency components from the slip compensation (for induction motors) are not included. r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.		
Dependency:	Refer to: r0021, r0063		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).		
r0024	Output frequency smoothed / f_outp smooth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 5300, 5730 Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the smoothed output frequency.		
Dependency:	Refer to: r0066		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The output frequency is available smoothed (r0024) and unsmoothed (r0066).		
r0024	Output frequency smoothed / f_outp smooth		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 6300, 6799 Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the smoothed output frequency. Frequency components from the slip compensation (for induction motors) are included.		
Dependency:	Refer to: r0066		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The output frequency is available smoothed (r0024) and unsmoothed (r0066).		
r0024	CO: Line supply frequency smoothed / f_line smooth		
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 8850, 8950 Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Display and connector output for the smoothed line frequency.		
Dependency:	Refer to: r0066		

2 Parameters

2.2 List of parameters

Note: Smoothing time constant = 300 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The line frequency is available smoothed (r0024) and unsmoothed (r0066).
A positive sign of the frequency is obtained when the line supply phases U, V and W are connected with the correct phase sequence.
A negative sign of the frequency is obtained when the 3 line phases are interchanged therefore designating a negative direction of the rotating field of the 3-phase line supply voltage.

r0025	CO: Output voltage smoothed / U_outp smooth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [Vrms]	Access level: 2 Func. diagram: 5730, 6300, 6799 Unit selection: - Expert list: 1 Factory setting - [Vrms]

Description: Displays the smoothed output voltage of the power unit.

Dependency: Refer to: r0072

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The output voltage is available smoothed (r0025) and unsmoothed (r0072).

r0025[0...4]	CO: Input voltage smoothed / U_inp smth		
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [Vrms]	Access level: 2 Func. diagram: 8850, 8950 Unit selection: - Expert list: 1 Factory setting - [Vrms]

Description: Display and connector output for the smoothed actual values of the input voltage.

Index: [0] = Power unit input terminals (model)
[1] = Line filter input terminals (VSM)
[2] = Line voltage source (model)
[3] = Line voltage source smoothed (model)
[4] = Line voltage source strongly smoothed (model)

Dependency: Refer to: r0072

Note: Smoothing time constant = 300 ms
The signals are not suitable as process quantity and may only be used as display quantities.
The input voltages are available smoothed (r0025) and unsmoothed (r0072).
For r0025[0]:
Pulsed voltage at the line supply input terminals of the power unit.
The value is calculated from the modulation depth r0074, and is therefore only correct in the closed-loop controlled mode and when the pulses are enabled.
For r0025[1]:
Absolute voltage value at the input terminals of the line filter or the connection point of a Voltage Sensing Module (VSM).
If a VSM is not connected, then the value is calculated from the VSM measured values r3661 and r3662 and is therefore equal to 0.
For r0025[2]:
Estimated value for the voltage of the voltage source that is calculated in the voltage model of the line supply PLL.
For r0025[3]:
Smoothed display value of the filtered source voltage from r0072[3].
For r0025[4]:
Smoothed display value of the filtered source voltage from r0072[4].

r0026	CO: DC link voltage smoothed / Vdc smth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 5730, 8750, 8850, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: p2001	Unit selection: - Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the smoothed actual value of the DC link voltage.		
Dependency:	Refer to: r0070		
Notice:	For SINAMICS S120 AC Drive (AC/AC) the following applies: When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24 V power supply is connected, a value of approx. 24 V is displayed in the display parameter.		
Note:	SERVO, VECTOR: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
r0026	CO: DC link voltage smoothed / Vdc smth		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 6799, 8750, 8850, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: p2001	Unit selection: - Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the smoothed actual value of the DC link voltage.		
Dependency:	Refer to: r0070		
Notice:	For SINAMICS S120 AC Drive (AC/AC) the following applies: When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24 V power supply is connected, a value of approx. 24 V is displayed in the display parameter.		
Note:	SERVO, VECTOR: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
r0026	CO: DC link voltage smoothed / Vdc smth		
A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: p2001	Unit selection: - Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the smoothed actual value of the DC link voltage.		
Dependency:	Refer to: r0070		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.		
Note:	A_INF, B_INF, S_INF: smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		

2 Parameters

2.2 List of parameters

r0027	CO: Absolute actual current smoothed / I_act AbsV smth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: - Scaling: p2002 Max - [Arms]	Access level: 2 Func. diagram: 5730, 6799, 8850, 8950 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the smoothed absolute current actual value.		
Dependency:	Refer to: r0068		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.		
Note:	A_INF, S_INF, VECTOR: Smoothing time constant = 300 ms SERVO: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).		
<hr/>			
r0027	CO: Absolute actual current smoothed / I_act AbsV smth		
B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dyn. index: - Unit group: 6_4 Scaling: p2002 Max - [A]	Access level: 2 Func. diagram: 8750 Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the smoothed absolute current actual value.		
Dependency:	Refer to: r0068		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used. For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).		
<hr/>			
r0028	Modulation depth smoothed / mod_depth smth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: p2002 Max - [%]	Access level: 3 Func. diagram: 5730, 6799, 8950 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the smoothed actual value of the modulation depth.		
Dependency:	Refer to: r0074		
Note:	A_INF: Smoothing time constant = 300 ms SERVO, VECTOR: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The modulation depth is available smoothed (r0028) and unsmoothed (r0074).		

r0029	Current actual value field-generating smoothed / Id_act smth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed field-generating actual current.		
Dependency:	Refer to: r0076		
Note:	SERVO: Smoothing time constant = 100 ms VECTOR: Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).		

r0029	Reactive current actual value smoothed / I_react smooth		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed actual value of the reactive current component.		
Note:	Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The reactive current actual value is available smoothed (r0029) and unsmoothed (r0076).		

r0030	Current actual value torque-generating smoothed / Iq_act smth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed torque-generating actual current.		
Dependency:	Refer to: r0078		
Note:	SERVO: Smoothing time constant = 100 ms VECTOR: Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The following applies for SERVO: The torque-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]). The following applies for VECTOR: The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).		

2 Parameters

2.2 List of parameters

r0030	Current actual value force generating smoothed / I_q_act smth		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed force-generating actual current.		
Dependency:	Refer to: r0078		
Note:	SERVO: Smoothing time constant = 100 ms VECTOR: Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The following applies for SERVO: The force-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]). The following applies for VECTOR: The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).		

r0030	Active current actual value smoothed / I_{act} smth		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed actual value of the active current components.		
Dependency:	Refer to: r0078		
Note:	Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The active current actual value is available smoothed (r0030) and unsmoothed (r0078).		

r0031	Force actual value smoothed / F_{ActV} smth		
HLA	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 8_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [N]	- [N]	- [N]
Description:	Displays the smoothed force setpoint.		
Dependency:	Refer to: r0080		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The force actual value is available smoothed (r0031) and unsmoothed (r0080).		

r0031	Actual torque smoothed / M_act smth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Nm]	Calculated: - Dyn. index: - Unit group: 7_1 Scaling: p2003 Max - [Nm]	Access level: 2 Func. diagram: 5730, 6799 Unit selection: p0505 Expert list: 1 Factory setting - [Nm]
Description:	Displays the smoothed torque actual value.		
Dependency:	Refer to: r0080		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The torque actual value is available smoothed (r0031) and unsmoothed (r0080).		

r0031	Force actual value smoothed / F_ActV smth		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [N]	Calculated: - Dyn. index: - Unit group: 8_1 Scaling: p2003 Max - [N]	Access level: 2 Func. diagram: 5730, 6799 Unit selection: p0505 Expert list: 1 Factory setting - [N]
Description:	Displays the smoothed force setpoint.		
Dependency:	Refer to: r0080		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The force actual value is available smoothed (r0031) and unsmoothed (r0080).		

r0032	CO: Active power actual value smoothed / P_ActV_act smth		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [kW]	Calculated: - Dyn. index: - Unit group: 14_10 Scaling: r2004 Max - [kW]	Access level: 2 Func. diagram: 5730, 6799, 8750, 8850, 8950 Unit selection: p0505 Expert list: 1 Factory setting - [kW]
Description:	Display and connector output for the smoothed actual value of the active power.		
Dependency:	Refer to: r0082		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.		
Note:	Significance for the drive: Power output at the motor shaft Significance for the infeed: Line power drawn For A_INF, B_INF and S_INF the following applies: The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082). The following applies for SERVO: The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]). For VECTOR and VECTORMV, the following applies: The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).		

r0032	CO: Active power actual value smoothed / P_ActV_act smth		
B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals	Unit group: 14_10	Unit selection: p0505

	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the smoothed force utilization as a percentage.
The force utilization is obtained from the required smoothed force referred to the force limit.

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The force utilization is available smoothed (r0033) and unsmoothed (r0081).
For $F_{set\ total} (r0079) > F_{max\ offset} (p1532)$, the following applies:
- demanded torque = $F_{set\ total} - F_{max\ offset}$
- actual force limit = $F_{max\ upper\ effective} (r1538) - F_{max\ offset}$
For $F_{set\ total} (r0079) \leq F_{max\ offset} (p1532)$, the following applies:
- demanded force = $F_{max\ offset} - F_{set\ total}$
- actual force limit = $F_{max\ offset} - F_{max\ lower\ effective} (r1539)$
For the actual force limit = 0, the following applies: r0033 = 100 %
For the actual force limit < 0, the following applies: r0033 = 0 %

r0033	Torque utilization smoothed / M_util smth		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8012
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the smoothed torque utilization as a percentage.
The torque utilization is obtained from the required smoothed torque in reference to the torque limit, scaled using p2196.

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The torque utilization is available smoothed (r0033) and unsmoothed (r0081).
For $M_{set\ total} (r0079) > 0$, the following applies:
- Required torque = $M_{set\ total}$
- Actual torque limit = $M_{max\ upper\ effective} (r1538)$
For $M_{set\ total} (r0079) \leq 0$, the following applies:
- Required torque = $- M_{set\ total}$
- Actual torque limit = $- M_{max\ lower\ effective} (r1539)$
For the actual torque limit = 0, the following applies: r0033 = 100 %
For the actual torque limit < 0, the following applies: r0033 = 0 %

r0034	CO: Motor utilization thermal / Mot_util therm		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: ASM, SESM, REL Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 8017, 8019 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	<p>Display and connector output for the motor utilization from motor temperature model 1 (I2t) or 3. For motor temperature model 1 (I2t) (p0612.0 = 1), the following applies: For firmware version < 4.7 SP6: - r0034 = (motor model temperature - 40 °C) / (p0605 - 40 °C) * 100 % From firmware version 4.7 SP6: - p0612.12 = 0 and p0612.8 = 0: r0034 = (motor model temperature - 40 °C) / (p0605 - 40 °C) * 100 % - p0612.12 = 0 and p0612.8 = 1: r0034 = (motor model temperature - 40 °C) / p0627 * 100 % - p0612.12 = 1 and p0612.8 = 0: r0034 = (motor model temperature - p0613) / (p0605 - p0613) * 100 % - p0612.12 = 1 and p0612.8 = 1: r0034 = (motor model temperature - p0613) / p0627 * 100 % For motor temperature model 3 (p0612.2 = 1), the following applies: - r0034 = (motor model temperature - r5397) / (r5398 - r5397) * 100 %</p>		
Dependency:	<p>The thermal motor utilization is only determined when the motor temperature model 1 (I2t) or 3 is activated. The following conditions are a prerequisite for additional information. - a temperature sensor has not been parameterized (p0600, p0601). - the current corresponds to the stall current (p0318). - speed n > 1 [rpm]. For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies: - the temperature model operates with an ambient temperature of 20 °C. A motor utilization of 100% is displayed (r0034 = 100 %) when the following conditions are permanently fulfilled: - the ambient temperature is 40 °C (model 1: p0625 = 40 °C, model 3: p0613 = 40 °C). From firmware version 4.7 SP6 and p0612.12 = 1, the following applies: - the ambient temperature can be adapted to the conditions using p0613. Refer to: p0605, p0611, p0612, p0613, p0627, r0632 Refer to: F07011, A07012</p>		
Notice:	<p>After the drive is switched on, the system starts to determine the motor temperature with an assumed model value. This means that the value for the motor utilization is only valid after a stabilization time.</p>		
Note:	<p>Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. For r0034 = -200.0 %, the following applies: The value is invalid (e.g. the motor temperature model is not activated or has been incorrectly parameterized).</p>		

r0035	CO: Motor temperature / Mot temp		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°C]	Calculated: - Dyn. index: - Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 2 Func. diagram: 8016, 8017 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	<p>Display and connector output for the actual temperature in the motor.</p>		
Note:	<p>For r0035 not equal to -200.0 °C, the following applies: - this temperature display is valid. - a KTY/PT1000 temperature sensor is connected. - the thermal model for the induction motor is activated (p0612 bit 1 = 1 and temperature sensor deactivated: p0600 = 0 or p0601 = 0).</p>		

For r0035 equal to -200.0 °C, the following applies:

- this temperature display is not valid (temperature sensor error).
- a PTC sensor or bimetallic NC contact is connected.
- the temperature sensor of the synchronous motor is deactivated (p0600 = 0 or p0601 = 0).

	16	OFF1 enable internal missing	Yes	No	-
	17	OFF2 enable internal missing	Yes	No	-
	19	Pulse enable internal missing	Yes	No	-
	26	Infeed inactive or not operational	Yes	No	-
	29	Cooling unit ready signal missing	Yes	No	-

Dependency: Refer to: r0002

Note: The value r0046 = 0 indicates that all enable signals for the infeed are present.

Bit 00 = 1 (enable signal missing), if:

- the signal source in p0840 is a 0 signal.
- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:

- the signal source in p0844 or p0845 is a 0 signal.

Bit 03 = 1 (enable signal missing), if:

- the signal source in p0852 is a 0 signal.

Bit 08 = 1 (enable signal missing), if:

- the pulse enable via terminal EP is missing (booksize: X21, chassis: X41).

Bit 16 = 1 (enable signal missing), if:

- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:

- the commissioning mode is selected (p0009 > 0 or p0010 > 0) or there is an OFF2 fault response or the OFF1 signal source (p0840) is changed.

Bit 19 = 1 (internal pulse enable missing), if:

- synchronization is running between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle.

Bit 26 = 1 (enable signal missing), if:

- the infeed is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).
- the infeed is in the "PROFenergy energy-saving mode" (r5600, CU-specific).

Bit 29 = 1 (enable signal missing), if:

- the cooling unit ready signal via binector input p0266[1] missing.

	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output for the velocity setpoint after the setpoint filters.		

r0062	CO: Speed setpoint after the filter / n_set after filter		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5019, 5020, 5030, 5042, 5210
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed setpoint after the setpoint filters.		

r0062	CO: Velocity setpoint after the filter / v_set after filter		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5019, 5020, 5030, 5042, 5210
	P-Group: Displays, signals	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output for the velocity setpoint after the setpoint filters.		

r0062	CO: Speed setpoint after the filter / n_set after filter		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6020, 6030, 6031
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed setpoint after the setpoint filters.		

r0063	CO: Actual velocity smoothed / v_act smth		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4965
	P-Group: Displays, signals	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output for the smoothed velocity actual value.		
Dependency:	Refer to: r0021, r0022, r0061, p1441		
Note:	The value in r0063 is smoothed with p1441. The velocity actual value is available smoothed (r0021, r0022) and unsmoothed (r0061).		

r0063	CO: Actual speed smoothed / n_act smth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4700, 4710, 5019, 5300, 8019
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the smoothed speed actual value.		
Dependency:	Refer to: r0021, r0022, r0061, p1441, p1451		

2 Parameters

2.2 List of parameters

Note: In encoderless operation, the speed actual value is calculated and can be smoothed using p1451.
For operation with encoder, r0063 is smoothed with p1441.
The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0061).

r0063	CO: Actual velocity smoothed / v_act smth		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 4700, 4710, 5019, 5300, 8019
	P-Group: Displays, signals Not for motor type: -	Unit group: 4_1 Scaling: p2000	Unit selection: p0505 Expert list: 1
	Min - [m/min]	Max - [m/min]	Factory setting - [m/min]
Description:	Display and connector output for the smoothed velocity actual value.		
Dependency:	Refer to: r0021, r0022, r0061, p1441, p1451		
Note:	In encoderless operation, the velocity actual value is calculated and can be smoothed using p1451. For operation with encoder, r0063 is smoothed with p1441. The velocity actual value is available smoothed (r0021, r0022) and unsmoothed (r0061).		

r0063[0...2]	CO: Speed actual value / n_ActV		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 4702, 4715, 6799
	P-Group: Displays, signals Not for motor type: -	Unit group: 3_1 Scaling: p2000	Unit selection: p0505 Expert list: 1
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]
Description:	Display and connector output for the speed actual value. Frequency components from the slip compensation (for induction motors) are not included. For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output frequency is shown in r0063[0].		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045 [2] = Calculated from f_set - f_slip (unsmoothed)		
Dependency:	Refer to: r0021, r0022		
Note:	The speed actual value is calculated in encoderless operation and for U/f control. For operation with encoder, r0063[0] is smoothed with p1441. The speed actual value r0063[0] – smoothed with p0045 – is additionally displayed in r0063[1]. r0063[1] can be used as process variable for the appropriate smoothing time constant p0045. The speed (r0063[2]) calculated from the output frequency and slip can only be compared with the speed actual value (r0063[0]) in the steady-state. The actual speed (r0063[0]) is available as a display quantity with additional smoothing in r0021. For U/f control, the mechanical speed calculated from the output frequency and the slip is shown in r0063[2] even if slip compensation is deactivated.		

r0063	CO: Speed actual value / n_ActV		
TM41	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: -
	P-Group: Displays, signals Not for motor type: -	Unit group: 3_1 Scaling: p2000	Unit selection: p0505 Expert list: 1
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]
Description:	Display and connector output for the smoothed speed actual value.		
Note:	For Terminal Module 41 (TM41), this value is used to interconnect with standard telegram 3 and is always zero.		

r0064	CO: Velocity controller system deviation / v_ctrl SysDev		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the actual system deviation of the velocity controller.		
Note:	With active reference model, the system deviation to the P component of the velocity controller is displayed.		
r0064	CO: Speed controller system deviation / n_ctrl SysDev		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 6040
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the actual system deviation of the speed controller.		
Note:	In servo control mode with active reference model, the system deviation to the P component of the speed controller is displayed.		
r0064	CO: Velocity controller system deviation / v_ctrl SysDev		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 6040
	P-Group: Displays, signals	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the actual system deviation of the velocity controller.		
Note:	In servo control mode with active reference model, the system deviation to the P component of the velocity controller is displayed.		
r0065	Slip frequency / f_slip		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6310, 6700, 6727, 6730, 6732
	P-Group: Displays, signals	Unit group: 2_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the slip frequency for induction motors (ASM).		

2 Parameters

2.2 List of parameters

r0066	CO: Output frequency / f_{outp}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: 2_1 Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 5300, 5730, 6300, 6310, 6730, 6731, 6799 Unit selection: p0505 Expert list: 1 Factory setting - [Hz]
Description:	Display and connector output for the output frequency of the Motor Module.		
Dependency:	Refer to: r0024		
Note:	The output frequency is available smoothed (r0024) and unsmoothed (r0066).		
<hr/>			
r0066[0...1]	CO: Line frequency / f_{line}		
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: 2_1 Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 8850, 8864, 8950, 8964 Unit selection: p0505 Expert list: 1 Factory setting - [Hz]
Description:	Display and connector output for the line frequency. For index [0]: Displays the instantaneous value of the line supply PLL. For index [1]: Displays the values smoothed with a time constant of 50 ms to monitor the frequency.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: r0024		
Note:	The line frequency is also available with an adjustable smoothing (r0024). A positive sign of the frequency is obtained when the line supply phases U, V, W are connected with the correct phase sequence. A negative sign of the frequency is obtained when the 3 line phases are interchanged therefore designating a negative direction of the rotating field of the 3-phase line supply voltage.		
<hr/>			
r0067[0...1]	CO: Pressure actual value A / Press ActV A		
HLA	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [bar]	Calculated: - Dyn. index: - Unit group: - Scaling: p2002 Max - [bar]	Access level: 3 Func. diagram: 4970 Unit selection: - Expert list: 1 Factory setting - [bar]
Description:	Display and connector output for the actual pressure value on side A.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		

r0067	CO: Output current maximum / I_{outp} max		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 5722, 6300, 6301, 6640 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the maximum output current of the power unit.		
Dependency:	The maximum output current is determined by the parameterized current limit and the motor and converter thermal protection. Refer to: p0290, p0640		
r0067[0...1]	Absolute current value permissible / I_{AbsV} perm		
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the actual permissible absolute line-side current.		
Index:	[0] = Motor mode [1] = Regenerative mode		
Dependency:	The permissible current is the minimum from the maximum converter current (r0209), the parameterized current limits (p3530 to p3533) as well as the maximum permissible current of line filter (r3534). Refer to: p3530, p3531, r3534		
r0068[0...1]	CO: Pressure actual value B / Press ActV B		
HLA	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [bar]	Calculated: - Dyn. index: - Unit group: - Scaling: p2002 Max - [bar]	Access level: 3 Func. diagram: 4970 Unit selection: - Expert list: 1 Factory setting - [bar]
Description:	Displays the actual pressure value at side B.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
r0068	CO: Absolute current actual value / I_{act} AbsV		
SERVO, SERVO_AC, SERVO_I_AC, A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 5730, 7017, 8017, 8019, 8021, 8850, 8950 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays actual absolute current.		
Dependency:	Refer to: r0027		
Notice:	For A_INF, S_INF the following applies: The value is updated with the current controller sampling time. The following applies for SERVO: The value is updated with a sampling time of 1 ms.		

2 Parameters

2.2 List of parameters

Note: Absolute current value = $\sqrt{I_q^2 + I_d^2}$
The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0068[0...1]	CO: Absolute current actual value / I_act AbsV		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6300, 6714, 6799, 7017, 8017, 8019, 8029, 8021
	P-Group: Displays, signals Not for motor type: - Min - [Arms]	Unit group: 6_2 Scaling: p2002 Max - [Arms]	Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays actual absolute current.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0027		
Notice:	The value is updated with the current controller sampling time.		
Note:	Absolute current value = $\sqrt{I_q^2 + I_d^2}$ The absolute value of the current actual value is available smoothed (r0027 with 300 ms, r0068[1] with p0045) and unsmoothed (r0068[0]).		

r0068	CO: DC current in the DC link / Idc DC link		
B_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 8021, 8750
	P-Group: Displays, signals Not for motor type: - Min - [A]	Unit group: 6_4 Scaling: p2002 Max - [A]	Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the DC current in the DC link.		
Dependency:	Refer to: r0027		
Notice:	For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	The DC current in the DC link is available smoothed (r0027) and unsmoothed (r0068).		

r0069	CO: System pressure actual value / Sys press ActV		
HLA	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: -
	P-Group: Displays, signals Not for motor type: - Min - [bar]	Unit group: - Scaling: p2002 Max - [bar]	Unit selection: - Expert list: 1 Factory setting - [bar]
Description:	Display and connector output for the actual value of the system pressure.		

r0069[0...8]	CO: Phase current actual value / I_phase ActV		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5700, 5730, 7008
	P-Group: Displays, signals	Unit group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the measured actual phase currents as peak value.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W [3] = Phase U offset [4] = Phase V offset [5] = Phase W offset [6] = Total U, V, W [7] = Alpha component [8] = Beta component		
Note:	In indices 3 ... 5, the offset currents of the 3 phases, which are added to correct the phase currents, are displayed. The sum of the 3 corrected phase currents is displayed in index 6.		
r0069[0...8]	CO: Phase current actual value / I_phase ActV		
VECTOR, VECTOR_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6730, 6731, 6732, 7983, 7987, 8850, 8950
	P-Group: Displays, signals	Unit group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Display and connector output for the measured actual phase currents as peak value.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W [3] = Phase U offset [4] = Phase V offset [5] = Phase W offset [6] = Total U, V, W [7] = Alpha component [8] = Beta component		
Note:	In indices 3 ... 5, the offset currents of the 3 phases, which are added to correct the phase currents, are displayed. The sum of the 3 corrected phase currents is displayed in index 6.		
r0070[0...1]	CO: Valve position voltage setpoint before inversion / U_set before inv		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4966
	P-Group: Displays, signals	Unit group: 5_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Display and connector output for the voltage setpoint of the valve position before inversion.		
Index:	[0] = Before the manipulated variable filter p180x [1] = After the manipulated variable filter p180x		
Dependency:	Refer to: r0071		

2 Parameters

2.2 List of parameters

r0070	CO: Actual DC link voltage / Vdc act val		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 5730 Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Display and connector output for the measured actual value of the DC link voltage.		
Dependency:	Refer to: r0026		
Notice:	For SINAMICS S120 AC Drive (AC/AC) the following applies: When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24V power supply is connected, a value of approx. 24 V is displayed.		
Note:	The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
<hr/>			
r0070	CO: Actual DC link voltage / Vdc act val		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 6723, 6724, 6730, 6731, 6799 Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Display and connector output for the measured actual value of the DC link voltage.		
Dependency:	Refer to: r0026		
Notice:	For SINAMICS S120 AC Drive (AC/AC) the following applies: When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24V power supply is connected, a value of approx. 24 V is displayed.		
Note:	The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
<hr/>			
r0070	CO: Actual DC link voltage / Vdc act val		
A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 8750, 8850, 8910, 8940, 8950, 8964 Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Display and connector output for the measured actual value of the DC link voltage.		
Dependency:	Refer to: r0026		
Note:	The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
<hr/>			
r0071[0...1]	CO: Valve position voltage setpoint / Valve U_set		
HLA	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 4966 Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Displays the voltage setpoint for the valve position.		
Index:	[0] = Unsmoothed [1] = Smoothed		

r0071	Maximum output voltage / U_output max			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6301, 6640, 6700, 6722, 6723, 6724, 6725, 6727	
	P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Unit group: 5_1 Scaling: p2001 Max - [Vrms]	Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]	
Description:	Displays the maximum output voltage.			
Dependency:	The maximum output voltage depends on the actual DC link voltage (r0070) and the maximum modulation depth (p1803).			
Note:	As the (driven) motor load increases, the maximum output voltage drops as a result of the reduction in DC link voltage.			
r0072[0...1]	CO: Valve position voltage actual value / Valve U_act			
HLA	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: -	
	P-Group: Displays, signals Not for motor type: - Min - [V]	Unit group: 5_2 Scaling: p2001 Max - [V]	Unit selection: p0505 Expert list: 1 Factory setting - [V]	
Description:	Display and connector output for the voltage actual value of the valve actuator position.			
Index:	[0] = Unsmoothed [1] = Smoothed			
r0072	CO: Output voltage / U_output			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5730, 6730, 6731, 6799	
	P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Unit group: 5_1 Scaling: p2001 Max - [Vrms]	Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]	
Description:	Display and connector output for the actual output voltage of the power unit (Motor Module).			
Dependency:	Refer to: r0025			
Note:	The output voltage is available smoothed (r0025) and unsmoothed (r0072).			
r0072[0...4]	CO: Input voltage / U_inp			
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 8850, 8950	
	P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Unit group: 5_1 Scaling: p2001 Max - [Vrms]	Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]	
Description:	Display and connector output for the actual input voltage of the power unit (Line Module).			
Index:	[0] = Power unit input terminals (model) [1] = Line filter input terminals (VSM) [2] = Line voltage source (model) [3] = Line voltage source smoothed (model) [4] = Line voltage source strongly smoothed (model)			

2 Parameters

2.2 List of parameters

Note: The input voltages are available smoothed (r0025) and unsmoothed (r0072).
 For r0072[0]:
 Displays the pulsed voltage at the line supply input terminals of the power unit.
 The value is calculated from the modulation depth (r0074) and is therefore only correct in the closed-loop controlled mode and when the pulses are enabled.
 For r0072[1]:
 Displays the absolute voltage at the input terminals of the line filter or the connection point of a Voltage Sensing Module (VSM).
 If a VSM is not connected, then the value is calculated from the VSM measured values r3661 and r3662 and is therefore equal to 0.
 For r0072[2]:
 Displays the estimated value for the voltage of the voltage source that is calculated in the voltage model of the line supply PLL.
 Input quantities of the model are the measured values of the line currents and the DC link voltage as well as the characteristics of the line filter p0225, p0226 as well as the line inductance p3424.
 For r0072[3]:
 Displays the smoothed value for the source voltage in r0072[2].
 The PT1 smoothing time constant is set in p3472[0, 1].
 For r0072[4]:
 Displays the strongly smoothed value for the source voltage in r0072[2].
 The PT1 smoothing time constant is set in p3472[2].

r0073[0...1]	Controller valve position voltage setpoint / Valve U_set		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4965, 4970
	P-Group: Displays, signals	Unit group: 5_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the voltage setpoints for the valve position of the controller.		
Index:	[0] = Velocity controller [1] = Force controller		
Note:	These voltage setpoints have been taken before the characteristic compensation.		

r0073	Maximum modulation depth / mod_depth max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6723, 6724, 6725
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the maximum modulation depth.		
Dependency:	Refer to: p1803		

r0074	CO: Piston position with respect to the piston zero point / Piston pos zero		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the piston position regarding the piston zero point in encoder fine pulses.		

r0074	CO: Modulation depth / mod_depth		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: 5730, 6730, 6731, 6799, 8940, 8950 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Display and connector output for the actual modulation depth.		
Dependency:	Refer to: r0028		
Note:	For space vector modulation, 100% corresponds to the maximum output voltage without overcontrol. Values above 100% indicate an overcontrol condition - values below 100% have no overcontrol. The phase voltage (phase-to-phase, rms) is calculated as follows: $(r0074 \times r0070) / (\sqrt{2} \times 100 \%)$. The modulation depth is available smoothed (r0028) and unsmoothed (r0074).		
r0075	CO: Current setpoint field-generating / Id_set		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: REL Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 5700, 5714, 5722 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the field-generating current setpoint (Id_set).		
Note:	This value is irrelevant for the U/f control mode.		
r0075	CO: Current setpoint field-generating / Id_set		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: REL Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 6700, 6714, 6725 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the field-generating current setpoint (Id_set).		
Note:	This value is irrelevant for the U/f control mode.		
r0075	CO: Reactive current setpoint / I_react_set		
A_INF, R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 7997, 8945, 8946 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the reactive current setpoint.		
Dependency:	Refer to: r3471, p3610		
Note:	The reactive current requirement of a line filter should be covered by the controlled infeed/regenerative feedback so that the converter always operates with a power factor of 1 compared to the line. Setpoint r0075 includes the reactive current for a line filter that depends on the actual operating point (r3471). If the line phases are reversed and the line voltage therefore has a negative orientation ($r0066 < 0$), it should be noted that the sign of the reactive current is reversed.		

2 Parameters

2.2 List of parameters

r0076	CO: Current actual value field-generating / Id_act		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5714, 5730, 6700, 6714, 6799
	P-Group: Displays, signals Not for motor type: - Min - [Arms]	Unit group: 6_2 Scaling: p2002 Max - [Arms]	Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the field-generating current actual value (Id_act).		
Dependency:	Refer to: r0029		
Note:	This value is irrelevant for the U/f control mode. The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).		
r0076[0...1]	CO: Current actual value field-generating / Id_act		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5714, 5730, 6700, 6714, 6799
	P-Group: Displays, signals Not for motor type: - Min - [Arms]	Unit group: 6_2 Scaling: p2002 Max - [Arms]	Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the field-generating current actual value (Id_act).		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0029		
Note:	This value is irrelevant for the U/f control mode. The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).		
r0076	CO: Reactive current actual value / I_reactive_ActV		
A_INF, S_INF, R_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 8810, 8850, 8910, 8946, 8950
	P-Group: Displays, signals Not for motor type: - Min - [Arms]	Unit group: 6_2 Scaling: p2002 Max - [Arms]	Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the reactive current actual value.		
Dependency:	Refer to: r0029, r0075		
Note:	The reactive current actual value is available smoothed (r0029) and unsmoothed (r0076).		
r0077	CO: Current setpoint torque-generating / Iq_set		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5714, 5722
	P-Group: Displays, signals Not for motor type: REL Min - [Arms]	Unit group: 6_2 Scaling: p2002 Max - [Arms]	Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the torque/force-generating current setpoint.		
Note:	This value is irrelevant for the U/f control mode.		

r0077	CO: Current setpoint force-generating / Iq_set		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5714, 5722
	P-Group: Displays, signals Not for motor type: REL	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Display and connector output for the force-generating current setpoint.		
Note:	This value is irrelevant for the U/f control mode.		

r0077	CO: Current setpoint torque-generating / Iq_set		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6700, 6710
	P-Group: Displays, signals Not for motor type: REL	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Display and connector output for the torque/force-generating current setpoint.		
Note:	This value is irrelevant for the U/f control mode.		

r0077	CO: Active current setpoint / I_act_set		
A_INF, R_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 7997, 8910, 8940, 8945
	P-Group: Displays, signals Not for motor type: -	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Display and connector output for the active current setpoint (Iq_set).		

r0078[0...1]	CO: Current actual value torque-generating / Iq_act		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5714, 5730
	P-Group: Displays, signals Not for motor type: -	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Display and connector output for the torque-generating current actual value (Iq_act).		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0030, p0045		
Note:	These values are irrelevant for the U/f control mode. The torque-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]).		

2 Parameters

2.2 List of parameters

r0078[0...1]	CO: Current actual value force-generating / I_{q_act}		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5700, 5714, 5730

[2] = Power drawn
[3] = Power drawn smoothed
Dependency: Refer to: r0032
Note: The mechanical active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).
For index [3]:
Smoothing time constant = 4 ms

r0082[0...2] CO: Active power actual value / P_act

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714, 6799
	P-Group: Displays, signals	Unit group: 14_5	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]

Description: Displays the instantaneous active power.
Index: [0] = Unsmoothed
[1] = Smoothed with p0045
[2] = Electric power
Dependency: Refer to: r0032
Note: The mechanical active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).

r0082 CO: Active power actual value / P_act

A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8750, 8850, 8950
	P-Group: Displays, signals	Unit group: 14_7	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]

Description: Displays the instantaneous active power.
Dependency: Refer to: r0032
Note: The active power is available smoothed (r0032) and unsmoothed (r0082).

r0082	CO: Active power actual value / P_act		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8750, 8850, 8950
	P-Group: Displays, signals	Unit group: 14_7	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Displays the instantaneous active power.		
Dependency:	Refer to: r0032		
Notice:	For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	The active power is available smoothed (r0032) and unsmoothed (r0082).		
r0083	CO: Flux setpoint / Flux set

Description:	Displays the flux actual value.		
Index:	[0] = Unsmoothed [1] = Smoothed		

2 Parameters

2.2 List of parameters

Note: The flux actual value (index 1) smoothed with p1585 is only displayed for separately excited synchronous motors. In the following cases, the unsmoothed flux actual value is also displayed:

- in the range of the current model.
- during the pole position identification.
- for I/f control.
- for a stalled drive.

r0087	CO: Actual power factor / Cos phi act		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714, 6730, 6732, 6799

The pre-setting of the controller clock cycles can result in a derating of the Motor Module (e.g. p0115[0] = 400 µs --> 375 µs).</p> <p>When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).</p>		
Value:	<p>0: No isochronous PROFIBUS 1: Isochronous PROFIBUS</p>		
Dependency:	<p>Refer to: r0110, p0115 Refer to: A01223, A01224</p>		
Caution: 	<p>Only current controller sampling times (p0115[0]) which are integers of 125 µs are permitted for isochronous mode. For SERVO the following current controller sampling times are also possible: 187.5, 150, 100, 93.75, 75, 62.5, 50, 37.5, 31.25 µs For VECTOR the following current controller sampling times are also possible: 312.5, 218.75, 200, 187.5, 175, 156.25, 150, 137.5 µs The additional current controller sampling times must be taken into account when parameterizing the bus for Ti, To and Tdp.</p>		
Notice:	<p>p0092 only has an influence on the automatic default for the sampling times (p0115) in the drive. If the sampling times are modified subsequently in expert mode (p0112 = 0), p0092 = 0 should be set so that the new values are not overwritten again by the automatic default when the parameters are downloaded. The conditions for current controller sampling time for isochronous operation must still be carefully ensured (refer under Caution!).</p>		

p0092	Clock synchronous operation pre-assignment/check / Clk sync op pre-as		
CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: C1(1)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Setting to pre-assign/check the sampling times for the internal controller clock cycles for isochronous PROFIdrive operation.
 For p0092 = 0:
 The controller clock cycles are set without any restrictions by the isochronous PROFIdrive operation (same as for up to V2.3).
 When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).
 For p0092 = 1:
 The controller clock cycles are set so that isochronous PROFIdrive operation is possible. If it is not possible to change the controller clock cycles of the isochronous PROFIdrive operation, then an appropriate message is output. The pre-setting of the controller clock cycles can result in a derating of the Motor Module (e.g. p0115[0] = 400 µs --> 375 µs).
 When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).

Value:
 0: No isochronous PROFIBUS
 1: Isochronous PROFIBUS

Dependency:
 Refer to: r0110, p0115
 Refer to: A01223, A01224

Caution:  Only current controller sampling times (p0115[0]) which are integers of 125 µs are permitted for isochronous mode.
 For SERVO the following current controller sampling times are also possible:
 187.5, 150, 100, 93.75, 75, 62.5, 50, 37.5, 31.25 µs
 For VECTOR the following current controller sampling times are also possible:
 312.5, 218.75, 200, 187.5, 175, 156.25, 150, 137.5 µs
 The additional current controller sampling times must be taken into account when parameterizing the bus for Ti, To and Tdp.

Notice: p0092 only has an influence on the automatic default for the sampling times (p0115) in the drive.
 If the sampling times are modified subsequently in expert mode (p0112 = 0), p0092 = 0 should be set so that the new values are not overwritten again by the automatic default when the parameters are downloaded.
 The conditions for current controller sampling time for isochronous operation must still be carefully ensured (refer under Caution!).

r0093	CO: Pole position angle electrically scaled / Pole pos el scale		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4710
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]

Description: Displays the scaled electrical pole position angle.
Dependency: Refer to: r0094, p0431, r1778

Notice: When the pole position angle (r0093) is output via test socket Tx (x = 0, 1, 2) to adjust the encoder (to determine the angular commutation offset) the test socket being used must be parameterized as follows:

p0771[x] = r0093
 p0777[x] = 0 %
 p0778[x] = 0 V
 p0779[x] = 400 %
 p0780[x] = 4 V
 p0783[x] = 0 V
 p0784[x] = 0

For p1821 = 1 (counter-clockwise direction of rotation) the following applies:

In order to adjust the encoder using the EMF method, the value, determined using the oscilloscope, must be inverted and then entered in p0431.

Note: For operation with encoder and pulse suppression, the following applies:

- the value is generated from r0094 + 180 °.

- this angle can be used to adjust the encoders of synchronous motors.

For pulse enable, the following applies:

- the value indicates the transformation angle used by the control + 180 °.

- this value is, contrary to r0094, also applicable (provides information) for encoderless operation and after a pole position identification routine.

r0094**CO: Piston position actual value / Piston pos ActV**

HLA

Can be changed: -**Calculated:** -**Access level:** 3**Data type:** FloatingPoint32**Dyn. index:** -**Func. diagram:** -**P-Group:** Displays, signals**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** p2005**Expert list:** 1**Min****Max****Factory setting**

- [mm]

- [mm]

- [mm]

Description:

Display and connector output of the piston position.

Note:

The piston position should be calibrated, so that when the cylinder is completely retracted, zero is displayed and the value increases as it extends.

For piston calibration, p1960 (automatic) or p1909 (manual) can be used.

r0094**CO: Transformation angle / Transformat_angle**SERVO, VECTOR,
SERVO_AC,
VECTOR_AC,
SERVO_I_AC,
VECTOR_I_AC**Can be changed:** -**Calculated:** -**Access level:** 3**Data type:** FloatingPoint32**Dyn. index:** -**Func. diagram:** 4700, 4702,
4710, 6300, 6714, 6730, 6731,

- [°]

- [°]

- [°]

Description:

Displays the transformation angle.

Dependency:

Refer to: r0093, p0431, r1778

Note:

The transformation angle corresponds to the electrical commutation angle.

If no pole position identification is carried out (p1982), and the encoder is adjusted, the following applies:

The encoder supplies the value and indicates the electrical angle of the flux position (d axis).

r0094	CO: Transformation angle / Transformat_angle		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the transformation angle.		
Note:	The transformation angle corresponds to the line supply angle.		

p0097	Select drive object type / Select DO type		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(1)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Topology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	24	0
Description:	Executes an automatic device configuration. In so doing, p0099, p0107 and p0108 are appropriately set.		
Value:	0: No selection 1: Drive object type SERVO 2: Drive object type VECTOR 3: SINAMICS GM (DFEMV & VECTORMV) 4: SINAMICS SM (AFEMV & VECTORMV) 5: SINAMICS GL (VECTORGL) 6: SINAMICS SL (VECTORSL) 12: Drive object type VECTOR parallel circuit 13: Drive object type VECTORMV - GM parallel circuit 14: Drive object type VECTORMV - SM parallel circuit 15: Drive object type DC_CTRL 16: Drive object type SERVO HMI 17: Drive object type VECTOR HMI 24: Drive object type VECTORMV - SM parallel circuit		
Dependency:	Refer to: r0098, p0099 Refer to: A01330		
Note:	For p0097 = 0, p0099 is automatically set to the factory setting. The possible settings are dependent upon the device type. Using parameter p9940.2, for SERVO (value = 1) and VECTOR (value = 2) drive objects, the infeed units can be connected in parallel.		

r0098[0...5]	Actual device topology / Device_act topo		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Topology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the automatically detected actual device topology in coded form.		
Index:	[0] = DRIVE-CLiQ socket X100 [1] = DRIVE-CLiQ socket X101 [2] = DRIVE-CLiQ socket X102 [3] = DRIVE-CLiQ socket X103 [4] = DRIVE-CLiQ socket X104 [5] = DRIVE-CLiQ socket X105		
Dependency:	Refer to: p0097, p0099		

Note: Topology coding: abcd efgh hex
a = number of Active Line Modules
b = number of Motor Modules
c = number of motors
d = number of encoders (or the line supply voltage sensing for Active Line Modules)
e = number of additional encoders (or the line supply voltage sensing for Active Line Modules)
f = number of Terminal Modules
g = number of Terminal Boards
h = reserved
if the value 0 is displayed in all indices, then components are not detected via DRIVE-CLiQ.
If a value F hex occurs at a position of the coding (abcd efgh hex), then an overflow has occurred.

p0099[0...5]	Device target topology / Device_target topo		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(1) Data type: Unsigned32 P-Group: Topology Not for motor type: - Min 0000 hex	Calculated: - Dyn. index: - Unit group: - Scaling: - Max FFFF FFFF hex	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the device target topology in coded form (refer to r0098). The setting is made during commissioning. Deactivated or non-available components are also counted		
Index:	[0] = DRIVE-CLiQ socket X100 [1] = DRIVE-CLiQ socket X101 [2] = DRIVE-CLiQ socket X102 [3] = DRIVE-CLiQ socket X103 [4] = DRIVE-CLiQ socket X104 [5] = DRIVE-CLiQ socket X105		
Dependency:	The parameter can only be written into for p0097 = 0. To perform an automatic device configuration run, an index of the device target topology must be set to the value of the device actual topology in r0098 for acknowledgment. An index of the device actual topology with a value other than 0 must be selected. Refer to: p0097, r0098 Refer to: A01330		
Note:	The parameter can only be set to the values 0, the value of the actual device topology, the value of the actual device target topology and FFFFFFFF hex. If the value 0 is displayed in all of the indices, then the system has still not been commissioned. The value FFFFFFFF hex indicates that the topology was not generated by the automatic device configuration, but was commissioned using the commissioning tool (e.g. using parameter download).		

p0100	IEC/NEMA Standards / IEC/NEMA Standards		
HLA	Can be changed: C2(1, 2) Data type: Integer16 P-Group: Converter Not for motor type: SESM Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Defines whether the converter and motor power settings (e.g. rated motor power, p0307) are expressed in [kW] or [hp]. Depending on the selection, the rated motor frequency (p0310) is either set to 50 Hz or 60 Hz. For p0100 = 0, the following applies: The power factor (p0308) should be parameterized. For p0100 = 1, the following applies: The efficiency (p0309) should be parameterized.		
Value:	0: IEC (50 Hz line, SI units) 1: NEMA (60 Hz line, US units)		

2 Parameters

2.2 List of parameters

Dependency: If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made. The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969). Refer to: p0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0312, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p0338, p1800

Note: The parameter can only be changed for vector control (p0107). The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).

p0100	IEC/NEMA Standards / IEC/NEMA Standards

Value:	0: IEC (50 Hz line, SI units) 1: NEMA (60 Hz line, US units)		
Dependency:	If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made. The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969). Refer to: r0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0312, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p0338, p1800		
Note:	The parameter can only be changed for vector control (p0107). The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).		

p0101[0...n]	Drive object numbers / DO numbers		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(1)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Topology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	62	0
Description:	The parameter contains the object number via which every drive object can be addressed. The number of an existing drive object is entered into each index. Value = 0: No drive object is defined.		

Note: The numbers are automatically allocated.
For the commissioning tool, this object number cannot be entered using the expert list, but is automatically assigned when inserting an object.

r0102[0...1]	Number of drive objects / DO count		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: Topology Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of existing or existing and prepared drive objects.		
Index:	[0] = Existing drive objects [1] = Existing and prepared drive objects		
Dependency:	Refer to: p0101		
Note:	The numbers of the drive objects are in p0101. For index [0]: Displays the number of drive objects that have already been set up. For index [1]: Displays the number of drive objects that have already been set up and, in addition, the drive objects that still have to be set up.		

p0103[0...n]	Application-specific view / Appl_spec view		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(2) Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 999	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The application-specific view of an existing drive object is entered into each index. The parameter cannot be changed.		
Dependency:	Refer to: p0107		
Note:	In the non-volatile memory, the application-specific views are defined in files with the following structure: PDxxxxyy.ACX xxx: Application-specific view (p0103) yyy: Type of drive object (p0107) Example: PD052011.ACX --> "011" stands for the drive object, type SERVO --> "052" is the number of the view for this drive object		

r0103	Application-specific view / Appl_spec view		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the application-specific view of the individual drive object.		
Dependency:	Refer to: r0107		

p0105	Activate/deactivate drive object / DO act/deact		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Setting to activate/deactivate a drive object.		
Value:	0: Deactivate drive object 1: Activate drive object		
Dependency:	Refer to: r0106		
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.		

p0105	Activate/deactivate drive object / DO act/deact		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM17, TM15DI_DO, TM120, TM150, TB30, ENC, HUB, CU_LINK	Can be changed: T Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Setting to activate/deactivate a drive object.		
Value:	0: Deactivate drive object 1: Activate drive object 2: Drive object deactivate and not present		
Dependency:	When activating drive objects with the safety functions enabled, the following applies: After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out. Refer to: r0106 Refer to: A01314		
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.		
Note:	For value = 0, 2: When a drive object is deactivated it no longer outputs any errors. If value = 0: All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error. If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all. If value = 1: All components of the drive object must be available for error-free operation. If value = 2: Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line. For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.		

p0105		Activate/deactivate drive object / DO act/deact		
TM31, TM41, TM15	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	2	1	
Description:	Setting to activate/deactivate a drive object.			
Value:	0: Deactivate drive object 1: Activate drive object 2: Drive object deactivate and not present			
Dependency:	Refer to: r0106 Refer to: A01314			
Warning:	A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while this parameter is being changed over.			
				
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.			
Note:	For value = 0, 2: When a drive object is deactivated it no longer outputs any errors. If value = 0: All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error. If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all. If value = 1: All components of the drive object must be available for error-free operation. If value = 2: Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line. For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.			

p0105		Activate/deactivate drive object / DO act/deact		
TM54F_MA, TM54F_SL	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	2	1	
Description:	Setting to activate/deactivate a drive object.			
Value:	0: Deactivate drive object 1: Activate drive object 2: Drive object deactivate and not present			
Dependency:	TM54F can only be deactivated if all of the drives assigned to it via p10010 have been deactivated or safety on the assigned drives has not been enabled. When activating drive objects with the safety functions enabled, the following applies: After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out. Refer to: r0106 Refer to: A01314			
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.			

2 Parameters

2.2 List of parameters

Note: For value = 0, 2:
When a drive object is deactivated it no longer outputs any errors.
If value = 0:
All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error.
If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all.
If value = 1:
All components of the drive object must be available for error-free operation.
If value = 2:
Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.
For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

The following bits are only automatically set, if the power units are detected with the appropriate properties.

Bit 15: Parallel connection of identical power units (only automatically set for G130/G150).

Bit 20: Software gating unit (only automatically set when power units are connected in parallel).

Bit 24: Type PM330 power units are presently not supported.

Bit 26: Type PM250 power units with F3E energy recovery are only supported for S120 CRANES.

Bit 28: Power units with liquid cooling.

Description: Pre-assignment of the sampling times in p0115.
The clock cycles for the current controller / speed controller / flux controller / setpoint channel / position controller / positioning / technology controller are pre-assigned as follows:
SINAMICS S, servo drive:
p0112 = 1: 250 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs (for chassis units)
p0112 = 2: 125 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs
p0112 = 3: 125 / 125 / 125 / 4000 / 1000 / 4000 / 4000 µs
p0112 = 4: 62.5 / 62.5 / 62.5 / 1000 / 1000 / 2000 / 1000 µs (for S210)
p0112 = 5: 31.25 / 31.25 / 31.25 / 1000 / 1000 / 2000 / 1000 µs
SINAMICS S, Active Infeed (p0112 = 1 not for p0092 = 1):
p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)
p0112 = 2: 250 / - / - / 2000 µs (pre-setting for rated pulse frequency = 4.0 kHz, 8.0 kHz)
p0112 = 3: 125 / - / - / 2000 µs
p0112 = 4: 125 / - / - / 1000 µs
p0112 = 5: 125 / - / - / 500 µs
SINAMICS S, Smart Infeed (p0112 = 1 not for p0092 = 1):
p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)
p0112 = 2: 250 / - / - / 2000 µs (pre-setting for rated pulse frequency = 4.0 kHz, 8.0 kHz)
p0112 = 3: 250 / - / - / 2000 µs
p0112 = 4: 250 / - / - / 1000 µs
p0112 = 5: Not possible
SINAMICS S, Basic Infeed, booksize:
p0112 = 4: 250 / - / - / 2000 µs
SINAMICS S, Basic Infeed, chassis:
p0112 = 1: 2000 / - / - / 2000 µs
p0112 = 2: 2000 / - / - / 2000 µs (pre-setting)
p0112 = 3: 2000 / - / - / 2000 µs
p0112 = 4: Not possible
p0112 = 5: Not possible

SINAMICS S/G, vector drive (p0112 = 1 not for p0092 = 1 and not for PM340):

p0112 = 1: 400 / 1600 / 1600 / 1600 / 3200 / 3200 / 3200 μ s (for rated pulse frequency = 1.25, 2.5 kHz)

p0112 = 2: 250 / 1000 / 2000 / 1000 / 2000 / 4000 / 4000 μ s

p0112 = 3: 250 / 1000 / 1000 / 1000 / 2000 / 4000 / 4000 μ s (for rated pulse frequency = 2.0, 4.0 kHz)

SINAMICS S, vector drive:

p0112 = 4: 250 / 500 / 1000 / 500 / 1000 / 2000 / 2000 μ s

p0112 = 5: 250 / 250 / 1000 / 500 / 1000 / 2000 / 1000 μ s

Value:
 0: Expert
 1: xLow
 2: Low
 3: Standard
 4: High
 5: xHigh

Recommendation: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Dependency: It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).

If, for a servo drive, p112 = 5 is set, then the pulse frequency p1800 is pre-assigned 8 kHz. For D410-2 and vector drive, the current controller sampling time can only be permanently changed for p0112 = 0.

Refer to: p0092

Note: For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.

The setting p0112 = 1 cannot be set for a vector drive with power unit type PM340 (refer to r0203).

p0113 Minimum pulse frequency, selection / f_puls min sel

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	2.000 [kHz]	4.000 [kHz]	4.000 [kHz]

Description: The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.

Dependency: The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller sampling time of 125 μ s is obtained as an integer number.

The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0), assuming that this has not been restricted by other conditions (e.g. as a result of p1082, p0310).

Refer to: p0112, r0114, p0115, p1800

Note: The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 2.0 kHz, p0115[0] = 250 μ s is set, for p0113 = 4.0 kHz, p0115[0] = 125 μ s is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 μ s.

For a power unit type PM340 (refer to r0203), only the values 2.0 and 4.0 kHz can be set.

p0113 Minimum pulse frequency, selection / f_puls min sel

SERVO (Dig IO)	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4.000 [kHz]	4.000 [kHz]	4.000 [kHz]

Description: The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.

Dependency: The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller sampling time of 125 μ s is obtained as an integer number.

The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0), assuming that this has not been restricted by other conditions (e.g. as a result of p1082, p0310).

Refer to: p0112, r0114, p0115, p1800

2 Parameters

2.2 List of parameters

Note: The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 2.0 kHz, p0115[0] = 250 µs is set, for p0113 = 4.0 kHz, p0115[0] = 125 µs is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 µs.
For a power unit type PM340 (refer to r0203), only the values 2.0 and 4.0 kHz can be set.

p0113 Minimum pulse frequency, selection / f_puls min sel			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000 [kHz]	4.000 [kHz]	2.000 [kHz]
Description:	The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.		
Dependency:	The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller sampling time of 125 µs is obtained as an integer number. The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0), assuming that this has not been restricted by other conditions (e.g. as a result of p1082, p0310). Refer to: p0112, r0114, p0115, p1800		
Note:	The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 1.0 kHz, p0115[0] = 500 µs is set, for p0113 = 2.0 kHz, p0115[0] = 250 µs is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 µs. For a power unit type PM340 (refer to r0203), only the values 1.0 and 2.0 kHz can be set. A value of 1.0 kHz can be set in order to achieve a current controller sampling time of 500µs. However, in this case, the minimum pulse frequency p1800 is limited to 2 kHz.		

r0114[0...9] Minimum pulse frequency recommended / f_puls min recom			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kHz]	- [kHz]	- [kHz]
Description:	Displays the recommended values (indices 0 and 1) for the minimum pulse frequency (p0113). If the system rejects a change to p0113 because the value to be used lies outside the permitted value range, then instead the recommended value from r0114 can be used.		
Index:	[0] = If only the actual drive is changed [1] = If all drives connected to the DRIVE-CLiQ line are changed [2] = 2nd possible pulse frequency [3] = 3rd possible pulse frequency [4] = 4th possible pulse frequency [5] = 5th possible pulse frequency [6] = 6th possible pulse frequency [7] = 7th possible pulse frequency [8] = 8th possible pulse frequency [9] = 9th possible pulse frequency		
Dependency:	Refer to: p0113		
Note:	After exiting commissioning (p0009 = p0010 = 0), the pulse frequencies calculated from the sampling time p0115[0] are displayed in indices 1 to 9. If additional restrictions do not apply (e.g. as a result of the maximum speed (p1082) or due to having selected an output filter), these can be entered into p1800. The maximum pulse frequency of the power units was already taken into account in r0114. A value of 0 kHz does not define a recommended pulse frequency.		

p0115[0]		Sampling time for supplementary functions / t_samp suppl_fct		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]	
Description:	Sets the basic sampling time for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125 µs are permissible.			
Index:	[0] = Basic sampling time			
p0115[0...6]		Sampling times for internal control loops / t_samp int ctrl		
HLA	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 125.00 [µs] [1] 125.00 [µs] [2] 125.00 [µs] [3] 4000.00 [µs] [4] 1000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]	
Description:	Sets the sampling times for the control loops. The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).			
Recommendation:	When changing the sampling times of the controller (p0115[0]), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340.3 = 1.			
Index:	[0] = Controller (velocity/force) [1] = Reserved [2] = Reserved [3] = Setpoint channel [4] = Position controller [5] = Positioning [6] = Technology controller			
Dependency:	The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms. Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the controller sampling time (p0115[0]). Refer to: r0110, r0111, p0112			
Note:	For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned. If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) are always greater than or equal to twice the controller sampling time (p0115[0]).			

p0115[0...6]	Sampling times for internal control loops / t_samp int ctrl

			[6] 4000.00 [µs]
Description:	Sets the sampling times for the control loops. The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).		
Recommendation:	When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.		
Index:	[0] = Current controller [1] = Speed controller [2] = Flux controller [3] = Setpoint channel [4] = Position controller [5] = Positioning [6] = Technology controller		
Dependency:	The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms. Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]). For servo drives, the maximum sampling time of the current controller is 250 µs and for vector drives, 500 µs. The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]). Refer to: r0110, r0111, p0112		
Note:	For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned. For the Active Line Module (ALM) and Smart Line Module (SLM), the current and DC link voltage controllers operate with the same sampling time. For ALM/SLM the maximum current controller sampling time is 400 µs. For the Basic Line Module (BLM), the DC link voltage measurement operates in the current controller sampling time. For BLM booksite, only the current controller sampling time of 250 µs is permitted. For BLM chassis, only the current controller sampling time of 2000 µs is permitted. For power unit type PM340 (r0203), only current controller sampling times of 62.5 µs, 125 µs, 250 µs and 500 µs can be set. The maximum current controller sampling time for servo drives and the minimum current controller sampling time for vector drives is 250 µs. If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) are always greater than or equal to twice the current controller sampling time (p0115[0]).

			[4] 2000.00 [µs]
			[5] 4000.00 [µs]
			[6] 4000.00 [µs]
Description:	Sets the sampling times for the control loops. The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).		
Recommendation:	When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4. When adjusting the current controller sampling time, it is recommended to use values that are an integer multiple of 6.25 µs. The sampling times of analog or digital inputs/outputs (see p0799, p4099) should be set to an integer multiple of the current controller sampling time. If the current controller sampling time is to be reduced with respect to the default setting (e.g. < 250 µs), then it is recommended that the motor data identification (standstill measurement) is executed beforehand, in order to avoid a thermal overload of the power unit as a result of high pulse frequencies (p1800).		
Index:	[0] = Current controller [1] = Speed controller [2] = Flux controller [3] = Setpoint channel [4] = Position controller [5] = Positioning [6] = Technology controller		
Dependency:	Depending on the number and type of vector drives, the sampling times are preset differently. The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms. Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]). The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]). The sampling time of the current controller p0115[0] and pulse frequency p1800 are checked at each parameter download, and when necessary changed, if, for p0092 = 1, the current controller sampling time is not an integral multiple of 125 µs or if p0112 is set > 1. For p0092 = 0, the check with p0112 = 0 (= expert) can be deactivated. Refer to: r0110, r0111, p0112		
Note:	For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned. For power unit type PM340 (r0203), only current controller sampling times of 250 µs or 500 µs can be set. The minimum current controller sampling time is otherwise 125 µs (SINAMICS G: 250 µs), the maximum current controller sampling time is 500 µs. For SINAMICS G, the minimum speed controller sampling time is 1 ms. Current controller sampling times of less than 250 µs are restricted by the number of drives or by the number of power units connected in parallel (also see F01340). For chassis power units connected in parallel, it is recommended to connect the DRIVE-CLiQ cables (partially) in parallel between the Control Unit and the individual Motor Modules. For D410-2, the current controller sampling times can only be permanently changed with p0112 = 0 (e.g. to 250 µs).		

p0115[0]	Sampling time for supplementary functions / t_samp suppl_fct		
TM120	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	16000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling times for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125 µs are permissible.		
Index:	[0] = Basic sampling time		
p0115[0]	Sampling time for supplementary functions / t_samp suppl_fct		
TM31, TM15DI_DO, TM150, TB30	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -

	Min	Max	Factory setting
	125.00 [µs]	500.00 [µs]	125.00 [µs]
Description:	Sets the sampling times for speed detection.		
Index:	[0] = Basic sampling time		

r0116[0...1]			
Drive object clock cycle recommended / DO_clock recom			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM17, TM15, TM15DI_DO, TB30	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [µs]
Description:	Displays the recommended sampling time for the drive objects. r00116[0] = recommended sampling time: Recommended value which would then make the complete system operational. r00116[1] = recommended sampling time: Recommended value, which after changing other clock cycles on the DRIVE-CLiQ line, would result in an operational system.		
Index:	[0] = Change only for the actual drive object [1] = Changing all objects on the DRIVE-CLiQ line		
Dependency:	Refer to: p0115		

p0117			
Current controller computing dead time mode / I_ctrl t_dead mode			
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 6	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 6
Description:	Sets the mode for the computing dead time of the current controller. 0: Offset (shifted) clocking, minimum computing dead time of each drive, automatic setting 1: Clocking at the same time, the dead time aligns itself to the dead time of the latest drive, automatic setting 2: Manual setting of the computing dead time, early transfer 3: Manual setting of the computing dead time, late transfer 4-6: As for 0-2, however, no early transfers are set for vectors		
Dependency:	Refer to: p0118 Refer to: A02100		

Note: The mode change is not effective until the drive unit is switched on again.

For p0117 = 0:
The times when the setpoints become effective for the individual controls is automatically and individually determined. Another computing dead time is set for each control (closed-loop) (p0118). Current is impressed for the individual controls without any offset with respect to time (improved EMC compatibility).

For p0117 = 1:
The latest closed-loop control determines when the setpoints for each of the individual controls become active. The same computing dead time is set for each control (p0118). Current is impressed (flows) for the individual controls without any offset with respect to time.

For p0117 = 2:
The computing dead time is manually set. The user must optimize the value in p0118.

For p0117 = 3:
The computing dead time is manually set. The user must optimize the value in p0118.

For p0117 = 4 ... 6:
Behavior as for p0117 = 0 ... 2, however for vectors, the earliest times are not determined.

p0118		Current controller computing dead time / I_ctrl t_dead		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [µs]	2000.00 [µs]	0.00 [µs]	
Description:	This parameter is pre-set as a function of the current controller sampling time (p0115[0]) and normally does not have to be changed.			
Dependency:	Refer to: p0117 Refer to: A02100			
Note:	For p0118 ≤ 0.005 µs, the current controller output is delayed by a complete current controller sampling time (p0115[0]). After p0118 has been changed, we recommend that the current controller is adapted (p1715).			

p0118		Current controller computing dead time / I_ctrl t_dead		
VECTOR, HLA, VECTOR_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [µs]	2000.00 [µs]	0.00 [µs]	
Description:	This parameter is pre-set as a function of the current controller sampling time (p0115[0]) and normally does not have to be changed.			
Dependency:	Refer to: p0117 Refer to: A02100			
Note:	For p0118 ≤ 0.005 µs, the current controller output is delayed by a complete current controller sampling time (p0115[0]). After p0118 has been changed, we recommend that the current controller is adapted (p1715).			

2 Parameters

2.2 List of parameters

p0120	Number of valve data sets (PDS) / PDS count		
HLA	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	1	1
Description:	Sets the number of valve data sets (power unit data set PDS).		
Dependency:	Refer to: r0107		
Note:	Only one valve data set is supported.		
p0120	Number of Power unit Data Sets (PDS) / PDS count		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	8	1
Description:	Sets the number of Power unit Data Sets (PDS). The value corresponds to the number of power units connected together for a parallel circuit configuration.		
Dependency:	Refer to: r0107		
Note:	This parameter is only significant for drive objects A_INF and VECTOR with a parallel circuit configuration.		
p0121[0...n]	Power unit component number / PU comp_no		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	The power unit data set is assigned to a power unit using this parameter. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a power unit.		
Dependency:	Refer to: r0107		
Note:	For parallel circuit configurations, the parameter index is assigned to a power unit.		
p0124[0...n]	Main component detection using LED / M_comp detect LED		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Detection of the main components of the drive object selected via the index.		

p0124[0...n]	Power unit detection via LED / PU detection LED		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: Unsigned8 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Detects the power unit assigned to this drive and data set.		
Note:	While p0124 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate power unit. For parallel circuit configurations, the parameter index is assigned to a power unit.		

p0125[0...n]	Activate/deactivate power unit components / PU_comp act/deact		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: C1(4), T Data type: Integer16 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 2	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Setting to activate/deactivate a power unit component.		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0126 Refer to: A01314, A01317		

Caution:

For a parallel connection, the following applies:

When deactivating individual power units using this parameter, it is not permissible that the power units of the parallel connection involved are connected. Infeed units should be disconnected from the line supply (for example, using a contactor). Motor feeder cables should be disconnected. In addition, defective power units should be disconnected from the DC link.

Notice:

It is not permissible to deactivate drive objects with safety functions enabled.

Note:

The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

For units connected in parallel, when one of the power units is deactivated, then the enable in p7001 is withdrawn.

For value = 0, 2:

When a component is deactivated it no longer outputs any errors.

If value = 0:

The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error.

If value = 1:

The component must be available for error-free operation.

If value = 2:

A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the component is marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

2 Parameters

2.2 List of parameters

r0126[0...n]	Power unit components active/inactive / PU comp act/inact		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Integer16 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the "active/inactive" state of a power unit component.		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0105, p0125, p0897		
r0127[0...n]	Power unit EEPROM data version / PU EEPROM version		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned32 P-Group: Converter Not for motor type: - Min -	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the version of the EEPROM data of the power unit.		
Dependency:	Refer to: r0147, r0157		
Note:	For parallel circuit configurations, the parameter index is assigned to a power unit.		
r0128[0...n]	Power unit firmware version / PU FW version		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned32 P-Group: Converter Not for motor type: - Min -	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the firmware version of the power unit.		
Dependency:	Refer to: r0018, r0148, r0158, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00. For parallel circuit configurations, the parameter index is assigned to a power unit.		
p0130	Number of Motor Data Sets (MDS) / MDS count		
HLA	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of Motor Data Sets (MDS).		

p0130	Number of Motor Data Sets (MDS) / MDS count			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 1	
Description:	Sets the number of Motor Data Sets (MDS).			
p0131[0...n]	Motor component number / Mot comp_no			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(4), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 199	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	The motor data set is assigned to a motor using this parameter. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a motor.			
p0133[0...n]	Motor configuration / Motor config			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: Unsigned16 P-Group: Motor Not for motor type: PMSM, SESM, REL Min -	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Configuration of the motor when commissioning the motor.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Motor connection type	Delta	Star
Dependency:	For standard induction motors (p0301 > 10000), bit 0 is automatically pre-assigned the connection type of the selected data set. For p0100 > 0 (60 Hz rated motor frequency), it is not possible to select bit 1. Refer to: p0304, p0305			
Note:	For bit 00: When changing the bits, the rated motor voltage p0304 and the rated motor current p0305 are automatically converted to the selected connection type (star/delta). For instance, this can be necessary if an 1LE1 motor is selected using the Article number (MLFB) or code number (p0300 = 100, p0301 = 1x0xx), and the motor connection type does not correspond to that of the data set.			
p0139[0...2]	Copy Motor Data Set MDS / Copy MDS			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 31	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Copying a Motor Data Set (MDS) into another.			
Index:	[0] = Source motor data set [1] = Target motor data set [2] = Start copying procedure			

2 Parameters

2.2 List of parameters

Note: Procedure:
 1. In Index 0, enter which motor data set should be copied.
 2. In Index 1, enter the motor data set data that is to be copied into.
 3. Start copying: set index 2 from 0 to 1.
 p0139[2] is automatically set to 0 when copying is completed.
 When copying, p0131 is not taken into account.

p0140	Number of Encoder Data Sets (EDS) / EDS count		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	16	1

Description: Sets the number of Encoder Data Sets (EDS).
Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0140	Number of VSM data sets / VSM count		
A_INF, S_INF, R_INF	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	8	1

Description: Sets the number of VSM data sets.
Note: The value cannot be changed for infeed units; it corresponds to the number of power units connected in parallel.

p0140	Number of Encoder Data Sets (EDS) / EDS count		
ENC	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	1	1

Description: Sets the number of Encoder Data Sets (EDS).
Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0141[0...n]	Encoder interface (Sensor Module) component number / Enc_intf comp_no		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4704, 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0

Description: This parameter is used to assign the encoder data set to an encoder evaluation (e.g. SMC).
 This unique component number is assigned when parameterizing the topology.
 Only a component number can be entered that corresponds to an encoder evaluation.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
 For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).
 SMC: Sensor Module Cabinet

p0141[0...n]	VSM component number / VSM comp_no		
A_INF, S_INF, R_INF	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: p0140	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	The VSM data set is assigned to a VSM evaluation using this parameter. This unique component number is assigned when parameterizing the topology. Only a component number can be entered that corresponds to a VSM evaluation.		
p0142[0...n]	Encoder component number / Encoder comp_no		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4704
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	This parameter is used to assign the encoder data set to an encoder. This assignment is made using the unique component number that was assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to an encoder.		
Note:	If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical. For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).		
p0144[0...n]	Sensor Module detection via LED / SM detection LED		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Detects the Sensor Module assigned to this drive and data set.		
Note:	While p0144 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Sensor Module.		
p0144[0...n]	Voltage Sensing Module detection via LED / VSM detection LED		
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Detects the Voltage Sensing Module (VSM) module assigned to this infeed.		

p0145[0...n]	Activate/deactivate encoder interface / Enc_intf act/deact		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C1(4), U, T Data type: Integer16 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 2	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Setting to activate/deactivate an encoder interface (Sensor Module).		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0146 Refer to: A01314, A01317		
Note:	<p>The deactivation of an encoder interface corresponds to the "parking encoder" function and has the same effect. The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited. With the encoder interface for encoder 1 (motor encoder), the relevant drive object for writing the parameter must be in the "Ready for operation" state. With the encoder interface for encoders 2 and 3, the parameter can also be written during operation. For value = 0, 2: When a component is deactivated it no longer outputs any errors. If value = 0: The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error. If value = 1: The component must be available for error-free operation. If value = 2: A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start. For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.</p>		

p0145[0...n]	Voltage Sensing Module activate/deactivate / VSM act/deact		
A_INF, S_INF, R_INF	Can be changed: C1(4), T Data type: Integer16 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: p0140 Unit group: - Scaling: - Max 2	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Setting to activate/deactivate a Voltage Sensing Module (VSM).		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0146 Refer to: A01314, A01317		
Note:	<p>For chassis infeeds, it is not possible to activate/deactivate the Voltage Sensing Module (VSM) via p0145. The VSM can only be activated/deactivated in the group with the appropriate infeed via p0125[0...n]. The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.</p>		

r0146[0...n]	Encoder interface active/inactive / Enc_intf act/deact		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active" or "inactive" state of an encoder interface (Sensor Module).		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0105, p0145, p0480, p0897		

r0146[0...n]	Voltage Sensing Module active/inactive / VSM act/inact		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: p0140	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0105, p0145		

r0147[0...n]	Sensor Module EEPROM data version / SM EEPROM version		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Sensor Module.		
Dependency:	Refer to: r0127, r0157		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0147[0...n]	Voltage Sensing Module EEPROM data version / VSM EEPROM version		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Voltage Sensing Module (VSM).		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

2 Parameters

2.2 List of parameters

r0148[0...n]	Sensor Module firmware version / SM FW version		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the firmware version of the Sensor Module.		
Dependency:	Refer to: r0018, r0128, r0158, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r0148[0...n]	Voltage Sensing Module firmware version / VSM FW version		
A_INF, S_INF, R_INF	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: p0140 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the firmware version of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: r0018, r0128, r0158, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
p0150	Number of VSM data sets / VSM dat_sets qty		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of VSM data sets.		
p0150	VSM2 data sets selection / VSM2 dat_sets qty		
A_INF, S_INF, R_INF	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of VSM2 data sets.		
Dependency:	The Voltage Sensing Module 2 (VSM2) can only be used if the "line transformer" function module has been activated (r0108.4 = 1).		
Note:	For the VSM2, parameters p5460 and following are significant. The Voltage Sensing Module 2 (VSM2) should always be connected to the primary side of the line transformer if at all possible.		

p0151[0...n]	Voltage Sensing Module component number / VSM comp_no		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	The VSM data set is assigned to a VSM evaluation using this parameter.		
Note:	If two VSM are connected at the Motor Module, then the first (p0151[0]) is assigned to the line voltage measurement (see p3801) and the second, to the motor voltage measurement (see p1200).		

p0151[0...n]	Voltage Sensing Module 2 component number / VSM2 comp_no		
A_INF, S_INF, R_INF	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	The VSM2 data set is assigned to a VSM2 evaluation using this parameter.		
Note:	A change to this parameter only becomes effective after a warm restart.		

p0151	Terminal Module component number / TM comp_no		
TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the Terminal Module. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a Terminal Module.		

p0151[0...1]	DRIVE-CLiQ Hub Module component number / Hub comp_no		
HUB	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	This parameter is used to assign the data set to a DRIVE-CLiQ Hub Module. This unique component number is assigned when parameterizing the topology. Only the numbers of components operated as hubs can be entered in these parameters. [0] = DRIVE-CLiQ node 1 [1] = DRIVE-CLiQ node 2		

p0154[0...n]	Voltage Sensing Module 2 detection via LED / VSM2 detection LED		
A_INF, S_INF, R_INF	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Detects the Voltage Sensing Module 2 (VSM2) assigned to this infeed.

p0154	Terminal Module detection via LED / TM detection LED		
TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Detects the Terminal Module assigned to this drive and data set.
Note: While p0154 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Terminal Module.

p0154	DRIVE-CLiQ Hub Module detection via LED / Hub detection LED		
HUB	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Detects any DRIVE-CLiQ Hub Module that has been assigned.

p0155[0...n]	Voltage Sensing Module activate/deactivate / VSM act/deact		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C1(4), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1

Description: Setting to activate/deactivate a Voltage Sensing Module (VSM).
Value:
 0: Deactivate component
 1: Activate component
 2: Component deactivate and not present
Recommendation: After inserting a component, before activating, first wait for Alarm A01317.
Dependency: Refer to: r0156
 Refer to: A01314, A01317

p0155[0...n]	Voltage Sensing Module 2 activate/deactivate / VSM2 act/deact		
A_INF, S_INF, R_INF	Can be changed: C1(4), T	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting to activate/deactivate a Voltage Sensing Module 2 (VSM2).		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0156 Refer to: A01314, A01317		
r0156[0...n]	Voltage Sensing Module active/inactive / VSM act/inact		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0155		
r0156[0...n]	Voltage Sensing Module 2 active/inactive / VSM2 act/inact		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active" or "inactive" state of a Voltage Sensing Module 2 (VSM2).		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0155		
r0157[0...n]	Voltage Sensing Module EEPROM data version / VSM EEPROM version		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Voltage Sensing Module (VSM).		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0157[0...n]	Voltage Sensing Module 2 EEPROM data version / VSM2 EEPROM vers		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Voltage Sensing Module 2 (VSM2).		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0157	Terminal Module EEPROM data version / TM EEPROM version		
TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Terminal Module.		
Dependency:	Refer to: r0127, r0147		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0157	DRIVE-CLiQ Hub Module EEPROM data version / Hub EEPROM version		
HUB	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data for the DRIVE-CLiQ Hub Module.		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0158[0...n]	Voltage Sensing Module firmware version / VSM FW version		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: r0018, r0128, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0158[0...n]	Voltage Sensing Module 2 firmware version / VSM2 FW version		
A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the Voltage Sensing Module 2 (VSM2).		
Dependency:	Refer to: r0018, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r0158	Terminal Module firmware version / TM FW version		
TM31, TM41, TM17, TM15, TM15DI_DO, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the Terminal Module.		
Dependency:	Refer to: r0018, r0128, r0148, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r0158	DRIVE-CLiQ Hub Module firmware version / Hub FW version		
HUB	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the DRIVE-CLiQ Hub Module.		
p0161	Valve component number / Valve comp_no		
HLA	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the valve. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a valve.		

2 Parameters

2.2 List of parameters

p0161	HF Damping Module component number / HF Damp comp_no		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the HF Damping Module. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to an HF Damping Module.		

p0161	Option board component number / Opt board comp_no		
TB30	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the option board (e.g. Terminal Board 30). This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to an option board.		

p0162	HF Choke Module component number / HF Choke comp_no		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C1(4)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the HF Choke Module. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to an HF Choke Module.		

p0162	CU-LINK slave component number / CU-LINK comp_no		
CU_LINK	Can be changed: C1(4)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the expansion component (e.g. CX32, NX10) for CU-LINK. This unique component number is assigned when parameterizing the topology.		

p0165	Activate/deactivate filter module / FM act/deact		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C1(4), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting for activating/deactivating the filter module.		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0166 Refer to: A01314, A01317		
Note:	The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited. For value = 0, 2: When a component is deactivated it no longer outputs any errors. If value = 0: The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error. If value = 1: The component must be available for error-free operation. If value = 2: A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start.		

r0166	Filter module active/inactive / FM act/inact		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active/inactive" state of a filter module.		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0165		

p0170	Number of Command Data Sets (CDS) / CDS count		
HLA, TM41	Can be changed: C1(3)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -

2 Parameters

2.2 List of parameters

r0173	Drive objects function module 3 / DO fct_mod 3			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM31, TM41, TM15DI_DO, TM120, TM150, TB30, ENC	Can be changed: - Data type: Unsigned32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Displays the activated function module for the particular drive object.			
Dependency:	Refer to: r0108, r0171, r0172			
Note:	A "function module" is a functional expansion of a drive object that can be activated when commissioning.			
p0180	Number of Drive Data Sets (DDS) / DDS count			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 32	Access level: 2 Func. diagram: 8565 Unit selection: - Expert list: 1 Factory setting 1	
Description:	Sets the number of Drive Data Sets (DDS).			
p0186[0...n]	Motor Data Sets (MDS) number / MDS number			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(4), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 15	Access level: 3 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Using the parameter, each Drive Data Set (= index) is assigned the associated Motor Data Set (MDS). The parameter value therefore corresponds to the number of the assigned motor data set.			
p0187[0...n]	Encoder 1 encoder data set number / Enc 1 EDS number			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C1(4), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 99	Access level: 3 Func. diagram: 4700, 8570 Unit selection: - Expert list: 1 Factory setting 99	
Description:	Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 1. The value corresponds to the number of the assigned encoder data set. Example: Encoder 1 in drive data set 2 should be assigned encoder data set 0. --> p0187[2] = 0			
Notice:	Writing to p0187 is rejected if the pole position identification is selected (p1982 = 1) and additional data sets with the same MDS data set (p0186) are available, which however have a different encoder data set number in p0187. If all data sets with this MDS p0187 are to be changed, then the pole position identification of the data sets involved should be temporarily deselected (p1982 = 0), p0187 changed for all MDS data sets and then the pole position identification reselected (p1982 = 1). If a motor with pole position identification is to be operated with two different encoders, then for this motor, two motor data sets should be introduced.			
Note:	A value of 99 means that no encoder has been assigned to this drive data set (not configured).			

p0187[0...n]	Encoder 1 encoder data set number / Enc 1 EDS number		
VECTOR, HLA, VECTOR_AC, VECTOR_I_AC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 4700, 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 1.
The value corresponds to the number of the assigned encoder data set.
Example:

Encoder 1 in drive data set 2 should be assigned encoder data set 0.
--> p0187[2] = 0

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0188[0...n]	Encoder 2 encoder data set number / Enc 2 EDS number		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 4700, 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 2.
The value corresponds to the number of the assigned encoder data set.
Example:

Encoder 2 in drive data set 2 should be assigned to encoder data set 1.
--> p0188[2] = 1

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0189[0...n]	Encoder 3 encoder data set number / Enc 3 EDS number		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 4700, 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 3.
The value corresponds to the number of the assigned encoder data set.

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

r0192	Power unit firmware properties 1 / PU FW properties 1		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3

28	DC link voltage compensation in the power unit.	Yes	No	-
29	Voltage measurement	Yes	No	-
30	Gating unit with all-phase current limiting	Yes	No	-

Dependency:

Refer to: r0193

Notice:

This information represents the characteristics/features of the power unit firmware. It does not provide information/data about the characteristics/features of the hardware (e.g. bit 06 = 1 means that although the firmware supports "liquid cooling", a power unit with liquid cooling does not have to be used).

Note:

For bit 09:

The Motor Module supports the internal armature short-circuit. The function is internally required for voltage protection (p1231 = 3).

For bit 10:

The Motor Module supports the autonomous internal voltage protection.

If the "internal voltage protection" function is activated (p1231 = 3) the Motor Module decides autonomously - using the DC link voltage - as to whether the short-circuit is activated.

For bit 23:

The component supports the detection of current actual values (and the detection of valve close durations) with double clocking and phase shift.

Bit 3, 2, 1, 0 = 1, 0, 0, 1 --> firmware download completed, wait for POWER ON (LED = green/red with 2.0 Hz). For bits 12 ... 11: These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.				

r0197[0...1]	Bootloader version / Bootloader vers		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the bootloader version. Index 0: Displays the bootloader version. Index 1: Displays the bootloader version 3 (for CU320-2 and CU310-2) A value of 0 indicates that bootloader 3 is not available.		
Dependency:	Refer to: r0018, r0128, r0148, r0158, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r0198[0...2]	BIOS/EEPROM data version / BIOS/EEPROM vers		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the BIOS and EEPROM data version. r0198[0]: BIOS version r0198[1]: EEPROM data version EEPROM 0 r0198[2]: EEPROM data version EEPROM 1		
Dependency:	Refer to: r0018, r0128, r0148, r0158, r0197		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
p0199[0...24]	Drive object name / DO name		
All objects	Can be changed: C1 Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Freely assignable name for a drive object. For the commissioning tool, this name cannot be entered using the expert list, but is specified in the configuration wizards. The object name can be subsequently modified in the Project Navigator using standard Windows resources.		
Note:	The parameter is not influenced by setting the factory setting.		

r0200[0...n]	Power unit code number actual / PU code no act		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned16 P-Group: Converter Not for motor type: - Min -	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the unique code number of the power unit.		
Note:	r0200 = p0201: No power unit found For parallel circuit configurations, the parameter index is assigned to a power unit.		

p0201[0...n]	Power unit code number / PU code no		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(2) Data type: Unsigned16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the actual code number from r0200 to acknowledge the power unit being used. When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.		
Dependency:	Refer to: F07815		
Notice:	When p0201 = 10000, the rated power unit data is reloaded and dependent parameters are set (e.g. p0205, p0210, p0230, p0857, p1800). p0201 is then automatically assigned the value of r0200 if the code number of the power unit could be read. A warm start must be performed after this procedure (automatically if necessary).		
Note:	The parameter is used to identify when the drive is being commissioned for the first time. The power unit commissioning can only be exited (p0201 = r0200), if the actual and acknowledged code numbers are identical (p0010 = 2). However, if the comparator in p9906 or p9908 is at 2 (low) or 3 (minimum), the power unit commissioning is automatically set to p0201 = r0200 upon exiting. When the code number is changed, the connection voltage (p0210) is checked and, if necessary, adjusted. For parallel circuit configurations, the parameter index is assigned to a power unit.		

p0201[0...n]	Power unit code number / PU code no		
A_INF, S_INF, R_INF, B_INF	Can be changed: C2(2) Data type: Unsigned16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the actual code number from r0200 to acknowledge the power unit being used. When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.		
Dependency:	Refer to: F07815		
Note:	The parameter is used to identify when the drive is being commissioned for the first time. The power unit commissioning can only be exited (p0201 = r0200), if the actual and acknowledged code numbers are identical (p0010 = 2). For parallel circuit configurations, the parameter index is assigned to a power unit.		

2 Parameters

2.2 List of parameters

r0203[0...15]	Firmware package name / FW pkg name		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Displays the name of the firmware package on the memory card/device memory.

r0203[0]: Name character 1

...

r0203[15]: Name character 16

For the commissioning tool, the ASCII characters are displayed uncoded.

Notice: An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.

r0203[0...n]	Actual power unit type / PU actual type

2 Parameters

2.2 List of parameters

p0205[0...n]	Valve rated voltage / Valve Un		
HLA	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.500 [V]	15.000 [V]	10.000 [V]
Description:	Sets the rated voltage for the valve.		
Dependency:	Refer to: p1832, p1850, p1851		
Note:	The output valve voltage is between -p0205 + offset (p1832) and p0205 + offset (p1832). Additional voltage limiting is possible via p1850 and p1851.		
p0205	Power unit application / PU application		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 2)	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	7	6
Description:	Overloading the load duty cycles applies under the prerequisite that before and after the overload, the drive converter is operated with its base load current - in this case, a load duty cycle of 300 s is used as basis. For booksize drive units, the following applies: Only the setting p0205 = 0 can be selected. In this particular case, the base load current has a load duty cycle of 150 % for 60 s and 176 % for 30 s. For chassis units, the following applies: The base load current for a low overload condition is based on a load duty cycle 110 % for 60 s and 150 % for 10 s. The base load current for a high overload condition is based on a load duty cycle 150 % for 60 s and 160 % for 10 s.		
Value:	0: Load duty cycle with high overload 1: Load duty cycle with low overload 6: S1 continuous duty (for servo drives) 7: S6 load duty cycle (for servo drives)		
Note:	Depending on the drive object and the power unit type, the parameter is appropriately preassigned when commissioning the system for the first time. When the parameter is changed, all of the motor parameters and the control mode are pre-assigned according to the selected application. The parameter has no influence when calculating the thermal overload. p0205 can only be changed to the settings that are saved in the power unit EEPROM. The parameter value is not reset when the factory setting is restored (see p0010 = 30, p0970).		
p0206[0...n]	Valve transition point flow rate / Valve trans flow		
HLA	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.2 [%]	95.0 [%]	10.0 [%]
Description:	Sets the flow rate at the transition point of the valve.		
Dependency:	Pre-assignment of p1839 and p1842.		

r0206[0...4]	Rated power unit power / PU P_{rated}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [kW]	Calculated: - Dyn. index: - Unit group: 14_6 Scaling: - Max - [kW]	Access level: 2 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting - [kW]
Description:	Displays the rated power unit power for various load duty cycles.		
Index:	[0] = Rated value [1] = Load duty cycle with low overload [2] = Load duty cycle with high overload [3] = S1 cont duty cyc [4] = S6 load duty cycle		
Dependency:	IECdrives (p0100 = 0): Units kW NEMA drives (p0100 = 1): Units hp Refer to: p0100, p0205		

r0206[0...4]	Rated power unit power / PU P_{rated}		
R_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [kW]	Calculated: - Dyn. index: - Unit group: 14_6 Scaling: - Max - [kW]	Access level: 2 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting - [kW]
Description:	Displays the rated power unit power for various load duty cycles.		
Index:	[0] = Rated value [1] = Load duty cycle with low overload [2] = Load duty cycle with high overload [3] = S1 cont duty cyc [4] = S6 load duty cycle		
Dependency:	IECdrives (p0100 = 0): Units kW NEMA drives (p0100 = 1): Units hp Refer to: p0100, p0205		
Note:	The active power is valid for cos phi = 1 for the line voltage specified on the type plate.		

p0207[0...n]	Valve transition point voltage / Valve trans U		
HLA	Can be changed: C2(1, 2) Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.2 [%]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 95.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [%]
Description:	Sets the voltage at the transition point of the valve.		

2 Parameters

2.2 List of parameters

r0207[0...4]	Rated power unit current / PU PI_{rated}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Arms]	Access level: 2 Func. diagram: 8021 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the rated power unit power for various load duty cycles.		
Index:	[0] = Rated value [1] = Load duty cycle with low overload [2] = Load duty cycle with high overload [3] = S1 cont duty cyc [4] = S6 load duty cycle		
Dependency:	Refer to: p0205		
r0207[0...4]	Rated power unit current / PU PI_{rated}		
A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Arms]	Access level: 2 Func. diagram: 8021 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the rated power unit power for various load duty cycles.		
Index:	[0] = Rated value [1] = Load duty cycle with low overload [2] = Load duty cycle with high overload [3] = S1 cont duty cyc [4] = S6 load duty cycle		
Dependency:	Refer to: p0205		
Note:	The following applies for booksize power units: The display value corresponds to the rated DC link current at 600 V (according to the SINAMICS S120 Manual). For chassis power units, the following applies: The display value corresponds to the rated input current at the rated line voltage (according to the SINAMICS S120 Manual).		
p0208[0...n]	Valve rated flow rate / Valve V_n		
HLA	Can be changed: C2(1, 2) Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.000 [ltr/min]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1000.000 [ltr/min]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [ltr/min]
Description:	Sets the nominal flow rate for the valve.		

r0208	Rated power unit line supply voltage / PU U_{rated}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Vrms]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the rated line supply voltage of the power unit. r0208 = 400: 380 - 480 V +/-10 % r0208 = 500: 500 - 600 V +/-10 % r0208 = 690: 660 - 690 V +/-10 % For the Basic Line Module (BLM) the following applies: r0208 = 690: 500 - 690 V +/-10 %		
p0209[0...n]	Valve rated pressure drop / Valve P_n		
HLA	Can be changed: C2(1, 2) Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 1.0 [bar]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 300.0 [bar]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 35.0 [bar]
Description:	Sets the nominal pressure drop per control edge for the valve.		
r0209[0...4]	Power unit maximum current / PU I_{max}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [Arms]	Access level: 2 Func. diagram: 8750, 8850, 8950 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the maximum output current of the power unit.		
Index:	[0] = Catalog [1] = Load duty cycle with low overload [2] = Load duty cycle with high overload [3] = S1 load duty cycle [4] = S6 load duty cycle		
Dependency:	Refer to: p0205		
p0210	Drive unit line supply voltage / U_{connect}		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Unsigned16 P-Group: Converter Not for motor type: - Min 1 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 63000 [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 600 [V]
Description:	Sets the drive unit supply voltage. AC/AC unit: The rms value of the phase-to-phase line supply voltage should be entered. DC/AC unit: The rated DC voltage of the connection busbar should be entered.		
Dependency:	Set p1254, p1294 (automatic detection of the V _{dc} switch-on levels) = 0. The switch-in thresholds of the V _{dc_max} controller (r1242, r1282) are then directly determined using p0210.		

2 Parameters

2.2 List of parameters

Notice: If, in the switched-off state (pulse inhibit), the supply voltage is higher than the entered value, the Vdc controller may be automatically deactivated in some cases to prevent the motor from accelerating the next time the system is switched on. In this case, an appropriate alarm A07401 is output.

Note: Setting ranges for p0210 as a function of the rated power unit voltage:

U_{rated} = 400 V:

- p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V (DC/AC)

U_{rated} = 500 V:

- p0210 = 500 ... 600 V (AC/AC), 675 ... 900 V (DC/AC)

U_{rated} = 660 ... 690 V:

- p0210 = 660 ... 690 V (AC/AC), 890 ... 1035 V (DC/AC)

U_{rated} = 500 ... 690 V:

- p0210 = 500 ... 690 V (AC/AC), 675 ... 1035 V (DC/AC)

The precharging switch-in threshold for the DC link voltage (Vdc) is calculated from p0210:

Vdc_{pre} = p0210 * 0.82 * 1.35 (AC/AC)

Vdc_{pre} = p0210 * 0.82 (DC/AC)

The undervoltage thresholds for the DC link voltage (Vdc) are calculated from p0210 as a function of the rated power unit voltage:

U_{rated} = 400 V:

- U_{min} = p0210 * 0.78 (AC/AC) > 330 V, p0210 * 0.60 (DC/AC) > 380 V

U_{rated} = 500 V:

- U_{min} = p0210 * 0.76 (AC/AC) > 410 V

U_{rated} = 660 ... 690 V:

- U_{min} = p0210 * 0.82 (AC/AC) > 565 V, p0210 * 0.63 (DC/AC) > 650 V

U_{rated} = 500 ... 690 V:

- U_{min} = p0210 * 0.82 (AC/AC) > 420 V, p0210 * 0.63 (DC/AC) > 480 V

Factory setting

1 [V]

63000 [V]

600 [V]

Description:

Sets the drive unit supply voltage.

AC/AC unit: The rms value of the phase-to-phase line supply voltage should be entered.

DC/AC unit: The rated DC voltage of the connection busbar should be entered.

Dependency:

Set p1254, p1294 (automatic detection of the Vdc switch-on levels) = 0.

The switch-in thresholds of the Vdc_{max} controller (r1242, r1282) are then directly determined using p0210.

The parameter can be reduced to p0210 = 100 V if p0212.0 = 1 has been set.

Refer to: p0212

Notice:

If, in the switched-off state (pulse inhibit), the supply voltage is higher than the entered value, the Vdc controller may be automatically deactivated in some cases to prevent the motor from accelerating the next time the system is switched on. In this case, an appropriate alarm is output (A07401).

For SINAMICS S150 devices, the supply voltage is calculated from the line supply voltage (p0210 of the infeed), and is overwritten each time that the line supply voltage changes.

Note: Setting ranges for p0210 as a function of the rated power unit voltage:

U_{rated} = 400 V:
 - p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V (DC/AC)

U_{rated} = 500 V:
 - p0210 = 500 ... 600 V (AC/AC), 675 ... 900 V (DC/AC)

U_{rated} = 660 ... 690 V:
 - p0210 = 660 ... 690 V (AC/AC), 890 ... 1035 V (DC/AC)

U_{rated} = 500 ... 690 V:
 - p0210 = 500 ... 690 V (AC/AC), 675 ... 1035 V (DC/AC)

The precharging switch-in threshold for the DC link voltage (V_{dc}) is calculated from p0210:
 V_{dc_pre} = p0210 * 0.82 * 1.35 (AC/AC)
 V_{dc_pre} = p0210 * 0.82 (DC/AC)

The undervoltage thresholds for the DC link voltage (V_{dc}) are calculated from p0210 as a function of the rated power unit voltage:

U_{rated} = 400 V:
 - U_{min} = p0210 * 0.78 (AC/AC) > 330 V, p0210 * 0.60 (DC/AC) > 380 V

U_{rated} = 500 V:
 - U_{min} = p0210 * 0.76 (AC/AC) > 410 V

U_{rated} = 660 ... 690 V:
 - U_{min} = p0210 * 0.82 (AC/AC) > 565 V, p0210 * 0.63 (DC/AC) > 650 V

U_{rated} = 500 ... 690 V:
 - U_{min} = p0210 * 0.82 (AC/AC) > 420 V, p0210 * 0.63 (DC/AC) > 480 V

p0210		Drive unit line supply voltage / U_{connect}	
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8860, 8960
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	70 [Vrms]	1000 [Vrms]	400 [Vrms]

Description: Sets the drive unit supply voltage (3-ph. AC).
 The value corresponds to the rms value of the phase-to-phase rated line supply voltage.

Dependency: Refer to: p3400

Warning:

If the infeed is continually in the controlled mode with high DC link voltages (p3510 > 660 V), depending on the particular application, this can damage the connected motors that have not been specified for these high voltages. Before an active infeed with a line supply voltage p0210 > 415 V goes into pulsed operation it must be ensured that all of the components connected to the DC link can be permanently operated with DC link voltages exceeding 660 V. Controlled operation of booksize power units for p0210 > 415 V is possible if the maximum steady-state DC link voltage (p0280) is increased as follows:
 p0280 >= 1.5 x p0210 and p0280 > 660 V
 In this case, the setpoint of the DC link voltage p3510 is not automatically adapted. We recommend p3510 = 1.5 x p0210.

Closed-loop voltage controlled operation is active with p3400.0 = 0 and p3400.3 = 1.

Notice: For p0210 > 415 V for booksize power units with a supply voltage of 3-ph. 380 ... 480 V, the Smart Mode is automatically activated (p3400.0 = 1); this is because in the voltage-controlled mode, the maximum permissible steady-state DC link voltage (p0280) would otherwise be exceeded.

For booksize power units with supply voltage of 3-ph. 380 ... 480 V AC, the following applies:

380 V <= p0210 <= 400 V --> Pre-assignment, setpoint for the DC link voltage: p3510 = 600 V

401 V <= p0210 <= 415 V --> Pre-assignment, setpoint for the DC link voltage: p3510 = 625 V

416 V <= p0210 <= 480 V --> Smart Mode with non-regulated DC link voltage: p3510 = 1.35 x p0210

2 Parameters

2.2 List of parameters

Note: When pre-assigning the setpoint for the DC link voltage (p3510), the following is generally valid:
 $p3510 = 1.5 \times p0210$
 The voltage range for the supply voltage depends on the type and the voltage class of the power unit.
 The following applies for the normal range of the supply voltage:
 400 V devices: $380 \text{ V} \leq p0210 \leq 480 \text{ V}$
 690 V devices: $660 \text{ V} \leq p0210 \leq 690 \text{ V}$
 500/690 V devices: $500 \text{ V} \leq p0210 \leq 690 \text{ V}$
 Further, for the following devices an extended voltage range downwards can be set:
 Booksize devices:
 ALM, 400 V device: $180 \text{ V} \leq p0210$
 SLM, 400 V device: $180 \text{ V} \leq p0210$
 80 kW / 120 kW ALM with internal and external cooling are excluded.
 For ALM with 6SL3130-7TE28-0Axx, 6SL3130-7TE31-2Axx, 6SL3131-7TE28-0Axx, 6SL3131-7TE31-2Axx, the following applies:
 $380 \text{ V} \leq p0210$
 Chassis devices:
 ALM, 400 V device: $180 \text{ V} \leq p0210 \leq 480 \text{ V}$
 ALM, 500/690 V device: $380 \text{ V} \leq p0210 \leq 690 \text{ V}$

p0210	Drive unit line supply voltage / U_connect		
B_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8760
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	70 [Vrms]	1000 [Vrms]	400 [Vrms]

Description: Sets the drive unit supply voltage (3-ph. AC).

The value corresponds to the rms value of the phase-to-phase rated line supply voltage.

Dependency: The parameter can be reduced to $p0210 = 70 \text{ V}$ if $p0212.0$ is set.

Notice: When connected to 3-ph. 230 V AC (only booksize units) the following must be observed:

- the undervoltage and overvoltage limits change (r0296, r0297).
- when using the internal braking chopper of Basic Line Modules (20 or 40 kW) the threshold when the braking chopper becomes active is reduced to 385 V. When using an external braking chopper, it must be ensured that a suitable activation threshold is used.
- all of the components connected to this DC link must also be adapted to the low line supply voltage. It is especially important that the rated DC voltage of all of the drives connected to this DC link is set with $p0210$ (e.g. $p0210(\text{SERVO}) = 1.35 \times p0210(\text{B_INF}) = 310 \text{ V}$).
- it is not possible to use a Control Supply Module (CSM) to generate a 24 V supply from the DC link, as the minimum continuous DC link voltage should not be below 430 V.

Note: The supply voltage range depends on the voltage class of the power unit.

400 V chassis units: $380 \text{ V} \leq p0210 \leq 480 \text{ V}$

690 V chassis units: $500 \text{ V} \leq p0210 \leq 690 \text{ V}$

400 V booksize units can also be connected to 3-ph. 230 V AC:

400 V booksize units: $180 \text{ V} \leq p0210 \leq 480 \text{ V}$

A reduced supply voltage up to 70 V is possible if $p0212.0 = 1$ has been set.

Sets the power unit configuration.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Drive unit line supply voltage reduced	Yes	No	-
01	External precharging present	Yes	No	-
03	Automatically adapt Vdc_max limit	No	Yes	-
05	Contactor display inputs/outputs status	Yes	No	9814

Dependency:

For bit 00:
Reduced supply voltages are only possible for booksize and chassis power units (DC/AC).
Bit 0 = 1 can only be set if r0192.22 = 1.
For bit 01 = 1:
The external precharging setting only affects the DC/AC power units.
For bit 03 = 1:
The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set.
Refer to: r0192, p0210

Caution:

For bit 00:
Working with reduced input voltages deactivates undervoltage detection.
For bit 03:
If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note:

For bit 00 = 0:
It is not possible to reduce the supply voltage in p0210.
For bit 00 = 1:
With this setting the supply voltage in p0210 can be reduced to 100 V.
Booksize PU: only for operating mode p1300 = 19
Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control
For bit 01 = 0:
There is no external precharging of the DC/AC Motor Modules. The precharging monitoring is bypassed.
For bit 01 = 1:
There is external precharging of the DC/AC Motor Modules. The precharging monitoring is calculated.
For bit 03 = 0:
The DC link voltage limit is calculated from p0210.
For bit 03 = 1:
The DC link voltage limit is set to the maximum value of the power unit.

For bit 05 = 1:

The status of the inputs/outputs for the power unit contactors is displayed in r0256.

This only applies to chassis power units with 3 AC line connection and line contactors.

The status display is only effective after parameter save and POWER ON.

06	Reduction of the permissible minimum voltage during precharging	Yes	No	-

Dependency:

For bit 00:

Reduced supply voltages are only possible for booksize and chassis power units (DC/AC).

Bit 0 = 1 can only be set if r0192.22 = 1.

For bit 01 = 1:

The external precharging setting only affects the DC/AC power units.

For bit 03 = 1:

The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set.

Refer to: r0192, p0210

Caution:

For bit 00:

Working with reduced input voltages deactivates undervoltage detection.

For bit 03:

If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note:

For bit 00 = 0:

It is not possible to reduce the supply voltage in p0210.

For bit 00 = 1:

With this setting the supply voltage in p0210 can be reduced to 100 V.

Booksize PU: only for operating mode p1300 = 19

Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control

For bit 01 = 0:

There is no external precharging of the DC/AC Motor Modules. The precharging monitoring is bypassed.

For bit 01 = 1:

There is external precharging of the DC/AC Motor Modules. The precharging monitoring is calculated.

For bit 03 = 0:

The DC link voltage limit is calculated from p0210.

For bit 03 = 1:

The DC link voltage limit is set to the maximum value of the power unit.

For bit 05 = 1:

The status of the inputs/outputs for the power unit contactors is displayed in r0256.

This only applies to chassis power units with 3 AC line connection and line contactors.

The status display is only effective after parameter save and POWER ON.

2 Parameters

2.2 List of parameters

For bit 06:

Precharging via the Motor Module is activated using this bit. To do this, while precharging, the undervoltage threshold for the pulse enable is reduced.

Precharging via the Motor Module can only be activated for S120 devices for separately excited synchronous generators where the DC link voltage control has been preselected (technology controller function module).

p0212		Power unit configuration / PU config			
A_INF, S_INF, R_INF	Can be changed: C2(2)	Calculated: -	Access level: 3

	0.400	1.000	0.800
Description:	Sets the damping for the valve.		

p0218[0...n]	Cylinder safety configuration / Cyl safety config		
HLA	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0111 bin

Description: Sets the configuration for the cylinder safety circuit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Close shutoff valve for power inhibit (PI)	Yes	No	-
	01	Shutdown control valve supply for power inhibit (PI)	Yes	No	4990
	02	Valve feedback signal available	Yes	No	-
	03	Invert valve feedback signal	Yes	No	-

Note:

PI: power inhibit
For bit 01 = 0 and power inhibit:
When the control valve is switched in, the valve setpoint is interlocked to 0. If bit 0 = 0 (shutoff valve for power inhibit does not close) the drive can drift.

p0220	Hydraulic oil modulus of elasticity / Hydr_oil e_module		
HLA	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1000.0 [bar]	21000.0 [bar]	11000.0 [bar]
Description:	Sets the value of the modulus of elasticity for the hydraulic oil being used.		
Note:	The value defines the compressibility of the hydraulic fluid.		

p0220[0...1]	Infeed line filter type / INF line fil type		
A_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	119	0

Description: Sets the line filter type for the Active Line Module (ALM).
 For an Active Line Module (ALM), a line filter (Active Interface Module, AIM) with the appropriate rating is automatically selected and the line filter type (p0220) preset as follows:
 - "booksize" format: p0220 = 41 ... 45
 - "Chassis" format: p0220 = 10 ... 29 or 78 ... 105
 - "Chassis-2" format: p0220 = 110 ... 140
 Based on the line filter type, filter capacitance (p0221), filter resistance (p0222), line-side filter reactor (p0228) as well as inductance (p0223) and the resistance (p0224) of the commutation reactor are preassigned. Further, the setting of the pulse frequency wobulation is also preassigned (p1810.2, p1810.4, p1811) for which the AIM is dimensioned.
 For the selected filter, controller settings (p3421, p3422, p3424) are newly preassigned suitable values. As a consequence, a subsequent line supply and DC link identification with automatic controller setting is recommended (p3410 >= 4).

Value:

0:	No line filter
1:	Wideband Line Filter booksize 400 V 16 kW (6SL3000-0BE21-6AA0)
2:	Wideband Line Filter booksize 400 V 36 kW (6SL3000-0BE23-6AA0)
3:	Wideband Line Filter booksize 400 V 55 kW (6SL3000-0BE25-5AA0)
4:	Wideband Line Filter booksize 400 V 80 kW (6SL3000-0BE28-0AA0)
5:	Wideband Line Filter booksize 400 V 120 kW (6SL3000-0BE31-2AA0)
10:	AIM F 400 V 132 kW 160 kW (6SL3300-7TE32-6Ax0)

119:	AIM FS4+ 400 V 900 kW (6SL3301-7TE41-4AA0)

Index: [0] = Line filter
[1] = Line filter optional

Dependency: Refer to: p3665

Caution: "Booksize" format:

When using an Active Interface Module (AIM), it is absolutely necessary that the terminals for the temperature switch between the Active Interface Module (X121.1/2) and the Active Line Module (X21.1/2) are connected.

"Chassis" format:

When connecting AIMS in parallel, if the last position of the Article number (MLFB) is different, then the temperature sensor type must be manually set (p3665).

Notice: After changing the filter selection, it may be necessary to again make special settings regarding the modulation type (p1810, p1811).

For p0220 = 110 ... 140, the following applies:

These line filter types have been designed for operation with pulse frequency wobulation (p1810.2 = 1, p1810.4 = 0, p1811 = 10%), and they only satisfy operation in compliance with the standard under this precondition. Further, the pulse frequency (p1800) can be increased - depending on the power unit - to additionally reduce the line harmonics.

Note: The maximum filter current is indicated in r3534, and acts as apparent current limit for the closed-loop control.

For booksize units, when using an Active Interface Module in p0220[0] it is also possible to use a Basic Filter that is parameterized in p0220[1].

The setting of the filter capacitance (p0221) and filter resistance (p0222) - derived from p0220[0, 1] - are required in the closed-loop voltage controlled mode to automatically compensate the filter reactive current.

For two power ratings, the same line filter is used for both power ratings.

p0221 System pressure / p_system

HLA	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [bar]	10000.0 [bar]	0.0 [bar]

Description: Sets the system pressure that the drive unit supplies.

p0221[0...1]	Infeed filter capacitance / INF C_filter		
A_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µF]	100000.00 [µF]	0.00 [µF]
Description:	Sets the filter capacitance of the line filter (connected in a delta configuration).		
Index:	[0] = Line filter [1] = Line filter optional		
Note:	When a Siemens line filter is used (p0220) this parameter is automatically pre-set with the correct value. For a parallel circuit, the value corresponds to the capacitance of a power unit. Index 0 refers to the first line filter from p0220[0]. Index 1 refers to the optional second line filter from p0220[1].		
p0222[0...n]	Valve precontrol pressure / Valve p_prectrl		
HLA	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [bar]	350.0 [bar]	0.0 [bar]
Description:	Sets the precontrol pressure for precontrolled valve. For a value = 0, the following applies: Directly controlled (not precontrolled) valve. For values not equal to 0, the following applies: Precontrol pressure for the precontrolled valve.		
Note:	The natural frequency of the precontrolled valve is obtained from the valve natural frequency multiplied by the square root of the precontrolled pressure divided by 100 bar.		
p0222[0...1]	Infeed filter resistance / INF R_filter		
A_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	100.00000 [ohm]	0.00000 [ohm]
Description:	Sets the filter resistance in series with the filter capacitance.		
Index:	[0] = Line filter [1] = Line filter optional		
Note:	When a Siemens line filter is used (p0220) this parameter is automatically pre-set with the correct value. For a parallel circuit, the value corresponds to the resistance of a power unit. Index 0 refers to the first line filter from p0220[0]. Index 1 refers to the optional second line filter from p0220[1].		

p0223	Infeed inductance between filter and power unit / INF L filter/PU		
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001 [mH]	1000.000 [mH]	2.100 [mH]
Description:	Sets the inductance between the filter and power unit.		
Note:	The parameter is automatically pre-assigned depending on the power unit being used and matches the specified Siemens line reactors. For a parallel circuit, the value corresponds to the inductance of a power unit. The controller settings (p3421, p3424) are overwritten according to p0223. In the case that p0223 is subsequently changed, it is always recommended that a line and DC link identification routine with automatic controller setting is carried out (p3410 >= 4).		
p0224	Infeed resistance between filter and power unit / INF R filter/PU		
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	100.00000 [ohm]	0.00100 [ohm]
Description:	Sets the resistance between the filter and power unit		
Note:	The parameter is automatically pre-assigned depending on the power unit being used and matches the specified Siemens line reactors. For a parallel circuit, the value corresponds to the resistance of a power unit.		
p0225	Infeed inductance between line supply and filter / INF L line/filter		
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001 [mH]	1000.000 [mH]	0.001 [mH]
Description:	Sets the inductance between line supply and filter.		
Note:	The value must be, for example, appropriately increased if an additional inductance (reactor or transformer is installed in front of the filter). The controller settings (p3421, p3424) are overwritten according to p0225. In the case that p0225 is subsequently changed, it is always recommended that a line and DC link identification routine with automatic controller setting is carried out (p3410 >= 4).		
p0226	Infeed resistance between line supply and filter / INF R line/filter		
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ohm]	100.00 [ohm]	0.00 [ohm]
Description:	Sets the resistance between the line supply and filter.		
Note:	The value must be, for example, appropriately increased if an additional resistor is installed in front of the filter.		

p0227	Infeed DC link capacitance, power unit / INF C		
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.20 [mF]	1000.00 [mF]	1.00 [mF]
Description:	Sets the total DC link capacitance.		
Note:	The total DC link capacitance of a DC link group comprises the sum of the sub-capacitances of all motor/infeed modules and the additional DC link capacitors. The controller setting (p3422) is overwritten according to p0227. In the case that p0227 is subsequently changed, it is always recommended that a line and DC link identification routine with automatic controller setting is carried out (p3410 >= 4).		
p0228	Infeed filter inductance line side / INF L_filt L side		
A_INF, S_INF, R_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8850, 8950
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mH]	1000.000 [mH]	0.000 [mH]
Description:	Sets the inductance of a line reactor in the filter.		
Note:	Contrary to p0225, this inductance is in the filter itself, and in the case that active infeed units are connected in parallel, this inductance becomes part of the parallel connection. For a parallel connection, the following applies: In the case of a single connection (r7000 = 1), the inductance value is entered in p0228. The controller settings (p3421, p3424) are overwritten according to p0228. In the case that p0228 is subsequently changed, it is always recommended that a line and DC link identification routine with automatic controller setting is carried out (p3410 >= 4).		
p0230[0...n]	Manipulated variable inhibit time / Manip var t_inhib		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	300 [ms]
Description:	Setting the manipulated variable inhibit time. The manipulated variable inhibit time starts after controlling the shutoff valve (opening) or after switching-on the power supply voltage of the control valve and during this time keeps the velocity setpoint at zero.		
Note:	For p0218.1 = 1 (shutdown control valve supply for power inhibit), the following applies: The system waits for the manipulated variable inhibit time to expire – also after the close command for the shutoff valve – and then the power supply voltage of the control valve is shut down. For p0218.0 = 0 (do not close shutoff valve for power inhibit) and p0218.1 = 0 (do not switch off control valve supply for power inhibit), the following applies: Parameter p0230 is not effective.		

p0230	Drive filter type motor side / Drv filt type mot		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 2)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	0
Description:	Sets the type of the filter at the motor side.		
Value:	0: No filter 1: Motor reactor 2: dv/dt filter 3: Sine-wave filter Siemens 4: Sine-wave filter third-party		
Dependency:	<p>The following parameters are influenced using p0230:</p> <p>p0230 = 1: --> p0233 (power unit, motor reactor) = filter inductance</p> <p>p0230 = 3: --> p0233 (power unit, motor reactor) = filter inductance --> p0234 (power unit sine-wave filter capacitance) = filter capacitance --> p0290 (power unit overload response) = inhibit pulse frequency reduction --> p1082 (maximum speed) = Fmax filter / pole pair number --> p1800 (pulse frequency) >= nominal pulse frequency of the filter --> p1802 (modulator modes) = space vector modulation without overcontrol --> p1811 (modulator configuration) = wobulation amplitude --> p1909 (motor data identification, control word) = only Rs measurement</p> <p>p0230 = 4: --> p0290 (power unit overload response) = inhibit pulse frequency reduction --> p1802 (modulator modes) = space vector modulation without overcontrol --> p1811 (modulator configuration) = wobulation amplitude --> p1909 (motor data identification, control word) = only Rs measurement</p> <p>The user must set the following parameters according to the data sheet of the sine-wave filter and also the user must check whether they are permitted.</p> <p>--> p0233 (power unit, motor reactor) = filter inductance --> p0234 (power unit sine-wave filter capacitance) = filter capacitance --> p1082 (maximum speed) = Fmax filter / pole pair number --> p1800 (pulse frequency) >= nominal pulse frequency of the filter</p> <p>Refer to: p0233, p0234, p0290, p1082, p1800, p1802</p>		
Note:	<p>Only motor reactor filter type can be selected for a synchronous reluctance motor (RESM). if a filter type cannot be selected, then this filter type is not permitted for the Motor Module.</p> <p>p0230 = 1: The output frequency of booksize power units with output reactors is restricted to 120 Hz, for blocksize and chassis power units, to 150 Hz. The maximum pulse frequency for booksize and blocksize power units is 4 kHz, for chassis power units, twice the rated pulse frequency (2.5 kHz or 4 kHz).</p> <p>p0230 = 2: Chassis power units with dv/dt filter, depending on the rated pulse frequency, may be operated with a maximum pulse frequency of p1800 = 2.5 kHz or 4 kHz. The output frequency is limited to 150 Hz.</p> <p>p0230 = 3: Sine-wave filters with a rated pulse frequency of 1.25 or 2.5 kHz should only be operated with a current controller sampling time p0115[0] = 400 μs, sine-wave filters with a rated pulse frequency of 2 or 4 kHz with p0115[0] = 250 μs. The sine-wave filter cannot be selected if the current controller sampling time has not been appropriately set. Chassis power units with sine-wave filter are limited to output frequencies of 115 Hz or 150 Hz.</p>		

2 Parameters

2.2 List of parameters

p0231[0...n]	Power enable inhibit time / Pow_enab t_inhib		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	300 [ms]	100 [ms]
Description:	Sets the inhibit time for the shutoff valve after the power enable. If a shutoff valve is being used (p0218.0/.1 = 1), then the following applies: Sets the time that the control valve requires to go to the center position from the failsafe position. If a shutoff valve is not being used, the following applies: Set the time to zero.		
Dependency:	Refer to: p0230		
p0232[0...n]	Valve monitoring time / Valve t_mon		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [ms]	1000 [ms]	50 [ms]
Description:	Sets the monitoring time for the valve.		
p0233	Power unit motor reactor / PU mot reactor		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mH]	1000.000 [mH]	0.000 [mH]
Description:	Enter the inductance of a filter connected at the power unit output.		
Dependency:	This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit. Refer to: p0230		
Note:	The parameter cannot be changed if the power unit has an internal sine-wave filter.		
p0233	Power unit motor reactor / PU mot reactor		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mH]	1000.000 [mH]	0.000 [mH]
Description:	Enter the inductance of a filter connected at the power unit output.		
Dependency:	This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit. Refer to: p0230		
Note:	When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. In this specific case, the parameter value of a third-party filter has to be entered outside the commissioning phase (p0010 = 0). For p3900 = 3, the value is kept.		

p0234	Power unit sine-wave filter capacitance / PU sine filter C		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.000 [μ F]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000.000 [μ F]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [μ F]
Description:	Enters the capacitance of a sine-wave filter connected at the power unit output.		
Dependency:	This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit. Refer to: p0230		
Note:	The parameter value includes the sum of all of the capacitances of a phase connected in series (phase - ground). The parameter cannot be changed if the power unit has an internal sine-wave filter.		
p0234	Power unit sine-wave filter capacitance / PU sine filter C		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.000 [μ F]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000.000 [μ F]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [μ F]
Description:	Enters the capacitance of a sine-wave filter connected at the power unit output.		
Dependency:	This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit. Refer to: p0230		
Note:	The parameter value includes the sum of all of the capacitances of a phase connected in series (phase - ground). When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. In this specific case, the parameter value of a third-party filter has to be entered outside the commissioning phase (p0010 = 0). For p3900 = 3, the value is kept.		
p0235	Motor reactor in series number / L_mot in SeriesQty		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 2) Data type: Unsigned8 P-Group: Converter Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of reactors connected in series at the power unit output.		
Dependency:	Refer to: p0230		
Notice:	The reactor inductances should be the same. If the number of motor reactors connected in series does not correspond to this parameter value, then this can result in an unfavorable control behavior.		
r0238	Internal power unit resistance / PU R internal		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ohm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [ohm]
Description:	Displays the internal resistance of the power unit (IGBT and line resistance).		
Note:	For a parallel circuit, the value corresponds to the resistance of a power unit.		

2 Parameters

2.2 List of parameters

p0240[0...n]	Pressure sensor A reference value at 10 V / Sensor A ref 10V		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [bar]	1000.0 [bar]	200.0 [bar]
Description:	Sets the reference value for pressure sensor A to 10 V.		

p0241[0...n]	Pressure sensor A offset correction / Sensor A offset		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-5000.000 [bar]	5000.000 [bar]	0.000 [bar]
Description:	Sets the offset correction for pressure sensor A		
Dependency:	After changing the reference value (p0240) this value must be adapted. Refer to: p0240		

p0242[0...n]	Pressure sensor B reference value at 10 V / Sensor B ref 10V		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [bar]	1000.0 [bar]	200.0 [bar]
Description:	Sets the reference value for pressure sensor B to 10 V.		

p0243[0...n]	Pressure sensor B offset correction / Sensor B offset		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-5000.000 [bar]	5000.000 [bar]	0.000 [bar]
Description:	Sets the offset correction for pressure sensor B		
Dependency:	Refer to: p0242		
Note:	After changing the reference value (p0242) this value must be adapted.		

p0244[0...n]	Pressure sensor P reference value at 10 V / Sensor P ref 10V		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [bar]	1000.0 [bar]	200.0 [bar]
Description:	Sets the reference value for pressure sensor P (system pressure) to 10 V.		

p0245[0...n]	Pressure sensor P offset correction / Sensor P offs_corr			
HLA	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-5000.000 [bar]	5000.000 [bar]	0.000 [bar]	
Description:	Sets the offset correction for pressure sensor P (system pressure).			
Dependency:	Refer to: p0244			
Note:	After changing the reference value (p0244) this value must be adapted.			
p0246	CI: System pressure external / Sys pressure ext			
HLA	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: p2002	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the external system pressure.			
Dependency:	Refer to: r0069			
Note:	For several hydraulic drives with the same system pressure, and only one system pressure measurement, the value can be interconnected from another axis via this connector input. To do this, the following BICO interconnection should be set: p0264 (axis without system pressure measurement) = r0069 (axis with system pressure measurement). CI: p0246 = 0: The analog measurement of its own axis is effective (p0244, p0245). CI: p0246 > 0: The value of the source is accepted, and displayed in r0069 of its own axis.			
p0247	Voltage measurement configuration / U_mes config			
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Converter	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 0000 bin	
Description:	Sets the configuration for the voltage measurement.			
Bit field:	Bit	Signal name	1 signal	0 signal
	05	Use voltage measured values for flying restart	Yes	No
				FP
				-
Warning:	For p0247.5 = 1 (only for induction motors): If the Voltage Sensing Module (VSM) is connected to the line voltage, then the line frequency is interpreted as speed. In this case, the flying restart function cannot be used together with VSM and the bit should be set to 0. If only one VSM is connected at the Motor Module, line synchronization must be deactivated (p3800 = 0), in order to be able to use flying restart together with VSM. If two VSMs are connected, the second VSM is used for flying restart.			
				
Note:	The functions are only available if the Motor Module is assigned a Voltage Sensing Module (VSM) (p0150, p0151).			

2 Parameters

2.2 List of parameters

p0249	Power unit cooling type / PU cool type		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, S_INF	Can be changed: C2(1, 2) Data type: Integer16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the cooling type for booksize compact power units. This therefore defines whether for these power units, the internal air cooling is shut down and instead, the "Cold-Plate" cooling type is used.		
Value:	0: Air cooling int 1: Cold-Plate		
Note:	For booksize compact power units, there is a 4 at the 5th position of the Article number. The parameter is irrelevant for all other power unit types.		

p0251[0...n]	Power unit heat sink fan operating hours counter / PU fan t_op		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 P-Group: Modulation Not for motor type: - Min 0 [h]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 4294967295 [h]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [h]
Description:	Displays the operating hours of the heat sink fan in the power unit. The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).		
Dependency:	Refer to: p0252, r0277 Refer to: A30042		
Note:	For r0193.13 = 0, the following applies: For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.		

p0252	Power unit heat sink fan operating time maximum / PU fan t_op max		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 P-Group: Modulation Not for motor type: - Min 0 [h]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500000 [h]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 40000 [h]
Description:	Sets the maximum operating time of the heat sink fan in the power unit. The monitoring is deactivated with p0252 = 0.		
Dependency:	Refer to: p0251, r0277 Refer to: A30042		
Notice:	For firmware version < 5.1 of the power unit, the value is limited to 65535 hours. For multi-axis power units, the same value must be entered for all axes.		
Note:	For power units with a model for the fan service life, the shortest conceivable service life is permanently saved. If p0252 is set to a value not equal to 0, then this saved value is always indicated in p0252.		

p0254[0...n]	Operating hours counter power unit fan inside the converter / PU inner fan t_op		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 P-Group: Modulation Not for motor type: - Min 0 [h]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 4294967295 [h]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [h]
Description:	Displays the power unit fan operating hours of the internal fan in the power unit. The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).		
Dependency:	Refer to: A30042		
Note:	For r0193.13 = 0, the following applies: For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.		
p0255[0...7]	Power unit contactor monitoring time / PU cont t_mon		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min -1 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 0 [ms] [1] 0 [ms] [2] -1 [ms] [3] -1 [ms] [4...7] 0 [ms]
Description:	Sets the monitoring time for internal monitoring of the contactor feedback contacts. For a value 0.0 or negative values, the particular monitoring is deactivated. For index [0...3]: Used to monitor the delay time between the control signal and feedback signals of the particular contactor. For index [2, 3]: The value -1.0 means that the particular opening time is taken from Index 0 or 1. For index [4...7]: Is used for simultaneity monitoring for a parallel connection. After a contactor has been opened or closed, this checks whether, after the monitoring time has expired, all contactors of the parallel connection have assumed the same state.		
Index:	[0] = Precharging contactor closing time [1] = Bypass contactor closing time [2] = Precharging contactor opening time [3] = Bypass contactor opening time [4] = Simultaneity precharging contactor closing time [5] = Simultaneity bypass contactor closing time [6] = Simultaneity precharging contactor opening time [7] = Simultaneity bypass contactor opening time		
Dependency:	Refer to: r0256 Refer to: F05118, F05119, F30060, F30061		
Notice:	For index [4...7]: The simultaneity monitoring is only activate after parameter save and POWER ON.		
Note:	- this parameter is only effective for chassis power units with 3 AC line connection and line contactors. - the simultaneity monitoring can only be activated for a parallel connection. - the feedback signal input of an open bypass contactor must be displayed in r0256 = 0. - the feedback signal input of an open precharging contactor must be displayed in r0256 = 1. - Determining practical monitoring times can be supported by a tracing r0256. For power unit firmware version less than 4.6, the following applies: There are no separate monitoring times for the delay time between opening and closing. In this case, the maximum of the opening time and closing time is effective.		

2 Parameters

2.2 List of parameters

For index [0...3]:

For Active Line Modules in the Chassis-2 format, the delay time monitoring is active and preset as follows:

- p0255[0, 2] = 250 ms

- p0255[1, 3] = 3000 ms

r0256.0...31		CO/BO: Power unit contactor inputs/outputs status / PU cont IO stat			
VECTOR, VECTOR_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 9814 Unit selection: - Expert list: 1 Factory setting -		
Description:	Display and BICO output for the status of the inputs/outputs of the power unit contactors. The display is activated in p0212.5.

30	PDS7 bypass contactor control output	High	Low	-
31	PDS7 bypass contactor feedback signal input	High	Low	-

Dependency:

Refer to: p0212

Note:

This parameter is only effective for chassis power units with 3 AC line connection and line contactors.
PDS: Power unit Data Set

p0260**Cooling unit starting time 1 / RKA start time 1**

SERVO (Cool_unit), VECTOR (Cool_unit), SERVO_AC (Cool_unit), VECTOR_AC (Cool_unit), SERVO_I_AC (Cool_unit), VECTOR_I_AC (Cool_unit), A_INF (Cool_unit), S_INF (Cool_unit), R_INF (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60.0 [s]	Access level: 3 Func. diagram: 9794, 9795 Unit selection: - Expert list: 1 Factory setting 5.0 [s]
--	--	---	--

Description:

Sets starting time 1 to monitor the cooling unit after switch-on command.
After switching on, the following signals must be present within starting time 1:
- "RKA switched on"
- "RKA liquid flow OK"
When a fault occurs, an appropriate message is output.

Dependency:

Refer to: F49152, F49153

Note:

RKA: cooling unit

p0261**Cooling unit starting time 2 / RKA start time 2**

SERVO (Cool_unit), VECTOR (Cool_unit), SERVO_AC (Cool_unit), VECTOR_AC (Cool_unit), SERVO_I_AC (Cool_unit), VECTOR_I_AC (Cool_unit), A_INF (Cool_unit), S_INF (Cool_unit), R_INF (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1200.0 [s]	Access level: 3 Func. diagram: 9794, 9795 Unit selection: - Expert list: 1 Factory setting 180.0 [s]
--	--	---	--

Description:

Sets starting time 2 to monitor the cooling unit after switch-on command.
After switching on, the following signals must be present within starting time 2:
- "RKA conductivity, no fault"
- "RKA conductivity, no alarm"
When a fault occurs, an appropriate message is output.

Dependency:

Refer to: p0266
Refer to: F49151

2 Parameters

2.2 List of parameters

p0262	Cooling unit fault conductivity delay time / RKA cond t_del		
SERVO (Cool_unit), VECTOR (Cool_unit), SERVO_AC (Cool_unit), VECTOR_AC (Cool_unit), SERVO_I_AC (Cool_unit), VECTOR_I_AC (Cool_unit), A_INF (Cool_unit), S_INF (Cool_unit), R_INF (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 30.0 [s]	Access level: 3 Func. diagram: 9794, 9795 Unit selection: - Expert list: 1 Factory setting 0.0 [s]
Description:	Sets the delay time for the fault "RKA: Conductive limit value exceeded" during operation. The fault is only output if the conductivity during operation exceeds the permissible fault value, and the value remains at this level for longer than is set in this parameter.		
Dependency:	Refer to: F49151, A49171		
<hr/>			
p0263	Cooling unit fault liquid flow delay time / RKA flow t_del

Dependency:	Refer to: p0266			
r0277[0...n]	Power unit heat sink fan wear counter / PU fan wear_count			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min - [%]	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]	
Description:	Displays the wear counter of the heat sink fan in the power unit. After a fan has been replaced, the wear can be reset by setting parameter p0251 to 0. The wear counter is deactivated with p0252 = 0.			
Dependency:	Refer to: p0251, p0252 Refer to: A30042			
Note:	- for r0193.13 = 1, the wear counter is based on a model for the service life. For r0193.13 = 0, the value is determined as quotient from p0251 and p0252. - for r0193.13 = 0, a 0 is displayed in the wear counter if the operating hours counter/wear counter was deactivated using p0252 = 0.			
p0278	DC link voltage undervoltage threshold reduction / Vdc U_under red			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min -80 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0 [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [V]	
Description:	Sets the absolute value by which the threshold to initiate the undervoltage fault (F30003) is reduced.			
Dependency:	Refer to: p0210, r0296 Refer to: F30003			
Notice:	When using a Control Supply Module (CSM) for 24 V supply from the DC link, the minimum continuous DC link voltage may not lie below 430 V. DC link voltages in the range 300 ... 430 V are permissible up to a duration of 1 min.			

Note: The resulting shutdown threshold can be read in r0296 and is dependent on the selected rated voltage (p0210) and the power unit being used.

p0279 DC link voltage offset alarm threshold / Vdc offs A thr

A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8760, 8864, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [V]	500 [V]	0 [V]

Description: Sets the voltage threshold to initiate alarm A06810.

The value represents an offset so that the alarm threshold is obtained from the total of r0296 and p0279.

Dependency: Refer to: p0210, r0296

Refer to: A06810

Note: The absolute value of the undervoltage threshold r0296 depends on the selected unit supply voltage (p0210).

p0280 DC link voltage maximum steady-state / Vdc_max stat

A_INF, R_INF	Can be changed: C2(1), T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8940, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50 [V]	1500 [V]	660 [V]

Description: Sets the maximum steady-state DC link voltage. When the DC link voltage setpoint reaches the threshold, alarm A06800 is output.

The setpoint for the DC link voltage in p3510 is limited to the value in p0280.

The voltage can be increased (boosted) using the modulation depth reserve controller. The modulation depth reserve (p3480) can be too low if p0210 (drive unit supply voltage) was incorrectly parameterized, a line overvoltage condition is present or a high reactive current is required.

Dependency: Refer to: p0210

Refer to: A06800

Warning: Before increasing the voltage limit for pulsed operation of a controlled booksize infeed with line supply voltages p0210 > 415 V it should be checked whether the motors connected to the DC link are specified for the higher motor voltages.

The warning information associated with p0210 must be carefully observed.

Caution: All motors connected to the DC link must be rated for the maximum DC link voltage set in this parameter.

Notice: For chassis power units, for the extended line supply voltage range from 500 V to 690 V, the value in p0280 is automatically adapted if the line supply voltage in p0210 is changed. The individual parameter setting for p0280 is then lost and if necessary must be re-entered.

Note: A brief dynamic increase of the DC link voltage does not result in an alarm.

Pre-setting values:

380 ... 480 V booksize devices: 660 V

380 ... 480 V chassis devices: 750 V

500 ... 690 V chassis devices: $0.875 * p0210 + 502$ V

Maximum values:

380 ... 480 V booksize devices: 785 V

380 ... 480 V chassis devices: 785 V

500 ... 690 V chassis devices: 1130 V

2 Parameters

2.2 List of parameters

p0281	Line supply overvoltage alarm threshold / U_I_over A thr		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8860, 8960
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	100 [%]	200 [%]	110 [%]
Description:	Sets the alarm threshold for a line supply overvoltage condition. The setting is made as a percentage of the drive unit supply voltage (p0210).		
Dependency:	Refer to: p0211, p0221, p0222, p0223, p0224, p0225, p0226		
Note:	If synchronizing voltages are not detected, the line supply voltage is estimated using a model. It is therefore important to ensure that drive unit data is correctly specified.		

p0282	Line supply undervoltage alarm threshold / U_I_under A thr		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8860, 8960
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	100 [%]	85 [%]
Description:	Sets the alarm threshold for a line undervoltage condition. The setting is made as a percentage of the drive unit supply voltage (p0210).		
Dependency:	Refer to: p0222, p0224, p0225, p0226, p3421, p3422 Refer to: A06105		
Note:	If synchronizing voltages are not detected, the line supply voltage is estimated using a model. It is therefore important to ensure that drive unit data is correctly specified.		

p0283	Line supply undervoltage shutdown (trip) threshold / U_I_under tr_thr		
A_INF, S_INF, R_INF	Can be changed: C2(1), T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8860, 8960
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	100 [%]	75 [%]
Description:	Sets the shutdown threshold for the line supply undervoltage. The setting is made as a percentage of the drive unit supply voltage (p0210).		
Dependency:	Refer to: p0282 Refer to: F06100		
Notice:	For booksize Active Line Modules, the following applies: When operated without Active Interface Module (p0220 not equal to 41 ... 45), the minimum shutdown threshold is 75 %.		

p0284	Line supply frequency exceeded alarm threshold / f_I_exc A thr		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8864, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	100.0 [%]	300.0 [%]	110.0 [%]
Description:	Sets the alarm threshold for an excessively high line frequency.		
Dependency:	Set as a percentage of the rated line frequency. Refer to: p0211		

p0285	Line supply frequency undershot alarm threshold / f_I under A thr		
A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8864, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	90.0 [%]
Description:	Sets the alarm threshold for an excessively low line frequency.		
Dependency:	Set as a percentage of the rated line frequency. Refer to: p0211		

p0287[0...1]	Ground fault monitoring shutdown threshold / Gnd flt threshold		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	[0] 6.0 [%] [1] 16.0 [%]

Description:	Sets the shutdown thresholds for the ground fault monitoring. The setting is made as a percentage of the maximum current of the power unit (r0209).
Index:	[0] = During precharging [1] = Regular
Dependency:	Refer to: F30021
Note:	The parameter only applies to booksize and chassis power units. Sets the thresholds: - the prerequisite is at least firmware version 2.2 of the power unit. Deactivate ground fault monitoring: - Sequence: --> p0287[1] = 0 --> p0287[0] = 0 - irrespective of the firmware version of the power unit.

r0289	CO: Maximum power unit output current / PU I_{out} max		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Display and connector output for the maximum actual output current of the power unit. Derating factors must be taken into account for this value.		

p0290	Power unit overload response / PU overl response		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Integer16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 13	Access level: 3 Func. diagram: 8021 Unit selection: - Expert list: 1 Factory setting 0
Description:	<p>Sets the response to a thermal overload condition of the power unit. The following quantities can result in a response to thermal overload:</p> <ul style="list-style-type: none"> - heat sink temperature (r0037[0]). - chip temperature (r0037[1]). - power unit overload I2t (r0036). <p>Possible measures to avoid thermal overload:</p> <ul style="list-style-type: none"> - reduce the output current limit r0289 and r0067 (for closed-loop speed/velocity or torque/force control) or the output frequency (for U/f control indirectly via the output current limit and the intervention of the current limiting controller). - reduce the pulse frequency. <p>A reduction, if parameterized, is always realized after an appropriate alarm is output.</p> <p>For p0290 = 0: When a temperature alarm threshold is exceeded, the output current is reduced, and in turn, the output frequency. If the current reduction is not sufficient to thermally relieve the power unit, when the drive reaches the temperature fault threshold it switches off. This setting is not suitable for drives requiring a constant torque. Application: pumps, fans</p> <p>For p0290 = 1: The power unit operates at the required operating point. When the fault threshold is reached, the drive switches off and an appropriate fault is output. Application: Drive applications where, as a result of the underlying process, no setpoint deviations of individual drives in the group are permitted - or where the pulse frequency must be strictly maintained.</p> <p>For p0290 = 2: The pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. If the pulse frequency reduction is not sufficient to thermally relieve the power unit, then the output current is also reduced. Application: Drives with a low dynamic performance and occasional overload where speed deviations are permissible.</p> <p>For p0290 = 3: Only the pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. Application: Drives with a low dynamic performance and occasional overload where a speed deviation is not permissible.</p> <p>For p0290 = 10: For Booksize devices, in addition to the heat sink and chip temperatures, the difference between the two temperatures is monitored as an additional variable. When a temperature threshold is exceeded, the output current is reduced - and in turn, the output frequency. This overload response is activated as default setting for Booksize devices with a pulse frequency higher than or equal to 16 kHz.</p> <p>For p0290 = 12: In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum. The output current is only reduced if the actual chip temperature increases above a certain temperature threshold. Application: Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile (e.g. centrifuges, flywheel presses, cranes).</p>		

For p0290 = 13:

In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum.

Application:

Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile, and where the output current is not to be reduced (e.g. centrifuges, flywheel presses, cranes).

Value:	0: Reduce output current
	1: No reduction shutdown when overload threshold is reached
	2: Reduce the pulse frequency and output current
	3: Reduce the pulse frequency
	10: Automatic output current reduction
	12: Automatic pulse frequency and output current reduction
	13: Automatic pulse frequency reduction

Dependency: For a thermal power unit overload, an appropriate alarm or fault is output, and r2135.15 or r2135.13 set. Settings, where the pulse frequency is reduced, are not possible if the "Extended torque control" function module (r0108.1) is activated.

For p0290 = 2, 3:

These responses are only applicable for blocksize power units.

For p0290 = 10:

This response is only applicable for booksize power units.

Refer to: r0036, r0037, r0108, p0230, r2135

Refer to: A05000, A05001, A07805

Notice: If the thermal overload of the power unit is not sufficiently reduced by the actions taken, the drive is always shut down. This means that the power unit is always protected irrespective of the setting of this parameter.

Note: Under overload conditions, the current and torque limit are reduced, and therefore the motor is braked and forbidden speed ranges (e.g. minimum speed p1080 and suppression [skip] speeds p1091 ... p1094) can be passed through. When the motor data identification routine is selected, parameter p0290 cannot be changed.

For p0290 = 0, 2, 12:

This setting is only practical if the load decreases with decreasing speed (e.g. for applications with variable torque such as for pumps and fans).

For p0290 = 2, 3, 12, 13:

The I2t overload detection of the power unit does not influence the response "Reduce pulse frequency".

For p0290 = 10, 12, 13:

The possible load duty cycles, calculated based on the previous model (p0290 = 0, 1, 2, 3) for booksize power units cannot be transferred in every case. This is the reason that we recommend that you contact our application support department if you are uncertain about dimensioning the device.

p0290	Power unit overload response / PU overl response		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8021
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	13	0
Description:	<p>Sets the response to a thermal overload condition of the power unit. The following quantities can result in a response to thermal overload:</p> <ul style="list-style-type: none"> - heat sink temperature (r0037[0]). - chip temperature (r0037[1]). - power unit overload I2t (r0036). <p>Possible measures to avoid thermal overload:</p> <ul style="list-style-type: none"> - reduce the output current limit r0289 and r0067 (for closed-loop speed/velocity or torque/force control) or the output frequency (for U/f control indirectly via the output current limit and the intervention of the current limiting controller). - reduce the pulse frequency. <p>A reduction, if parameterized, is always realized after an appropriate alarm is output.</p> <p>For p0290 = 0: When a temperature alarm threshold is exceeded, the output current is reduced, and in turn, the output frequency. If the current reduction is not sufficient to thermally relieve the power unit, when the drive reaches the temperature fault threshold it switches off. This setting is not suitable for drives requiring a constant torque. Application: pumps, fans</p> <p>For p0290 = 1: The power unit operates at the required operating point. When the fault threshold is reached, the drive switches off and an appropriate fault is output. Application: Drive applications where, as a result of the underlying process, no setpoint deviations of individual drives in the group are permitted - or where the pulse frequency must be strictly maintained.</p> <p>For p0290 = 2: The pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. If the pulse frequency reduction is not sufficient to thermally relieve the power unit, then the output current is also reduced. Application: Drives with a low dynamic performance and occasional overload where speed deviations are permissible.</p> <p>For p0290 = 3: Only the pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. Application: Drives with a low dynamic performance and occasional overload where a speed deviation is not permissible.</p> <p>For p0290 = 10: For Booksize devices, in addition to the heat sink and chip temperatures, the difference between the two temperatures is monitored as an additional variable. When a temperature threshold is exceeded, the output current is reduced - and in turn, the output frequency. This overload response is activated as default setting for Booksize devices with a pulse frequency higher than or equal to 16 kHz.</p> <p>For p0290 = 12: In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum. The output current is only reduced if the actual chip temperature increases above a certain temperature threshold. Application: Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile (e.g. centrifuges, flywheel presses, cranes).</p>		

For p0290 = 13:

In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum.

Application:

Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile, and where the output current is not to be reduced (e.g. centrifuges, flywheel presses, cranes).

Value:	0: Reduce output current
	1: No reduction shutdown when overload threshold is reached
	2: Reduce the pulse frequency and output current
	3: Reduce the pulse frequency
	10: Automatic output current reduction
	12: Automatic pulse frequency and output current reduction
	13: Automatic pulse frequency reduction

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only responses can be selected without reducing the pulse frequency (p0290 = 0, 1, 10).

For a thermal power unit overload, an appropriate alarm or fault is output, and r2135.15 or r2135.13 set.

For p0290 = 10:

This response is only applicable for booksize power units.

Refer to: r0036, r0037, r0108, p0230, r2135

Refer to: A05000, A05001, A07805

Notice: If the thermal overload of the power unit is not sufficiently reduced by the actions taken, the drive is always shut down. This means that the power unit is always protected irrespective of the setting of this parameter.

Note: Under overload conditions, the current and torque limit are reduced, and therefore the motor is braked and forbidden speed ranges (e.g. minimum speed p1080 and suppression [skip] speeds p1091 ... p1094) can be passed through. When the motor data identification routine is selected, parameter p0290 cannot be changed.

For p0290 = 0, 2, 12:

This is setting is only practical if the load decreases with decreasing speed (e.g. for applications with variable torque such as for pumps and fans).

For p0290 = 2, 3, 12, 13:

The I2t overload detection of the power unit does not influence the response "Reduce pulse frequency".

For p0290 = 10, 12, 13:

The possible load duty cycles, calculated based on the previous model (p0290 = 0, 1, 2, 3) for booksize power units cannot be transferred in every case. This is the reason that we recommend that you contact our application support department if you are uncertain about dimensioning the device.

r0293

CO: Power unit alarm threshold model temperature / PU A_thr mod_temp

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8021

	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]

Description: Temperature alarm threshold for the difference from the chip and heat sink temperature in the thermal model.

Dependency: Refer to: r0037

Refer to: F30024

Note: The parameter is only relevant for chassis power units.

2 Parameters

2.2 List of parameters

p0294	Power unit alarm with I2t overload / PU I2t alarm thr		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 10.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: 8021 Unit selection: - Expert list: 1 Factory setting 95.0 [%]
Description:	Sets the alarm threshold for the I2t power unit overload. Drive: If this threshold is exceeded, an overload alarm is generated and the system responds as parameterized in p0290. Infeed: When the threshold value is exceeded, only an overload alarm is output.		
Dependency:	Refer to: r0036, p0290 Refer to: A07805		
Note:	The I2t fault threshold is 100 %. If this value is exceeded, fault F30005 is output.		
<hr/>			
p0294	Power unit alarm with I2t overload / PU I2t alarm thr		
B_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 10.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: 8021 Unit selection: - Expert list: 1 Factory setting 95.0 [%]
Description:	Sets the alarm threshold for the I2t power unit overload.		
Dependency:	Refer to: r0036 Refer to: A07805		
Note:	The parameter is only relevant for booksize units!		
<hr/>			
p0295	Fan run-on time / Fan run-on time		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 600 [s]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [s]
Description:	Sets the fan run-on time after the pulses for the power unit have been canceled.		
Note:	- Under certain circumstances, the fan can continue to run for longer than was set (e.g. as a result of the excessively high heat sink temperature). - For values less than 1 s, a 1 s run on time for the fan is active.		
<hr/>			
r0296	DC link voltage undervoltage threshold / Vdc U_under_thr		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Converter Not for motor type: - Min - [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [V]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Threshold to detect a DC link undervoltage. If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.		
Dependency:	Refer to: p0278 Refer to: F30003		

Note: The value depends on the device type and the selected device rated voltage (p0210).
For booksize drive units, the following applies:
The undervoltage threshold can be reduced with p0278.

r0296 DC link voltage undervoltage threshold / Vdc U_under_thr

A_INF, S_INF, R_INF, B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8750, 8760, 8850, 8864, 8950, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.
If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.

Dependency: Refer to: F30003

Note: The value depends on the device type and the selected device rated voltage (p0210).

r0297 DC link voltage overvoltage threshold / Vdc U_over_thr

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8750, 8760, 8850, 8864, 8950, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link overvoltage.
If the DC link voltage exceeds the threshold specified here, the drive unit is tripped due to DC link overvoltage.

Dependency: Refer to: F30002

p0300[0...n] Motor type selection / Mot type sel

SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10100	0

Description: Selects the motor type or start to read in the motor parameters for a motor with DRIVE-CLiQ (p0300 = 10000).
For p0300 < 10000 the following applies:
The first digit of the parameter value always defines the general motor type and corresponds to the third-party motor belonging to a motor list:
1 = rotating induction motor
2 = rotating synchronous motor
3 = linear induction motor (reserved)
4 = linear synchronous motor
The type information must be entered to filter motor-specific parameters and to optimize the operating characteristics and behavior. For example, for synchronous motors, power factor (p0308) is neither used nor displayed (in the BOP/AOP).
The following applies for values < 100:
Motor data must be manually entered.
The following applies for values >= 100:
Motor data are automatically loaded from an internal list.

2.2 List of parameters

Value:	0:	No motor
	1:	Induction motor
	2:	Synchronous motor
	4:	Synchronous motor linear
	102:	1PH2 induction motor
	103:	1PH3 induction motor
	104:	1PH4 induction motor
	107:	1PH7 induction motor
	108:	1PH8 induction motor
	111:	xxxx induction motor OEM
	132:	1FE2 induction motor
	133:	2KJ3 induction motor
	134:	1PM4 induction motor
	136:	1PM6 induction motor
	166:	1PL6 induction motor
	191:	2SP1 induction motor
	200:	1PH8 synchronous motor
	203:	1FT2 synchronous motor
	206:	1FT6 synchronous motor
	207:	1FT7 synchronous motor
	222:	xxxx synchronous motor OEM
	231:	1FG1 synchronous geared motor
	232:	1FE2 synchronous motor
	236:	1FK6 synchronous motor
	237:	1FK7 synchronous motor
	261:	1FE1 synchronous motor
	272:	1FK2 synchronous motor
	276:	1FS6 synchronous motor
	283:	1FW3 synchronous motor
	286:	1FW6 synchronous motor
	291:	2SP1 synchronous motor
	401:	1FN1 synchronous motor linear
	403:	1FN3 synchronous motor linear
	406:	1FN6 synchronous motor linear
	444:	xxxx synchronous motor linear OEM
	10000:	Motor with DRIVE-CLiQ
	10001:	Motor with DRIVE-CLiQ 2nd data set
	10100:	Motor with DRIVE-CLiQ (only read in motor data)

Dependency: When the motor type is changed, the code number in p0301 may be reset to 0.
 If p0300 is changed during quick commissioning (p0010 = 1), then the matching technological application (p0500) is automatically pre-assigned. This does not occur when commissioning the motor (p0010 = 3). If p0300 = 10000 is written for a parameter download, p0500 is pre-assigned with DRIVE-CLiQ corresponding to the motor type.
 Refer to: p0301

Notice: If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx). Write protection is automatically canceled when the results of motor data identification are copied to the motor parameters.

The motor type of a catalog motor corresponds to the upper three digits of the code number or the following assignment (if the particular motor type is listed):

Type/code number ranges

- 102 / 102xx, 122xx
- 103 / 103xx
- 104 / 104xx, 114xx, 124xx
- 107 / 107xx, 117xx, 127xx
- 108 / 108xx, 118xx, 128xx, 138xx, 148xx, 158xx
- 132 / 132xx, 142xx
- 134 / 134xx, 144xx, 154xx
- 136 / 136xx, 146xx, 156xx
- 166 / 166xx, 176xx, 186xx
- 191 / 191xx
- 200 / 200xx, 210xx, 220xx
- 203 / 203xx, 213xx, 233xx, 243xx, 253xx, 273xx

206 / 206xx, 216xx, 226xx
 207 / 207xx, 217xx, 227xx
 231 / 231xx, 241xx, 251xx
 232 / 232xx, 242xx, 252xx
 235 / 235xx, 245xx, 255xx
 237 / 237xx, 247xx, 257xx
 261 / 261xx, 262xx, 263xx
 272 / 272xx, 282xx, 292xx
 283 / 283xx, 293xx
 286 / 286xx, 296xx
 403 / 403xx, 413xx
 406 / 406xx, 416xx, 426xx
 For OEM motors:
 111 / 111xx, 112xx, 113xx
 222 / 222xx, 223xx, 224xx
 444 / 444xx, 445xx, 446xx

Note: With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

A motor type with a value above p0300 >= 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of a third-party motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for a third-party motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

With p0300 = 10100, when the system powers up, for a motor with DRIVE-CLiQ, the motor data are loaded, without subsequently newly calculating the control parameters. This means that control parameters that are already optimized are kept. To load the data, motor code number p0301 must match the code number of the connected encoder r0302.

This is the reason that after exiting commissioning, all parameters must be saved and a warm restart must be initiated (e.g. p0009 = 30, p0976 = 3).</p> <p>Refer to: p0301</p>
Caution:	<p>A permanent-magnet synchronous motor cannot be operated with an SSI encoder without HTL/TTL track.</p>
	<p>A separately excited synchronous motor can only be operated with an SSI encoder if this is used as the second encoder and an HTL/TTL encoder is used as the first encoder.</p>
Notice:	<p>If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx). Write protection is automatically canceled when the results of motor data identification are copied to the motor parameters.</p> <p>The motor type of a catalog motor corresponds to the upper three digits of the code number or the following assignment (if the particular motor type is listed):</p> <p>Type/code number ranges</p> <p>100 / 100xx, 110xx, 120xx, 130xx, 140xx, 150xx, 160xx, 170xx, 180xx, 190xx</p> <p>101 / 101xx</p> <p>102 / 102xx, 122xx</p> <p>104 / 104xx, 114xx, 124xx</p>

105 / 105xx
 107 / 107xx, 117xx, 127xx
 108 / 108xx, 118xx, 128xx, 138xx, 148xx, 158xx
 134 / 134xx, 144xx, 154xx
 136 / 136xx, 146xx, 156xx
 166 / 166xx, 176xx, 186xx
 271 / 271xx, 281xx
 264 / 264xx, 274xx, 284xx, 294xx
 283 / 283xx, 293xx
 600 / 600xx, 610xx, 620xx
 603 / 603xx, 613xx, 623xx
 608 / 608xx, 618xx, 628xx
 For OEM motors:
 111 / 111xx, 112xx, 113xx
 222 / 222xx, 223xx, 224xx

For 1PQ8 motors (p0300 = 18) the fan type p0335 should be set to 5.

Note: With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

A motor type with a value above p0300 >= 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of a third-party motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for a third-party motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

p0301[0...n]	Motor code number selection / Mot code no sel		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: Unsigned16 P-Group: Motor Not for motor type: SESM Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 65535	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to select a motor from a motor parameter list. When changing the code number (with the exception to the value 0), all of the motor parameters are pre-assigned from the internally available parameter lists.		
Dependency:	Code numbers can only be selected for motor types that correspond to the motor type selected in p0300. For 1PH2, 1PH4, 1PH7, 1PM4, 1PM6, 1FT6 motors, code numbers are also possible, whose fourth decimal position is greater by a value of 1 or 2 than the matching motor type in p0300. For 1FE1 motors, the third decimal position can be higher by a value of 1. Refer to: p0300		
Note:	The motor code number can only be changed if the matching catalog motor was first selected in p0300. For a motor with DRIVE-CLiQ, p0301 cannot be changed. In this case, p0301 is automatically written to the code number of the motor parameter read in (r0302) if p0300 is set to 10000. When selecting a catalog motor (p0300 >= 100), drive commissioning can only be exited if a code number is selected. If, for direct drives, the motor code number (p0301) is changed, this does not automatically result in the angular commutation offset being determined (p0431).		

2 Parameters

2.2 List of parameters

p0301[0...n]	Motor code number selection / Mot code no sel		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1, 3)	Calculated: -	Access level: 1

Description:	Sets the rated motor voltage (rating plate).																																	
Dependency:	Refer to: p0349																																	
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.																																	
Note:	When the parameter value is entered the connection type of the motor (star-delta) must be taken into account. When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).																																	

2 Parameters

2.2 List of parameters

p0305[0...n]	Rated motor current / Mot I_{rated}		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the rated motor current (rating plate).		
Dependency:	Refer to: p0349		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	When the parameter value is entered the connection type of the motor (star-delta) must be taken into account.		
p0305[0...n]	Rated motor current / Mot I_{rated}		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6301
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the rated motor current (rating plate).		
Dependency:	Refer to: p0349		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3). If the rated motor current exceeds twice the maximum drive converter current (r0209), then the maximum current is reduced due to the current harmonics that increase overproportionally (r0067).		
Note:	When the parameter value is entered the connection type of the motor (star-delta) must be taken into account. When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).		
p0306[0...n]	Number of motors connected in parallel / Mot parallel qty		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: Unsigned8	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	10	1
Description:	Sets the number (count) of motors that can be operated in parallel using one motor data set. Depending on the motor number entered, internally an equivalent motor is calculated. The following should be carefully observed for motors connected in series: The following rating plate data should only be entered for one motor: - resistances and inductances: p0350, p0352, p0353, p0354, p0356, p0357, p0358, p0360 - currents: p0305, p0318, p0320, p0323, p0325, p0329, p0338, p0391, p0392 - torques/forces: p0312, p0319 - power ratings: p0307 - masses/moments of inertia: p0341, p0344 All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0370, r0373, r0374).		
Recommendation:	For motors connected in parallel, external thermal protection should be provided for each individual motor.		
Dependency:	Refer to: r0331, r0370, r0373, r0374, r0376, r0377, r0382		

Caution:

The motors to be connected up in parallel must be of the same type and the same size (power rating) (identical Article No. [MLFB]).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.

The number of motors set must correspond to the number of motors that are actually connected in parallel.

After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

For synchronous motors connected in parallel with p1300 >= 20, the following applies:

- the individual motors must be mechanically coupled with one another and the EMF must be aligned to one another.

For induction motors that are connected in parallel, but which are not mechanically coupled with one another, then the following applies:

- an individual motor must not be loaded beyond its stall point.

Notice:

If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

p0306[0...n]**Number of motors connected in parallel / Mot parallel qty**

Expert list: 1

Min

Max

Factory setting

1

50

1

Description:

Number of motors that can be operated in parallel using one motor data set.

Depending on the motor number entered, internally an equivalent motor is calculated.

The following should be carefully observed for motors connected in series:

The following rating plate data should only be entered for one motor:

- resistances and inductances: p0350 ... p0361

- currents: p0305, p0320, p0323, p0325, p0329, p0389, p0390, p0391, p0392

- power ratings: p0307

- masses/moments of inertia: p0341, p0344

All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0333).

Recommendation:

For motors connected in parallel, external thermal protection should be provided for each individual motor.

Dependency:

Refer to: r0331

Caution:

The motors to be connected up in parallel must be of the same type and the same size (power rating) (identical Article No. [MLFB]).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.

The number of motors set must correspond to the number of motors that are actually connected in parallel.

After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

For synchronous motors connected in parallel with p1300 >= 20, the following applies:

- the individual motors must be mechanically coupled with one another and the EMF must be aligned to one another.

For induction motors that are connected in parallel, but which are not mechanically coupled with one another, then the following applies:

- an individual motor must not be loaded beyond its stall point.

Notice:

If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note:

Only operation with U/f characteristic makes sense if more than 10 identical motors are connected in parallel.

Separately excited synchronous motors must not be connected in parallel.

Synchronous and reluctance motors that are not coupled with one another align themselves when the pulses are switched in. If the motors have different load levels, then equalization currents flow between the motors.

2 Parameters

2.2 List of parameters

p0307[0...n]	Rated motor power / Mot P_{rated}		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.00 [kW]	Calculated: - Dyn. index: MDS, p0130 Unit group: 14_6 Scaling: - Max 100000.00 [kW]	Access level: 1 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.00 [kW]
Description:	Sets the rated motor power (rating plate).		
Dependency:	IECdrives (p0100 = 0): Units kW NEMA drives (p0100 = 1): Units hp Refer to: p0100		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
<hr/>			
p0307[0...n]	Rated motor power / Mot P_{rated}		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min -100000.00 [kW]	Calculated: - Dyn. index: MDS, p0130 Unit group: 14_6 Scaling: - Max 100000.00 [kW]	Access level: 1 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.00 [kW]
Description:	Sets the rated motor power (rating plate).		
Dependency:	IECdrives (p0100 = 0): Units kW NEMA drives (p0100 = 1): Units hp Refer to: p0100		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For generators, a negative rated power should be entered. When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).		
<hr/>			
p0308[0...n]	Rated motor power factor / Mot cos phi rated		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL Min 0.000	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 1.000	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the rated motor power factor (cos phi, rating plate). For a parameter value of 0.000, the power factor is internally calculated and displayed in r0332.		
Dependency:	This parameter is only available for IEC motors (p0100 = 0). Refer to: p0100, p0309, r0332		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

p0308[0...n]	Rated motor power factor / Mot cos phi rated		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL Min -0.990	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 1.000	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the rated motor power factor (cos phi, rating plate). For a parameter value of 0.000, the power factor is internally calculated and displayed in r0332.		
Dependency:	This parameter is only available for IEC motors (p0100 = 0). Refer to: p0100, p0309, r0332		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. For separately excited synchronous motors (p0300 = 5) negative values for the power factor are interpreted as overexcitation. For all other motor types, the sign is ignored.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx). When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).		
p0309[0...n]	Rated motor efficiency / Mot eta_rated		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL Min 0.0 [%]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 99.9 [%]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [%]
Description:	Sets the rated motor efficiency (rating plate). For a parameter value of 0.0, the power factor is internally calculated and displayed in r0332.		
Dependency:	This parameter is only visible for NEMA motors (p0100 = 1, 2). Refer to: p0100, p0308, r0332		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
p0310[0...n]	Cylinder piston diameter / Cyl piston diam		
HLA	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [mm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 2500.0 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [mm]
Description:	Sets the piston diameter of the hydraulic cylinder.		

2 Parameters

2.2 List of parameters

p0310[0...n]	Rated motor frequency / Mot f_{rated}		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	Sets the rated motor frequency (rating plate).		
Dependency:	The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0. If p0310 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. Refer to: p0311, r0313, p0314		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0310 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	For synchronous motors, the parameter is not required and must therefore be pre-assigned zero. For p0310 = 0, it is not possible to calculate the pole pair; instead, it must be entered in p0314.		
p0310[0...n]	Rated motor frequency / Mot f_{rated}		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6301
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Hz]	3000.000 [Hz]	0.000 [Hz]
Description:	Sets the rated motor frequency (rating plate).		
Dependency:	The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0. The rated frequency is restricted to values between 1.00 Hz and 650.00 Hz. Refer to: p0311, r0313, p0314		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0310 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).		
p0311[0...n]	Cylinder piston rod diameter A side / Cyl PistRodDiam A		
HLA	Can be changed: C2(1, 3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mm]	2400.0 [mm]	0.0 [mm]
Description:	Sets the piston rod diameter on the A side.		

p0311[0...n]	Rated motor speed / Mot n Rated		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the rated motor speed (rating plate).		
Dependency:	If p0311 is changed and for p0314 = 0, the pole pair (r0313) is re-calculated automatically. Refer to: p0310, r0313, p0314		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0311 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		

p0311[0...n]	Rated motor velocity / Mot v Rated		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [m/min]	6000.0 [m/min]	0.0 [m/min]
Description:	Sets the rated motor velocity (rating plate).		
Dependency:	The pole pair width is set in p0315. Refer to: p0310, r0313, p0314		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0311 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		

p0311[0...n]	Rated motor speed / Mot n Rated		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the rated motor speed (rating plate). For VECTOR the following applies (p0107): For p0311 = 0, the rated motor slip of induction motors is internally calculated and displayed in r0330. It is especially important to correctly enter the rated motor speed for vector control and slip compensation for U/f control.		
Dependency:	If p0311 is changed and for p0314 = 0, the pole pair (r0313) is re-calculated automatically. Refer to: p0310, r0313, p0314		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0311 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [N]	1000000.00 [N]	0.00 [N]
Description:	Sets the rated motor force (rating plate).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
p0313[0...n]	Cylinder piston stroke / Cyl pist stroke		
HLA	Can be changed: C2(1, 3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mm]	6000.0 [mm]	0.0 [mm]
Description:	Enter the piston stroke of the hydraulic cylinder.		
r0313[0...n]	CO: Motor pole pair number, actual (or calculated) / MotPolePair no act		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: 5300
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of motor pole pairs. The value is used for internal calculations. r0313 = 1: 2-pole motor r0313 = 2: 4-pole motor, etc.		

Dependency: For p0314 > 0, the entered value is displayed in r0313.
For p0314 = 0, the pole pair number (r0313) is automatically calculated from the rated frequency (p0310) and the rated speed (p0311).
Refer to: p0310, p0311, p0314

Note: For the automatic calculation, the pole pair number is set to the value of 2 if the rated speed or the rated frequency is zero.

r0313[0...n]	CO: Motor pole pair number, actual (or calculated) / MotPolePair no act		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: 5300
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the number of motor pole pairs. The value is used for internal calculations.
r0313 = 1: 2-pole motor
r0313 = 2: 4-pole motor, etc.

Dependency: For p0314 > 0, the entered value is displayed in r0313.
For p0314 = 0, the pole pair number (r0313) is automatically calculated from the rated power (p0307), rated frequency (p0310) and rated speed (p0311).
Refer to: p0307, p0310, p0311, p0314

Note: For the automatic calculation, the pole pair number is set to the value of 2 if the rated speed or the rated frequency is zero.

p0314[0...n]	Cylinder dead volume A side / Cyl_dead vol A		
HLA	Can be changed: C2(1), U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [cm ³]	200000.0 [cm ³]	0.0 [cm ³]

Description: Sets the cylinder dead volume on the A side.

p0314[0...n]	Motor pole pair number / Mot PolePair no		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4000	0

Description: Sets the motor pole pair number.
p0314 = 1: 2-pole motor
p0314 = 2: 4-pole motor, etc.

Dependency: For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.

Notice: If p0314 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).
For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.

2 Parameters

2.2 List of parameters

p0314[0...n]	Motor pole pair number / Mot PolePair no		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 255	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the motor pole pair number. p0314 = 1: 2-pole motor p0314 = 2: 4-pole motor, etc.		
Dependency:	For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.		
Notice:	If p0314 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3). For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.		
p0315[0...n]	Cylinder dead volume B side / Cyl_dead vol B		
HLA	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [cm ³]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 200000.0 [cm ³]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [cm ³]
Description:	Sets the cylinder dead volume on the B side.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
p0315[0...n]	Motor pole pair width / Mot PolePair width		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 1.00 [mm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 1000.00 [mm]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 30.00 [mm]
Description:	Sets the pole pair width of the linear motor.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
p0316[0...n]	Motor torque constant / Mot kT		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL, RESM Min 0.000 [Nm/A]	Calculated: - Dyn. index: MDS, p0130 Unit group: 28_1 Scaling: - Max 4000.000 [Nm/A]	Access level: 1 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.000 [Nm/A]
Description:	Sets the torque constant of the synchronous motor. p0316 = 0: The torque constant is calculated from the motor data. p0316 > 0: The selected value is used as torque constant.		

Dependency:	Refer to: r0334, r1937
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
Note:	This parameter is not used for induction motors (p0300 = 1xx).

p0316[0...n]	Motor force constant / Mot kT		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 29_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [N/Arms]	150000.000 [N/Arms]	0.000 [N/Arms]

Description: Sets the force constant of the synchronous motor.
p0316 = 0:
The force constant is calculated from the motor data.
p0316 > 0:
The selected value is used as force constant.

Dependency:	Refer to: r0334, r1937
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

p0316[0...n]	Motor torque constant / Mot kT		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 28_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Nm/A]	400.000 [Nm/A]	0.000 [Nm/A]

Description: Sets the torque constant of the synchronous motor.
p0316 = 0:
The torque constant is calculated from the motor data.
p0316 > 0:
The selected value is used as torque constant.

Dependency:	Refer to: r0334
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
Note:	This parameter is not used for induction motors (p0300 = 1xx).

p0317[0...n]	Motor voltage constant / Mot kE		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	240000.0 [Vrms]	0.0 [Vrms]

Description: Sets the voltage constant for synchronous motors.
Units for rotating synchronous motors: Vrms/(1000 rpm), phase-to-phase

Dependency:	Refer to: r1938
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
Note:	This parameter is not used for induction motors (p0300 = 1xx).

2 Parameters

2.2 List of parameters

p0317[0...n]	Motor voltage constant / Mot kE		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms s/m]	50000.0 [Vrms s/m]	0.0 [Vrms s/m]
Description:	Sets the voltage constant for synchronous motors. Units for linear synchronous motors: Vrms s/m, phase		
Dependency:	Refer to: r1938		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
p0318[0...n]	Motor stall current / Mot I_standstill		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the stall current for synchronous motors (p0300 = 2xx).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is used for the I2t monitoring of the motor (refer to p0611). This parameter is not used for induction motors (p0300 = 1xx).		
p0318[0...n]	Motor stall current / Mot I_standstill		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the stall current for synchronous motors (p0300 = 2xx), as well as for synchronous reluctance motors (p0300 = 6xx).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is used for the I2t monitoring of the motor (refer to p0611). This parameter is not used for induction motors (p0300 = 1xx). For synchronous reluctance motors, the current corresponds to a winding temperature increase of 105 K at a speed of 20 % of the rated speed.		

p0319[0...n]	Motor stall torque / Mot M_standstill		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 7_4	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	100000.00 [Nm]	0.00 [Nm]
Description:	Sets the standstill (stall) torque for rotating synchronous motors (p0300 = 2xx).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	This parameter is not used for induction motors (p0300 = 1xx). This parameter value is not evaluated from a control-related perspective.		
p0319[0...n]	Motor stall force / Mot F_standstill		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 8_4	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [N]	100000.00 [N]	0.00 [N]
Description:	Sets the standstill (stall) force for linear synchronous motors (p0300 = 4xx).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	This parameter value is not evaluated from a control-related perspective.		
p0320[0...n]	Motor rated magnetizing current/short-circuit current / Mot I_mag_rated		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5722
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Arms]	5000.000 [Arms]	0.000 [Arms]
Description:	Induction motors: Sets the rated motor magnetizing current. For p0320 = 0.000 the magnetizing current is internally calculated and displayed in r0331. Synchronous motors: Sets the rated motor short-circuit current.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The magnetization current p0320 for induction motors (not for catalog motors) is reset when quick commissioning is exited with p3900 > 0. VECTOR: If, for induction motors, the magnetizing current p0320 is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance p0360 is changed so that the EMF r0337 remains constant.		

2 Parameters

2.2 List of parameters

p0322[0...n]	Maximum motor speed / Mot n_max		
SERVO, SERVO_AC, SERVO_I_AC (Spin_diag), SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [rpm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 210000.0 [rpm]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [rpm]
Description:	Sets the maximum motor speed.		
Dependency:	Refer to: p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no significance for a value of p0322 = 0.		

p0322[0...n]	Motor maximum velocity / Mot v_max		
SERVO (Lin, Spin_diag), SERVO_AC (Lin, Spin_diag), SERVO_I_AC (Lin, Spin_diag)	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [m/min]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 2000.0 [m/min]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [m/min]
Description:	Sets the maximum motor velocity.		
Dependency:	Refer to: p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no significance for a value of p0322 = 0.		

p0322[0...n]	Maximum motor speed / Mot n_max		
SERVO (Spin_diag), SERVO_AC (Spin_diag)	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [rpm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 260000.0 [rpm]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [rpm]
Description:	Sets the maximum motor speed.		
Dependency:	Refer to: p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no significance for a value of p0322 = 0.		

p0322[0...n]	Maximum motor speed / Mot n_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [rpm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 210000.0 [rpm]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [rpm]
Description:	Sets the maximum motor speed.		
Dependency:	Refer to: p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no significance for a value of p0322 = 0.		
p0323[0...n]	Maximum motor current / Mot I_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, RESM Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 20000.00 [Arms]	Access level: 1 Func. diagram: 5722 Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]
Description:	Sets the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no effect for induction motors. For synchronous motors, a value must always be entered for the maximum motor current. p0323 is a motor data. The user-selectable current limit is entered into p0640.		
p0323[0...n]	Maximum motor current / Mot I_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, RESM Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 20000.00 [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]
Description:	Sets the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no effect for induction motors. The parameter has not effect for synchronous motors if a value of 0.0 is entered. The user-selectable current limit is entered into p0640.		

2 Parameters

2.2 List of parameters

p0324[0...n]	Winding maximum speed / Winding n_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the maximum speed for the winding. The following applies when calculating the maximum speed (p1082): - for p0324 = 0 or p0532 = 0, p0322 is used. - for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0322, p0532, p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0324 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).		

p0324[0...n]	Winding maximum velocity / Winding v_max		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [m/min]	1300.0 [m/min]	0.0 [m/min]
Description:	Sets the maximum velocity for the winding. The following applies when calculating the maximum velocity (p1082): - for p0324 = 0 or p0532 = 0, p0322 is used. - for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0322, p0532, p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0324 is changed during quick commissioning (p0010 = 1), then the maximum velocity p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).		

p0324[0...n]	Winding maximum speed / Winding n_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the maximum speed for the winding. The following applies when calculating the maximum speed (p1082): - for p0324 = 0 or p0532 = 0, p0322 is used. - for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0322, p0532, p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0324 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).		

p0325[0...n]	Motor pole position identification current 1st phase / Mot PolID I 1st Ph		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 0.000 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.000 [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [Arms]
Description:	Sets the current for the 1st phase of the two-stage technique for pole position identification routine. The current of the 2nd phase is set in p0329. The two-stage technique is selected with p1980 = 4.		
Dependency:	Refer to: p0329, p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992 Refer to: F07995		
Notice:	When the motor code (p0301) is changed, it is possible that p0325 is not pre-assigned. p0325 can be pre-assigned using p0340 = 3.		
Note:	The value is automatically pre-assigned for the following events: - For p0325 = 0 and automatic calculation of the closed-loop control parameters (p0340 = 1, 2, 3). - for quick commissioning (p3900 = 1, 2, 3).		
p0326[0...n]	Motor stall torque correction factor / Mot M_stall_corr		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL, RESM Min 5 [%]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 300 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 60 [%]
Description:	Sets the correction factor for the stall torque/force at a 600 V DC link voltage.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300). The reference value for this parameter is inversely proportional to the leakage inductance of the motor (p0353, p0354, p0356). The following applies for firmware version 2.6 SP2 and higher: If leakage inductances are changed for motor data identification, the value in p0326 is automatically adapted to maintain the stall torque.		
p0326[0...n]	Motor stall force correction factor / Mot F_stall_corr		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL, RESM Min 5 [%]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 300 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 60 [%]
Description:	Sets the correction factor for the stall force at a 600 V DC link voltage.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300). The reference value for this parameter is inversely proportional to the leakage inductance of the motor (p0353, p0354, p0356). The following applies for firmware version 2.6 SP2 and higher: If leakage inductances are changed for motor data identification, the value in p0326 is automatically adapted to maintain the stall torque.		

2 Parameters

2.2 List of parameters

p0327[0...n]	Optimum motor load angle / Mot phi_load opt		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5722, 6721
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°]	135.0 [°]	90.0 [°]
Description:	Sets the optimum load angle for synchronous motors with reluctance torque (e.g. 1FE motors). SERVO: The load angle is measured at 1.5 x rated motor current. VECTOR: The load angle is measured at the rated motor current.		
Dependency:	Refer to: r1947		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	This parameter has no significance for induction motors. For synchronous motors without reluctance torque, a angle of 90 degrees must be set. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0328[0...n]	Motor reluctance torque constant / Mot kT_reluctance		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [mH]	1000.00 [mH]	0.00 [mH]
Description:	Sets the reluctance torque constant for synchronous motors with reluctance torque (e.g. 1FE ... motors). This parameter has no significance for induction motors.		
Dependency:	Refer to: r1939		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For synchronous motors without reluctance torque, the value 0 must be set.		

p0328[0...n]	Motor reluctance force constant / Mot kT_reluctance		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [mH]	1000.00 [mH]	0.00 [mH]
Description:	Sets the reluctance force constant for synchronous motors with reluctance force (e.g. 1FE ... motors). This parameter has no significance for induction motors.		
Dependency:	Refer to: r1939		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For synchronous motors without reluctance torque, the value 0 must be set.		

p0329[0...n]	Motor pole position identification current / Mot PolID current		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.00 [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]
Description:	Sets the current for the pole position identification routine (p1980 = 1). For a two-stage technique (p1980 = 4), the current is set for the 2nd phase. The current for the 1st phase is set in p0325.		
Dependency:	The following applies for vector drives: If a maximum current (p0323) was not parameterized, then p0329 is limited to the rated motor current. Refer to: p0325, p1980, p1981, p1982, p1983, r1984, r1985, r1986, r1987, p1990, r1992 Refer to: F07995		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
r0330[0...n]	Rated motor slip / Mot slip_rated		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, SESM, REL, RESM Min - [Hz]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the rated motor slip.		
Dependency:	The rated slip is calculated from the rated frequency, rated speed and number of pole pairs. Refer to: p0310, p0311, r0313		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
r0331[0...n]	Actual motor magnetizing current/short-circuit current / Mot I_mag_rtd act		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min - [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Arms]	Access level: 3 Func. diagram: 5722, 6722, 6724 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Induction motor: Displays the rated magnetizing current from p0320. For p0320 = 0, the internally calculated magnetizing current is displayed. Synchronous motor: Displays the rated short-circuit current from p0320.		
Dependency:	If p0320 was not entered, then the parameter is calculated from the rating plate parameters.		
Note:	In the case of multi-motor operation r0331 is increased by the factor p0306 compared to p0320.		

2 Parameters

2.2 List of parameters

r0332[0...n]	Rated motor power factor / Mot cos phi rated		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL Min -	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the rated power factor for induction motors. For IEC motors, the following applies (p0100 = 0): For p0308 = 0, the internally calculated power factor is displayed. For p0308 > 0, this value is displayed. For NEMA motors, the following applies (p0100 = 1, 2): For p0309 = 0, the internally calculated power factor is displayed. For p0309 > 0, this value is converted into the power factor and displayed.		
Dependency:	If p0308 is not entered, the parameter is calculated from the rating plate parameters.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
r0333[0...n]	Rated motor torque / Mot M_{rated}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min - [Nm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 7_4 Scaling: - Max - [Nm]	Access level: 3 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting - [Nm]
Description:	Displays the rated motor torque.		
Dependency:	IEC drives (p0100 = 0): unit Nm NEMA drives (p0100 = 1): unit lbf ft		
Note:	For induction and reluctance motors, r0333 is calculated from p0307 and p0311. For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. If p0316 = 0, then r0333 = p0312 is displayed. In the case of multi-motor operation r0333 is increased by the factor p0306 compared to the rated torque of an individual motor.		
r0333[0...n]	Rated motor force / Mot F_{rated}		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min - [N]	Calculated: - Dyn. index: MDS, p0130 Unit group: 8_4 Scaling: - Max - [N]	Access level: 3 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting - [N]
Description:	Displays the rated motor force.		
Dependency:	IECdrives (p0100 = 0): Units N NEMA drives (p0100 = 1): unit lbf		
Note:	For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. For p0316 = 0, r0333 = p0312 is displayed.		

r0334[0...n]	Actual motor-torque constant / Mot kT act		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 28_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nm/A]	- [Nm/A]	- [Nm/A]
Description:	Displays the torque constant of the synchronous motor used.		
Dependency:	IEC drives (p0100 = 0): unit Nm / A NEMA drives (p0100 = 1): unit lbf ft / A Refer to: p0316		
Note:	This parameter is not used for induction motors (p0300 = 1xx). For synchronous motors, parameter r0334 = p0316 is displayed. For p0316 = 0, r0334 is calculated from p0305 and p0312.		

r0334[0...n]	Actual motor force constant / Mot kT act		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 29_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [N/Arms]	- [N/Arms]	- [N/Arms]
Description:	Displays the force constant of the synchronous motor used.		
Dependency:	IEC drives (p0100 = 0): unit N / A NEMA drives (p0100 = 1): unit lbf / A Refer to: p0316		
Note:	For synchronous motors, parameter r0334 = p0316 is displayed. For p0316 = 0, r0334 is calculated from p0305 and p0312.		

r0334[0...n]	Actual motor-torque constant / Mot kT act		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 28_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nm/A]	- [Nm/A]	- [Nm/A]
Description:	Displays the torque constant of the synchronous motor used.		
Dependency:	IEC drives (p0100 = 0): unit Nm / A NEMA drives (p0100 = 1): unit lbf ft / A Refer to: p0316		
Note:	This parameter is not used for induction motors (p0300 = 1xx). For synchronous motors, parameter r0334 = p0316 is displayed. For p0316 = 0, r0334 is calculated from p0305 and p0312 or p0305, p0307, and p0311.		

p0335[0...n]	Motor cooling type / Mot cool type		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1), T Data type: Integer16 P-Group: Motor Not for motor type: PMSM, SESM, REL Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 128	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the motor cooling system used.		
Value:	0: Natural ventilation 1: Forced cooling 2: Liquid cooling 4: Natural ventilation and internal fan 5: Forced cooling and internal fan 6: Liquid cooling and internal fan 128: No fan		
Dependency:	For 1LA5 and 1LA7 motors (p0300), the parameter is pre-set as a function of p0307 and p0311.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter influences the thermal 3-mass motor model. 1LA1 and 1LA8 motors are characterized by the fact that they have an internal rotor fan. This "internal cooling" lies within the motor frame and is not visible. Air is not directly exchanged with the motor ambient air. For 1PQ8 motors, p0335 should be set to 5 as these motors are force-ventilated motors. The setting p0335 = 128 applies for 1LA7 motors, frame size 56 (these are operated without a fan).		

r0336[0...n]	Actual rated motor frequency / Mot f_{rated act}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the rated frequency of the motor. For p0310 > 0, this value is displayed.		
Dependency:	Refer to: p0311, p0314		
Note:	For p0310 = 0 or for synchronous motors, the rated motor frequency r0336 is calculated from the rated speed and the pole pair number. For p0310 > 0, this value is displayed (not for synchronous motors).		

r0337[0...n]	Rated motor EMF / Mot EMF_{rated}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: REL, RESM Min - [Vrms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Vrms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the rated EMF of the motor.		
Note:	EMF: Electromotive force		

r0337[0...n]	Rated motor EMF / Mot EMF_{rated}				
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: REL, RESM Min - [Vrms s/m]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Vrms s/m]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms s/m]		
Description:	Displays the rated EMF of the motor.				
Note:	EMF: Electromotive force				
p0338[0...n]	Motor limit current / Mot I_{limit}				
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL, RESM Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.00 [Arms]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]		
Description:	Sets the motor limit current for synchronous motors (for a 600 V DC link voltage). Using this current, the maximum torque is achieved at the rated speed (voltage limit characteristic).				
Dependency:	If p0338 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).				
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.				
r0339[0...n]	Rated motor voltage / Mot U_{rated}				
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: REL Min - [Vrms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Vrms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]		
Description:	Displays the rated motor voltage.				
Note:	For induction motors (p0300 = 1xx) the parameter is set to p0304. For synchronous motors, parameter r0339 = p0304 is displayed. If p0304 = 0, then r0339 is calculated from p0305 and p0316.				
p0340[0...n]	Automatic parameter calculation / Auto par calc				
HLA	Can be changed: C2(1), T Data type: Unsigned16 P-Group: Motor Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 bin		
Description:	Setting to automatically calculate the corresponding values from the valve, cylinder and system data.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Pre-assign reference values	Yes	No	-
	01	Pre-assign loop gain and natural frequencies	Yes	No	-
	02	Pre-assign characteristic values	Yes	No	-
	03	Pre-assign controller values	Yes	No	-
	04	Pre-assign limit values	Yes	No	-

2 Parameters

2.2 List of parameters

Notice: The following parameters are influenced using p0340:
 p0340.0 = 1:
 - p2000 ... p2003
 p0340.1 = 1:
 - p0350 ... p0354, p1475, p1570 ... p1572, p1700, p1830, p1831, p3998
 p0340.2 = 1:
 - p1833, p1834, p1836, p1837, p1839 ... p1848
 p0340.3 = 1:
 - p1400.5, p1433, p1434, p1460 ... p1467, p1715 ... p1719, p1820
 p0340.4 = 1:
 - p1082, p1083, p1086, p1520, p1521, p1532, p1850, p1851, p2162, p2177

Note: When quick commissioning is exited using p3900 = 3, p0340 is automatically called = 1 1111 bin.
 At the end of the calculations, p0340 is automatically set to 0.

p0340[0...n]	Automatic calculation motor/control parameters / Calc auto par		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	5	0

Description: Setting to automatically calculate motor parameters and U/f open-loop and closed-loop control parameters from the rating plate data.

Value:
 0: No calculation
 1: Complete calculation
 2: Calculation of equivalent circuit diagram parameters
 3: Calculation of closed-loop control parameters
 4: Calculation of controller parameters
 5: Calculation of technological limits and threshold values

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

The following parameters are influenced using p0340:
 The parameters designated with (*) are not overwritten for catalog motors (p0300 > 100).

SERVO:
 p0340 = 1:
 -> All of the parameters influenced for p0340 = 2, 3, 4, 5

p0340 = 3:

--> All of the parameters influenced for p0340 = 4, 5

--> p0346, p0347, p0492, p0622, p1262, p1320 ... p1327, p1582, p1584, p1612, p1616, p1744, p1748, p1749, p1755, p1756, p2178

p0340 = 4:

--> p1290, p1292, p1293, p1299, p1338, p1339, p1340, p1341, p1345, p1346, p1460, p1461, p1462, p1463, p1464, p1465, p1470, p1472, p1590, p1592, p1600, p1628, p1629, p1630, p1643, p1703, p1715, p1717, p1740, p1756, p1757, p1760, p1761, p1764, p1767, p1780, p1781, p1783, p1785, p1786, p1795, p7036, p7037, p7038

p0340 = 5:

--> p0260 ... p0264, p1037, p1038, p1520, p1521, p1530, p1531, p1574, p1750, p1802, p1803, p2140, p2141, p2142, p2148, p2150, p2155, p2161 ... p2164, p2175, p2177, p2194, p3207, p3208, p3236, p3237, p3806, p3815, p3820 ... p3829

Note:

The calculation is not performed, if the power unit is deactivated.

p0340 = 1 contains the calculations of p0340 = 2, 3, 4, 5 without overwriting the motor parameters from the Siemens motor lists (p0301 > 0).

p0340 = 2 calculates the motor parameters (p0350 ... p0360), but only if it does not involve a Siemens catalog motor (p0301 = 0).

p0340 = 3 contains the calculations of p0340 = 4, 5.

p0340 = 4 only calculates the controller parameters.

p0340 = 5 only calculates the controller limits.

When quick commissioning is exited using p3900 > 0, p0340 is automatically set to 1.

At the end of the calculations, p0340 is automatically set to 0.

If the STARTER commissioning tool writes a 3 into p0340 when "Downloading to target device", then this corresponds to a "Complete calculation of the motor/control parameters without equivalent circuit diagram data". The same calculations are carried out as for p0340 = 1, however, without the equivalent circuit diagram parameters of the motor (p0340 = 2), the motor moment of inertia (p0341) and the motor mass (p0344).

For third-party linear synchronous motors (p0300 = 4) equivalent circuit diagram data are not calculated (p0340 = 2).

0

Description:

Setting to reset and automatically calculate filter and control (closed-loop) parameters.

Value:

0: No calculation

1: Complete re-calculation of control parameters with COMM data

2: Reset control parameters

2 Parameters

2.2 List of parameters

- Notice:** After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.
The following parameters are influenced using p0340:
p0340 = 1:
--> All of the parameters influenced for p0340 = 2
--> p3421 = p0223, p0225
--> p3422 = p0227
--> p3424 = p0225
--> p3415, p3425, p3555, p3614, p3620, p3622 are reset to the factory settings dependent on the particular unit.
p0340 = 2:
--> p3560, p3562, p3564, p3603, p3615 and p3617 are reset to the factory setting.
For S_INF, these control parameters are not available.
- Note:** When quick commissioning is exited using p3900 > 0, p0340 is automatically set to 1.
At the end of the calculations, p0340 is automatically set to 0.

p0341[0...n]	Cylinder weight / Cyl weight		
HLA	Can be changed: C2(1), U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 27_1	Unit selection: p0100
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000000 [kg]	100000.000000 [kg]	0.000000 [kg]
Description:	Sets the inertia mass.		

p0341[0...n]	Motor moment of inertia / Mot m_inert		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5042, 5210, 6020, 6030, 6031
	P-Group: Motor	Unit group: 25_1	Unit selection: p0100
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kgm ²]	- [kgm ²]	- [kgm ²]
Description:	Sets the motor moment of inertia (without load).		
Dependency:	IEC drives (p0100 = 0): unit kg m ² NEMA drives (p0100 = 1): unit lb ft ² The parameter value is included, together with p0342, in the rated starting time of the motor. Refer to: p0342, r0345		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	SERVO: p0341 * p0342 + p1498 influence the speed/torque precontrol in encoderless operation. VECTOR: The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.		

p0341[0...n]	Motor weight / Mot weight		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: REL Min - [kg]	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: 27_1 Scaling: - Max - [kg]	Access level: 3 Func. diagram: 5042, 5210 Unit selection: p0100 Expert list: 1 Factory setting - [kg]
Description:	Sets the high moments of inertia (without load).		
Dependency:	IEC drives (p0100 = 0): unit kg m ² NEMA drives (p0100 = 1): unit lb ft ² The parameter value is included, together with p0342, in the rated starting time of the motor. Refer to: p0342, r0345		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	p0341 * p0342 + p1498 influence the speed/torque precontrol in encoderless operation.		
p0341[0...n]	Motor moment of inertia / Mot m_inert		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: REL Min 0.000000 [kgm ²]	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: 25_1 Scaling: - Max 100000.000000 [kgm ²]	Access level: 3 Func. diagram: 5042, 5210, 6020, 6030, 6031 Unit selection: p0100 Expert list: 1 Factory setting 0.000000 [kgm ²]
Description:	Sets the motor moment of inertia (without load).		
Dependency:	IEC drives (p0100 = 0): unit kg m ² NEMA drives (p0100 = 1): unit lb ft ² The parameter value is included, together with p0342, in the rated starting time of the motor. Refer to: p0342, r0345		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	SERVO: p0341 * p0342 + p1498 influence the speed/torque precontrol in encoderless operation. VECTOR: The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.		
p0342[0...n]	Ratio between the total and motor moment of inertia / Mot m_inert ratio		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: REL Min 1.000	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.000	Access level: 3 Func. diagram: 5042, 5210 Unit selection: - Expert list: 1 Factory setting 1.000
Description:	Sets the ratio between the total moment of inertia (load + motor) and the intrinsic motor moment of inertia (no load).		
Dependency:	Refer to: p0341, r0345, p1498		
Note:	(p0341 * p0342) + p1498 influence the speed/torque precontrol (active in encoderless operation or for p1402.4 = 1).		

2 Parameters

2.2 List of parameters

p0342[0...n]	Ratio between the total and motor moment of inertia / Mot m_inert ratio		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5042, 5210
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000	10000.000	1.000
Description:	Sets the ratio between the total mass (load + motor) and the intrinsic motor mass (no load).		
Dependency:	Refer to: p0341, r0345, p1498		
Note:	(p0341 * p0342) + p1498 influence the velocity/force precontrol (active in encoderless operation or for p1402.4 = 1).		

p0342[0...n]	Ratio between the total and motor moment of inertia / Mot m_inert ratio		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6020, 6030, 6031
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000	10000.000	1.000
Description:	Sets the ratio between the total moment of inertia (load + motor) and the intrinsic motor moment of inertia (no load).		
Dependency:	This means that together with p0341, the rated starting time of the motor is calculated.		
	Refer to: p0341, r0345, p1498		
Note:	The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.		

p0343[0...n]	Valve/cylinder configuration / Valve/cyl config				
HLA	Can be changed: C2(1, 3)	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -		
	P-Group: Motor	Unit group: -	Unit selection: -		
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for valve and cylinder.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Valve/cylinder connection configuration	Valve A at cyl B	Valve A at cyl A	-
	01	Cylinder mounting type	Piston rod	Cylinder	-
Note:	For bit 00: The firmware does not evaluate this bit.				
	For bit 01: For bit = 0, the cylinder is stationary, the mass that is moved is attached to the piston rod. For bit = 1, the piston rod is stationary, the mass that is moved is attached to the cylinder.				

p0343[0...n]	Rated motor current identified / Mot I_rated ident		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Displays the identified rated motor current.		

p0344[0...n]	Cylinder mounting position A side / Cyl mount pos A		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-90.0 [°]	90.0 [°]	0.0 [°]
Description:	Adjustment of the mounting position referred to the A side of the cylinder.		
Note:	The mounting position specifies to what extent the forces due to weight of the moved mass is taken into account when calculating the loop gain and the maximum retraction/extension.		
p0344[0...n]	Motor weight (for the thermal motor model) / Mot weightThermMod		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018
	P-Group: Motor	Unit group: 27_1	Unit selection: p0100
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [kg]	50000.0 [kg]	0.0 [kg]
Description:	Sets the motor weight.		
Dependency:	IEC drives (p0100 = 0): unit kg NEMA drives (p0100 = 1): unit lb		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter influences the thermal 3 mass model of the induction motor. The parameter is not used for synchronous motors (p0300 = 2xx).		
p0345[0...n]	Required damping controlled axis / Damped ctrl axis		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.200	2.000	0.700
Description:	Sets the required damping for the controlled axis. With this value, for "Calculate controller data", the control loop (gain, integral time, rate time) is calculated.		
r0345[0...n]	Nominal motor starting time / Mot t_start_rated		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [s]	- [s]	- [s]
Description:	Displays the rated motor starting time. This time corresponds to the time from standstill up to reaching the motor rated speed and the acceleration with motor rated torque (r0333).		
Dependency:	Refer to: r0313, r0333, r0336, p0341, p0342		

p0346[0...n]	Line length A side / Line length A		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mm]	10000.0 [mm]	0.0 [mm]
Description:	Sets the hydraulic line length on the A side.		
Dependency:	Refer to: p0347		

p0346[0...n]	Motor excitation build-up time / Mot t_excitation		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation build-up time of the motor.
This involves the delay time between enabling the pulses and enabling the ramp-function generator. The induction motor is magnetized during this time.

Caution:  If there is insufficient magnetization under load or if the acceleration rate is too high, then an induction motor can stall (refer to the note). This is especially true for sensorless vector control or U/f control.

Notice: If the parameter is set to 0 s for separately excited synchronous motors (p0300 = 5), then an excitation current setpoint is generated even if the drive is switched off. In the base speed range, this is the no-load excitation current (p0389). In the field-weakening range, the value is reduced with the inverse value of the actual speed. An excitation current setpoint is not generated during de-magnetizing (p0347) and if an encoder fault is detected.

When starting or executing a flying restart for a separately excited synchronous motor without encoder or with incremental encoder, then the voltage induced in the stator by the excitation current pulse is used to determine the rotor position.

The length of the ramp is pre-assigned from the motor data for p0346 = 0 s. If it crystallizes out that this time is too short, then it can be extended by entering a negative value in p0346, whereby otherwise, the excitation behavior corresponds with that for p0346 = 0 s.

For all other motor types, p0346 is internally limited downwards to 0 s.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384). If this time is excessively reduced, this can result in an inadequate magnetizing of the induction motor. This is the case if the current limit is reached while building up magnetizing. For induction motors, the parameter cannot be set to 0 s (internal limit: 0.1 * r0384).

For permanent-magnet synchronous motors and vector control, the value depends on the stator time constant (r0386). Here, it defines the time to establish the current for encoderless operation immediately after the pulses have been enabled.

The current to excite the induction motor can be limited in p0644.

p0347[0...n]	Line length B side / Line length B		
HLA	Can be changed: T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mm]	10000.0 [mm]	0.0 [mm]

Description: Sets the hydraulic line length on the B side.

Dependency: Refer to: p0346

p0347[0...n]	Motor de-excitation time / Mot t_de-excitat		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	20.000 [s]	0.000 [s]
Description:	Sets the de-magnetizing time (for induction motors) after the inverter pulses have been canceled. The inverter pulses cannot be switched in (enabled) within this delay time. For SERVO, the de-excitation time is only used for DC current braking.		
Note:	The parameter is calculated using p0340 = 1, 3. For induction motors, the result depends on the rotor time constant (r0384). if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).		
p0347[0...n]	Motor de-excitation time / Mot t_de-excitat		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	20.000 [s]	0.000 [s]
Description:	Sets the de-magnetizing time (for induction motors) after the inverter pulses have been canceled. The inverter pulses cannot be switched in (enabled) within this delay time.		
Note:	The parameter is calculated using p0340 = 1, 3. For induction motors, the result depends on the rotor time constant (r0384). if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).		
p0348[0...n]	Internal line diameter / Line_inner diam		
HLA	Can be changed: T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mm]	100.0 [mm]	5.0 [mm]
Description:	Sets the internal line diameter for the A and B sides.		
p0348[0...n]	Speed at the start of field weakening Vdc = 600 V / n_strt field weak		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5722
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the speed at the start of field weakening for a DC link voltage of 600 V.		
Dependency:	Refer to: p0320, r0331		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		

2 Parameters

2.2 List of parameters

p0348[0...n]	Velocity at the start of field weakening Vdc = 600 V / v_strt field weak		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [m/min]	Calculated: CALC_MOD_REG Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 1300.0 [m/min]	Access level: 3 Func. diagram: 5722 Unit selection: - Expert list: 1 Factory setting 0.0 [m/min]
Description:	Sets the velocity at the start of field weakening for a DC link voltage of 600 V.		
Dependency:	Refer to: p0320, r0331		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
p0349	System of units motor equivalent circuit diagram data / Unit_sys mot ESB		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3) Data type: Integer16 P-Group: Motor Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the actual system of units for motor equivalent circuit diagram data.		
Value:	1: System of units, physical 2: System of units, referred		
Dependency:	The parameter can only be changed in an offline project using the commissioning tool. Refer to: p0304, p0305, p0310		
Note:	The reference parameter for resistances of the rated motor impedance $Z = p0304 / (1.732 * p0305)$ is in the % units system. Inductances are converted into a resistance using the factor $2 * \text{Pi} * p0310$. If a reference parameter (p0304, p0305, p0310) is zero, then it is not possible to make a changeover to "referred" values (per unit values).		
p0350[0...n]	Damping uncontrolled axis / Damp unctrl axis		
HLA	Can be changed: T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.010	Calculated: CALC_MOD_EQU Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2.000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.100
Description:	Sets the damping for the uncontrolled axis.		
p0350[0...n]	Motor stator resistance cold / Mot R_stator cold		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.00000 [ohm]	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: 16_1 Scaling: - Max 2000.00000 [ohm]	Access level: 2 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting 0.00000 [ohm]
Description:	Sets the stator resistance of the motor at ambient temperature p0625 (phase value).		
Dependency:	Refer to: p0625, r1912		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The motor identification routine determines the stator resistance from the total stator resistance minus the cable resistance (p0352).		

p0351[0...n]	Piston position natural frequency minimum / Piston pos fn min		
HLA	Can be changed: T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [mm]	3000.0 [mm]	0.0 [mm]
Description:	Sets the piston position for minimum natural frequency.		

p0352[0...n]	Axis natural frequency A side / Axis fn A		
HLA	Can be changed: T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [Hz]	2000.0 [Hz]	1.0 [Hz]
Description:	Sets the natural frequency for the axis on the A side.		

p0352[0...n]	Cable resistance / R_cable		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	120.00000 [ohm]	0.00000 [ohm]
Description:	Resistance of the power cable between the Motor Module and motor.		

Caution: The cable resistance should be entered prior to motor data identification. If it is used subsequently, the difference by which p0352 was changed must be subtracted from the stator resistance p0350 or motor data identification must be repeated.

Note: The parameter influences the temperature adaptation of the stator resistance. The motor identification routine does not change the cable resistance. This is subtracted from the total measured stator resistance in order to calculate the stator resistance (p0350, p0352). The cable resistance is reset when quick commissioning is exited with p3900 > 0.

p0352[0...n]	Cable resistance / R_cable		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	120.00000 [ohm]	0.00000 [ohm]
Description:	Resistance of the power cable between the Motor Module and motor.		

Dependency: Refer to: p7003

Caution: The cable resistance should be entered prior to motor data identification. If it is used subsequently, the difference by which p0352 was changed must be subtracted from the stator resistance p0350 or motor data identification must be repeated.

Notice: Parallel circuits with one winding system (p7003 = 0):
p0352 includes the feeder cable resistance of an individual Motor Module. The total feeder cable resistance is obtained from p0352 divided by the number of activated Motor Modules (refer to r0395).
Parallel circuits with multi-winding system (p7003 = 1):
p0352 includes the complete feeder cable resistance and is directly added to the stator resistance (refer to r0395).

2 Parameters

2.2 List of parameters

Note: The parameter influences the temperature adaptation of the stator resistance.
 The motor identification sets the cable resistance to 20% of the measured total resistance if p0352 is zero at the time that the measurement is made. If p0352 is not zero, then the value is subtracted from the measured total stator resistance to calculate stator resistance p0350. In this case, p0350 is a minimum of 10% of the measured value.
 Exception:
 For parallel circuit configurations with one winding system (p07003 = 0), the cable resistance is directly measured. It is important to note that only the component of an individual Motor Module is entered into p0352.
 The cable resistance is reset when quick commissioning is exited with p3900 > 0.

p0353[0...n]	Axis natural frequency center / Axis fn center		
HLA	Can be changed: T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [Hz]	2000.0 [Hz]	1.0 [Hz]
Description:	Sets the axis natural frequency at the center position.		

p0353[0...n]	Motor series inductance / Mot L_series		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mH]	1000000.000 [mH]	0.000 [mH]

Description: Sets the series inductance.
Note: For the automatic calculation with p0340 = 1 or 3, the calculation of p0348 is influenced by p0353 if p0348 was 0.
 For the automatic calculation with p0340 = 1, 3 or 4, the calculation of p1715 is influenced by p0353.
 The series inductance is reset when quick commissioning is exited with p3900 > 0.
 The reference value for p0326 is inversely proportional to the leakage inductance of the motor (p0353, p0354, p0356).

p0353[0...n]	Motor series inductance / Mot L_series		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mH]	1000000.000 [mH]	0.000 [mH]

Description: Sets the series inductance.
Note: For the automatic calculation with p0340 = 1, 3 or 4, the calculation of p1715 is influenced by p0353.
 The series inductance is reset when quick commissioning is exited with p3900 > 0.

p0354[0...n]	Axis natural frequency B side / Axis fn B		
HLA	Can be changed: T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [Hz]	2000.0 [Hz]	1.0 [Hz]
Description:	Sets the natural frequency for the axis on the B side.		

p0354[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]
Description:	Sets the rotor/secondary section resistance of the motor at the ambient temperature p0625. For separately excited synchronous motors: Sets the damping resistance in the rotor direction (d-axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor data identification routine (p1910) (not for separately excited synchronous motors).		
Dependency:	Refer to: p0625		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx). The reference value for p0326 is inversely proportional to the leakage inductance of the motor (p0353, p0354, p0356).		
p0354[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]
Description:	Sets the rotor/secondary section resistance of the motor at the ambient temperature p0625. For separately excited synchronous motors: Sets the damping resistance in the rotor direction (d-axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor data identification routine (p1910) (not for separately excited synchronous motors).		
Dependency:	Refer to: p0625		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
p0355[0...n]	Motor damping resistance q axis / Mot R_{damp} q		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]
Description:	Sets the damping resistance of the separately excited synchronous motor quadrature to the rotor direction (q axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2).		

2 Parameters

2.2 List of parameters

p0356[0...n]	Motor stator leakage inductance / Mot L_stator leak		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910). Induction motor, separately excited synchronous motor: Sets the rotor leakage inductance of the motor. Synchronous motor: Sets the stator quadrature axis inductance of the motor.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The reference value for p0326 is inversely proportional to the leakage inductance of the motor (p0353, p0354, p0356).		
p0356[0...n]	Motor stator leakage inductance / Mot L_stator leak		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910). Induction motor, separately excited synchronous motor: Sets the rotor leakage inductance of the motor. Synchronous motor: Sets the stator quadrature axis inductance of the motor.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	If the stator leakage inductance (p0356) for induction motors is changed outside the commissioning phase (p0010 > 0), the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960). For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is, therefore, ideal for a low current.		
p0357[0...n]	Motor stator inductance d axis / Mot L_stator d		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the stator direct-axis inductance of the synchronous motor. This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).		
Note:	The parameter is not used for separately excited synchronous motors (p0300 = 5). For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is ideal for a low current.		

p0358[0...n]	Motor rotor leakage inductance / damping inductance d axis / Mot L_r leak / LDd		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the rotor/secondary section leakage inductance of the motor. For separately excited synchronous motors: Sets the damping inductance in the rotor direction (d-axis). This value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx). VECTOR: If the rotor leakage inductance (p0358) for induction motors is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).		
p0358[0...n]	Motor rotor leakage inductance / damping inductance d axis / Mot L_r leak / LDd		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the rotor/secondary section leakage inductance of the motor. For separately excited synchronous motors: Sets the damping inductance in the rotor direction (d-axis). This value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx). VECTOR: If the rotor leakage inductance (p0358) for induction motors is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).		
p0359[0...n]	Motor damping inductance q axis / Mot L_damp q		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the damping inductance of the separately excited synchronous motor quadrature to the rotor direction (q axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2).		

2 Parameters

2.2 List of parameters

p0360[0...n]	Motor magnetizing inductance/magn. inductance d axis saturated / Mot Lh/Lh d sat		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]
Description:	Sets the magnetizing inductance of the motor. For separately excited synchronous motors: Sets the saturated magnetizing inductance in the rotor direction (d-axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
p0360[0...n]	Motor magnetizing inductance/magn. inductance d axis saturated / Mot Lh/Lh d sat		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]
Description:	Sets the magnetizing inductance of the motor. For separately excited synchronous motors: Sets the saturated magnetizing inductance in the rotor direction (d-axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
p0361[0...n]	Motor magnetizing inductance q axis saturated / Mot L_magn q sat		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]
Description:	Sets the saturated magnetizing inductance of the separately excited synchronous motor quadrature to the rotor direction (q axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2).		

p0362[0...n]	Motor saturation characteristic flux 1 / Mot sat flux 1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	800.0 [%]	60.0 [%]
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the y coordinate (flux) for the 1st value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the first motor flux as a [%] referred to the rated motor flux. Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the first stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.</p>		
Dependency:	<p>The following applies for the flux values: p0362 < p0363 < p0364 < p0365 The following applies for the stator quadrature axis flux values (PMSM): 20 % < p0362 < p0363 < p0364 < p0365 Refer to: p0366</p>		
Notice:	<p>For permanent magnet synchronous motors (PMSM): If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.</p>		
Note:	<p>For induction motors, p0362 = 100 % corresponds to the rated motor flux. For separately excited synchronous motors p0362 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed). With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305). When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).</p>		

p0363[0...n]	Motor saturation characteristic flux 2 / Mot sat flux 2		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	800.0 [%]	85.0 [%]
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the y coordinate (flux) for the 2nd value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the second motor flux as a [%] referred to the rated motor flux. Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the second stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.</p>		

2 Parameters

2.2 List of parameters

Dependency:	The following applies for the flux values: p0362 < p0363 < p0364 < p0365 The following applies for the stator quadrature axis flux values (PMSM): 20 % < p0362 < p0363 < p0364 < p0365 Refer to: p0367
Notice:	For permanent magnet synchronous motors (PMSM): If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.
Note:	For induction motors, p0363 = 100 % corresponds to the rated motor flux. For separately excited synchronous motors p0363 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed). With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305). When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0364[0...n]	Motor saturation characteristic flux 3 / Mot sat flux 3		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	800.0 [%]	115.0 [%]
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the y coordinate (flux) for the 3rd value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the third motor flux as a [%] referred to the rated motor flux. Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the third stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.</p>		
Dependency:	<p>The following applies for the flux values: p0362 < p0363 < p0364 < p0365 The following applies for the stator quadrature axis flux values (PMSM): 20% < p0362 < p0363 < p0364 < p0365 Refer to: p0368</p>		
Notice:	For permanent magnet synchronous motors (PMSM): If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.		
Note:	<p>For induction motors, p0364 = 100 % corresponds to the rated motor flux. For separately excited synchronous motors p0364 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed). With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305). When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).</p>		

p0365[0...n]	Motor saturation characteristic flux 4 / Mot sat flux 4		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	800.0 [%]	125.0 [%]
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the y coordinate (flux) for the 4th value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the fourth motor flux as a [%] referred to the rated motor flux. Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the fourth stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.</p>		
Dependency:	<p>The following applies for the flux values: p0362 < p0363 < p0364 < p0365 The following applies for the stator quadrature axis flux values (PMSM): 20 % < p0362 < p0363 < p0364 < p0365 Refer to: p0369</p>		
Notice:	<p>For permanent magnet synchronous motors (PMSM): If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.</p>		
Note:	<p>For induction motors, p0365 = 100 % corresponds to the rated motor flux. For separately excited synchronous motors p0365 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed). With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305). When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).</p>		

p0366[0...n]	Motor saturation characteristic I_mag 1 / Mot sat I_mag 1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	5.0 [%]	800.0 [%]	50.0 [%]
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the x coordinate for the 1st value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the first magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM). Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the first stator quadrature axis current as a [%] referred to the rated motor current (p0305).</p>		

2 Parameters

2.2 List of parameters

- Dependency:** The following applies for the magnetizing currents:
p0366 < p0367 < p0368 < p0369
The following applies for the stator quadrature axis current values (PMSM):
20 % < p0366 < p0367 < p0368 < p0369
Refer to: p0362
- Notice:** For permanent magnet synchronous motors (PMSM), the following applies:
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.
- Note:** When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0367[0...n]	Motor saturation characteristic I_mag 2 / Mot sat I_mag 2		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	5.0 [%]	800.0 [%]	75.0 [%]
Description:	The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the x coordinate for the 2nd value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the second magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM). Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the second stator quadrature axis current as a [%] referred to the rated motor current (p0305).		
Dependency:	The following applies for the magnetizing currents: p0366 < p0367 < p0368 < p0369 The following applies for the stator quadrature axis current values (PMSM): 20 % < p0366 < p0367 < p0368 < p0369 Refer to: p0363		
Notice:	For permanent magnet synchronous motors (PMSM), the following applies: If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0368[0...n]	Motor saturation characteristic I_mag 3 / Mot sat I_mag 3		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: RESM	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 3 Func. diagram: 6723, 6726 Unit selection: - Expert list: 1 Factory setting
Min 5.0 [%]	Max 800.0 [%]	Factory setting 150.0 [%]	
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the x coordinate for the 3rd value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the third magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM). Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the third stator quadrature axis current as a [%] referred to the rated motor current (p0305).</p>		
Dependency:	<p>The following applies for the magnetizing currents: p0366 < p0367 < p0368 < p0369 The following applies for the stator quadrature axis current values (PMSM): 20 % < p0366 < p0367 < p0368 < p0369 Refer to: p0364</p>		
Notice:	<p>For permanent magnet synchronous motors (PMSM), the following applies: If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.</p>		
Note:	<p>When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).</p>		
p0369[0...n]	Motor saturation characteristic I_mag 4 / Mot sat I_mag 4		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: RESM	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 3 Func. diagram: 6723, 6726 Unit selection: - Expert list: 1 Factory setting
Min 5.0 [%]	Max 800.0 [%]	Factory setting 210.0 [%]	
Description:	<p>The saturation characteristic (flux as mapping of current) is defined using 4 points. This parameter specifies the x coordinate for the 4th value pair of the characteristic. Induction motors (ASM) and separately excited synchronous motors (SESM): The saturation characteristic describes the mapping of the magnetizing current onto the motor flux. The parameter sets the fourth magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM). Permanent magnet synchronous motors (PMSM): The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux. The parameter sets the fourth stator quadrature axis current as a [%] referred to the rated motor current (p0305).</p>		
Dependency:	<p>The following applies for the magnetizing currents: p0366 < p0367 < p0368 < p0369 The following applies for the stator quadrature axis current values (PMSM): 20 % < p0366 < p0367 < p0368 < p0369 Refer to: p0365</p>		
Notice:	<p>For permanent magnet synchronous motors (PMSM), the following applies: If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.</p>		

2 Parameters

2.2 List of parameters

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0370[0...n]	Motor stator resistance cold / Mot R_stator cold		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 16_1 Scaling: - Max - [ohm]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [ohm]
Description:	Displays the motor stator resistance at an ambient temperature (p0625). The value does not include the cable resistance.		
Dependency:	Refer to: p0625		

r0372[0...n]	Total power unit cable resistance / PU cable R tot		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 16_1 Scaling: - Max - [ohm]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [ohm]
Description:	Displays the total cable resistance between Motor Module and motor, as well as the internal converter resistance.		
Dependency:	Refer to: r0238, p0352		

r0373[0...n]	Motor rated stator resistance / Mot R_stator rated		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, SESM, REL Min - [ohm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 16_1 Scaling: - Max - [ohm]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [ohm]
Description:	Displays the rated motor stator resistance at rated temperature (total of p0625 and p0627).		
Dependency:	Refer to: p0627		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

r0374[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL, RESM Min - [ohm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 16_1 Scaling: - Max - [ohm]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [ohm]
Description:	Displays the rotor/secondary section resistance of the motor for the ambient temperature p0625. For separately excited synchronous motors: Displays the damping resistance in the rotor direction (d-axis).		
Dependency:	Refer to: p0625		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

r0375[0...n]	Motor damping resistance q axis / Mot R_damp q		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the damping resistance of the separately excited synchronous motor quadrature to the rotor direction (q axis).		
r0376[0...n]	Rated motor rotor resistance / Mot rated R_rotor		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the nominal rotor / secondary section resistance of the motor at the rated temperature. The rated temperature is the sum of p0625 and p0628.		
Dependency:	Refer to: p0628		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
r0377[0...n]	Motor leakage inductance total / Mot L_leak total		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6640
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the total stray inductance of the motor. Induction motor: Displays the stator leakage inductance of the motor including the series inductance (p0353). Synchronous motor: Displays the stator quadrature axis inductance of the motor including the series inductance (p0353).		
r0377[0...n]	Motor leakage inductance total / Mot L_leak total		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6640
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the total stray inductance of the motor. Induction motor, separately excited synchronous motor: Displays the stator leakage inductance of the motor, including the series inductance (p0353) and the motor reactor (p0233). Synchronous motor: Displays the stator quadrature inductance, including the series inductance (p0353) and the motor reactor (p0233).		

2 Parameters

2.2 List of parameters

r0378[0...n]	Motor stator inductance d axis / Mot L_stator d		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min - [mH]	Calculated: - Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max - [mH]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [mH]
Description:	Displays the stator longitudinal inductance of the synchronous motor including the series inductance (p0353) and the motor reactor (p0233).		
Note:	The parameter is not used for separately excited synchronous motors (p0300 = 5).		
r0380[0...n]	Motor damping inductance d axis / Mot L_damp d		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, PMSM, REL, RESM Min - [mH]	Calculated: - Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max - [mH]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [mH]
Description:	Displays the damping inductance of the separately excited synchronous motor in the rotor direction (d-axis).		
r0381[0...n]	Motor damping inductance q axis / Mot L_damp q		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, PMSM, REL, RESM Min - [mH]	Calculated: - Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max - [mH]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [mH]
Description:	Displays the damping inductance of a separately excited synchronous motor quadrature to the rotor direction (q axis).		
r0382[0...n]	Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL, RESM Min - [mH]	Calculated: - Dyn. index: MDS, p0130 Unit group: 15_1 Scaling: - Max - [mH]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting - [mH]
Description:	Displays the magnetizing inductance of the motor. For separately excited synchronous motors: Displays the saturated magnetizing inductance in the rotor direction (d-axis).		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

r0383[0...n]	Motor magnetizing inductance q axis saturated / Mot L_magn q sat		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the saturated magnetizing inductance of a separately excited synchronous motor quadrature to the rotor direction (q axis).		
r0384[0...n]	Motor rotor time constant / damping time constant d axis / Mot Tc_rotor/T_Dd		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6722
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the rotor time constant. For separately excited synchronous motors: Displays the damping time constant to the rotor direction (d axis).		
Note:	The parameter is not used for synchronous motors. The value is calculated from the total of the inductances on the rotor side (p0358, p0360) divided by the rotor/damping resistance (p0354). The temperature adaptation of the rotor resistance for induction motors is not taken into account.		
r0385[0...n]	Motor damping time constant q axis / Mot L_damping q		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the damping time constant of a separately excited synchronous motor quadrature to the rotor direction (q axis).		
Note:	The value is calculated from the total of the inductances on the damping side (p0359, p0361) divided by the damping resistance (p0355).		
r0386[0...n]	Motor stator leakage time constant / Mot Tc_stator leak		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the stator leakage time constant.		
Note:	The value is calculated from the total of all leakage inductances (p0233*, p0353, p0356, p0358) divided by the total of all motor resistances (p0350, p0352, p0354). The temperature adaptation of the resistances is not taken into account. * only applies for VECTOR (r0107).		

2 Parameters

2.2 List of parameters

r0387[0...n]	Motor stator leakage time constant q axis / Mot Tc_Sleak / T_Sq		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the stator leakage time constant quadrature to the rotor direction (q axis).		
Note:	The value is calculated from the total of all leakage inductances (p0233, p0356, p0359) divided by the total of all motor resistances (p0350, p0352, p0355). The temperature adaptation of the resistances is not taken into account.		
p0388[0...n]	Motor stall torque correction factor for p1402.6 = 1 / Mot M_stallCorrNew		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	5 [%]	300 [%]	140 [%]
Description:	Sets the correction factor for the stall torque for a DC link voltage of 600 V and p1402.6 = 1. For p1402.6 = 0, this correction factor is set with p0326. A value of p0388 that is set too low results in an unnecessarily low stall power limit. The controller corrects a value that is set too high. In the stall power range, r1549[1] can be used to check whether the controller the influences the value. The value is sufficiently high if the controller intervention in r1549[1] is visible in the stall power range. If p0388 is too low, then r1549[1] remains zero in the stall power range.		
Note:	The reference values for p0326 and p0388 differ.		
p0389[0...n]	Excitation rated no-load current / Exc I_noload_rated		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [A]	10000.00 [A]	0.00 [A]
Description:	Sets the rated no-load current (I_F0) for the excitation.		
p0390[0...n]	Rated excitation current / Exc I_rated		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [A]	10000.00 [A]	0.00 [A]
Description:	Setting the rated current (I_F) of the controlled excitation rectifier (DC master).		

p0391[0...n]	Current controller adaptation starting point Kp / I_adpt pt Kp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.		
Dependency:	Refer to: p0392, p0393, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.		

p0391[0...n]	Current controller adaptation starting point Kp / I_adpt pt Kp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.		
Dependency:	Refer to: p0392, p0393, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0392[0...n]	Current controller adaptation starting point Kp adapted / I_adpt pt Kp adpt		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 x p0393 is effective.		
Dependency:	Refer to: p0391, p0393, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.		

p0392[0...n]	Current controller adaptation starting point Kp adapted / I_adpt pt Kp adpt		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 x p0393 is effective.		

2 Parameters

2.2 List of parameters

Dependency:	Refer to: p0391, p0393, p1402, p1715
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0393[0...n]	Current controller adaptation P gain adaptation / I_adpt Kp adpt		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the factor for the current controller P gain in the adaptation range (current > p0392). The value is referred to p1715.		
Dependency:	Refer to: p0391, p0392, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.		

p0393[0...n]	Current controller adaptation P gain scaling / I_adpt Kp scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the factor for the current controller P gain in the adaptation range (e.g. r0078 > p0392, if p0392 > p0391). The value is referred to p1715.		
Dependency:	Refer to: p0391, p0392, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

r0395[0...n]	Actual stator resistance / R_stator act		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6301, 6730, 6731, 6732
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the actual stator resistance (phase value). The parameter value also contains the temperature-independent cable resistance.		
Dependency:	In the case of induction motors the parameter is also affected by the motor temperature model. Refer to: p0350, p0352, p0620		
Note:	In each case, only the stator resistance of the active Motor Data Set is included with the stator temperature of the thermal motor model.		

r0396[0...n]	Actual rotor resistance / R_rotor act		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6730
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the actual rotor/secondary section resistance (phase value). The parameter is affected by the motor temperature model.		
Dependency:	Refer to: p0354, p0620		
Note:	In each case, only the rotor resistance of the active Motor Data Set is included with the rotor temperature of the thermal motor model. This parameter is not used for synchronous motors (p0300 = 2xx).		
p0397[0...n]	Angle magnetic decoupling maximum angle / Magn decpl max_ang		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-90.0 [°]	90.0 [°]	90.0 [°]
Description:	Maximum angle when calculating the polynomial function to decouple the magnetic flux axes for permanent-magnet synchronous motors (see p0398, p0399).		
p0398[0...n]	Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000000	10.000000	0.000000
Description:	The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities. The angle offset can be described as a 3rd order polynomial function of the load current consumed: $\text{phiOffset} = f(C1 \cdot iq + C3 \cdot iq^3)$ This parameter is the coefficient C1; it describes the linear load impact effect.		
p0399[0...n]	Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000000	10.000000	0.000000
Description:	The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities. The angle offset can be described as a 3rd order polynomial function of the load current consumed: $\text{phiOffset} = f(C1 \cdot iq + C3 \cdot iq^3)$ This parameter is the coefficient C3; it describes the cubic load impact effect.		

p0400[0...n]	Encoder type selection / Enc_type sel		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(1, 4)	Calculated: -	Access level: 1

	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10100	0
Description:	Selects the encoder from the list of encoder types supported.		
Value:	0: No encoder 202: DRIVE-CLiQ encoder AS20, singleturn 204: DRIVE-CLiQ encoder AM20, multiturn 4096 212: DRIVE-CLiQ encoder AS21, singleturn 214: DRIVE-CLiQ encoder AM21, multiturn 4096 222: DRIVE-CLiQ encoder AS22, singleturn 224: DRIVE-CLiQ encoder AM22, multiturn 4096 242: DRIVE-CLiQ encoder AS24, singleturn 244: DRIVE-CLiQ encoder AM24, multiturn 4096 262: DRIVE-CLiQ encoder AS26, singleturn 264: DRIVE-CLiQ encoder AM26, multiturn 4096 1001: Resolver 1 speed 1002: Resolver 2 speed 1003: Resolver 3 speed 1004: Resolver 4 speed 2001: 2048, 1 Vpp, A/B C/D R 2002: 2048, 1 Vpp, A/B R 2003: 256, 1 Vpp, A/B R 2004: 400, 1 Vpp, A/B R 2005: 512, 1 Vpp, A/B R 2006: 192, 1 Vpp, A/B R 2007: 480, 1 Vpp, A/B R 2008: 800, 1 Vpp, A/B R 2010: 18000, 1 Vpp, A/B R distance-coded 2012: 420, 1 Vpp, A/B R 2013: 675, 1 Vpp, A/B R 2051: 2048, 1 Vpp, A/B, EnDat, multiturn 4096 2052: 32, 1 Vpp, A/B, EnDat, multiturn 4096 2053: 512, 1 Vpp, A/B, EnDat, multiturn 4096 2054: 16, 1 Vpp, A/B, EnDat, multiturn 4096 2055: 2048, 1 Vpp, A/B, EnDat, singleturn 2081: 2048, 1 Vpp, A/B, SSI, singleturn 2082: 2048, 1 Vpp, A/B, SSI, multiturn 4096 2083: 2048, 1 Vpp, A/B, SSI, singleturn, error bit 2084: 2048, 1 Vpp, A/B, SSI, multiturn 4096, error bit 2110: 4000 nm, 1 Vpp, A/B R distance-coded 2111: 20000 nm, 1 Vpp, A/B R distance-coded 2112: 40000 nm, 1 Vpp, A/B R distance-coded 2151: 16000 nm, 1 Vpp, A/B, EnDat, resolution 100 nm 3001: 1024 HTL A/B R 3002: 1024 TTL A/B R 3003: 2048 HTL A/B R 3005: 1024 HTL A/B 3006: 1024 TTL A/B 3007: 2048 HTL A/B 3008: 2048 TTL A/B 3009: 1024 HTL A/B unipolar 3011: 2048 HTL A/B unipolar 3020: 2048 TTL A/B R, with sense 3081: SSI, singleturn, 24 V 3082: SSI, multiturn 4096, 24 V 3088: 1024, HTL, A/B, SSI, singleturn 3090: 4096, HTL, A/B, SSI, singleturn 3109: 2000 nm, TTL, A/B R distance-coded		

9010: Simulated motor encoder
 9999: User defined
 10000: Identify encoder
 10050: Encoder with EnDat2.x interface identified
 10051: DRIVE-CLiQ encoder identified
 10058: Digital encoder (absolute) identified
 10059: Digital encoder (incremental) identified
 10100: Identify encoder (waiting)

Notice: An encoder type with p0400 < 9999 defines an encoder for which there is an encoder parameter list. When selecting a catalog encoder (p0400 < 9999) the parameters from the encoder parameter list cannot be changed (write protection). To remove write protection, the encoder type should be set to a third-party encoder (p0400 = 9999).

Note: The connected encoder can be identified by setting p0400 to 10000 or 10100. This means that the encoder must support this, and is possible in the following cases:

- motor with DRIVE-CLiQ
- encoder with EnDat interface
- DRIVE-CLiQ encoder
- encoder with SSI interface (only 10100)

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

When using an encoder with track A/B and zero pulse, as standard, fine synchronization is not set using a zero mark. If, for a synchronous motor, fine synchronization is to be realized using a zero mark, then the following must be executed:

- set p0400 to 9999
- set p0404.15 to 1

Prerequisite:

Coarse synchronization must be selected (e.g. pole position identification) and the zero pulse of the encoder must be either mechanically or electronically (p0431) adjusted to the pole position.

For p0400 = 9010 the following applies:

Further, for encoderless operation, the position actual value (r0482) is supplied from the motor model. This means that encoderless positioning/position control is possible.

For p0400 = 10000 the following applies:

The connected encoder is identified. If an identification is not possible, then p0400 is set to 0.

For p0400 = 10100 the following applies:

The connected encoder is identified. If identification is not possible, then p0400 remains set = 10100, and the system waits until identification is possible.

p0402[0...n]		Gearbox type selection / Gearbox type sel		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(1, 4) Data type: Integer16 P-Group: Encoder Not for motor type: - Min 1	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 10100	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 9999	
Description:	Selects the gearbox type to pre-set the inversion and the gearbox factor. Measuring gear factor = motor or load revolutions / encoder revolutions.			
Value:	1: Gearbox 1:1 not inverted 2: Gearbox 2:7 inverted 3: Gearbox 4:17 inverted 4: Gearbox 2:10 inverted 9999: Gearbox user-defined 10000: Identify gearbox 10100: Identify gearbox			
Dependency:	Refer to: p0410, p0432, p0433			

2 Parameters

2.2 List of parameters

Note:

For p0402 = 1:
Automatic setting of p0410 = 0000 bin, p0432 = 1, p0433 = 1.

For p0402 = 2:
Automatic setting of p0410 = 0011 bin, p0432 = 7, p0433 = 2.

For p0402 = 3:
Automatic setting of p0410 = 0011 bin, p0432 = 17, p0433 = 4.

For p0402 = 4:
Automatic setting of p0410 = 0011 bin, p0432 = 10, p0433 = 2.

For p0402 = 9999:
No automatic setting of p0410, p0432, p0433. The parameters should be manually set.

For p0402 = 10000:
It is only possible to identify the gearbox type for a motor with DRIVE-CLiQ. Parameters p0410, p0432 and p0433 are set corresponding to the identified gearbox. If an identification is not possible, then p0402 is set to 9999.

p0404[0...n]	Encoder configuration effective / Enc_config eff		
SERVO, HLA, SERVO_AC, SERVO_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Settings for the basic encoder properties.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Linear encoder	Yes	No	-
	01	Absolute encoder	Yes	No	-
	02	Multiturn encoder	Yes	No	-
	03	Track A/B square-wave	Yes	No	-
	04	Track A/B sine	Yes	No	-
	05	Track C/D	Yes	No	-
	06	Hall sensor	Yes	No	-
	08	EnDat encoder	Yes	No	-
	09	SSI encoder	Yes	No	-
	10	DRIVE-CLiQ encoder	Yes	No	-
	11	Digital encoder	Yes	No	-
	12	Equidistant zero mark	Yes	No	-
	13	Irregular zero mark	Yes	No	-
	14	Distance-coded zero mark	Yes	No	-
	15	Commutation with zero mark (not ASM)	Yes	No	-
	16	Acceleration	Yes	No	-
	17	Track A/B analog	Yes	No	-
	20	Voltage level 5 V	Yes	No	-
	21	Voltage level 24 V	Yes	No	-
	22	Remote sense (only SMC30)	Yes	No	-
	23	Resolver excitation	Yes	No	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: ZM: Zero mark
 SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:
 The track A/B is adjusted to match the magnetic position of the motor.
 For bit 01, 02 (absolute encoder, multiturn encoder):
 These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.
 For bit 10 (DRIVE-CLiQ encoder):
 This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.
 For bit 12 (equidistant zero mark):
 The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).
 The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.
 For bit 13 (irregular zero mark):
 The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.
 For bit 14 (distance-coded zero mark):
 The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.
 For bit 15 (commutation with zero mark):
 Only applicable for synchronous motors.
 The function can be deselected by priority via p0430.23.
 For distance-coded zero marks, the following applies:
 The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).
 The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.
 The fine synchronization is only started after two zero marks have been passed.

p0404[0...n]	Encoder configuration effective / Enc_config eff		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704

	08	EnDat encoder	Yes	No	-
	09	SSI encoder	Yes	No	-
	10	DRIVE-CLiQ encoder	Yes	No	-
	11	Digital encoder	Yes	No	-
	12	Equidistant zero mark	Yes	No	-
	13	Irregular zero mark	Yes	No	-
	14	Distance-coded zero mark	Yes	No	-
	15	Commutation with zero mark (not ASM)	Yes	No	-
	16	Acceleration	Yes	No	-
	17	Track A/B analog	Yes	No	-

2 Parameters

2.2 List of parameters

20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excitation	Yes	No	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

If an SSI encoder (bit 9 = 1) is used as motor encoder for permanent-magnet synchronous motors, then this is only permissible in conjunction with an additional A/B track (bit 3 = 1 or bit 4 = 1).

Note:

ZM: Zero mark

SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

For bit 01, 02 (absolute encoder, multiturn encoder):

These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

For bit 10 (DRIVE-CLiQ encoder):

This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

For bit 12 (equidistant zero mark):

The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).

The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.

For bit 13 (irregular zero mark):

The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.

For bit 14 (distance-coded zero mark):

The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

For bit 15 (commutation with zero mark):

Only applicable for synchronous motors.

The function can be deselected by priority via p0430.23.

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

p0405[0...n]	Square-wave encoder track A/B / Sq-wave enc A/B		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 1111 bin

Description: Settings for the track A/B in a square-wave encoder.

For square-wave encoders, p0404.3 must also be 1.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Signal	Bipolar	Unipolar	-
	01	Level	TTL	HTL	-
	02	Track monitoring	A/B <> -A/B	None	-
	03	Zero pulse	Same as A/B track	24 V unipolar	-
	04	Switching threshold	High	Low	-
	05	Pulse/direction	Active	Inactive	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For bit 02:
When the function is activated, track monitoring can be deactivated by setting p0437.26.

For bit 05:
When the function is activated, a frequency setpoint and a direction for traveling can be entered via an encoder interface.

p0407[0...n] Linear encoder grid division / Enc grid div

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [nm]	250000000 [nm]	16000 [nm]

Description: Sets the grid division for a linear encoder.
In conjunction with the values in p0418/p0419, the grid division defines the transfer format for position actual values Gn_XIST1 (r0482) and Gn_XIST2 (r0483).

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The lowest permissible value is 250 nm.
This value does not always correspond to the grid division of the measuring device. For a DRIVE-CLiQ encoder, a value is entered here that facilitates optimum transfer of the resolution (p0422).

p0408[0...n] Rotary encoder pulse number / Rot enc pulse no

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16777215	2048

Description: Sets the number of pulses for a rotary encoder.
In conjunction with the values in p0418/p0419, the pulse number defines the transfer format for position actual values Gn_XIST1 (r0482) and Gn_XIST2 (r0483).

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The smallest permissible value is 1 pulse.
The number of pole pairs for a resolver is entered here.
This value does not always correspond to the pulse number of the measuring device. For a DRIVE-CLiQ encoder, a value is entered here that facilitates optimum transfer of the resolution (p0423).

p0408	TM41 encoder emulation pulse number / Rot enc pulse no		
TM41	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9674, 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	32	16384	2048
Description:	Sets the pulse number output from the encoder emulation.		
Note:	For p4408 = 0, the following applies: Parameters p0408 and p0418 have a double significance. They define the format of the position actual value from the original encoder (TM41 input) and the format of the TM41 output. In this case, the zero mark is only correctly output, if the two parameters p0408 and p0418 for the TM41 and the encoder interconnected at p4420 have the same setting.		

p0410[0...n]	Encoder inversion actual value / Enc inv ActV				
HLA	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: 4965		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Setting to invert actual values.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Invert velocity actual value	Yes	No	4710, 4711, 4715
	01	Invert position actual value	Yes	No	4704
Note:	The inversion influences the following parameters: Bit 00: r0061, r0063, r0094 Bit 01: r0482, r0483				

p0410[0...n]	Encoder inversion actual value / Enc inv ActV				
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: 4704, 4710, 4711, 4715		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Setting to invert actual values.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Invert speed actual value	Yes	No	4710, 4711, 4715
	01	Invert position actual value	Yes	No	4704
Note:	The inversion influences the following parameters: Bit 00: r0061, r0063 (exception: encoderless control), r0094 Bit 01: r0482, r0483				

p0410[0...n]		Encoder inversion actual value / Enc inv ActV			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin), ENC (Lin_enc)	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: 4704, 4710, 4711, 4715		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Setting to invert actual values.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Invert velocity actual value	Yes	No	4710, 4711, 4715, 4704
	01	Invert position actual value	Yes	No	4704
Note:	The inversion influences the following parameters: Bit 00: r0061, r0063 (exception: encoderless control), r0094 Bit 01: r0482, r0483				
p0411[0...n]		Measuring gear configuration / Meas gear config			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 1		
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for position tracking of a measuring gear.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Measuring gear activate position tracking	Yes	No	-
	01	Axis type	Linear axis	Rotary axis	-
	02	Measuring gear reset position	Yes	No	-
	03	Meas. gearbox, activate pos. tracking for incremental encoders	Yes	No	-
Notice:	For p0411.3 = 1 the following applies: If position tracking is activated for incremental encoders, only the position actual value is stored. Axis or encoder motion is not detected when deactivated! Any tolerance window entered in p0413 has no effect.				
Note:	For the following events, the non-volatile, saved position values are automatically reset: - when an encoder replacement has been identified. - when changing the configuration of the Encoder Data Set (EDS).				
p0412[0...n]		Measuring gear absolute encoder rotary revolutions virtual / Abs rot rev			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 1		
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	4194303	0		
Description:	Sets the number of rotations that can be resolved for a rotary encoder with activated position tracking of the measuring gear.				
Dependency:	This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking (p0411.0 = 1) and for an incremental encoder with activated position tracking (p0411.3 = 1).				

2 Parameters

2.2 List of parameters

Note: The resolution that is set must be able to be represented using r0483.
 For rotary axes/modulo axes, the following applies:
 p0411.0 = 1:
 This parameter is pre-set with p0421 and can be changed.
 p0411.3 = 1:
 The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).
 For linear axes, the following applies:
 p0411.0 = 1:
 This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.
 p0411.3 = 1:
 The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

p0413[0...n] Measuring gear position tracking tolerance window / Pos track window

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting

0.00	4294967300.00	0.00
------	---------------	------

Description: Sets a tolerance window for position tracking.
 After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:
 Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.
 Difference outside the tolerance window --> An appropriate message is output.

Dependency: Refer to: F31501, F32501, F33501

Caution: Rotation, for example through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.
 For p0411.0 = 1, the value is automatically pre-assigned quarter of the encoder range.
 Example:
 Quarter of the encoder range = (p0408 * p0421) / 4
 It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

p0414[0...n] Redundant coarse position value relevant bits (identified) / Relevant bits

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting

0	16	16
---	----	----

Description: Sets the number of relevant bits for the redundant coarse position value.

p0415[0...n]	Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 31	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 14
Description:	Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.		
Note:	MSB: Most Significant Bit		
p0416[0...n]	Non safety-relevant meas. steps position value POS1 (detected) / nsrPos1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 22000
Description:	Sets the non safety-relevant measuring steps of POS1.		
Dependency:	Refer to: r0473, p9513		
p0417[0...n]	Encoder safety comparison algorithm (detected) / Safety comp_algo		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 255
Description:	Sets the comparison algorithm for the encoder position monitoring functions.		
Value:	0: Reserved 10: Reserved 11: DQL linear non-binary safety algorithm 12: SMC30 safety algorithm 255: Safety algorithm unknown		
Dependency:	Refer to: p9541		
p0418[0...n]	Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned8 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 18	Access level: 3 Func. diagram: 4010, 4704 Unit selection: - Expert list: 1 Factory setting 11
Description:	Sets the fine resolution in bits of the incremental position actual values.		
Note:	The parameter applies for the following process data: - Gx_XIST1 - Gx_XIST2 for reference mark or flying measurement The fine resolution specifies the fraction between encoder pulses. Depending on the physical measurement principle, an encoder pulse can be broken down into a different number of fractions (e.g. square-wave encoder: 2 bit = resolution 4, sin/cos encoder: Typical 11 bit = resolution 2048). For a square-wave encoder, with the factory setting, the least significant bits have the value zero, i.e. they do not supply any useful information. For especially high quality measuring systems, the fine resolution must be increased corresponding to the available accuracy.		

p0418	TM41 encoder emulation fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1		
TM41	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 9674, 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	2	18	11

Description: Sets the fine resolution in bits of the position actual value (r0479, r0482).
Note: For p4408 = 0, the following applies:
Parameters p0408 and p0418 have a double significance. They define the format of the position actual value from the original encoder (TM41 input) and the format of the TM41 output.
In this case, the zero mark is only correctly output, if the two parameters p0408 and p0418 for the TM41 and the encoder interconnected at p4420 have the same setting.

p0419[0...n]	Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4704, 4710
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	18	9

Description: Sets the fine resolution in bits of the absolute position actual values.
Dependency: Refer to: p0418
Note: This parameter applies to process data Gx_XIST2 when reading the absolute value.

p0420[0...n]	Encoder connection / Enc_connection		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Selecting the encoder connection.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	SUB-D	Yes	No	-
	01	Terminal	Yes	No	-

p0421[0...n]	Absolute encoder rotary multiturn resolution / Enc abs multiturn		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4294967295	4096

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder.
Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0422[0...n]	Absolute encoder linear measuring step resolution / Enc abs meas step		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0 [nm]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 4294967295 [nm]	Access level: 3 Func. diagram: 4704 Unit selection: - Expert list: 1 Factory setting 100 [nm]
Description:	Sets the resolution of the absolute position for a linear absolute encoder.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	The serial protocol of an absolute encoder provides the position with a certain resolution (e.g. 100 nm). This value must be entered here.		
p0423[0...n]	Absolute encoder rotary singleturn resolution / Enc abs singleturn		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 1073741823	Access level: 3 Func. diagram: 4704 Unit selection: - Expert list: 1 Factory setting 8192
Description:	Sets the number of measuring steps per revolution for a rotary absolute encoder. The resolution refers to the absolute position.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
p0424[0...n]	Encoder linear zero mark distance / Enc lin ZM_dist		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0 [mm]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20 [mm]
Description:	Sets the distance between two zero marks for a linear encoder. This information is used for zero mark monitoring.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For distance-coded zero marks this parameter signifies the basic distance.		
p0425[0...n]	Encoder rotary zero mark distance / Enc rot dist ZM		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 16777215	Access level: 3 Func. diagram: 4704, 8570 Unit selection: - Expert list: 1 Factory setting 2048
Description:	Sets the distance in pulses between two zero marks for a rotary encoder. This information is used for zero mark monitoring.		

2 Parameters

2.2 List of parameters

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For distance-coded zero marks this parameter signifies the basic distance.

p0426[0...n]	Encoder zero mark differential distance / Enc ZM Dif_dist		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
	Min 1	Max 65535	Factory setting 1
Description:	Sets the differential pitch for distance-coded zero marks (signal periods). The value corresponds to jump displacement of "zero mark with interference".		
Dependency:	This function can only be used when a Sensor Module property is available (r0459.9 = 1).		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		

p0427[0...n]	Encoder SSI baud rate / Enc SSI baud rate		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: FloatingPoint32 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
	Min 0 [kHz]	Max 65535 [kHz]	Factory setting 100 [kHz]
Description:	Sets the baud rate for an SSI encoder.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	SSI: Synchronous Serial Interface		

p0428[0...n]	Encoder SSI monoflop time / Enc SSI t_monoflop		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
	Min 0 [µs]	Max 65535 [µs]	Factory setting 30 [µs]
Description:	Sets the minimum delay time between two data transfers of the absolute value for an SSI encoder.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		

p0429[0...n]		Encoder SSI configuration / Enc SSI config		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 bin	
Description:	Sets the configuration for an SSI encoder.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Transfer code	Binary code	Gray code
	02	Transfer absolute value twice	Yes	No
	06	Data line during the monoflop time	High level	Low level
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.			
Note:	For bit 06: The quiescent signal level of the data line corresponds to the inverted, set level.			

p0430[0...n]		Sensor Module configuration / SM config		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1110 0000 0000 1000 0000 0000 0000 0000 bin	
Description:	Sets the configuration of the Sensor Module.			
Bit field:	Bit	Signal name	1 signal	0 signal
	17	Burst oversampling	Yes	No
	18	Continuous oversampling (reserved)	Yes	No
	19	Safety position actual value sensing	Yes	No
	20	Speed calculation mode (only SMC30)	Incremental diff	Flank time meas
	21	Zero mark tolerance	Yes	No
	22	Rotor position adaptation	Yes	No
	23	Deselect commutation with zero mark	Yes	No
	24	Commutation with selected zero mark	Yes	No
	25	Switch off encoder voltage supply during parking	Yes	No
	27	Extrapolate position values	Yes	No
	28	Cubic correction	Yes	No
	29	Phase correction	Yes	No
	30	Amplitude correction	Yes	No
	31	Offset correction	Yes	No
Notice:	A bit-wise configuration is only possible if the corresponding property is also present in r0458.			
Note:	For bit 17 (burst oversampling): - if bit = 1, burst oversampling is switched on. For bit 18 (continuous oversampling): - if bit = 1, continuous oversampling is switched on. For bit 19 (Safety position actual value sensing): - if bit = 1, the Safety position actual value is transferred in the cyclic telegram. For bit 20 (speed calculation mode): - if bit = 1, the speed is calculated via incremental difference without extrapolation. - if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode. For bit 21 (zero mark tolerance): - if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.			

For bit 22 (rotor position adaptation):

- if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.

For bit 23 (deselect commutation with zero mark):

- the bit should only be set for encoders that have not been adjusted.

For bit 24 (commutation with selected zero mark):

- if bit = 1, the commutation position is corrected via a selected zero mark.

For bit 25 (disconnect the encoder power supply on parking):

- if bit = 1, the encoder power supply is switched off on parking (0 V).

- if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.

For bit 27 (extrapolate position values):

- if bit = 1, the extrapolation of the position values is activated.

For bit 28 (cubic correction):

- if bit = 1, the cubic correction for track A/B sine is activated.

For bit 29 (phase correction):

- if bit = 1, the phase correction for track A/B sine is activated.

For bit 30 (amplitude correction):

- if bit = 1, the amplitude correction for track A/B sine is activated.

For bit 31 (offset correction):

- if bit = 1, the offset correction for track A/B sine is activated.

Description:

Sets the configuration of the Sensor Module.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
17	Burst oversampling	Yes	No	-
18	Continuous oversampling (reserved)	Yes	No	-
19	Safety position actual value sensing	Yes	No	-
20	Velocity calculation mode (only SMC30)	Incremental diff	Flank time meas	-
21	Zero mark tolerance	Yes	No	-
22	Rotor position adaptation	Yes	No	-
23	Deselect commutation with zero mark	Yes	No	-
24	Commutation with selected zero mark	Yes	No	-
25	Switch off encoder voltage supply during parking	Yes	No	-
27	Extrapolate position values	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Notice:

A bit-wise configuration is only possible if the corresponding property is also present in r0458.

Note:

For bit 17 (burst oversampling):

- if bit = 1, burst oversampling is switched on.

For bit 18 (continuous oversampling):

- if bit = 1, continuous oversampling is switched on.

For bit 19 (Safety position actual value sensing):

- if bit = 1, the Safety position actual value is transferred in the cyclic telegram.

For bit 20 (speed calculation mode):

- if bit = 1, the speed is calculated via incremental difference without extrapolation.

- if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode.

For bit 21 (zero mark tolerance):

- if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.

For bit 22 (rotor position adaptation):

- if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.

For bit 23 (deselect commutation with zero mark):

- the bit should only be set for encoders that have not been adjusted.

For bit 24 (commutation with selected zero mark):

- if bit = 1, the commutation position is corrected via a selected zero mark.

For bit 25 (disconnect the encoder power supply on parking):

- if bit = 1, the encoder power supply is switched off on parking (0 V).

- if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.

For bit 27 (extrapolate position values):

- if bit = 1, the extrapolation of the position values is activated.

For bit 28 (cubic correction):

- if bit = 1, the cubic correction for track A/B sine is activated.

For bit 29 (phase correction):

- if bit = 1, the phase correction for track A/B sine is activated.

For bit 30 (amplitude correction):

- if bit = 1, the amplitude correction for track A/B sine is activated.

For bit 31 (offset correction):

- if bit = 1, the offset correction for track A/B sine is activated.

p0431[0...n]

Angular commutation offset / Ang_com offset

SERVO, HLA,
SERVO_AC,
SERVO_I_AC

Can be changed: C2(4)

Calculated: -

Access level: 3

Data type: FloatingPoint32

Dyn. index: EDS, p0140

Func. diagram: -

P-Group: Encoder

Unit group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

-180.00 [°]

180.00 [°]

0.00 [°]

Description:

Sets the angular commutation offset.

Dependency:

The value is taken into account in r0094.

Refer to: r0094, r1778

Notice:

When the firmware is upgraded from V2.3 to V2.4 or higher, the value must be reduced by 60° if all the following conditions are fulfilled:

- the motor is a synchronous motor (p0300 = 2, 2xx, 4, 4xx).
- the encoder is a resolver (p0404.23 = 1).
- the actual speed value is inverted (p0410.0 = 1).

The angular commutation offset cannot be generally taken from other drive systems. As a minimum - the sign of the offset determined for SIMODRIVE 611 digital and SIMODRIVE 611 universal must be reversed for SINAMICS (p0431 (SINAMICS) = -p1016 (SIMODRIVE)).

Note:

Angular commutation offset, angular difference between electrical position of encoder and flux position.

For p0404.5 = 1 (track C/D) the following applies:

The angular offset in p0431 acts on track A/B, the zero mark on track C/D.

For p0404.6 = 1 (Hall sensor) the following applies:

The angular offset in p0431 acts on track A/B and the zero mark.

Description:	Sets the motor and load revolutions for the gearbox factor of the encoder evaluation. The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.		
Dependency:	This parameter can only be set for p0402 = 9999. Refer to: p0402, p0410, p0432		

Note: Negative gearbox factors should be implemented with p0410.
For synchronous motors, the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number:
(p0314 * p0433) / p0432

p0434[0...n]	Encoder SSI error bit / Enc SSI error bit		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min 0	Max 65535	Factory setting 0
Description:	Sets the position and level of the error bit in the SSI protocol.		
Notice:	The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.		
Note:	Value = dcba ba: Position of the error bit in the protocol (0 ... 63). c: Level (0: Low level, 1: High level). d: Status of the evaluation (0: Off, 1: On with 1 error bit, 2: On with 2 error bits ... 9: On with 9 error bits). For several error error bits, the following applies: - the position specified under ba and the additional bits are assigned increasing consecutively. - the level set under c applies to all error bits. Example: p0434 = 1013 --> The evaluation is switched in and the error bit is at position 13 with a low level. p0434 = 1113 --> The evaluation is switched in and the error bit is at position 13 with a high level.		

p0435[0...n]	Encoder SSI alarm bit / Enc SSI alarm bit		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting
	Min 0	Max 65535	Factory setting 0
Description:	Sets the position and level of the alarm bit in the SSI protocol.		
Notice:	The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.		
Note:	Value = dcba ba: Position of the alarm bit in protocol (0 ... 63). c: Level (0: Low level, 1: High level). d: Status of the evaluation (0: Off, 1: On with 1 alarm bit, 2: On with 2 alarm bits ... 9: On with 9 alarm bits). The following applies for several alarm bits: - the position specified under ba and the additional bits are assigned increasing consecutively. - the level set under c applies to all error bits. Example: p0435 = 1014 --> The evaluation is switched in and the alarm bit is at position 14 with a low level. p0435 = 1114 --> The evaluation is switched in and the alarm bit is at position 14 with a high level.		

2 Parameters

2.2 List of parameters

p0436[0...n]		Encoder SSI parity bit / Enc SSI parity bit			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0		
Description:	Sets the position and parity of the parity bit in the SSI protocol.				
Notice:	The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.				
Note:	Value = dcba ba: Position of the parity bit in the protocol (0 ... 63). c: Parity (0: even, 1: uneven). d: State of the evaluation (0: Off, 1: On). Example: p0436 = 1015 --> The evaluation is switched in and the parity bit is at position 15 with even parity. p0436 = 1115 --> The evaluation is switched in and the parity bit is at position 15 with uneven parity.				
p0437[0...n]		Sensor Module configuration extended / SM config ext			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0011 0000 0000 0000 0000 1000 0000 0000 bin		
Description:	Sets the extended configuration of the Sensor Module.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Data logger	Yes	No	-
	01	Zero mark edge detection	Yes	No	-
	02	Correction position actual value XIST1	Yes	No	-
	04	Edge evaluation bit 0	Yes	No	-
	05	Edge evaluation bit 1	Yes	No	-
	06	Freeze the speed actual value for dn/dt errors	Yes	No	-
	07	Do not accumulate the number of incorrect pulses	Yes	No	-
	11	Fault handling after PROFIdrive	Yes	No	-
	12	Activate additional messages	Yes	No	-
	13	Support absolute position for incremental encoder	Yes	No	4750
	22	Resolution absolute position as factor	Yes	No	-
	25	Deselect monitoring multiturn representation in Gx_XIST2	Yes	No	-
	26	Deselect track monitoring	Yes	No	-
	28	EnDat linear encoder monitoring incremental/absolute	Yes	No	-
	29	EnDat encoder initialization with high accuracy	Yes	No	-
	31	Analog unipolar track monitoring	Yes	No	-
Dependency:	Refer to: p0430, r0459				

- Note:** A value of zero is displayed if an encoder is not present.
- For bit 00:
When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.
- For bit 01:
If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark.
For bit = 1, the zero mark is evaluated depending on the direction of rotation detected. For a positive direction of rotation, the positive edge of the zero mark is considered and for a negative direction of rotation, the negative edge of the zero mark.
- For bit 02:
When the bit is set, for a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulse number is corrected. If the bit is not set, encoder fault F3x131 is triggered.
- For bits 05, 04:
The actual hardware only supports 1x or 4x signal evaluation.
Bit 5/4 = 0/0: Signal evaluation per period, 4x.
Bit 5/4 = 1/0: signal evaluation per period, 4x with speed calculation over the complete pulse.
Bit 5/4 = 0/1: Signal evaluation per period, 1x.
Bit 5/4 = 1/1: Illegal setting.
- For bit 06:
If the function is active, when dn/dt monitoring responds, the speed actual value is internally frozen for a time equivalent to two current controller sampling times. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.
- For bit 07:
When the bit is not set, the incorrect pulses that have occurred up until now are accumulated in p4688.
When the bit is not set, p4688 indicates the incorrect pulses that have still not been corrected.
- For bit 11:
If the bit is set, the Sensor Module checks within a certain time grid whether the fault cause is still present. This enables the Sensor Module to switch from the fault state to the operating state and provide valid actual values automatically. The faults are displayed until the user acknowledges them.
- For bit 12:
Additional fault messages can be activated for extended fault diagnostics.
- For bit 13:
When the bit is set, for an incremental encoder with zero mark, the absolute value in Gn_XIST2 can be requested via Gn_STW.13. The absolute value is only valid after passing the zero mark.
- For bit 22:
When the bit is set, the resolution of the absolute position in the serial protocol is set using distribution factor in p4630. The resolution for the absolute position is then calculated using p0407/p4630.
- For bit 26:
Track monitoring is deactivated for the square-wave encoders when the bit is set, even if the monitoring function is selected in p0405.2.
- For bit 28:
Monitoring of the difference between incremental and absolute position in the case of linear encoders.
- For bit 29:
When the bit is set, the EnDat encoder is initialized under a certain speed and, therefore, with high accuracy. If initialization at a higher speed is requested, fault F31151, F32151, or F33151 is output.
- For bit 31:
When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0437[0...n]	Sensor Module configuration extended / SM config ext				
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin), ENC (Lin_enc)	Can be changed: C2(4)	Calculated: -	Access level: 3

Dependency:	Refer to: p0430, r0459				
Note:	A value of zero is displayed if an encoder is not present.				
	For bit 00:				
	When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.				
	For bit 01:				
	If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark.				
	For bit = 1, the zero mark is evaluated depending on the direction detected. For a positive direction, the positive edge of the zero mark is considered and for a negative direction, the negative edge of the zero mark.				
	For bit 02:				
	When the bit is set, for a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulse number is corrected. If the bit is not set, encoder fault F3x131 is triggered.				
	For bits 05, 04:				
	Bit 5/4 = 0/0: Signal evaluation per period, 4x.				
	Bit 5/4 = 1/0: Signal evaluation per period, 4x.				
	Bit 5/4 = 0/1: Signal evaluation per period, 1x.				
	Bit 5/4 = 1/1: Illegal setting.				
	For bit 06:				
	If the function is active, when dn/dt monitoring responds, the velocity actual value is internally frozen - for a time equivalent to two current controller sampling times. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.				
	For bit 07:				
	When the bit is not set, the incorrect pulses that have occurred up until now are accumulated in p4688.				
	When the bit is not set, p4688 indicates the incorrect pulses that have still not been corrected.				

For bit 29:

When the bit is set, the EnDat encoder is initialized under a certain velocity and, therefore, with high accuracy. If initialization at a higher velocity is requested, fault F31151, F32151, or F33151 is output.

For bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0438[0...n]	Square-wave encoder filter time / Enc t_filt		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 100.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.64 [µs]
Description:	Sets the filter time for a square-wave encoder. The hardware of the square-wave encoder only supports the following values: 0: No filtering 0.04 µs 0.64 µs 2.56 µs 10.24 µs 20.48 µs		
Dependency:	Refer to: r0452		
Notice:	If the filter time is too long, the track signals A/B/R may be suppressed and the appropriate messages output.		
Note:	The most suitable filter time depends on the number of pulses and maximum speed of the square-wave encoder. The filter time is automatically corrected to the next value when entering a non-specified value. In this case, no message is output. The effective filter time is displayed in r0452.		
p0439[0...n]	Encoder ramp-up time / Enc ramp-up time		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the ramp-up time for the encoder. The encoder supplies stable track signals once this time has elapsed.		
Dependency:	This function can only be used when a Sensor Module property is available (r0459.9 = 1).		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).		
p0440[0...n]	Copy encoder serial number / Copy enc ser_no		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Copies the actual serial number of the encoder belonging to this Encoder Data Set (EDS) to p0441 ... p0445. Example: For p0440[0] = 1, the serial number of the encoder belonging EDS0 is copied to p0441[0] ... p0445[0].		
Value:	0: No action 1: Transfer serial number		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464, p1990		

2 Parameters

2.2 List of parameters

Note: For encoders with serial number, encoder replacement is monitored in order to request angular commutation calibration (adjustment) for motor encoders and absolute calibration for direct measuring systems with absolute value data. The serial number, which from then onwards is used for monitoring purposes, can be transferred using p0440. Copying is automatically started in the following cases:

- 1.) When commissioning 1FT6, 1FK6, 1FK7 motors.
- 2.) When writing into p0431.
- 3.) For p1990 = 1.

p0440 is automatically set to 0 when the copying has been completed.
In order to permanently accept the copied values, it is necessary to save in a non-volatile fashion (p0977).

p0441[0...n]	Encoder commissioning serial number part 1 / Enc com ser_no 1

Dependency:	Refer to: p0440, p0441, p0442, p0443, p0444, r0460, r0461, r0462, r0463, r0464 Refer to: F07414		
Note:	A value of zero is displayed if an encoder is not present.		
p0446[0...n]	Encoder SSI number of bits before the absolute value / Enc SSI bit before		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the number of bits before the absolute value in the SSI protocol.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For example, error bit, alarm bit or parity bit can be positioned at these bits.		
p0447[0...n]	Encoder SSI number of bits absolute value / Enc SSI bit val		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 25
Description:	Sets the number of bits for the absolute value in the SSI protocol.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		

2 Parameters

2.2 List of parameters

p0448[0...n]	Encoder SSI number of bits after the absolute value / Enc SSI bit after		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the number of bits after the absolute value in the SSI protocol.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For example, error bit, alarm bit or parity bit can be positioned at these bits.		
p0449[0...n]	Encoder SSI number of bits filler bits / Enc SSI fill bits		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of filler bits for double absolute value transfer in the SSI protocol.		
Dependency:	Refer to: p0429		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	This parameter is only of significance for p0429.2 = 1.		
r0451[0...2]	Commutation angle factor / Enc commut_factor		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 4710 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the relationship between the electrical and mechanical pole positions.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Note:	A value of zero is displayed if an encoder is not present.		
r0452[0...2]	Square-wave encoder filter time display / Enc t_filt disp		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min - [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [µs]
Description:	Displays the effective filter time for a square-wave encoder. The filter time is set using p0438.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		

Dependency: Refer to: p0438
Note: A value of zero is displayed if an encoder is not present.

r0452 Square-wave encoder filter time display / Enc t_filt disp

ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [µs]	- [µs]	- [µs]

Description: Displays the effective filter time for a square-wave encoder.
The filter time is set using p0438.

Dependency: Refer to: p0438
Note: A value of zero is displayed if an encoder is not present.

p0453[0...n] Pulse encoder evaluation zero speed measuring time / Enc_ev n_0 t_meas

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [ms]	10000.00 [ms]	1000.00 [ms]

Description: Sets the measuring time for evaluating zero speed.
If no pulses are detected from track A/B during this time, a speed actual value of zero is output.

Dependency: Refer to: r0452
Note: This function is required for slow-running motors so that actual speeds close to zero can be output correctly.

p0454[0...n] Sensor Module configuration extended Part 2 / SM config ext 2

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 bin

Description: Sets the extended configuration Part 2 of the Sensor Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	04	Extended cyclic DRIVE-CLiQ telegram	Yes	No	-

Dependency: Refer to: r0457
Note: For bit 04:
The extended cyclic DRIVE-CLiQ telegram of the encoder should be used.
A power on is required after changing this setting.

r0455[0...2] Encoder configuration recognized / Enc_config recog

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the detected encoder configuration.
In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).

2 Parameters

2.2 List of parameters

Index:
 [0] = Encoder 1
 [1] = Encoder 2
 [2] = Encoder 3

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Linear encoder	Yes	No	-
	01	Absolute encoder	Yes	No	-
	02	Multiturn encoder	Yes	No	-
	03	Track A/B square-wave	Yes	No	-
	04	Track A/B sine	Yes	No	-
	05	Track C/D	Yes	No	-
	06	Hall sensor	Yes	No	-
	08	EnDat encoder	Yes	No	-
	09	SSI encoder	Yes	No	-
	10	DRIVE-CLiQ encoder	Yes	No	-
	11	Digital encoder	Yes	No	-
	12	Equidistant zero mark	Yes	No	-
	13	Irregular zero mark	Yes	No	-
	14	Distance-coded zero mark	Yes	No	-
	15	Commutation with zero mark (not ASM)	Yes	No	-
	16	Acceleration	Yes	No	-
	17	Track A/B analog	Yes	No	-
	20	Voltage level 5 V	Yes	No	-
	21	Voltage level 24 V	Yes	No	-
	22	Remote sense (only SMC30)	Yes	No	-
	23	Resolver excitation	Yes	No	-

Dependency: Refer to: p0404

Note: ZM: Zero mark

This parameter is only used for diagnostics.

A value of zero is displayed if an encoder is not present.

For bit 20, 21 (voltage level 5 V, voltage level 24 V):

The voltage level cannot be detected. Therefore, these bits are always set to 0.

r0455 Encoder configuration recognized / Enc_config recog

ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the detected encoder configuration.

In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Linear encoder	Yes	No	-
	01	Absolute encoder	Yes	No	-
	02	Multiturn encoder	Yes	No	-
	03	Track A/B square-wave	Yes	No	-
	04	Track A/B sine	Yes	No	-
	05	Track C/D	Yes	No	-
	06	Hall sensor	Yes	No	-
	08	EnDat encoder	Yes	No	-
	09	SSI encoder	Yes	No	-
	10	DRIVE-CLiQ encoder	Yes	No	-
	11	Digital encoder	Yes	No	-
	12	Equidistant zero mark	Yes	No	-
	13	Irregular zero mark	Yes	No	-
	14	Distance-coded zero mark	Yes	No	-
	15	Commutation with zero mark (not ASM)	Yes	No	-
	16	Acceleration	Yes	No	-
	17	Track A/B analog	Yes	No	-
	20	Voltage level 5 V	Yes	No	-

21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excitation	Yes	No	-

Dependency:

Refer to: p0404

Note:

ZM: Zero mark

This parameter is only used for diagnostics.

A value of zero is displayed if an encoder is not present.

For bit 20, 21 (voltage level 5 V, voltage level 24 V):

The voltage level cannot be detected. Therefore, these bits are always set to 0.

2.2 List of parameters

23	Commutation with zero mark can be deselected	Yes	No	-
24	Commutation with selected zero mark	Yes	No	-
25	Disconnection of encoder power supply on parking supported	Yes	No	-
26	Parking with temperature evaluation	Yes	No	-
27	SSI position value extrapolation	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Dependency:

Refer to: p0437, p0600, p0601

Note:

A value of zero is displayed if an encoder is not present.

For bit 11:

When the property is set, the following parameters can be changed without the actual value in the encoder interface becoming invalid (state r0481.14 = 1 "parking encoder active"):

p0314, p0315, p0430, p0431, p0441, p0442, p0443, p0444, p0445

For bit 12:

The extended functions can be configured using p0437.

For bit 13:

Encoder faults can be acknowledged via Gn_STW.15.

For bit 14:

Only for internal Siemens use.

For bit 23:

When the property is set, commutation with zero mark can be deselected using p0430.23.

For bit 24:

If the property is set, commutation to the selected zero mark can be carried out.

	06	Sensor Module permits parking/unparking	Yes	No	-
	07	Hall sensor can be combined with actual value inversion	Yes	No	-

2 Parameters

2.2 List of parameters

08	Evaluation through several temperature channels possible	Yes	No	-
09	Encoder fault and its associated information available	Yes	No	-
10	Speed diagnostics in the Sensor Module	Yes	No	-
11	Configuring without park state possible	Yes	No	-
12	Extended functions available	Yes	No	-
13	Extended encoder fault handling	Yes	No	-
14	Extended singleturn/multiturn information available	Yes	No	-
15	Evaluation function reserve	Yes	No	-
16	Pole position identification	Yes	No	-
17	Burst oversampling	Yes	No	-
18	Continuous oversampling	Yes	No	-
19	Safety position actual value sensing	Yes	No	-
20	Extended speed calculation being used (only SMC30)	Yes	No	-
21	Zero mark tolerance	Yes	No	-
22	Rotor position adaptation	Yes	No	-
23	Commutation with zero mark can be deselected	Yes	No	-
24	Commutation with selected zero mark	Yes	No	-
25	Disconnection of encoder power supply on parking supported	Yes	No	-
26	Parking with temperature evaluation	Yes	No	-
27	SSI position value extrapolation	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Dependency:

Refer to: p0437, p0600, p0601

Note:

A value of zero is displayed if an encoder is not present.

For bit 11:

When the property is set, the following parameters can be changed without the actual value in the encoder interface becoming invalid (state r0481.14 = 1 "parking encoder active"):

p0314, p0315, p0430, p0431, p0441, p0442, p0443, p0444, p0445

For bit 12:

The extended functions can be configured using p0437.

For bit 13:

Encoder faults can be acknowledged via Gn_STW.15.

For bit 14:

Only for internal Siemens use.

For bit 23:

When the property is set, commutation with zero mark can be deselected using p0430.23.

For bit 24:

If the property is set, commutation to the selected zero mark can be carried out.

2.2 List of parameters

r0475[0...2]	Gx_XIST1 coarse position safety most significant bit / Gx_XIST1 safe MSB		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Note:	MSB: Most Significant Bit		
r0475	Gx_XIST1 coarse position safety most significant bit / Gx_XIST1 safe MSB		
ENC	Can be changed: - Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.		
Note:	MSB: Most Significant Bit		
p0476[0...n]	Piston zero point calibration value / Piston 0 pt cal		
HLA	Can be changed: T Data type: Integer32 P-Group: Encoder Not for motor type: - Min -2147483648	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 2147483647	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the position offset to the piston zero point in fine pulses. The piston position is displayed in r0094.		
Dependency:	Refer to: r0094, p1909, p1959, p1960		
Note:	The calibration value can be determined using p1959/p1960 (automatic) or p1909 (manual).		
r0477[0...2]	CO: Measuring gear position difference / Meas gear pos diff		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Integer32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the position difference before the measuring gear between switching off and switching on.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: F31501, F32501, F33501		
Note:	The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.		

r0477	CO: Measuring gear position difference / Meas gear pos diff		
ENC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position difference before the measuring gear between switching off and switching on.		
Dependency:	Refer to: F31501, F32501, F33501		
Note:	The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.		

r0479[0...2]	CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics. In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Caution:	Following ramping-up or after a data set changeover, the new value is present at connector inputs which are interconnected to connector output r0479 and under certain circumstances take 100 ms to become available. Reason: These interconnections are updated in the background, unlike interconnections involving other connector outputs (e.g. CO: r0482). The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).		

r0479	CO: TM41 encoder emulation diagnostics Gn_XIST1 / Diag Gn_XIST1		
TM41	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 9674, 9676
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics. In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.		

r0479	CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics. In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.		

Caution:

Following ramping-up or after a data set changeover, the new value is present at connector inputs which are interconnected to connector output r0479 and under certain circumstances take 100 ms to become available.

Reason:

These interconnections are updated in the background, unlike interconnections involving other connector outputs (e.g. CO: r0482).

The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).

	09	Measuring probe 2 deflected	Yes	No	-
	11	Encoder fault acknowledge active	Yes	No	9676
	13	Absolute value cyclically	Displayed in r0483	No	-
	14	Parking encoder active	Yes	No	-
	15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: For bit 14:
Displays the acknowledgment for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid.
For bit 14, 15:
r0481.14 = 1 and r0481.15 = 0 can have one of the following causes:
- the encoder is parked.
- the encoder is deactivated.
- the encoder is being commissioned.
- no parameterized encoder available.
- encoder data set is being changed over.
r0481.14 = 1 and r0481.15 = 1 has the following significance:
An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

r0481 CO: TM41 encoder emulation status word Gn_ZSW / Enc Gn_ZSW

2 Parameters

2.2 List of parameters

Note: For p4401 = 0, the following applies:
 For Terminal Module 41 (TM41), this value is used to interconnect with standard telegram 3 and is always zero.
 For p4401 = 1, the following applies:
 r0481.0 indicates as to whether the zero mark synchronization is active.
 r0481.4 indicates whether the zero mark of the incremental encoder was found.
 r0481.14 indicates whether the output of track A/B is activated.

r0481 CO: Encoder status word Gn_ZSW / Enc Gn_ZSW

 5: DI/DO 14 (X132.12/X131.4)
 6: DI/DO 15 (X132.13/X131.5)
 7: DI/DO 8 (X122.9/X121.7)
 8: DI/DO 12 (X132.9/X131.1)
 50: DI/DO 0 distributed (X3.2)
 51: DI/DO 1 distributed (X3.4)

Index: [0] = Encoder 1
 [1] = Encoder 2
 [2] = Encoder 3

Dependency: Refer to: p0488, p0490, p0728

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: Regarding the terminal designation:
 The first designation is valid for CU320-2, the second for CU310-2.
 To select the values:

For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output

The terminal must be set as input (p0728).

Refer to the encoder interface for PROFIdrive.

If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

Notice:	To select the values: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual). Regarding the terminal designation: The first designation is valid for CU320-2, the second for CU310-2.			
Note:	The terminal must be set as input. When the measuring probe or the equivalent zero mark is inverted, this has no effect on the status displays of the digital inputs (r0721, r0722, r0723). DI/DO: Bidirectional Digital Input/Output			

p0491	Motor encoder fault response ENCODER / Fault resp ENCODER			
HLA, TM41	Can be changed: T Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 6	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the behavior for the ENCODER fault response (motor encoder). This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.			
Value:	0: Encoder fault results in OFF2 1: Enc fault results in encoderless oper. and oper. continues 2: Encoder fault results in encoderless operation and OFF1 3: Encoder fault results in encoderless operation and OFF3 4: Encoder fault results in an armature short-cct int/DC braking 5: Enc fault results in encoderless op, operation continues, alarm 6: An encoder fault results in encoderless operation, alarm			
Dependency:	The following parameters are relevant for encoderless operation. Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755 Refer to: F07575			
Caution:	For a value = 1, 2, 3, 5, 6 the following applies: - encoderless operation must have been started. - if, for synchronous motors, an encoder fault occurs below the switchover speed p1755, when switching over to encoderless operation, the motor can stall. For a value = 1, 5, 6, the following applies: - in spite of the motor encoder fault that has occurred, the motor continues to operate.			

- Note:** For a value = 1, 2, 3, 5, 6 the following applies:
- Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).
 - if, with r1407.13 = 1, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop/closed-loop control mode p1300 of this data set must match that of the original data set (e.g. p1300 = 21). Encoderless closed-loop controlled operation is kept when changing over.
- For a value = 4, the following applies:
- the value can only be set for all motor data sets when p1231 = 3, 4.
 - For synchronous motors, an armature short circuit is initiated on an encoder fault.
 - For induction motors, DC braking is initiated on an encoder fault. DC braking must be commissioned (p1232, p1233, p1234).
- For a value = 5, 6 the following applies:
- Same function as for value = 1.
- However, faults are output as alarm and the message bit "Fault active" (r2139.3) is not set. The encoder fault has to be acknowledged via the encoder interface in order to resume operation with encoder.
- For a value 6, the following applies:
- The drive can be switched on again even with encoder malfunction - except for a topology error.

p0491		Motor encoder fault response ENCODER / Fault resp ENCODER	
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).
This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

Value:

- 0: Encoder fault results in OFF2
- 1: Enc fault results in encoderless oper. and oper. continues
- 2: Encoder fault results in encoderless operation and OFF1
- 3: Encoder fault results in encoderless operation and OFF3
- 4: Encoder fault results in an armature short-cct int/DC braking
- 5: Enc fault results in encoderless op, operation continues, alarm
- 6: An encoder fault results in encoderless operation, alarm

Dependency: The following parameters are relevant for encoderless operation.
Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755
Refer to: A07532, F07575

Caution: For a value = 1, 2, 3, 5, 6 the following applies:

- encoderless operation must have been started. When doing this, the following parameters must be set: p1612, p1498, p1451, p1470, p1472, p0642.
- if, for synchronous motors, an encoder fault occurs below the switchover speed p1755, when switching over to encoderless operation, the motor can stall.

For a value = 1, 5, 6, the following applies:

- in spite of the motor encoder fault that has occurred, the motor continues to operate.

Note: For a value = 1, 2, 3, 5, 6 the following applies:

- for encoderless operation the following condition must be fulfilled: $p1800 \geq 1 / (4 * p0115[0])$
- Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).
- if, with $r1407.13 = 1$, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop/closed-loop control mode p1300 of this data set must match that of the original data set (e.g. $p1300 = 21$). Encoderless closed-loop controlled operation is kept when changing over.

For a value = 4, the following applies:

- the value can only be set for all motor data sets when $p1231 = 3, 4$.
- For synchronous motors, an armature short circuit is initiated on an encoder fault.
- For induction motors, DC braking is initiated on an encoder fault. DC braking must be commissioned ($p1232, p1233, p1234$).

For a value = 5, 6 the following applies:

Same function as for value = 1.

However, faults are output as alarm and the message bit "Fault active" (r2139.3) is not set. The encoder fault has to be acknowledged via the encoder interface in order to resume operation with encoder.

For a value 6, the following applies:

The drive can be switched on again even with encoder malfunction - except for a topology error.

p0491	Motor encoder fault response ENCODER / Fault resp ENCODER		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).
This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

Value:

- 0: Encoder fault results in OFF2
- 1: Enc fault results in encoderless oper. and oper. continues
- 2: Encoder fault results in encoderless operation and OFF1
- 3: Encoder fault results in encoderless operation and OFF3
- 4: Encoder fault results in an armature short-cct int/DC braking
- 5: Enc fault results in encoderless op, operation continues, alarm
- 6: An encoder fault results in encoderless operation, alarm

Dependency: The following parameters are relevant for encoderless operation.
Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755
Refer to: F07575

Caution: For a value = 1, 2, 3, 5, 6 the following applies:

- encoderless operation must have been started.

For a value = 1, 5, 6, the following applies:

- the motor continues to operate in spite of the incorrect motor encoder function.

Note: For a value = 1, 2, 3, 5, 6 the following applies:

- Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).
- if, with $r1407.13 = 1$, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop/closed-loop control mode p1300 of this data set must match that of the original data set (e.g. $p1300 = 21$). Encoderless closed-loop controlled operation is kept when changing over.

For a value = 4, the following applies:

- the value can only be set for all motor data sets when $p1231 = 3, 4$.
- for permanent magnet synchronous motors, an armature short circuit is initiated when an encoder fault occurs.
- For induction motors, DC braking is initiated on an encoder fault. DC braking must be commissioned ($p1232, p1233, p1234$).

For a value = 5, the following applies:

Same function as for value = 1.

However, in operation, encoder malfunctions that occur are only output as alarm and the message bit "Fault active" (r2139.3) is not set. Fault F07575 is set after the drive axis has been shut down.

The active malfunction of the encoder must be acknowledged via the encoder interface before the system can be switched on again.

For a value = 6, the following applies:

Same function as for value = 1.

Encoder malfunctions that occur are only output as alarm and the message bit "Fault active" (r2139.3) is not set.

After shutting down the drive axis, in spite of an active encoder malfunction, the drive can restart without switching over to encoderless operation (except if an active topology error is involved).

The active encoder malfunction must be acknowledged via the encoder interface before operation can be resumed for operation with the encoder.

p0492	Square-wave encoder max. velocity difference per sampling cycle / v_dif max/samp_cyc		
HLA	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	210000.00 [m/min]	0.00 [m/min]
Description:	Sets the maximum permissible speed difference between two computing cycles when square-wave encoders are evaluated. The drive is switched off if this value is exceeded.		
Dependency:	Refer to: F31118, A31418, F32118, A32418, F33118, A33418		
Note:	The velocity change monitoring is deactivated for a value = 0.0. If the set maximum velocity difference is only exceeded for one sampling time, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.		

p0492	Square-wave encoder maximum speed difference per sampling cycle / n_dif max/samp_cyc		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the maximum permissible speed difference within the current controller sampling time for square-wave encoders. When the value is exceeded, depending on p0491, either encoderless closed-loop speed/torque control is selected or the drive is switched off.		
Dependency:	Refer to: F31118, A31418, F32118, A32418, F33118, A33418		
Note:	For a value of 0.0, the speed change monitoring is disabled. if the set maximum speed difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output. The speed actual value used for the monitoring is a floating average between p0115[0] and p0115[1].		

p0492	Square-wave encoder max. velocity difference per sampling cycle / v_dif max/samp_cyc		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [m/min]	Calculated: CALC_MOD_REG Dyn. index: - Unit group: - Scaling: - Max 1000.00 [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [m/min]
Description:	Sets the maximum permissible speed difference between two computing cycles when square-wave encoders are evaluated. When the value is exceeded, depending on p0491, either encoderless closed-loop velocity/force control is selected or the drive is switched off.		
Dependency:	Refer to: F31118, A31418, F32118, A32418, F33118, A33418		
Note:	For a value of 0.0, velocity change monitoring is disabled. When half of the parameter value is exceeded, an alarm is already generated and the velocity change is limited to this.		

p0492	Maximum speed difference per sampling cycle / n_dif max/samp_cyc		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_REG Dyn. index: - Unit group: - Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the maximum permissible speed difference within the current controller sampling time.		
Dependency:	Refer to: r1408 Refer to: F07902, F31118, A31418, F32118, A32418, F33118, A33418		
Note:	For a value of 0.0, the speed change monitoring is disabled. The following applies for square-wave encoders: If the speed difference exceeds the threshold value p0492, depending on p0491, either encoderless closed-loop speed/torque control is selected or the drive is switched off with fault F3x118. The following applies for other speed encoders: If the speed difference exceeds threshold value p0492, in order to avoid subsequent faults, the old speed actual value is kept and after time p2178 shut down with fault F07902 (motor stalled).		

p0492	Square-wave encoder maximum speed difference per sampling cycle / n_dif max/samp_cyc

	211: DI 1 (X130 / 1.5)

Dependency: Refer to: p0490

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
Regarding the terminal designation:

The first designation is valid for CU320-2, the second for CU310-2.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input (p0728).

For p0493 = 0 (factory setting) the following applies:

- there is no logic operation between the reference mark search and an input signal.

For p0493 > 0, the following applies:

- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.

- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

Expert list: 1

Min

Max

Factory setting

0

8

0

Description:

Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:

0:	No equivalent zero mark (evaluation of the encoder zero mark)
1:	DI/DO 9 (X122.10/X121.8)
2:	DI/DO 10 (X122.12/X121.10)
3:	DI/DO 11 (X122.13/X121.11)
4:	DI/DO 13 (X132.10/X131.2)
5:	DI/DO 14 (X132.12/X131.4)
6:	DI/DO 15 (X132.13/X131.5)
7:	DI/DO 8 (X122.9/X121.7)
8:	DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0490

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

For p0494 = 0 (factory setting), the setting in p0495 is effective.

Regarding the terminal designation:

The first designation is valid for CU320-2, the second for CU310-2.

Note:

Refer to the encoder interface for PROFIdrive.

The terminal must be set as input.

Caution:	In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.			
				

- Notice:** For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
For p0494 > 0, the setting in p0494 is effective and p0495 is invalid.
Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.
- Note:** Refer to the encoder interface for PROFIdrive.
The terminal must be set as input.
For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.
For p0495 > 0, the following applies:
Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.
- increasing position actual values (r0482) --> the 0/1 edge is evaluated.
- decreasing position actual values (r0482) --> the 1/0 edge is evaluated.
Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in a fault message in Gn_ZSW.
The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.
An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark.
Exception:
Simultaneous use as measuring probe and equivalent zero mark is possible for the same encoder, as both functions cannot be simultaneously requested.

p0495[0...2]	Equivalent zero mark input terminal / ZM_equiv input

	100	103	100
Description:	Sets the technology application. The parameter influences the calculation of open-loop and closed-loop control parameters that is initiated using p0578, for example.		
Value:	100: Standard drive (SERVO) 101: Feed drive (limit current limitation) 102: Spindle drive (rated current limitation) 103: Feed drive (maximum power limiting)		
Dependency:	Refer to: p1520, p1521, p1530, p1531, p2000, p2175, p2177		

2 Parameters

2.2 List of parameters

Caution:

After changing over the technological application and then calculating the open-loop and closed-loop parameters, the behavior of the motor can have changed very significantly (e.g. the same setpoint results in a higher speed due to a different reference speed). For this reason extreme caution must be taken when the motor is started for the first time.

Note:

The calculation of parameters dependent on the technology application can be called up as follows:

- when exiting quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5
- when writing p0578 = 1

For p0500 = 100 and when the calculation is initiated, the following parameters are set:

- p1520/p1521 = rated motor torque (r0333)
- p1530/p1531 = $2 * \pi * r0333 * p0311$ (rotary) or $r0333 * p0311$ (linear)
- p2000 = rated motor speed (p0311) (only for p0340 = 1, p3900 > 0)
- p2175 = factory setting
- p2177 = factory setting

For p0500 = 101 and when the calculation is initiated, the following parameters are set:

- p1520/p1521 = torque at the maximum motor current (p0323)
- p1530/p1531 = power at the maximum motor current (p0323) and rated motor speed (p0311)
- p2000 = rated motor speed (p0311) (only for p0340 = 1, p3900 > 0)
- p2175 = maximum value
- p2177 = 0.2 s

For p0500 = 102 and when the calculation is initiated, the following parameters are set:

- p1520/p1521 = rated motor torque (r0333)
- p1530/p1531 = $2 * \pi * r0333 * p0311$ (rotary) or $r0333 * p0311$ (linear)
- p2000 = maximum motor speed (p0322) if p0322 not equal to 0, otherwise rated motor speed (p0311) (only for p0340 = 1, p3900 > 0)
- p2175 = factory setting
- p2177 = factory setting

For p0500 = 103 and when the calculation is initiated, the following parameters are set:

- p1520/p1521 = torque at the maximum motor current (p0323)
- p1530/p1531 = power at the maximum motor current (p0323) and rated motor speed (p0311)
- p2000 = maximum motor speed (p0322) if p0322 not equal to 0, otherwise rated motor speed (p0311) (only for p0340 = 1, p3900 > 0)
- p2175 = factory setting
- p2177 = factory setting

0

6

1

Description:

Sets the technology application.

The parameter influences the calculation of open-loop and closed-loop control parameters that is initiated using p0578, for example.

Value:

- 0: Standard drive (VECTOR)
- 1: Pumps and fans
- 2: Sensorless closed-loop control down to $f = 0$ (passive loads)
- 4: Dynamic in the field weakening range
- 5: Starting with a high break loose torque
- 6: High load moment of inertia

Dependency:

Refer to: p2175, p2177

Note:

The calculation of parameters dependent on the technology application can be called up as follows:

- when exiting quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5 (for p0500 = 6: p0340 = 1, 3, 4)
- when writing p0578 = 1

For p0500 = 0 and when the calculation is initiated, the following parameters are set:

- p1574 = 10 V (separately excited synchronous motor: 20 V)
- p1750.2 = 0
- p1802 = 4 (SVM/FLB without overcontrol)
- p1803 = 106 %
- p1610 = 50 %
- p1611 = 30 %
- p1310 = 50 %
- p1311 = 0 %
- p1381 = 0 %

For p0500 = 1 and when the calculation is initiated, the following parameters are set:

- p1574 = 2 V (separately excited synchronous motor: 4 V)
- p1750.2 = 0
- p1802 = 9 (edge modulation), if r0192.0 = 1
- p1802 = 4, if r0192.0 = 0
- p1803 = 106 %
- p1310, p1311, p1381, p1611, p1610 the same as for p0500 = 0

For p0500 = 2 and when the calculation is initiated, the following parameters are set:

- p1574 = 2 V (separately excited synchronous motor: 4 V)
- p1750.2 = 1: Encoderless control of the induction motor is effective down to zero frequency.

This operating mode is possible for passive loads. These include applications where the load does not generate regenerative torque when breaking away and the motor comes to a standstill (zero speed) itself when the pulses are inhibited.

- p1802, p1803, p1310, p1311, p1381, p1610, p1611 the same as for p0500 = 0

The setting of p1750 is only relevant for induction motors.

p1802 and p1803 are only changed, in all cases, if a sine-wave output filter (p0230 = 3, 4) has not been selected.

For p0500 = 4: (presetting for VECTOR with PM250 power unit)

- p1574 = 30 V
- p1750.2 = 0
- p1802 = 2 (SVM with overcontrol)
- p1803 = 106 %
- p1381 = 6 % (to avoid overcontrol)
- p1654 = p0115[1]
- p1402.11 = 1
- p1310, p1311, p1610, p1611 the same as for p0500 = 0

For p0500 = 5: (for speed-controlled starting for vector control without encoder)

- p1574, p1750.2, p1802, p1803, p1381 the same as for p0500 = 0
- p1610 = 80 % (separately excited synchronous motor: 50 %)
- p1611 = 80 % (separately excited synchronous motor: 50 %)
- p1310 minimum 80%
- p1311 at least 30 %

For p0500 = 6: (for high moments of inertia with/without gearbox coupling)

- p1574, p1750.2, p1802, p1803, p1610, p1611, p1310, p1311 the same as for p0500 = 0

The following settings change the speed control for p0340 = 1, 3, 4

They are only reset using p0340 = 1 or p3900 > 0.

- p0342 = 10 (motor moment of inertia factor, if previously p0342 = 1)

The real factor can be entered in the commissioning tool.

- p1400.20 = 1 (acceleration model)
- p1441, p1442, p1452 calculated
- p1496 = 100 %
- p1959.14 = 1 (speed actual value smoothing is calculated)
- p1967 = 80 %

2 Parameters

2.2 List of parameters

The following settings are only reset again using p3900 = 1.

- p1115 = 1

- p1130, p1131 ramp-function generator rounding calculated from p1120, p1121 and r0345.

The moment of inertia estimator (p1400.18, p5310) can be activated, depending on the specific application, to adaptively determine the load moment of inertia in operation.

p0505		Selecting the system of units / Unit sys select		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41, ENC	Can be changed: C2(5) Data type: Integer16 P-Group: Applications Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1	
Description:	Sets the actual system of units.			
Value:	1: SI system of units 2: System of units referred/SI 3: US system of units 4: System of units referred/US			
Dependency:	The parameter can only be changed in an offline project using the commissioning tool.			
Caution:	If a per unit representation is selected and if the reference parameters (e.g. p2000) are subsequently changed, then the physical significance of several control parameters is also adapted at the same time. As a consequence, the control behavior can change (see p1576, p1621, p1744, p1752, p1755 and p1609, p1612, p1619, p1620).			
				
Note:	Reference parameter for the unit system % are, for example, p2000 ... p2004. Depending on what has been selected, these are displayed using either SI or US units.			

p0514[0...9]		Scaling-specific reference values / Scal spec ref val		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0.000001	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 10000000.000000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000000	
Description:	Sets the reference values for the specific scaling of BICO parameters. The specific scaling is active when interconnecting with other BICO parameters, and can be used in the following cases: <ol style="list-style-type: none"> Parameter with the marking "Scaling: p0514". Changing the standard scaling for parameters with the marking "Scaling: p2000" ... "Scaling: p2007". Relative values refer to the corresponding reference value. The reference value corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). To specifically scale BICO parameters, proceed as follows: <ul style="list-style-type: none"> - set the reference value (p0514[0...9]). - set the numbers of the parameters, which should be active for the scaling, corresponding to the index of p0514 (p0515[0...19] ... p0524[0...19]). For parameters with the marking "Scaling: p0514", which are not entered in p0515[0...19] to p0524[0...19], the reference value 1.0 (factory setting) applies.			
Index:	[0] = Parameters in p0515[0...19] [1] = Parameters in p0516[0...19] [2] = Parameters in p0517[0...19] [3] = Parameters in p0518[0...19] [4] = Parameters in p0519[0...19] [5] = Parameters in p0520[0...19] [6] = Parameters in p0521[0...19] [7] = Parameters in p0522[0...19] [8] = Parameters in p0523[0...19] [9] = Parameters in p0524[0...19]

p0523[0...19] Scaling specific parameters referred to p0514[8] / Scal spec p514[8]			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 P-Group: Communications Not for motor type: - Min 0	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the parameters with reference value in p0514[8] for the specific scaling. p0523[0]: parameter number p0523[1]: parameter number p0523[2]: parameter number ... p0523[19]: parameter number		
Dependency:	Refer to: p0514		

p0524[0...19]	Scaling specific parameters referred to p0514[9] / Scal spec p514[9]		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 P-Group: Communications Not for motor type: - Min 0	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the parameters with reference value in p0514[9] for the specific scaling. p0524[0]: parameter number p0524[1]: parameter number p0524[2]: parameter number ... p0524[19]: parameter number		
Dependency:	Refer to: p0514		

p0528	Controller gain system of units / Ctrl_gain unit_sys		
SERVO, HLA, SERVO_AC, SERVO_I_AC, TM41, ENC	Can be changed: C2(5) Data type: Integer16 P-Group: Applications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the system of units for the controller gains.		
Value:	0: Representation physical/% (p0505) 1: Representation no dimensions (referred)		
Note:	The parameter is pre-assigned a value of 0 and cannot be changed.		

p0528	Controller gain system of units / Ctrl_gain unit_sys		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(5) Data type: Integer16 P-Group: Applications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the system of units for the controller gains.		
Value:	0: Representation physical/% (p0505) 1: Representation no dimensions (referred)		
Note:	For VECTOR (r0107) the following applies: The parameter is pre-assigned a value of 1 and cannot be changed.		

p0530[0...n]	Bearing version selection / Bearing vers sel		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1, 3) Data type: Unsigned16 P-Group: Motor Not for motor type: SESM Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 104	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the bearing version. Corresponding to the bearing version entered, its code number (p0531) is automatically set. 0 = No data 1 = Manual entry 101 = STANDARD 102 = PERFORMANCE 103 = HIGH PERFORMANCE 104 = ADVANCED LIFETIME		
Dependency:	Refer to: p0301, p0531, p0532, p1082		
Notice:	For p0530 = 101, 102, 103, 104, the maximum bearing speed (p0532) is write protected. Write protection is withdrawn with p0530 = 1. If p0530 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.		
Note:	For a motor with DRIVE-CLiQ, p0530 can only be set to 1.		
p0531[0...n]	Bearing code number selection / Bearing codeNo sel		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 65535	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Display and setting the code number of the bearing. When setting p0301 and p0530 the code number is automatically pre-assigned and is write protected. The information in p0530 should be observed when removing write protection.		
Dependency:	Refer to: p0301, p0530, p0532, p1082		
Notice:	If p0531 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.		
Note:	p0531 cannot be changed on a motor with DRIVE-CLiQ.		
p0532[0...n]	Bearing maximum speed / Bearing n_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [rpm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 210000.0 [rpm]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [rpm]
Description:	Sets the maximum speed of the bearing. The following applies when calculating the maximum speed (p1082): - for p0324 = 0 or p0532 = 0, p0322 is used. - for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0301, p0322, p0324, p0530, p1082		

2 Parameters

2.2 List of parameters

Notice: This parameter is pre-assigned in the case of motors from the motor list (p0301) if a bearing version (p0530) is selected.

When selecting a catalog motor, this parameter cannot be changed (write protection). The information in p0530 should be observed when removing write protection.

If p0532 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).

p0532[0...n]	Bearing maximum velocity / Bearing v_max		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [m/min]	1300.0 [m/min]	0.0 [m/min]
Description:	Sets the maximum velocity of the bearing.		
	The following applies when calculating the maximum velocity (p1082):		
	- for p0324 = 0 or p0532 = 0, p0322 is used.		
	- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0301, p0322, p0324, p0530, p1082		
Notice:	This parameter is pre-assigned in the case of motors from the motor list (p0301) if a bearing version (p0530) is selected.		
	When selecting a catalog motor, this parameter cannot be changed (write protection). The information in p0530 should be observed when removing write protection.		
	If p0532 is changed during quick commissioning (p0010 = 1), then the maximum velocity p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).		

p0532[0...n]	Bearing maximum speed / Bearing n_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the maximum speed of the bearing.		
	The following applies when calculating the maximum speed (p1082):		
	- for p0324 = 0 or p0532 = 0, p0322 is used.		
	- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0301, p0322, p0324, p0530, p1082		
Notice:	This parameter is pre-assigned in the case of motors from the motor list (p0301) if a bearing version (p0530) is selected.		
	When selecting a catalog motor, this parameter cannot be changed (write protection). The information in p0530 should be observed when removing write protection.		
	If p0532 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).		

p0541[0...n]	Load gearbox code number / Load grbx code no		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: Unsigned32 P-Group: Motor Not for motor type: ASM, SESM, REL, RESM	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1
	Min 0	Max 4294967295	Factory setting 1
Description:	Display and setting the code number for the load gearbox. 0 = No data 1 = Manual entry > 1 = valid code number If value = 0: - parameters listed under Dependent are set to a value of zero and are write protected. If value = 1: - write protection for the parameters listed under Dependent is withdrawn. If value > 1: - parameters listed under Dependent are automatically preassigned and are write protected.		
Dependency:	Refer to: p0542, p0543, p0544, p0545, p0546, p0547		
Note:	A code number that does not exist cannot be set.		
p0542[0...n]	Load gearbox maximum speed / Load grbx n_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL, RESM	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1
	Min 0.0 [rpm]	Max 210000.0 [rpm]	Factory setting 0.0 [rpm]
Description:	Sets the maximum permissible input speed at the load gearbox. When calculating the maximum speed (p1082) in quick commissioning (p0010 = 1), the following applies: - for p0542 = 0, this parameter has no effect. The maximum speed from p0322 is used. - for p0542 > 0, the maximum speed (p0322) is limited by p0542.		
Notice:	After entering a corresponding code number (p0541), this parameter is automatically preassigned and write protected. The information in p0541 should be observed when removing write protection.		
p0543[0...n]	Load gearbox maximum torque / Load grbx M_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL, RESM	Calculated: - Dyn. index: MDS, p0130 Unit group: 7_4 Scaling: -	Access level: 2 Func. diagram: - Unit selection: p0100 Expert list: 1
	Min 0.00 [Nm]	Max 1000000.00 [Nm]	Factory setting 0.00 [Nm]
Description:	Sets the maximum permissible input torque at the load gearbox. When calculating the upper/motoring torque limit (p1520) and the lower/generating torque limit (p1521) in quick commissioning (p0010 = 1), then the following applies: - for p0543 = 0, the values in p1520/p1521 remain unchanged. - for p0543 > 0, the torque limits (r1538, r1539) are limited by p0543.		
Notice:	After entering a corresponding code number (p0541), this parameter is automatically preassigned and write protected. The information in p0541 should be observed when removing write protection.		

2 Parameters

2.2 List of parameters

p0544[0...n]	Load gearbox overall ratio numerator / Load grbx ratio N		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: Integer32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2147483647	0
Description:	Sets the numerator for the overall ratio (absolute value) of the load gearbox.		
Notice:	After entering a corresponding code number (p0541), this parameter is automatically preassigned and write protected. The information in p0541 should be observed when removing write protection.		
p0545[0...n]	Load gearbox overall ratio denominator / Load grbx ratio D		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: Integer32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2147483647	0
Description:	Sets the denominator for the overall ratio (absolute value) of the load gearbox.		
Notice:	After entering a corresponding code number (p0541), this parameter is automatically preassigned and write protected. The information in p0541 should be observed when removing write protection.		
p0546[0...n]	Load gearbox direction of rotation inversion / Load grbx dir inv		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: Integer32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2147483647	0
Description:	Setting to invert the direction of rotation of the load gearbox. Value = 0: no inversion Value = 1: inversion		
Notice:	After entering a corresponding code number (p0541), this parameter is automatically preassigned and write protected. The information in p0541 should be observed when removing write protection.		
p0547[0...n]	Load gearbox moment of inertia / Load grbx m_inert		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 25_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000000 [kgm ²]	100000.000000 [kgm ²]	0.000000 [kgm ²]
Description:	Sets the load gearbox moment of inertia.		
Notice:	After entering a corresponding code number (p0541), this parameter is automatically preassigned and write protected. The information in p0541 should be observed when removing write protection.		
Note:	For a manual input (p0541 = 1), the value to be set is rejected if this entry were to lead to a ratio between the total moment of inertia and the motor of less than 1 (p0342 < 1). In this case, the gearbox data should be reset using p0541 = 0, and re-entered (p0541 = 0 results in p0342 = 1).		

p0550[0...n]	Brake version / Brake version		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: Integer16 P-Group: Motor Not for motor type: SESM, REL, RESM Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 2	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the brake version.		
Value:	0: No data 1: Holding brake 2: High performance holding brake		
Notice:	After entering a corresponding code number (p0551), this parameter is automatically preassigned and write protected. The information in p0551 should be observed when removing write protection.		
Note:	For p0550 = 1: The default value for opening time/closing time applies. For p0550 = 2: A shorter opening time/closing time is realized if the power unit supports the function.		
p0551[0...n]	Brake code number / Brake code no		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: Unsigned32 P-Group: Motor Not for motor type: SESM, REL, RESM Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 4294967295	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Display and setting the code number for the brake. 0 = No data 1 = Manual entry > 1 = valid code number If value = 0: - parameters listed under Dependent are set to a value of zero and are write protected. - parameters p1216, p1217 are set to a value of zero. If value = 1: - write protection for the parameters listed under Dependent is withdrawn. If value > 1: - parameters listed under Dependent are automatically preassigned and are write protected. - parameters p1216, p1217 are automatically appropriately preassigned.		
Dependency:	Refer to: p0550, p0552, p0553		
Note:	Only code numbers can be set that are permitted for the selected motor code (p0301).		
p0552[0...n]	Maximum brake speed / Brake n_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL, RESM Min 0.0 [rpm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 210000.0 [rpm]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [rpm]
Description:	Sets the maximum permissible brake speed. When calculating the maximum speed (p1082) in quick commissioning (p0010 = 1), the following applies: - for p0552 = 0, this parameter has no effect. The maximum speed from p0322 is used. - for p0552 > 0, the maximum speed (p0322) is limited by p0552.		
Notice:	After entering a corresponding code number (p0551), this parameter is automatically preassigned and write protected. The information in p0551 should be observed when removing write protection.		

2 Parameters

2.2 List of parameters

p0553[0...n]	Brake holding torque / Brake M_hold		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL, RESM Min 0.00 [Nm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 7_4 Scaling: - Max 1000000.00 [Nm]	Access level: 2 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.00 [Nm]
Description:	Sets the brake holding torque.		
Notice:	After entering a corresponding code number (p0551), this parameter is automatically preassigned and write protected. The information in p0551 should be observed when removing write protection.		
p0554[0...n]	Brake moment of inertia / Brake m_inert		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL, RESM Min - [kgm ²]	Calculated: - Dyn. index: MDS, p0130 Unit group: 25_1 Scaling: - Max - [kgm ²]	Access level: 2 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting - [kgm ²]
Description:	Sets the brake moment of inertia.		
Notice:	After entering a corresponding code number (p0551), this parameter is automatically preassigned and write protected. The information in p0551 should be observed when removing write protection.		
Note:	For a manual input (p0551 = 1), the value to be set is rejected if this entry were to lead to a ratio between the total moment of inertia and the motor of less than 1 (p0342 < 1). In this case, the brake data should be reset using p0551 = 0, and re-entered (p0551 = 0 results in p0342 = 1).		
r0565[0...15]	CO: Probe time stamp / Probe t_stamp		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for the time stamp MT_ZS_1 up to MT_ZS_16. Displays the measuring time for an edge at the digital input for the "central measuring probe evaluation stage 3" function. The measuring time is specified as 16-bit value with a resolution of 0.25 µs. Priority: MT1 ... MT8, oldest ... newest time stamp		
r0566[0...3]	CO: Probe time stamp reference / Probe t_stamp name		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for the time stamp reference MT_ZSB1 up to MT_ZSB4.		

r0567	CO: Probe diagnostics word / Probe diag_word		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for diagnostics word MT_DIAG.		
p0570	Inhibit list values effective number / Inhib list no		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Unsigned8 P-Group: Applications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 50	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the number of parameters in the inhibit list p0571. This number of parameters can be automatically excluded from the calculation of the motor and control parameters (see p0340, p0578), starting from index 0.		
Note:	Defines the number of entries in p0571 that should be taken into account. The inhibit list is deactivated for a value of 0.		
p0571[0...49]	Inhibit list motor/closed-loop control parameter calculation / Inhib list calc		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Applications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2142	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The inhibit list contains parameters that should be withdrawn from the automatic motor and closed-loop control parameter calculation (p0340, p0578).		
Value:	0: No parameter 348: Speed at the start of field weakening Vdc = 600 V 600: Motor temperature sensor 640: Current limit 1082: Maximum speed 1441: Actual speed smoothing time 1460: Speed controller P gain 1462: Speed controller integral time 1470: Speed controller P gain encoderless 1472: Speed controller integral time encoderless 1520: Torque limit upper/motoring 1521: Torque limit lower/regenerative 1530: Power limit motoring 1531: Power limit regenerative 1590: Flux controller P gain 1592: Flux controller integral time 1656: Activates current setpoint filter 2141: Speed threshold 1 2142: Hysteresis speed 1		
Note:	Parameter p0570 defines the number of entries (starting at index 0) in the inhibit list. p0572 can be used to define for which drive data sets the inhibit list should apply. If a motor data set is entered into a parameter number, then this is not overwritten as soon as only one drive data set refers to the motor data set (p0186).		

p0571[0...49]	Inhibit list motor/closed-loop control parameter calculation / Inhib list calc		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2142	0
Description:	The inhibit list contains parameters that should be withdrawn from the automatic motor and closed-loop control parameter calculation (p0340, p0578).		
Value:	0: No parameter 600: Motor temperature sensor 640: Current limit 1082: Maximum speed 1460: Speed controller P gain 1462: Speed controller integral time 1470: Speed controller P gain encoderless 1472: Speed controller integral time encoderless 1520: Torque limit upper/motoring 1521: Torque limit lower/regenerative 1530: Power limit motoring 1531: Power limit regenerative 1590: Flux controller P gain 1592: Flux controller integral time 2141: Speed threshold 1 2142: Hysteresis speed 1		
Note:	Parameter p0570 defines the number of entries (starting at index 0) in the inhibit list. p0572 can be used to define for which drive data sets the inhibit list should apply. If a motor data set is entered into a parameter number, then this is not overwritten as soon as only one drive data set refers to the motor data set (p0186).		

p0572[0...n]	Activate/deactivate inhibit list / Inh_list act/deact		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting for activating/deactivating the inhibit list. Depending on the setting, the parameters of the inhibit list (p0571) should be overwritten when calculating the motor and closed-loop control parameters for the particular drive data set (DDS).		
Value:	0: No 1: Yes		
Note:	If value = 0: The automatic calculation (p0340, p0578) also overwrites the parameters of the inhibit list (p0571). If value = 1: The automatic calculation (p0340, p0578) does not overwrite the parameters of the inhibit list (p0571).		

p0573	Inhibit automatic reference value calculation / Inhibit calc		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF, TM41	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to inhibit the calculation of reference parameters (e.g. p2000) when automatically calculating the motor and closed-loop control parameters (p0340, p3900).		

Value:	0: No 1: Yes
Notice:	The inhibit for the reference value calculation is canceled when new motor parameters (e.g. p0305) are entered and only one drive data set exists (p0180 = 1). This is the case during initial commissioning. Once the motor and control parameters have been calculated (p0340, p3900), the inhibit for the reference value calculation is automatically re-activated.
Note:	If value = 0: The automatic calculation (p0340, p3900) overwrites the reference parameters. If value = 1: The automatic calculation (p0340, p3900) does not overwrite the reference parameters.

p0578[0...n] Calculate technology-dependent parameters / Calc tec par

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Integer16 P-Group: Applications Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
---	--	---	---

Description: This parameter is used to calculate all parameters that depend on the technology of the application (p0500). All of the parameters are calculated that can also be determined using p0340 = 5.

Value: 0: No calculation
1: Complete calculation

Note: At the end of the calculations, p0578 is automatically set to 0.

p0580 Measuring probe input terminal / MT input terminal

SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 8	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
--	--	--	---

Description: Sets the input terminal for the measuring probe for speed actual value measurement.

Value: 0: No measuring probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0581, p0728

Refer to: A07498

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
The terminal must be set as input (p0728).

Note: If a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0488, p0489, p0493, p0494, p0495, p0680, p2517 or p2518.
DI/DO: Bidirectional Digital Input/Output

2 Parameters

2.2 List of parameters

p0581	Measuring probe edge / MT edge		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the edge to evaluate the measuring probe signal for speed actual value measurement. 0: 0/1 edge 1: 1/0 edge		
Dependency:	Refer to: p0580		
p0582	Measuring probe pulses per revolution / MT pulses per rev		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	12	1
Description:	Sets the number of pulses per revolution (e.g. for perforated disks).		
p0583	Measuring probe maximum measuring time / MT t_meas max		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.040 [s]	10.000 [s]	10.000 [s]
Description:	Sets the maximum measuring time for the measuring probe. If a new pulse is not received before the maximum measuring time has expired, then the speed actual value in r0586 is set to zero. This timer is re-started with the next pulse.		
Dependency:	Refer to: r0586		
r0586	CO: Measuring probe speed actual value / MT n_act		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the speed actual value measured using the BERO.		
Dependency:	Refer to: p0580, p0583		
Note:	For p0580 = 0 (no measuring probe), a value of zero is displayed here.		

r0586	CO: Measuring probe velocity actual value / MT v_act		
SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the velocity actual value measured using the BERO.		
Dependency:	Refer to: p0580, p0583		
Note:	For p0580 = 0 (no measuring probe), a value of zero is displayed here.		
r0587	CO: Measuring probe measuring time measured / MT t_meas measured		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the time between the last two BERO pulses. The measuring time is specified as 32-bit value with a resolution of 1/48 µs. If a new pulse is not received before the maximum measured time in p0583 expires, then r0587 is set to the maximum measuring time.		
Dependency:	Refer to: p0580		
Note:	For p0580 = 0 (no measuring probe), a value of zero is displayed here.		
r0588	CO: Measuring probe pulse counter / MT pulse counter		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of measuring pulses that have occurred (been received) up until now.		
Dependency:	Refer to: p0580		
Note:	After reaching 4294967295 ($2^{32} - 1$), the counter starts again at 0.		
r0589	Measuring probe delay time / MT t_delay		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the time since the last measuring pulse was detected. The delay time is specified as 32-bit value with a resolution of 1/48 µs. When a measuring pulse occurs (is received) the delay time is reset and is limited to the maximum measuring time in p0583.		
Dependency:	Refer to: p0580		
Note:	For p0580 = 0 (no measuring probe), a value of zero is displayed here.		

p0595	Technological unit selection / Tec unit sel		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: C2(5)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	32	1
Description:	Selects the units for the parameters of the technology controller. For p0595 = 1, 2, the reference variable set in p0596 is not active.		
Value:	1: % 2: 1 referred no dimensions 3: bar 4: °C 5: Pa 6: ltr/s 7: m³/s 8: ltr/min 9: m³/min 10: ltr/h 11: m³/h 12: kg/s 13: kg/min 14: kg/h 15: t/min 16: t/h 17: N 18: kN 19: Nm 20: psi 21: °F 22: gallon/s 23: inch³/s 24: gallon/min 25: inch³/min 26: gallon/h 27: inch³/h 28: lb/s 29: lb/min 30: lb/h 31: lbf 32: lbf ft		
Dependency:	Only the unit of the technology controller parameters are switched over (unit group 9_1). Refer to: p0596		
Note:	When switching over from % into another unit, the following sequence applies: - set p0596 - set p0595 to the required unit		

p0596	Technological unit reference quantity / Tec unit ref qty		
SERVO (Tech_ctrl), VECTOR (Tech_ctrl), SERVO_AC (Tech_ctrl), VECTOR_AC (Tech_ctrl), SERVO_I_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.01	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.00
Description:	Sets the reference quantity for the technological units. When changing over using changeover parameter p0595 to absolute units, all of the parameters involved refer to the reference quantity.		
Dependency:	Refer to: p0595		
Notice:	When changing over from one technological unit into another, or when changing the reference parameter, a changeover is not made.		

p0600[0...n]	Motor temperature sensor for monitoring / Mot temp_sensor		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Motor Not for motor type: - Min 0	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 21	Access level: 2 Func. diagram: 8016 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the sensor to monitor the motor temperature. The sensor type used is set in p0601.		
Value:	0: No sensor 1: Temperature sensor via encoder 1 2: Temperature sensor via encoder 2 3: Temperature sensor via encoder 3 10: Temperature sensor via a BICO interconnection 11: Temperature sensor via Motor Module / CU terminals 20: Temperature sensor via a BICO interconnection p0608 21: Temperature sensor via a BICO interconnection p0609		
Dependency:	Refer to: r0458, p0601, p0603		
Caution:	If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another sensor, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.		
			
Notice:	The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0. The parameter is set to 1 during commissioning, if a motor encoder is connected (p0187 <> 99). If a temperature sensor is not being used, then p0601 = 0 must be set.		
Note:	For p0600 = 0: With induction motors, the motor temperature is calculated using the motor temperature model (see also p0612.1). For p0600 = 1, 2, 3: Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported. For p0600 = 10: The BICO interconnection should be executed via connector input p0603. For p0600 = 11: For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210). For p0600 = 20, 21: The BICO interconnection should be executed via connector input p0608 or p0609. Associated parameters: p0601, p4600 ... p4603, p4610 ... p4613		

p0600[0...n]	Motor temperature sensor for monitoring / Mot temp_sensor		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	21	0
Description:	Sets the sensor to monitor the motor temperature. The sensor type used is set in p0601.		
Value:	0: No sensor 1: Temperature sensor via encoder 1 2: Temperature sensor via encoder 2 3: Temperature sensor via encoder 3 10: Temperature sensor via a BICO interconnection 11: Temperature sensor via Motor Module / CU terminals 20: Temperature sensor via a BICO interconnection p0608 21: Temperature sensor via a BICO interconnection p0609		
Dependency:	Refer to: r0458, p0601, p0603		
Caution:	If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another sensor, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.		
			
Notice:	The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0. For operation with a braking resistor (p1300 = 15), p0600 = 11 is automatically set when commissioning.		
Note:	For p0600 = 0: With induction motors, the motor temperature is calculated using the motor temperature model (see also p0612.1). For p0600 = 1, 2, 3: Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported. For p0600 = 10: The BICO interconnection should be executed via connector input p0603. For p0600 = 11: For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210). For p0600 = 20, 21: The BICO interconnection should be executed via connector input p0608 or p0609. Associated parameters: p0601, p4600 ... p4603, p4610 ... p4613		

p0601[0...n]	Motor temperature sensor type / Mot_temp_sens type		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	11	2
Description:	Sets the sensor type for the motor temperature monitoring.		
Value:	0: No sensor 1: PTC alarm & timer 2: KTY84 3: KTY84 and PTC (only for motors with DRIVE-CLiQ): 4: Bimetallic NC contact alarm & timer 5: PT100 6: PT1000 7: PT1000 and PTC (only for motors with DRIVE-CLiQ): 10: Evaluation via several temperature channels SME12x 11: Evaluation via several temperature channels BICO		
Dependency:	A thermal motor model is calculated corresponding to p0612. Refer to: r0458, p0600, p0612		

Note: The temperature sensor for the temperature evaluation is set in p0600.
 For p0600 = 10 (temperature sensor via a BICO interconnection), the setting in p0601 has no significance.
 Information on using temperature sensors is provided in the following literature:
 - hardware description of the appropriate components
 - SINAMICS S120 Commissioning Manual
 For p0601 = 1:
 Tripping resistance = 1650 Ohm.
 After the tripping resistance has been exceeded, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.
 For p0601 = 3, 7:
 For motors with DRIVE-CLiQ and two temperature sensors, the value is automatically set.
 For p0601 = 4:
 Tripping resistance = 100 Ohm.
 After tripping, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.
 For p0601 = 5:
 It is only possible to evaluate a PT100 for p0600 = 11 and r0192.15 = 1.
 For p0601 = 10:
 Not permitted for p0600 = 0, 10, 11.
 Associated parameters: p4600 ... p4603 (can be switched via EDS)
 For r0458.8 = 1, a temperature evaluation is supported through several temperature channels.
 Examples:
 When evaluating using SME120 or SME125, 4 temperature channels are available (parameterized using p4600, p4601, p4602, p4603).
 When evaluating using CU310 and CUA32, 2 temperature channels are available (encoder interface: parameterization via p4600, terminal block: parameterization via p4601).
 For p0601 = 11:
 Not permitted for p0600 = 0, 10, 11.
 Associated parameters: p4610 ... p4613 (can be switched via MDS)

p0601		Temperature sensor, sensor type / Temp_sens type		
A_INF, S_INF, R_INF, B_INF	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	6	0	
Description:	Sets the sensor type for the temperature measurement at input X21 (booksize) or X41 (chassis). The measured value is displayed in r0035.			
Value:	0: No sensor 1: PTC alarm & timer 2: KTY84 4: Bimetallic NC contact alarm & timer 6: PT1000			
Dependency:	Refer to: r0035			

2 Parameters

2.2 List of parameters

Note: The measured value display depends on the selected sensor type.
 For p0601 = 0:
 --> r0035 = -200 °C
 For p0601 = 1:
 Tripping resistance = 1650 Ohm (lower resistance --> r0035 = -50 °C, higher resistance --> r0035 = 250 °C).
 For p0601 = 2, 6:
 Displays the temperature in °C.
 For p0601 = 4:
 r0035 = -50 °C
 --> The tripping resistance is less than 100 Ohm (bimetallic NC contact is closed or has a short-circuit).
 r0035 = 250 °C
 --> The tripping resistance is greater than 100 Ohm (bimetallic NC contact is open, not connected or has a wire breakage).
 When using the following components, a value of 4 is set as the factory setting and can no longer be changed:
 - Basic Line Module (BLM) with internal Braking Module.
 - Active Line Module (ALM) with line filter Active Interface Module (AIM, p0220[0] = 41 ... 45).
 In these cases, in addition to the temperature display, the temperature is also monitored.

p0602	Par_connection power unit number, temperature sensor / PU_no temp_sensor		
VECTOR (Parallel), VECTOR_AC (Parallel), VECTOR_I_AC (Parallel)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10	0

Description: Sets the power unit number to which the temperature sensor is connected. The value corresponds to the Power unit Data Set number (PDS) of the power unit. The number of power unit data sets is defined in p0120.

p0603	CI: Motor temperature signal source / Mot temp s_s		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to evaluate the motor temperature via a BICO interconnection.

Dependency: Refer to: p0600

Note: Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C.
 Temperature sensor PTC/bimetallic switch with NC contact:
 For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC/bimetal contact closed.
 For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC/bimetal contact open.
 Note:
 When using a Terminal Module 31 (TM31), the following applies:
 - the sensor type used is set using p4100.
 - the temperature signal is interconnected using CO: r4105.

p0604[0...n]	Mot_temp_mod 2: sensor alarm threshold / Mod 2: sens A_thr		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°C]	200.0 [°C]	120.0 [°C]
Description:	Sets the alarm threshold for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000. After the alarm threshold is exceeded, alarm A07910 is output and timer (p0606) is started. If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.		
Dependency:	Refer to: p0606, p0612 Refer to: F07011, A07910		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The hysteresis is 2 K. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0604[0...n]	Mot_temp_mod 2: sensor alarm threshold / Mod 2: sens A_thr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°C]	200.0 [°C]	130.0 [°C]
Description:	Sets the alarm threshold for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000. After the alarm threshold is exceeded, alarm A07910 is output and timer (p0606) is started. If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.		
Dependency:	Refer to: p0606, p0612 Refer to: F07011, A07910		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The hysteresis is 2 K. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0605[0...n]	Mot_temp_mod 1/2 sensor threshold and temperature value / Mod 1/2 sens thr_T		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max 240.0 [°C]	Access level: 2 Func. diagram: 8016, 8017 Unit selection: p0505 Expert list: 1 Factory setting 145.0 [°C]
Description:	Sets the threshold and temperature value to monitor the motor temperature. Temperature model 1 (l2t, p0612.0 = 1): The following applies for firmware version < 4.7 SP6 or p0612.8 = 0: - sets the alarm threshold. If the model temperature (r0034) exceeds the alarm threshold, then alarm A07012 is output. - this value is simultaneously used as rated winding temperature. The following applies from firmware version 4.7 SP6 and p0612.8 = 1: - p5390: when commissioning a catalog motor for the first time, p0605 is copied to p5390. - p5390: p5390 is of significance when evaluating the alarm threshold. - p5390: the stator winding temperature (r0632) is used to initiate the signal. - p0627: when a catalog motor is commissioned for the first time, p0605 - 40 °C is copied to p0627. - p0627: p0627 is of significance for the rated temperature. Motor temperature model 2 (p0612.1 = 1) or measurement: - sets the fault threshold. If the temperature (r0035) exceeds the fault threshold, then fault F07011 is output.		
Dependency:	Refer to: r0034, p0606, p0611, p0612 Refer to: F07011, A07012		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. Motor temperature model 1 (l2t): The following applies for firmware version < 4.7 SP6 or p0612.8 = 0: p0605 also defines the final temperature of the model for r0034 = 100 %. Therefore, p0605 has no influence on the time up to alarm A07012 being issued. The time is only determined by time constant p0611, the actual current and the reference value p0318. For p0318 = 0, the rated motor current is used as reference value.		
Note:	The hysteresis is 2 K. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		
p0606[0...n]	Mot_temp_mod 2: sensor timer / Mod 2:sens timer		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 600.000 [s]	Access level: 2 Func. diagram: 8016 Unit selection: - Expert list: 1 Factory setting 240.000 [s]
Description:	Sets the timer for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000. This timer is started when the temperature alarm threshold (p0604) is exceeded. If the timer has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output. If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.		
Dependency:	Refer to: p0604, p0605 Refer to: F07011, A07910		
Note:	With p0606 = 0 s, the timer is deactivated and only the fault threshold is effective. KTY/PT1000: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded. PTC, bimetallic NC contact: The timer minimum value has no special significance.		

p0606[0...n]	Mot_temp_mod 2: sensor timer / Mod 2:sens timer		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 600.000 [s]	Access level: 2 Func. diagram: 8016 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the timer for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000. This timer is started when the temperature alarm threshold (p0604) is exceeded. If the timer has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output. If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.		
Dependency:	Refer to: p0604, p0605 Refer to: F07011, A07910		
Note:	With p0606 = 0 s, the timer is deactivated and only the fault threshold is effective. KTY/PT1000: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded. PTC, bimetallic NC contact: The timer minimum value has no special significance.		
p0607[0...n]	Temperature sensor fault timer / Sensor fault time		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 600.000 [s]	Access level: 2 Func. diagram: 8016 Unit selection: - Expert list: 1 Factory setting 0.100 [s]
Description:	Sets the timer between the output of alarm and fault for a temperature sensor fault. If there is a sensor fault, this timer is started. If the sensor fault is still present after the timer has expired, a corresponding fault is output.		
Notice:	The parameterized time is internally rounded-off to an integer multiple of 48 ms.		
Note:	If the motor is an induction motor, the timer is switched off when setting the minimum value and no alarm is output. Temperature monitoring is then based on the thermal model.		
p0608[0...3]	CI: Motor temperature signal source 2 / Mot_temp s_s 2		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Motor Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2006 Max -	Access level: 2 Func. diagram: 8016 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets signal source 2 to evaluate the motor temperature via a BICO interconnection.		
Index:	[0] = Motor temperature channel 1 [1] = Motor temperature channel 2 [2] = Motor temperature channel 3 [3] = Motor temperature channel 4		
Dependency:	Refer to: p0600		
Note:	Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C. Temperature sensor PTC/bimetallic switch with NC contact: For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC/bimetal contact closed. For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC/bimetal contact open.		

2 Parameters

2.2 List of parameters

Note:

When using a Terminal Module 120 (TM120), the following applies:

- the sensor type used is set using p4100.
- the temperature signal is interconnected using connector output r4105.

p0609[0...3]	CI: Motor temperature signal source 3 / Mot_temp s_s 3		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets signal source 3 to evaluate the motor temperature via a BICO interconnection.		
Index:	[0] = Motor temperature channel 1 [1] = Motor temperature channel 2 [2] = Motor temperature channel 3 [3] = Motor temperature channel 4		
Dependency:	Refer to: p0600		
Note:	Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C. Temperature sensor PTC/bimetallic switch with NC contact: For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC/bimetal contact closed. For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC/bimetal contact open. Note: When using a Terminal Module 120 (TM120), the following applies: - the sensor type used is set using p4100. - the temperature signal is interconnected using connector output r4105.		

p0610[0...n]	Motor overtemperature response / Mot temp response		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: 8016, 8017, 8018, 8019
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	12	12
Description:	Sets the system response when the motor temperature reaches the alarm threshold.		
Value:	0: No response only alarm no reduction of I_max 1: Messages, reduction of I_max 2: Messages, no reduction of I_max 12: Messages, no reduction of I_max, temperature storage		
Dependency:	Refer to: p0601, p0604, p0605, p0614, p0615, p5390 Refer to: F07011, A07012, A07910		
Note:	The relevant alarm threshold (p0604, p0605, p5390) depends on the setting in p0600, p0601 and p0612. If the temperature measurement and temperature model are simultaneously active, then the temperature provided by the temperature model is used. If value = 0: An alarm is output and I_max is not reduced. If value = 1: An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired. The I_max reduction can result in a lower output frequency. - for KTY/PT1000/PT100, the following applies: reduction of I_max. - for PTC (p0601 = 1) or bimetallic NC contact (p0601 = 4) the following applies: I_max is not reduced.		

If value = 2:

An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired.

If value = 12:

Behavior is always the same as for value 2.

For motor temperature monitoring without temperature sensor, when switching off, the model temperature is saved in a non-volatile fashion. When switching on, the same value (reduced by p0614) is taken into account in the model calculation. As a consequence, the UL508C specification is fulfilled.

p0611[0...n]	I2t motor model thermal time constant / I2t MotMod Tc		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 0 [s]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 20000 [s]	Access level: 3 Func. diagram: 8017 Unit selection: - Expert list: 1 Factory setting 0 [s]
Description:	Sets the winding time constant. The time constant specifies the warm-up time of the cold stator winding when loaded with the motor standstill current (rated motor current, if the motor standstill current is not parameterized) up until a temperature rise of 63 % of the continuously permissible winding temperature has been reached.		
Dependency:	The parameter is only used for synchronous motors (p0300 = 2xx, 4) and synchronous reluctance motors (p0300 = 6xx). Refer to: r0034, p0612, p0615 Refer to: F07011, A07012, A07910		
Notice:	This parameter is automatically pre-set from the motor database for motors from the motor list (p0301). When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection. When exiting commissioning, p0612 is checked, and where relevant, is pre-assigned to a value that matches the motor power, if a temperature sensor was not parameterized (see p0601).		
Note:	When parameter p0611 is reset to 0, then this switches out the thermal I2t motor model (refer to p0612). If no temperature sensor is parameterized, then the ambient temperature for the thermal motor model is referred to p0625.		

p0612[0...n]	Mot_temp_mod activation / Mot_temp_mod act				
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: SESM, REL Min -	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8017, 8018, 8019 Unit selection: - Expert list: 1 Factory setting 0000 0010 0000 0010 bin		
Description:	Setting to activate the motor temperature model.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activate mot_temp_mod 1 (I2t)	Yes	No	-
	01	Activate mot_temp_mod 2	Yes	No	-
	02	Activate mot_temp_mod 3	Yes	No	-
	08	Activate mot_temp_mod 1 (I2t) extensions	Yes	No	-
	09	Activate mot_temp_mod 2 extensions	Yes	No	-
	12	Mot_temp_mod 1 (I2t) ambient temperature can be adjusted	Yes (via p0613)	No (fixed 20 °C)	-
Dependency:	For synchronous motors and synchronous reluctance motors, when exiting commissioning, temperature model 1 is automatically activated if a time constant has been entered in p0611. Refer to: r0034, p0351, p0604, p0605, p0606, p0611, p0613, p0615, p0617, p0618, p0619, p0625, p0626, p0627, p0628, r0630, r0631, r0632, r0633, p5350, r5389, p5390, p5391 Refer to: F07011, A07012, F07013, A07014, A07910				

2 Parameters

2.2 List of parameters

- Notice:** For bit 00:
This bit is only automatically activated for permanent-magnet 1FT7 synchronous motors and synchronous reluctance motors. For other permanent-magnet synchronous motors, the user himself must activate motor temperature model 1 (I2t).
It is only possible to activate this motor temperature model (I2t) for a time constant greater than zero ($p0611 > 0$).
- Note:** Mot_temp_mod: motor temperature model
- For bit 00 (see also bit 8):
This bit is used to activate/deactivate the motor temperature model for permanent-magnet synchronous motors and synchronous reluctance motors.
- For bit 01 (see also bit 9):
This bit is used to activate/deactivate the motor temperature model for induction motors.
- For bit 02:
This bit is used to activate/deactivate the motor temperature model for 1FK7/1FG1 motors without encoder, 1FK2 and 1FL6.
Motor temperature model 3 cannot be simultaneously activated with another motor temperature model.
- For bit 08:
This bit is used to extend the motor temperature model 1 (I2t).
The following applies for firmware version < 4.7 SP6 (only bit 0):
- this bit has no function. Temperature model 1 operates in the standard mode.
Overtemperature at rated load: p0605 - 40 °C
Alarm threshold: p0605
Fault threshold: p0615
The following applies from firmware version 4.7 SP6 (bits 0 and 8):
- temperature model 1 operates in the extended mode.
Overtemperature at rated load: p0627
Alarm threshold: p5390
Fault threshold: p5391
- For bit 09:
This bit is used to extend the motor temperature model 2.
For firmware version < 4.7 following applies (only bit 1):
- this bit has no function. Temperature model 2 operates in the standard mode.
From firmware version 4.7 the following applies (bits 1 and 9):
- this bit should be set. Temperature model 2 then operates in the extended mode and the result of the model is more precise.
- For bit 12 (only effective if a temperature sensor has not been parameterized):
This bit is used to set the ambient temperature for the motor temperature model 1 (I2t).
The following applies for firmware version < 4.7 SP6 (only bit 0):
- this bit has no function. Temperature model 1 operates with an ambient temperature of 20 °C.
The following applies from firmware version 4.7 SP6 (bits 0 and 12):
- the ambient temperature can be adapted to the conditions using p0613.

p0613[0...n]	Mot_temp_mod 1/3 ambient temperature / Mod 1/3 amb_temp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017, 8019
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-40 [°C]	100 [°C]	40 [°C]
Description:	Sets the ambient temperature for motor temperature model 1 or 3. - temperature model 1 (I2t, p0612.0 = 1): For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies: The parameter is not relevant. From firmware version 4.7 SP6 and p0612.12 = 1, the following applies: The parameter defines the current ambient temperature. - temperature model 3 (p0612.2 = 1): The parameter defines the current ambient temperature.		
Dependency:	Refer to: p0612 Refer to: F07011, A07012		

p0613[0...n]	Mot_temp_mod 1/3 ambient temperature / Mod 1/3 amb_temp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017, 8019
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-40 [°C]	100 [°C]	20 [°C]
Description:	Sets the ambient temperature for motor temperature model 1 or 3. - temperature model 1 (I2t, p0612.0 = 1): For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies: The parameter is not relevant. From firmware version 4.7 SP6 and p0612.12 = 1, the following applies: The parameter defines the current ambient temperature. - temperature model 3 (p0612.2 = 1): The parameter defines the current ambient temperature.		
Dependency:	Refer to: p0612 Refer to: F07011, A07012		

p0614[0...n]	Thermal resistance adaptation reduction factor / Therm R_adapt red		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	100 [%]	30 [%]
Description:	Sets the reduction factor for the overtemperature of the thermal adaptation of the stator/rotor resistance. The value is a starting value when switching on. Internally, after switch-on, the reduction factor has no effect corresponding to the thermal time constant.		
Dependency:	Refer to: p0610		
Note:	The reduction factor is only effective for p0610 = 12, and refers to the overtemperature.		

2 Parameters

2.2 List of parameters

p0615[0...n]	Mot_temp_mod 1 (I2t) fault threshold / I2t F thr		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 0.0 [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max 220.0 [°C]	Access level: 2 Func. diagram: 8017 Unit selection: p0505 Expert list: 1 Factory setting 180.0 [°C]
Description:	Sets the fault threshold for monitoring the motor temperature for motor temperature model 1 (I2t). The following applies for firmware version < 4.7 SP6: - fault F07011 is output after the fault threshold is exceeded. - fault threshold for r0034 = 100 % * (p0615 - 40 °C) / (p0605 - 40 °C). The following applies from firmware version 4.7 SP6 and p0612.8 = 1: - the fault threshold in p0615 is preset when commissioning. - when a catalog motor with motor temperature model 1 (I2t) is being commissioned for the first time, the threshold value is copied from p0615 to p5391. - p5391 is of significance for evaluating the fault threshold.		
Dependency:	The parameter is only used for motor temperature model 1 (I2t). Refer to: r0034, p0611, p0612 Refer to: F07011, A07012		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The hysteresis is 2 K.		
p0616[0...n]	Motor overtemperature alarm threshold 1 / Mot temp alarm 1		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max 200.0 [°C]	Access level: 2 Func. diagram: 8016 Unit selection: p0505 Expert list: 1 Factory setting 195.0 [°C]
Description:	Sets the alarm threshold 1 for monitoring the motor temperature.		
Note:	The alarm threshold is not, as for p0604, coupled to the timer p0606. The hysteresis for canceling the fault is 2 K.		
p0616[0...n]	Motor overtemperature alarm threshold 1 / Mot temp alarm 1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.0 [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max 200.0 [°C]	Access level: 2 Func. diagram: 8016 Unit selection: p0505 Expert list: 1 Factory setting 130.0 [°C]
Description:	Sets the alarm threshold 1 for monitoring the motor temperature.		
Note:	The alarm threshold is not, as for p0604, coupled to the timer p0606. The hysteresis for canceling the fault is 2 K.		

p0617[0...n]	Stator thermally relevant iron component / Stat therm iron		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018

	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	20.0 [%]
Description:	Thermally relevant weight of the motor as a percentage of p0344.		
Dependency:	Refer to: p0344		
Note:	The sum of p0617, p0618 and p0619 can be more than 100 %.		
p0620[0...n]	Thermal adaptation, stator and rotor resistance / Mot therm_adpt R		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	2
Description:	Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.		
Value:	0: No thermal adaptation of stator and rotor resistances 1: Resistances adapted to the temperatures of the thermal model 2: Resistances adapted to the measured stator winding temperature		

2 Parameters

2.2 List of parameters

Note: For p0620 = 1, the following applies:
The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633.
For p0620 = 2, the following applies:
The stator resistance is adapted using the temperature in r0035. If applicable, the rotor temperature for adapting the rotor resistance is calculated from the stator temperature (r0035) as follows:
$$\theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035$$

p0620[0...n]	Thermal adaptation, stator and rotor resistance / Mot therm_adpt R		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.		
Value:	0: No thermal adaptation of stator and rotor resistances 1: Resistances adapted to the temperatures of the thermal model 2: Resistances adapted to the measured stator winding temperature		
Note:	For p0620 = 1, the following applies: The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633. For p0620 = 2, the following applies: The stator resistance is adapted using the temperature in r0035. If applicable, the rotor temperature for adapting the rotor resistance is calculated from the stator temperature (r0035) as follows: $\theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035$ For separately excited synchronous motors and p0620 = 1, p0620 = 2 is internally and automatically used for calculating. There is no thermal model to adapt the damping resistances.		

p0621[0...n]	Identification stator resistance after restart / ID rst restart		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	0
Description:	Selects the identification of the stator resistance after booting the Control Unit (only for vector control). The identification is used to measure the actual stator resistance and from the ratio of the result of motor data identification (p0350) to the matching ambient temperature (p0625) the actual mean temperature of the stator winding is calculated. The result is used to initialize the thermal motor model. p0621 = 1: Identification of the stator resistance only when switching on the drive for the first time (pulse enable) after the Control Unit powers up. p0621 = 2: Identification of the stator resistance every time the drive is switched on (pulse enable). p0621 = 3: One-time identification of the cable resistance p0352 without making a change in the thermal motor model (also suitable for synchronous motors).		
Value:	0: No Rs identification 1: Rs identification after switching-on again 2: Rs identification after switching-on each time		
Dependency:	- perform motor data identification (see p1910) with cold motor. - enter ambient temperature at time of motor data identification in p0625. Refer to: p0622, r0623		

- Notice:** The calculated stator temperature can only be compared with the measured value of a temperature sensor (KTY/PT1000) to a certain extent, as the sensor is usually the warmest point of the stator winding, whereas the measured value of identification reflects the average value of the stator winding.
- Furthermore this is a short-time measurement with limited accuracy that is performed during the magnetizing phase of the induction motor.
- Note:** The measurement is performed in the following cases:
- an induction motor is being used.
 - vector control is active (see p1300).
 - temperature sensor (KTY/PT1000) is not connected.
 - when switching on, the motor remains at standstill.
- When a flying restart is performed on a rotating motor, the temperatures of the thermal motor model are set to a third of the overtemperatures. However, this occurs only once when the Control Unit has powered up (e.g. after a power failure).
- If identification is activated, the magnetizing time is determined via p0622 and not via p0346. Quick magnetizing (p1401.6) is internally deactivated and alarm A07416 is output. The speed is enabled after completion of the measurement.

p0622[0...n]	Motor excitation time for Rs_ident after switching on again / t_excit Rs_id		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	20.000 [s]	0.000 [s]
Description:	Sets the excitation time of the motor for the stator resistance identification after switching on again (restart).		
Dependency:	Refer to: p0621, r0623		
Note:	For p0622 < p0346 the following applies: If identification is activated, the magnetizing time is influenced by p0622. The speed is enabled after measurement is complete, but not before the time in p0346 has elapsed (see r0056 bit 4). The time taken for measurement also depends on the settling time of the measured current. For p0622 >= p0346 the following applies: Parameter p0622 is internally limited to the magnetizing time p0346, so that p0346 represents the maximum possible magnetizing time during identification. The entire measurement period (magnetizing plus measurement settling time plus measuring time) will always be greater than p0346.		

r0623	Rs identification stator resistance after switch on again / Rs-id Rs aft sw-on		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the stator resistance determined using the Rs identification after switching on again.		
Dependency:	Refer to: p0621, p0622		

p0624[0...n]	Motor temperature offset PT100 / Mot T_offset PT100		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min -100.0 [K]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_2 Scaling: - Max 100.0 [K]	Access level: 3 Func. diagram: 8016 Unit selection: p0505 Expert list: 1 Factory setting 0.0 [K]
Description:	Sets the temperature offset for the PT100 measured value. If there is a difference between the motor temperature displayed in r0035 and the actual motor temperature, then this offset can be entered into this parameter. thereby compensating for the difference.		
Dependency:	Refer to: p0600, p0601, p0602		
Note:	The parameter only has an influence with the following settings: - Temperature sensor of the power unit detected (p0600 = 11). - Sensor type PT100 selected (p0601 = 5). If the resistance in series with the PT100 (e.g. the cable resistance of the feeder cable) is known, the following conversion formula must be used: Offset in p0624 = Measured resistance in ohms x 2.5 K/Ohm Example: Measured cable resistance = 2 Ohm --> 2 Ohm x 2.5 K / Ohm = 5.0 K		
p0625[0...n]	Motor ambient temperature during commissioning / Mot amb_temp com		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min -40 [°C]	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: - Max 80 [°C]	Access level: 3 Func. diagram: 8017, 8018 Unit selection: p0505 Expert list: 1 Factory setting 20 [°C]
Description:	Defines the ambient temperature of the motor for calculating the motor temperature model.		
Dependency:	Refer to: p0350, p0354		
Note:	The parameters for stator and rotor resistance (p0350, p0354) refer to this temperature. If the thermal I2t motor model is activated for permanent-magnet synchronous motors (refer to p0611), p0625 is included in the model calculation if a temperature sensor is not being used (see p0601).		
p0626[0...n]	Motor overtemperature, stator core / Mot T_over core		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, SESM, REL, RESM Min 10 [K]	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: 21_2 Scaling: - Max 200 [K]	Access level: 3 Func. diagram: 8018 Unit selection: p0505 Expert list: 1 Factory setting 50 [K]
Description:	Defines the rated overtemperature of the stator iron referred to ambient temperature in the motor temperature model 2 (p0612.1 = 1).		
Dependency:	For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311. Refer to: p0625		
Notice:	When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0627[0...n]	Motor overtemperature, stator winding / Mot T_over stator		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min 15 [K]	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: 21_2 Scaling: - Max 200 [K]	Access level: 2 Func. diagram: 8017, 8018 Unit selection: p0505 Expert list: 1 Factory setting 80 [K]
Description:	Defines the rated overtemperature of the stator winding referred to the ambient temperature. - motor temperature model 1 (I2t, p0612.0 = 1): The following applies for firmware version < 4.7 SP6 or p0612.8 = 0: p0605 is of significance for the rated temperature. The following applies from firmware version 4.7 SP6 and p0612.8 = 1: Overtemperature at the rated operating point. - motor temperature model 2 (p0612.1 = 1): Overtemperature at the rated operating point.		
Dependency:	For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311. Refer to: p0625		
Notice:	When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300). The signal is not suitable as a process quantity and may only be used as a display quantity.		
p0628[0...n]	Motor overtemperature rotor / Mot T_over rotor		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, SESM, REL, RESM Min 20 [K]	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: 21_2 Scaling: - Max 200 [K]	Access level: 3 Func. diagram: 8018 Unit selection: p0505 Expert list: 1 Factory setting 100 [K]
Description:	Defines the rated overtemperature of the squirrel cage rotor referred to ambient temperature in the motor temperature model 2 (p0612.1 = 1).		
Dependency:	For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311. Refer to: p0625		
Notice:	When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

2 Parameters

2.2 List of parameters

p0629[0...n]	Stator resistance reference / R_stator ref		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, SESM, REL, RESM Min 0.00000 [ohm]	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: 16_1 Scaling: - Max 2000.00000 [ohm]	Access level: 4 Func. diagram: - Unit selection: p0349 Expert list: 1 Factory setting 0.00000 [ohm]
Description:	Reference value for the identification of the stator resistance every time the drive is switched on.		
Dependency:	The measurement of the reference value is activated by the automatic calculation (p0340 = 1, 2), if the following conditions apply: - the motor temperature is at this instant in time less than 30 °C (r0035). - a temperature sensor is not being used (p0601). Refer to: p0621, r0623		
Note:	The reference value to identify the stator resistance should be manually entered after the first identification (p0629 = r0623). The identification must be realized when the motor is in a cold state, as the value refers to the ambient temperature p0625. The feeder cable resistance should be entered into p0352 before the measurement. The result must be saved after the first measurement so that the reference is available after the CU has powered up. When changing p0350 or p0352, the reference value p0629 should be re-determined.		
r0630[0...n]	Mot_temp_mod ambient temperature / Mod T_ambient		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min - [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 4 Func. diagram: 8018 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the ambient temperature of the motor temperature model (models 2 and 3).		
r0631[0...n]	Mot_temp_mod stator iron temperature / Mod T_stator		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min - [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 4 Func. diagram: 8018, 8019 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the stator iron temperature of the motor temperature model (models 2 and 3).		
Note:	For motor temperature model 1 (p0612.0 = 1), this parameter is not valid:		
r0632[0...n]	Mot_temp_mod stator winding temperature / Mod T_winding		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min - [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 2 Func. diagram: 8017, 8018, 8019 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the stator winding temperature of the motor temperature model.		
Dependency:	Refer to: F07011, A07012, A07910		

r0633[0...n]	Mot_temp_mod rotor temperature / Mod rotor temp		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min - [°C]	Calculated: - Dyn. index: MDS, p0130 Unit group: 21_1 Scaling: p2006 Max - [°C]	Access level: 4 Func. diagram: 8018, 8019 Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the rotor temperature of the motor temperature model (models 2 and 3).		
Note:	For motor temperature model 1 (p0612.0 = 1), this parameter is not valid:		
p0634[0...n]	Q flux flux constant unsaturated / PSIQ KPSI UNSAT		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, RESM Min 0.000 [Vsrms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 100.000 [Vsrms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [Vsrms]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. The parameter weights the unsaturated component of the quadrature axis flux function.		
p0635[0...n]	Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, RESM Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.00 [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. This parameter describes the interdependency of the unsaturated component of the quadrature axis current.		
Dependency:	Refer to: p0634		
p0636[0...n]	Q flux direct axis current constant unsaturated / PSIQ KID UNSAT		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, RESM Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.00 [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. This parameter describes the interdependency of the unsaturated component of the direct axis current.		
Dependency:	Refer to: p0634		

p0637[0...n]	Q flux flux gradient saturated / PSIQ Grad SAT		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min 0.00 [mH]	Max 10000.00 [mH]	Factory setting 0.00 [mH]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. This parameter describes the gradients of the saturated component over the quadrature axis current.		
Dependency:	Refer to: p0634, p0635, p0636		

p0640[0...n]	Current limit / Current limit		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1), U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5722, 6640
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [Arms]	Max 10000.00 [Arms]	Factory setting 0.00 [Arms]
Description:	Sets the current limit.		
Dependency:	Refer to: r0209, p0323		
Note:	<p>The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0305, p0323 and p0338.</p> <p>The current limit p0640 is limited to r0209 and p0323. The limit to p0323 is not realized if a value of zero is entered there.</p> <p>The resulting current limit is displayed in r0067 and if required, r0067 is reduced by the thermal model of the Motor Module.</p> <p>The torque and power limits (p1520, p1521, p1530, p1531) matching the current limit are automatically calculated when exiting the quick commissioning using p3900 > 0 or using the automatic parameterization with p0340 = 3, 5. For VECTOR the following applies (p0107):</p> <p>p0640 is limited to 4.0 x p0305.</p> <p>p0640 is pre-assigned for the automatic self commissioning routine (e.g. to 1.5 x p0305, with p0305 = r0207[1]). p0640 must be entered when commissioning the system. This is the reason that p0640 is not calculated by the automatic parameterization when exiting the quick commissioning (p3900 > 0).</p> <p>For SERVO the following applies (p0107):</p> <p>p0640 is pre-assigned as follows using the automatic parameterization (p0340 = 1, p3900 > 0) taking into account the limits r0209 and r0323:</p> <ul style="list-style-type: none"> - for induction motors: p0640 = 1.5 x p0305 - for synchronous motors: p0640 = p0338 		

p0641[0...n]	CI: Current limit scaling signal source / I_lim scal s_s		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6300, 6640
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min -	Max -	Factory setting 1
Description:	Sets the signal source for scaling the current limit (p0640).		

p0642[0...n]	Encoderless operation current reduction / Encoderl op I_red		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	100.00 [%]
Description:	Sets the reduction for the current limit in encoderless operation. The value is referred to p0640.		
Dependency:	Refer to: r0209, p0323, p0491, p0640, p1300, p1404		
Note:	If the motor is operated both with encoder as well as without encoder (e.g. p0491 is not equal to 0 or p1404 < p1082) then the maximum current can be reduced in encoderless operation. This reduces disturbing saturation-related motor data changes in encoderless operation.		

p0643[0...n]	Overvoltage protection for synchronous motors / U_over_protect		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the overvoltage protection for synchronous motors in the field-weakening range.		
Value:	0: No measure 1: Voltage Protection Module (VPM)		
Dependency:	Refer to: p0316, p1082, p1231, p9601, p9801 Refer to: F07432, F07906, F07907		
Notice:	When the speed limiting is removed, the user is responsible for implementing a suitable overvoltage protection.		
Note:	In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage: - limit the maximum speed (p1082) without any additional protection. The maximum speed without protection is calculated as follows: Rotary motors: $p1082 \text{ [rpm]} \leq 11.695 * r0297/p0316 \text{ [Nm/A]}$ Linear motors: $p1082 \text{ [m/min]} \leq 73.484 * r0297/0316 \text{ [N/A]}$ - use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801). When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM. - activating the internal voltage protection (IVP) with p1231 = 3.		

p0643[0...n]	Overvoltage protection for synchronous motors / U_over_protect		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the overvoltage protection for synchronous motors in the field-weakening range.		
Value:	0: No measure 1: Voltage Protection Module (VPM)		
Dependency:	Refer to: p0316, p1082, p1231, p9601, p9801 Refer to: F07432, F07906, F07907		
Notice:	When the speed limiting is removed, the user is responsible for implementing a suitable overvoltage protection.		

2 Parameters

2.2 List of parameters

Note: In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage:

- limit the maximum speed (p1082) without any additional protection.

The maximum speed without protection is calculated as follows:
 $p1082 \text{ [rpm]} \leq 11.695 * r0297 / p0316 \text{ (or } r0334) \text{ [Nm/A]}$

- use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801).

When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM.

- activating the internal voltage protection (IVP) with p1231 = 3.

p0644[0...n]	Current limit excitation induction motor / I_{max} excit ASM		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	300.0 [%]	300.0 [%]

Description: Maximum excitation current of the induction motor referred to the permissible rated current of the power unit (r0207[0]).

Dependency: Only effective for vector control.

Refer to: p1401, p1573

Note: The parameter is pre-assigned in the automatic calculation for chassis power units.

p0645[0...n]	Motor kT characteristic kT1 / Mot kT char kT1		
SERVO (Ext M_ctrl, Lin), SERVO_AC (Ext M_ctrl, Lin), SERVO_I_AC (Ext M_ctrl, Lin)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [N/Arms]	200.000 [N/Arms]	0.000 [N/Arms]

Description: Sets the constant kT1 for the kT characteristic.

$$kT(iq) = kT1 + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6$$

Dependency: Refer to: p0316, p0646, p0647, p0648, p1780

Notice: In the case of current reduction (e.g. as a result of the thermal model) while measuring the kT characteristic, it cannot be ensured that the identified characteristic is reliable above the measured values (r1935, r1937).

Note: For the standard setting, the value in p0316 is effective.

The value in p0316 is ignored and the kT characteristic is effective, if the following conditions are fulfilled:

- the function module "expanded torque control" has been activated (r0108.1 = 1).
- the kT characteristic has been activated (p1780.9 = 1).

p0645[0...n]	Motor kT characteristic kT1 / Mot kT char kT1		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Nm/A]	200.000 [Nm/A]	0.000 [Nm/A]

Description: Sets the constant kT1 for the kT characteristic.

$$kT(iq) = kT1 + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6$$

Dependency: Refer to: p0316, p0646, p0647, p0648, p1780

Notice: In the case of current reduction (e.g. as a result of the thermal model) while measuring the kT characteristic, it cannot be ensured that the identified characteristic is reliable above the measured values (r1935, r1937).

Note: For the standard setting, the value in p0316 is effective.
The value in p0316 is ignored and the kT characteristic is effective, if the following conditions are fulfilled:
- the function module "expanded torque control" has been activated (r0108.1 = 1).
- the kT characteristic has been activated (p1780.9 = 1).

p0646[0...n]	Motor kT characteristic kT3 / Mot kT char kT3		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T	Calculated: -	Access level: 1

Description:	Sets the constant kT5 for the kT characteristic. $kT(iq) = kT1 + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6$		
Dependency:	Refer to: p0316, p0645, p0646, p0648, p1780		
Notice:	In the case of current reduction (e.g. as a result of the thermal model) while measuring the kT characteristic, it cannot be ensured that the identified characteristic is reliable above the measured values (r1935, r1937).		
Note:	For the standard setting, the value in p0316 is effective. The value in p0316 is ignored and the kT characteristic is effective, if the following conditions are fulfilled: - the function module "expanded torque control" has been activated (r0108.1 = 1). - the kT characteristic has been activated (p1780.9 = 1).		

p0648[0...n]	Motor kT characteristic kT7 / Mot kT char kT7		
SERVO (Ext M_ctrl), SERVO_AC (Ext M_ctrl), SERVO_I_AC (Ext M_ctrl)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Sets the constant kT7 for the kT characteristic. $kT(iq) = kT1 + kT3 * iq^2 + kT5 * iq^4 + kT7 * iq^6$		
Dependency:	Refer to: p0316, p0645, p0646, p0647, p1780		
Notice:	In the case of current reduction (e.g. as a result of the thermal model) while measuring the kT characteristic, it cannot be ensured that the identified characteristic is reliable above the measured values (r1935, r1937).		

2 Parameters

2.2 List of parameters

Note: For the standard setting, the value in p0316 is effective.
The value in p0316 is ignored and the kT characteristic is effective, if the following conditions are fulfilled:
- the function module "expanded torque control" has been activated (r0108.1 = 1).
- the kT characteristic has been activated (p1780.9 = 1).

p0650[0...n]	Actual motor operating hours / Mot t_op act		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [h]	4294967295 [h]	0 [h]
Description:	Displays the operating hours for the corresponding motor. The motor operating time counter continues to run when the pulses are enabled. When the pulse enable is withdrawn, the counter is held and the value saved.		
Dependency:	The following prerequisites must be fulfilled in order to be able to save the operating hours counter in a non-volatile fashion: - firmware with V2.2 or higher. - Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM). Refer to: p0651 Refer to: A01590		
Note:	For p0651 = 0, the operating hours counter is disabled. The operating hours counter in p0650 can only be reset to 0. The operating hours counter only runs with motor data set 0 and 1 (MDS).		

p0651[0...n]	Motor operating hours maintenance interval / Mot t_op maint		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [h]	150000 [h]	0 [h]
Description:	Sets the service/maintenance intervals in hours for the appropriate motor. An appropriate message is output when the operating hours set here are reached.		
Dependency:	Refer to: p0650 Refer to: A01590		
Note:	For p0651 = 0, the operating hours counter is disabled. When setting p0651 to 0, then p0650 is automatically set to 0. The operating hours counter only runs with motor data set 0 and 1 (MDS).		

p0652[0...n]	Motor stator resistance scaling / Mot R_stator scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Sets the factor to evaluate the stator resistance.		
Dependency:	Refer to: p0350, r0370		

p0653[0...n]	Motor stator leakage inductance scaling / Mot L_S_leak scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, PMSM, REL, RESM	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1
	Min 10.0 [%]	Max 300.0 [%]	Factory setting 100.0 [%]
Description:	Sets the factor to evaluate the stator leakage induction.		
Dependency:	Refer to: p0356, r0377		
p0655[0...n]	Motor magnetizing inductance d axis saturated scaling / Mot L_m d sat scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, PMSM, REL, RESM	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 4 Func. diagram: 6727 Unit selection: - Expert list: 1
	Min 10.0 [%]	Max 300.0 [%]	Factory setting 100.0 [%]
Description:	Factor to evaluate the magnetizing inductance in the direction of the rotor axis (d axis).		
Dependency:	Refer to: p0360, r0382		
p0656[0...n]	Motor magnetizing inductance q axis saturated scaling / Mot L_m q sat scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, PMSM, REL, RESM	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 4 Func. diagram: 6727 Unit selection: - Expert list: 1
	Min 10.0 [%]	Max 300.0 [%]	Factory setting 100.0 [%]
Description:	Factor to evaluate the magnetizing inductance quadrature to the rotor axis (q axis).		
Dependency:	Refer to: p0361, r0383		
p0657[0...n]	Motor damping inductance d axis scaling / Mot L_damp d scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, PMSM, REL, RESM	Calculated: CALC_MOD_EQU Dyn. index: MDS, p0130 Unit group: - Scaling: -	Access level: 4 Func. diagram: 6727 Unit selection: - Expert list: 1
	Min 10.0 [%]	Max 300.0 [%]	Factory setting 100.0 [%]
Description:	Factor to evaluate the damping inductance in the direction of the rotor axis (d axis).		
Dependency:	Refer to: p0358, r0380		

2 Parameters

2.2 List of parameters

p0658[0...n]	Motor damping inductance q axis scaling / Mot L_damp q scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727

Description:	Factor to evaluate the damping inductance quadrature to the rotor axis (q axis).		
Dependency:	Refer to: p0359, r0381		

p0659[0...n]	Motor damping resistance d axis scaling / Mot R_damp d scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the damping resistance in the direction of the rotor axis (d axis).		
Dependency:	Refer to: p0354, r0374		

p0660[0...n]	Motor damping resistance q axis scaling / Mot R_damp q scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the damping resistance quadrature to the rotor axis (q axis).		
Dependency:	Refer to: p0355, r0375		

p0680[0...7]	Central measuring probe input terminal / Cen meas inp		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0
Description:	Sets the digital input used for the function "central measuring probe evaluation". p0680[0]: Digital input, measuring probe 1 p0680[1]: Digital input, measuring probe 2 ... p0680[7]: Digital input, measuring probe 8		

Value:	0: No measuring probe
	1: DI/DO 9 (X122.10/X121.8)
	2: DI/DO 10 (X122.12/X121.10)
	3: DI/DO 11 (X122.13/X121.11)
	4: DI/DO 13 (X132.10/X131.2)
	5: DI/DO 14 (X132.12/X131.4)
	6: DI/DO 15 (X132.13/X131.5)
	7: DI/DO 8 (X122.9/X121.7)
	8: DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0728

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.

To select the values:

For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output

Prerequisite: The DI/DO must be set as input (p0728.x = 0).

If a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0488, p0489, p0493, p0494, p0495, p0580, p2517 or p2518.

p0681 **BI: Central measuring probe synchronizing signal signal source / Cen meas sync_sig**

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the synchronizing signal (SYN) of the function "central measuring probe evaluation".
The signal is used to synchronize the common system time between the master and slave.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0682 **CI: Central measuring probe control word signal source / Cen meas STW s_s**

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the control word of the function "central measuring probe evaluation".

p0684 **Central measuring probe evaluation technique / Cen meas eval_tech**

CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	0

Description: Sets the evaluation technique for the "central measuring probe evaluation" function.

Value:
0: Measurement with handshake
1: Measurement without handshake 2 edges
16: Measurement without handshake more than 2 edges

Notice: For p0684 = 16:
This evaluation procedure is only activated after parameter save and POWER ON.

2 Parameters

2.2 List of parameters

Note: During measurement without a handshake, the probe may have a higher evaluation frequency.
 The setting "Measurement without handshake" must be supported by the higher-level control. This setting cannot be used for SIMOTION D with integrated SINAMICS or with CX32.

For p0684 = 0:
 Changing this evaluation procedure to p0684 = 1 is possible in the RUN state.
 Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON.
 Permissible combinations in p0922 are:
 p0922 = 391, 392, 393, 394

For p0684 = 1:
 Changing this evaluation procedure to p0684 = 0 is possible in the RUN state.
 Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON.
 Permissible combinations in p0922 are:
 p0922 = 391, 392, 393, 394

For p0684 = 16:
 Changing this evaluation procedure to p0684 = 0 or to p0684 = 1 is only activated after parameter save and POWER ON.
 Permissible combinations in p0922 are:
 p0922 = 395

p0690[0...n]	Brushless excitation rated current / BLE I_rated		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [A]	1000.00 [A]	0.00 [A]

Description: Sets the rated current of the excitation equipment for the exciter for brushless excitation with a rotating-armature synchronous machine or reverse field induction machine.

Dependency: Refer to: p0699, r1626

Refer to: A49205

Notice: For a value = 0, brushless excitation is not activated.

Note: BLE: brushless excitation

p0691[0...n]	Reverse field excitation correction factor / RFE correction		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	1000 [%]	100 [%]

Description: Sets the correction factor for the calculated excitation current setpoint of the reverse field exciter for reverse field excitation.

Dependency: Refer to: p0311, p0390, p0690, p0699

Refer to: A49205

Note: The correction factor specifies the ratio between the rated excitation current and the rated current of the exciter (p0690). The rated excitation current is the current that flows at the rated operating point of the main machine as stamped on the rating plate.

p0692[0...n]	Reverse field excitation iron resistance / RFE iron R		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100000.00000 [ohm]	100000.00000 [ohm]	0.00000 [ohm]
Description:	Sets the ohmic iron resistance of the rotor for the main machine for reverse field excitation.		
Dependency:	Refer to: p0699		
Note:	For a value of 0, it is assumed that the iron resistance is infinitely high.		

p0693[0...n]	Brushless excitation inductance d-axis saturated / BLE L_d sat		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the saturated inductance of the exciter for brushless excitation with rotating-armature synchronous machine or reverse field induction machine. A negative value can also be entered as part of optimizing coefficients.		
Dependency:	Refer to: p0699 Refer to: A49205		
Notice:	For a value = 0, brushless excitation is not activated.		
Note:	For excitation using a rotating-armature synchronous machine, the equivalent circuit diagram data should be entered, referred to the rotor. For excitation using a reverse field induction machine, the equivalent circuit diagram data should be entered, referred to the stator. BLE: brushless excitation		

p0694[0...n]	Reverse field excitation leakage inductance / RFE L_leak		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.00000 [mH]	10.00000 [mH]	0.00000 [mH]
Description:	Sets the leakage inductance of the reverse field exciter in mH for reverse field excitation. A negative value can also be entered as part of optimizing coefficients.		
Dependency:	Refer to: p0699 Refer to: A49205		

2 Parameters

2.2 List of parameters

p0696[0...n]	Brushless excitation ratio / BLE ratio		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	1000.000	0.000
Description:	Sets the ratio between the stator and rotor of the exciter for brushless excitation. For excitation using a rotating-armature synchronous machine, the ratio of the rated excitation current of the main machine to the associated excitation current of the exciter at the rated point of the machine is entered. For excitation using a reverse field induction machine, the physical ratio at standstill is specified.		
Dependency:	Refer to: p0311, p0390, p0699 Refer to: A49205		
Notice:	For a value = 0, brushless excitation is not activated.		
Note:	BLE: brushless excitation		
p0697[0...n]	Brushless excitation number of pole pairs / BLE PolePair no		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	20	0
Description:	Sets the pole pair number of the exciter for brushless excitation using a rotating- armature synchronous machine or using a reverse field induction machine.		
Dependency:	Refer to: p0699 Refer to: A49205		
Notice:	For a value = 0, brushless excitation is not activated.		
Note:	BLE: brushless excitation		
p0698[0...n]	Brushless excitation, excitation resistance / BLE exc_R		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.00000 [ohm]	100.00000 [ohm]	0.00000 [ohm]
Description:	Sets the ohmic excitation resistance of the main machine for brushless excitation for a rotating-armature synchronous machine or reverse field induction machine.		
Dependency:	Refer to: p0699 Refer to: A49205		
Notice:	For a value = 0, brushless excitation is not activated.		
Note:	When the rotor resistance is known, this value can be added to the excitation resistance. For excitation using a reverse field induction machine, it should be noted that the rotor resistance specified in the data sheet is referred to the stator; however, the excitation resistance of the main machine is referred to the rotor. BLE: brushless excitation		

p0699[0...n]	Excitation configuration / Exc config		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: C2(1, 3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	20	0
Description:	Configuration of the excitation. 0: Excitation via sliprings, default setting. 10: Brushless excitation for rotating-armature synchronous motor with excitation current setpoint input (FCR). 11: Brushless excitation for rotating-armature synchronous motor with independently controlled stator voltage (AVR). 20: Brushless excitation using a reverse field induction machine where the exciter is fed from a SIMOTRAS three-phase AC power controller.		
Value:	0: Excitation via sliprings 10: Brushless excitation via rotating-armature synchr. machine (FCR) 11: Brushless excitation via rotating-armature synchr. machine (AVR) 20: Brushless excit. via reverse field induction machine (SIMOTRAS)		
Dependency:	Refer to: p0690, p0691, p0692, p0693, p0694, p0696, p0697, p0698 Refer to: A49205		
Warning:	For values = 10, 11: For excitation using a rotating-armature synchronous machine, it is not permissible that a standing measurement is used for motor data identification, as this can damage the excitation winding of the main machine.		
			
Notice:	The following parameters must be assigned values that are not equal to zero in order that the speed-dependent transmission ratio for brushless excitation ($p0699 > 0$) can be calculated: p0699 = 10: p0690, p0693, p0696, p0697, p0698 p0699 = 11: No excitation current setpoint input p0699 = 20: p0690, p0692, p0693, p0696, p0697, p0698 Otherwise, the speed-dependent transmission ratio for brushless excitation as well as for slipring excitation is assumed to be 1.		
Note:	FCR: field current control AVR: autonomous voltage control SIMOTRAS: Siemens three-phase AC power controller U/f MM: SINAMICS Motor Module in U/f control as excitation controller		

p0700	Macro Binector Input (BI) / Macro BI		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410, TM31, TM15DI_DO, TB30	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	999999	0
Description:	Runs the corresponding macro files. The selected macro file must be available on the memory card/device memory. Example: p0700 = 6 --> macro file PM000006.ACX is run.		

2 Parameters

2.2 List of parameters

Dependency: Refer to: r8571

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group! When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8571. r8571 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.
BI: Binector Input
CDS: Command Data Set

p0700[0...n] Macro Binector Input (BI) / Macro BI

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: C2(1), T Data type: Unsigned32 P-Group: Commands Not for motor type: - Min 0	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
--	--	--	---

Description: Runs the corresponding macro files.
The binector inputs of the corresponding command data set are appropriately interconnected.
The selected macro file must be available on the memory card/device memory.
Example:
p0700 = 6 --> macro file PM000006.ACX is run.

Dependency: Refer to: p0015, p1000, p1500, r8571

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group! When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8571. r8571 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.
BI: Binector Input
CDS: Command Data Set

p0713[0...7] BI: Cam function setpoint state / Cam fct set state

CU_I_D410	Can be changed: - Data type: Unsigned32 / Binary P-Group: Terminals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
-----------	---	--	---

Description: Sets the setpoint state for the cam outputs.

Index: [0] = Bit 0
[1] = Bit 1
[2] = Bit 2
[3] = Bit 3
[4] = Bit 4
[5] = Bit 5
[6] = Bit 6
[7] = Bit 7

Note: If the time stamp is not connected, or if both time stamps have the value "0", then the output state (r0716) of the cam sequencer is obtained directly from the reference state (p0713).

p0714[0...7]	CI: Cam function setting time / Cam t_set		
CU_I_D410	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the setting time for the cam outputs.		
Index:	[0] = Cam_0 switching instant for a rising edge [1] = Cam_1 switching instant for a rising edge [2] = Cam_2 switching instant for a rising edge [3] = Cam_3 switching instant for a rising edge [4] = Cam_4 switching instant for a rising edge [5] = Cam_5 switching instant for a rising edge [6] = Cam_6 switching instant for a rising edge [7] = Cam_7 switching instant for a rising edge		
Note:	If the setpoint state is not connected, then the output state (r0716) of the cam sequencer is only obtained from the specified switching instants (p0714/p0715). 0000 hex and FFFF have a special significance "No switching event". The maximum time is 16 ms, FA00 hex.		

p0715[0...7]	CI: Cam function reset time / Cam t_reset		
CU_I_D410	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the reset time for the cam outputs.		
Index:	[0] = Cam_0 switching instant for a falling edge [1] = Cam_1 switching instant for a falling edge [2] = Cam_2 switching instant for a falling edge [3] = Cam_3 switching instant for a falling edge [4] = Cam_4 switching instant for a falling edge [5] = Cam_5 switching instant for a falling edge [6] = Cam_6 switching instant for a falling edge [7] = Cam_7 switching instant for a falling edge		
Note:	If the setpoint state is not connected, then the output state (r0716) of the cam sequencer is only obtained from the specified switching instants (p0714/p0715). 0000 hex and FFFF have a special significance "No switching event". The maximum time is 16 ms, FA00 hex.		

r0716.0...7	CO/BO: Cam function output / Cam output		
CU_I_D410	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and BICO output for the cam outputs.		

2 Parameters

2.2 List of parameters

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Cam_0 output signal	High	Low	-
	01	Cam_1 output signal	High	Low	-
	02	Cam_2 output signal	High	Low	-
	03	Cam_3 output signal	High	Low	-
	04	Cam_4 output signal	High	Low	-
	05	Cam_5 output signal	High	Low	-
	06	Cam_6 output signal	High	Low	-
	07	Cam_7 output signal	High	Low	-

Note: The cam sequencer is only calculated if the output-side binector (r0716) is interconnected.

r0721

CU digital inputs terminal actual value / CU DI term ActV

CU_I, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 2119, 2120, 2121, 2130, 2131, 2132, 2133
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the actual value at the digital inputs.

This means that the actual input signal can be checked at terminal DI x or DI/DO x prior to switching from the simulation mode (p0795.x = 1) to terminal mode (p0795.x = 0).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X122.1/X121.1)	High	Low	-
	01	DI 1 (X122.2/X121.2)	High	Low	-
	02	DI 2 (X122.3/X121.3)	High	Low	-
	03	DI 3 (X122.4/X121.4)	High	Low	-
	04	DI 4 (X132.1 / -)	High	Low	-
	05	DI 5 (X132.2 / -)	High	Low	-
	06	DI 6 (X132.3 / -)	High	Low	-
	07	DI 7 (X132.4 / -)	High	Low	-
	08	DI/DO 8 (X122.9/X121.7)	High	Low	-
	09	DI/DO 9 (X122.10/X121.8)	High	Low	-
	10	DI/DO 10 (X122.12/X121.10)	High	Low	-
	11	DI/DO 11 (X122.13/X121.11)	High	Low	-
	12	DI/DO 12 (X132.9/X131.1)	High	Low	-
	13	DI/DO 13 (X132.10/X131.2)	High	Low	-
	14	DI/DO 14 (X132.12/X131.4)	High	Low	-
	15	DI/DO 15 (X132.13/X131.5)	High	Low	-
	16	DI 16 (X122.5/X120.3)	High	Low	-
	17	DI 17 (X122.6/X120.4)	High	Low	-
	20	DI 20 (X132.5/X120.9)	High	Low	-
	21	DI 21 (X132.6/X120.10)	High	Low	-

Notice: Regarding the terminal designation:

The first designation is valid for CU320-2, the second for CU310-2.

Note: If a DI/DO is parameterized as output (p0728.x = 1), then r0721.x = 0 is displayed.

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

r0721		CX digital inputs terminal actual value / CX DI actual value			
CU_NX_CX	Can be changed: -	Calculated: -	Access level: 2

Factory setting

0

5

4

Description: Sets the type of analog inputs of the CU310-2.

p0756[x] = 0, 4 corresponds to a voltage input (r0752, p0757, p0759 are displayed in V).

p0756[x] = 2, 3, 5 corresponds to a current input (r0752, p0757, p0759 are displayed in mA).

In addition, the associated DIP switch S1200 must be set.

For a voltage input, S1200.1 must be switched to setting "BL".

For a current input, S1200.1 must be switched to the "ON" setting (load resistor = 250 Ohm is switched in).

Value:

- 0: Unipolar voltage input (0 V ... +10 V)
- 2: Unipolar current input (0 mA ... +20 mA)
- 3: Unipolar current input monitored (+4 mA to +20 mA)
- 4: Bipolar voltage input (-10 V ... +10 V)
- 5: Bipolar current input (-20 mA to +20 mA)

Index: [0] = AI0 (X131.7, 8)

Warning: The maximum voltage difference between analog input terminals AI+, AI-, and the ground must not exceed 35 V (X131.3, X131.6).

For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 12.50 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.

Notice: For use as voltage input, DIP switch S1200 must be set to 0 for the input involved (0).

DIP switch S1200 is located on the front panel, below the BOP cover.

2 Parameters

2.2 List of parameters

Note: When changing p0756, the parameters of the scaling characteristic (p0757, p0758, p0759, p0760) are overwritten with the following default values:
For p0756 = 0, 4, p0757 is set to 0.0 V, p0758 = 0.0 %, p0759 = 10.0 V and p0760 = 100.0 %.
For p0756 = 2, 5, p0757 is set to 0.0 mA, p0758 = 0.0 %, p0759 = 20.0 mA and p0760 = 100.0 %.
For p0756 = 3, p0757 is set to 4.0 mA, p0758 = 0.0 %, p0759 = 20.0 mA and p0760 = 100.0 %.

p0757[0] CU analog input characteristic value x1 / CU AI char x1

CU_S_AC_DP, CU_S_AC_PN, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	0.000

Description: Sets the scaling characteristic for the analog input of the CU310-2.
The scaling characteristic for the analog input is defined using 2 points.
This parameter specifies the x coordinate (input voltage in V or input current in mA) of the 1st value pair of the characteristic.

Index: [0] = AI0 (X131.7, 8)

Dependency: The unit of this parameter (V or mA) depends on the analog input type.
Refer to: p0756

Notice: This parameter is automatically overwritten when the analog input type (p756) is modified.

Note: The parameters for the characteristic do not have a limiting effect.

p0758[0] CU analog input characteristic value y1 / CU AI char y1

CU_S_AC_DP, CU_S_AC_PN, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	0.00 [%]

Description: Sets the scaling characteristic for the analog input of the CU310-2.
The scaling characteristic for the analog inputs is defined using 2 points.
This parameter specifies the y coordinate (percentage) of the 1st value pair of the characteristic.

Index: [0] = AI0 (X131.7, 8)

Notice: This parameter is automatically overwritten when the analog input type (p756) is modified.

Note: The parameters for the characteristic do not have a limiting effect.

p0759[0] CU analog input characteristic value x2 / CU AI char x2

CU_S_AC_DP, CU_S_AC_PN, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	10.000

Description: Sets the scaling characteristic for the analog input of the CU310-2.
The scaling characteristic for the analog inputs is defined using 2 points.
This parameter specifies the x coordinate (input voltage in V or input current in mA) of the 2nd value pair of the characteristic.

Index: [0] = AI0 (X131.7, 8)

Dependency: The unit of this parameter (V or mA) depends on the analog input type.
Refer to: p0756

Notice: This parameter is automatically overwritten when the analog input type (p0756) is modified.

Note: The parameters for the characteristic do not have a limiting effect.

p0760[0]	CU analog input characteristic value y2 / CU AI char y2		
CU_S_AC_DP, CU_S_AC_PN, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaling characteristic for the analog input of the CU310-2.
The scaling characteristic for the analog input is defined using 2 points.
This parameter specifies the y coordinate (percentage) of the 2nd value pair of the characteristic.

Index: [0] = AI0 (X131.7, 8)

Notice: This parameter is automatically overwritten when the analog input type (p756) is modified.

Note: The parameters for the characteristic do not have a limiting effect.

p0761[0]	CU analog input wire breakage monitoring response threshold / CU wire brk thr		
CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [mA]	20.00 [mA]	2.00 [mA]

Description: Sets the response threshold for the wire breakage monitoring of the analog input.
The unit for the parameter value depends on the set analog input type.

Index: [0] = AI0 (X131.7, 8)

Dependency: For the following analog input type, the wire breakage monitoring is active:
p0756[0...1] = 1 (unipolar voltage input monitored (+2 V ... +10 V)), unit [V]
p0756[0...2] = 3 (unipolar current input monitored (+4 mA ... +20 mA)), unit [mA]
p0756[3]: Wire breakage monitoring is not supported for this analog input.

Refer to: p0756

Note: AI: Analog Input

p0761[0]	CU analog input wire breakage monitoring response threshold / CU wire brk thr		
CU_S_AC_DP, CU_S_AC_PN	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040

Description:	Sets the mode for the test sockets.		
Value:	96: Physical address (32-bit integer signal unsigned) 97: Physical address (32-bit integer signal) 98: Physical address (32-bit floating-point signal) 99: BICO signal		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Refer to: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784, r0786, p0788, p0789, r0790		
p0777[0...2]	Test socket characteristic value x1 / Test skt char x1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -100000.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100000.00 [%]	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	The scaling characteristic for the test sockets is defined using two points. This parameter specifies the x coordinate (percentage) of the first point on the characteristic.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Can only be set when p0776 = 99. Refer to: p0778, p0779, p0780, r0786		
Note:	The value 0.00 % corresponds to 2.49 V.		

p0778[0...2]	Test socket characteristic value y1 / Test skt char y1		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min 0.00 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4.98 [V]	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting 2.49 [V]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the y coordinate (output voltage) of the first point on the characteristic.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0779, p0780, r0786

p0779[0...2]	Test socket characteristic value x2 / Test skt char x2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -100000.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 427.9E9 [%]	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting 100.00 [%]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the x coordinate (percentage) of the second point on the characteristic.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0778, p0780, r0786

Note: The value 100.00 % corresponds to 4.98 V.

p0780[0...2]	Test socket characteristic value y2 / Test skt char y2		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min 0.00 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4.98 [V]	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting 4.98 [V]

Description: The scaling characteristic for the test sockets is defined using two points.
This parameter specifies the y coordinate (output voltage) of the second point on the characteristic.

Index:
[0] = T0
[1] = T1
[2] = T2

Dependency: Can only be set when p0776 = 99.
Refer to: p0777, p0778, p0779, r0786

p0783[0...2]	Test sockets offset / Test skt offset		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -4.98 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4.98 [V]	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting 0.00 [V]
Description:	Sets an additional offset for the test sockets.		
Index:	[0] = T0 [1] = T1 [2] = T2		

p0784[0...2]	Test socket limit on/off / TestSktLim on/off		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Integer16 P-Group: Terminals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the limit for a signal to be output via test sockets.		
Value:	0: Limiting off 1: Limiting on		
Index:	[0] = T0 [1] = T1 [2] = T2		
Note:	Limiting on: If signals are output outside the permissible measuring range, the signal is limited to 4.98 V or to 0 V. Limiting off: If signals are output outside the permissible measuring range, this causes signal overflow. In the case of signal overflow, the signal jumps from 0 V to 4.98 V or from 4.98 V to 0 V.		

r0786[0...2]	Test socket scaling per volt / TestSktScal/Volt		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8134 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the scaling of the signal to be output. A change in the output voltage by 1 volt corresponds to the value in this parameter. The units are determined by the interconnected test signal.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Refer to: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784		
Note:	Example: r0786[0] = 1500.0 and the measuring signal is r0063 (CO: Actual speed smoothed [rpm]). A change of 1 V at the output of test socket T0 corresponds to 1500.0 [rpm].		

p0788[0...2]	Test sockets physical address / Test skt PhyAddr		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned32 P-Group: Terminals Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin
Description:	Sets the physical address to output signals via the test sockets.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Changes only become effective if p0776 does not equal 99. Refer to: p0789, r0790		
p0789[0...2]	Test sockets physical address gain / TestSktPhyAddrGain		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -340.28235E36	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 340.28235E36	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.00000
Description:	Sets the gain of a signal output of a physical address via test sockets.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Changes only become effective if p0776 does not equal 99. Refer to: p0788		
r0790[0...2]	Test sockets physical address signal value / TestSksPhyAddrVal		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: - Data type: Unsigned32 P-Group: Terminals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual value of a signal determined via a physical address.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Only effective when p0776 = 97 or p0776 = 96. Refer to: p0788		

p0795		CU digital inputs simulation mode / CU DI simulation			
CU_I, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: Unsigned32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133

0000 0000 0000 0000 0000
0000 0000 0000 bin

Description: Sets the setpoint for the input signals in the digital input simulation mode.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X122.1/X121.1)	High	Low	-
	01	DI 1 (X122.2/X121.2)	High	Low	-
	02	DI 2 (X122.3/X121.3)	High	Low	-
	03	DI 3 (X122.4/X121.4)	High	Low	-
	08	DI/DO 8 (X122.9/X121.7)	High	Low	-
	09	DI/DO 9 (X122.10/X121.8)	High	Low	-
	10	DI/DO 10 (X122.12/X121.10)	High	Low	-
	11	DI/DO 11 (X122.13/X121.11)	High	Low	-
	12	DI/DO 12 (X132.9/X131.1)	High	Low	-
	13	DI/DO 13 (X132.10/X131.2)	High	Low	-
	14	DI/DO 14 (X132.12/X131.4)	High	Low	-
	15	DI/DO 15 (X132.13/X131.5)	High	Low	-
	16	DI 16 (X122.5/X120.3)	High	Low	-
	17	DI 17 (X122.6/X120.4)	High	Low	-
	18	DI 18 (- / X120.6)	High	Low	-
	19	DI 19 (- / X120.7)	High	Low	-
	20	DI 20 (X132.5/X120.9)	High	Low	-
	21	DI 21 (X132.6/X120.10)	High	Low	-
	22	DI 22 (- / X130.1)	High	Low	-

Dependency: The simulation of a digital input is selected using p0795.
Refer to: p0795

Notice: Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input
DI/DO: Bidirectional Digital Input/Output

p0797[0]	CU analog input simulation mode / CU AI sim mode		
CU_S_AC_DP, CU_S_AC_PN, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the simulation mode for the analog input of the CU310-2.		
Value:	0: Terminal evaluation for analog input x 1: Simulation for analog input x		
Index:	[0] = AI0 (X131.7, 8)		
Dependency:	The setpoint for the input voltage is specified via p0798. Refer to: p0798		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		

p0798[0]	CU analog input simulation mode setpoint / CU AI sim set		
CU_S_AC_DP, CU_S_AC_PN, CU_I_D410	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2040
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	0.000
Description:	Sets the setpoint for the input value in the simulation mode of the analog input of the CU310-2.		
Index:	[0] = AI0 (X131.7, 8)		
Dependency:	The simulation of an analog input is selected using p0797. If AI x is parameterized as a voltage input (p0756), the setpoint is a voltage in V. If AI x is parameterized as a current input (p0756), the setpoint is a current in mA. Refer to: p0756, p0797		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		

p0799[0...2]	CU inputs/outputs sampling time / CU I/O t_samp		
CU_I, CU_I_D410	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2020, 2030, 2031
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of the Control Unit.		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Not available - analog outputs (AO)		
Dependency:	The parameter can only be modified for p0009 = 3, 29. Refer to: p0009		
Note:	The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).		

p0799[0...2]	CX inputs/outputs sampling time / CX I/O t_samp		
CU_NX_CX	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2020, 2030, 2031
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of the Control Unit.		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Not available - analog inputs (AI) [2] = Not available - analog outputs (AO)		
Dependency:	The parameter can only be modified for p0009 = 3, 29. Refer to: p0009		
Note:	The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).		
p0799[0...2]	CU inputs/outputs sampling time / CU I/O t_samp		
CU_S_AC_DP, CU_S_AC_PN	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2020, 2030, 2031

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of the Control Unit.		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Not available - analog outputs (AO)		
Dependency:	The parameter can only be modified for p0009 = 3, 29. Refer to: p0009		
Notice:	The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).		
Note:	- the modified sampling time is not effective until the drive unit is switched on again. - parameter p0799[0] must never equal zero.		
p0799[0...2]	CU inputs/outputs sampling time / CU I/O t_samp		
CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2020, 2030, 2031
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of the Control Unit.		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Not available - analog inputs (AI) [2] = Not available - analog outputs (AO)		
Dependency:	The parameter can only be modified for p0009 = 3, 29. Refer to: p0009		
Notice:	The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).		
Note:	- the modified sampling time is not effective until the drive unit is switched on again. - parameter p0799[0] must never equal zero.		

p0806	BI: Inhibit master control / PcCtrl inhibit		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to block the master control.		
Dependency:	Refer to: r0807		
Note:	The commissioning tool (drive control panel) uses the master control, for example.		

r0807.0	BO: Master control active / PcCtrl active				
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned8 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -		
Description:	Displays what has the master control. The drive can be controlled via the BICO interconnection or from external (e.g. the commissioning tool).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Master control active	Yes	No	5030, 6031
Dependency:	Refer to: p0806				
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.				
Note:	Bit 0 = 0: BICO interconnection active Bit 0 = 1: Master control for PC/AOP The commissioning tool (drive control panel) uses the master control, for example.				

p0809[0...2]	Copy Command Data Set CDS / Copy CDS		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned8 P-Group: Commands Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 15	Access level: 2 Func. diagram: 8560 Unit selection: - Expert list: 1 Factory setting 0
Description:	Copies one Command Data Set (CDS) into another.		
Index:	[0] = Source Command Data Set [1] = Target Command Data Set [2] = Start copying procedure		
Note:	When copying a command data set (CDS), the values in p0700, p1000 and p1500 are not accepted. As a consequence, the associated macros are not executed and inconsistencies are avoided. Procedure: 1. In Index 0, enter which command data set should be copied. 2. In index 1, enter the command data set that is to be copied into. 3. Start copying: set index 2 from 0 to 1. p0809[2] is automatically set to 0 when copying is completed.		

p0810	BI: Command data set selection CDS bit 0 / CDS sel, bit 0		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8560 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Command Data Set bit 0 (CDS bit 0).		
Dependency:	Refer to: r0050, p0811, r0836		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The Command Data Set selected using the binector inputs is displayed in r0836. The currently effective command data set is displayed in r0050. A Command Data Set can be copied using p0809.		
p0811	BI: Command data set selection CDS bit 1 / CDS sel, bit 1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8560 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Command Data Set bit 1 (CDS bit 1).		
Dependency:	Refer to: r0050, p0810, r0836		
Note:	The Command Data Set selected using the binector inputs is displayed in r0836. The currently effective command data set is displayed in r0050. A Command Data Set can be copied using p0809.		
p0819[0...2]	Copy Drive Data Set DDS / Copy DDS		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 31	Access level: 2 Func. diagram: 8565 Unit selection: - Expert list: 1 Factory setting 0
Description:	Copies one Drive Data Set (DDS) into another.		
Index:	[0] = Source Drive Data Set [1] = Target Drive Data Set [2] = Start copying procedure		
Note:	Procedure: 1. In Index 0, enter which drive data set is to be copied. 2. In index 1, enter the drive data set data that is to be copied into. 3. Start copying: set index 2 from 0 to 1. p0819[2] is automatically set to 0 when copying is completed.		

2 Parameters

2.2 List of parameters

p0820[0...n]	BI: Drive Data Set selection DDS bit 0 / DDS sel, bit 0		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: T Data type: Unsigned32 / Binary P-Group: Data sets Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8565, 8575 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Drive Data Set, bit 0 (DDS, bit 0).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p0821[0...n]	BI: Drive Data Set selection DDS bit 1 / DDS sel, bit 1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: T Data type: Unsigned32 / Binary P-Group: Data sets Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8565, 8570 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Drive Data Set, bit 1 (DDS, bit 1).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p0822[0...n]	BI: Drive Data Set selection DDS bit 2 / DDS sel, bit 2		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: T Data type: Unsigned32 / Binary P-Group: Data sets Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8565 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Drive Data Set, bit 2 (DDS, bit 2).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p0823[0...n]	BI: Drive Data Set selection DDS bit 3 / DDS sel, bit 3		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: T Data type: Unsigned32 / Binary P-Group: Data sets Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8565 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Drive Data Set, bit 3 (DDS, bit 3).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0824[0...n]	BI: Drive Data Set selection DDS bit 4 / DDS sel, bit 4		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, TM41	Can be changed: T Data type: Unsigned32 / Binary P-Group: Data sets Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8565, 8575 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the Drive Data Set, bit 4 (DDS, bit 4).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p0826[0...n]	Motor changeover motor number / Mot_chgov mot no		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 15	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the freely assignable motor number for the motor changeover.		
Dependency:	Refer to: p0827		
Notice:	When changing over motor data sets with the same motor number (e.g. star-delta changeover) and for a motor with brake, the motor brake remains open during the changeover.		
Note:	When the motor data sets are changed over, the following applies: The same motor number signifies the same thermal model.		
p0826[0...n]	Motor changeover motor number / Mot_chgov mot no		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 15	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the freely assignable motor number for the motor changeover.		
Dependency:	Refer to: p0827		
Notice:	When changing over motor data sets with the same motor number (e.g. star-delta changeover) and for a motor with brake, the motor brake remains open during the changeover.		
Note:	When the motor data sets are changed over, the following applies: The same motor number signifies the same thermal model. For the same motor number, the correction values of the Rs, Lh or kT adaptation are applied for the data set changeover (refer to r1782, r1787, r1797).		
p0827[0...n]	Motor changeover status word bit number / Mot_chg ZSW bit no		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 15	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the bit number for every motor data set. Example: p0827[0] = 0: For MDS0, r0830.0 is switched. p0827[1] = 5: For MDS1, r0830.5 is switched.		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p0826, r0830
Note: A motor is only changed over (a new motor selected) after the pulses have been suppressed.
 When the motor data sets are changed over, the following applies:
 Bit numbers that are not identical, signify that the motor must be changed over.

p0828[0...n] **BI: Motor changeover feedback signal / Mot_chgov fdbk sig**

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8575
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the feedback signal when changing over the motor.
 For p0833.0 = 1 the following applies:
 This feedback signal (0/1 edge) is required after a motor changeover to enable the pulses.

Dependency: Refer to: p0833
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

r0830.0...15 **CO/BO: Motor changeover status word / Mot_chgov ZSW**

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8575
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word of the motor changeover.
 These signals can be connected to digital outputs to change over the motor.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Motor selection bit 0	High	Low	-
	01	Motor selection bit 1	High	Low	-
	02	Motor selection bit 2	High	Low	-
	03	Motor selection bit 3	High	Low	-
	04	Motor selection bit 4	High	Low	-
	05	Motor selection bit 5	High	Low	-
	06	Motor selection bit 6	High	Low	-
	07	Motor selection bit 7	High	Low	-
	08	Motor selection bit 8	High	Low	-
	09	Motor selection bit 9	High	Low	-
	10	Motor selection bit 10	High	Low	-
	11	Motor selection bit 11	High	Low	-
	12	Motor selection bit 12	High	Low	-
	13	Motor selection bit 13	High	Low	-
	14	Motor selection bit 14	High	Low	-
	15	Motor selection bit 15	High	Low	-

Dependency: Refer to: p0827

p0831[0...15]		BI: Motor changeover contactor feedback / Mot_chg cont fdbk			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Motor Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0		
Description:	Sets the signal source for the feedback signal of the contactors when changing over motors. There is a fixed inter-relationship between energizing the contactor and the feedback signal. Example: A changeover is to be made between MDS0 (motor 0) and MDS1 (motor 1). The contactors should be switched using bit 4 (contactor 0) and 5 (contactor 1). The changeover should be made with an interconnection of the feedback signal. Implementation: MDS0: p0827[0] = 4, interconnect output to switch contactor 0 to r0830.4, p0831[4] = "input, feedback signal, contactor 0" MDS1: p0827[1] = 5, interconnect output to switch contactor 1 to r0830.5, p0831[5] = "input, feedback signal, contactor 1" The following sequence applies when changing over from MDS0 to MDS1: 1. Status bit r0830.4 is deleted. When the feedback signal (p0831[4]) is connected, the system waits until the feedback signal "contactor open" is displayed. If the feedback signal is not connected, then the system waits for the switch-off interlocking time of 320 ms. 2. Status bit r0830.5 is set. If the feedback signal (p0831[5]) is connected, the system waits until the feedback signal "contactor closed" is displayed. If the feedback signal is not connected, then the system waits for the switch-on interlocking time of 160 ms.				
Index:	[0] = Feedback signal contactor 0 [1] = Feedback signal contactor 1 [2] = Feedback signal contactor 2 [3] = Feedback signal contactor 3 [4] = Feedback signal contactor 4 [5] = Feedback signal contactor 5 [6] = Feedback signal contactor 6 [7] = Feedback signal contactor 7 [8] = Feedback signal contactor 8 [9] = Feedback signal contactor 9 [10] = Feedback signal contactor 10 [11] = Feedback signal contactor 11 [12] = Feedback signal contactor 12 [13] = Feedback signal contactor 13 [14] = Feedback signal contactor 14 [15] = Feedback signal contactor 15				
r0832.0...15		CO/BO: Mot. changeover contactor feedback sig. status word / Mot_chgov fdbk ZSW			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting -		
Description:	Displays the status word of the contactor feedback signals when changing over a motor.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Feedback signal contactor 0	Closed	Opened	-
	01	Feedback signal contactor 1	Closed	Opened	-
	02	Feedback signal contactor 2	Closed	Opened	-

Factory setting

-

-

0000 bin

Description:

Sets the configuration for the motor and encoder changeover.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Contact changeover from the application/drive	Application	Drive	-
01	Pulse suppression by application/drive	Application	Drive	-
02	Suppress drive parking for EDS changeover	Yes	No	-

Note:

For bit 00:

When the bit is set and the motor has to be changed over, then p0827 must be set differently in the appropriate motor data sets.

For bit 02:

The bit defines whether, for an EDS changeover, the status signal Gn_ZSW.14 is suppressed (parking encoder active).

0010 bin

Description:

Sets the configuration for the motor and encoder changeover.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Contact changeover from the application/drive	Application	Drive	-
01	Pulse suppression by application/drive	Application	Drive	-
02	Suppress drive parking for EDS changeover	Yes	No	-

Note:

For bit 00:

When the bit is set and the motor has to be changed over, then p0827 must be set differently in the appropriate motor data sets.

For bit 02:

The bit defines whether, for an EDS changeover, the status signal Gn_ZSW.14 is suppressed (parking encoder active).

For motor changeover to running motor:

The "flying restart" function should also be activated (p1200) when changing over to a motor that is already running.

Dependency:	Refer to: r0051, p0820, p0821, p0822, p0823, p0824				
Note:	Drive data sets are selected via binector input p0820 and following. The currently effective drive data set is displayed in r0051. If there is only one data set, then a value of 0 is displayed in this parameter and not the selection via binector inputs.				

r0838[0...3]	Motor/Encoder Data Set selected / MDS/EDS selected		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned8 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8565 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the selected Motor Data Set (MDS) and the selected Encoder Data Sets (EDS).		
Index:	[0] = Motor Data Set MDS selected [1] = Encoder 1 Encoder Data Set EDS selected [2] = Encoder 2 Encoder Data Set EDS selected [3] = Encoder 3 Encoder Data Set EDS selected		
Dependency:	Refer to: r0049, p0186, p0187, p0188, p0189		
Note:	Value 99 means the following: No encoder assigned (not configured).		
p0839	Motor changeover contactor control delay time / Mot_chg ctrl t_del		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500 [ms]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the delay time for the contactor control for the motor changeover.		
Note:	The delay time is taken into account in the following cases: - for feedback signal, previous contactor "Open". The new motor contactor is controlled (energized) after the delay time has expired. - for the feedback signal, new motor contactor "Closed". The pulses are enabled after the delay time has expired.		
p0840[0...n]	BI: ON / OFF (OFF1) / ON / OFF (OFF1)		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2501 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the command "ON/OFF (OFF1)". For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p1055, p1056		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	For binector input p0840 = 0 signal, the motor can be moved, jogging using binector input p1055 or p1056. The command "ON/OFF (OFF1)" can be issued using binector input p0840 or p1055/p1056. For binector input p0840 = 0 signal, the switching on inhibited is acknowledged. Only the signal source that originally switched on can also switch off again. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

2 Parameters

2.2 List of parameters

Note: For drives with closed-loop speed control (p1300 = 20, 21), the following applies:
 - BI: p0840 = 0 signal: OFF1 (braking with the ramp-function generator, then pulse suppression)
 For drives with closed-loop torque control (p1300 = 22, 23), the following applies:
 - BI: p0840 = 0 signal: immediate pulse suppression
 For drives with closed-loop torque control (activated using p1501), the following applies:
 - BI: p0840 = 0 signal: No dedicated braking response, but pulse cancelation when standstill is detected (p1226, p1227)
 For drives with closed-loop speed/torque control, the following applies:
 - BI: p0840 = 0/1 signal: ON (pulses can be enabled)
 r0863.1 of a drive can also be selected as signal source.

p0840[0...n]	BI: ON / OFF (OFF1) / ON / OFF (OFF1)		
A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "ON/OFF (OFF1)". For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p1055, p1056		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	For binector input p0840 = 0 signal, the switching on inhibited is acknowledged. Only the signal source that originally switched on can also switch off again. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	For active infeeds (Active Line Module and Smart Line Module) the following applies: - BI: p0840 = 0 signal: OFF1 (reduce Vdc along the ramp, then pulse suppression and precharging contactor/line contactor open) - BI: p0840 = 0/1 signal: ON (precharging contactor/line contactor close, pulses can be enabled) For passive infeeds (Basic Line Module) the following applies: - BI: p0840 = 0 signal: OFF1 (precharging contactor/line contactor open) - BI: p0840 = 0/1 signal: ON (precharging contactor/line contactor close) r0863.1 of a drive can also be selected as signal source. Switching on can be delayed with a wait time (p0862). Switching off can also be delayed with a wait time (p3490).		

p0840	BI: ON / OFF (OFF1) / ON / OFF (OFF1)		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9677
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "ON/OFF (OFF1)". For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p1055, p1056		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			

- Notice:** Only the signal source that originally switched on can also switch off again.
The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
- Note:** BI: p0840 = 0 signal: OFF1 (pulse suppression and switching on inhibited)
BI: p0840 = 0/1 signal: ON (pulses can be enabled)
This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.

p0844[0...n]	BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 s_s 1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

- Description:** Sets the first signal source for the command "No coast down/coast down (OFF2)".
The following signals are AND'ed:
- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"
For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).
BI: p0844 = 0 signal or BI: p0845 = 0 signal
- OFF2 (immediate pulse suppression and switching on inhibited)
BI: p0844 = 1 signal and BI: p0845 = 1 signal
- no OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0844[0...n]	BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 s_s 1		
A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

- Description:** Sets the first signal source for the command to instantaneously switch off the drive.
This corresponds to command "No coast down/coast down (OFF2)" for drives.
The following signals are AND'ed:
- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"
For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).
BI: p0844 = 0 signal or BI: p0845 = 0 signal
- OFF2 (immediate pulse suppression and switching on inhibited)
BI: p0844 = 1 signal and BI: p0845 = 1 signal
- no OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For binector input p0844 = 0 signal or p0845 = 0 signal, the following applies:
- precharging contactor/line contactor is additionally opened.

p0844	BI: No coast-down / coast-down (OFF2) / OFF2		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9677
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "No coast down/coast down (OFF2)". For the PROFIdrive profile, this command corresponds to control word 1 bit 1 (STW1.1). BI: p0844 = 0 signal - OFF2 (immediate pulse suppression and switching on inhibited) BI: p0844 = 1 signal - no OFF2 (enable is possible)		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.		

p0845[0...n]	BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 s_s 2		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the second signal source for the command "No coast down/coast down (OFF2)". The following signals are AND'ed: - BI: p0844 "No coast-down / coast-down (OFF2) signal source 1" - BI: p0845 "No coast-down / coast-down (OFF2) signal source 2" For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1). BI: p0844 = 0 signal or BI: p0845 = 0 signal - OFF2 (immediate pulse suppression and switching on inhibited) BI: p0844 = 1 signal and BI: p0845 = 1 signal - no OFF2 (enable is possible)		
Caution:	When "master control from PC" is activated, this binector input is effective.		
			

p0845[0...n]	BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 s_s 2		
A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the second signal source for the command to instantaneously switch off the drive. This corresponds to command "No coast down/coast down (OFF2)" for drives. The following signals are AND'ed:

- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).
 BI: p0844 = 0 signal or BI: p0845 = 0 signal
 - OFF2 (immediate pulse suppression and switching on inhibited)
 BI: p0844 = 1 signal and BI: p0845 = 1 signal
 - no OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is effective.

Note: For binector input p0844 = 0 signal or p0845 = 0 signal, the following applies:
 - precharging contactor/line contactor is additionally opened.

p0848[0...n]	BI: No Quick Stop / Quick Stop (OFF3) signal source 1 / OFF3 s_s 1		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the first signal source for the command "No quick stop/quick stop (OFF3)". The following signals are AND'ed:

- BI: p0848 "No quick stop / quick stop (OFF3) signal source 1"
- BI: p0849 "No quick stop / quick stop (OFF3) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 2 (STW1.2).
 BI: p0848 = 0 signal or BI: p0849 = 0 signal
 - OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switching on inhibited)
 BI: p0848 = 1 signal and BI: p0849 = 1 signal
 - no OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For drives with closed-loop torque control (activated using p1501), the following applies:
 BI: p0848 = 0 signal:
 - no dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227).

p0848	BI: No Quick Stop / Quick Stop (OFF3) / OFF3		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9677
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the first signal source for the command "No quick stop/quick stop (OFF3)".
 For the PROFIdrive profile, this command corresponds to control word 1 bit 2 (STW1.2).
 BI: p0848 = 0 signal
 - OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switching on inhibited)
 BI: p0848 = 1 signal
 - no OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.

p0849[0...n]	BI: No Quick Stop / Quick Stop (OFF3) signal source 2 / OFF3 s_s 2		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the second signal source for the command "No quick stop/quick stop (OFF3)".
 The following signals are AND'ed:
 - BI: p0848 "No quick stop / quick stop (OFF3) signal source 1"
 - BI: p0849 "No quick stop / quick stop (OFF3) signal source 2"
 For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 2 (STW1.2).
 BI: p0848 = 0 signal or BI: p0849 = 0 signal
 - OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switching on inhibited)
 BI: p0848 = 1 signal and BI: p0849 = 1 signal
 - no OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is effective.

Note: For drives with closed-loop torque control (activated using p1501), the following applies:

BI: p0849 = 0 signal:
 - no dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227).

p0852[0...n]	BI: Enable operation/inhibit operation / Enable operation		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "enable operation/inhibit operation".
For the PROFIdrive profile, this command corresponds to control word 1 bit 3 (STW1.3).
BI: p0852 = 0 signal
Inhibit operation (suppress pulses).
BI: p0852 = 1 signal
Enable operation (pulses can be enabled).

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0852	BI: Enable operation/inhibit operation / Enable operation		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9677
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "enable operation/inhibit operation".
For the PROFIdrive profile, this command corresponds to control word 1 bit 3 (STW1.3).
BI: p0852 = 0 signal
Inhibit operation (suppress pulses).
BI: p0852 = 1 signal
Enable operation (pulses can be enabled).

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.

p0854[0...n]	BI: Control by PLC/no control by PLC / Master ctrl by PLC		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".
For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Caution: When "master control from PC" is activated, this binector input is ineffective.

2 Parameters

2.2 List of parameters

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.
If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0854	BI: Control by PLC/no control by PLC / Master ctrl by PLC		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9677, 9678
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".
For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Dependency:

Refer to: p1155

Caution:

When "master control from PC" is activated, this binector input is ineffective.

Notice:

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note:

For the TM41, a response can be initiated using this bit if the control fails.

The parameter is only effective in the "SIMOTION" operating mode (p4400 = 0).

In the "SINAMICS" operating mode, the setpoints at connector input p4420 are evaluated independently of p0854.

Further, the setting of p2037 should be observed.

p0854	BI: Control by PLC/no control by PLC / Master ctrl by PLC		
ENC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".
For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Caution:

When "master control from PC" is activated, this binector input is ineffective.

Notice:

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note:

This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.

If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0855[0...n]	BI: Unconditionally release holding brake / Uncond open brake		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 2701, 2707
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "unconditionally open holding brake".		
Dependency:	Refer to: p0858		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The signal via binector input p0858 "Unconditionally close holding brake" has a higher priority than via binector input p0855 "Unconditionally open holding brake".		
p0856[0...n]	BI: Enable speed controller / n_ctrl enable		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 2701, 2707
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "enable speed controller" (r0898.12). 0 signal: Set the I component and speed controller output to zero. 1 signal: Enable speed controller.		
Dependency:	Refer to: r0898		
Note:	If "enable speed controller" is withdrawn, then an existing brake will be closed. If "enable speed controller" is withdrawn, the pulses are not suppressed.		
p0856[0...n]	BI: Enable velocity controller / v_ctrl enable		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 2701, 2707
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "enable speed controller" (r0898.12). 0 signal: Set the I component and speed controller output to zero. 1 signal: Enable speed controller.		
Dependency:	Refer to: r0898		
Note:	If "enable speed controller" is withdrawn, then an existing brake will be closed. If "enable speed controller" is withdrawn, the pulses are not suppressed.		

2 Parameters

2.2 List of parameters

p0857	Power unit monitoring time / PU t_mon		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 100.0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60000.0 [ms]	Access level: 2 Func. diagram: 8760, 8864, 8964 Unit selection: - Expert list: 1 Factory setting 6000.0 [ms]
Description:	Sets the monitoring time for the power unit. The following applies for infeeds and drives: The monitoring time is started after an 0/1 edge of the ON/OFF1 command. If the power unit does not return a READY signal within the monitoring time, then fault F06000 (infeeds) or F07802 (drives) is output. For drives, the following also applies: After the pulse enable (operation enabled, p0852), the monitoring time is re-started. If the infeed does not signal ready to the drive within the monitoring time (using binector input p0864 of the drive), fault F07840 is initiated.		
Dependency:	Refer to: F06000, F07802, F07840, F30027		
Notice:	The maximum time to precharge the DC link is monitored in the power unit and cannot be changed. The maximum duration of the precharging depends on the power class and the power unit design. The monitoring time for the precharging is started after the ON command (BI: p0840 = 0/1 signal). Fault F30027 is output when the maximum precharging duration is exceeded.		
Note:	The factory setting for p0857 depends on the power class and the design of the power unit. The monitoring time for the ready signal of the power unit includes the time to precharge the DC link and, if relevant, the de-bounce time of the contactors. If an excessively low value is entered into p0857, then after enable, this results in the corresponding fault.		
p0858[0...n]	BI: Unconditionally close holding brake / Uncond close brake		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2501, 2701, 2707 Unit selection: - Expert list: 1 Factory setting 10251.13
Description:	Sets the signal source for the command "unconditionally close holding brake".		
Dependency:	Refer to: p0855		
Note:	The signal via binector input p0858 "Unconditionally close holding brake" has a higher priority than via binector input p0855 "Unconditionally open holding brake". For a 1 signal via binector input p0858, the command "unconditionally close the holding brake" is executed and internally a zero setpoint is entered.		
p0860	BI: Line contactor feedback signal / Line contact fdbk		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2634, 8734, 8834, 8934 Unit selection: - Expert list: 1 Factory setting 863.1
Description:	Sets the signal source for the feedback signal from the line contactor.		
Recommendation:	When the monitoring is activated (BI: p0860 not equal to r0863.1), then to control the line contactor, signal BO: r0863.1 of its own drive object should be used.		
Dependency:	Refer to: p0861, r0863 Refer to: F07300		

- Notice:** The line contactor monitoring is deactivated if the control signal of the particular drive object is set as the signal source for the feedback signal of the line contactor (BI: p0860 = r0863.1).
- Note:** The state of the line contactor is monitored depending on signal BO: r0863.1.
When the monitoring is activated (BI: p0860 not equal to r0863.1), fault F07300 is then also output if the contactor is closed before it is controlled using r0863.1.

p0861	Line contactor monitoring time / Line cont t_mon		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000 [ms]	Access level: 2 Func. diagram: 2634, 8734, 8834, 8934 Unit selection: - Expert list: 1 Factory setting 100 [ms]
Description:	Sets the monitoring time of the line contactor. This time starts each time that the line contactor switches (r0863.1). If a feedback signal is not received from the line contactor within the time, a message is output.		
Dependency:	Refer to: p0860, r0863 Refer to: F07300		
Note:	The monitoring function is disabled for the factory setting of p0860.		

p0862	Power unit ON-delay / PU t_on		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65000 [ms]	Access level: 3 Func. diagram: 2610, 8732, 8832, 8932 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the delay time for the control command of the power unit and a line contactor, if used.		
Note:	This means that it is possible to realize a shifted (delayed) precharging or switch-on using a single ON command. When the infeed units are active, before the line contactor is closed, an offset adjustment of the current measurement is carried out for a duration of 120 ms (p3491).		

r0863.0	CO/BO: System pressure status word / p_sys ZSW				
HLA	Can be changed: - Data type: Unsigned16 P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -		
Description:	Display and BICO output for the status word of the system pressure.				
Recommendation:	If the system pressure is measured (r0069), this signal can be interconnected from the binector input "system pressure available" (p0864). To do this, the threshold and hysteresis for the system pressure must be appropriately set (p0865, p0866).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	System pressure reached	Yes	No	-
Dependency:	Refer to: p0864, p0865, p0866				

r0863.0...2		CO/BO: Drive coupling status word/control word / CoupleZSW/STW			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: - Data type: Unsigned16 P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -		
Description:	Display and BICO output for the status word and control word of the drive coupling.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Closed-loop control operation	Yes	No	2610, 8710, 8810, 8910
	01	Energize contactor	Yes	No	2610, 2634, 7990, 8734, 8834, 8934
	02	Infeed line supply failure	Yes	No	-
Dependency:	Refer to: p0864				
Note:	For bit 00: Bit 0 signals that the infeed is ready. When the operating signal is transferred via binector output r0863.0 this allows several drives to start (run-up) staggered over time when they are simultaneously switched on. To realize this, the following connections/interconnections are required: Drive 1: Interconnect binector input p0864 with binector output r0863.0 of the infeed Drive 2: Interconnect binector input p0864 with binector output r0863.0 of drive 1 Drive 3: Interconnect binector input p0864 with binector output r0863.0 of drive 2 etc. The first drive only transfers the operating signal to the next drive after it has reached its ready condition. For bit 01: Bit 1 is used to control an external line contactor. For bit 02: This bit only signals line supply failure for Active Infeed (A_INF) and Smart Infeed (S_INF).				

p0864		BI: System pressure available / p_sys available			
HLA	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1		
Description:	Sets the signal source for the "system pressure available" signal.				
Dependency:	Refer to: r0863, p0865, p0866				
Note:	An enable is only possible for p0864 = 1 signal.				

p0864	BI: Infeed operation / INF operation		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2610, 8710, 8910 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the operating signal of the infeed (e.g. BO: r0863.0).		
Dependency:	Refer to: r0863		
Note:	The sequence control of a servo/vector drive requires this signal. The following applies for an infeed without DRIVE-CLiQ: For these infeeds, the "ready" message is available via an output terminal. This signal must be connected to a digital input. The drives supplied from this infeed must use this signal as ready signal (BI: p0864 = digital input).		
p0865	System pressure switch-on threshold / p_sys thr		
HLA	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [bar]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.0 [bar]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [bar]
Description:	Sets the switch-on threshold to evaluate the measured system pressure.		
Recommendation:	If the system pressure is measured (r0069), this signal can be interconnected from the binector input "system pressure available" (p0864). To do this, the threshold and hysteresis for the system pressure must be appropriately set (p0865, p0866).		
Dependency:	Refer to: r0863, p0864, p0866		
p0866	System pressure switch-on threshold hysteresis / p_sys hyst		
HLA	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20.0 [%]
Description:	Sets the hysteresis for the switch-on threshold to evaluate the measured system pressure.		
Recommendation:	If the system pressure is measured (r0069), this signal can be interconnected from the binector input "system pressure available" (p0864). To do this, the threshold and hysteresis for the system pressure must be appropriately set (p0865, p0866).		
Dependency:	Refer to: r0863, p0864, p0865		
Note:	The hysteresis refers to the switch-on threshold (p0865) and acts on the lower threshold.		
p0867	Power unit main contactor holding time after OFF1 / PU t_MC after OFF1		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.0 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50.0 [ms]
Description:	Sets the main contactor holding time after OFF1 After withdrawing the OFF1 enable (signal source of p0840), the main contactor is only opened after the main contactor holding time has elapsed.		

2 Parameters

2.2 List of parameters

Recommendation: When operating a drive connected to SINUMERIK, which only closes the main contactor with the OFF1 command (blocksize, chassis), p0867 should be set as a minimum to 50 ms.

Dependency: Refer to: p0869

Note: For p0869 = 1 (keep main contactor closed for STO), after withdrawing STO, the switching on inhibited must be acknowledged via the signal source of p0840 = 0 (OFF1) – and before the main contactor holding time expires, should go back to 1, otherwise the main contactor will open.

p0868	Power unit debounce time/wait time / PU t_debnc/t_wait		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	65000 [ms]	65000 [ms]

Description: Sets the debounce time or wait time for the power unit.
The following applies for "Chassis" format Motor Modules:
- sets the debounce time for the DC circuit breaker.
The following applies for "Chassis" format AC/AC converters:
- sets the wait time for the thyristor rectifier.

Note: The following applies if p0868 = 65000 ms:
The debounce time defined internally in the power unit's EEPROM is implemented.

p0869	Sequence control configuration / Seq_ctrl config		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration for the sequence control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Keep main contactor closed for STO	Yes	No	-

Dependency: Refer to: p0867

Note: STO: Safe Torque Off

For bit 00:

After withdrawing the OFF1 enable (signal source of p0840), the main contactor is opened after the main contactor holding time has elapsed.

For p0869.0 = 1, after withdrawing STO, the switching on inhibited must be acknowledged via the signal source of p0840 = 0 (OFF1) – and before the main contactor holding time expires (p0867), should go back to 1, otherwise the main contactor will open.

p0869	Sequence control configuration / Seq_ctrl config		
A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8732, 8832, 8932
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration for the sequence control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	Wait for the feedback signal from the external main contactor	Yes	No	8732, 8832, 8932

- Notice:** For chassis units, the following applies:
Setting p0869.1 = 1 is not permissible, if, using p0860 the internal circuit breaker is monitored (this is not controlled with r0863.1).
- Note:** For bit 01:
For p0869.1 = 1, before starting to charge the DC link (r0899.8 = 1), the system waits for a feedback signal from the external main contactor (p0860 = 1 signal). The main contactor must be controlled using r0863.1.
Waiting for the contactor feedback signal is especially necessary if the external main contactor has long switching times, which would lead to the precharging time being exceeded (F06000, F30027).

p0870	BI: Close main contactor / Close main cont		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

- Description:** Sets the signal source to close the main contactor.
- Note:** The main contactor is also closed when the converter is switched on after issuing the necessary enable signals.
A binector input p0870 = 1 signal prevents the main contactor from being opened when enable signals are withdrawn.

r0873	CO/BO: Infeed total operation / INF total op		
S_INF, B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8732, 8832
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

- Description:** Displays the operational readiness of the infeeds when using Smart Line Module (SLM) and Basic Line Module (BLM) together (mixed operation).
In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.
- Dependency:** Refer to: r0863, p0874
- Note:** Mixed operation is not possible with the Active Line Module (ALM)!

p0874	BI: Smart/ Basic Line Module operation / SLM/BLM operation		
S_INF, B_INF	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8732, 8832
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

- Description:** Setting to interconnect the ready signal for mixed operation of Smart Line Module (SLM) and Basic Line Module (BLM).
In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.
- Dependency:** Refer to: r0863, r0873
- Note:** Mixed operation is not possible with the Active Line Module (ALM)!

r0887.0...13	BO: ESR status word / ESR ZSW				
SERVO (ESR), HLA (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: -	Calculated: -	Access level: 2

	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word for the "ESR" function.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ESR monitoring activated	Yes	No	-
	01	Profile "Extended stopping (integrated in the drive)" active	Yes	No	-
	02	Profile "Extended retraction (integrated in the drive)" active	Yes	No	-
	03	Profile "Generator operation (Vdc controller)" active	Yes	No	-
	09	ESR enabled (p0889)	Yes	No	-
	10	ESR trigger active (p0890)	Yes	No	-
	11	ESR OFF ramp OFF1/OFF3 (p0891)	OFF1	OFF3	-
	12	ESR response initiated	Yes	No	3082
	13	ESR response presently running	Yes	No	-
Dependency:	Refer to: p0888, p0889, p0890, p0891				
Note:	ESR: Extended Stop and Retract				

p0888	ESR configuration / ESR configuration			
SERVO (ESR), HLA (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: 3082	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	4	0	
Description:	Sets the configuration for the "ESR" function.			
Value:	0: No function 1: Extended stopping (integrated in the drive), n_set 2: Extended retraction (function integrated in the drive) 3: Generator operation (Vdc controller) 4: Extended stopping (integrated in the drive), n_act			
Dependency:	Refer to: p0889, p0891, p0892, p0893, p1240			
Caution:	For p0888 = 3 generator operation (Vdc controller) must be correspondingly configured using p1240.			
				
Note:	ESR: Extended Stop and Retract			

p0889	BI: ESR response enable / Response enab			
SERVO (ESR), HLA (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 3082	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	2090.9	
Description:	Sets the signal source to enable the response for the "ESR" function. BI: p0889 = 0 signal The ESR response is locked. A possible trigger event that occurs is ignored. BI: p0889 = 1 signal The ESR response is enabled. A possible trigger event that occurs initiates the response.			

Dependency: Refer to: p0888
Note: ESR: Extended Stop and Retract

p0890[0...4] BI: ESR trigger / ESR trigger

SERVO (ESR), HLA (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 3082 Unit selection: - Expert list: 1 Factory setting [0] 2090.2 [1] 9721.15 [2] 9723.1 [3] 9723.2 [4] 0
--	--	--	---

Description: Sets the signal sources for the trigger for the "ESR" function.
The binector inputs cannot be interconnected or interconnected as follows:
BI: p0890[0] = r2090.2 (CU_STW1.2)
BI: p0890[1] = r9721.15 (Safety Integrated STOP E)
BI: p0890[2] = r9723.1 (Safety Integrated STOP F)
BI: p0890[3] = r9723.2 (Safety Integrated communication failure)
BI: p0890[4] = can be freely interconnected

Index:
[0] = Trigger for NCK
[1] = Trigger for SI STOP E
[2] = Trigger for SI STOP F
[3] = Trigger for SI communication failure
[4] = Trigger can be freely interconnected

Dependency: Refer to: p0888
Note: ESR: Extended Stop and Retract

p0891 ESR OFF ramp / ESR OFF ramp

SERVO (ESR), HLA (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: 3082 Unit selection: - Expert list: 1 Factory setting 0
--	--	--	--

Description: Sets the OFF ramp for the "ESR" function.

Value:
0: OFF3
1: OFF1

Dependency: Refer to: p0888
Note: ESR: Extended Stop and Retract

2 Parameters

2.2 List of parameters

p0892	ESR timer / ESR timer			
SERVO (ESR), HLA (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [s]	20.00 [s]	0.50 [s]	
Description:	Sets the timer for the brake delay for the "ESR" function.			
Dependency:	The following applies when Safety Integrated is enabled: p0892 < p9580 (SI motion, pulse cancellation delay bus failure) If the setting for the times is not observed, then ESR OFF ramp will not be able to be fully completed. Refer to: p0888, p9580			
Note:	ESR: Extended Stop and Retract			
p0893	ESR velocity / ESR velocity			
SERVO (ESR, Lin), HLA, HLA (ESR), SERVO_AC (ESR, Lin), SERVO_I_AC (ESR, Lin)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3082	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-340.28235E36 [m/min]	340.28235E36 [m/min]	0 [m/min]	
Description:	Sets the speed/velocity, which, when triggered, is approached with an OFF3 ramp. The timer in p0892 is the total time that elapses for the approach and constant velocity travel. After this, depending on the setting in p0891, an OFF1 ramp or OFF3 ramp is realized.			
Dependency:	Refer to: p0888, p0889, p0891, p0892			
Note:	This parameter is only of significance for the "Retract" profile (p0888 = 2). ESR: Extended Stop and Retract			
p0893	ESR speed / ESR speed			
SERVO (ESR), SERVO_AC (ESR), SERVO_I_AC (ESR)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3082	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-340.28235E36 [rpm]	340.28235E36 [rpm]	0 [rpm]	
Description:	Sets the speed/velocity, which, when triggered, is approached with an OFF3 ramp. The timer in p0892 is the total time that elapses for the approach and constant velocity travel. After this, depending on the setting in p0891, an OFF1 ramp or OFF3 ramp is realized.			
Dependency:	Refer to: p0888, p0889, p0891, p0892			
Note:	This parameter is only of significance for the "Retract" profile (p0888 = 2). ESR: Extended Stop and Retract			
p0894	Parking pre-setting / Parking pre-set			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, ENC	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Pre-setting for the "Parking axis" and "Parking encoder" function.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Default with interconnection	Park	Do not park
				FP
				-

Dependency: Refer to: p0480, p0897

Note: For bit 00:

If there is at least one BICO interconnection for "Parking axis" or "Parking encoder", this default setting is taken into consideration during power up.

p0895[0...n]	BI: Activate/deactivate power unit components / PU_comp act/deact		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC, A_INF, S_INF, R_INF, B_INF	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source to activate/deactivate a power unit component.

Dependency: BI: p0895 = 0 signal
Deactivate power unit components.
BI: p0895 = 1 signal
Activate power unit components
Refer to: p0125, r0126
Refer to: A05054

Caution: It is not permissible to deactivate drive objects with safety functions enabled.

Notice: For Active Line Modules in the "Chassis" format, the Voltage Sensing Module (VSM, p0145) belonging to the power unit is automatically activated/deactivated.

Note: The power unit is only deactivated when the pulses are suppressed.
For units connected in parallel, when one of the power units is deactivated, then the enable in p7001 is withdrawn.

r0896.0	BO: Parking axis, status word / Parking axis, ZSW			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	

Description: Displays the status word for the "parking axis" function.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Parking axis active	Yes	No	-

Dependency: Refer to: p0897

p0897	BI: Parking axis selection / Parking axis sel		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to select the "parking axis" function.

Dependency: BI: p0897 = 0 signal
The function "parking axis" is not selected.
BI: p0897 = 1 signal
The function "parking axis" is selected.
Refer to: r0896

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: After it has been selected the "parking axis" function only becomes active when the pulses are suppressed.

	13	Command close holding brake	Yes	No	-
	14	Pulse enable from the brake control	Yes	No	-
	15	Setpoint enable from the brake control	Yes	No	-

Note: For bits 00, 01, 02, 04, 05, 06, 09:
For PROFIdrive, these signals are used for status word 1.
For bit 13:
When the "Safe Brake Control" (SBC) is activated and selected, the brake is no longer controlled using this signal.
For bit 14, 15:
These signals are only of significance when the "extended brake control" function module is activated (r0108.14 = 1).

r0899.0...12 CO/BO: Status word sequence control infeed / ZSW seq_ctrl INF

A_INF, S_INF, R_INF	Can be changed: -	Calculated: -	Access level: 2

999

999

Description:

Sets the send and receive telegram.

Value:

1: Standard telegram 1, PZD-2/2
2: Standard telegram 2, PZD-4/4
20: Standard telegram 20, PZD-2/6
220: SIEMENS telegram 220, PZD-10/10
352: SIEMENS telegram 352, PZD-6/6
999: Free telegram configuration with BICO

Caution:

Telegrams 2, 3 and 4 are not suitable for sensorless vector control (p1300 = 20). For sensorless vector control, it is necessary that the setpoint speed is entered at the ramp-function generator input (e.g. p1070) and not after the ramp-function generator (p1155).

Note:

If a value is not equal to 999, a telegram is set and the automatically set interconnections in the telegram are inhibited.

The inhibited interconnections can only be changed again after setting value 999.

When switching to telegram 220, parameter p0045 is restored to the factory setting.

Description:	Sets the number of tolerated consecutive sign-of-life errors of the isochronous master. The sign-of-life signal is normally received in PZD4 (control word 2) from the master.		
Dependency:	Refer to: p2045, r2065 Refer to: F01912		
Note:	The sign-of-life monitoring is disabled for p0925 = 65535.		

r0930	PROFIdrive operating mode / PD operating mode		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned16 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the operating mode. 1: Closed-loop speed controlled operation with ramp-function generator 2: Closed-loop position controlled operation 3: Closed-loop speed controlled operation without ramp-function generator		

r0944	CO: Counter for fault buffer changes / Fault buff change		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8060 Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for the counter for changes of the fault buffer. This counter is incremented every time the fault buffer changes.		
Recommendation:	Used to check whether the fault buffer has been read out consistently.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109		

r0945[0...63]	Fault code / Fault code		
All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the numbers of faults that have occurred.		
Dependency:	Refer to: r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122		
Notice:	The properties of the fault buffer should be taken from the corresponding product documentation.		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). Fault buffer structure (general principle): r0945[0], r0949[0], r0948[0], r2109[0], r3115[0] --> actual fault case, fault 1 ... r0945[7], r0949[7], r0948[7], r2109[7], r3115[7] --> actual fault case, fault 8 r0945[8], r0949[8], r0948[8], r2109[8], r3115[8] --> 1st acknowledged fault case, fault 1 ... r0945[15], r0949[15], r0948[15], r2109[15], r3115[15] --> 1st acknowledged fault case, fault 8 ... r0945[56], r0949[56], r0948[56], r2109[56], r3115[56] --> 7th acknowledged fault case, fault 1 ... r0945[63], r0949[63], r0948[63], r2109[63], r3115[63] --> 7th acknowledged fault case, fault 8		

r0946[0...65534]	Fault code list / Fault code list		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Lists the fault codes stored in the drive unit. The indices can only be accessed with a valid fault code. Example: r0946[0...999] = 0 --> fault code 0 ... 999 is not available r0946[1000] = 1000 --> fault code 1000 is available r0946[1001] = 1001 --> fault code 1001 is available ... r0946[1008] = 0 --> fault code 1008 is not available ...		
Dependency:	The parameter assigned to the fault code is entered in r0951 under the same index.		

r0947[0...63]	Fault number / Fault number		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	This parameter is identical to r0945.		

r0948[0...63]	Fault time received in milliseconds / t_fault rcv ms		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the system runtime in milliseconds when the fault occurred.		
Dependency:	Refer to: r0945, r0947, r0949, r2109, r2114, r2130, r2133, r2136, r3115, r3120, r3122		
Notice:	The time comprises r2130 (days) and r0948 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the fault buffer and the assignment of the indices is shown in r0945. When the parameter is read via PROFIdrive, the TimeDifference data type applies.		
r0949[0...63]	Fault value / Fault value		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays additional information about the fault that occurred (as integer number).		
Dependency:	Refer to: r0945, r0947, r0948, r2109, r2130, r2133, r2136, r3115, r3120, r3122		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the fault buffer and the assignment of the indices is shown in r0945.		
p0952	Fault cases counter / Fault cases qty		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 6700, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Number of fault situations that have occurred since the last reset.		
Dependency:	The fault buffer is deleted (cleared) by setting p0952 to 0. In order that faults with "POWER ON" acknowledgment can also be cleared from the fault buffer, POWER ON must first be carried out. Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136		
r0963	PROFIBUS baud rate / PB baud rate		
CU_S_AC_DP, CU_S120_DP, CU_S150_DP	Can be changed: -	Calculated: -	Access level: 3

p0970			
Reset drive parameters / Drive par reset			
HLA	Can be changed: C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to initiate the reset of the parameters of an individual drive object. Parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0.		

p0970		Reset drive parameters / Drive par reset		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(30)	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Factory settings	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	100	0	
Description:	The parameter is used to initiate the reset of the parameters of an individual drive object. Parameters p0100, p0205 (only for VECTOR) and the parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).			
Value:	0: Inactive 1: Start a parameter reset 5: Starts a safety parameter reset 6: Start reset non-safety/safety parameters 100: Start a BICO interconnection reset			
Dependency:	Refer to: F01659			
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.			
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0. For p0970 = 5 the following applies: The password for Safety Integrated must be set. When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed. Then save the parameters and carry out a POWER ON. For p0970 = 1 the following applies: If a Safety Integrated Function is parameterized (p9601), then the safety parameters are not reset. In this case, a fault F01659 is output with fault value 2.			

p0970		Reset infeed parameter / INF par reset

	Min	Max	Factory setting	
	0	100	0	
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 15 (TM15). Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).			
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset			
Dependency:	Refer to: p0010			
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.			
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.			
p0970		TM150 reset parameters / TM150 par reset		
TM150	Can be changed: C2(30)	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Factory settings	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	100	0	
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 150 (TM150).			
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset			
Dependency:	Refer to: p0010			
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.			
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.			

p0970	TM15DI/DO reset parameter / TM15D par reset		
TM15DI_DO	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 15 (TM15). The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle. Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.		

p0970	TM17 reset parameter / TM17 par reset		
TM17	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 17 (TM17). Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.		

p0970	TM31 reset parameters / TM31 par reset		
TM31	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 31 (TM31). The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle. Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		

2 Parameters

2.2 List of parameters

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970	TM41 reset parameters / TM41 par reset		
TM41	Can be changed: C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 41 (TM41). Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.		

p0970	TB30 reset parameters / TB30 par reset		
TB30	Can be changed: C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Board 30 (TB30). The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle. Parameter p0161 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0.		

p0970	TM54F reset parameters / TM54F par reset		
TM54F_MA	Can be changed: C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 54F (TM54F). Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 5: Starts a safety parameter reset 6: Start reset non-safety/safety parameters 100: Start a BICO interconnection reset		

- Notice:** After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.
- Note:** A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.
For p0970 = 5 the following applies:
The password for Safety Integrated must be set.
When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed.
Then save the parameters and carry out a POWER ON.

p0970 ENCODER reset parameters / ENC par reset

ENC	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0

Description: The parameter is used to initiate the reset of the parameters on the ENCODER drive object.
Parameter p0141 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value: 0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0971 Save drive object parameters / DO par save

All objects	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Setting to save the parameter of the particular drive object in the non-volatile memory.
When saving, only the adjustable parameters intended to be saved are taken into account.

Value: 0: Inactive
1: Save drive object

Dependency: Refer to: p0977, p1960, p3845, r3996

Warning: If the Control Unit power supply is switched off while data is being saved, then the backup of all adjustable parameters can be lost, and the Control Unit must be recommissioned.

Notice: The Control Unit power supply may only be switched off after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).
Writing to parameters is inhibited while saving.

Note: The progress while saving is displayed in r3996.
Starting from the particular drive object, the following parameters are saved:
CU3xx: Device-specific parameters and PROFIBUS device parameters.
Other objects: Parameters of the actual object and PROFIBUS device parameters.
Prerequisite:
Before saving with p0971, all parameters (topology, all drive objects) must have been saved at least once using p0977 = 1.

p0972	Drive unit reset / Drv_unit reset		
CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP	Can be changed: U, T Data type: Unsigned16 P-Group: All groups Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the required procedure to execute a hardware reset for the drive unit.		
Value:	0: Inactive 1: Hardware-Reset immediate 2: Hardware reset preparation 3: Hardware reset after cyclic communication has failed		
Danger: 	It must be absolutely ensured that the system is in a safe condition. The memory card/device memory of the Control Unit must not be accessed.		
Note:	If value = 1: Reset is immediately executed and communications interrupted. After communications have been established, check the reset operation (refer below). This value cannot be set in operation. If value = 2: Help to check the reset operation. Firstly, set p0972 = 2 and then read back. Secondly, set p0972 = 1 (it is possible that this request is possibly no longer acknowledged). The communication is then interrupted. After communications have been established, check the reset operation (refer below). If value = 3: The reset is executed after interrupting cyclic communication. This setting is used to implement a synchronized reset by a control for several drive units. If cyclic communication is not active, then the reset is immediately executed. If the cyclic communication is active for both PROFIdrive interfaces, then the reset is executed after completing both cycle communications. After communications have been established, check the reset operation (refer below). To check the reset operation: After the drive unit has been restarted and communications have been established, read p0972 and check the following: p0972 = 0 --> the reset was successfully executed. p0972 > 0 --> the reset was not executed.		

r0975[0...10]	Drive object identification / DO identification		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Communications Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the identification of the drive object.		
Index:	[0] = Company (Siemens = 42) [1] = Drive object type [2] = Firmware version [3] = Firmware date (year) [4] = Firmware date (day/month) [5] = PROFIdrive drive object type class [6] = PROFIdrive drive object sub-type Class 1 [7] = Drive object number [8] = Reserved [9] = Reserved [10] = Firmware patch/hot fix		

Note: Example:
 r0975[0] = 42 --> SIEMENS
 r0975[1] = 11 --> SERVO drive object type
 r0975[2] = 102 --> first part, firmware version V01.02 (second part, refer to index 10)
 r0975[3] = 2003 --> year 2003
 r0975[4] = 1401 --> 14th of January
 r0975[5] = 1 --> PROFIdrive drive object, type class
 r0975[6] = 9 --> PROFIdrive drive object sub-type class 1
 r0975[7] = 2 --> drive object number = 2
 r0975[8] = 0 (reserved)
 r0975[9] = 0 (reserved)
 r0975[10] = 600 --> second part, firmware version (complete version: V01.02.06.00)

p0976	Reset and load all parameters / Reset load all par		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(30), C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1013	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0

Description: Resets or downloads all parameters of the drive system.

Value:

- 0: Inactive
- 1: Start reset of all parameters to factory setting
- 2: Start dnload of param. saved in non-volatile mem w/ p0977=1
- 3: Start download of volatile parameters from RAM
- 10: Start dnload of param. saved in non-volatile mem w/ p0977=10
- 11: Start dnload of param. saved in non-volatile mem w/ p0977=11
- 12: Start dnload of param. saved in non-volatile mem w/ p0977=12
- 20: Start load of param. saved in non-volatile mem w/ p0977=20
- 21: Start load of param. saved in non-volatile mem w/ p0977=21
- 22: Start load of param. saved in non-volatile mem w/ p0977=22
- 23: Start load of param. saved in non-volatile mem w/ p0977=23
- 24: Start load of param. saved in non-volatile mem w/ p0977=24
- 25: Start load of param. saved in non-volatile mem w/ p0977=25
- 26: Start load of param. saved in non-volatile mem w/ p0977=26
- 30: Start loading the delivery state saved with p0977=30
- 100: Start resetting of all BICO interconnections
- 1011: Start dnload of param. saved in volatile mem w/ p0977=1011
- 1012: Start dnload of param. saved in volatile mem w/ p0977=1012
- 1013: Start dnload of param. saved in volatile mem w/ p0977=1013

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: After all of the parameters have been reset to their factory setting, the system must be commissioned for the first time again.

Resetting or loading is realized in the non-volatile memory.

Procedure:

1. Set p0009 = 30 (parameter reset).
 2. Set p0976 to "required value". The system is rebooted.
- p0976 is automatically set to 0 and p0009 is automatically set to 1 after this has been carried out.

p0977	Save all parameters / Save all par		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: U, T Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1013	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Saves all parameters of the drive system to the non-volatile memory. When saving, only the adjustable parameters intended to be saved are taken into account.		
Value:	0: Inactive 1: Save in non-volatile memory - loaded at POWER ON 10: Save as opt. in non-vol. memory - loaded with p0976=10 11: Save as opt. in non-vol. memory - loaded with p0976=11 12: Save as opt. in non-vol. memory - loaded with p0976=12 20: Save as opt. in non-vol. memory - loaded with p0976=20 21: Save as opt. in non-vol. memory - loaded with p0976=21 22: Save as opt. in non-vol. memory - loaded with p0976=22 23: Save as opt. in non-vol. memory - loaded with p0976=23 24: Save as opt. in non-vol. memory - loaded with p0976=24 25: Save as opt. in non-vol. memory - loaded with p0976=25 26: Save as opt. in non-vol. memory - loaded with p0976=26 30: State when delivered, save in non-volatile memory as setting 30 80: Save in non-volatile memory time-optimized (reserved) 1011: Save in volatile memory, downloaded with p0976=1011 1012: Save in volatile memory, downloaded with p0976=1012 1013: Save in volatile memory, downloaded with p0976=1013		
Dependency:	Refer to: p0976, p1960, p3845, r3996		
Notice:	The Control Unit power supply may only be switched off after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0). Writing to parameters is inhibited while saving. The progress while saving is displayed in r3996. For p0977 = 30: The original state when delivered is overwritten when executing this memory function.		
Note:	Parameters saved with p0977 = 10, 11 or 12 can be downloaded again with p0976 = 10, 11 or 12. The identification and maintenance data (I&M data, p8806 and following) are only saved for p0977 = 1.		

p0978[0...n]	List of drive objects / List of the DO		
CU_I, CU_NX_CX, CU_S_AC_DP, CU_S_AC_PN, CU_S120_PN, CU_S150_PN, CU_S120_DP, CU_S150_DP, CU_I_D410	Can be changed: C1(1) Data type: Unsigned8 P-Group: Topology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 255	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 1 [1...24] 0
Description:	<p>This parameter is an image of p0101 in conformance with PROFIdrive. Parameters p0101 and p0978 contain the following information:</p> <ol style="list-style-type: none"> 1) The same number of drive objects 2) The same drive objects <p>In this sense, they are consistent. Difference between p0101 and p0978: p0978 can be re-sorted and a zero inserted in order to identify those drive objects that participate in the process data exchange and to define their sequence in the process data exchange. Drive objects that are listed after the first zero, are excluded from the process data exchange. For p0978, in addition, the value 255 can be inserted a multiple number of times. p0978[n] = 255 means: The drive object is visible for the PROFIBUS master and is empty (without any actual process data exchange). This allows cyclic communications of a PROFIBUS master with unchanged configuring to the drive units with a lower number of drive objects.</p>		
Dependency:	Refer to: p0101, p0971, p0977		
Note:	p0978 cannot be changed when the drive system is commissioned for the first time. The reason for this is that at this time the actual topology has still not been acknowledged (p0099 is still not equal to r0098 and p0009 is set to 0).		

r0979[0...30]	PROFIdrive encoder format / PD encoder format		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 4704 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual position encoder used according to PROFIdrive.		
Index:	<p>[0] = Header [1] = Type encoder 1 [2] = Resolution encoder 1 [3] = Shift factor G1_XIST1 [4] = Shift factor G1_XIST2 [5] = Distinguishable revolutions encoder 1 [6...10] = Reserved [11] = Type encoder 2 [12] = Resolution encoder 2 [13] = Shift factor G2_XIST1 [14] = Shift factor G2_XIST2 [15] = Distinguishable revolutions encoder 2 [16...20] = Reserved [21] = Type encoder 3 [22] = Resolution encoder 3 [23] = Shift factor G3_XIST1 [24] = Shift factor G3_XIST2 [25] = Distinguishable revolutions encoder 3 [26...30] = Reserved</p>

Description:	Setting and connector output for fixed speed setpoint 4.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

2 Parameters

2.2 List of parameters

p1005[0...n]	CO: Fixed velocity setpoint 5 / v_set_fix 5		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 5.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1005[0...n]	CO: Fixed speed setpoint 5 / n_set_fix 5		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 5.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1006[0...n]	CO: Fixed velocity setpoint 6 / v_set_fix 6		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 6.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1006[0...n]	CO: Fixed speed setpoint 6 / n_set_fix 6		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 6.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1007[0...n]	CO: Fixed velocity setpoint 7 / v_set_fix 7		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 7.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1007[0...n]	CO: Fixed speed setpoint 7 / n_set_fix 7		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 7.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1008[0...n]	CO: Fixed velocity setpoint 8 / v_set_fix 8		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 8.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1008[0...n]	CO: Fixed speed setpoint 8 / n_set_fix 8		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 8.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

2 Parameters

2.2 List of parameters

p1009[0...n]	CO: Fixed velocity setpoint 9 / v_set_fix 9		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 9.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
<hr/>			
p1009[0...n]	CO: Fixed speed setpoint 9 / n_set_fix 9		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 9.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
<hr/>			
p1010[0...n]	CO: Fixed velocity setpoint 10 / v_set_fix 10		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 10.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
<hr/>			
p1010[0...n]	CO: Fixed speed setpoint 10 / n_set_fix 10		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 10.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1011[0...n]	CO: Fixed velocity setpoint 11 / v_set_fix 11		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 11.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1011[0...n]	CO: Fixed speed setpoint 11 / n_set_fix 11		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 11.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1012[0...n]	CO: Fixed velocity setpoint 12 / v_set_fix 12		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 12.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1012[0...n]	CO: Fixed speed setpoint 12 / n_set_fix 12		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 12.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

2 Parameters

2.2 List of parameters

p1013[0...n]	CO: Fixed velocity setpoint 13 / v_set_fix 13		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 13.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
<hr/>

SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 13.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
<hr/>			
p1014[0...n]	CO: Fixed velocity setpoint 14 / v_set_fix 14		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 14.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
<hr/>			
p1014[0...n]	CO: Fixed speed setpoint 14 / n_set_fix 14		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 14.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1015[0...n]	CO: Fixed velocity setpoint 15 / v_set_fix 15		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Setting and connector output for fixed velocity setpoint 15.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1015[0...n]	CO: Fixed speed setpoint 15 / n_set_fix 15		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3010 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 15.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1020[0...n]	BI: Fixed velocity setpoint selection Bit 0 / v_set_fixed bit 0		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2505, 3010 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to select the fixed velocity setpoint.		
Dependency:	Selects the required fixed velocity setpoint using p1020 ... p1023. Displays the number of the actual fixed velocity setpoint in r1197. Sets values for the fixed velocity setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1021, p1022, p1023, r1197		
Note:	If a fixed velocity setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		
p1020[0...n]	BI: Fixed speed setpoint selection bit 0 / n_set_fixed bit 0		
SERVO (Ext setp), SERVO_AC (Ext setp), SERVO_I_AC (Ext setp)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2505, 3010 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for selecting the fixed speed setpoint.		
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1021, p1022, p1023, r1197		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		

2 Parameters

2.2 List of parameters

p1020[0...n]	BI: Fixed speed setpoint selection bit 0 / n_set_fixed bit 0		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3010, 3011
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for selecting the fixed speed setpoint.		
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1021, p1022, p1023, r1197		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		
p1021[0...n]	BI: Fixed velocity setpoint selection Bit 1 / v_set_fixed bit 1

p1030[0...n]	Motorized potentiometer configuration / MoP configuration				
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 3020		
	P-Group: Setpoints	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0110 bin		
Description:	Sets the configuration for the motorized potentiometer.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Data save active	Yes	No	-
	01	Automatic mode ramp-function generator active	Yes	No	-
	02	Initial rounding-off active	Yes	No	-
	03	Non-volatile saving active	Yes	No	-
	04	Ramp-function generator always active	Yes	No	-
Notice:	The following prerequisites must be fulfilled in order to be able to save the setpoint (Bit 03 = 1) in a non-volatile fashion: - Firmware with V2.3 or higher. - Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).				
Note:	For bit 00: 0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p1040. 1: The setpoint for the motorized potentiometer is saved after OFF and after ON set to the saved value. In order to save in a non-volatile fashion, bit 03 should be set to 1. For bit 01: 0: Without ramp-function generator in the automatic mode (ramp-up/ramp-down time = 0). 1: With ramp-function generator in the automatic mode. For manual operation (0 signal via BI: p1041), the ramp-function generator is always active. For bit 02: 0: Without initial rounding-off 1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximum speed (p1082). It is calculated as follows: $r = 0.01 \% * p1082 [1/s] / 0.13^2 [s^2]$ The jerk acts up until the maximum acceleration is reached ($a_{max} = p1082 [1/s] / p1047 [s]$), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p1047 is), the longer the ramp-up time increases with respect to the set ramp-up time.				

For bit 03:

0: Non-volatile data save deactivated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for bit 00 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r1050.

p1035[0...n]		BI: Motorized potentiometer setpoint raise / MoP raise		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3020	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source to continually increase the setpoint for the motorized potentiometer. The setpoint change (CO: r1050) depends on the set ramp-up time (p1047) and the duration of the signal that is present (BI: p1035).			
Dependency:	Refer to: p1036			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.			
p1035		BI: Zero marks enable / ZM enable		
TM41	Can be changed: T	Calculated: -	Access level: 3

Description:	Sets the maximum speed/velocity for the motorized potentiometer.		
Note:	This parameter is automatically pre-assigned in the commissioning phase. The setpoint output from the motorized potentiometer is limited to this value.		

p1037[0...n]	Motorized potentiometer maximum speed / MoP n_max		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets the maximum speed/velocity for the motorized potentiometer.		
Note:	This parameter is automatically pre-assigned in the commissioning phase. The setpoint output from the motorized potentiometer is limited to this value.		

p1038[0...n]	Motorized potentiometer minimum velocity / MoP n_min		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Sets the minimum speed/velocity for the motorized potentiometer.		
Note:	This parameter is automatically pre-assigned in the commissioning phase. The setpoint output from the motorized potentiometer is limited to this value.		

p1038[0...n]	Motorized potentiometer minimum speed / MoP n_min		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets the minimum speed/velocity for the motorized potentiometer.		
Note:	This parameter is automatically pre-assigned in the commissioning phase. The setpoint output from the motorized potentiometer is limited to this value.		

p1039[0...n]	BI: Motorized potentiometer inversion / MoP inv		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to invert the minimum speed/velocity or the maximum speed/velocity for the motorized potentiometer.		
Dependency:	Refer to: p1037, p1038		
Note:	The inversion is only active during "motorized potentiometer raise" or "motorized potentiometer lower".		
p1040[0...n]	Motorized potentiometer starting value / MoP start value		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Sets the starting value for the motorized potentiometer. This starting value becomes effective after the drive has been switched on.		
Dependency:	Only effective if p1030.0 = 0. Refer to: p1030		
p1040[0...n]	Motorized potentiometer starting value / MoP start value		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets the starting value for the motorized potentiometer. This starting value becomes effective after the drive has been switched on.		
Dependency:	Only effective if p1030.0 = 0. Refer to: p1030		
p1041[0...n]	BI: Motorized potentiometer manual/automatic / MoP manual/auto		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to change over from manual to automatic when using a motorized potentiometer. In the manual mode, the setpoint is changed using two signals - raise and lower. In the automatic mode, the setpoint must be interconnected via a connector input.		
Dependency:	Refer to: p1030, p1035, p1036, p1042		
Note:	The effectiveness of the internal ramp-function generator can be set in automatic mode.		

2 Parameters

2.2 List of parameters

p1042[0...n]	CI: Motorized potentiometer automatic setpoint / MoP auto setpoint		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the setpoint of the motorized potentiometer in the automatic mode.		
Dependency:	Refer to: p1041		

p1043[0...n]	BI: Motorized potentiometer accept setting value / MoP acc set val		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to accept the setting value for the motorized potentiometer.		
Dependency:	Refer to: p1044		
Note:	The setting value (CI: p1044) becomes effective for a 0/1 edge of the setting command (BI: p1043).		

p1044[0...n]	CI: Motorized potentiometer setting value / MoP set val		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the setting value for the motorized potentiometer.		
Dependency:	Refer to: p1043		
Note:	The setting value (CI: p1044) becomes effective for a 0/1 edge of the setting command (BI: p1043).		

r1045	CO: Mot. potentiom. velocity setp. in front of ramp-fct. gen. / MoP n_set bef RFG		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Sets the effective setpoint in front of the internal motorized potentiometer ramp-function generator.		

r1045	CO: Mot. potentiometer speed setp. in front of ramp-fct. gen. / MoP n_set bef RFG		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3020 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Sets the effective setpoint in front of the internal motorized potentiometer ramp-function generator.		

p1047[0...n]		Motorized potentiometer ramp-up time / MoP ramp-up time		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [s]	1000.000 [s]	10.000 [s]	
Description:	Sets the ramp-up time for the internal ramp-function generator for the motorized potentiometer. The setpoint is changed from zero up to the speed/velocity limit (p1082) within this time (if no initial rounding-off has been activated).			
Dependency:	Refer to: p1030, p1048, p1082			
Note:	When the initial rounding-off is activated (p1030.2) the ramp-up time is correspondingly extended.			

p1048[0...n]		Motorized potentiometer ramp-down time / MoP ramp-down time		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [s]	1000.000 [s]	10.000 [s]	
Description:	Sets the ramp-down time for the internal ramp-function generator for the motorized potentiometer. The setpoint is changed from the speed/velocity limit (p1082) to zero within this time (if no initial rounding-off has been activated).			
Dependency:	Refer to: p1030, p1047, p1082			
Note:	The deceleration time is extended corresponding to the activated initial rounding-off (p1030.2).			

r1050		CO: Motorized potentiometer setpoint after ramp-function generator / MoP set after RFG		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 3020	
	P-Group: Setpoints	Unit group: 4_1	Unit selection: p0505	
	Not for motor type: -	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	- [m/min]	- [m/min]	- [m/min]	
Description:	Sets the effective setpoint after the internal motorized potentiometer ramp-function generator. This setpoint is the output value of the motorized potentiometer and must be appropriately interconnected onwards (e.g. with the main setpoint).			
Recommendation:	Interconnect the signal with main setpoint (p1070).			
Dependency:	Refer to: p1070			
Note:	For "With ramp-function generator", after an OFF1, OFF2, OFF3 or for a 0 signal via BI: p0852 (inhibit operation, suppress pulses) the ramp-function generator output (r1050) is set to the starting value (configuration via p1030.0).			

r1050		CO: Motorized potentiometer setpoint after ramp-function generator / MoP set after RFG		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 3020	
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505	
	Not for motor type: -	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	- [rpm]	- [rpm]	- [rpm]	
Description:	Sets the effective setpoint after the internal motorized potentiometer ramp-function generator. This setpoint is the output value of the motorized potentiometer and must be appropriately interconnected onwards (e.g. with the main setpoint).			

2 Parameters

2.2 List of parameters

Recommendation: Interconnect the signal with main setpoint (p1070).
Dependency: Refer to: p1070
Note: For "With ramp-function generator", after an OFF1, OFF2, OFF3 or for a 0 signal via BI: p0852 (inhibit operation, suppress pulses) the ramp-function generator output (r1050) is set to the starting value (configuration via p1030.0).

p1051[0...n]	CI: Velocity limit RFG positive direction / v_limit RFG pos		
SERVO (ESR, Ext setp, Lin), SERVO_AC (ESR, Ext setp, Lin), SERVO_I_AC (ESR, Ext setp, Lin)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 1083[0]
Description:	Sets the signal source for the velocity limit of the positive direction on the ramp-function generator input.		
Note:	The OFF3 ramp-down time (p1135) is effective when the limit is reduced.		

p1051[0...n]	CI: Speed limit RFG positive direction of rotation / n_limit RFG pos		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 1083[0]
Description:	Sets the signal source for the speed limit of the positive direction on the ramp-function generator input.		
Note:	The OFF3 ramp-down time (p1135) is effective when the limit is reduced.		

p1052[0...n]	CI: Velocity limit RFG negative direction / v_limit RFG neg		
SERVO (ESR, Ext setp, Lin), SERVO_AC (ESR, Ext setp, Lin), SERVO_I_AC (ESR, Ext setp, Lin)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 1086[0]
Description:	Sets the signal source for the velocity limit of the negative direction on the ramp-function generator input.		
Note:	The OFF3 ramp-down time (p1135) is effective when the limit is reduced.		

p1052[0...n]	CI: Speed limit RFG negative direction of rotation / n_limit RFG neg		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 1086[0]
Description:	Sets the signal source for the speed limit of the negative direction on the ramp-function generator input.		
Note:	The OFF3 ramp-down time (p1135) is effective when the limit is reduced.		

p1055[0...n]	BI: Jog bit 0 / Jog bit 0		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2501, 3030 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for jog 1.		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p0840, p1058		
Notice:	The drive is enabled for jogging using BI: p1055 or BI: p1056. The command "ON/OFF1" can be issued using BI: p0840 or using BI: p1055/p1056. Only the signal source that was used to switch on can also be used to switch off again.		
p1056[0...n]	BI: Jog bit 1 / Jog bit 1		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2501, 3030 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for jog 2.		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p0840, p1059		
Notice:	The drive is enabled for jogging using BI: p1055 or BI: p1056. The command "ON/OFF1" can be issued using BI: p0840 or using BI: p1055/p1056. Only the signal source that was used to switch on can also be used to switch off again.		
p1058[0...n]	Jog 1 velocity setpoint / Jog 1 v_set		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3001, 3030 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Sets the velocity for jog 1. Jogging (JOG) is level-triggered, and allows the motor to be incrementally traversed.		
Dependency:	Refer to: p1055, p1056		
p1058[0...n]	Jog 1 speed setpoint / Jog 1 n_set		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3001, 3030 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets the speed for jog 1. Jogging (JOG) is level-triggered, and allows the motor to be incrementally traversed.		
Dependency:	Refer to: p1055, p1056		

2 Parameters

2.2 List of parameters

p1059[0...n]	Jog 2 velocity setpoint / Jog 2 v_set		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.000 [m/min]	Access level: 2 Func. diagram: 3001, 3030 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Sets the velocity for jog 2. Jogging (JOG) is level-triggered, and allows the motor to be incrementally traversed.		
Dependency:	Refer to: p1055, p1056		

p1059[0...n]	Jog 2 speed setpoint / Jog 2 n_set		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -210000.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 2 Func. diagram: 3001, 3030 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets the speed for jog 2. Jogging (JOG) is level-triggered, and allows the motor to be incrementally traversed.		
Dependency:	Refer to: p1055, p1056		

p1063[0...n]	Setpoint channel velocity limit / Set_chan v_lim		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.000 [m/min]	Access level: 1 Func. diagram: 3040 Unit selection: p0505 Expert list: 1 Factory setting 1000.000 [m/min]
Description:	Sets the velocity limit effective in the setpoint channel.		
Dependency:	Refer to: p1082, p1083, p1085, p1086, p1088		

p1063[0...n]	Setpoint channel speed limit / Set_chan n_lim		
SERVO (Ext setp), SERVO_AC (Ext setp), SERVO_I_AC (Ext setp)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 1 Func. diagram: 3040 Unit selection: p0505 Expert list: 1 Factory setting 210000.000 [rpm]
Description:	Sets the speed limit effective in the setpoint channel.		
Dependency:	Refer to: p1082, p1083, p1085, p1086, p1088		

p1063[0...n]	Setpoint channel speed limit / Set_chan n_lim		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.000 [rpm]	Access level: 1 Func. diagram: 3040 Unit selection: p0505 Expert list: 1 Factory setting 40000.000 [rpm]
Description:	Sets the speed limit effective in the setpoint channel.		
Dependency:	Refer to: p1082, p1083, p1085, p1086, p1088		

p1070[0...n]	CI: Main setpoint / Main setpoint		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3001, 3030 Unit selection: - Expert list: 1 Factory setting 1024[0]
Description:	Sets the signal source for the main setpoint. Examples: r1024: Fixed speed setpoint effective r1050: Motor. potentiometer setpoint after the ramp-function generator		
Dependency:	Refer to: p1071, r1073, r1078		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p1071[0...n]	CI: Main setpoint scaling / Main set scal		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 3001, 3030 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for scaling the main setpoint.		

r1073	CO: Main setpoint effective / Main setpoint eff		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3030 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the effective main setpoint. The value shown is the main setpoint after scaling.		

r1073	CO: Main setpoint effective / Main setpoint eff		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3030 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the effective main setpoint. The value shown is the main setpoint after scaling.		

2 Parameters

2.2 List of parameters

p1075[0...n]	CI: Supplementary setp / Suppl set		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3001, 3030 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the supplementary setpoint.		
Dependency:	Refer to: p1076, r1077, r1078		

p1076[0...n]	CI: Supplementary setpoint scaling / Suppl set scal		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 3001, 3030 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for scaling the supplementary setpoint.		

r1077	CO: Supplementary setpoint effective / Suppl setpoint eff		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3030 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the effective supplementary setpoint. The value shown is the additional setpoint after scaling.		

r1077	CO: Supplementary setpoint effective / Suppl setpoint eff		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3030 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the effective supplementary setpoint. The value shown is the additional setpoint after scaling.		

r1078	CO: Total setpoint effective / Total setpoint eff		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3030 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the total effective setpoint. The value indicates the sum of the effective main setpoint and supplementary setpoint.		

r1078	CO: Total setpoint effective / Total setpoint eff		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3030 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the total effective setpoint. The value indicates the sum of the effective main setpoint and supplementary setpoint.		
p1079	Interpolator clock cycle for speed setpoints / Interp_cyc n_set		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.00 [ms]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 127.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the time with which new speed setpoints are interpolated. With interpolation, the higher-level control adapts the speed setpoint steps to the time grid of the setpoint channel.		
Recommendation:	For non-synchronous operation, a setting to the maximum time difference between two setpoints is recommended. For sensorless vector control, interpolation should always be activated if the ramp-up and ramp-down times of the ramp-function generator are very short. The drive must be able to follow the external speed setpoint (the drive does not ramp up at the torque limit).		
Note:	For acceleration precontrol of the speed controller, interpolation prevents torque peaks from occurring if the ramp-up or ramp-down times in the setpoint channel are zero. When exiting commissioning, the parameter is preset using the automatic calculation if, as setpoint source for the main or supplementary setpoint, a PZD receive word is already set and the ramp-up time is zero. Interpolation is limited to 127 cycles of the setpoint channel. p1079 = 0 ms: Interpolation is deactivated. p1079 = 0.01 ms: The interpolation time is automatically determined the first time that the speed setpoint is changed. After this, no other changes are made if the send times of the external control increase. Writing to p1079 again initiates the automatic adaptation of the interpolation time. p1079 > 0.01 ms: Interpolation is performed corresponding to the ratio to the computation clock cycle. For a value of 0, for synchronized setpoint input, the currently valid application clock cycle is loaded.		
p1080[0...n]	Minimum velocity / v_min		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: C2(1), T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.000 [m/min]	Access level: 1 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Sets the lowest possible motor velocity. This value is not undershot in operation.		
Dependency:	Refer to: p1106		
Notice:	The effective minimum velocity is formed from p1080 and p1106.		

2 Parameters

2.2 List of parameters

Note: The parameter value applies for both motor directions.
 In exceptional cases, the motor can operate below this value (e.g. when reversing).
 In order that a stationary motor – after all of the enable signals have been switched on, can operate at the minimum speed/minimum velocity once all of the enable signals are available, the direction must be entered using one of the following options:
 - direction input via small setpoint.
 - direction input by inhibiting the negative or positive direction (p1110, p1111).

p1080[0...n]	Minimum speed / n_min		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: C2(1), T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 19500.000 [rpm]	Access level: 1 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets the lowest possible motor speed. This value is not undershot in operation.		
Dependency:	Refer to: p1106		
Notice:	The effective minimum speed is formed from p1080 and p1106.		
Note:	The parameter value applies for both motor directions. In exceptional cases, the motor can operate below this value (e.g. when reversing). In order that a stationary motor – after all of the enable signals have been switched on, can operate at the minimum speed/minimum velocity once all of the enable signals are available, the direction must be entered using one of the following options: - direction input via small setpoint. - direction input by inhibiting the negative or positive direction (p1110, p1111).

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 100.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 105.00 [%]	Access level: 2 Func. diagram: 3050, 3095 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling for the maximum speed (p1082). For a higher-level speed control, this scaling allows the maximum speed to be briefly exceeded.		
Dependency:	Refer to: p1082		
Notice:	Continuous operation above a scaling of 100 % is not permitted.		

p1081	Maximum velocity scaling / v_max scal		
SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 100.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max 105.00 [%]	Access level: 2 Func. diagram: 3050, 3095 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling for the maximum velocity (p1082). For a higher-level velocity control, this scaling allows the maximum velocity to be briefly exceeded.		
Dependency:	Refer to: p1082		
Notice:	Continuous operation above a scaling of 100 % is not permitted.		

p1082[0...n]		Maximum velocity / v_max	
HLA	Can be changed: C2(1), T	Calculated: CALC_MOD_LIM_REF	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Setpoints	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [m/min]	Max 1000.000 [m/min]	Factory setting 1000.000 [m/min]
Description:	Sets the highest possible velocity.		
Dependency:	Refer to: p0115, p0230, p0313, p0322, p0324, r0336, p0532		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	The parameter is applicable for both directions of rotation. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).		
p1082[0...n]		Maximum speed / n_max	
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), T	Calculated: CALC_MOD_ALL	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 2820, 3020, 3050, 3060, 3070, 3095
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [rpm]	Max 210000.000 [rpm]	Factory setting 1500.000 [rpm]
Description:	Sets the highest possible speed.		
Dependency:	Refer to: p0115, p0322, p0324, p0532		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	The parameter applies for both motor directions. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer). Since the parameter is part of quick commissioning (p0010 = 1), it is defined appropriately when p0310, p0311, p0322, p0324, p0530, p0531, and p0532 are changed. $p1082 \leq \min(p0324, p0532)$ if $p0324 > 0$ and $p0532 > 0$ $p1082 \leq p0322$, if $p0324 = 0$ or $p0532 = 0$ and $p0322 > 0$ $p1082 \leq 60 / (10.0 * p0115[0] * r0313)$ $p1082 \leq 60 * \text{Maximum power unit pulse frequency} / (5.0 * r0313)$ For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value ($p0310 * 60 / r0313$). For synchronous motors, the following additionally applies: In the automatic calculation (p0340 = 1), p1082 is, on one hand, limited to speeds for which the rated power unit current (S1 continuous duty r0207[3]) is not sufficient as field current: $p1082 < p0348 / (1 - r0207 / r0331)$, applicable for $r0207[3] < r0331$ On the other hand, an additional limit is effective, which prevents the EMF from exceeding the maximum DC link voltage (see p0643 and p1231). The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186. p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.

p1082[0...n]	Maximum speed / n_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), T	Calculated: CALC_MOD_ALL	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 2820, 3020, 3050, 3060, 3070, 3095
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	210000.000 [rpm]	1500.000 [rpm]
Description:	Sets the highest possible speed.		
Dependency:	<p>For vector control ($p1300 = 20 \dots 23$) the maximum speed is limited to $60.0 / (8.333 * p0115[0] * r0313)$. This can be identified by a reduction in r1084. p1082 is not changed in this process due to the fact that the operating mode p1300 can be changed over.</p> <p>If a sine-wave filter ($p0230 = 3$) is parameterized as output filter, then the maximum speed is limited corresponding to the maximum permissible filter output frequency (refer to the filter data sheet). When using sine-wave filters ($p0230 = 3, 4$), the maximum speed r1084 is limited to 70% of the resonant frequency of the filter capacitance and the motor leakage inductance.</p> <p>For reactors and dU/dt filters, it is limited to $150 \text{ Hz} * 60 / r0313$ (for chassis power units) or $120 \text{ Hz} * 60 / r0313$ (for booksize power units).</p> <p>Refer to: p0115, p0230, r0313, p0322, p0324, r0336, p0532</p>		

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: The parameter applies for both motor directions.

The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).

Since the parameter is part of quick commissioning (p0010 = 1), it is defined appropriately when p0310, p0311, p0322, p0324, p0530, p0531, and p0532 are changed.

$p1082 \leq \min(p0324, p0532)$ if $p0324 > 0$ and $p0532 > 0$

$p1082 \leq p0322$, if $p0324 = 0$ or $p0532 = 0$ and $p0322 > 0$

$p1082 \leq 60 \times \text{minimum} (15 \times r0336, 650 \text{ Hz}) / r0313$

$p1082 \leq 60 \times \text{Maximum power unit pulse frequency} / (k \times r0313)$

$k = 12$ for vector control ($r0108.2 = 1$), $k = 6.5$ for U/f control ($r0108.2 = 0$)

For the automatic calculation ($p0340 = 1$) the value of the parameter is pre-assigned the maximum motor speed ($p0322$). If $p0322 = 0$, the rated motor speed ($p0311$) is used as default (pre-assignment) value. For induction motors that are not catalog motors ($p0301 = 0$), the synchronous no-load speed is used as default (pre-assignment) value ($p0310 \times 60 / r0313$).

For synchronous motors, the following additionally applies:

The maximum speed $p1082$ is restricted to speeds ($r1084$) where the EMF does not exceed the DC link voltage.

The effective assignment of the motor data set parameter (e.g. $p0311$) to the drive data set parameter $p1082$ when pre-assigning should be taken from $p0186$.

$p1082$ is also available in the quick commissioning ($p0010 = 1$); this means that when exiting via $p3900 > 0$, the value is not changed.

p1082[0...n] Encoder emulation maximum speed / Enc_emul n_max

TM41	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 9674, 9676
	P-Group: -	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the frequency limit of the signal output as maximum speed for the encoder emulation.

The value is displayed independent of the operating mode set ($p4400$).

Dependency: Refer to: p0115
Refer to: F35220

p1083[0...n] CO: Velocity limit positive direction / v_limit pos

Description: Display and connector output for the active negative velocity limit.

Dependency: Refer to: p1082, p1086, p1088

r1087	CO: Speed limit negative effective / n_limit neg eff		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3050, 3095
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the active negative speed limit.

Dependency: Refer to: p1082, p1086, p1088

r1087	CO: Velocity limit negative effective / v_limit neg eff		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3050, 3095
	P-Group: Setpoints	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]

Description: Display and connector output for the active negative velocity limit.

Dependency: Refer to: p1082, p1086, p1088

r1087	CO: Speed limit negative effective / n_limit neg eff		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3050, 3095
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the active negative speed limit.		
Dependency:	Refer to: p1082, p1086, p1088		
Note:	Vector control: r1087 >= -60 / (8.333 x p0115[0] x r0313)		

p1088[0...n]	CI: Velocity limit negative direction / n_limit neg		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3050
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	1086[0]
Description:	Sets the signal source for the speed/velocity limit of the negative direction.		

p1088[0...n]	CI: Speed limit in negative direction of rotation / n_limit neg		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3050
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	1086[0]
Description:	Sets the signal source for the speed/velocity limit of the negative direction.		

p1091[0...n]	Skip velocity 1 / v_skip 1		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3050
	P-Group: Setpoints	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	0.000 [m/min]	1000.000 [m/min]	0.000 [m/min]
Description:	Sets skip velocity 1.		
Dependency:	Refer to: p1092, p1093, p1094, p1101		
Notice:	Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.		
Note:	The skip (suppression) velocities can be used to prevent the effects of mechanical resonance.		

p1091[0...n]	Skip speed 1 / n_skip 1		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3050
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets skip speed 1.		
Dependency:	Refer to: p1092, p1093, p1094, p1101		

2 Parameters

2.2 List of parameters

Notice: Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.

Note: The skip (suppression) speeds can be used to prevent the effects of mechanical resonance.

p1092[0...n] Skip velocity 2 / v_skip 2

SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
--	--	--	--

Description: Sets skip velocity 2.

Dependency: Refer to: p1091, p1093, p1094, p1101

Notice: Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.

p1092[0...n] Skip speed 2 / n_skip 2

SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
---	--	--	--

Description: Sets skip speed 2.

Dependency: Refer to: p1091, p1093, p1094, p1101

Notice: Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.

p1093[0...n] Skip velocity 3 / v_skip 3

SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
--	--	--	--

Description: Sets skip velocity 3.

Dependency: Refer to: p1091, p1092, p1094, p1101

Notice: Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.

p1093[0...n] Skip speed 3 / n_skip 3

SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
---	--	--	--

Description: Sets skip speed 3.

Dependency: Refer to: p1091, p1092, p1094, p1101

Notice: Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.

p1094[0...n]	Skip velocity 4 / v_skip 4		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]
Description:	Sets skip velocity 4.		
Dependency:	Refer to: p1091, p1092, p1093, p1101		
Notice:	Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.		

p1094[0...n]	Skip speed 4 / n_skip 4		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]
Description:	Sets skip speed 4.		
Dependency:	Refer to: p1091, p1092, p1093, p1101		
Notice:	Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.		

p1098[0...n]	CI: Skip velocity scaling / v_skip scal		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for scaling the skip velocities.		
Dependency:	Refer to: p1091, p1092, p1093, p1094		

p1098[0...n]	CI: Skip speed scaling / n_skip scal		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for scaling the skip speeds.		
Dependency:	Refer to: p1091, p1092, p1093, p1094		

2 Parameters

2.2 List of parameters

r1099.0	CO/BO: Skip band status word / Skip band ZSW			
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: Unsigned32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -	
Description:	Display and BICO output for the skip bands.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	r1170 within the skip band	Yes	No
Dependency:	Refer to: r1170			
Note:	For bit 00: With the bit set, the setpoint speed is within the skip band after the ramp-function generator (r1170). The signal can be used to switch over the drive data set (DDS).			
p1101[0...n]	Skip velocity bandwidth / v_skip bandwidth			
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: p2000 Max 1000.000 [m/min]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [m/min]	
Description:	Sets the bandwidth for the skip velocities 1 to 4.			
Dependency:	Refer to: p1091, p1092, p1093, p1094			
Note:	The setpoint velocities are skipped (suppressed) in the range of the skip velocity +/-p1101. Steady-state operation is not possible in the skipped (suppressed) velocity range. The skip (suppression) range is skipped. Example: p1091 = 600 and p1101 = 20 --> setpoint velocities between 580 and 620 [rpm] are skipped. For the skip bandwidths, the following hysteresis behavior applies: For a setpoint velocity coming from below, the following applies: r1170 < 580 [m/min] and 580 [m/min] <= r1114 <= 620 [m/min] --> r1119 = 580 [m/min] For a setpoint velocity coming from above, the following applies: r1170 > 620 [m/min] and 580 [m/min] <= r1114 <= 620 [m/min] --> r1119 = 620 [m/min]			
p1101[0...n]	Skip speed bandwidth / n_skip bandwidth			
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: p2000 Max 210000.000 [rpm]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting 0.000 [rpm]	
Description:	Sets the bandwidth for the skip speeds/velocities 1 to 4.			
Dependency:	Refer to: p1091, p1092, p1093, p1094			
Note:	The setpoint (reference) speeds are skipped (suppressed) in the range of the skip speed +/-p1101. Steady-state operation is not possible in the skipped (suppressed) speed range. The skip (suppression) range is skipped. Example: p1091 = 600 and p1101 = 20 --> setpoint speeds between 580 and 620 [rpm] are skipped.			

For the skip bandwidths, the following hysteresis behavior applies:

For a setpoint speed coming from below, the following applies:

$r1170 < 580 \text{ [rpm]}$ and $580 \text{ [rpm]} \leq r1114 \leq 620 \text{ [rpm]} \rightarrow r1119 = 580 \text{ [rpm]}$

For a setpoint speed coming from above, the following applies:

$r1170 > 620 \text{ [rpm]}$ and $580 \text{ [rpm]} \leq r1114 \leq 620 \text{ [rpm]} \rightarrow r1119 = 620 \text{ [rpm]}$

p1106[0...n]	CI: Minimum velocity signal source / v_min s_s		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for lowest possible motor velocity.		
Dependency:	Refer to: p1080		
Notice:	The effective minimum velocity is formed from p1080 and p1106.		
p1106[0...n]	CI: Minimum speed signal source / n_min s_s		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2000 Max -	Access level: 3 Func. diagram: 3050 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for lowest possible motor speed.		
Dependency:	Refer to: p1080		
Notice:	The effective minimum speed is formed from p1080 and p1106.		
p1110[0...n]	BI: Inhibit negative direction / Inhib neg dir		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2505, 3040 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to disable the negative direction.		
Dependency:	Refer to: p1111		
p1111[0...n]	BI: Inhibit positive direction / Inhib pos dir		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2505, 3040 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to disable the positive direction.		
Dependency:	Refer to: p1110		

2 Parameters

2.2 List of parameters

r1112	CO: Velocity setpoint after minimum limiting / v_set aft min_lim		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the velocity setpoint after the minimum limiting.		
Dependency:	Refer to: p1091, p1092, p1093, p1094, p1101		
r1112	CO: Speed setpoint after minimum limiting / n_set aft min_lim		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3050 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the speed setpoint after the minimum limiting.		
Dependency:	Refer to: p1091, p1092, p1093, p1094, p1101		
p1113[0...n]	BI: Setpoint inversion / Set inv		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2441, 2442, 2505, 3040 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to invert the setpoint.		
Dependency:	Refer to: r1198		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
r1114	CO: Setpoint after the direction limiting / Set after limit		
SERVO (Ext setp, Lin), SERVO_AC (Ext setp, Lin), SERVO_I_AC (Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3001, 3040, 3050 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the speed/velocity setpoint after the changeover and limiting the direction.		
r1114	CO: Setpoint after the direction limiting / Set after limit		
SERVO (Ext setp), VECTOR, SERVO_AC (Ext setp), VECTOR_AC, SERVO_I_AC (Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3001, 3040, 3050 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the speed/velocity setpoint after the changeover and limiting the direction.		

p1115	Ramp-function generator selection / RFG selection		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: T Data type: Integer16 P-Group: Setpoints Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: 3001, 3080 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the ramp-function generator type.		
Value:	0: Basic ramp-function generator 1: Extended ramp-function generator		
Note:	Another ramp-function generator type can only be selected when the motor is at a standstill.		
r1119	CO: Ramp-function generator setpoint at the input / RFG set at inp		
HLA, HLA (ESR)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the setpoint at the input of the ramp-function generator.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The setpoint is influenced by other functions, e.g. skip (suppressed) speeds, minimum and maximum limits.		
r1119	CO: Ramp-function generator setpoint at the input / RFG set at inp		
SERVO (ESR, Ext setp, Lin), SERVO_AC (ESR, Ext setp, Lin), SERVO_I_AC (ESR, Ext setp, Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: p2000 Max - [m/min]	Access level: 3 Func. diagram: 3001, 3050, 3060, 3070, 6300 Unit selection: p0505 Expert list: 1 Factory setting - [m/min]
Description:	Displays the setpoint at the input of the ramp-function generator.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The setpoint is influenced by other functions, e.g. skip (suppressed) speeds, minimum and maximum limits.		
r1119	CO: Ramp-function generator setpoint at the input / RFG set at inp		
SERVO (ESR, Ext setp), VECTOR, SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 3001, 3050, 3060, 3070, 6300 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the setpoint at the input of the ramp-function generator.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The setpoint is influenced by other functions, e.g. skip (suppressed) speeds, minimum and maximum limits.		

2 Parameters

2.2 List of parameters

p1120[0...n]	Ramp-function generator ramp-up time / RFG ramp-up time		
HLA, HLA (ESR)	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	The ramp-function generator ramps-up the velocity setpoint from standstill (setpoint = 0) up to the maximum velocity (p1082) in this time.		
Dependency:	Refer to: p1082, p1138		
Note:	The ramp-up time can be scaled via connector input p1138.		
p1120[0...n]	Ramp-function generator ramp-up time / RFG ramp-up time		
SERVO (ESR, Ext setp, Lin), SERVO_AC (ESR, Ext setp, Lin), SERVO_I_AC (ESR, Ext setp, Lin)	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	The drive is accelerated from standstill (setpoint = 0) up to the maximum velocity (p1082) in this time.		
Dependency:	Refer to: p1082, p1138		
p1120[0...n]	Ramp-function generator ramp-up time / RFG ramp-up time		
SERVO (ESR, Ext setp), SERVO_AC (ESR, Ext setp), SERVO_I_AC (ESR, Ext setp)	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.		
Dependency:	Refer to: p1082, p1138		
p1120[0...n]	Ramp-function generator ramp-up time / RFG ramp-up time		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.		
Dependency:	Refer to: p1082, p1138		
Note:	The ramp-up time can be scaled via connector input p1138. The parameter is adapted during the rotating measurement (p1960 > 0). This is the reason that during the rotating measurement, the motor can accelerate faster than was originally parameterized. For U/f control and sensorless vector control (see p1300), a ramp-up time of 0 s does not make sense. The setting should be based on the startup times (r0345) of the motor.		

p1121[0...n]	Ramp-function generator ramp-down time / RFG ramp-down time		
HLA	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	0.000 [s]
Description:	The drive is decelerated from the maximum velocity (p1082) down to standstill (setpoint = 0) in this time. Further, the ramp-down time is always effective for OFF1.		
Dependency:	Refer to: p1082, p1139		
Note:	The ramp-down time can be scaled via connector input p1139.		
p1121[0...n]	Ramp-function generator ramp-down time / RFG ramp-down time		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	Sets the ramp-down time for the ramp-function generator. The ramp-function generator ramps-down the speed setpoint from the maximum speed (p1082) down to standstill (setpoint = 0) in this time. Further, the ramp-down time is always effective for OFF1.		
Dependency:	Refer to: p1082, p1139		
Note:	The ramp-down time can be scaled via connector input p1139. The following applies for SERVO: The ramp-function generator is only available when the function module "extended setpoint channel" is active (r0108.8 = 1).		
p1121[0...n]	Ramp-function generator ramp-down time / RFG ramp-down time		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	0.000 [s]
Description:	The drive is decelerated from the maximum velocity (p1082) down to standstill (setpoint = 0) in this time. Further, the ramp-down time is always effective for OFF1.		
Dependency:	Refer to: p1082, p1139		
Note:	The ramp-down time can be scaled via connector input p1139. The following applies for SERVO: The ramp-function generator is only available when the function module "extended setpoint channel" is active (r0108.8 = 1).		

2 Parameters

2.2 List of parameters

p1121[0...n]	Ramp-function generator ramp-down time / RFG ramp-down time		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 999999.000 [s]	Access level: 1 Func. diagram: 3060, 3070 Unit selection: - Expert list: 1 Factory setting 10.000 [s]
Description:	Sets the ramp-down time for the ramp-function generator. The ramp-function generator ramps-down the speed setpoint from the maximum speed (p1082) down to standstill (setpoint = 0) in this time. Further, the ramp-down time is always effective for OFF1.		
Dependency:	Refer to: p1082, p1139		
Note:	For U/f control and sensorless vector control (see p1300), a ramp-down time of 0 s does not make sense. The setting should be based on the startup times (r0345) of the motor.		
p1122[0...n]	BI: Bypass ramp-function generator / Bypass RFG		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2505 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for bypassing the ramp generator (ramp-up and ramp-down times = 0).		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed. The bypass is kept for OFF1/OFF3.		
Note:	For VECTOR in encoderless operation, it is not permissible that the ramp-function generator is bypassed.		
p1130[0...n]	Ramp-function generator initial rounding-off time / RFG t_start_round		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 30.000 [s]	Access level: 2 Func. diagram: 3070 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the initial rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.		
Note:	Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.		
p1131[0...n]	Ramp-function generator final rounding-off time / RFG t_end_delay		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 30.000 [s]	Access level: 2 Func. diagram: 3070 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the final rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.		
Note:	Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.		

p1134[0...n]	Ramp-function generator rounding-off type / RFG round-off type		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Setpoints Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: 3070 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the smoothed response to the OFF1 command or the reduced setpoint for the extended ramp-function generator.		
Value:	0: Continuous smoothing 1: Discontinuous smoothing		
Dependency:	No effect up to initial rounding-off time (p1130) > 0 s.		
Note:	p1134 = 0 (continuous smoothing) If the setpoint is reduced while ramping-up, initially a final rounding-off is carried out and then the ramp-up completed. During the final rounding-off, the output of the ramp-function generator continues to go in the direction of the previous setpoint (overshoot). After the final rounding-off has been completed, the output goes toward the new setpoint. p1134 = 1 (discontinuous smoothing) If the setpoint is reduced while ramping-up, then the output goes immediately in the direction of the new setpoint. For the setpoint change there is no rounding-off.		
p1135[0...n]	OFF3 ramp-down time / OFF3 t_RD		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 600.000 [s]	Access level: 2 Func. diagram: 3060, 3070 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the ramp-down time from the maximum speed down to zero speed for the OFF3 command.		
Note:	This time can be exceeded if the DC link voltage reaches its maximum value.		
p1135[0...n]	OFF3 ramp-down time / OFF3 t_RD		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 600.000 [s]	Access level: 2 Func. diagram: 3060, 3070 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the ramp-down time from the maximum velocity down to zero speed for the OFF3 command.		
Note:	This time can be exceeded if the DC link voltage reaches its maximum value.		
p1135[0...n]	OFF3 ramp-down time / OFF3 t_RD		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 600.000 [s]	Access level: 2 Func. diagram: 3060, 3070 Unit selection: - Expert list: 1 Factory setting 3.000 [s]
Description:	Sets the ramp-down time from the maximum speed down to zero speed for the OFF3 command.		
Note:	This time can be exceeded if the DC link voltage reaches its maximum value.		

2 Parameters

2.2 List of parameters

p1136[0...n]	OFF3 initial rounding-off time / RFGOFF3 t_strt_rnd		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 30.000 [s]	Access level: 2 Func. diagram: 3070 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the initial rounding-off time for OFF3 for the extended ramp generator.		
p1137[0...n]	OFF3 final rounding-off time / RFG OFF3 t_end_del		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 30.000 [s]	Access level: 2 Func. diagram: 3070 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the final rounding-off time for OFF3 for the extended ramp generator.		
p1138[0...n]	CI: Ramp-function generator ramp-up time scaling / RFG t_RU scal		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 3060, 3070 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for scaling the ramp-up time of the ramp-function generator.		
Dependency:	Refer to: p1120		
Note:	The ramp-up time is set in p1120.		
p1139[0...n]	CI: Ramp-function generator ramp-down time scaling / RFG t_RD scal		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: 3060, 3070 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for scaling the ramp-down time of the ramp-function generator.		
Dependency:	Refer to: p1121		
Note:	The ramp-down time is set in p1121.		

p1140[0...n]	BI: Enable ramp-function generator/inhibit ramp-function generator / Enable RFG		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "enable ramp-function generator/inhibit ramp-function generator". For the PROFIdrive profile, this command corresponds to control word 1 bit 4 (STW1.4). BI: p1140 = 0 signal: Inhibits the ramp-function generator (the ramp-function generator output is set to zero). BI: p1140 = 1 signal: Enable ramp-function generator.		
Dependency:	Refer to: p1141, p1142		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p1140	BI: Enable ramp-function generator/inhibit ramp-function generator / Enable RFG		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9678
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "enable ramp-function generator/inhibit ramp-function generator". For the PROFIdrive profile, this command corresponds to control word 1 bit 4 (STW1.4). BI: p1140 = 0 signal: Inhibits the ramp-function generator (the ramp-function generator output is set to zero). BI: p1140 = 1 signal: Enable ramp-function generator.		
Dependency:	Refer to: p1141, p1142		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.		
p1141[0...n]	BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG		
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "continue ramp-function generator/freeze ramp-function generator". For the PROFIdrive profile, this command corresponds to control word 1 bit 5 (STW1.5). BI: p1141 = 0 signal: Freezes the ramp-function generator. BI: p1141 = 1 signal: Continue ramp-function generator.		
Dependency:	Refer to: p1140, p1142		

2 Parameters

2.2 List of parameters

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The ramp-function generator is, independent of the state of the signal source, active in the following cases:
 - OFF1/OFF3.
 - ramp-function generator output within the suppression bandwidth.
 - ramp-function generator output below the minimum speed.

p1141 **BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG**

TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9678
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "continue ramp-function generator/freeze ramp-function generator".
 For the PROFIdrive profile, this command corresponds to control word 1 bit 5 (STW1.5).
 BI: p1141 = 0 signal:
 Freezes the ramp-function generator.
 BI: p1141 = 1 signal:
 Continue ramp-function generator.

Dependency: Refer to: p1140, p1142

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.

p1142[0...n] **BI: Enable setpoint/inhibit setpoint / Setpoint enable**

SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "enable setpoint/inhibit setpoint".
 For the PROFIdrive profile, this command corresponds to control word 1 bit 6 (STW1.6).
 BI: p1142 = 0 signal
 Inhibits the setpoint (the ramp-function generator input is set to zero).
 BI: p1142 = 1 signal
 Setpoint enable.

Dependency: Refer to: p1140, p1141

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: When the function module "position control" (r0108.3 = 1) is activated, this binector input is interconnected as follows as standard:
 BI: p1142 = 0 signal

p1142	BI: Enable setpoint/inhibit setpoint / Setpoint enable		
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9674, 9678
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "enable setpoint/inhibit setpoint".
For the PROFIdrive profile, this command corresponds to control word 1 bit 6 (STW1.6).

BI: p1142 = 0 signal

Inhibits the setpoint (the ramp-function generator input is set to zero).

BI: p1142 = 1 signal

Setpoint enable.

Dependency: Refer to: p1140, p1141

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This parameter has no function in the "SINAMICS" (p4400 = 1) operating mode.

p1143[0...n]	BI: Ramp-function generator, accept setting value / RFG accept set val		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for accepting the setting value of the ramp-function generator.

Dependency: The signal source for the ramp-function generator setting value is set using parameters.

Refer to: p1144

Note: 0/1 signal:

The ramp-function generator output is immediately (without delay) set to the setting value of the ramp-function generator.

1 signal:

The setting value of the ramp-function generator is effective.

1/0 signal:

The input value of the ramp-function generator is effective. The ramp-function generator output is adapted to the input value using the ramp-up time or the ramp-down time.

0 signal:

The input value of the ramp-function generator is effective.

p1144[0...n]	CI: Ramp-function generator setting value / RFG setting value		
SERVO (ESR, Ext setp), VECTOR, HLA (ESR), SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the ramp-function generator setting value.

Dependency: The signal source for accepting the setting value is set using parameters.

Refer to: p1143

p1145[0...n]	Ramp-function generator tracking intensity. / RFG track intens		
SERVO (ESR, Ext setp), SERVO_AC (ESR, Ext setp), SERVO_I_AC (ESR, Ext setp)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 50.0	Access level: 3 Func. diagram: 3080 Unit selection: - Expert list: 1 Factory setting 1.3
Description:	Sets the ramp-function generator tracking. The output value of the ramp-function generator is tracked (corrected) corresponding to the maximum possible drive acceleration. The reference value is the deviation at the speed/velocity controller input that is necessary to ensure that the motor accelerates at the torque/force limit.		
Recommendation:	If at least one speed setpoint filter/velocity setpoint filter is activated (p1414), then the ramp-function generator tracking should be deactivated (p1145 = 0.0). When the speed setpoint filter is activated, the output value of the ramp-function generator can no longer be tracked (corrected) corresponding to the maximum possible drive acceleration. For p1145 = 0.0: This value deactivates the ramp-function generator tracking. For p1145 = 0.0 ... 1.0: Generally, these values are not practical. They cause the motor to accelerate below its torque limit. The lower the selected value, the greater the margin between the controller and torque limit when accelerating. For p1145 > 1.0: The greater the value, the higher the permissible deviation between the speed setpoint and speed actual value.		
Notice:	If ramp-function generator tracking is activated and the ramp time is set too short, this can cause unsteady acceleration. Remedy: - deactivate ramp-function generator tracking (p1145 = 0). - increase the ramp-up/ramp-down time (p1120, p1121).		
Note:	In the U/f mode, ramp-function generator tracking is not active. For SERVO with U/f operation, the following applies: The complete ramp-function generator is not active, i.e. ramp-up and ramp-down time = 0.		

p1145[0...n]	Ramp-function generator tracking intensity. / RFG track intens		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min 0.0	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 50.0	Access level: 3 Func. diagram: 3080 Unit selection: - Expert list: 1 Factory setting 1.3
Description:	Sets the ramp-function generator tracking. The output value of the ramp-function generator is tracked (corrected) corresponding to the maximum possible drive acceleration. The reference value is the deviation at the speed/velocity controller input that is necessary to ensure that the motor accelerates at the torque/force limit.		
Recommendation:	If at least one speed setpoint filter/velocity setpoint filter is activated (p1414), then the ramp-function generator tracking should be deactivated (p1145 = 0.0). When the speed setpoint filter is activated, the output value of the ramp-function generator can no longer be tracked (corrected) corresponding to the maximum possible drive acceleration. For p1145 = 0.0: This value deactivates the ramp-function generator tracking. For p1145 = 0.0 ... 1.0: Generally, these values are not practical. They cause the motor to accelerate below its torque limit. The lower the selected value, the greater the margin between the controller and torque limit when accelerating. For p1145 > 1.0: The greater the value, the higher the permissible deviation between the speed setpoint and speed actual value.		

Notice: If ramp-function generator tracking is activated and the ramp time is set too short, this can cause unsteady acceleration.

Remedy:

- deactivate ramp-function generator tracking (p1145 = 0).

- increase the ramp-up/ramp-down time (p1120, p1121).

Note: In the U/f mode, ramp-function generator tracking is not active.

For ramp-function generator tracking and active acceleration model (p1400.20, 23), the integral component of the speed controller should be able to run freely up to the torque limit (p1400.16 = 1).

Description:	Displays the setpoint at the output of the ramp-function generator.			
p1151[0...n]	Ramp-function generator configuration / RFG config			
SERVO (ESR, Ext setp), VECTOR, SERVO_AC (ESR, Ext setp), VECTOR_AC, SERVO_I_AC (ESR, Ext setp), VECTOR_I_AC	Can be changed: U, T Data type: Unsigned16 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Sets the configuration for the extended ramp-function generator.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Deactivate rounding-off at the zero cross-over	Yes	No
	01	RFG tracking without polarity change	Yes	No
	02	RFG tracking with polarity change	Yes	No
Dependency:	For bit 01, 02 = 1: These bits are only effective when ramp-function generator tracking is activated (p1145 > 0). When both bits are activated, RFG tracking with polarity change is active. For bit 01 = 0, bit 02 = 0: When ramp-function generator tracking is active, the setpoint can only change in the direction of the target setpoint – or be frozen.			
Notice:	For bit 00 = 1: If the ramp-up time is longer than the ramp-down time (p1120 > p1121), then there is an acceleration step at the zero crossover. This can have a negative impact on the mechanical system.			
Note:	For bit 00 = 1: When the direction change is changed there is no rounding-off before and after the zero crossover. For bit 01 = 1: For load surges, the ramp-function generator output tracks the actual value. The tracking (correction) ends at a setpoint of zero. For bit 02 = 1: For load surges, the ramp-function generator output tracks the actual value. For a polarity change, the tracking (correction) is continued.

	00	Interpolation ramp-fct gen/velocity controller active	Yes	No	3080
	01	Interpol. op-loop ctrl /velocity controller active	Yes	No	3080

Note: For bit 01:
The interpolator is only effective in following cases:
- isochronous PROFIBUS operation with a sign-of-life received from the master (STW2.12 ... STW2.15).

p1189	TM41 encoder simulation configuration / Enc_emulat config			
TM41	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9674	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0010 bin	
Description:	Sets the configuration for the incremental encoder emulation.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	Interpol. op-loop ctrl /speed controller active	Yes	No
				FP 9674
Note:	The parameter is not effective in the SINAMICS operating mode (p4400 = 1). For bit 01: The interpolator is only effective for isochronous PROFIBUS operation and when the master receives a sign-of-life (STW 2.12 ... STW 2.15).			

p1190	CI: DSC position deviation XERR / DSC XERR			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: 3001, 3090	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the position deviation XERR for DSC (position controller output of the higher-level control).			
Dependency:	Isochronous operation must be activated for DSC. The position controller gain factor (KPC), the position deviation (XERR) and the speed setpoint (N_SOLL_B) must be included in the setpoint telegram. At least the encoder interface (Gx_XIST1) must be included in the actual value telegram. The position actual value used for the internal position controller can be selected using p1192. Refer to: p1191, p1192			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed. The parameter can only be interconnected to a signal source with Integer32 data type.			
Note:	DSC: Dynamic Servo Control			

p1191	CI: DSC position controller gain KPC / DSC KPC			
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 3090	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the position controller gain KPC for DSC.			
Dependency:	Isochronous operation must be activated for DSC. Refer to: p1190			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.			
Note:	DSC: Dynamic Servo Control			

p1192[0...n]	DSC encoder selection / DSC enc selection		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Setpoints Not for motor type: - Min 1	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: 3090 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of the encoder used for DSC.		
Value:	1: Encoder 1 (motor encoder) 2: Encoder 2 3: Encoder 3		
Note:	DSC: Dynamic Servo Control Value 1 corresponds to encoder 1 (motor encoder); the encoder data set is assigned via p0187. Value 2 corresponds to encoder 2; the encoder data set is assigned via p0188. Value 3 corresponds to encoder 3; the encoder data set is assigned via p0189.		
p1193[0...n]	DSC encoder adaptation factor / DSC enc adpt fact		
SERVO, HLA, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: - Min -1000000.00000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000000.00000	Access level: 3 Func. diagram: 3090 Unit selection: - Expert list: 1 Factory setting 1.00000
Description:	Sets the factor to adapt the encoder when using either encoder 2 or 3 for DSC. The factor sets the ratio of the pulse difference between the motor encoder (encoder 1) and the selected encoder for the same distance moved through. This factor takes into account e.g. gear ratios, differences in the number of encoder pulses.		
Dependency:	Refer to: p1192		
Note:	DSC: Dynamic Servo Control Example: Encoder 1: Motor encoder with 2048 pulses/revolution, ballscrew with 10 mm/revolution pitch Encoder 2: Linear scale with 20 µm grid division as direct measuring system p1193 = number of pulses, encoder 1 per motor revolution / number of pulses, encoder 2 per motor revolution p1193 = 2048 / (10 mm / 20 µm) = 4.096		
p1194	CI: DSC control word DSC_STW / DSC_STW		
SERVO (DSC spline, Lin), SERVO_AC (DSC spline, Lin), SERVO_I_AC (DSC spline, Lin)	Can be changed: T Data type: Unsigned32 / Integer16 P-Group: Setpoints Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 3001, 3090 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for control word DSC_STW for DSC with spline. Bit 0: DSC with spline on Bit 4: Velocity precontrol for DSC with spline on Bit 5: Force precontrol for DSC with spline on		
Dependency:	The control word is only evaluated if the "DSC with spline" function module (r0108.6) is activated. The closed-loop control structure selected by the DSC control word is displayed in r1407. Refer to: p1191, p1192, p1195

Note: For bit 02:

The bit is the result of the OR logic operation - bit 00 and bit 01.

p1200	CI: Position offset incremental/absolute / x_offs inc/abs		
HLA	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the position offset between incremental and absolute position.		
Dependency:	Refer to: p1201		
Note:	When using an incremental measuring system, which is referenced (homed) via the control system, then the control must provide an offset for the incremental position. This value is added to the incremental value, therefore generating an absolute position. The absolute position is used in the drive to determine the piston position, if the measuring system does not have any absolute information.		
p1200[0...n]	Flying restart operating mode / FlyRest op_mode		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the operating mode for flying restart. The flying restart allows the drive converter to be switched on while the motor is still rotating. In so doing, the drive converter output frequency is changed until the actual motor speed/velocity is found. The motor then accelerates up to the setpoint at the ramp-function generator setting.		
Value:	0: Flying restart inactive 1: Flying restart always active (start in setpoint direction) 2: FlyRestart active after on, fault, OFF2 (start in setp. dir.) 3: FlyRestart active after fault, OFF2 (start in setp. direction) 4: Flying restart always active (start only in setpoint direction) 5: FlyRestart active after on, fault, OFF2 (start only in setp_dir) 6: FlyRestart active after fault, OFF2 (start only in setp. dir.)		
Dependency:	The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated (p1200 = 0). For induction motors, the following applies: A differentiation is made between flying restart for U/f control and for vector control (p1300). Flying restart, U/f control: p1202, p1203, r1204 Flying restart, vector control: p1202, p1203, r1205 For synchronous motors, the following applies: Flying restart is not possible with U/f control or if, in the case of sensorless vector control, a Voltage Sensing Module (VSM) has not been connected and parameterized. If two VSMs are connected to the Motor Module, then the motor voltage for the flying restart is measured using the second VSM (see p0151[1]). If only one VSM is connected, then this can be used for the flying restart (p1200) (for induction motors, also see p0247 bit 5). When activating flying restart, line synchronization must be deactivated (p3800 = 0). Refer to: p1201 Refer to: F07330, F07331		
Notice:	The "flying restart" function must be used in cases where the motor may still be running (e.g. after a brief line supply interruption) or is being driven by the load. The system might otherwise shut down as a result of overcurrent. It does not make sense to use "flying restart" together with the "motor holding brake function" (p1215 > 0) because then the flying restart will always be realized with the motor stationary. For a flying restart of induction motors without voltage measurement (VSM) the de-energization time (p0347) must be set long enough so that for fast restarts after a pulse inhibit, excessively high current peaks do not occur. When operating synchronous reluctance motors and flying restart a motor data identification must first be carried out.		

Note: For p1200 = 1, 4, the following applies:
Flying restart is active after faults, OFF1, OFF2, OFF3.
For p1200 = 2, 5, the following applies:
The "switch-on" is the first switching-on operation after the drive system has been booted. This is practical for motors with a high-inertia load.
For p1200 = 1, 2, 3, the following applies: The search is made in both directions.
For reluctance motors, the converter is directly switched to the rotating motor without executing a search routine.
For p1200 = 4, 5, 6, the following applies: The search is only made in the setpoint direction. For a setpoint of zero, a search is not made in the negative direction of rotation.
This selection is not necessary for reluctance motors (see p1200 = 1, 2, 3).
For operation with encoder, the following applies:
p1200 = 1, 4 as well as p1200 = 2, 5 and p1200 = 3, 6 have the same meaning.
For U/f control (p1300 < 20), the following applies:
The speed can only be sensed for values above approx. 5 % of the rated motor speed. For lower speeds, it is assumed that the motor is at a standstill.
If p1200 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1200 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1201[0...n]	CI: Position offset incremental/absolute valid / x_offs valid		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer16	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the message "Position offset incremental/absolute valid". BI: p1201 = 1 signal: The value for the position offset incremental/absolute (p1200) is valid.		
Dependency:	Refer to: p1200		

p1201[0...n]	BI: Flying restart enable signal source / FlyRest enab s_s		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source to enable the "flying restart" function.		
Dependency:	Refer to: p1200		
Note:	Withdrawing the enable signal has the same effect as setting p1200 = 0.		

p1202[0...n]	Flying restart search current / FlyRest I_srch		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	400 [%]	100 [%]
Description:	Sets the search current for the "flying restart" function. The value is referred to the motor magnetizing current. For U/f control, it may be necessary to increase the search current (e.g. 120 %) to ensure reliable flying restart. Fast flying restart for induction motors with voltage model (see r1780.11): Sets the initial setpoint for the field-generating current component.		

2 Parameters

2.2 List of parameters

Dependency: Refer to: r0331

Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

Note:

In U/f control mode, the parameter serves as a threshold value for establishing the current at the beginning of the flying restart function. When the threshold value is reached, the actual search current is set as a function of the frequency based on the voltage setpoints.

Reducing the search current can also improve flying restart performance (if the system moment of inertia is not very high, for example).

The following applies for a synchronous reluctance motor:

- a parameter change only becomes effective after carrying out the motor data identification.
- the minimum search current is limited (p1202 >= 50 %).
- the search algorithm is optimized for 100%, and the current reached is internally limited. It is possible that a set value (p1202 != 100%) may not be able to be reached.
- if the ratio between motor power and converter power is greater than 1, then it may be advantageous to increase the search current.

p1203[0...n]

Flying restart search rate factor / FlyRes v_srch fact

VECTOR,
VECTOR_AC,
VECTOR_I_AC

Can be changed: U, T

Expert list: 1

Min

Max

Factory setting

10 [%]

4000 [%]

100 [%]

Description:

Sets the factor for the search speed for flying restart.

The value influences the rate at which the output frequency is changed during a flying restart. A higher value results in a longer search time.

Recommendation:

For sensorless vector control and motor cables longer than 200 m - as well as for du/dt filters (p0230) - the following applies:

p1203 >= 300 %

Caution:

An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

For vector control, a value that is too low or too high can cause flying restart to become unstable.

Note:

The parameter factory setting is selected so that standard induction motors that are rotating can be found and restarted as quickly as possible (fast flying restart).

With this pre-setting, if the motor is not found (e.g. for motors that are accelerated as a result of active loads or with U/f control and low speeds), we recommend that the search rate is reduced (by increasing p1203).

For a fast flying restart with voltage model in the U/f control mode (p1300 < 20) the search duration can be modified using this parameter.

The following applies for a synchronous reluctance motor:

- the minimum search speed is limited (p1203 >= 50 %).

p1210	Automatic restart mode / AR mode		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	0
Description:	Sets the automatic restart mode (AR).		
Value:	0: Inhibit automatic restart 1: Acknowledge all faults without restarting 4: Restart after line supply failure w/o additional start attempts 6: Restart after fault with additional start attempts 14: Restart after line supply failure following man. acknowledgment 16: Restart after fault following manual acknowledgment		
Dependency:	The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted. When using an Operator Panel in the LOCAL mode, then there is no automatic start. For p1210 = 14, 16, a manual acknowledgment is required for an automatic restart. Refer to: p0840, p0857, p1267 Refer to: F30003		
Danger:	If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). When faults are present, therefore, the parameter cannot be changed. For p1210 > 1, the motor is automatically started.		
Note:	For p1210 = 1: Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. p1211 has no influence on the number of acknowledgment attempts. For p1210 = 4: An automatic restart is only carried out if fault F30003 occurred at the Motor Module or a 1 signal is present at binector input p1208[1]. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure. For p1210 = 6: An automatic restart is carried out if any fault has occurred or there is a 1 signal at binector input p1208[0]. For p1210 = 14: as for p1210 = 4. However, active faults must be manually acknowledged. For p1210 = 16: as for p1210 = 6. However, active faults must be manually acknowledged.		

p1210	Automatic restart mode / AR mode		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the automatic restart mode (AR).		
Value:	0: Inhibit automatic restart 1: Acknowledge all faults without restarting 4: Restart after line supply failure w/o additional start attempts 6: Restart after fault with additional start attempts 14: Restart after line supply failure following man. acknowledgment 16: Restart after fault following manual acknowledgment		
Recommendation:	For brief line supply failures, the motor shaft may still be rotating when restarting. The "flying restart" function (p1200) might need to be activated to restart while the motor shaft is still rotating.		
Dependency:	The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted. When using an Operator Panel in the LOCAL mode, then there is no automatic start. For p1210 = 14, 16, a manual acknowledgment is required for an automatic restart. Refer to: p0840, p0857, p1267 Refer to: F30003		
Danger:	 If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). When faults are present, therefore, the parameter cannot be changed. For p1210 > 1, the motor is automatically started.		
Note:	For p1210 = 1: Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. p1211 has no influence on the number of acknowledgment attempts. For p1210 = 4: An automatic restart is only carried out if fault F30003 occurred at the Motor Module or a 1 signal is present at binector input p1208[1]. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure. For p1210 = 6: An automatic restart is carried out if any fault has occurred or there is a 1 signal at binector input p1208[0]. For p1210 = 14: as for p1210 = 4. However, active faults must be manually acknowledged. For p1210 = 16: as for p1210 = 6. However, active faults must be manually acknowledged.

0

Description:

Sets the automatic restart mode (AR).

Value:

- 0: Inhibit automatic restart
- 1: Acknowledge all faults without restarting
- 4: Restart after line supply failure w/o additional start attempts
- 6: Restart after fault with additional start attempts

Dependency:

The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.

When using an Advanced Operator Panel (AOP) in the LOCAL Mode, then there is no automatic restart.

Refer to: p0840, p0857, p1267

Refer to: F30003

Danger:

If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.

Notice:

A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).
For p1210 > 1, the infeed is automatically started.

Note:

For p1210 = 1:
Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. A minimum time of p1212 + 1 s must expire between a successful fault acknowledgment and a fault re-occurring if the signal ON/OFF1 (STW1.0) is at a HIGH signal level. If the signal ON/OFF1 is at a LOW signal level, then the time between a successful fault acknowledgment and a new fault must be at least 1 s.

p1211 has no influence on the number of acknowledgment attempts.

For p1210 = 4:

An automatic restart is only executed if fault F06200 has occurred. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure.

For p1210 = 6:

An automatic restart is carried out if any fault has occurred.

p1211 Automatic restart start attempts / AR start attempts			
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Unsigned16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 3
Description:	Sets the start attempts of the automatic restart function for p1210 = 4, 6.		
Dependency:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). Refer to: p1210, r1214 Refer to: F07320		
Notice:	After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated. After a complete power failure (blackout) the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. if the Control Unit remains active on power failure longer than the time p1212/2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.		
Note:	A start attempt starts immediately when a fault occurs. The start attempt is considered to be completed if the motor was magnetized (r0056.4 = 1) and an additional delay time of 1 s has expired. As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgment starts again from the beginning. Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt, i.e. a fault/error has no longer occurred up to the end of the magnetizing phase, the start counter is again reset to the parameter value after 1 s. If a fault re-occurs - the parameterized number of start attempts is again available. At least one start attempt is always carried out. After a line supply failure, acknowledgment is immediate and when the line supply returns, the system is switched on. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgment also causes the start counter to be decremented.		

p1211 Automatic restart start attempts / AR start attempts			
A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: Unsigned16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 3
Description:	Sets the start attempts of the automatic restart function for p1210 = 4, 6.		
Dependency:	This parameter setting is active for p1210 = 6. For p1210 = 4, the parameter only has an influence if, when attempting to start, an additional line phase failure (F06200) occurs. A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). Refer to: p1210, r1214 Refer to: F07320		
Notice:	After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated. After a complete power failure (blackout) the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. if the Control Unit remains active on power failure longer than the time p1212/2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.		

2 Parameters

2.2 List of parameters

Note: A start attempt starts immediately when a fault occurs. The restart attempt is considered to have been completed if the infeed is switched on and an additional delay time of 1 s has expired.

As long as a fault is present, an acknowledge command is generated in the time intervals of $p1212 / 2$. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgment starts again from the beginning.

Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt (i.e. a fault/error has no longer occurred up to the end of the switching-on operation) the start counter is again reset to the parameter value after 1 s. If faults re-occur, the parameterized number of start attempts is again available.

At least one start attempt is always carried out.

After a line supply failure, acknowledgment is immediate and when the line supply returns, the system is switched on. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgment also causes the start counter to be decremented.

p1212	Automatic restart delay time start attempts / AR t_wait start		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.1 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.0 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.0 [s]
Description:	Sets the delay time up to restart.		
Dependency:	This parameter setting is active for $p1210 = 4, 6$. For $p1210 = 1$, the following applies: Faults are only automatically acknowledged in half of the waiting time, no restart. Refer to: $p1210, r1214$		
Notice:	A change is only accepted and made in the state "initialization" ($r1214.0$) and "wait for alarm" ($r1214.1$).		
Note:	The faults are automatically acknowledged after half of the delay time has expired and the full delay time. If the cause of a fault is not removed in the first half of the delay time, then it is no longer possible to acknowledge in the delay time.		

p1212	Automatic restart delay time start attempts / AR t_wait start		
A_INF, S_INF, R_INF, B_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.1 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.0 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.0 [s]
Description:	Sets the delay time up to restart.		
Dependency:	This parameter setting is active for $p1210 = 4, 6$. For $p1210 = 1$, the following applies: Only automatic acknowledgment of the faults, no restart. Refer to: $p1210, r1214$		
Notice:	A change is only accepted and made in the state "initialization" ($r1214.0$) and "wait for alarm" ($r1214.1$).		
Note:	Faults are automatically acknowledged and the drive switched on again after half and the complete wait time have expired.		

p1213[0...1]	Automatic restart monitoring time / AR t_mon		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	10000.0 [s]	0.0 [s]
Description:	Sets the monitoring time of the automatic restart (AR).		
Index:	[0] = Restart [1] = Reset start counter		
Dependency:	Refer to: p1210, r1214		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.		
Note:	For index [0]: The monitoring time starts when the faults are detected. If the automatic acknowledgments are not successful, the monitoring time runs again. If, after the monitoring time has expired, the drive has still not successfully started again (flying restart and magnetizing of the motor must have been completed: r0056.4 = 1), then fault F07320 is output. The monitoring is deactivated with p1213 = 0. If p1213 is set lower than the sum of p1212, the magnetizing time p0346 and the additional delay time due to the flying restart, then fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart. The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present). In the case of p1210 = 14, 16, the faults which are present must be acknowledged manually within the time in p1213[0]. Otherwise, fault F07320 is generated after the set time. For index [1]: The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgment without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the switch-on command is withdrawn and the fault is acknowledged. The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.		

p1213[0...1]	Automatic restart monitoring time / AR t_mon		
A_INF, S_INF, R_INF, B_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	10000.0 [s]	0.0 [s]
Description:	Sets the monitoring time of the automatic restart (AR).		
Index:	[0] = Restart [1] = Reset start counter		
Dependency:	Refer to: p1210, r1214		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.		
Note:	For index [0]: The monitoring time starts when the faults are detected. If the automatic acknowledgments are not successful, the monitoring time runs again. If the drive has not restarted at the end of the monitoring time, fault F07320 is signaled. The monitoring is deactivated with p1213 = 0. If p1213 is set to a value which is lower than in p1212, fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart. The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).		

2 Parameters

2.2 List of parameters

For index [1]:

The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgment without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the switch-on command is withdrawn and the fault is acknowledged. The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.

Description:

Displays the status of the automatic restart (AR).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Initialization	Yes	No	-
01	Wait for alarm	Yes	No	-
02	Auto restart act	Yes	No	-
03	Setting the acknowledgment command	Yes	No	-
04	Acknowledge alarms	Yes	No	-
05	Restart	Yes	No	-
06	Delay time running after automatic switch-on	Yes	No	-
07	Fault	Yes	No	-
10	Effective fault	Yes	No	-
12	Start counter bit 0	ON	OFF	-
13	Start counter bit 1	ON	OFF	-
14	Start counter bit 2	ON	OFF	-
15	Start counter bit 3	ON	OFF	-

Note:

For bit 00:

State to display the single initialization after POWER ON.

For bit 01:

State in which the automatic restart function waits for faults (initial state).

For bit 02:

General display that a fault has been identified and that the restart or acknowledgment has been initiated.

For bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

For bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgment. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgment command (bit 3 = 1).

For bit 05:

State in which the drive is automatically switched on (only for p1210 = 4, 6).

For bit 06:

State in which the system waits after having been switched on, to the end of the start attempt (to the end of the magnetizing process).

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

For bit 07:

State which is assumed after a fault occurs within the automatic restart function. This is only reset after acknowledging the fault and withdrawing the switch-on command.

For bit 10:

When the automatic restart function is active, r1214.7 is displayed, otherwise the active fault r2139.3.

The bit is set if the automatic restart can no longer acknowledge a fault, and cancels with fault F07320.

For bits 12 ... 15:

Actual state of the start counter (binary coded).

For bit 05:

State in which the drive is automatically switched on (only for p1210 = 4, 6).

For bit 06:

State in which the system waits after having been switched on, to the end of the start attempt.

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

For bit 07:

State which is assumed after a fault occurs within the automatic restart function.

For bit 10:

When the automatic restart function is active, r1214.7 is displayed, otherwise the active fault r2139.3.

The bit is set if the automatic restart can no longer acknowledge a fault, and cancels with fault F07320.

For bits 12 ... 15:

Actual state of the start counter (binary coded).

p1215	Motor holding brake configuration / Brake config		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: T Data type: Integer16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 2 Func. diagram: 2701, 2707, 2711 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the holding brake configuration.		
Value:	0: No motor holding brake available 1: Motor holding brake acc. to sequence control 2: Motor holding brake always open 3: Motor holding brake like sequence control connection via BICO		
Dependency:	Refer to: p1216, p1217, p1226, p1227, p1228, p1278		
Caution:	For the setting p1215 = 0, if a brake is used, it remains closed. If the motor moves, this will destroy the brake.		
			
Notice:	If p1215 was set to 1 or if p1215 was set to 3, then when the pulses are suppressed, the brake is closed even if the motor is still rotating. Pulse suppression can either be caused by a 0 signal at p0844, p0845 or p0852 or as a result of a fault with OFF2 response. If this is not desirable (e.g. for a flying restart), then the brake can be kept open using a 1 signal at p0855.		
Note:	If the configuration is set to "no holding brake present" when booting, then the motor holding brake will be automatically identified. If a motor holding brake is detected, the configuration is set to "motor holding brake as for sequence control". If a motor holding brake is used via the brake connection of the Motor Module integrated in the drive, then it is not permissible that p1215 is set to 3. if an external motor holding brake is being used, then p1215 should be set to 3 and r0899.12 should be interconnected as control signal. When the function module "extended brake control" is activated (r0108.14 = 1), r1229.1 should be interconnected as control signal. The parameter can only be set to zero when the pulses are inhibited. The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = 1, p9802 = 1) is not practical if there is no motor holding brake. The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.		

p1216	Motor holding brake opening time / Brake t_{open}		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000 [ms]	Access level: 2 Func. diagram: 2701, 2711 Unit selection: - Expert list: 1 Factory setting 100 [ms]
Description:	Sets the time to open the motor holding brake. After controlling the holding brake (opens), the speed/velocity setpoint remains at zero for this time. After this, the speed/velocity setpoint is enabled.		
Recommendation:	This time should be set longer than the actual opening time of the brake. This ensures that the drive cannot accelerate when the brake is applied.		
Dependency:	Refer to: p1215, p1217		
Note:	For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor. For p1216 = 0 ms, the monitoring and the message A07931 "Brake does not open" are deactivated.		

p1217	Motor holding brake closing time / Brake t_close		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000 [ms]	Access level: 2 Func. diagram: 2701, 2711 Unit selection: - Expert list: 1 Factory setting 100 [ms]
Description:	Sets the time to apply the motor holding brake. After OFF1 or OFF3 and the holding brake is controlled (the brake closes), then the drive remains closed-loop controlled for this time stationary with a speed setpoint/velocity setpoint of zero. The pulses are suppressed when the time expires.		
Recommendation:	This time should be set longer than the actual closing time of the brake. This ensures that the pulses are only suppressed after the brake has closed.		
Dependency:	Refer to: p1215, p1216		
Notice:	If the selected closing time is too short with respect to the actual closing time of the brake, then the load can sag. If the closing time is selected to be too long with respect to the actual closing time of the brake, the control works against the brake and therefore reduces its lifetime.		
Note:	For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor. For p1217 = 0 ms, the monitoring and the message A07932 "Brake does not close" are deactivated.		
p1218[0...1]	BI: Open motor holding brake / Open brake		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2707 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for a conditional opening of the motor holding brake.		
Dependency:	Refer to: p1215		
Note:	[0]: Signal, open brake, AND logic operation, input 1 [1]: Signal, open brake, AND logic operation, input 2		
p1219[0...3]	BI: Immediately close motor holding brake / Close brake		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2707 Unit selection: - Expert list: 1 Factory setting [0] 0 [1] 0 [2] 0 [3] 1229.9
Description:	Sets the signal source for an unconditional (immediate) closing of the motor holding brake.		
Dependency:	Refer to: p1215, p1275		
Note:	[0]: Signal, immediately close brake, inversion via p1275.0 [1]: Signal, immediately close brake, inversion via p1275.1 [2]: Signal, immediately close brake [3]: Signal, immediately close brake - refer to the factory setting These four signals form an OR logic operation.		

2 Parameters

2.2 List of parameters

p1220	CI: Open motor holding brake signal source threshold / Open brake thr		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 2707 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for the command "open brake".		
Dependency:	Refer to: p1215, p1221, r1229, p1277		
p1221	Open motor holding brake threshold / Open brake thr		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.00 [%]	Access level: 2 Func. diagram: 2707 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the threshold value for the command "open brake".		
Dependency:	Refer to: p1220, r1229, p1277		
p1222	BI: Motor holding brake feedback signal brake closed / Brake fdbk closed		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2711 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the feedback signal "brake closed". For motor holding brakes with feedback signal, the signal "brake closed" can be activated using p1275.5 = 1.		
Dependency:	Refer to: p1223, p1275		
Note:	1 signal: Brake closed. When braking with 1 feedback signal, the inverted feedback signal is connected to the BICO input for the second feedback signal (p1223). For r1229.5 = 1, OFF1/OFF3 are suppressed to prevent the drive accelerating by a load that drives the motor - whereby OFF2 remains effective.		
p1223	BI: Motor holding brake feedback signal brake open / Brake fdbk open		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2711 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for the feedback signal "brake open". For motor holding brakes with feedback signal, the signal "brake open" can be activated using p1275.5 = 1.		
Dependency:	Refer to: p1222, p1275		

Note: 1 signal: Brake open.
When braking with 1 feedback signal, the inverted feedback signal is connected to the BICO input for the second feedback signal (p1222).

p1224[0...3]	BI: Close motor holding brake at standstill / Brk close standst		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2704 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for close brake at standstill.		
Dependency:	Refer to: p1275		
Note:	[0]: Signal, close brake at standstill, inversion via p1275.2 [1]: Signal, close brake at standstill, inversion via p1275.3 [2]: signal, close brake at standstill [3]: signal, close brake at standstill These four signals form an OR logic operation.		

p1225	CI: Standstill detection threshold value / Standstill thr		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max -	Access level: 2 Func. diagram: 2704 Unit selection: - Expert list: 1 Factory setting 63[0]
Description:	Sets the signal source "threshold value" for the standstill identification.		
Dependency:	Refer to: p1226, p1228, r1229		

p1226[0...n]	Standstill detection velocity threshold / v_standst v_thr		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.00 [m/min]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.20 [m/min]
Description:	Sets the velocity threshold for the standstill identification. Acts on the actual value and setpoint monitoring. When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.		
Dependency:	Refer to: p1227		
Note:	Standstill is identified in the following cases: - the velocity actual value falls below the velocity threshold in p1226 and the time started after this in p1228 has expired. - the velocity setpoint falls below the velocity threshold in p1226 and the time started after this in p1227 has expired. The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the velocity threshold is too low.		

p1226[0...n]	Threshold for zero speed detection / n_standst n_thr		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [rpm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 2 Func. diagram: 2701, 2704 Unit selection: p0505 Expert list: 1 Factory setting 20.00 [rpm]
Description:	<p>Sets the speed threshold for the standstill identification.</p> <p>Acts on the actual value and setpoint monitoring.</p> <p>When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.</p> <p>The following applies when the brake control is activated:</p> <p>When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.</p> <p>if the brake control is not activated, the following applies:</p> <p>When the threshold is undershot, the pulses are suppressed and the drive coasts down.</p>		
Dependency:	Refer to: p1215, p1216, p1217, p1227		
Notice:	For reasons relating to the compatibility to earlier firmware versions, a parameter value of zero in indices 1 to 31 is overwritten with the parameter value in index 0 when the Control Unit boots.		
Note:	<p>Standstill is identified in the following cases:</p> <ul style="list-style-type: none"> - the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired. - the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired. <p>The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the speed threshold is too low.</p>		

p1226[0...n]	Standstill detection velocity threshold / v_standst v_thr		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [m/min]	Calculated: - Dyn. index: DDS, p0180 Unit group: 4_1 Scaling: - Max 1000.00 [m/min]	Access level: 2 Func. diagram: 2701, 2704 Unit selection: p0505 Expert list: 1 Factory setting 0.20 [m/min]
Description:	<p>Sets the velocity threshold for the standstill identification.</p> <p>Acts on the actual value and setpoint monitoring.</p> <p>When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.</p> <p>The following applies when the brake control is activated:</p> <p>When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.</p> <p>if the brake control is not activated, the following applies:</p> <p>When the threshold is undershot, the pulses are suppressed and the drive coasts down.</p>		
Dependency:	Refer to: p1215, p1216, p1217, p1227		
Notice:	For reasons relating to the compatibility to earlier firmware versions, a parameter value of zero in indices 1 to 31 is overwritten with the parameter value in index 0 when the Control Unit boots.		
Note:	<p>Standstill is identified in the following cases:</p> <ul style="list-style-type: none"> - the velocity actual value falls below the velocity threshold in p1226 and the time started after this in p1228 has expired. - the velocity setpoint falls below the velocity threshold in p1226 and the time started after this in p1227 has expired. <p>The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the velocity threshold is too low.</p>		

p1227	Zero speed detection monitoring time / Standst_id t_mon		
HLA	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	300.000 [s]	4.000 [s]
Description:	Sets the monitoring time for the standstill identification. When braking with OFF1 or OFF3, standstill is identified after this time has expired, after the setpoint speed has fallen below p1226 (also refer to p1145). After this, the brake control is started, the system waits for the closing time in p1217 and then the pulses are suppressed.		
Notice:	For p1145 > 0.0 (RFG tracking) the setpoint is not equal to zero dependent on the selected value. This can therefore cause the monitoring time in p1227 to be exceeded. In this case, for a driven motor, the pulses are not suppressed.		
Note:	Standstill is identified in the following cases: - the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired. - the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired. For p1227 = 300.000 s the following applies: Monitoring is deactivated. For p1227 = 0.000 s, the following applies: With OFF1 or OFF3 and a ramp-down time = 0, the pulses are immediately suppressed and the motor "coasts" down.		

p1227	Zero speed detection monitoring time / n_standst t_mon		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2701, 2704
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	300.000 [s]	4.000 [s]
Description:	Sets the monitoring time for the standstill identification. When braking with OFF1 or OFF3, standstill is identified after this time has expired, after the setpoint speed has fallen below p1226 (also refer to p1145). After this, the brake control is started, the system waits for the closing time in p1217 and then the pulses are suppressed.		
Dependency:	Refer to: p1215, p1216, p1217, p1226		
Notice:	For p1145 > 0.0 (RFG tracking) the setpoint is not equal to zero dependent on the selected value. This can therefore cause the monitoring time in p1227 to be exceeded. In this case, for a driven motor, the pulses are not suppressed.		
Note:	Standstill is identified in the following cases: - the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired. - the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired. For p1227 = 300.000 s the following applies: Monitoring is deactivated. For p1227 = 0.000 s, the following applies: With OFF1 or OFF3 and a ramp-down time = 0, the pulses are immediately suppressed and the motor "coasts" down.		

2 Parameters

2.2 List of parameters

p1228	Pulse suppression delay time / Pulse suppr t_del			
SERVO, VECTOR, HLA, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 299.000 [s]	Access level: 2 Func. diagram: 2701, 2704 Unit selection: - Expert list: 1 Factory setting 0.000 [s]	
Description:	Sets the delay time for pulse suppression. After OFF1 or OFF3, the pulses are canceled, if at least one of the following conditions is fulfilled: - the speed actual value falls below the threshold in p1226 and the time started after this in p1228 has expired. - the speed setpoint falls below the threshold in p1226 and the time started after this in p1227 has expired.			
Dependency:	Refer to: p1226, p1227			
Notice:	When the motor holding brake is activated, pulse cancellation is additionally delayed by the brake closing time (p1217).

7017**Unit selection:** -**Expert list:** 1**Factory setting**

0

Description:

Setting to activate the various types for armature short-circuit / DC braking.

Value:

- 0: No function
- 1: External armature short-circuit with contactor feedback signal
- 2: Ext. armature short circuit without contactor feedback signal
- 3: Internal voltage protection
- 4: Internal armature short-circuit / DC braking
- 5: DC braking for OFF1/OFF3
- 14: DC braking below starting speed

Dependency:

Refer to: p0300, p1230, p1232, p1233, p1234, p1235, p1236, p1237, r1238, r1239, p1345, p1346

Danger:

For p1231 = 1, 2:

- only short-circuit-proof motors may be used, or suitable resistors must be used to short-circuit the motor

For p1231 = 3:

- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)!

- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).

- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).

- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.

- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.

- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.

- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

For p1231 = 4 and synchronous motor:

- when armature short-circuit is active, all of the motor terminals are at half of the DC link potential.

- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).

- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).

- for pulling loads, it is not permissible that an armature short circuit is used by itself. The reason for this is that until this becomes effective, the motor will have continued to rotate. In the case of a fault, it is only permissible to use an armature short circuit as support in conjunction with a mechanical brake.

For p1231 = 4 and induction motor:

- it is not permissible that DC braking is used for pulling loads; this is because during the demagnetization time (p0347) the motor rotates and a mechanical brake is then only closed while the motor is still rotating.

Note:

For p1231 = 1, 2:

The external armature short circuit can only be selected for synchronous motors (p0300). In this case, control bit BO: r1239.0 must be interconnected (e.g. to a digital input) to control the external contactor.

The external armature short circuit cannot be set as a fault response. It can be triggered via binector input p1230. It is also always activated in the case of pulse suppression.

When the external armature short circuit is activated, the system waits for the de-excitation time (p0347) before the short-circuit contactor is controlled. For vector control, for the de-excitation time, a value greater than zero may be required in order to avoid the overcurrent monitoring from responding.

For p1231 = 3:

Internal voltage protection (using an internal armature short circuit) can only be selected for synchronous motors (p0300) and Motor Modules in booksize or chassis format. Further, it is not permissible for Safety Integrated to be active on blocksize Motor Modules (i.e. p9501 = 0 and p9601 = 0). The internal voltage protection prevents the DC link capacitance from being charged if there is no possibility of regenerating the EMF of a motor operated in the field-weakening mode. The Motor Module must support this function (r0192.9 = 1).

a) If the Motor Module does not support the autonomous, internal armature short-circuit (r0192.10 = 0), the armature short-circuit is activated as soon as the activation criterion is fulfilled (refer below):

b) If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module itself decides - using the DC link voltage - as to whether the short-circuit should be activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn. This therefore ensures that the required input voltage for the Control Supply Module is maintained.

For chassis units, the following applies:

The value for the voltage limits is calculated, depending on the voltage class, from EEPROM data of the particular power unit and a factor.

For p1231 = 4:

The function is activated as soon as the activation criterion is fulfilled.

- the function can be superseded by OFF2

a) For synchronous motors (p0300 = 2xx, 4xx), the internal armature short-circuit is initiated.

- the Motor Module must support this function (r0192.9 = 1).

b) For induction motors (p0300 = 1xx), the DC braking is initiated.

Activation criterion (one of the following criteria is fulfilled):

- binector input p1230 = 1 signal (DC braking activation).

- the drive is not in the state "S4: Operation" or in "S5x" (refer to function diagram 2610).

- the internal pulse enable is missing (r0046.19 = 0).

For p1231 = 5:

DC braking can only be set for induction motors.

DC braking is activated if the OFF1 or OFF3 command is present. Binector input p1230 is ineffective. If the drive speed still lies above the speed threshold p1234, then initially, the drive is ramped-down to this threshold, demagnetized (see p0347) and is then switched into DC braking for the time set in p1233. After this, the drive is switched-off. If, at OFF1/OFF3, the drive speed is below p1234, then it is immediately demagnetized and switched into DC braking. A change is made into normal operation if the OFF1 command is withdrawn prematurely.

DC braking by means of fault response continues to be possible.

For p1231 = 14:

DC braking can only be set for induction motors.

DC braking is initiated if binector input p1230 = 1 during operation and the actual speed is below the starting speed p1234 (before this, the drive must have operated above p1234 plus the hysteresis). Then, following upstream demagnetization (see p0347), the braking current p1232 is injected for the time set in p1233. The drive then changes into normal operation. During braking the command for DC braking can be withdrawn. If the time p1233 is exceeded, then DC braking is inhibited and the drive changes into normal operation.

For OFF1 and OFF3, DC braking is only executed, if binector input p1230 = 1 signal.

DC braking by means of fault response continues to be possible.

For operation with an encoder, the encoder signal may not exceed a ripple of 15 rpm in the range of p1234.

For p1231 = 3, 4, 5, 14:

The value can only be changed to values not equal to 3, 4, 5 or 14 if p0491 is not equal to 4 and p2101 is not equal to 6 (armature short-circuit/DC braking not set).

In order that the armature short-circuit/DC braking is active as fault response, the corresponding fault number must be entered in p2100 and fault response p2101 set = 6 (encoder fault response, see p0491).

Note:

ASC: Armature Short Circuit

CSM: Control Supply Module

DCBRK: DC Braking

IVP: Internal Voltage Protection

UPS: Uninterruptible Power Supply

	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]
Description:	Sets the starting speed for DC braking. If the actual speed falls below this threshold, then DC braking is activated.		
Dependency:	Refer to: p1230, p1231, p1232, p1233, r1239		
Notice:	If an encoder fault occurs during closed-loop operation with an encoder, controlled deceleration of the drive down to the start speed p1234 is no longer possible. In this case, DC braking is activated immediately and injects the braking current p1232 for the braking time p1233 after de-magnetizing. The braking current and braking duration must, therefore, be dimensioned accordingly for this situation so that the drive can be decelerated to standstill. In the case of operation with an encoder, this speed may not be set too low so as ensure that the oscillation movement induced by the residual flux/remanence of the motor does not cause DC braking to be deactivated again.		
Note:	Function p1231 = 14 is activated at 15 1/min higher than the value set in p1234. This hysteresis is required to prevent DC braking from being deactivated for speed encoder signals with ripple.		

p1234[0...n]	DC braking starting velocity / DCBRK v_start

	Min	Max	Factory setting

- - 0

Description: Sets the signal source for the contactor feedback signal for external armature short-circuit.

Dependency: Refer to: p1230, p1231, p1236, p1237, r1239

Notice: In order that the pulses are not enabled when the contactor is closed, the contactor feedback signal must lag by a sufficiently long time when opening the contactor.

Note: 1 signal: The contactor is closed.

0 signal: The contactor is open.

p1236[0...n] Ext. armature short-cct. contactor feedback signal monit. time / ASC ext t_mon

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting

0 [ms] 1000 [ms] 200 [ms]

Description: Sets the monitoring time of the contactor feedback signal for the external armature short-circuit configuration.

If the contactor feedback signal (p1235) is parameterized, then the appropriate feedback signal (r1239.1) is expected within this monitoring time after either opening or closing the contactor.

Dependency: Refer to: p1230, p1231, p1235, p1237, r1239

Refer to: F07904, F07905

p1237[0...n] External armature short-circuit delay time when opening / ASC ext t_wait

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting

0 [ms] 1000 [ms] 200 [ms]

Description: Sets the delay time when opening the contactor of the external armature short-circuit.

If no contactor feedback signal has been selected (p1235), then the system waits for this time before the pulses are switched in.

Dependency: Refer to: p1230, p1231, p1235, p1236, r1239

Notice: This delay time must be at least long enough so that the contactor contacts reliably open before the pulses are switched in. The delay time must be greater than the contactor response time. The Motor Module can be damaged if the delay time is too short.

r1238	CO: Armature short-circuit external state / EASC state		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 2610
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	-
Description:	Displays the state for the external armature short-circuit.		
Value:	0: Switched off 1: Ready 2: Active 3: Active - feedback signal "Closed" OK 4: Active - feedback signal "Closed" missing 5: Prompt to remove the armature short-circuit 6: Active - feedback signal "Open" missing		
Dependency:	Refer to: p1230, p1231, p1235, p1236, p1237, r1239 Refer to: F07904, F07905		
Note:	Activation criterion (one of the following criteria is fulfilled): - the signal at BI: p1230 (armature short-circuit activation) is 0. - the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610). - the internal pulse enable is missing (r0046.19 = 0). For state "switched out" (r1238 = 0): - the external armature short-circuit can be selected with p1231 = 1. For state "ready" (r1238 = 1): - as soon as the activation criterion is fulfilled, then a transition is made into the state "active" (r1238 = 2). Regarding the state "active" (r1238 = 2), "active - feedback signal "Closed" OK" (r1238 = 3)", "active - feedback signal "Closed" missing" (r1238 = 4)": - the control signal to close contactor r1239.0 is set to "1" (closed) and the pulses are suppressed. - if a contactor feedback signal is not connected (BI: p1235 = 0 signal), then a transition is immediately made into state 3. - if a contactor feedback signal is connected, then a transition is made into state 3 if the feedback signal at BI: p1235 goes to "1" (closed) within the monitoring time (p1236). - otherwise, a transition is made into state 4. For state "prompt to remove the armature short-circuit" (r1238 = 5): - the activation criterion is no longer fulfilled. An attempt is made to again remove the armature short circuit. - the control signal to close the contactor r1239.0 is set to "0" (open) and the pulses remain suppressed. - if a contactor feedback signal is not connected (BI: p1235 = 0 signal), the system waits for the delay time (p1237) to expire until a transition is made into state 1. - if a contactor feedback signal is connected, the system waits until the feedback signal at BI:p1235 goes to "0" (open) until a transition is made into state 1. If this does not occur within the monitoring time (p1236), then a transition is made into state 6. For state "active - feedback signal "Open" missing" (r1238 = 6): - this error state can be exited by deselecting the external armature short-circuit (p1231 = 0).		

r1239.0...13 CO/BO: Armature short-circuit / DC braking status word / ASC/DCBRK ZSW

SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -

	06	Internal armature short-circuit ready	Yes	No	-
	08	DC braking active	Yes	No	7017
	09	DC current injection active	Yes	No	-
	10	DC braking ready	Yes	No	7017
	11	Armature short circuit/DC braking selected	Yes	No	-
	12	DC braking selection internally inhibited	Yes	No	-
	13	DC braking for OFF1/OFF3	Yes	No	-

Dependency: Refer to: p1230, p1231, p1232, p1233, p1234, p1235, p1236, p1237

Note: External armature short-circuit (bits 0 ... 3):

For bit 00:

Using this signal, the motor is short-circuited through an external contactor circuit. This means that this BO: p1239.0 must be interconnected e.g. to a digital output.

For bit 01:

This signal indicates the state of the contactor to establish the armature short-circuit. To do this, BI: p1235 must be interconnected to a digital input.

For bit 02:

The external armature short-circuit configuration is ready and is activated as soon as the activation criterion is fulfilled.

For bit 03:

1: A feedback signal from an external contactor was parameterized in BI: p1235.

Internal voltage protection / internal armature short-circuit (bits 4 ... 6):

For bit 04:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The Motor Module decides autonomously whether the armature short-circuit is activated. In this case, the following applies: r1239.4 = r1239.5.

c) Internal armature short-circuit (p1231 = 4) was selected.

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

For bit 05:

The Motor Module signals that the motor is short-circuited in the Motor Module through the power semiconductors.

2 Parameters

2.2 List of parameters

For bit 06:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The internal voltage protection is ready and is activated as soon as the activation criterion is fulfilled.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The internal voltage protection is ready and the Motor Module decides autonomously - using the DC link voltage - whether the short-circuit is activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short-circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn.

c) Internal armature short-circuit (p1231 = 4) was selected.

The internal armature short-circuit is ready and is activated as soon as the activation criterion is fulfilled.

Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 1.
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

For bits 12, 13:

Only effective for p1231 = 14.

p1240[0...n]	Vdc controller or Vdc monitoring configuration / Vdc ctrl config		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 3082, 5650
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	9	0
Description:	Sets the configuration of the controller or monitoring for the DC link voltage (Vdc).		
Value:	0: Inhibit Vdc ctrl 1: Enable Vdc_max controller 2: Enable Vdc_min controller (kinetic buffering) 3: Enable Vdc_min controller and Vdc_max controller 4: Activate Vdc_max monitoring 5: Activate Vdc_min monitoring 6: Activate Vdc_min monitoring and Vdc_max monitoring 7: Enable Vdc_max controller without accelerating 8: Enable Vdc_min controller without braking 9: Enable Vdc_min and Vdc_max controller w/o braking/accelerating		
Dependency:	Refer to: p1244, p1248, p1250, p1532		
Notice:	During a few steps of the rotating measurement (p1960 = 1) the Vdc_min controller and/or Vdc_max controller is disabled.		
Note:	p1240 = 1, 3: When the upper DC link voltage threshold is reached (p1244), then the following applies: - the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking. - when other drives regenerate into the DC link, then the Vdc_max controller causes the motor to accelerate. p1240 = 2, 3: When the lower DC link voltage threshold is reached (p1248), the following applies: - the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating. - the motor is braked in order to use its kinetic energy to buffer the DC link. p1240 = 4, 5, 6: When the threshold in p1244 or p1248 is reached, the DC link voltage monitoring initiates a fault with a response and therefore reduces additional negative effects on the DC link voltage. p1240 = 7, 9: as for p1240 = 1, 3. However, the motor is prevented from accelerating as a result of the regenerative feedback (energy recovery) of the other drives. The effective lower torque limit cannot exceed the offset of the torque limit (p1532).		

p1240 = 8, 9:

as for p1240 = 2, 3. However, the motor is prevented from braking due to the fact that the DC link voltage has been lowered. The effective upper torque limit cannot be less than the offset of the torque limit (p1532).

p1240[0...n]	Vdc controller or Vdc monitoring configuration / Vdc ctrl config		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: REL Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 6	Access level: 3 Func. diagram: 6220 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the controller configuration of the DC link voltage (Vdc controller) in the closed-loop control mode.		
Value:	0: Inhibit Vdc ctrl 1: Enable Vdc_max controller 2: Enable Vdc_min controller (kinetic buffering) 3: Enable Vdc_min controller and Vdc_max controller 4: Activate Vdc_max monitoring 5: Activate Vdc_min monitoring 6: Activate Vdc_min monitoring and Vdc_max monitoring		
Dependency:	Refer to: p1245 Refer to: A07400, A07401, A07402, F07403, F07404, F07405, F07406		
Warning: 	When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.		
Caution: 	If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with high moments of inertia. If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated. Drives with Udc control must be able to brake and accelerate independently of one another.		
Notice:	An excessively high value in p1245 can possibly negatively influence the normal operation of the drive.		
Note:	p1240 = 1, 3: When the DC link voltage limit specified for the Motor Module is reached the following applies: - the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking. - the ramp-down times are automatically increased. p1240 = 2, 3: When the switch-in threshold of the Vdc_min controller is reached (p1245), the following applies: - the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating. - the motor is braked in order to use its kinetic energy to buffer the DC link. p1240 = 4, 5, 6: When the threshold in r1242 or r1246 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage. If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled (also see p1531).		

p1241	Vdc_max controller switch-in level / Vdc_max on_level		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 70.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100.0 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the switch-in level for the Vdc_max controller for line droop control (BI: p5401[0] = 1 signal).		
Dependency:	Refer to: r0297, p1250		
Note:	The absolute value is obtained as follows: p1241[%] * r0297		

r1242	Vdc_max controller switch-in level / Vdc_max on_level		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6220

	Min	Max	Factory setting
	1 [%]	10000 [%]	100 [%]
Description:	<p>Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).</p> <p>100% means that p1250, p1251, and p1252 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.</p> <p>If subsequent optimization is required, this can be carried out using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1243.</p> <p>If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.</p>		
Note:	<p>The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.</p>		
p1244[0...n]	DC link voltage threshold upper / Vdc upper thr		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5650
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	165 [V]	1200 [V]	750 [V]
Description:	<p>Sets the upper threshold for the DC link voltage.</p> <p>For p1240 = 1, 3, 7, 9, this threshold is used as limit setpoint for the Vdc_max controller.</p> <p>For p1240 = 4, 6, for DC link voltages above this threshold, an appropriate fault is output.</p>		
Dependency:	<p>Refer to: p1240, p1248, p1250</p>		
Note:	<p>For p1244 < $1.07 * \text{"parameterized DC link voltage"}$, the input of values is rejected.</p> <p>For p0204.0 = 1, the following applies: "Parameterized DC link voltage" = p0210</p> <p>For p0204.0 = 0, the following applies: "Parameterized DC link voltage" = p0210 * 1.4142</p>		

p1245[0...n]	Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 65 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 150 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 76 [%]
Description:	Sets the switch-in level for the Vdc-min controller (kinetic buffering). The value is obtained as follows: AC/AC device: $r1246[V] = p1245[\%] * \sqrt{2} * p0210$ DC/AC device: $r1246[V] = p1245[\%] * p0210$		
Dependency:	Refer to: p0210		
Warning:	An excessively high value possibly negatively influences normal drive operation, and can mean that after the line supply returns, the Vdc minimum control can no longer be exited. The values up to 150 % are intended for operating modes p1240 = 5, 6.		
			
Note:	For SINAMICS GM/SM, the following applies: Minimum value = 0.75 Maximum value = 0.90		
p1245	Vdc_min controller switch-in level / Vdc_min on_level		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 100.0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200.0 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the switch-in level for the Vdc_min controller for line droop control (BI: p5401[0] = 1 signal).		
Dependency:	Refer to: p0210, r0296, p1250		
Note:	The undervoltage threshold r0296 also depends on the set supply voltage p0210. The absolute value is obtained as follows: $p1245[\%] * r0296$		
r1246	Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min - [V]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 6220 Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the switch-in level for the Vdc_min controller (kinetic buffering).		
Note:	The Vdc_min controller is not switched back off until the DC link voltage rises above the threshold $1.05 * p1246$ and the controller output is zero.		

2 Parameters

2.2 List of parameters

p1247[0...n]	Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6220
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	10000 [%]	100 [%]
Description:	Sets the dynamic factor for the Vdc_min controller (kinetic buffering). 100% means that p1250, p1251, and p1252 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization. If subsequent optimization is required, this can be carried out using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1247. If several components are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the component involved.		
p1248[0...n]	DC link voltage threshold lower / Vdc lower thr		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5650
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50 [V]	1000 [V]	285 [V]
Description:	Sets the lower threshold for the DC link voltage. For p1240 = 2, 3, 8, 9, this threshold is used as limit setpoint for the Vdc_min controller. For p1240 = 5, 6, for DC link voltages below this threshold, an appropriate fault is output.		
Dependency:	Refer to: p1240, p1244, p1250		
Note:	For p1248 > 0.93 * "parameterized DC link voltage", the input of values is rejected. For p0204.0 = 1, the following applies: "Parameterized DC link voltage" = p0210 For p0204.0 = 0, the following applies: "Parameterized DC link voltage" = p0210 * 1.4142		
p1249[0...n]	Vdc_max controller speed threshold / Vdc_max n_thr		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]
Description:	Sets the lower speed threshold for the Vdc_max controller. When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.		
Note:	For fast braking where the ramp-function generator tracking was active, it is possible to prevent the drive rotating in the opposite direction by increasing the speed threshold and setting a final rounding-off time in the ramp-function generator (p1131). This is supported using a dynamic setting of the speed controller.		

p1250[0...n]	Vdc controller proportional gain / Vdc_ctrl Kp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5650
	P-Group: Functions	Unit group: 19_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [A/V]	100.00 [A/V]	1.00 [A/V]
Description:	Sets the proportional gain for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	Refer to: p1240, p1244, p1248		
p1250[0...n]	Vdc controller proportional gain / Vdc_ctrl Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	1.00
Description:	Sets the proportional gain for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	The effective proportional gain is obtained taking into account p1243 (Vdc_max controller dynamic factor).		
Note:	The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units, which are connected to the DC link, can be taken into account using the dynamic factor (p1247 or p1243).		
p1250	Vdc controller proportional gain / Vdc_ctrl Kp		
A_INF (Line droop ctrl), R_INF (Line droop ctrl)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	0.00
Description:	Sets the proportional gain for the DC link voltage controller (Vdc_min controller, Vdc_max controller) in line droop operation (p5401). The controller actuating signal acts on the frequency output of the line droop control. The additional power to change the DC link voltage is therefore internally multiplied with the gradient of the frequency droop (p5407, p5408).		
Dependency:	Refer to: p1241, p1245		
Notice:	The Vdc_min controller or Vdc_max controller for grid droop operation can only become correctly active from its inherent operating principle, if additional island grid components are connected whose power significantly changes with the grid frequency. Examples of this are other power generators at an operating point with sufficient reserve for higher and lower power output - or line motors with sufficient reserve for higher and lower power consumption. Otherwise, when the activation level for the Vdc_min controller or Vdc_max controller is exceeded, serious line faults can occur (underfrequency/overfrequency and undervoltage/overvoltage).		
Note:	Parameter p1250 acts as multiplier to the internal default setting of the gain factor. The internal setting already takes into account the dependency on the capacitance of the DC link (corresponding to p3422).		

2 Parameters

2.2 List of parameters

p1251[0...n]	Vdc controller integral time / Vdc_ctrl Tn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [ms]	Access level: 3 Func. diagram: 6220 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the integral time for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	The effective integral time is obtained taking into account p1243 (Vdc_max controller dynamic factor).		
Note:	An integral time is normally not required for single axis drives. For multi-axis drives on the other hand, it may be possible to compensate for interference from other axes using the integral time (integral component) . p1251 = 0: The integral component is deactivated.		
p1252[0...n]	Vdc controller rate time / Vdc_ctrl Tv		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000 [ms]	Access level: 3 Func. diagram: 6220 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the rate time constant for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	The effective rate time is obtained taking into account p1243 (Vdc_max controller dynamic factor).		
p1254	Vdc_max controller automatic ON level detection / Vdc_max SenseOnLev		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: REL Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Activates/deactivates the automatic sensing of the switch-in level for the Vdc_max controller.		
Value:	0: Automatic detection inhibited 1: Automatic detection enabled		
p1255[0...n]	Vdc_min controller time threshold / Vdc_min t_thr		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.000 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the time threshold for the Vdc_min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized. Prerequisite: p1256 = 1		
Dependency:	Refer to: F07406		
Notice:	If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1240 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.		

p1256[0...n]	Vdc_min controller response (kinetic buffering) / Vdc_min response		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: REL Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the response for the Vdc_min controller (kinetic buffering).		
Value:	0: Buffer Vdc until undervoltage, n<p1257 -> F07405 1: Buff. Vdc until undervolt., n<p1257 -> F07405, t>p1255 -> F07406		
Dependency:	Refer to: F07405, F07406		
p1257[0...n]	Vdc_min controller speed threshold / Vdc_min n_thr		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0.00 [rpm]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 50.00 [rpm]
Description:	Sets the speed threshold for the Vdc-min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized . Kinetic buffering is not started below the speed threshold.		
Note:	Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down. However, the maximum braking torque can be set via the appropriate torque limiting.		
r1258	CO: Vdc controller output / Vdc_ctrl output		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 6220 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the actual output of the Vdc controller (DC link voltage controller)		
Note:	The regenerative power limit p1531 is used for vector control to precontrol the Vdc_max controller. The lower the power limit is set, the lower the correction signals of the controller when the voltage limit is reached.		
p1260	Bypass configuration / Bypass config		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: RESM Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the configuration for the bypass function.		
Value:	0: Bypass deactivated 1: Bypass with synchronization and overlap 2: Bypass with synchronization without overlap 3: Bypass without synchronization		

2 Parameters

2.2 List of parameters

Note: If the bypass function is selected (p1260 > 0), then when the power unit restarts after POWER OFF, the state of the bypass switch is evaluated. This means that after the ramp-up, it is possible to directly change into the standby mode. This is only possible for p1267 = 1 (bypass using the control signal) and if the control command after the system has been booted is still available (p1266). This function has a higher priority than the automatic restart function (p1210).

The "bypass" function can only be switched off again (p1260 = 0) if the bypass is not active or the bypass function has a fault.

The corresponding function should be activated in p3800 for bypass with synchronization.

r1261.0...12 CO/BO: Bypass control/status word / Bypass STW / ZSW

VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Control and feedback signals of the bypass switch.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Command switch motor - power unit	Close	Open	-
	01	Command switch motor - line supply	Close	Open	-
	02	Synchronization requested	Yes	No	-
	03	Staging status	Active	Not active	-
	05	Feedback signal switch motor - power unit	Closed	Opened	-
	06	Feedback signal switch motor - line supply	Closed	Opened	-
	07	Bypass command (from p1266)	Yes	No	-
	08	Feedback signal synchronization completed (from p1268)	Yes	No	-
	09	Staging requested (from p2369)	Yes	No	-
	10	Bypass in process sequence	Yes	No	-
	11	Bypass enabled	Yes	No	-
	12	DC link voltage monitoring activated	Yes	No	-

Dependency: Refer to: p1200, p2369

Note: Control bits 0 and 1 should be interconnected to the signal outputs via which the switches in the motor feeder cables should be controlled. These should be selected/dimensioned for switching under load.

For bit 12:

The DC link voltage monitoring is only available for a synchronized bypass. The overcurrent monitoring is also activated together with the DC link voltage monitoring. For debypass, monitoring is only activated if "Flying restart" is activated.

p1262[0...n] Bypass dead time / Bypass t_dead

VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	20.000 [s]	1.000 [s]

Description: Sets the dead time for non-synchronized bypass.

Note: This parameter is used to define the changeover time of the contactors. It should not be shorter than the demagnetizing time of the motor (p0347).

The total time for switching over to line operation or returning back to converter operation is obtained from the sum of p1262 and the monitoring time of the relevant switch (p1274[x]).

p1263		Debypass delay time / Debypass t_del		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [s]	300.000 [s]	1.000 [s]	
Description:	Sets the delay time for switching back to converter operation operation for a non-synchronized bypass (time between resetting the bypass command and "Command switch motor - line supply" p1261.1).			

p1264		Bypass delay time / Bypass t_del		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [s]	300.000 [s]	1.000 [s]	
Description:	Sets the delay time for switching to line operation for a non-synchronized bypass (time between setting the bypass command and "Command switch motor - power unit" p1261.0).			

p1265		Bypass speed threshold / Bypass n_thr		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: 3_1	Unit selection: p0505	
	Not for motor type: REL, RESM	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [rpm]	210000.00 [rpm]	1480.00 [rpm]	
Description:	Sets the speed threshold to activate the bypass.			
Dependency:	If the drive setpoint speed is entered via a motorized potentiometer, then the configuration bit p1030.4 should be set in order to ensure the bypass via speed threshold function.			
Note:	When selecting p1260 = 3 and p1267.1 = 1, the bypass is automatically activated when this speed is reached.			

p1266		BI: Bypass control command / Bypass command		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the control command to the bypass.			

p1267		Bypass changeover source configuration / Chgov_src config			
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2		
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: RESM	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the cause that should initiate the bypass.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bypass via signal (BI: p1266)	Yes	No	-
	01	Bypass via reaching the speed threshold	Yes	No	-

2 Parameters

2.2 List of parameters

Note: The parameter only has an effect for a non-synchronized bypass.
 p1267.0 = 1:
 The bypass is initiated by setting a binary signal. When the command is reset, after the debypass delay time (p1263) has expired, operation at the power unit is re-selected.
 p1267.1 = 1:
 When the speed threshold entered in p1265 is reached, the bypass is switched in. The system only switches back when the speed setpoint again falls below the threshold value.

p1268	BI: Bypass feedback synchronization completed / FS sync compl		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: RESM Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 3819.2
Description:	Sets the signal source for the feedback signal "synchronization completed" for the bypass function.		
Dependency:	Refer to: r3819		

p1269[0...1]	BI: Bypass switch feedback signal / Bypass FS		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: RESM Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the feedback signal of the bypass switch.		
Index:	[0] = Switch motor/drive [1] = Switch motor/line supply		
Note:	In the case of switches without a feedback signal, interconnect the corresponding control bit as the signal source: BI: p1269[0] = r1261.0 BI: p1269[1] = r1261.1		

p1270[0...n]	Flying restart configuration / FlyRest config				
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: PMSM, SESM, REL, RESM Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0000 bin		
Description:	Sets the configuration for the "flying restart function" function.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fast flying restart with voltage model for induction motor	Yes	No	-
	01	PLL expansion for fast flying restart w/ voltage model for ASM	Yes	No	-
	12	Siemens internal	Yes	No	-
	13	Siemens internal	ON	OFF	-
	14	Siemens internal	ON	OFF	-
	15	Siemens internal	ON	OFF	-

Caution: For bit 00 = 1:
 When using a dv/dt filter, it is not permissible that a flying restart with voltage model is activated.

Notice: For bit 00:
 When selecting - also for U/f characteristic operation - a standstill measurement to identify the motor data must have been performed to set the necessary current controller for a fast flying restart.

Note: ASM: Induction motor
PMSM: permanent-magnet synchronous motor
For bit 00:
This bit is equivalent to p1780 bit 11.
For bit 01:
This bit should only be set when required for large drives.

p1271[0...n] Flying restart maximum frequency for the inhibited direction / FlyRest f_max dir

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [Hz]	650 [Hz]	0 [Hz]

Description: Sets the maximum search frequency for a flying restart in an inhibited setpoint direction (p1110, p1111).

Note: The parameter has no effect for an operating mode, which only searches in the setpoint direction (p1200 > 3).

p1272 Simulation mode / Simulation mode

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: In the simulation mode, the closed-loop control or U/f control can be operated without motor.

The simulation mode is used to test the power unit. Even though the DC link voltage is missing, the pulses are enabled when switching on. The DC link precharging is bypassed and the undervoltage detection is disabled.

Closed-loop speed control with an encoder is possible if the torque setpoint (r0079) is used in order to operate a second drive in the closed-loop torque controlled mode.

Value:
0: OFF
1: ON

Dependency: The following functions are deactivated in the simulation mode:

- motor data identification routine
- motor data identification routine, rotating without encoder
- pole position identification

For U/f control and sensorless vector control, flying restart is not carried out (refer to p1200).

Refer to: r0192, p1900, p1910, p1960, p1990

Refer to: A07825, F07826

Notice: In simulation mode, binector output r0863.1 = 1 is set. This is why you need to check whether other devices are switched on via this signal before activating simulation mode. You might need to disconnect the corresponding BICO interconnection temporarily.

Note: Simulation mode is only possible for DC link voltages below 40 V. In order that the closed-loop control can be calculated, the displayed DC link voltage (r0026, r0070) is set to the rated DC link voltage (refer to p0210). Closed-loop current control and motor model are switched out (disabled) - the same is true for the speed controller for encoderless closed-loop speed control.

When fault messages occur, the parameter is not automatically reset. This function is not implemented for SINAMICS GM.

2 Parameters

2.2 List of parameters

p1274[0...1]		Bypass switch monitoring time / Switch t_mon		
VECTOR (Tech_ctrl), VECTOR_AC (Tech_ctrl), VECTOR_I_AC (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	5000 [ms]	1000 [ms]	
Description:	Sets the monitoring time for the bypass switch.			
Index:	[0] = Switch motor/drive [1] = Switch motor/line supply			
Dependency:	Refer to: p1260			
Note:	The monitoring is deactivated with p1274 = 0 ms. For non-synchronized bypass (p1260 = 3), the following applies: The changeover time for the bypass (p1262) is extended by the value in this parameter.			

p1275		Motor holding brake control word / Brake STW			
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: U, T	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Functions	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 bin		
Description:	Sets the control word for the motor holding brake.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Inversion BI: 1219[0]	Yes	No	2707
	01	Inversion BI: 1219[1]	Yes	No	2707
	02	Inversion BI: 1224[0]	Yes	No	2704
	03	Inversion BI: 1224[1]	Yes	No	2704
	05	Brake with feedback	Yes	No	2711
	06	Enable with feedback signal	Yes	No	2711
Note:	For p1275.6 = 1 and p1275.5 = 1, the following applies: The pulse enable (BO: r1229.3) is independent of the timer that has been set (p1217, p1216). The particular enable is only defined by the feedback signal (BI: p1222, BI: p1223). The timers (p1216, p1217) only influence the alarm A07931 "Brake does not open" and A07932 "Brake does not close".				

p1276		Motor holding brake standstill detection bypass / Brk standst bypass		
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2704	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [s]	300.000 [s]	300.000 [s]	
Description:	Sets the delay time for closing the brake at standstill. After this time has expired, if the "close brake at standstill" or OFF1/OFF3 is present, the brake is closed and the pulses are suppressed. For p1276 = 300.000 s, the timer is deactivated - this means that the timer output is always zero.			

p1277		Motor holding brake braking threshold delay exceeded / Del thr exc	
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.000 [s]	Access level: 2 Func. diagram: 2707 Unit selection: - Expert list: 1 Factory setting 0.000 [s]

Description: Sets the delay time for the signal "braking threshold exceeded" (BO: r1229.6).

Dependency: Refer to: p1220, p1221, r1229

p1278		Brake control diagnostics evaluation / Brake diagnostics	
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the brake control type (with or without diagnostics evaluation).

Example for brake control with diagnostics evaluation.

- brake control in the Motor Modules in booksize format

- Safe Brake Relay for AC Drive

Example for brake control without diagnostics evaluation.

- Brake Relay for AC Drive

Value: 0: Brake control with diagnostics evaluation
1: Brake control without diagnostics evaluation

Note: If the configuration of the motor holding brake (p1215) is set to "no holding brake present" when booting, then an automatic identification of the motor holding brake will be carried out. If a brake control is detected without diagnostics evaluation (e.g. Brake Relay for AC Drive), then the parameter is set to "brake control without diagnostics evaluation".

It is not permissible to parameterize "brake control without diagnostics evaluation" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

p1279[0...3]		BI: Motor holding brake OR/AND logic operation / Brake OR AND	
SERVO (Ext brake), VECTOR (Ext brake), SERVO_AC (Ext brake), VECTOR_AC (Ext brake), SERVO_I_AC (Ext brake), VECTOR_I_AC (Ext brake)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2707 Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the signal source for the OR/AND logic operation.

Dependency: Refer to: r1229

Note: [0]: OR logic operation, input 1 --> the result is displayed in r1229.10.
[1]: OR logic operation, input 2 --> the result is displayed in r1229.10.
[2]: AND logic operation, input 1 --> the result is displayed in r1229.11.
[3]: AND logic operation, input 2 --> the result is displayed in r1229.11.

p1280[0...n]	Vdc controller or Vdc monitoring configuration (U/f) / Vdc_ctr config U/f		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300, 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	1
Description:	Sets the configuration of the controller for the DC link voltage (Vdc controller) in the U/f operating mode.		
Value:	0: Inhibit Vdc ctrl 1: Enable Vdc_max controller 2: Enable Vdc_min controller (kinetic buffering) 3: Enable Vdc_min controller and Vdc_max controller 4: Activate Vdc_max monitoring 5: Activate Vdc_min monitoring 6: Activate Vdc_min monitoring and Vdc_max monitoring		
Warning:	 When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.		
Caution:	 If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with relatively high moments of inertia. If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated. Drives with Udc control must be able to brake and accelerate independently of one another.		
Note:	For p1280 = 4, 5, 6: When the threshold in r1282 or r1286 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage. If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled. For p1280 = 1, 3: Only U/f control: When the Vdc max controller is active, fault F07404 is initiated if the speed setpoint ramp is stopped (held) longer than the time set in p1284.		

p1281[0...n]	Vdc controller configuration / Vdc ctrl config				
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for the DC link voltage controller.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Vdc min control (U/f) without up ramp	Yes	No	-
	02	Vdc min shorter wait time when the line returns	Yes	No	-
Note:	ASM: Induction motor (induction motor) PMSM: permanent-magnet synchronous motor For bit 00: This bit is equivalent to p1780 bit 1. For bit 01: This bit should only be set when required for large drives.				

r1282	Vdc_max controller switch-in level (U/f) / Vdc_max on_level		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	<p>Displays the switch-in level for the Vdc_max controller.</p> <p>If p1294 = 0 (automatic sensing of the switch-in level = off), then the following applies: AC/AC device: $r1282 = 1.15 * \sqrt{2} * p0210$ DC/AC device: $r1282 = 1.15 * p0210$</p> <p>If p1294 = 1 (automatic sensing of the switch-in level = on), then the following applies: $r1282 = Vdc_max - 50.0 \text{ V}$ (Vdc_max: Overvoltage threshold of the power unit) $r1282 = Vdc_max - 25.0 \text{ V}$ (for 230 V power units)</p>		
Notice:	If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.		
Note:	The Vdc_max controller is not switched back off until the DC link voltage falls below the threshold $0.95 * r1282$ and the controller output is zero.		
p1283[0...n]	Vdc_max controller dynamic factor (U/f) / Vdc_max dyn_factor		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	10000 [%]	100 [%]
Description:	<p>Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).</p> <p>100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used in accordance with their basic settings and on the basis of a theoretical controller optimization.</p> <p>If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1283.</p> <p>If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.</p>		
Note:	The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.		
p1284[0...n]	Vdc_max controller time threshold (U/f) / Vdc_max t_thr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	300.000 [s]	4.000 [s]
Description:	<p>Sets the monitoring time for the Vdc_max controller.</p> <p>If the down ramp of the speed setpoint is held for longer than the time set in p1284, then fault F07404 is output.</p>		

2 Parameters

2.2 List of parameters

p1285[0...n]	Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	65 [%]	150 [%]	76 [%]
Description:	Sets the switch-in level for the Vdc-min controller (kinetic buffering). The value is obtained as follows: AC/AC device: $r1286[V] = p1285[\%] * \sqrt{2} * p0210$ DC/AC device: $r1286[V] = p1285[\%] * p0210$		
Warning:	An excessively high value may adversely affect normal drive operation. The values up to 150 % are intended for operating modes p1240 = 5, 6.		
			
r1286	Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the switch-in level for the Vdc_min controller (kinetic buffering).		
Note:	The Vdc_min controller is not switched back off until the DC link voltage rises above the threshold $1.05 * r1286$ and the controller output is zero.		
p1287[0...n]	Vdc_min controller dynamic factor (kinetic buffering) (U/f) / Vdc_min dyn_factor		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	10000 [%]	100 [%]
Description:	Sets the dynamic factor for the Vdc_min controller (kinetic buffering). 100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization. If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1287. If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.		
Note:	The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.		

p1288[0...n]	Vdc_max controller feedback coupling factor ramp-fct. gen. (U/f) / Vdc_max factor RFG		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.000	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.500
Description:	Sets the feedback factor for the ramp-function generator. Its ramp times are decelerated relative to the output signal of the Vdc_max controller.		
Note:	For values p1288 = 0.0 to 0.5, the controller dynamics are automatically adapted internally.		
p1289[0...n]	Vdc_max controller speed threshold (U/f) / Vdc_max n_thr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 10.00 [rpm]
Description:	Sets the lower speed threshold for the Vdc_max controller. When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.		
p1290[0...n]	Vdc controller proportional gain (U/f) / Vdc_ctrl Kp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.00	Access level: 3 Func. diagram: 6320 Unit selection: - Expert list: 1 Factory setting 1.00
Description:	Sets the proportional gain for the Vdc controller (DC link voltage controller).		
Note:	The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units which are connected to the DC link can be taken into account using the dynamic factor (p1287 or p1283).		
p1291[0...n]	Vdc controller integral time (U/f) / Vdc_ctrl Tn		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [ms]	Access level: 3 Func. diagram: 6320 Unit selection: - Expert list: 1 Factory setting 40 [ms]
Description:	Sets the integral time for the Vdc controller (DC link voltage controller).		

2 Parameters

2.2 List of parameters

p1292[0...n]	Vdc controller rate time (U/f) / Vdc_ctrl Tv		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000 [ms]	Access level: 3 Func. diagram: 6320 Unit selection: - Expert list: 1 Factory setting 10 [ms]
Description:	Sets the rate time constant for the Vdc controller (DC link voltage controller).		
p1293[0...n]	Vdc min controller output limit (U/f) / Vdc_min outp_lim		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 600.00 [Hz]	Access level: 3 Func. diagram: 6320 Unit selection: - Expert list: 1 Factory setting 10.00 [Hz]
Description:	Sets the output limit for the Vdc min controller (DC link undervoltage controller).		
p1294	Vdc_max controller automatic detection ON signal level (U/f) / Vdc_max SenseOnLev		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Activates/deactivates the automatic sensing of the switch-in level for the Vdc_max controller. When the sensing function is deactivated, the activation threshold r1282 for the Vdc_max controller is determined from the parameterized connection voltage p0210.		
Value:	0: Automatic detection inhibited 1: Automatic detection enabled		
p1295[0...n]	Vdc_min controller time threshold (U/f) / Vdc_min t_thr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.000 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the time threshold for the Vdc_min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized. Prerequisite: p1296 = 1		
Notice:	If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1280 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.		

p1296[0...n]	Vdc_min controller response (kinetic buffering) (U/f) / Vdc_min response		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: Integer16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the response for the Vdc_min controller (kinetic buffering).		
Value:	0: Buffer Vdc until undervoltage, n<p1297 -> F07405 1: Buff. Vdc until undervolt., n<p1297 -> F07405, t>p1295 -> F07406		
Note:	For p1296 = 1: The quick stop ramp entered in p1135 must not be equal to zero, to prevent overcurrent shutdown if F07406 is triggered.		
p1297[0...n]	Vdc_min controller speed threshold (U/f) / Vdc_min n_thr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 50.00 [rpm]
Description:	Sets the speed threshold for the Vdc-min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized .		
Note:	Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down.		
r1298	CO: Vdc controller output (U/f) / Vdc_ctrl output		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 6320 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the actual output of the Vdc controller (DC link voltage controller)		
p1300[0...n]	Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C2(1), T Data type: Integer16 P-Group: V/f open-loop control Not for motor type: - Min 20	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 23	Access level: 2 Func. diagram: 5060, 8012 Unit selection: - Expert list: 1 Factory setting 21
Description:	Sets the open and closed-loop control mode of a drive.		
Value:	20: Speed control (encoderless) 21: Speed control (with encoder) 23: Torque control (with encoder)		
Dependency:	Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400). Refer to: r0108, p0300, p0311, p0400, p1501		
Notice:	General conditions for encoderless operation can be found in the following literature: SINAMICS S120 Function Manual Drive Functions		

2 Parameters

2.2 List of parameters

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.

For encoderless operation (p1404 = 0 or p1300 = 20), the following applies:

- the following condition must be fulfilled: $p1800 \geq 1 / (4 * p0115[0])$
- for motors with a low power rating (< 300 W), we recommend to set $p1800 \geq 1 / p0115[0]$.
- although pulse frequencies $p1800 = 1 / (n * p0115[0])$ with $n = 3$ or 4 are possible, for $p0115[0] > 62.5 \mu s$, they result in unsteady closed-loop control and should be avoided.
- for a blocksize unit with a current controller sampling time $p0115[0] < 80 \mu s$ and a pulse frequency of $p1800 = 0.5 / p0115[0]$, then it may be necessary to increase the switchover speed of the model p1755.

p1300[0...n]	Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 5060, 8012
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	20	23	21
Description:	Sets the open and closed-loop control mode of a drive.		
Value:	20: Velocity control (encoderless) 21: Velocity control (with encoder) 23: Force control (with encoder)		
Dependency:	Closed-loop velocity or force control (with encoder) cannot be selected if the encoder type is not entered (p0400). Refer to: r0108, p0300, p0311, p0400, p1501		
Notice:	General conditions for encoderless operation can be found in the following literature: SINAMICS S120 Function Manual Drive Functions		
Note:	It is only possible to change over to force control during operation (p1501) if velocity control is selected (p1300 = 20, 21). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3. For encoderless operation (p1404 = 0 or p1300 = 20), the following applies: - the following condition must be fulfilled: $p1800 \geq 1 / (4 * p0115[0])$ - for motors with a low power rating (< 300 W), we recommend to set $p1800 \geq 1 / p0115[0]$. - although pulse frequencies $p1800 = 1 / (n * p0115[0])$ with $n = 3$ or 4 are possible, for $p0115[0] > 62.5 \mu s$, they result in unsteady closed-loop control and should be avoided.		

p1300[0...n]	Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: C2(1), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301, 8012
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	19	0
Description:	Sets the U/f control mode of the drive.		
Value:	0: U/f control with linear characteristic 1: U/f control with linear characteristic and FCC 2: U/f control with parabolic characteristic 3: U/f control with parameterizable characteristic 4: U/f control with linear characteristic and ECO 5: U/f control for drives requiring a precise freq. (e.g. textiles) 6: U/f control for drives requiring a precise frequency and FCC 7: U/f control for a parabolic characteristic and ECO 15: Operation with braking resistor 19: U/f control with independent voltage setpoint		
Recommendation:	The use of the vector control operating modes is recommended for synchronous motors.		

Dependency:	If you are working with reduced supply voltages (p0212.0 = 1), only U/f control with independent voltage setpoint (p1300 = 19) can be set as the operating mode. p1300 = 15 (operation with braking resistor), can only be activated or deactivated in quick commissioning (p0010 = 1). This operating mode is only possible for chassis power units (DC/AC Motor Module).
Notice:	Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). Slip compensation scaling (p1335) must be set so that the slip is completely compensated (or generally, 100 %). The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.
Note:	The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3. For motors, type p0300 = 6, 14, 6xx, the following applies: Operation with U/f control is only recommended for diagnostic purposes.

p1300[0...n]	Open-loop/closed-loop control operating mode / Op/cl-tp ctrl_mode		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: C2(1), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301, 8012
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	23	20

Description: Sets the open and closed-loop control mode of a drive.

Value:	0: U/f control with linear characteristic
	1: U/f control with linear characteristic and FCC
	2: U/f control with parabolic characteristic
	3: U/f control with parameterizable characteristic
	4: U/f control with linear characteristic and ECO
	5: U/f control for drives requiring a precise freq. (e.g. textiles)
	6: U/f control for drives requiring a precise frequency and FCC
	7: U/f control for a parabolic characteristic and ECO
	15: Operation with braking resistor
	18: I/f control with fixed current
	19: U/f control with independent voltage setpoint
	20: Speed control (encoderless)
	21: Speed control (with encoder)
	22: Torque control (encoderless)
	23: Torque control (with encoder)

Recommendation: The use of the vector control operating modes is recommended for synchronous motors.

Dependency: Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400).
Closed-loop speed or torque control can be selected if the closed-loop speed/torque control was selected as operating mode (p0108.2).
Only operation with U/f characteristic is possible if the rated motor speed is not entered (p0311).
A reluctance motor (p0300 = 8) can only be operated in a U/f control mode (p1300 < 20), a synchronous-reluctance motor (p0300 = 6, 6xx) only in closed-loop speed/torque control.
Sensorless control on separately excited synchronous motors is only possible with a VSM module (see p0150, p0151).
For chassis power units with reduced line voltage (see r0212.0), the drive can only be operated in a control mode (p1300 = 20...23) and with the DC link voltage control activated.
Refer to: r0108, p0212, p0300, p0311, p0400, p1501

Notice: Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). Slip compensation scaling (p1335) must be set so that the slip is completely compensated (or generally, 100 %).
The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.

2 Parameters

2.2 List of parameters

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.

For the open-loop control modes p1300 = 5 and 6 (textile sector), slip compensation p1335, resonance damping p1338, and the I_{max} frequency controller are switched off internally so that the output frequency can be set precisely. The I_{max} voltage controller remains active.

For the open-loop control modes p1300 = 4 and 7 (Eco mode), the efficiency can be optimized by varying the voltage (when the operating point is constant).

Separately excited synchronous motors can only be operated in modes p1300 = 20, 21 and 23 - or for diagnostic purposes in modes p1300 = 0, 3 and 18. For I/f control (p1300 = 18), the current amplitude can be set using p1609. Both for U/f as well as for I/f control only a small load may be applied to the separately excited synchronous motor because the excitation current is not calculated as a function of the load.

During operation (pulses enabled) the open-loop/closed-loop control mode cannot be changed by changing over drive data sets.

p1300 is pre-assigned depending on r0108.2 and p0187.

p1302[0...n]	U/f control configuration / U/f config		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 bin

Description: Sets the configuration for the U/f control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Output voltage starting angle zero	Yes	No	-
	01	Take into account the setpoint voltage sign	Yes	No	-
	02	Output voltage angle setpoint input	Yes	No	-
	04	Field orientation	Yes	No	-
	06	Immediate setpoint transfer for pulse inhibit	Yes	No	-

Note: For bit 00:
If the bit is set the device will always start up with setpoint angle zero on pulse enable. This also affects the setpoint angle for DC braking (p1231).

For bit 01:
If the bit is set, in the case of U/f control with independent voltage setpoint (p1300 = 19) and negative setpoint voltages at the input of p1330, the setpoint angle is rotated through 180 degrees, thereby achieving a negative output voltage. The voltage boost is in this case not active (p1310, p1311).

For bit 02:
When the bit is set, for U/f controls with independent voltage setpoint (p1300 = 19), the setpoint angle should be entered directly at connector input p1356.

For bit 06 (only for p1300 = 19):
When the bit is set, the setpoints from p1330 for pulse inhibit are transferred without any delay.

p1310[0...n]	Starting current (voltage boost) permanent / I_start (Ua) perm		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	250.0 [%]	50.0 [%]
Description:	<p>Defines the voltage boost as a [%] referred to the rated motor current (p0305). The magnitude of the permanent voltage boost is reduced with increasing frequency so that at the rated motor frequency, the rated motor voltage is present. The magnitude of the boost in Volt at a frequency of zero is defined as follows: Voltage boost [V] = 1.732 x p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1310 (permanent voltage boost [%]) / 100 % At low output frequencies, there is only a low output voltage in order to maintain the motor flux. However, the output voltage can be too low in order to achieve the following:</p> <ul style="list-style-type: none"> - magnetize the induction motor. - hold the load. - compensate for losses in the system. <p>This is the reason that the output voltage can be increased using p1310. The voltage boost can be used for both linear as well as square-law U/f characteristics.</p>		
Dependency:	<p>The starting current (voltage boost) is limited by the current limit p0640. The accuracy of the starting current depends on the setting of the stator and feeder cable resistance (p0350, p0352). Refer to: p1300, p1311, p1312, r1315</p>		
Notice:	<p>The starting current (voltage boost) increases the motor temperature (particularly at zero speed).</p>		
Note:	<p>The starting current as a result of the voltage boost is only effective for U/f control (p1300). The boost values are combined with one another if the permanent voltage boost (p1310) is used in conjunction with other boost parameters (acceleration boost (p1311), voltage boost for starting (p1312)). However, these parameters are assigned the following priorities: p1310 > p1311, p1312</p>		
p1311[0...n]	Starting current (voltage boost) when accelerating / I_start accel		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	250.0 [%]	0.0 [%]
Description:	<p>p1311 only results in a voltage boost when accelerating and generates a supplementary torque to accelerate the load. The voltage boost becomes effective for a positive setpoint increase, and is withdrawn once the setpoint has been reached. The build-up and withdrawal of the voltage boost are smoothed. The magnitude of the boost in Volt at a frequency of zero is defined as follows: Voltage boost [V] = 1.732 * p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1311 (voltage boost when accelerating [%]) / 100 %</p>		
Dependency:	<p>The current limit p0640 limits the boost. Refer to: p1300, p1310, p1312, r1315</p>		
Notice:	<p>The voltage boost results in a higher motor temperature increase.</p>		
Note:	<p>The voltage boost when accelerating can improve the response to small, positive setpoint changes. Assigning priorities for the voltage boosts: refer to p1310</p>		

2 Parameters

2.2 List of parameters

p1312[0...n]	Starting current (voltage boost) when starting / I_start start		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 250.0 [%]	Access level: 2 Func. diagram: 6300, 6301 Unit selection: - Expert list: 1 Factory setting 0.0 [%]
Description:	Setting for an additional voltage boost when powering-up (only for the first acceleration phase). The voltage boost becomes effective for a positive setpoint increase, and is withdrawn once the setpoint has been reached. The build-up and withdrawal of the voltage boost are smoothed.		
Dependency:	The current limit p0640 limits the boost. Refer to: p1300, p1310, p1311, r1315		
Notice:	The voltage boost results in a higher motor temperature increase.		
Note:	The voltage boost when accelerating can improve the response to small, positive setpoint changes. Assigning priorities for the voltage boosts: refer to p1310		
r1315	Voltage boost total / U_boost total		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max - [Vrms]	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the total resulting voltage boost in volt.		
Dependency:	Refer to: p1310, p1311, p1312		
p1317[0...n]	U/f control activation / Uf act		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: 5019, 5730 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to activate the U/f control with linear characteristic.		
Value:	0: Deactivated (p1300 effective) 1: Activated		
Dependency:	Refer to: p1318, p1319, p1326, p1327		
Note:	The following applies for firmware version 4.3 and higher: When U/f control is activated, resonance damping is automatically activated. The resonance damping must be deactivated (p1338 = 0) in order to obtain pure diagnostics operation without the influence of actual values. Further, when U/f control is activated, the following functions are active: - Vdc controller (p1240, p1244, p1248, p1250). - the up ramp is limited by the set M, P and I limits (p0326, p0341, p0342, p0640, p1520, p1521, p1530, p1531, p1498). - the ramp-function generator is held if the current actual value exceeds the current limit set in p0640.		

p1318[0...n]	U/f control ramp-up/ramp-down time / Uf t_rmp-up_rmp-dn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 999999.000 [s]	Access level: 3 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting 10.000 [s]
Description:	Sets the ramp-up and ramp-down time for the U/f control. The ramp-function generator requires this time to reach the maximum speed (p1082) from zero.		
Dependency:	Refer to: p1317, p1319, p1326, p1327		
Note:	This ramp is used for stall protection and operates independently of any ramp-function generator that might have been configured.		
p1319[0...n]	U/f control voltage at zero frequency / Uf U at f=0 Hz		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.0 [Vrms]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.0 [Vrms]	Access level: 3 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting 0.0 [Vrms]
Description:	The linear characteristic for the U/f control is defined by 0 Hz/p1319 and p1326/p1327. This parameter specifies the voltage for a frequency of 0 Hz.		
Dependency:	The U/f control is activated via p1317 = 1. Refer to: p1317, p1326, p1327		
Note:	Linear interpolation is carried out between the points 0 Hz/p1319 and p1326/p1327.		
p1320[0...n]	U/f control programmable characteristic frequency 1 / Uf char f1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3000.00 [Hz]	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0.00 [Hz]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the first point along the characteristic.		
Dependency:	Selects the freely programmable characteristic using p1300 = 3. The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point. Refer to: p1300, p1310, p1311, p1321, p1322, p1323, p1324, p1325, p1326, p1327		
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.		
p1321[0...n]	U/f control programmable characteristic voltage 1 / Uf char U1		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.0 [Vrms]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.0 [Vrms]	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0.0 [Vrms]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the first point along the characteristic.		

2 Parameters

2.2 List of parameters

Dependency: Selects the freely programmable characteristic using p1300 = 3.
Refer to: p1310, p1311, p1320, p1322, p1323, p1324, p1325, p1326, p1327

Note: Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327.
The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.

p1322[0...n] **U/f control programmable characteristic frequency 2 / Uf char f2**

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.

This parameter specifies the voltage of the second point along the characteristic.

Dependency: The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point.
Refer to: p1310, p1311, p1320, p1321, p1323, p1324, p1325, p1326, p1327

p1323[0...n] **U/f control programmable characteristic voltage 2 / Uf char U2**

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.

This parameter specifies the voltage of the second point along the characteristic.

Dependency: Refer to: p1310, p1311, p1320, p1321, p1322, p1324, p1325, p1326, p1327

p1324[0...n] **U/f control programmable characteristic frequency 3 / Uf char f3**

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.

This parameter specifies the voltage of the third point along the characteristic.

Dependency: The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point.
Refer to: p1310, p1311, p1320, p1321, p1322, p1323, p1325, p1326, p1327

p1325[0...n] **U/f control programmable characteristic voltage 3 / Uf char U3**

VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.

This parameter specifies the voltage of the third point along the characteristic.

Dependency: Refer to: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1326, p1327

p1326[0...n]		U/f control characteristic frequency / Uf char f		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.00 [Hz]	Access level: 3 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting 0.00 [Hz]	
Description:	The linear characteristic for the U/f control is defined by 0 Hz/p1319 and p1326/p1327. This parameter specifies the voltage of the upper point along the characteristic.			
Dependency:	The U/f control is activated via p1317 = 1. Refer to: p1317, p1319, p1327			
Note:	Linear interpolation is carried out between the points 0 Hz/p1319 and p1326/p1327.			
p1326[0...n]		U/f control programmable characteristic frequency 4 / Uf char f4		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.00 [Hz]	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0.00 [Hz]	
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the frequency of the fourth point along the characteristic.			
Dependency:	Selects the freely programmable characteristic using p1300 = 3. The following applies for the frequency values: p1320 <= p1322 <= p1324 <= p1326 Otherwise, a standard characteristic is used that contains the rated motor operating point. Refer to: p1310, p1311, p1317, p1319, p1320, p1321, p1322, p1323, p1324, p1325, p1327			
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. For output frequencies above p1326, the characteristic is extrapolated with the gradient between the characteristic points p1324/p1325 and p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.			
p1327[0...n]		U/f control characteristic voltage / Uf char U		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.0 [Vrms]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.0 [Vrms]	Access level: 3 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting 0.0 [Vrms]	
Description:	The linear characteristic for the U/f control is defined by 0 Hz/p1319 and p1326/p1327. This parameter specifies the voltage of the upper point along the characteristic.			
Dependency:	The U/f control is activated via p1317 = 1. Refer to: p1317, p1319, p1326			
Note:	Linear interpolation is carried out between the points 0 Hz/p1319 and p1326/p1327.			

2 Parameters

2.2 List of parameters

p1327[0...n]	U/f control programmable characteristic voltage 4 / Uf char U4		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.0 [Vrms]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.0 [Vrms]	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0.0 [Vrms]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the fourth point along the characteristic.		
Dependency:	Selects the freely programmable characteristic using p1300 = 3. Refer to: p1310, p1311, p1317, p1319, p1320, p1321, p1322, p1323, p1324, p1325, p1326		
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.		
p1330[0...n]	CI: U/f control independent voltage setpoint / Uf U_set independ.		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2001 Max -	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the voltage setpoint for U/f control with an independent voltage setpoint (p1300 = 19).		
Dependency:	Selects the U/f control with independent voltage setpoint via p1300 = 19. Refer to: p1300		
p1331[0...n]	Voltage limiting / U_lim		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 50.00 [Vrms]	Calculated: - Dyn. index: DDS, p0180 Unit group: 5_1 Scaling: - Max 2000.00 [Vrms]	Access level: 3 Func. diagram: 6300 Unit selection: p0505 Expert list: 1 Factory setting 1000.00 [Vrms]
Description:	Limiting the voltage setpoint. This means that the output voltage can be reduced with respect to the calculated maximum voltage r0071 and the start of field weakening.		
Note:	The output voltage is only limited if, as a result of p1331, the maximum output voltage (r0071) is fallen below.		
p1333[0...n]	U/f control FCC starting frequency / U/f FCC f_start		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3000.00 [Hz]	Access level: 3 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0.00 [Hz]
Description:	Sets the starting frequency at which FCC (Flux Current Control) is activated.		
Dependency:	The correct operating mode must be set (p1300 = 1, 6).		
Warning:	An excessively low value can result in instability.		
			
Note:	For p1333 = 0 Hz, the FCC starting frequency is automatically set to 6 % of the rated motor frequency.		

p1334[0...n]	U/f control slip compensation starting frequency / Slip comp start		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	Sets the starting frequency of the slip compensation.		
Note:	For p1334 = 0, the starting frequency of the slip compensation is automatically set to 6 % of the rated motor frequency.		
p1335[0...n]	Slip compensation scaling / Slip comp scal		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	600.0 [%]	0.0 [%]
Description:	Sets the setpoint for slip compensation in [%] referred to r0330 (motor rated slip). p1335 = 0.0 %: Slip compensation deactivated. p1335 = 100.0 %: The slip is completely compensated.		
Dependency:	Prerequisite for a precise slip compensation for p1335 = 100 % are the precise motor parameters (p0350 ... p0360). If the parameters are not precisely known, a precise compensation can be achieved by varying p1335. For U/f control modes with ECO optimization (p1300 = 4, 7), slip compensation must be activated in order to guarantee correct operation.		
Note:	The purpose of slip compensation is to maintain a constant motor speed regardless of the applied load. The fact that the motor speed decreases with increasing load is a typical characteristic of induction motors. For synchronous motors, this effect does not occur and the parameter has no effect in this case. For U/f control modes, for textile applications (p1300 = 5, 6), slip compensation is internally deactivated, allowing the output frequency to be precisely adjusted. If p1335 is changed during commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1335 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).		
p1336[0...n]	Slip compensation limit value / Slip comp lim val		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	600.00 [%]	250.00 [%]
Description:	Sets the limit value for slip compensation in [%] referred to r0330 (motor rated slip).		
r1337	CO: Actual slip compensation / Slip comp act val		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the actual compensated slip [%] referred to r0330 (rated motor slip).		
Dependency:	p1335 > 0 %: Slip compensation active. Refer to: p1335		

2 Parameters

2.2 List of parameters

p1338[0...n]	U/f mode resonance damping gain / Uf Res_damp gain		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.00	Access level: 3 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting 1.00
Description:	Sets the gain for resonance damping for U/f control. In U/f mode, the resonance damping function dampens oscillations that are frequently experienced by induction motors in certain speed ranges and by synchronous motors above even low speeds.		
Dependency:	Refer to: p1317, p1339, p1349		
Note:	Resonance damping is active in the following ranges: - Active: 3.1 Hz ... p1349 - Build-up (linear): 3.1 ... 4.77 Hz - Reduction (linear): 0.95 * p1349 ... p1349 Where the value = 1 and at the oscillation amplitude of the rated current, the rated slip frequency is switched in for induction motors, while a frequency of 10 Hz is switched in for synchronous motors.		
p1338[0...n]	U/f mode resonance damping gain / Uf Res_damp gain		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100.00	Access level: 3 Func. diagram: 6300, 6310 Unit selection: - Expert list: 1 Factory setting 0.00
Description:	Sets the gain for resonance damping for U/f control.		
Dependency:	Refer to: p1300, p1339, p1349		
Note:	The resonance damping function dampens active current oscillations that frequency occur under no-load conditions. The resonance damping is active in a range from approximately 6 % of the rated motor frequency (p0310). The shutoff frequency is determined by p1349. For the open-loop control modes p1300 = 5 and 6 (textile sectors), the resonance damping is internally disabled in order that the output frequency can be precisely set.		
p1339[0...n]	U/f mode resonance damping filter time constant / Uf Res_damp Tc		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 1.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.00 [ms]	Access level: 3 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting 20.00 [ms]
Description:	Sets the filter time constant for resonance damping for U/f control.		
Dependency:	Refer to: p1317, p1338, p1349		
Note:	The filter time constant must be greater than the oscillation period of the oscillation to be dampened.		
p1339[0...n]	U/f mode resonance damping filter time constant / Uf Res_damp Tc		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 1.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.00 [ms]	Access level: 3 Func. diagram: 6310 Unit selection: - Expert list: 1 Factory setting 20.00 [ms]
Description:	Sets the filter time constant for resonance damping for U/f control.		
Dependency:	Refer to: p1300, p1338, p1349		

p1340[0...n]	I_max frequency controller proportional gain / I_max_ctrl Kp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	0.500	0.000
Description:	Sets the proportional gain of the I_max frequency controller. The I_max controller reduces the drive converter output current if the maximum current (r0067) is exceeded. In the U/f operating modes (p1300) for the I_max control, one controller is used that acts on the output frequency and one controller that acts on the output voltage. The frequency controller reduces the current by decreasing the converter output frequency. The frequency is reduced down to a minimum value (equaling twice rated slip). If the overcurrent condition cannot be successfully resolved using this measure, then the drive converter output voltage is reduced using the I_max voltage controller. Once the overcurrent condition has been resolved, the drive is accelerated along the ramp set in p1120 (ramp-up time).		
Dependency:	In the U/f modes (p1300) for textile applications and for external voltage setpoints, only the I_max voltage controller is used.		
Notice:	When deactivating the I_max controller, the following must be carefully observed: When the maximum current (r0067) is exceeded, the output current is no longer reduced. The drive is switched off when the overcurrent limits are exceeded.		
Note:	The I_max limiting controller becomes ineffective if the ramp-function generator is deactivated with p1122 = 1. p1341 = 0: I_max frequency controller deactivated and I_max voltage controller activated over the complete speed range.		

p1341[0...n]	I_max frequency controller integral time / I_max_ctrl Tn		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	50.000 [s]	0.300 [s]
Description:	Sets the integral time for the I_max frequency controller.		
Dependency:	Refer to: p1340		
Note:	When p1341 = 0, the current limiting controller influencing the frequency is deactivated and only the current limiting controller influencing the output voltage remains active (p1345, p1346).		

r1343	CO: I_max controller frequency output / I_max_ctrl f_outp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the effective frequency limit.		
Dependency:	Refer to: p1340		

r1344	I_max controller voltage output / I_max_ctrl U_outp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min - [Vrms]	Calculated: - Dyn. index: - Unit group: 5_1 Scaling: p2001 Max - [Vrms]	Access level: 3 Func. diagram: 6300 Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]
Description:	Displays the amount by which the converter output voltage is reduced.		
Dependency:	Refer to: p1340		
p1345[0...n]	DC braking proportional gain / DCBRK Kp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.000	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100000.000	Access level: 3 Func. diagram: 6300, 7017 Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the proportional gain for DC braking (p1230, p1231).		
Dependency:	Refer to: p1346		
Note:	Current controller adaptation is not effective for DC braking.		
p1345[0...n]	I_max voltage controller proportional gain / I_max_U_ctrl Kp		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.000	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100000.000	Access level: 3 Func. diagram: 6300, 7017 Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the proportional gain for the I_max voltage controller.		
Dependency:	Refer to: p1340		
Note:	The controller settings are also used in the current controller of the DC braking (refer to p1232).		
p1346[0...n]	DC braking integral time / DCBRK Tn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.000 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 50.000 [ms]	Access level: 3 Func. diagram: 6300, 7017 Unit selection: - Expert list: 1 Factory setting 0.030 [ms]
Description:	Sets the integral time for DC braking (p1230, p1231).		
Dependency:	Refer to: p1345		
Note:	For p1346 = 0, the following applies: The integral time of DC braking is deactivated.		

p1346[0...n]	I_max voltage controller integral time / I_max_U_ctrl Tn		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.000 [s]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 50.000 [s]	Access level: 3 Func. diagram: 6300, 7017 Unit selection: - Expert list: 1 Factory setting 0.030 [s]
Description:	Sets the integral time for the I_max voltage controller.		
Dependency:	Refer to: p1340		
Note:	The controller settings are also used in the current controller of the DC braking (refer to p1232). For p1346 = 0, the following applies: The integral time of the I_max voltage controller is deactivated.		
r1348	CO: U/f control Eco factor actual value / Uf Eco fac ActV		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 4 Func. diagram: 6300, 6301 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the economic factor determined for optimizing motor consumption.		
Dependency:	Refer to: p1335		
Note:	The value is only determined for operating modes with Economic (p1300 = 4, 7).		
p1349[0...n]	U/f mode resonance damping maximum frequency / Uf res_damp f_max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3000.00 [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 3000.00 [Hz]
Description:	Sets the maximum output frequency for resonance damping for U/f control. Resonance damping is inactive above this output frequency.		
Dependency:	Refer to: p1338, p1339		
Note:	Resonance damping is active in the following ranges: - Active: 3.1 Hz ... p1349 - Build-up (linear): 3.1 ... 4.77 Hz - Reduction (linear): 0.95 * p1349 ... p1349		
p1349[0...n]	U/f mode resonance damping maximum frequency / Uf res_damp f_max		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: V/f open-loop control Not for motor type: - Min 0.00 [Hz]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3000.00 [Hz]	Access level: 3 Func. diagram: 6310 Unit selection: - Expert list: 1 Factory setting 0.00 [Hz]
Description:	Sets the maximum output frequency for resonance damping for U/f control. Resonance damping is inactive above this output frequency.		
Dependency:	Refer to: p1338, p1339		
Note:	For p1349 = 0, the changeover limit is automatically set to 95 % of the rated motor frequency - however, to a max. of 45 Hz.		

2 Parameters

2.2 List of parameters

p1350[0...n]	U/f control soft start / U/f soft start		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets whether the voltage is continuously increased during the magnetizing phase (p1350 = 1, On) or whether it jumps directly to the voltage boost (p1350 = 0, Off).		
Value:	0: OFF 1: ON		
Dependency:	The function is not effective for p1300 = 15.		
Note:	The settings for this parameter have the following advantages and disadvantages: 0 = off (jump directly to voltage boost) Advantage: Flux is established quickly -> torque is quickly available Disadvantage: The motor can move while it is being magnetized 1 = on (voltage is continually established) Advantage: The motor is unlikely to rotate Disadvantage: The flux is established slower -> torque is available later		
p1351[0...n]	CO: Motor holding brake starting frequency / Brake f_start		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-300.00 [%]	300.00 [%]	0.00 [%]
Description:	Sets the frequency setting value at the slip compensation output for starting up with motor holding brake.		
Dependency:	When setting p1351 > 0, then slip compensation is automatically activated (p1335 = 100 %).		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	A value of 100% corresponds to the motor rated slip (r0330).		
p1356[0...n]	CI: U/f control angular setpoint / Uf ang setpoint		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the differential angular generation for U/f control.		
p1358[0...n]	Angular difference symmetrizing actual angle / Sym act angle		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the dead time for the symmetrizing of the actual angle value for the differential angular generation. The selected multiplier refers to the current controller clock cycle (dead time= p1358 * p0115[0]).		

r1359	CO: Angular difference / Angular difference		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the output of the differential angular generation.		
Note:	The difference between the setpoint angle, read-in in p1356 and the actual value of the U/f control delayed with p1358 is displayed.		

p1360	Braking chopper braking resistor cold / Brk_chop R cold		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [ohm]	10.000 [ohm]	0.000 [ohm]
Description:	Sets the braking resistor for the braking chopper.		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1362, r1363, p1364 Refer to: A06921, F06922		

p1362[0...1]	Braking chopper activation threshold / Brk_chop thr		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [V]	1158 [V]	[0] 0 [V] [1] 60 [V]
Description:	Sets the activation threshold for the brake chopper. The hysteresis defines the range of the output voltage from zero up to the maximum voltage.		
Index:	[0] = Braking chopper threshold value [1] = Braking chopper hysteresis		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1360, r1363, p1364 Refer to: A06921, F06922		

r1363	CO: Braking chopper output voltage / Brk_chop U_output		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual power unit output voltage (Motor Module) in braking chopper operation.		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1360, p1362, p1364 Refer to: A06921, F06922		

2 Parameters

2.2 List of parameters

p1364	Braking chopper resistor asymmetry / Brk_chop R asym		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	25.00 [%]
Description:	Sets the percentage value for the asymmetry detection for the braking chopper. The ripple of the absolute current r0068 is monitored. The reference value is the average value of the absolute current. The minimum monitoring value is 10 % of the power unit rated current.		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1360, p1362, r1363 Refer to: F06922		
Note:	For p1364 = 0, asymmetry identification is deactivated. Asymmetry can also be displayed if the absolute current manifests ripple, caused by load-related ripple of the DC link voltage. In this particular case, p1364 must be increased.		
r1369[0]	CO: Phase current actual value filtered / I_ph ActV filt		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the measured actual phase currents as peak value. This value is averaged for the display in the speed controller sampling time (p0115[1]).		
Index:	[0] = Phase U		
Dependency:	The signal is only displayed in operating mode p1300 = 19 (U/f control with independent voltage setpoint) and is used to control DC currents (e.g. for excitation (field) controllers).		
p1381[0...n]	U/f control modulation limit reduction / U/f mod_lim red		
VECTOR, VECTOR_AC, VECTOR_I_AC	Can be changed: U, T	Calculated:	Access level: 3
	Data type: FloatingPoint32	CALC_MOD_LIM_REF	Func. diagram: 6723
	P-Group: Modulation	Dyn. index: DDS, p0180	Unit selection: -
	Not for motor type: -	Unit group: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	40.0 [%]	0.0 [%]
Description:	Reduction of the maximum modulation depth when compared to r0073 to reduce the maximum output voltage r0071. The maximum modulation depth is reduced no more than the ideal overcontrol limit of 100 %.		
Note:	If p1803 is increased for operation with closed-loop speed/torque control, then the modulation limit for operation with U/f control can in turn be reduced in order to avoid overcontrol and the associated current ripple.		

p1400[0...n]	Closed-loop control configuration / Ctrl config		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for the closed-loop control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Force limiting mode 1	ON	OFF	-
	01	Force limiting mode 2	ON	OFF	-
	02	Stiction compensation with force controller	ON	OFF	-
	03	Reference model velocity setpoint I component	ON	OFF	-
	05	Kp/Tv adaptation	ON	OFF	-
	07	Interpolation velocity controller precontrol active	Yes	No	-
	09	Stiction compensation voltage pulse	ON	OFF	-
	10	Speed precontrol	For symmetrizing	To setp_filter	-
	11	Stiction compensation voltage ramp	ON	OFF	-
	14	Activate force controller with setpoint p1511	Yes	No	-
	15	System pressure adaptation for velocity controller	Yes	No	-
	16	I component for limiting	Enable	Hold	-

Note:

For bit 00:

Force limiting when the force limit is exceeded as replacing mode. This function is only recommended for low velocities, and requires a precise compensation of the characteristic.

For bit 01:

The closed-loop force control is active if "Travel to end stop" (BI: p1545) is selected and the force limit has been exceeded. The force controller remains active until "Travel to end stop" is deselected.

For bit 02:

The force for both velocity signs must be constant, and parameterized in p1555 and p1556. Further, all of the preconditions for operation of the force controller must be fulfilled.

For bit 05:

P gain and derivative-action time of the velocity controller are adapted via the position. The position adaptation only becomes effective if a piston calibration has been performed, and the piston position is known (r1407.3 = 1).

For bit 09:

The stiction is essentially compensated without force controller and pressure sensors with a voltage pulse for reversal of the traversing direction. The duration and magnitude of the voltage pulse must be set in p1570, p1571 and p1572. Further, the standstill threshold in p1552 is effective. The piston must be calibrated. It is not necessary to know the adhesive forces.

For bit 11:

The stiction is essentially compensated without force controller and pressure sensors with a voltage ramp for reversal of the traversing direction. The duration and magnitude of the voltage ramp must be set in p1570, p1571 and p1572. Further, the standstill threshold in p1552 is effective. The piston must be calibrated. It is not necessary to know the adhesive forces. For elastic motion during the force change, a ramp-shaped velocity can be advantageous.

For bit 14:

The force controller is continuously activated, and the force setpoint entered via the sources of p1511 and p1512 (scaling). The force setpoint is limited to r1538 and r1539. All of the preconditions for operation of the force controller must be fulfilled.

p1400[0...n]	Speed control configuration / n_ctrl config		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 5019, 5490
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0011 1010 0000 bin

Description: Sets the configuration for the closed-loop speed control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	03	Reference model speed setpoint I component	ON	OFF	5030
	04	Torque limiting active in motoring/regenerative mode	Yes	No	-
	05	Kp/Tn adaptation active	Yes	No	-
	07	Interpolation speed precontrol active	Yes	No	-
	08	Interpolation torque setpoint active	Yes	No	-
	09	Damping for encoderless open-loop controlled oper.	Yes	No	-
	10	Speed precontrol	For symmetrizing	For setp_filter 2	-
	11	Encoderless oper. speed actual value starting value	Setpoint	0.0	-
	12	Encoderless operation changeover	Steady-state	When accelerating	-
	13	Motoring/regenerative depending on	Speed setpoint	Speed actual value	-
	16	I component for limiting	Enable	Hold	-
	17	DSC position controller limit active	Yes	No	3090
	18	Moment of inertia estimator active	Yes	No	-
	22	Obtain moment of inertia estimator value for pulse inhibit	Yes	No	-
	26	J_est load estimation only for constant velocity travel	Yes	No	-
	27	Load gearbox, take into account torque limit	No	Yes	-

Note:

For bit 07:
The interpolator is only active for isochronous PROFIBUS operation, and with the sign-of-life received from the master (STW2.12 ... STW2.15). Further, for active Dynamic Servo Control (DSC) an additional dead time of one speed controller sampling time occurs.

For bit 10:
The precontrol signal via connector input p1430 only becomes effective at p1402.4 = 1 (torque-speed precontrol with encoder) at p1400.10 = 0 (for setp_filter 2).

For bit 11:
If the motor rotates when the pulses are enabled, then we recommend p1400.11 = 1 (starting value = setpoint) with the matching sign.
If the motor remains stationary (zero speed) when the pulses are enabled, then we recommend p1400.11 = 0 (starting value = 0.0).

For bit 12:
If a changeover is made from operation with encoder to encoderless operation while accelerating (with the threshold from p1404), then we recommend p1400.12 = 0.
If the changeover is made from operation with encoder to encoderless at constant speed/velocity (e.g. with a DDS changeover or if there is an encoder fault via p0491) then we recommend p1400.12 = 1.

For bit 17:
In order to avoid limit cycles (e.g. as a result of disturbing torques) for DSC with a high Kv factor, the position controller output can be limited using a root function corresponding to the currently available deceleration capability of the drive. In this case, the total moment of inertia (J_tot) must be parameterized precisely (if necessary, determine the moment of inertia p0341, p0342 and p1498 using the motor data identification). If the limiting function responds, then this is indicated in r1407.19.
As a result of the absolute value limiting above $n[\text{rpm}] = 0.91 \times M_{\text{max}}[\text{Nm}] / (K_v[1000/\text{min}] \times J_{\text{tot}}[\text{kgm}^2])$ the dynamic response of the position controller is no longer linear (M_{max} , see r1538, r1539). This is the reason that speed precontrol is recommended.

For bit 18:

Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1).

The result of the moment of inertia estimator is displayed in r1493 when the function is activated.

The function assumes that speed changes are made without load change. If a speed change must be realized with associated load change, then during this time, the estimated moment of inertia should be frozen using binector input p1502.

For bit 22:

Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1) and when the moment of inertia estimator is active (p1400.18 = 1).

For bit = 0, the following applies:

The starting value after withdrawing the pulse inhibit is the parameterized moment of inertia (p0341 * p0342 + p1498).

For bit = 1, the following applies:

The starting value after withdrawing the pulse inhibit is the last estimated value for the moment of inertia.

For bit 26:

Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1) and when the moment of inertia estimator is active (p1400.18 = 1).

For bit 27:

When the bit is set, the torque limit of an existing load gearbox is not taken into account in the resulting torque limiting.

For bit = 0, the following applies:

The load can be estimated even if the speed setpoint changes.

Recommended if the traversing profile does not include any constant speed setpoints (e.g. sinusoidal speed setpoints).

For bit = 1, the following applies:

Speed setpoint changes prevent load estimation.

Recommended for constant speed setpoints in the traversing profile. Results in a more accurate estimate of the load and moment of inertia.

12	Encoderless operation changeover	Steady-state	When accelerating	-
13	Motoring/regenerative depending on	Speed setpoint	Speed actual value	-
16	I component for limiting	Enable	Hold	-
17	DSC position controller limit active	Yes	No	3090
18	Moment of inertia estimator active	Yes	No	-

2 Parameters

2.2 List of parameters

22	Obtain moment of inertia estimator value for pulse inhibit	Yes	No	-
26	J_est load estimation only for constant velocity travel	Yes	No	-
27	Load gearbox, take into account torque limit	No	Yes	-

Note:

For bit 07:

The interpolator is only active for isochronous PROFIBUS operation, and with the sign-of-life received from the master (STW2.12 ... STW2.15). Further, for active Dynamic Servo Control (DSC) an additional dead time of one velocity controller sampling time occurs.

For bit 10:

The precontrol signal via connector input p1430 only becomes effective at p1402.4 = 1 (force-velocity precontrol with encoder) at p1400.10 = 0 (for setp_filter 2).

For bit 11:

If the motor rotates when the pulses are enabled, then we recommend p1400.11 = 1 (starting value = setpoint) with the matching sign.

If the motor remains stationary (zero speed) when the pulses are enabled, then we recommend p1400.11 = 0 (starting value = 0.0).

For bit 12:

If a changeover is made from operation with encoder to encoderless operation while accelerating (with the threshold from p1404), then we recommend p1400.12 = 0.

If the changeover is made from operation with an encoder to encoderless at constant velocity (e.g. with a DDS changeover or if there is an encoder fault via p0491), then we recommend p1400.12 = 1.

For bit 17:

In order to avoid limit cycles (e.g. as a result of disturbing forces) for DSC with a high Kv factor, the position controller output can be limited using a root function corresponding to the currently available deceleration capability of the drive. In this case, the total mass (m_tot) must be parameterized precisely (if necessary, determine the mass p0341, p0342 and p1498 using the motor data identification). If the limiting function responds, then this is indicated in r1407.19.

As a result of the absolute value limiting above $v[m/min] = 5.7 \times F_{max}[N] / (Kv[1000/min] \times m_{tot}[kg])$, the dynamic response of the position controller is no longer linear (F_{max} , see r1538, r1539). This is the reason that velocity precontrol is recommended.

For bit 18:

Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1).

The result of the moment of inertia estimator is displayed in r1493 when the function is activated.

The function assumes that the velocity changes without the load changing. If the velocity must be changed with associated load change, then during this time, the estimated mass should be frozen using binector input p1502.

p1400[0...n]

VECTOR (n/M),
VECTOR_AC (n/M),
VECTOR_I_AC (n/M)

Speed control configuration / n_ctrl config

Can be changed: U, T	Calculated: -	Access level: 2

Description:

Sets the configuration for the closed-loop speed control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Automatic Kp/Tn adaptation active	Yes	No	6040
01	Sensorless vector control freeze I comp	Yes	No	6040
02	Acceleration precontrol signal source	External (p1495)	Internal (n_set)	6031
03	Reference model speed setpoint I component	ON	OFF	6031
05	Kp/Tn adaptation active	Yes	No	6040
06	Free Tn adaptation active	Yes	No	6050
07	Interpolation speed precontrol	Yes	No	6031
10	Speed precontrol	Yes	No	6031
14	Torque precontrol	Always active	For n_ctrl enab	6060
15	Sensorless vector control speed precontrol	Yes	No	6030
16	I component for limiting	Enable	Hold	6030

18	Moment of inertia estimator active	Yes	No	6030
19	Anti-windup for integral component	Yes	No	6030
20	Acceleration model	ON	OFF	6031
22	Obtain moment of inertia estimator value for pulse inhibit	Yes	No	6030
23	Acceleration model (with speed encoder)	Yes	No	6030
24	Moment of inertia estimator fast estimation active	Yes	No	6030
25	Acceleration torque instantaneous in the I/f mode	Yes	No	-
27	Load gearbox, take into account torque limit	No	Yes	-

Note:

For bit 01:

When the bit is set, the I component of the speed controller is kept when changing into the open-loop controlled mode.

For bit 10:

The change to the bit is only accepted when switched off (non-operational).

For bit 16:

When the bit is set, the integral component of the speed controller is only held if it reaches the torque limit.

For bit 19:

When this bit is set, speed overshoots when accelerating along the torque limit and for load surges are reduced. If the setpoint torque reaches the torque limit, then the integral component is set to the difference between the torque limit and P component.

For bits 20, 23:

The acceleration model for the speed setpoint is only active if p1496 is not zero. When the acceleration model and the ramp-function generator (p1145) are simultaneously activated, it is recommended that p1400 bit 16 is set (this allows the I component to run freely up to the torque limit).

For bit 24:

When the bit is set, assuming that the motor accelerates smoothly, the moment of inertia can be determined faster.

For bit 25:

When the bit is set, for high dynamic starting in the I/f mode, the acceleration precontrol torque smoothing only has a short minimum time (4 ms).

For bit 27:

When the bit is set, the torque limit of an existing load gearbox is not taken into account in the resulting torque limiting.

	01	Flux setpoint differentiation active	Yes	No	6723, 6726
	02	Flux build-up control active	Yes	No	6722, 6723, 6725, 6726
	03	Flux characteristic load-dependent	Yes	No	6725
	04	Flux controller (ASM with encoder)	Yes	No	-
	05	Flux impression (ASM with encoder)	with model chngov	From 30 % n _{rated}	-
	06	Quick magnetizing	Yes	No	6722
	07	Precontrol speed limitation	Yes	No	6640
	08	Speed limiting controller	With M _{limits}	With I _{limits}	6640
	09	Dynamic load-dependent flux boost	Yes	No	6790, 6823

2 Parameters

2.2 List of parameters

10	Flux boost low speed	Yes	No	6790, 6823
13	Precontrol characteristic (PESM)	Yes	No	-
14	Efficiency optimization 2 active	Yes	No	6722, 6837

Note:

For bit 00 (only for induction motors):

Initially, the flux is only established with a low rate of rise when magnetizing the induction motor. The flux setpoint p1570 is reached again at the end of the magnetizing time p0346.

For bit 01 (only for induction motors and separately excited synchronous motors):

The flux differentiation can be switched out if a significant ripple occurs in the field-generating current setpoint (r0075) when entering the field weakening range. However, this is not suitable for fast acceleration operations because then, the flux decays more slowly and the voltage limiting responds.

For bit 02 (only for induction motors):

The flux build-up control operates during the magnetizing phase p0346 of the induction motor. If it is switched out, a constant current setpoint is injected and the flux is built up corresponding to the rotor time constant. When quick magnetizing (p1401.6 = 1) is selected and when flux build-up control is de-energized alarm A07416 is displayed.

For bit 03:

Separately excited synchronous machine: flux characteristic is calculated as a function of the load.

Synchronous-reluctance motor (RESM): activation of the load-dependent optimum flux characteristic.

For bit 04 (only for induction motors with encoder):

The flux controller does not operate in the range of the current model and not in the range of the flux impression (refer to p1750.4).

For bit 05 (only for induction motors with encoder):

Extremely rugged control operation is possible by directly toggling between the current model and flux impression. We therefore recommend that, in addition, the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).

For bit 06 (not for induction motors):

Magnetizing is carried out with the maximum current ($0.9 * r0067 \leq p1603 * r0209$). Magnetization has been completed if the flux threshold value p1573 or the magnetizing time p0346 has been reached. With active identification of the stator resistance (see p0621) quick magnetizing is internally deactivated and alarm A07416 is displayed. During a flying restart of a rotating motor (see p1200) no quick magnetizing takes place.

For bit 07:

If the speed of the drive exceeds the effective speed limit of the speed limiting controller, the torque limit is reduced linearly to zero as the deviation becomes greater. This reduces the integral component of the speed controller and, in turn, the overshoot during load shedding (see also F07901 and p2162).

For bit 08:

The speed limiting controller sets the speed to maximum by opening the torque limits as far as the current limits (bit 8 = 0) or taking the torque limits into account (bit 8 = 1).

For bit 09:

Synchronous reluctance motor (RESM):

Dynamic increase in the flux setpoint when torque is quickly established.

For bit 10:

Synchronous reluctance motor (RESM):

For load-dependent optimum flux characteristic (p1401.3 = 1) the flux setpoint is increased at low speeds.

Flux boost at low speeds is not effective when using an encoder - or for encoderless operation with HF signal injection (p1750.5).

For bit 13:

PESM: activation of the load-dependent precontrol characteristic

For bit 14:

When the function is activated, the following applies:

- the optimum flux is calculated and the power loss is entered for optimization purposes
- the efficiency optimization (p1580) is not active.

It only makes sense to activate this function if the dynamic response requirements of the speed controller are low.

In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase T_n , reduce K_p). Further, the smoothing time of the flux setpoint filter (p1582) should be increased.

p1402[0...n]	Closed-loop current control and motor model configuration / I_ctrl config		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -

Description:

Display and BICO output for the status word of the speed controller.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	U/f control active	Yes	No	-
01	Encoderless operation active	Yes	No	-
02	Torque control active	Yes	No	8010
04	Speed setpoint from DSC	Yes	No	2522
05	Speed controller I component frozen	Yes	No	-
06	Speed controller I component set	Yes	No	-
07	Torque limit reached	Yes	No	5610
08	Upper torque limit active	Yes	No	5610
09	Lower torque limit active	Yes	No	5610
11	Speed setpoint limited	Yes	No	-
13	Encoderless operation due to a fault	Yes	No	-
19	DSC position controller limited	Yes	No	3090
20	DSC with spline on	Yes	No	-
21	Speed precontrol for DSC with spline on	Yes	No	-
22	Torque precontrol for DSC with spline on	Yes	No	-
23	Torque-speed precontrol with encoder on	Yes	No	-
24	Moment of inertia estimator active	Yes	No	-
25	Load estimate active	Yes	No	-
26	Moment of inertia estimator stabilized	Yes	No	-

Note:

For bit 01, 13:

If, after a fault, the encoder still provides a valid commutation position ($p1992.10 = 1$), then a switch is not immediately made into encoderless operation. Both bits remain at 0 for this time.

For bit 04:

The following conditions must be fulfilled to set to 1:

- connector input p1190 and p1191 must be interconnected with a signal source that is not equal to zero.
- OFF1, OFF3 or STOP2 must not be active.
- it is not permissible that the motor data identification is active.
- Master control must not be active.

2 Parameters

2.2 List of parameters

The following conditions can mean that the DSC function is not active in spite of the fact that the bit is set:

- isochronous operation is not selected (r2054 not equal to 4).
- the PROFIBUS is not isochronous (r2064[0] not equal to 1).
- DSC is not activated on the control side, therefore KPC = 0 is transferred as value to connector input p1191.

Description:	Display and BICO output for the status word of the current controller.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Current control	Active	Not active	-
	04	Limit Ud	Active	Not active	-
	05	Limit Uq	Active	Not active	-
	06	Positive limiting Iq	Active	Not active	-
	07	Negative limiting Iq	Active	Not active	-
	08	Limit iq_set	Active	Not active	-
	09	Limit id_set	Active	Not active	-
Note:	The set current limit is taken into account in upstream torque limiting. Bits 6, 7, and 8 are, therefore, only set in the event of overshoots on account of the current setpoint filter.				

2 Parameters

2.2 List of parameters

r1408.0...15		CO/BO: Status word current controller / ZSW I_ctrl			
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2530		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the status word of the current controller.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Current controller active	Active	Not active	-
	01	Id control I component limiting	Active	Not active	6714
	03	Voltage limiting	Active	Not active	6714
	10	Speed adaptation limiting	Active	Not active	-
	11	Speed adaptation speed deviation	Out tolerance	In tolerance	6730
	12	Motor stalled	Yes	No	6730, 8020
	13	Separately excited synchronous motor is excited	Yes	No	-
	14	Current model SESM: magnetizing excitation current limited to 0	Yes	No	6726
	15	Excitation current differential exceeded	Yes	No	6726
Note:	For bit 11: For operation with speed encoder, this bit is set as a result of steps/jumps in the speed signal (see p0492) or due to deviations at the adaptation controller output (see p1744).				

p1409[0...n]		Speed control extended configuration / n_ctrl ext config			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: C1(3)	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the extended configuration for the closed-loop speed control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Interpolation supplementary torque active	Yes	No	5060

p1409[0...n]		Velocity control extended configuration / v_ctrl ext config			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C1(3)	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the extended configuration for the closed-loop velocity control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Interpolation supplementary force active	Yes	No	5060

p1412[0...n]	TM41 increm. encoder emulation, speed setpoint filter deadtime / n_set dead time			
TM41	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 9674	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000 [ms]	1.000 [ms]	0.000 [ms]	
Description:	Sets the delay of the speed setpoint for the incremental encoder emulation.			
Note:	The parameter is not effective in the SINAMICS operating mode (p4400 = 1).			
p1413[0...n]	Velocity actual value filter activation / v_act_filt act			
HLA	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 4965	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating the velocity actual value filter.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	General filter activation	Yes	No
Dependency:	The velocity actual value filter is parameterized from p1446. Refer to: p1699			
p1413[0...n]	Speed actual value filter activation / n_act_filt act			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042, 5210	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating the speed actual value filter.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	General filter activation	Yes	No
Dependency:	The speed actual value filter is parameterized from p1446.			
p1413[0...n]	Velocity actual value filter activation / v_act_filt act			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042, 5210	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating the velocity actual value filter.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	General filter activation	Yes	No
Dependency:	The velocity actual value filter is parameterized from p1446 and higher.			

p1414[0...n]	Velocity setpoint filter activation / v_set_filt act			
HLA	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 4965	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating the velocity setpoint filter.			
Recommendation:	If only one filter is required, filter 1 should be activated and filter 2 deactivated, to avoid excessive processing time.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activate filter 1	Yes	No
	01	Activate filter 2	Yes	No
				FP
				-
				-
Dependency:	The individual velocity setpoint filters are parameterized as of p1415. Refer to: p1699			

p1414[0...n]	Speed setpoint filter activation / n_set_filt act			
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 5020	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating the speed setpoint filter.			
Recommendation:	If only one filter is required, filter 1 should be activated and filter 2 deactivated, to avoid excessive processing time.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activate filter 1	Yes	No
	01	Activate filter 2	Yes	No
				FP
				-
				-
Dependency:	The individual speed setpoint filters are parameterized as of p1415.			

p1414[0...n]	Velocity setpoint filter activation / v_set_filt act			
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 5020	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating the velocity setpoint filter.			
Recommendation:	If only one filter is required, filter 1 should be activated and filter 2 deactivated, to avoid excessive processing time.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activate filter 1	Yes	No
	01	Activate filter 2	Yes	No
				FP
				-
				-
Dependency:	The individual velocity setpoint filters are parameterized as of p1415.			

p1414[0...n]		TM41 incr. encoder emulation speed setpoint filter activation / n_set_filt act		
TM41	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 9674	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Setting for activating/deactivating speed setpoint filter 1 for the incremental encoder emulation.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Activate filter 1	Yes	No
Dependency:	The speed setpoint filter can be parameterized using p1417 and p1418. Refer to: p1417, p1418			
Note:	The parameter is not effective in the SINAMICS operating mode (p4400 = 1).			
p1415[0...n]		Velocity setpoint filter 1 type / v_set_filt 1 type		
HLA	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 4965	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	2	0	
Description:	Sets the type for speed setpoint filter 1.			
Value:	0: Low pass: PT1 1: Low pass: PT2 2: General 2nd order filter			
Dependency:	PT1 low pass: p1416 PT2 low pass: p1417, p1418 General filter: p1417 ... p1420			
p1415[0...n]		Speed setpoint filter 1 type / n_set_filt 1 type		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 5020	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	2	0	
Description:	Sets the type for speed setpoint filter 1.			
Value:	0: Low pass: PT1 1: Low pass: PT2 2: General 2nd order filter			
Dependency:	PT1 low pass: p1416 PT2 low pass: p1417, p1418 General filter: p1417 ... p1420			

2 Parameters

2.2 List of parameters

p1415[0...n]	Velocity setpoint filter 1 type / v_set_filt 1 type		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: 5020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the type for speed setpoint filter 1.		
Value:	0: Low pass: PT1 1: Low pass: PT2 2: General 2nd order filter		
Dependency:	PT1 low pass: p1416 PT2 low pass: p1417, p1418 General filter: p1417 ... p1420		

p1416[0...n]	Velocity setpoint filter 1 time constant / v_set_filt 1 Tc		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: 4965 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the time constant for the velocity setpoint filter 1 (PT1).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the filter is set as a PT1 low pass.		

p1416[0...n]	Speed setpoint filter 1 time constant / n_set_filt 1 Tc		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: 5020 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the time constant for the speed setpoint filter 1 (PT1).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the filter is set as a PT1 low pass.		

p1416[0...n]	Velocity setpoint filter 1 time constant / v_set_filt 1 Tc		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00 [ms]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: 5020 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the time constant for the velocity setpoint filter 1 (PT1).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the filter is set as a PT1 low pass.		

p1416[0...n]	Speed setpoint filter 1 time constant / n_set_filt 1 Tc		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	5000.00 [ms]	0.00 [ms]
Description:	Sets the time constant for the speed setpoint filter 1 (PT1).		

p1417[0...n]	Velocity setpoint filter 1 denominator natural frequency / v_set_filt1 fn_den		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for velocity setpoint filter 1 (PT2, general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is parameterized as a PT2 low pass or as general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1417[0...n]	Speed setpoint filter 1 denominator natural frequency / n_set_filt1 fn_den		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for speed setpoint filter 1 (PT2, general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the speed filter is parameterized as a PT2 low pass or as general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1417[0...n]	Velocity setpoint filter 1 denominator natural frequency / v_set_filt1 fn_den		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for velocity setpoint filter 1 (PT2, general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is parameterized as a PT2 low pass or as general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

2 Parameters

2.2 List of parameters

p1417[0...n]	TM41 Speed setpoint filter 1 denominator natural frequency / n_set_filt1 fn_den		
TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 9674
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the denominator natural frequency for the speed setpoint filter 1 (PT2) of the incremental encoder emulation.		
Dependency:	Refer to: p1414		
Note:	The parameter is not effective in the SINAMICS operating mode (p4400 = 1). This parameter is only effective if the speed setpoint filter in p1414 is activated. The filter is only effective if the natural frequency is less than half of the sampling frequency.		
p1418[0...n]	Velocity setpoint filter 1 denominator damping / v_set_filt 1 D_den		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700
Description:	Sets the denominator damping for velocity setpoint filter 1 (PT2, general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is parameterized as a PT2 low pass or as general filter.		
p1418[0...n]	Speed setpoint filter 1 denominator damping / n_set_filt 1 D_den		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700
Description:	Sets the denominator damping for speed setpoint filter 1 (PT2, general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the speed filter is parameterized as a PT2 low pass or as general filter.		
p1418[0...n]	Velocity setpoint filter 1 denominator damping / v_set_filt 1 D_den		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700
Description:	Sets the denominator damping for velocity setpoint filter 1 (PT2, general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is parameterized as a PT2 low pass or as general filter.		

p1418[0...n]	TM41 Speed setpoint filter 1 denominator damping / n_set_filt 1 D_den		
TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 9674
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	1.000	0.700
Description:	Sets the denominator damping for the speed setpoint filter 1 (PT2) of the incremental encoder emulation.		
Dependency:	Refer to: p1414		
Note:	The parameter is not effective in the SINAMICS operating mode (p4400 = 1). This parameter is only effective if the speed setpoint filter in p1414 is activated.		

p1419[0...n]	Velocity setpoint filter 1 numerator natural frequency / v_set_filt1 fn_num		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for velocity setpoint filter 1 (general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1419[0...n]	Speed setpoint filter 1 numerator natural frequency / n_set_filt1 fn_num		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for speed setpoint filter 1 (general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the speed filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1419[0...n]	Velocity setpoint filter 1 numerator natural frequency / v_set_filt1 fn_num		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for velocity setpoint filter 1 (general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

2 Parameters

2.2 List of parameters

p1420[0...n]	Velocity setpoint filter 1 numerator damping / v_set_filt 1 D_num		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for velocity setpoint filter 1 (general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the velocity filter is set as a general filter.		

p1420[0...n]	Speed setpoint filter 1 numerator damping / n_set_filt 1 D_num		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for speed setpoint filter 1 (general filter).		
Dependency:	Refer to: p1414, p1415		
Note:	This parameter is only effective if the speed filter is set as a general filter.		

p1420[0...n]	Velocity setpoint filter 1 numerator damping / v_set_filt 1 D_num		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700
Description:	Sets the denominator damping for velocity setpoint filter 2 (PT2, general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the velocity filter is parameterized as a PT2 low pass or as general filter.		

p1425[0...n]	Velocity setpoint filter 2 numerator natural frequency / v_set_filt2 fn_num		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for velocity setpoint filter 2 (general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the velocity filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

2 Parameters

2.2 List of parameters

p1425[0...n]	Speed setpoint filter 2 numerator natural frequency / n_set_filt2 fn_num		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for speed setpoint filter 2 (general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the speed filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1425[0...n]	Velocity setpoint filter 2 numerator natural frequency / v_set_filt2 fn_num		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for velocity setpoint filter 2 (general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the velocity filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1426[0...n]	Velocity setpoint filter 2 numerator damping / v_set_filt 2 D_num		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for velocity setpoint filter 2 (general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the velocity filter is set as a general filter.		

p1426[0...n]	Speed setpoint filter 2 numerator damping / n_set_filt 2 D_num		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for speed setpoint filter 2 (general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the speed filter is set as a general filter.		

p1426[0...n]	Velocity setpoint filter 2 numerator damping / v_set_filt 2 D_num		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for velocity setpoint filter 2 (general filter).		
Dependency:	Refer to: p1414, p1421		
Note:	This parameter is only effective if the velocity filter is set as a general filter.		
p1427[0...n]	DSC symmetrizing time constant additive T_SYMM_ADD / DSC Tc_SYMM_ADD		
SERVO (DSC spline, Lin), SERVO_AC (DSC spline, Lin), SERVO_I_AC (DSC spline, Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3090
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Set the additive symmetrizing time constant T_SYMM_ADD for the velocity precontrol value for active force precontrol.		
Dependency:	The additive symmetrizing time constant T_SYMM_ADD is only evaluated if the "DSC with spline" function module (r0108.6 = 1) is activated. Refer to: p1190, p1191, p1194, p1195		
Note:	For active force precontrol (r1407.20/.21/.22) and active symmetrizing (T_SYMM > 0), the velocity precontrol value is symmetrized with the sum of the following time constants: T_SYMM (see p1195) + T_SYMM_ADD (p1427) + 0.5 * velocity controller sampling time (p0115[1]) With half of the velocity controller sampling time, the velocity actual value generation is taken into account using position differences. DSC: Dynamic Servo Control		
p1427[0...n]	DSC symmetrizing time constant additive T_SYMM_ADD / DSC Tc_SYMM_ADD		
SERVO (DSC spline), SERVO_AC (DSC spline), SERVO_I_AC (DSC spline)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3090
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Set the additive symmetrizing time constant T_SYMM_ADD for symmetrizing the speed precontrol value for active torque precontrol.		
Dependency:	The additive symmetrizing time constant T_SYMM_ADD is only evaluated if the "DSC with spline" function module (r0108.6 = 1) is activated. Refer to: p1190, p1191, p1194, p1195		
Note:	When torque precontrol is active (r1407.20/.21/.22) and symmetrization is active (T_SYMM > 0) then the speed precontrol value is symmetrized with the sum of the following time constants: T_SYMM (see p1195) + T_SYMM_ADD (p1427) + 0.5 * speed controller sampling time (p0115[1]) With half of the speed controller sampling time, the speed actual value generation is taken into account using position differences. DSC: Dynamic Servo Control		

2 Parameters

2.2 List of parameters

p1428[0...n]	Velocity precontrol symmetrizing dead time / v_prectrSym t_dead		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	3.0	0.0
Description:	Sets the dead time to symmetrize the velocity setpoint for active force precontrol. The selected multiplier refers to the sampling time of the controller (dead time= p1428 * p0115[0]).		
Dependency:	In conjunction with p1429, this parameter can emulate the characteristics of how the force is established (dynamic response of closed control loop). Refer to: p1429, p1511		
p1428[0...n]	Speed precontrol symmetrizing dead time / n_prectrSym t_dead		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	2.0	0.0
Description:	Sets the dead time to symmetrize the speed setpoint for active torque precontrol. The selected multiplier refers to the sampling time of the speed controller (dead time= p1428 * p0115[1]).		
Dependency:	In conjunction with p1429, this parameter can emulate the characteristics of how the torque is established (dynamic response of closed current control loop). Refer to: p1429, p1511		
p1428[0...n]	Velocity precontrol symmetrizing dead time / v_prectrSym t_dead		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	2.0	0.0
Description:	Sets the dead time to symmetrize the velocity setpoint for active force precontrol. The selected multiplier refers to the sampling time of the velocity controller (dead time= p1428 * p0115[1]).		
Dependency:	In conjunction with p1429, this parameter can emulate the characteristics of how the force is established (dynamic response of closed current control loop). Refer to: p1429, p1511		
p1428[0...n]	Speed precontrol symmetrizing dead time / n_prectrSym t_dead		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	3.0	0.0
Description:	Sets the dead time to symmetrize the speed setpoint for active torque precontrol. The selected multiplier refers to the sampling time of the speed controller (dead time= p1428 * p0115[1]).		

Dependency: In conjunction with p1429, this parameter can emulate the characteristics of how the torque is established (dynamic response of closed current control loop).
The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, a fixed dead time is used.
Refer to: p1429, p1511

p1429[0...n]	Speed precontrol symmetrizing time constant / n_prectrl sym Tc		
SERVO, VECTOR (n/M), HLA, SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 5042, 5210, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant (PT1) for symmetrizing the speed setpoint for active torque precontrol.

Dependency: In conjunction with p1428, this parameter can emulate the characteristics of how torque is established (dynamic response of the closed current control loop).
For VECTOR (r0107) the following applies:
The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, time constant p1442 (or p1452 for sensorless vector control) is used.
Refer to: p1428, p1511

p1429[0...n]	Velocity precontrol symmetrizing time constant / v_prectrl sym Tc		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant (PT1) for symmetrizing the velocity setpoint for active force precontrol.

Dependency: In conjunction with p1428, this parameter can emulate the characteristics of how the force is established (dynamic response of closed current control loop).
Refer to: p1428, p1511

p1430[0...n]	CI: Velocity precontrol / v_prectrl		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3001, 5019, 5030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the velocity precontrol channel (velocity precontrol or force precontrol).

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

2 Parameters

2.2 List of parameters

p1430[0...n]	CI: Speed precontrol / n_prectrl		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32	Calculated: - Dyn. index: CDS, p0170	Access level: 3 Func. diagram: 3001, 5019, 5030
	P-Group: Closed-loop control Not for motor type: REL Min	Unit group: - Scaling: p2000 Max	Unit selection: - Expert list: 1 Factory setting
	-	-	0
Description:	Sets the signal source for speed precontrol channel (speed precontrol or torque precontrol).		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The precontrol signal via connector input p1430 only becomes effective at p1402.4 = 1 (torque-speed precontrol with encoder) at p1400.10 = 0 (for setp_filter 2).		
p1430[0...n]	CI: Velocity precontrol / v_prectrl		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T Data type: Unsigned32 / FloatingPoint32	Calculated: - Dyn. index: CDS, p0170	Access level: 3 Func. diagram: 3001, 5019, 5030
	P-Group: Closed-loop control Not for motor type: REL Min	Unit group: - Scaling: p2000 Max	Unit selection: - Expert list: 1 Factory setting
	-	-	0
Description:	Sets the signal source for the velocity precontrol channel (velocity precontrol or force precontrol).		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The precontrol signal via connector input p1430 only becomes effective at p1402.4 = 1 (force-velocity precontrol with encoder) at p1400.10 = 0 (for setp_filter 2).		
p1430[0...n]	CI: Speed precontrol / n_prectrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T Data type: Unsigned32 / FloatingPoint32	Calculated: - Dyn. index: CDS, p0170	Access level: 3 Func. diagram: 6020, 6031
	P-Group: Closed-loop control Not for motor type: REL Min	Unit group: - Scaling: p2000 Max	Unit selection: - Expert list: 1 Factory setting
	-	-	0
Description:	Sets the signal source for speed precontrol channel (speed precontrol or torque precontrol).		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The precontrol signal via connector input p1430 is only active for p1400.10 = 1.		
r1431	CO: Speed precontrol to motor model / n_prectrl MotMod		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 4 Func. diagram: 6030
	P-Group: Closed-loop control Not for motor type: REL Min	Unit group: 3_1 Scaling: p2000 Max	Unit selection: p0505 Expert list: 1 Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed setpoint to precontrol the motor model for sensorless vector control.		
Note:	With p1400.15 = 0 or encoderless torque control, the precontrol signal is kept continuously in the range of the voltage model.		

r1432[0...1]	CO: Speed precontrol / n_prectrl		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5020, 5030
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed precontrol. For index [0]: Displays the speed precontrol value after symmetrizing for the torque build-up (emulates the closed current control loop). For index [1]: Displays the speed precontrol value before the switch p1400.10. When the "DSC with spline" function module is activated (r0108.6 = 1, signal source of p1194.0 = 1), then this is the precontrol value generated by the spline. Otherwise, this is the value from the signal source of p1430 (possibly after linear interpolation). The precontrol value generated by the spline is zero if the speed precontrol for the spline is deactivated (signal source of p1194.4 = 0).		
Index:	[0] = After symmetrization [1] = Before switch p1400.10		
Dependency:	Symmetrizing can be parameterized with p1428 and/or p1429.		
r1432[0...1]	CO: Velocity precontrol / v_precontrol		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3

	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output for the velocity precontrol. For index [0]: Displays the velocity precontrol value after symmetrizing for the force build-up (emulates the closed current control loop). For index [1]: Displays the velocity precontrol value before the switch p1400.10. When the "DSC with spline" function module is activated (r0108.6 = 1, signal source of p1194.0 = 1), then this is the precontrol value generated by the spline. Otherwise, this is the value from the signal source of p1430 (possibly after linear interpolation). The precontrol value generated by the spline is zero if the velocity precontrol for the spline is deactivated (signal source of p1194.4 = 0).		
Index:	[0] = After symmetrization [1] = Before switch p1400.10		
Dependency:	Symmetrizing can be parameterized with p1428 and/or p1429.		
r1432[0...1]	CO: Speed precontrol / n_prectrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed precontrol. For index [0]: Displays the speed precontrol value after symmetrizing to establish the torque. For index [1]: Displays the speed precontrol value of the signal source p1430 after the interpolator (p1400.7).		

2 Parameters

2.2 List of parameters

Index: [0] = After symmetrization
[1] = After interpolator

Dependency: Symmetrizing can be parameterized with p1428 and/or p1429.

p1433[0...n]	Velocity controller reference model natural frequency / v_ctrl RefMod fn		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Hz]	8000.0 [Hz]	0.0 [Hz]
Description:	Sets the natural frequency of a PT2 element for the reference model of the velocity controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (velocity actual value) are virtually identical when the I component of the velocity controller is disabled.		
Dependency:	In conjunction with p1434, the time response of the P-controlled velocity control loop can be emulated. Refer to: p1434, p1435		

p1433[0...n]	Speed controller reference model natural frequency / n_ctrl RefMod fn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Hz]	8000.0 [Hz]	0.0 [Hz]
Description:	Sets the natural frequency of a PT2 element for the reference model of the speed controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop speed control (P) can be emulated. Refer to: p1434, p1435		

p1433[0...n]	Velocity controller reference model natural frequency / v_ctrl RefMod fn		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Hz]	8000.0 [Hz]	0.0 [Hz]
Description:	Sets the natural frequency of a PT2 element for the reference model of the velocity controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (velocity actual value) are virtually identical when the I component of the velocity controller is disabled.		
Dependency:	Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop velocity control (P) can be emulated. Refer to: p1434, p1435		

p1433[0...n]	Speed controller reference model natural frequency / n_ctrl RefMod fn		
VECTOR (J_estimator / OBt, n/M), VECTOR_AC (J_estimator / OBt, n/M), VECTOR_I_AC (J_estimator / OBt, n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 8000.0 [Hz]	Access level: 3 Func. diagram: 6031 Unit selection: - Expert list: 1 Factory setting 0.0 [Hz]
Description:	Sets the natural frequency of a PT2 element for the reference model of the speed controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop speed control (P) can be emulated. For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1. For sensorless vector control (p1300 = 20) the reference model is disabled in open-loop speed controlled operation (refer to p1755). Refer to: p1434, p1435		
p1434[0...n]	Velocity controller reference model damping / v_ctrl RefMod D		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5.000	Access level: 3 Func. diagram: 4965 Unit selection: - Expert list: 1 Factory setting 1.000
Description:	Sets the damping of a PT2 element for the reference model of the velocity controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (velocity actual value) are virtually identical when the I component of the velocity controller is disabled.		
Dependency:	In conjunction with p1433, the time response of the P-controlled velocity control loop can be emulated. Refer to: p1433, p1435		
p1434[0...n]	Speed controller reference model damping / n_ctrl RefMod D		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5.000	Access level: 3 Func. diagram: 5030, 6031 Unit selection: - Expert list: 1 Factory setting 1.000
Description:	Sets the damping of a PT2 element for the reference model of the speed controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	In conjunction with p1433 and p1435, the characteristics (in time) of the P-controlled speed control loop can be emulated. Refer to: p1433, p1435		

2 Parameters

2.2 List of parameters

p1434[0...n]	Velocity controller reference model damping / v_ctrl RefMod D		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	5.000	1.000
Description:	Sets the damping of a PT2 element for the reference model of the velocity controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (velocity actual value) are virtually identical when the I component of the velocity controller is disabled.		
Dependency:	Together with p1433 and p1435, the characteristics (in the time domain) of the P-controlled velocity control loop can be emulated. Refer to: p1433, p1435		
p1434[0...n]	Speed controller reference model damping / n_ctrl RefMod D		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	5.000	1.000
Description:	Sets the damping of a PT2 element for the reference model of the speed controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	In conjunction with p1433 and p1435, the characteristics (in time) of the P-controlled speed control loop can be emulated. For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1. Refer to: p1433, p1435		
p1435[0...n]	Speed controller reference model dead time / n_ctrRefMod t_dead		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 6031

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	2.00	0.00
Description:	Sets the "fractional" dead time for the reference model of the speed controller. This parameter emulates the computing dead time of the proportionally controlled speed control loop. The selected multiplier refers to the speed controller sampling time (dead time= p1435 * p0115[1]).		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	In conjunction with p1433 and p1434, the characteristics (in time) of the P-controlled speed control loop can be emulated. Refer to: p0115, p1433, p1434		

p1435[0...n]	Velocity controller reference model dead time / v_ctrRefMod t_dead		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	2.00	0.00
Description:	Sets the "fractional" dead time for the reference model of the velocity controller. This parameter emulates the computing dead time of the proportionally controlled velocity control loop. The selected multiplier refers to the velocity controller sampling time (dead time= p1435 * p0115[1]).		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (velocity actual value) are virtually identical when the I component of the velocity controller is disabled.		
Dependency:	Together with p1433 and p1434, the characteristics (in the time domain) of the P-controlled velocity control loop can be emulated. Refer to: p0115, p1433, p1434		
p1435[0...n]	Speed controller reference model dead time / n_ctrRefMod t_dead		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	3.00	0.00
Description:	Sets the "fractional" dead time for the reference model of the speed controller. This parameter emulates the computing dead time of the proportionally controlled speed control loop. The selected multiplier refers to the speed controller sampling time (dead time= p1435 * p0115[1]).		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	In conjunction with p1433 and p1434, the characteristics (in time) of the P-controlled speed control loop can be emulated. For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1. Refer to: p0115, p1433, p1434

	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	63[0]
Description:	Sets the signal source for the speed actual value of the speed controller.		
Dependency:	Refer to: r1443		
Danger:	When using external speed actual values for the speed controller, for a direction of rotation change via p1821 = 1, then its polarity must also be changed (e.g. for an encoder DO via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.		
			
Caution:	Speed control with encoder (p1300 = 21):		
	For the speed or position signal of the motor model there must always be a motor encoder available (evaluation via SMC/SMI, see p0400). The actual speed of the motor (r0061) and the position data for synchronous motors continue to come from this motor encoder and are not affected by the setting of p1440.		
	Interconnection of p1440:		
	If connector input p1440 is interconnected with an external speed actual value, the identical scaling of the speed should be observed (p2000).		
Notice:	Speed control without encoder (p1300 = 20):		
	Dependent upon the transmission path of the external speed signal there will be dead times which have to be taken into account when setting the speed controller parameters (p1470, p1472) and can lead to dynamic losses accordingly. It is for this reason that signal transmission times have to be kept as low as possible.		
	So that the speed controller can also work at standstill, set p1750.2 = 1 (closed-loop operation from zero speed for passive loads). If you do not make this setting, operation will switch to open-loop speed control in the low speed range, switching the closed-loop speed controller off and rendering the measured actual speed ineffective.		
Note:	Speed control with encoder (p1300 = 21):		
	An external speed signal should, on the average, correspond to the speed of the motor encoder (r0061).		

p1441[0...n]	Actual velocity smoothing time / v_act t_smth		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	50.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the velocity actual value.		
Dependency:	Refer to: r0063, p1451		
Note:	The velocity actual value should be smoothed for encoders with a low pulse number.		
	After this parameter has been changed, we recommend that the velocity controller is adjusted and/or the velocity controller settings Kp, Tn and Tv checked.		

p1441[0...n]	Actual speed smoothing time / n_act t_smth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4710, 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	50.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the speed actual value.		
Dependency:	Refer to: r0063, p1451		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers. After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).		
p1441[0...n]	Actual velocity smoothing time / v_act t_smth		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4710, 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	50.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the velocity actual value.		
Dependency:	Refer to: r0063, p1451		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers. After this parameter has been changed, we recommend that the velocity controller is adapted and/or the velocity controller settings checked Kp (p1460) and Tn (p1462).		
p1441[0...n]	Actual speed smoothing time / n_act t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4710, 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the speed actual value.		
Dependency:	Refer to: r0063		
Notice:	Smoothing times above 20 ms are only possible if the drive is accelerated or braked with the appropriately long ramp-up/ramp-down times. Otherwise, significant torque errors can occur and there is the danger that the drive is switched off (tripped) with F07902 (motor stalled).		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers. After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).		
p1442[0...n]	Speed controller speed actual value smoothing time / n_ctr n_act t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	32000.00 [ms]	4.00 [ms]
Description:	Sets the smoothing time for the actual speed value of the speed controller for closed-loop control with encoder.		
Note:	The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).		

2 Parameters

2.2 List of parameters

r1443	CO: Speed controller speed actual value at actual value input / n_ctrl n_act inp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the speed actual value at the speed controller's free-wiring actual value input p1440.		
Dependency:	Refer to: p1440		
Note:	This speed signal is only used by the speed controller and not by the motor model.		

r1444	Velocity controller velocity setpoint static / v_ctrl v_set stat		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Displays the sum of all velocity setpoints that are present. The following sources are available for the displayed setpoint: - setpoint at the ramp-function generator input (r1119). - velocity setpoint 1 (p1155). - velocity setpoint 2 (p1160). - velocity setpoint for the velocity precontrol (p1430). - setpoint from DSC (for DSC active). - setpoint via PC (for master control active).		
Dependency:	Refer to: r1119, p1155, p1160, p1430		

r1444	Speed controller speed setpoint steady-state (static) / n_ctrl n_set stat		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	2000.0 [Hz]
Description:	Sets the numerator natural frequency for the velocity actual value filter (general filter).		
Dependency:	Refer to: p1413, p1446		
Note:	This parameter is only effective if the velocity filter is set as a general filter. The filter is only effective if the natural frequency is less than half of the sampling frequency.		

p1450[0...n]	Velocity actual value filter numerator damping / v_act_filt D_num		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for the velocity actual value filter (general filter).		
Dependency:	Refer to: p1413, p1446		
Note:	This parameter is only effective if the velocity actual value filter is set as a general filter.		

p1450[0...n]	Speed actual value filter numerator damping / n_act_filt D_num		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for the speed actual value filter (general filter).		
Dependency:	Refer to: p1413, p1446		
Note:	This parameter is only effective if the speed filter is set as a general filter.		

p1450[0...n]	Velocity actual value filter numerator damping / v_act_filt D_num		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for the velocity actual value filter (general filter).		
Dependency:	Refer to: p1413, p1446		
Note:	This parameter is only effective if the velocity actual value filter is set as a general filter.		

p1451[0...n]	Speed actual value smoothing time sensorless / n_ActV t_smth sl		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the smoothing time for the calculated speed actual value in sensorless operation.		
Dependency:	Refer to: p1441		
p1451[0...n]	Velocity actual value smoothing time sensorless / v_ActV t_smth sl		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the smoothing time for the calculated velocity actual value in sensorless operation.		
Dependency:	Refer to: p1441		
p1451[0...n]	Motor model speed actual value smoothing time sensorless / MotMod n_act t_sm		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	4 [ms]
Description:	Sets the smoothing time for the speed actual value calculated by the motor model in sensorless operation.		
p1452[0...n]	Speed controller speed actual value smoothing time (sensorless) / n_C n_ActV t_s sl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	32000.00 [ms]	10.00 [ms]
Description:	Sets the smoothing time for the actual speed of the speed controller for encoderless closed-loop speed control.		
Note:	The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).		
r1454	CO: Velocity controller system deviation I component / v_ctrl SysDev Tn		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [m/min]	- [m/min]	- [m/min]
Description:	Display and connector output for the system deviation of the I component of the velocity controller. When the reference model is inactive (p1433 = 0 Hz), this parameter corresponds to the system deviation of the complete PI controller (r1454 = r0064).		

r1454	CO: Speed controller system deviation I component / n_ctrl SysDev Tn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.		
Dependency:	Refer to: p1455, p1456, p1457, p1458		
p1459[0...n]	Adaptation factor upper / Adapt_factor upper		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.		
Dependency:	Refer to: p1455, p1456, p1457, p1458		
Note:	If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.		
p1460[0...n]	Velocity controller P gain A / v_ctrl Kp A		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.000 [%]	1000.000 [%]	0.000 [%]
Description:	Sets the proportional gain (Kp) for the velocity controller at the A side		

p1460[0...n]	Speed controller P gain adaptation speed lower / n_ctrl Kp n lower		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042
	P-Group: Closed-loop control	Unit group: 17_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000 [Nms/rad]	500000000.0000 [Nms/rad]	0.3000 [Nms/rad]
Description:	Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).		
Dependency:	Refer to: p1461, p1464, p1465		
Note:	When automatically calculating the speed controller, only the motor moment of inertia is taken into account (p0341). For higher load moments of inertia (p0342 > 1 or p1498 > 0), you are advised to check the speed controller gain.		
p1460[0...n]	Velocity controller P gain adaptation velocity lower / v_ctrl Kp n lower		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042
	P-Group: Closed-loop control	Unit group: 24_2	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000 [Ns/m]	500000000.0000 [Ns/m]	10.0000 [Ns/m]
Description:	Sets the P gain of the velocity controller before the adaptation velocity range (0 ... p1464). This value corresponds to the basic setting of the P gain of the velocity controller without adaptation (p1461 = 100 %).		
Dependency:	Refer to: p1461, p1464, p1465		
Note:	When automatically calculating the velocity controller, only the motor inertia is taken into account (p0341). For higher inertias (p0342 > 1 or p1498 > 0), you are advised to check the velocity controller gain.		
p1460[0...n]	Speed controller P gain adaptation speed lower / n_ctrl Kp n lower		
VECTOR (J_estimator / OBT, n/M), VECTOR_AC (J_estimator / OBT, n/M), VECTOR_I_AC (J_estimator / OBT, n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000	999999.0000	0.3000
Description:	Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).		
Dependency:	For p0528 = 1, the speed controller gain is represented without any dimensions. Refer to: p1461, p1464, p1465		
p1461[0...n]	Velocity controller P gain / v_ctrl Kp		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.0 [%]	1000.0 [%]	0.0 [%]
Description:	Sets the proportional gain (Kp) for the velocity controller at the position of the minimum natural frequency.		

2 Parameters

2.2 List of parameters

p1461[0...n]	Speed controller Kp adaptation speed upper scaling / n_ctr Kp n up scal		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [%]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 200000.0 [%]	Access level: 3 Func. diagram: 5050 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the P gain of the speed controller for the upper adaptation speed range (> p1465). The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).		
Dependency:	Refer to: p1460, p1464, p1465		
Note:	When automatically calculating the speed controller, only the motor moment of inertia is taken into account (p0341). For higher load moments of inertia (p0342 > 1 or p1498 > 0), you are advised to check the speed controller gain.		
p1461[0...n]	Velocity controller Kp adaptation velocity upper scaling / v_ctr Kp n up scal		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [%]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 200000.0 [%]	Access level: 3 Func. diagram: 5050 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the P gain of the velocity controller for the upper adaptation velocity range (> p1465). The entry is made referred to the P gain for the lower adaptation velocity range of the velocity controller (% referred to p1460).		
Dependency:	Refer to: p1460, p1464, p1465		
Note:	When automatically calculating the velocity controller, only the motor inertia is taken into account (p0341). For higher inertias (p0342 > 1 or p1498 > 0), you are advised to check the velocity controller gain.		
p1461[0...n]	Speed controller Kp adaptation speed upper scaling / n_ctr Kp n up scal		
VECTOR (J_estimator / OBT, n/M), VECTOR_AC (J_estimator / OBT, n/M), VECTOR_I_AC (J_estimator / OBT, n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [%]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 200000.0 [%]	Access level: 3 Func. diagram: 6050 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the P gain of the speed controller for the upper adaptation speed range (> p1465). The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).		
Dependency:	Refer to: p1460, p1464, p1465		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition p1464, then the controller gain below p1465 is adapted with p1461. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		
p1462[0...n]	Velocity controller P gain B / v_ctrl Kp B		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -100.00 [%]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.00 [%]	Access level: 2 Func. diagram: 4965 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the proportional gain (Kp) for the velocity controller at the B side		

p1462[0...n]	Speed controller integral time adaptation speed lower / n_ctrl Tn n lower		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 5040, 5042, 6020, 6040
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.00 [ms]	Max 100000.00 [ms]	Factory setting 20.00 [ms]
Description:	Sets the integration time of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the integral time of the speed controller without adaptation (p1461 = 100 %).		
Dependency:	Refer to: p1463, p1464, p1465		
p1462[0...n]	Velocity contr. integral act. time adaptation velocity lower / v_ctrl Tn n lower		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 5040, 5042
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.00 [ms]	Max 100000.00 [ms]	Factory setting 20.00 [ms]
Description:	Sets the integration time of the velocity controller before the adaptation velocity range (0 ... p1464). This value corresponds to the basic setting of the integral time of the velocity controller without adaptation (p1461 = 100 %).		
Dependency:	Refer to: p1463, p1464, p1465		
p1462[0...n]	Speed controller integral time adaptation speed lower / n_ctrl Tn n lower		
VECTOR (J_estimator / OBT, n/M), VECTOR_AC (J_estimator / OBT, n/M), VECTOR_I_AC (J_estimator / OBT, n/M)	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 5040, 5042, 6020, 6040
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.00 [ms]	Max 100000.00 [ms]	Factory setting 20.00 [ms]
Description:	Sets the integration time of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the integral time of the speed controller without adaptation (p1461 = 100 %).		
Dependency:	Refer to: p1463, p1464, p1465		
Note:	The integral component is stopped if the complete controller output or the sum of controller output and torque precontrol reach the torque limit.		
p1463[0...n]	Velocity controller integral time / v_ctrl Tn		
HLA	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 4965
	P-Group: Closed-loop control Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.0 [ms]	Max 2000.0 [ms]	Factory setting 0.0 [ms]
Description:	Sets the integral time (Tn) for the velocity controller.		

p1463[0...n]	Speed controller Tn adaptation speed upper scaling / n_ctr Tn n up scal		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the integral time of the speed controller after the adaptation speed range (> p1465). The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).		
Dependency:	Refer to: p1462, p1464, p1465		
p1463[0...n]	Velocity controller Tn adaptation velocity upper scaling / v_ctr Tn n up scal		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the integral time of the velocity controller after the adaptation velocity range (> p1465). The entry is made referred to the integral time for the lower adaptation velocity range of the velocity controller (% referred to p1462).		
Dependency:	Refer to: p1462, p1464, p1465		
p1463[0...n]	Speed controller Tn adaptation speed upper scaling / n_ctr Tn n up scal		
VECTOR (J_estimator / OBT, n/M), VECTOR_AC (J_estimator / OBT, n/M), VECTOR_I_AC (J_estimator / OBT, n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the integral time of the speed controller after the adaptation speed range (> p1465). The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).		
Dependency:	Refer to: p1462, p1464, p1465		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller integral time below p1465 is adapted with p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		
p1464[0...n]	Velocity controller D component smoothing time constant / v_ctrl D comp Tc		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.25 [ms]	100.00 [ms]	0.25 [ms]
Description:	Sets the smoothing time constant for the D component of the velocity controller.		

p1464[0...n]	Speed controller adaptation speed lower / n_ctrl n lower		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the lower adaptation speed of the speed controller. No adaptation is effective below this speed.		
Dependency:	Refer to: p1460, p1461, p1462, p1463, p1465		
p1464[0...n]	Velocity controller adaptation velocity lower / v_ctrl n lower		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	0.00 [m/min]
Description:	Sets the lower adaptation velocity of the velocity controller. No adaptation is effective below this velocity.		
Dependency:	Refer to: p1460, p1461, p1462, p1463, p1465		
p1464[0...n]	Speed controller adaptation speed lower / n_ctrl n lower		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the lower adaptation speed of the speed controller. No adaptation is effective below this speed.		
Dependency:	The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made. Refer to: p1460, p1461, p1462, p1463, p1465		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		
p1465[0...n]	Velocity controller derivative-action time A / v_ctrl Tv A		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the derivative-action time (Tv, D component) for the velocity controller at the A side.		

2 Parameters

2.2 List of parameters

p1465[0...n]	Speed controller adaptation speed upper / n_ctrl n upper		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]
Description:	Sets the upper adaptation speed of the speed controller. No adaptation is effective above this speed. For the proportional gain, p1460 x p1461 is effective. For the integral time, p1462 x p1463 is effective.		
Dependency:	Refer to: p1460, p1461, p1462, p1463, p1464		
p1465[0...n]	Velocity controller adaptation velocity upper / v_ctrl n upper		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [m/min]	1000.00 [m/min]	1000.00 [m/min]
Description:	Sets the upper adaptation velocity of the velocity controller. No adaptation is effective above this velocity. For the proportional gain, p1460 x p1461 is effective. For the integral time, p1462 x p1463 is effective.		
Dependency:	Refer to: p1460, p1461, p1462, p1463, p1464		
p1465[0...n]	Speed controller adaptation speed upper / n_ctrl n upper		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]
Description:	Sets the upper adaptation speed of the speed controller. No adaptation is effective above this speed. For the proportional gain, p1460 x p1461 is effective. For the integral time, p1462 x p1463 is effective.		
Dependency:	The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made. Refer to: p1460, p1461, p1462, p1463, p1464		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		
p1466[0...n]	Velocity controller derivative-action time / v_ctrl Tv		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the derivative-action time (Tv, D component) for the velocity controller at the position of the minimum natural frequency.		

p1466[0...n]	CI: Speed controller P gain scaling / n_ctrl Kp scal		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the scaling of the P gain of the speed controller. This also makes the effective P gain (including adaptations) scalable.

p1466[0...n]	CI: Velocity controller P gain scaling / v_ctrl Kp scal		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the scaling of the P gain of the velocity controller. This also makes the effective P gain (including adaptations) scalable.

p1466[0...n]	CI: Speed controller P gain scaling / n_ctrl Kp scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the scaling of the P gain of the speed controller. This also makes the effective P gain (including adaptations) scalable.

p1467[0...n]	Velocity controller derivative-action time B / v_ctrl Tv B		
HLA	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the derivative-action time (Tv, D component) for the velocity controller at the B side.

r1468	Velocity controller P gain effective / v_ctrl Kp eff		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the effective P gain of the velocity controller.

2 Parameters

2.2 List of parameters

r1468	Speed controller P gain effective / n_ctrl Kp eff		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 5042, 5210
	P-Group: Closed-loop control	Unit group: 17_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nms/rad]	- [Nms/rad]	- [Nms/rad]
Description:	Displays the effective P gain of the speed controller.		
Note:	For encoderless operation and speeds less than p1755 (open-loop controlled mode) the speed controller is not active and r1468 = 0 is displayed.		
r1468	Velocity controller P gain effective / v_ctrl Kp eff		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 5042, 5210
	P-Group: Closed-loop control	Unit group: 24_2	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Ns/m]	- [Ns/m]	- [Ns/m]
Description:	Displays the effective P gain of the velocity controller.		
Note:	For encoderless operation and velocities less than p1755 (open-loop controlled mode) the velocity controller is not active and r1468 = 0 is displayed.		
r1468	CO: Speed controller P gain effective / n_ctrl Kp eff		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the effective P gain of the speed controller.		
Dependency:	For p0528 = 1, the speed controller gain is represented without any dimensions. In this case, connector output signal r1468 is increased by a factor of 100 in order to improve the resolution.		
r1469	Velocity controller derivative-action time active / v_ctrl Tv act		
HLA	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the effective derivative time of the velocity controller.		

r1469	Speed controller integral time effective / n_ctrl Tn eff		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: 5040, 5042, 6040 Unit selection: - Expert list: 1 Factory setting - [ms]
Description:	Displays the effective integral time of the speed controller.		
r1469	Velocity controller integral time effective / v_ctrl Tn eff		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: 5040, 5042 Unit selection: - Expert list: 1 Factory setting - [ms]
Description:	Displays the effective integral time of the velocity controller.		
p1470[0...n]	Speed controller encoderless operation P gain / n_ctrl SL Kp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00000 [Nms/rad]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: 17_1 Scaling: - Max 999999.00000 [Nms/rad]	Access level: 2 Func. diagram: 5210 Unit selection: p0505 Expert list: 1 Factory setting 0.30000 [Nms/rad]
Description:	Sets the P gain for encoderless operation for the speed controller.		
Note:	When automatically calculating the speed controller, only the motor moment of inertia is taken into account (p0341). For higher load moments of inertia (p0342 > 1 or p1498 > 0), you are advised to check the speed controller gain.		
p1470[0...n]	Velocity controller encoderless operation P gain / v_ctrl SLVC Kp		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00000 [Ns/m]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: 24_2 Scaling: - Max 999999.00000 [Ns/m]	Access level: 2 Func. diagram: 5210 Unit selection: p0505 Expert list: 1 Factory setting 10.00000 [Ns/m]
Description:	Sets the P gain for encoderless operation for the velocity controller.		
Note:	When automatically calculating the velocity controller, only the motor inertia is taken into account (p0341). For higher inertias (p0342 > 1 or p1498 > 0), you are advised to check the velocity controller gain.		
p1470[0...n]	Speed controller encoderless operation P gain / n_ctrl SL Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00000	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 999999.00000	Access level: 2 Func. diagram: 6040, 6050 Unit selection: - Expert list: 1 Factory setting 0.30000
Description:	Sets the P gain for encoderless operation for the speed controller.		
Dependency:	For p0528 = 1, the speed controller gain is represented without any dimensions.		
Note:	The product p0341 x p0342 is taken into account when automatically calculating the speed controller (p0340 = 1, 3, 4).		

2 Parameters

2.2 List of parameters

p1472[0...n]	Speed controller encoderless operation integral time / n_ctrl SL Tn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100000.0 [ms]	Access level: 2 Func. diagram: 5210 Unit selection: - Expert list: 1 Factory setting 20.0 [ms]
Description:	Set the integral time for encoderless operation for the speed controller.		
p1472[0...n]	Velocity controller encoderless operation integral time / v_ctrl SLVC Tn		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100000.0 [ms]	Access level: 2 Func. diagram: 5210 Unit selection: - Expert list: 1 Factory setting 20.0 [ms]
Description:	Set the integral time for encoderless operation for the velocity controller.		
p1472[0...n]	Speed controller encoderless operation integral time / n_ctrl SL Tn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 100000.0 [ms]	Access level: 2 Func. diagram: 6040, 6050 Unit selection: - Expert list: 1 Factory setting 20.0 [ms]
Description:	Set the integral time for encoderless operation for the speed controller.		
Note:	The integral component is stopped if the complete controller output or the sum of controller output and torque precontrol reach the torque limit.		
p1475[0...n]	Velocity controller loop gain / v_ctrl loop_gain		
HLA	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [mm/Vmin]	Calculated: CALC_MOD_EQU Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 20000.0 [mm/Vmin]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [mm/Vmin]
Description:	Sets the loop gain of the velocity controller.		
p1475[0...n]	CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2003 Max -	Access level: 3 Func. diagram: 6040 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the torque setting value when starting up with motor holding brake.		
Recommendation:	The offset for the torque limiting p1532 can be used as torque setting value. Sensorless vector control: To hold the actual torque when stopping the motor, you are advised to set p1400.1 = 1. As a result, the integral component of the speed controller is frozen when changing to the open-loop controlled operating range.		
Dependency:	The switching in of the torque setting value for the motor holding brake has a higher priority than the setting of the integrator value using p1477 and p1478.		

Note: The setting of the integral output of the speed controller begins after magnetizing (see p0346, r0056.4) and ends at the end of the brake control opening time p1216.
A setting value of zero means that no setting procedure will take place.

p1476[0...n]	BI: Velocity controller hold integrator / v_ctrl integ stop		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -

	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the integrator setting value for the velocity controller.
The signal to set this integrator setting value is interconnected via p1477.

Dependency: The setting value of the speed controller integrator is weighted with the scaling factor of the signal source in p1479.
If p1478 is interconnected to the integral output of the speed controller (r1482), then after the magnetizing time (r0346) and if the speed controller is enabled, the integral component of the controller is set to the last value before the pulse inhibit. This value is set if no setting command (p1477) is interconnected or, at the instant that the pulses were inhibited, a setting command is available, which is not deactivated up to the next time that the pulses are inhibited. For sensorless vector control, in addition p1400.1 should be set to 1 so that when the drive is stopped, the integral component of the speed controller is not controlled down to zero.

In order that when setting the integrator output, only the static torque is detected, we recommend that the accelerating torque is completely precontrolled (e.g. p1496).

If p1478 is interconnected to another output other than r1482, then after magnetizing and speed controller enable, the integral output is set once if the setting command is not interconnected (p1477 = 0).

Refer to: p1477, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1479[0...n]	CI: Speed controller integrator setting value scaling / n_ctrl I_val scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for scaling the integrator setting value (p1478) of the speed controller.

Dependency: Refer to: p1477, p1478

	- [%]	- [%]	- [%]
Description:	Display and connector output for the percentage Kp adaptation of the speed controller.		
Dependency:	Refer to: p1460, p1461, p1464, p1465		
Note:	The value is referred to the set proportional gain (p1460).		
r1484	CO: Velocity controller Kp adaptation as percentage / v_ctrl Kp adpt %		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5040, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for the percentage Kp adaptation of the velocity controller.		
Dependency:	Refer to: p1460, p1461, p1464, p1465		
Note:	The value is referred to the set proportional gain (p1460).		
p1486[0...n]	CI: Droop compensation torque / Droop M_comp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the compensation torque to be output within the droop calculation. This parameter should be interconnected with the torque setpoint of the drive (corresponding to the selection p1488), with which load equalization should be performed.		
p1487[0...n]	Droop compensation torque scaling / Droop M_comp scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-2000.0 [%]	2000.0 [%]	100.0 [%]
Description:	Sets the scaling for the compensation torque within the droop calculation.		

p1488[0...n]	Droop input source / Droop input source		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: 6030 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the source for droop feedback. With increasing torque, the speed setpoint is reduced (enabled using p1492), so that for mechanically coupled drives a load equalization (load compensation) is obtained. A load difference compensation is also possible, if p1486 is interconnected with the torque setpoint of the other drive.		
Value:	0: Droop feedback not connected 1: Droop from torque setpoint 2: Droop from speed controller output 3: Droop from integral output speed controller		
Dependency:	Refer to: p1486, p1487, p1489, r1490, p1492		
Caution: 	For active acceleration precontrol of the speed controller (refer to p1496), it is not recommended that p1488 is set to 1, as this could result in positive coupling effects. Instead of this, as source of the droop feedback, the output signal of the speed controller should be used, which generally sets the load torque.		
p1489[0...n]	Droop feedback scaling / Droop scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 0.500	Access level: 3 Func. diagram: 6030 Unit selection: - Expert list: 1 Factory setting 0.050
Description:	Sets the scaling for the droop feedback		
Dependency:	Refer to: p1486, p1487, p1488, r1490, p1492		
Note:	Example: A value of 0.05 means that for a torque equal to the rated motor torque, the rated motor speed is reduced by 5 %.		
r1490	CO: Droop feedback speed reduction / Droop n_reduction		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 6030 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the output signal of the droop calculation. The droop feedback result is subtracted from the speed setpoint when activated (p1492).		
Dependency:	Refer to: p1486, p1487, p1488, p1489, p1492		
p1492[0...n]	BI: Droop feedback enable / Droop enable		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2520, 6030 Unit selection: - Expert list: 1 Factory setting 0
Description:	Enables the droop to be applied to the speed/velocity setpoint.		
Dependency:	Refer to: p1486, p1487, p1488, p1489, r1490		

2 Parameters

2.2 List of parameters

Note: Even when not enabled, the droop speed is calculated but not subtracted from the setpoint speed. This makes it possible to subtract the result of this calculation from the speed of another drive.

r1493	CO: Moment of inertia total / M_inert total		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [kgm ²]	Calculated: - Dyn. index: - Unit group: 25_1 Scaling: - Max - [kgm ²]	Access level: 3 Func. diagram: 5042, 5210 Unit selection: p0100 Expert list: 1 Factory setting - [kgm ²]
Description:	Display and connector output for the parameterized total moment of inertia. The value is calculated as follows: (p0341 * p0342) + p1498 The scaling is not take into account using p1497. When the "moment of inertia estimator" is activated (r0108.10 = 1, p1400.18 = 1) and scaling is deactivated (CI: p1497 = 1), the following applies: The currently estimated value of the moment of inertia estimator is displayed in this parameter.		
Dependency:	Refer to: p1300, p1402, p1404, p1497		
Note:	The parameterized total moment of inertia, taking into account p1497, influences the torque precontrol. In encoderless operation or when the torque-speed precontrol with encoder (p1402.4 = 1) is activated, then torque-speed precontrol is activated.		

r1493	CO: Total mass / Total mass		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [kg]	Calculated: - Dyn. index: - Unit group: 27_1 Scaling: - Max - [kg]	Access level: 3 Func. diagram: 5042, 5210 Unit selection: p0100 Expert list: 1 Factory setting - [kg]
Description:	Display and connector output for the parameterized total mass. The value is calculated as follows: (p0341 * p0342) + p1498 The scaling is not take into account using p1497. When the "moment of inertia estimator" is activated (r0108.10 = 1, p1400.18 = 1) and scaling is deactivated (CI: p1497 = 1), the following applies: The currently estimated value of the moment of inertia estimator is displayed in this parameter.		
Dependency:	Refer to: p1300, p1402, p1404, p1497		
Note:	The parameterized total mass, taking into account p1497, influences the force-velocity precontrol. In encoderless operation or when the force-velocity precontrol with encoder (p1402.4 = 1) is activated, then torque-velocity precontrol is activated.		

r1493	CO: Moment of inertia total, scaled / M_inert tot scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [kgm ²]	Calculated: - Dyn. index: - Unit group: 25_1 Scaling: - Max - [kgm ²]	Access level: 3 Func. diagram: 6031 Unit selection: p0100 Expert list: 1 Factory setting - [kgm ²]
Description:	Display and connector output for the parameterized total moment of inertia. The value is calculated as follows: (p0341 * p0342) + p1496 The scaling is not take into account using p1497.		

p1494[0...n]	Velocity controller integrator feedback time constant / v_ctr integ_fdbkTc		
HLA	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the time constant of the PT1 filter for integrator feedback. The integrator of the velocity controller is re-parameterized to become a PT1 filter through a feedback element (1st Order low pass filter characteristics). The following applies: p1494 < 0.25 (2 x p0115[1]) --> the PT1 filter is not active - the pure integrator is effective. p1494 >= 0.25 (2 x p0115[1]) --> the PT1 filter is active and has replaced the pure integrator.		
Dependency:	Refer to: p1495		
Note:	Applications: Motion at zero setpoint and dominant stiction can be suppressed but this has a negative impact on the remaining setpoint-actual value difference. This can be used, for example, to avoid oscillation of a position-controlled axis at standstill (stick-slip effect) or overshoot when traversing (moving) in micrometer steps.		

p1494[0...n]	Speed controller integrator feedback time constant / n_ctr integ_fdbkTc		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the time constant of the PT1 filter for integrator feedback. The integrator of the speed controller is re-parameterized to become a PT1 filter through a feedback element (1st Order low pass filter characteristics). The following applies: p1494 < 2 x p0115[1] --> the PT1 filter is not active - the pure integrator is effective. p1494 >= 2 x p0115[1] --> the PT1 filter is active and has replaced the pure integrator.		
Note:	Applications: Motion at zero setpoint and dominant stiction can be suppressed but this has a negative impact on the remaining setpoint-actual value difference. This can be used, for example, to avoid oscillation of a position-controlled axis at standstill (stick-slip effect) or overshoot when traversing (moving) in micrometer steps. Also prevents tension/stressing for axes that are mechanically and rigidly coupled with one another (e.g. for synchronous spindles, master - slave axes).		

p1494[0...n]	Velocity controller integrator feedback time constant / v_ctr integ_fdbkTc		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042, 5210
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the time constant of the PT1 filter for integrator feedback. The integrator of the velocity controller is re-parameterized to become a PT1 filter through a feedback element (1st Order low pass filter characteristics). The following applies: p1494 < 0.25 (2 x p0115[1]) --> the PT1 filter is not active - the pure integrator is effective. p1494 >= 0.25 (2 x p0115[1]) --> the PT1 filter is active and has replaced the pure integrator.		

2 Parameters

2.2 List of parameters

Note: Applications:
Motion at zero setpoint and dominant stiction can be suppressed but this has a negative impact on the remaining setpoint-actual value difference. This can be used, for example, to avoid oscillation of a position-controlled axis at standstill (stick-slip effect) or overshoot when traversing (moving) in micrometer steps.
Also prevents tension/stressing for axes that are mechanically and rigidly coupled with one another (e.g. for synchronous spindles, master - slave axes).

p1495[0...n]	Integrator feedback velocity threshold / Integ_fdbk v_thr		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4965
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [m/min]	120000.000 [m/min]	0.010 [m/min]
Description:	Sets the velocity threshold for the integrator feedback.		
Dependency:	Refer to: p1494		

p1495[0...n]	CI: Acceleration precontrol / a_prectrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2007	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the acceleration precontrol.		
Dependency:	The signal source for the acceleration is activated with p1400.2 = 1. For p1400.2 = 0, the acceleration precontrol is calculated from the speed setpoint change from r0062. For p1400.2 = 0 and activate reference model (p1400.3 = 1) the acceleration precontrol is switched out. Refer to: p1400, p1496		
Note:	If the acceleration is entered as external signal, then the accelerating torque is calculated as follows (r1518): $r1518 = \text{acceleration (\% of p2007)} / 100 \% * (p2007 * 60 \text{ s}) / p0311 * r0345 / 1 \text{ s} * r0333$ or $p1518 = \text{acceleration (1/s*s)} * 2 * \text{Pi} * r1493$		

p1496[0...n]	Acceleration precontrol scaling / a_prectrl scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	10000.0 [%]	0.0 [%]
Description:	Sets the scaling for the acceleration precontrol of the speed/velocity controller.		
Dependency:	When the reference model is activated (p1400.3 = 1) and for an internal acceleration precontrol (p1400.2 = 0), the acceleration precontrol is switched out (disabled). The reference model (p1400.3 = 1) and external acceleration precontrol (p1400.2 = 1) can be operated together. Refer to: p0341, p0342		

Warning:  The acceleration precontrol r1518 is kept at the old value if the ramp-function generator tracking (r1199.5) is active or the ramp-function generator output is set (r1199.3). This is used to avoid torque peaks. Depending on the application, it may therefore be necessary to disable the ramp-function generator tracking (p1145 = 0) or the acceleration precontrol (p1496 = 0).

The acceleration precontrol is set to zero, if the Vdc control is active (r0056.14/15).

Note: The parameter is set to 100% by the rotating measurement (refer to p1960).
The acceleration precontrol may not be used if the speed setpoint manifests significant ripple (e.g. analog setpoint) and the rounding-off in the speed ramp-function generator is disabled.
We also recommend that the precontrol mode is not used if there is gearbox backlash.

p1497[0...n]	CI: Moment of inertia scaling signal source / M_inert scal s_s		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32	Calculated: - Dyn. index: CDS, p0170	Access level: 3 Func. diagram: 5042, 5210, 6030, 6031
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: PERCENT	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting 1

Description:

Sets the signal source for scaling the motor moment of inertia.

Notice:

This parameter has no effect when the "moment of inertia estimator" function is active (r0108.10 = 1, p1400.18 = 1).

p1497[0...n]	CI: Mass scaling signal source / Mass scal s_s		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32	Calculated: - Dyn. index: CDS, p0170	Access level: 3 Func. diagram: 5042, 5210
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: PERCENT	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting 1

Description:

Sets the signal source for scaling the motor mass.

Notice:

This parameter has no effect when the "moment of inertia estimator" function is active (r0108.10 = 1, p1400.18 = 1).

p1497[0...n]	CI: Moment of inertia scaling signal source / M_inert scal s_s		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32	Calculated: - Dyn. index: CDS, p0170	Access level: 3 Func. diagram: 5042, 5210, 6030, 6031
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: PERCENT	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting 1

Description:

Sets the signal source for scaling the motor moment of inertia.

p1498[0...n]	Load mass / Load mass		
HLA	Can be changed: U, T Data type: FloatingPoint32	Calculated: - Dyn. index: DDS, p0180	Access level: 3 Func. diagram: -
	P-Group: Closed-loop control Not for motor type: -	Unit group: 27_1 Scaling: -	Unit selection: p0100 Expert list: 1
	Min 0.00000 [kg]	Max 100000.00000 [kg]	Factory setting 0.00000 [kg]

Description:

Sets the load mass.

Note:

p0341 + p1498 influence the calculation of the natural frequencies (p0352 ... p0354), of the force offset (p1532) and of the velocity controller (p1460 ... p1467) for p0340.1 = 1 or p3900 = 3.

p1498[0...n]	Load moment of inertia / Load m_inert		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32	Calculated: - Dyn. index: DDS, p0180	Access level: 3 Func. diagram: 5042, 5210
	P-Group: Closed-loop control Not for motor type: -	Unit group: 25_1 Scaling: -	Unit selection: p0100 Expert list: 1
	Min - [kgm ²]	Max - [kgm ²]	Factory setting - [kgm ²]

Description:

Sets the load moment of inertia.

Note:

(p0341 * p0342) + p1498 influence the speed/torque precontrol (active in encoderless operation or for p1402.4 = 1).

2 Parameters

2.2 List of parameters

p1498[0...n]	Load mass / Load mass		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [kg]	Calculated: - Dyn. index: DDS, p0180 Unit group: 27_1 Scaling: - Max - [kg]	Access level: 3 Func. diagram: 5042, 5210 Unit selection: p0100 Expert list: 1 Factory setting - [kg]
Description:	Sets the load mass.		
Note:	(p0341 * p0342) + p1498 influence the velocity/force precontrol (active in encoderless operation or for p1402.4 = 1).		
p1498[0...n]	Load moment of inertia / Load m_inert		
VECTOR (J_estimator / OBT, n/M), VECTOR_AC (J_estimator / OBT, n/M), VECTOR_I_AC (J_estimator / OBT, n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00000 [kgm ²]	Calculated: - Dyn. index: DDS, p0180 Unit group: 25_1 Scaling: - Max 100000.00000 [kgm ²]	Access level: 3 Func. diagram: 6031 Unit selection: p0100 Expert list: 1 Factory setting 0.00000 [kgm ²]
Description:	Sets the load moment of inertia.		
Note:	(p0341 * p0342) + p1498 influence the speed/torque precontrol (active in encoderless operation or for p1402.4 = 1).		
p1499[0...n]	Accelerating for torque control scaling / a for M_ctrl scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 400.0 [%]	Access level: 3 Func. diagram: 6030 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the scaling for the acceleration integrator at low speeds (only for encoderless torque control).		
Dependency:	Refer to: p0341, p0342		
p1500[0...n]	Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set		
SERVO, VECTOR, SERVO_AC, VECTOR_AC, SERVO_I_AC, VECTOR_I_AC	Can be changed: C2(1), T Data type: Unsigned32 P-Group: Commands Not for motor type: REL Min 0	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Runs the corresponding macro files. The Connector Inputs (CI) for the torque setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected. The selected macro file must be available on the memory card/device memory. Example: p1500 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0015, p0700, p1000, r8573		
Notice:	No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group! When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8573. r8573 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product. CI: Connector Input		

p1500[0...n]	Macro Connector Inputs (CI) for force setpoints / Macro CI F_set		
SERVO (Lin), HLA, SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: C2(1), T Data type: Unsigned32 P-Group: Commands Not for motor type: REL Min 0	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Runs the corresponding macro files. The connector inputs (CI) for the force setpoints of the appropriate command data set (CDS) are appropriately interconnected. The selected macro file must be available on the memory card/device memory. Example: p1500 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0015, p0700, p1000, r8573		
Notice:	No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group! When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8573. r8573 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product. CI: Connector Input		
p1501[0...n]	BI: Change over between closed-loop speed/torque control / Chgov n/M_ctrl		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2520, 6020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for toggling between speed and torque control. 0 signal: Closed-loop speed control 1 signal: Closed-loop torque control		
Dependency:	The input connectors to enter the torque are provided using p1511, p1512 and p1513. Refer to: p1300		
Notice:	If the closed-loop torque control is not activated (p1300) and a change is made to closed-loop torque control (p1501), OFF1 (p0840) does not have its own braking response but pulse suppression when standstill is detected (p1226, p1227).		
Note:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p1501[0...n]	BI: Change over velocity/force control / Chgov n/F_ctrl		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2520, 6020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for toggling between velocity and force control. 0 signal: Velocity control 1 signal: Force control		
Dependency:	The input connectors to enter the force are provided using p1511, p1512 and p1513. Refer to: p1300		
Notice:	If the closed-loop force control is not activated (p1300) and a change is made to closed-loop force control (p1501), OFF1 (p0840) does not have its own braking response but pulse suppression when standstill is detected (p1226, p1227).		

2 Parameters

2.2 List of parameters

p1502[0...n]	BI: Freeze moment of inertia estimator / J_estimator freeze		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to freeze the estimated moment of inertia. 0 signal: Moment of inertia estimator active 1 signal: Determined moment of inertia frozen.		
Dependency:	Refer to: p1300		
Note:	Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1) and p1400.18 =1.		
<hr/>			
p1502[0...n]	BI: Freeze moment of inertia estimator / J_estimator freeze		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to freeze the estimated moment of inertia. 0 signal: Moment of inertia estimator active 1 signal: Determined moment of inertia frozen.		
Dependency:	Refer to: p1300		
Note:	Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1) and p1400.18 =1. For operation with encoder, p1400.23 must also be set to 1.		
<hr/>			
p1503[0...n]	CI: Torque setpoint / M_set		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the torque setpoint for torque control.		
Note:	A change is made to closed-loop torque control if, in p1300, closed-loop torque control was selected or if the selection was made using the changeover source in p1501. it is also possible to change over in operation using p1501.		

p1505	CI: Force actual value signal source / F_act s_s		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the force actual value. The reference value for 100 % is set in p1506.		
Dependency:	Refer to: p1506		

p1506	Force actual value reference value for 100% for p1505 / F_act ref 100%		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Nm]	20000000.0 [Nm]	0.0 [Nm]
Description:	Sets the reference value for the force actual value for 100 % for p1505. This value is only active if p1505 is interconnected.		
Dependency:	Refer to: p1505		
Caution:	 <p>The force actual value sign must be correctly selected in order that the force control loop is stable. When pressing, the force actual value must increase if the valve voltage before the inversion r0070 increases and p1821 is = 0. If necessary, the sign must be inverted using p4067 of the TM31, TM41 or TB30. To check the control sense of the force controller, it is recommended to temporarily limit the valve output voltage to low values via p1850 and p1851.</p>		
Note:	The force actual value is measured via an analog input of a TM31, TM41 or TB30. The offset or the mapping of voltage and current as percentage is parameterized using p4063 or p4057 - p4060 of the TM31, TM41 or TB30, and output p4055 interconnected to p1505 of the hydraulic drive.		

r1508	CO: Torque setpoint before supplementary torque / M_set bef M_suppl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6030, 6060, 6722
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the torque setpoint before entering the supplementary torque. For closed-loop speed control, r1508 corresponds to the speed controller output; for closed-loop torque control, r1508 corresponds to the torque setpoint of the signal source assigned in p1503.		

r1509	CO: Torque setpoint before torque limiting / M_set before M_lim		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5019, 5060, 5610
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the total torque setpoint before torque limiting. The value is the sum of the controller output, supplementary torque and where relevant precontrol torque, operation without encoder.		

2 Parameters

2.2 List of parameters

r1509	CO: Force setpoint before force limiting / F_set before F_lim		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [N]	Calculated: - Dyn. index: - Unit group: 8_1 Scaling: p2003 Max - [N]	Access level: 3 Func. diagram: 5019, 5060, 5610 Unit selection: p0505 Expert list: 1 Factory setting - [N]
Description:	Display and connector output for the total force setpoint before force limiting. The value is the sum of the controller output, supplementary force and where relevant precontrol force, operation without encoder.		
p1511[0...n]	CI: Force setpoint / F_set		
HLA	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2003 Max -	Access level: 3 Func. diagram: 4970 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the force setpoint. The force setpoint can be scaled using p1512 and is only effective for p1400.14 = 1.		
Dependency:	Refer to: p1400, p1512		
p1511[0...n]	CI: Supplementary torque 1 / M_suppl 1		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2003 Max -	Access level: 3 Func. diagram: 5060 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for supplementary torque 1.		
p1511[0...n]	CI: Supplementary force 1 / F_suppl 1		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2003 Max -	Access level: 3 Func. diagram: 5060 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for supplementary force 1.		
p1511[0...n]	CI: Supplementary torque 1 / M_suppl 1		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: p2003 Max -	Access level: 3 Func. diagram: 6020, 6060 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for supplementary torque 1.		

p1512[0...n]	CI: Force setpoint scaling / F_set scal		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for scaling the force setpoint via p1511.		
Dependency:	Refer to: p1400, p1511		
p1512[0...n]	CI: Supplementary torque 1 scaling / M_suppl 1 scal		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5060, 6060

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100.00 [ms]	4.00 [ms]
Description:	Sets the smoothing time constant of the accelerating force.		
Note:	For servo drives, the following applies: - For p1402.4 = 1, the highest dynamic performance is achieved with p1517 = 0 ms. - in encoderless operation, p1517 should be set >= 0.5 ms.		
r1518[0...1]	CO: Accelerating torque / M_{accel}		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5042, 5210
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the accelerating torque to precontrol the speed controller for torque-speed precontrol (p1402.4 = 1) or in encoderless operation.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p0341, p0342, p1300, p1402, r1493, p1497, p1498		

2 Parameters

2.2 List of parameters

r1518[0...1]	CO: Accelerating force / F_accel		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5042, 5210
	P-Group: Closed-loop control	Unit group: 8_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [N]	- [N]	- [N]
Description:	Displays the accelerating torque to precontrol the velocity controller for force- velocity precontrol (p1402.4 = 1) or in encoderless operation.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p0341, p0342, p1300, p1402, r1493, p1497, p1498		
r1518[0...1]	CO: Accelerating torque / M_accel		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the accelerating torque for precontrol of the speed controller.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p0341, p0342, p1496		
p1520[0...n]	CO: Force limit upper/motoring / F_max upper/mot		
HLA	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: 8_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-1000000.00 [N]	20000000.00 [N]	0.00 [N]
Description:	Sets the fixed upper or force limit when motoring.		
Dependency:	Refer to: p0500, p1521, p1522, p1523, p1532, r1538, r1539		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1520[0...n]	CO: Torque limit upper/motoring / M_max upper/mot		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5620, 5630
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-1000000.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]
Description:	Sets the fixed upper torque limit or the torque limit when motoring.		
Dependency:	p1400.4 = 0: upper/lower p1400.4 = 1: motoring / regenerating Refer to: p0500, p1521, p1522, p1523, p1532, r1538, r1539		
Danger:	For p1400.4 = 0 (torque limiting, upper/lower) the following applies: Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.		
			
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1520[0...n]	CO: Force limit upper/motoring / F_max upper/mot		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5620, 5630
	P-Group: Closed-loop control	Unit group: 8_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min -1000000.00 [N]	Max 20000000.00 [N]	Factory setting 0.00 [N]
Description:	Sets the fixed upper or force limit when motoring.		
Dependency:	p1400.4 = 0: upper/lower p1400.4 = 1: motoring / regenerating Refer to: p0500, p1521, p1522, p1523, p1532, r1538, r1539		
Danger: 	For p1400.4 = 0 (torque limiting, upper/lower) the following applies: Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1520[0...n]	CO: Torque limit upper / M_max upper		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6630
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min -1000000.00 [Nm]	Max 20000000.00 [Nm]	Factory setting 0.00 [Nm]
Description:	Sets the fixed, upper torque limit.		
Dependency:	Refer to: p1521, p1522, p1523, r1538, r1539		
Danger: 	Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).		
p1521[0...n]	CO: Force limit lower/regenerative / F_max lower/reg		
HLA	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: 8_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min -20000000.00 [N]	Max 1000000.00 [N]	Factory setting 0.00 [N]
Description:	Sets the fixed lower or force limit when regenerating.		
Dependency:	Refer to: p1520, p1522, p1523, p1532		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	2902[12]
Description:	Sets the signal source for the lower or torque/force limit when regenerating.		
Dependency:	Refer to: p1520, p1521, p1522, p1532		

p1523[0...n]	CI: Torque limit lower/regenerative / M_max lower/reg		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5609, 5620, 5630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	1521[0]
Description:	Sets the signal source for the lower or torque/force limit when regenerating.		
Dependency:	p1400.4 = 0: upper/lower p1400.4 = 1: motoring / regenerating Refer to: p1520, p1521, p1522, p1532		

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:
Positive values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.

p1523[0...n]	CI: Force limit lower/regenerative / F_max lower/reg		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5609, 5620, 5630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	1521[0]

Description: Sets the signal source for the lower or torque/force limit when regenerating.

Dependency: p1400.4 = 0: upper/lower
p1400.4 = 1: motoring / regenerating
Refer to: p1520, p1521, p1522, p1532

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:
Positive values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.

p1523[0...n]	CI: Torque limit lower / M_max lower		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6630

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min -100000.00 [kW]	Max -0.01 [kW]	Factory setting -0.01 [kW]
Description:	Sets the regenerative power limit.		
Dependency:	Refer to: p0500, p1530		
Note:	The power limit is limited to 300% of the rated motor power. For power units without regenerative feedback into the line supply, the regenerative power limit is pre-set to 30% of the motoring power limit p1530 and in the ratio rated drive converter power to rated motor power. If a braking resistor is connected to the DC link, then the power limit can be correspondingly increased.		
p1532[0...n]	CO: Force offset, force limit / F_max offset		
HLA	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: 8_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min -100000.00 [N]	Max 100000.00 [N]	Factory setting 0.00 [N]
Description:	Sets the force offset for the force limit.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1532[0...n]		CO: Torque limit offset / M_max offset	
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5620, 5630, 5650, 7010, 8012
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-100000.00 [Nm]	100000.00 [Nm]	0.00 [Nm]
Description:	Sets the torque offset for the torque limit. The setting allows electronic weight equalization to be used for vertical axes.		
Recommendation:	The torque offset can also be used for torque precontrol or as integrator setting value for the speed controller.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529		
Danger:	If the offset is set higher/lower than the lower/upper torque limit, then the unloaded drive can accelerate up to the maximum speed.		
			
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1532[0...n]		CO: Force offset, force limit / F_max offset	
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3

	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	65535 [%]	100 [%]
Description:	Sets the evaluation for the torque/force reduction when traversing to a fixed stop.		
Dependency:	Refer to: p1528, p1529, p1542, r1543, p1545		
Note:	4000 hex (16384 dec) in the MOMRED control word corresponds to a reduction by the percentage specified in this parameter.		

p1545[0...n]	BI: Activates travel to a fixed stop / TfS activation		
HLA	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2520, 3617, 8012
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to activate/deactivate the "travel to fixed stop" function 1: Travel to fixed stop is active 0: Travel to fixed stop is inactive		
Dependency:	Refer to: p1542, r1543, p1544		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p1545[0...n]	BI: Activates travel to a fixed stop / TfS activation		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2520, 3617, 8012
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	[0] 0 [1] 0
Description:	Sets the signal source to activate/deactivate the "travel to fixed stop" function 1: Travel to fixed stop is active 0: Travel to fixed stop is inactive		
Dependency:	Refer to: p1542, r1543, p1544		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

2 Parameters

2.2 List of parameters

p1545[0...n]	BI: Activates travel to a fixed stop / TfS activation		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2520, 3617, 8012 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to activate/deactivate the "travel to fixed stop" function 1: Travel to fixed stop is active 0: Travel to fixed stop is inactive		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	EPOS uses the parameter (refer to p2686). When traveling to fixed stop, the fault F07900 "motor blocked" is suppressed.		
p1546	Speed threshold motoring/regenerating / n_thr mot/reg		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 20.00 [rpm]
Description:	Sets the speed threshold for the motoring/regenerative limit. For speeds where the absolute value is less than p1546, then the following applies: - For p1400.13 = 0: Motoring limit (speed threshold is compared to the speed actual value). - For p1400.13 = 1: Regenerative limiting (speed threshold is compared to the speed setpoint).		
p1546	Velocity threshold motoring/regenerative / v_thr mot/reg		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [m/min]	Calculated: - Dyn. index: - Unit group: 4_1 Scaling: - Max 1000.00 [m/min]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.20 [m/min]
Description:	Sets the velocity threshold for the motoring/regenerative limit. For velocities where the absolute value is less than p1546, then the following applies: - For p1400.13 = 0: Motoring limit (velocity threshold is compared to the velocity actual value). - For p1400.13 = 1: Regenerative limiting (velocity threshold is compared to the velocity setpoint).		
r1547[0...1]	CO: Torque limit for speed controller output / M_max outp n_ctrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min - [Nm]	Calculated: - Dyn. index: - Unit group: 7_1 Scaling: p2003 Max - [Nm]	Access level: 3 Func. diagram: 6060 Unit selection: p0505 Expert list: 1 Factory setting - [Nm]
Description:	Displays the torque limit to limit the speed controller output.		
Index:	[0] = Upper limit [1] = Lower limit		

r1548[0...1]	CO: Stall current limit torque-generating maximum / Isq_max stall		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -

	P-Group: Displays, signals	Unit group: 14_8	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Displays the instantaneous stall power.		
Index:	[0] = Actual stall power value [1] = Stall power correction value		
Dependency:	Refer to: p0326		
Note:	The stall power is influenced by p0326, p0353, p0354 and p0356.		
p1550[0...n]	BI: Transfer actual torque as torque offset / Accept act torque		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	9718.23
Description:	For a positive edge, the actual torque (r0079[0]) at this instant in time is used instead of the torque offset from p1532 as long as p1550 remains at 1.		

2 Parameters

2.2 List of parameters

p1550[0...n]	BI: Transfer actual force as force offset / Accept act force		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	9718.23
Description:	For a positive edge, the actual force (r0079[0]) at this instant in time is used instead of the force offset from p1532 as long as p1550 remains at 1.		

p1551[0...n]	BI: Torque limit variable/fixed signal source / M_lim var/fix s_s		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 5620, 5630, 6060, 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source to change over the torque limits between variable and fixed torque limit. BI: p1551 = 1 signal: The variable torque limit applies (fixed torque limit + scaling). BI: p1551 = 0 signal: The fixed torque limit applies. Example: In order that for a Quick Stop (OFF3) the fixed torque limit is effective, binector input: p1551 must be interconnected to r0899.5.		

p1551[0...n]	BI: Force limit variable/fixed signal source / F_lim var/fix s_s		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 5620, 5630, 6060, 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source to change over the force limits between variable and fixed force limit. BI: p1551 = 1 signal: The variable force limit applies (fixed force limit + scaling). BI: p1551 = 0 signal: The fixed force limit applies. Example: In order that for a Quick Stop (OFF3) the fixed force limit is effective, binector input: p1551 must be interconnected to r0899.5.		

p1552[0...n]	Stiction velocity threshold / Stiction v_thr		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: 4_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [m/min]	10.000 [m/min]	0.010 [m/min]
Description:	Sets the velocity threshold for the stiction.		

p1552[0...n]	CI: Torque limit upper scaling without offset / M_max up w/o offs		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output without taking into account the current and power limits.		
Notice:	Speed controller limiting is only active if a BICO interconnection is set for connector input p1552 or p1554, (different to the factory setting).		

p1552[0...n]	CI: Force limit upper scaling without offset / F_max up w/o offs		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the upper force limiting to limit the velocity controller output without taking into account the current and power limits.		
Notice:	Speed controller limiting is only active if a BICO interconnection is set for connector input p1552 or p1554, (different to the factory setting).		

p1552[0...n]	CI: Torque limit upper scaling without offset / M_max up w/o offs		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output without taking into account the current and power limits.		

p1553[0...n]	Stall limit scaling / Stall limit scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	80.0 [%]	130.0 [%]	100.0 [%]
Description:	Sets the scaling of the stall limit for the start of field weakening.		
Danger:	If the stall current limit is increased, then the q current setpoint can exceed the stall limit; as a consequence, a hysteresis effect can occur when loading and unloading.		
			

2 Parameters

2.2 List of parameters

p1554[0...n]	Stiction shutdown rate action / Stict shutdown		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	3.0 [%]	100.0 [%]	40.0 [%]
Description:	Sets the shutdown rate time for the stiction compensation. The force controller is shut down via the shutdown rate time somewhat before reaching the force setpoint, so that the actuating time of the control valve does not result in an overshoot.		
Dependency:	Refer to: p1400, p1552, p1555, p1556		
p1554[0...n]	CI: Torque limit lower scaling without offset / M_max low w/o offs		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output without taking into account the current and power limits.		
Notice:	Speed controller limiting is only active if a BICO interconnection is set for connector input p1552 or p1554, (different to the factory setting).		
p1554[0...n]	CI: Force limit lower scaling without offset / F_max low w/o offs		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the lower force limiting to limit the velocity controller output without taking into account the current and power limits.		
Notice:	Speed controller limiting is only active if a BICO interconnection is set for connector input p1552 or p1554, (different to the factory setting).		
p1554[0...n]	CI: Torque limit lower scaling without offset / M_max low w/o offs		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output without taking into account the current and power limits.		

p1555[0...n]	Stiction force velocity positive / Stiction F v pos		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: 8_2	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100000000.0 [N]	100000000.0 [N]	0.0 [N]
Description:	Sets the force for positive velocity for the stiction compensation.		
Dependency:	Refer to: p1400, p1552, p1554, p1556		

p1555[0...n]	CI: Power limit / P_max		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6640
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the motoring and negative regenerative power limit.		
Dependency:	Refer to: p1530, p1531		
Note:	The resulting motoring power limit is the minimum from p1530 and the signal which is read in. The resulting regenerative power limit is the maximum from p1531 and the negative signal which is read in.		

p1556[0...n]	Stiction force velocity negative / Stiction F v neg		
HLA	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4970
	P-Group: Closed-loop control	Unit group: 8_2	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100000000.0 [N]	100000000.0 [N]	0.0 [N]
Description:	Sets the force for negative velocity for the stiction compensation.		
Dependency:	Refer to: p1400, p1552, p1554, p1555		

p1556[0...n]	Power limit scaling / P_max scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6640
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	340.28235E36	0.00
Description:	Sets the scaling of the signal source for the motoring and negative regenerative power limit. A value of 0 means no power limiting.		

2 Parameters

2.2 List of parameters

p1558	Measure/precontrol hanging/suspended axis force due to weight / Meas/prectr weight		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1	1	0
Description:	Setting to start/reset the measurement of the force due to weight for a hanging/suspended axis. The measurement can be started when the pulses are inhibited or the pulses are enabled (p1558 = 1). If it was started when the pulses were inhibited, then it is only executed after the pulses have been enabled. In both cases, alarm A07991 is output after starting. For the measurement, the torque/force to hold the axis is determined and entered into p1532. Further, the BICO interconnection p1511 = p1532 for precontrol is established, and the precontrol channel scaling set to 100 % (p1512 = 1).		
Value:	-1: Reset values 0: Inactive 1: Start measurement and activate precontrol		
Dependency:	When selecting the measurement, the switchover of the drive data set is suppressed. The pulse enable is withdrawn at the end of the measurement. Refer to: p1511, p1512, p1532 Refer to: A07991		
Note:	For master control with speed setpoint input from the commissioning tool, torque precontrol channels p1511 and p1513 are deactivated, so that the weight equalization entered here is not active.		

p1560[0...n]	Moment of inertia estimator accelerating force threshold value / J_est F thr		
SERVO (J_estimator, J_estimator / OBT, Lin), SERVO_AC	Can be changed: U, T	Calculated: -	Access level: 3
(J_estimator, J_estimator / OBT, Lin), SERVO_I_AC	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
(J_estimator, J_estimator / OBT, Lin)	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [%]	100.00 [%]	10.00 [%]
Description:	Sets the threshold for the acceleration force of the moment of inertia estimator. The moment of inertia estimator is active above this threshold. The value is referred to the rated motor force (r0333).		
Dependency:	Refer to: p1400, p1561, p1562		
Note:	The moment of inertia estimation is inaccurate at very low accelerating forces. As a consequence, below this threshold, the estimator does not provide any new values.		

p1560[0...n]	Moment of inertia estimator accelerating torque threshold value / J_est M thr		
SERVO (J_estimator, J_estimator / OBT), VECTOR (J_estimator / OBT), SERVO_AC	Can be changed: U, T	Calculated: -	Access level: 3
(J_estimator, J_estimator / OBT), VECTOR_AC	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
(J_estimator, J_estimator / OBT), VECTOR_I_AC	P-Group: Motor	Unit group: -	Unit selection: -
(J_estimator, J_estimator / OBT)	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [%]	100.00 [%]	10.00 [%]
Description:	Sets the threshold for the accelerating torque for the moment of inertia estimator. The moment of inertia estimator is active above this threshold. The value is referred to the rated motor torque (r0333).		
Dependency:	Refer to: p1400, p1561, p1562		

Note: The moment of inertia estimation is inaccurate at very low accelerating torques. As a consequence, below this threshold, the estimator does not provide any new values.

p1561[0...n]	Inertia estimator change time high inertia mass / J_est t_chg M		
SERVO (J_estimator, J_estimator / OBT, Lin), SERVO_AC (J_estimator, J_estimator / OBT, Lin), SERVO_I_AC (J_estimator, J_estimator / OBT, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 10.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the change time for the moment of inertia for the moment of inertia estimator. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1562		
p1561[0...n]	Moment of inertia estimator change time moment of inertia / J_est t_chg J		
SERVO (J_estimator, J_estimator / OBT), VECTOR (J_estimator / OBT), SERVO_AC (J_estimator, J_estimator / OBT), VECTOR_AC (J_estimator / OBT), SERVO_I_AC (J_estimator, J_estimator / OBT), VECTOR_I_AC (J_estimator / OBT)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 10.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the change time for the moment of inertia for the moment of inertia estimator. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1562		
p1562[0...n]	Moment of inertia estimator change time load / J_est t load		
SERVO (J_estimator, J_estimator / OBT, Lin), SERVO_AC (J_estimator, J_estimator / OBT, Lin), SERVO_I_AC (J_estimator, J_estimator / OBT, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 5.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.00 [ms]
Description:	Sets the change time for the load force for the moment of inertia estimator. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1561		

2 Parameters

2.2 List of parameters

p1562[0...n]	Moment of inertia estimator change time load / J_est t load		
SERVO (J_estimator, J_estimator / OBT), VECTOR (J_estimator / OBT), SERVO_AC (J_estimator, J_estimator / OBT), VECTOR_AC (J_estimator / OBT), SERVO_I_AC (J_estimator, J_estimator / OBT), VECTOR_I_AC (J_estimator / OBT)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 5.00 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.00 [ms]
Description:	Sets the change time for the load torque for the moment of inertia estimator. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1561		
<hr/>			
p1563[0...n]	CO: Moment of inertia estimator load force positive direction / J_est F pos		
SERVO (J_estimator, J_estimator / OBT, Lin), SERVO_AC (J_estimator, J_estimator / OBT, Lin), SERVO_I_AC (J_estimator, J_estimator / OBT, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -340.28235E36 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: p2003 Max 340.28235E36 [N]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [N]
Description:	Display and connector output for the monitored load force in the positive traversing direction. The moment of inertia estimator estimates the load force drawn while the velocity is constant.		
Dependency:	Refer to: p1400, p1560, p1561		
<hr/>			
p1563[0...n]	CO: Mom. of inertia estimator load torque direction of rotation pos. / J_est M pos		
SERVO (J_estimator, J_estimator / OBT), VECTOR (J_estimator / OBT), SERVO_AC (J_estimator, J_estimator / OBT), VECTOR_AC (J_estimator / OBT), SERVO_I_AC (J_estimator, J_estimator / OBT), VECTOR_I_AC (J_estimator / OBT)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -340.28235E36 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: p2003 Max 340.28235E36 [Nm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Nm]
Description:	Display and connector output for the monitored load torque in the positive direction of rotation. The moment of inertia estimator estimates the load torque drawn while the speed is constant.		
Dependency:	Refer to: p1400, p1560, p1561		

p1564[0...n] CO: Moment of inertia estimator load force negative direction / J_est F neg

SERVO (J_estimator, J_estimator / OBT, Lin), SERVO_AC (J_estimator, J_estimator / OBT, Lin), SERVO_I_AC (J_estimator, J_estimator / OBT, Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -340.28235E36 [N]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: p2003 Max 340.28235E36 [N]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [N]
--	--	--	--

Description: Display and connector output for the monitored load force in the negative traversing direction.
The moment of inertia estimator estimates the load force drawn while the velocity is constant.

Dependency: Refer to: p1400, p1560, p1561

p1564[0...n] CO: Mom. of inertia estimator load torque direction of rotation neg. / J_est M neg

SERVO (J_estimator, J_estimator / OBT), VECTOR (J_estimator / OBT), SERVO_AC (J_estimator, J_estimator / OBT), VECTOR_AC (J_estimator / OBT), SERVO_I_AC (J_estimator, J_estimator / OBT), VECTOR_I_AC (J_estimator / OBT)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min -340.28235E36 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: p2003 Max 340.28235E36 [Nm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [Nm]
--	---	---	---

Description: Display and connector output for the monitored load torque in the negative direction of rotation.
The moment of inertia estimator estimates the load torque drawn while the speed is constant.

Dependency: Refer to: p1400, p1560, p1561

p1565 Moment of inertia estimator reset moment of inertia / J_est reset J

SERVO (J_estimator, J_estimator / OBT), VECTOR (J_estimator / OBT), SERVO_AC (J_estimator, J_estimator / OBT), VECTOR_AC (J_estimator / OBT), SERVO_I_AC (J_estimator, J_estimator / OBT), VECTOR_I_AC (J_estimator / OBT)	Can be changed: U, T Data type: Integer16 P-Group: Closed-loop control Not for motor type: REL Min -1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
--	---	--	---

Description: Setting to reset the moment of inertia estimator for the currently selected drive data set (DDS).

Value:
-1: Reset moment of inertia and load
0: Inactive
1: Reset moment of inertia

Dependency: Refer to: p1400, p1560, p1561, p1562, p1563, p1564

Note: The parameter is automatically reset to 0 after the reset.

r1566[0...n]	Flux reduction torque factor transition value / Flux red M trans		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6790
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	The following applies for a synchronous reluctance motor: Displays the transition value for the start of the evaluation of the optimum flux characteristic. The value is referred to the rated motor torque.		
Note:	The transition value corresponds with the lower limit of the flux setpoint (p1581). For a lower absolute torque setpoint, the flux setpoint remains at the lower limit (p1581).		
p1567[0...n]	Magnetization rate time scaling / Mag Tv scale		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6790
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	1000 [%]	100 [%]
Description:	The following applies for a synchronous reluctance motor: Sets the scaling of the rate time Tv for dynamic flux increase when the torque is quickly established. The value is referred to the inverse value of the rated motor frequency. $T_v = p1567 / 100 \% / p0310$		
Dependency:	Refer to: p1401		
Note:	The "Dynamic load-dependent flux boost" function can be deactivated using $p1401.9 = 0$.		
r1568[0...5]	CO: Synchronous reluctance motor flux channel / RESM flux channel		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for signals of the flux channel for a synchronous reluctance motor (RESM). The values are referred to the rated motor flux of the direct axis ($p0357 * r0331$).		
Index:	[0] = Setpoint before filter [1] = Optimum flux characteristic output [2] = Minimum value at low speed [3] = Dynamic load-dependent boost [4] = Field weakening value total [5] = Field weakening value precontrol		
Note:	RESM: reluctance synchronous motor (synchronous reluctance motor)		

p1569[0...n]	CI: Supplementary torque 3 / M_suppl 3		
SERVO, VECTOR (n/M), SERVO_AC, VECTOR_AC (n/M), SERVO_I_AC, VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	3841[0]
Description:	Sets the signal source for supplementary torque 3.		
Dependency:	Refer to: p3842		
Notice:	The signal input is after the torque limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.		
Note:	The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the speed controller output reaches its torque limits, but the current limits have still not been reached (this only applies to vector drives).		
p1569[0...n]	CI: Supplementary force 3 / F_suppl 3		
SERVO (Lin), SERVO_AC (Lin), SERVO_I_AC (Lin)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	3841[0]
Description:	Sets the signal source for supplementary force 3.		
Dependency:	Refer to: p3842		
Notice:	The signal input is after the force limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.		
Note:	The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the velocity controller output reaches its force limits, but the current limits have still not been reached (this only applies to vector drives).		
p1570[0...n]	Stiction voltage pulse positive / Stiction U pos		
HLA	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [V]	10.000 [V]	0.200 [V]
Description:	Sets the voltage pulse for stiction compensation when changing from a negative to a positive traversing direction. This compensation does not require any pressure sensors and does not use the force controller. However, the piston must be calibrated.		
Dependency:	Refer to: p1400, p1552, p1571, p1572		
Note:	The "Stiction compensation voltage pulse" function is activated via p1400.9 = 1. The duration of the voltage pulse and the magnitude in both directions is set using p1572, p1570 and p1571. The threshold in p1552 is used to detect standstill.		

2 Parameters

2.2 List of parameters

p1570[0...n]	CO: Flux setpoint / Flux set		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	200.0 [%]	100.0 [%]
Description:	Sets the flux setpoint referred to rated motor flux. The following applies for a synchronous reluctance motor: Scaling the flux setpoint.		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	For p1570 > 100%, the flux setpoint increases as a function of the load from 100% (no-load operation) to the setting in p1570 (above rated motor torque), if p1580 > 0% has been set. The following applies for a synchronous reluctance motor: The scaling allows the flux setpoint to be adapted when operating with load-dependent optimum flux characteristic or with constant flux setpoint.		
p1571[0...n]	Stiction voltage pulse negative / Stiction U neg		
HLA	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000 [V]	0.000 [V]	-0.200 [V]
Description:	Sets the voltage pulse for stiction compensation when changing from a positive to a negative traversing direction. This compensation does not require any pressure sensors and does not use the force controller. However, the piston must be calibrated.		
Dependency:	Refer to: p1400, p1552, p1570, p1572		
Note:	The "Stiction compensation voltage pulse" function is activated via p1400.9 = 1. The duration of the voltage pulse and the magnitude in both directions is set using p1572, p1570 and p1571. The threshold in p1552 is used to detect standstill.		
p1571[0...n]	CI: Supplementary flux setpoint / Suppl flux set		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6725
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the supplementary flux setpoint.		
Notice:	Low flux setpoints can cause the drive to stall at higher loads. This is the reason that the flux setpoint should only be adapted for slow load changes.		
Note:	The supplementary flux setpoint is limited to +/- 50 %.		

p1572[0...n]	Stiction voltage pulse duration / Stiction U dur		
HLA	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100.00 [ms]	2.00 [ms]
Description:	Sets the duration of the voltage pulse for the stiction compensation. This compensation does not require any pressure sensors and does not use the force controller. However, the piston must be calibrated.		
Dependency:	Refer to: p1400, p1552, p1570, p1571		
Note:	The "Stiction compensation voltage pulse" function is activated via p1400.9 = 1. The duration of the voltage pulse and the magnitude in both directions is set using p1572, p1570 and p1571. The threshold in p1552 is used to detect standstill.		
p1572[0...n]	Supplementary flux setpoint / Suppl flux set		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	0.0 [%]
Description:	Separately-excited synchronous motor: Sets the supplementary flux setpoint for the flux controller. The value is referred to the rated motor flux. Synchronous-reluctance motor: Sets the factor by which the flux is reduced when operating under no-load conditions and operating using the pulse technique.		
Notice:	Separately-excited synchronous motor: The parameter should be set back to 0% again for normal closed-loop control operation.		
Note:	Separately-excited synchronous motor: The parameter is used to optimize the flux controller. The current model is not influenced by the setting.		
p1573[0...n]	Flux threshold value magnetizing / Flux thr magnet		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	200.0 [%]	100.0 [%]
Description:	Sets the flux threshold value for enabling the speed setpoint and the end of magnetizing (r0056.4).		
Note:	The parameter only has an influence if the flux actual value reaches the threshold value p1573 more quickly during magnetizing than the time set in p0346. This is generally the case when selecting fast magnetization (p1401.6). The parameter has no influence for flying restart (see p1200) and after DC braking (see p1231).		

2 Parameters

2.2 List of parameters

p1574[0...n]	Voltage reserve dynamic / U_reserve dyn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [Vrms]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 5_1 Scaling: - Max 150.0 [Vrms]	Access level: 3 Func. diagram: 6723, 6724 Unit selection: p0505 Expert list: 1 Factory setting 10.0 [Vrms]
Description:	Sets a dynamic voltage reserve.		
Note:	In the field weakening range, it must be expected that the control dynamic performance is somewhat restricted due to the limited possibilities of controlling/adjusting the voltage. This can be improved by increasing the voltage reserve. Increasing the reserve reduces the steady-state maximum output voltage (r0071).		

p1575[0...n]	Voltage target value limit / U_tgt val lim		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL Min 50.00 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 300.00 [%]	Access level: 4 Func. diagram: 6725 Unit selection: - Expert list: 1 Factory setting 200.00 [%]
Description:	Sets the limit of the voltage target value. In steady-state field weakening operation this corresponds to the required output voltage. The value of 100% refers to p0304.		
Note:	The output voltage is only limited if the maximum output voltage (r0071) minus the voltage reserve (p1574) corresponds to a value higher than p1575. Limiting via p1575 allows the influence of the voltage ripple of the line supply voltage to be eliminated at the operating point.		

p1576[0...n]	Flux boost adaptation speed, lower / Flux boost n lower		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min 0.00 [rpm]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: 6725 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the lower adaptation speed of the flux boost. Below this speed, p1570 is set as reference (setpoint) flux.		

p1577[0...n]	Flux boost adaptation speed upper / Flux boost n upper		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min 1.0 [%]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000.0 [%]	Access level: 3 Func. diagram: 6725 Unit selection: - Expert list: 1 Factory setting 200.0 [%]
Description:	Sets the upper adaptation speed of the flux boost. Above this speed, the rated motor flux (100 %) is set as reference (setpoint) flux.		
Dependency:	The parameter value refers to the lower adaptation speed of the flux boost. Refer to: p1576		

p1578[0...n]	Flux reduction flux decrease smoothing time / Flux red dec t_sm		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	20 [ms]	5000 [ms]	200 [ms]
Description:	Sets the smoothing time for the flux setpoint when decreasing the flux due to flux reduction (p1581 < 100 %).		
Dependency:	Refer to: p1579, p1581		
p1578[0...n]	Flux reduction flux decrease smoothing time / Flux red dec t_sm		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6791
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	20 [ms]	5000 [ms]	200 [ms]
Description:	Sets the smoothing time for the flux setpoint when decreasing the flux due to flux reduction (p1581 < 100 %).		
Dependency:	Refer to: p1579		
p1579[0...n]	Flux reduction flux build-up smoothing time / Flux red up t_smth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	5000 [ms]	4 [ms]
Description:	Sets the smoothing time for the flux setpoint for the flux build-up due to flux reduction (p1581 < 100 %).		
Dependency:	Refer to: p1578, p1581		
Note:	An excessively long smoothing time extends the time until the maximum torque is reached from the no-load phase.		
p1579[0...n]	Flux reduction flux build-up smoothing time / Flux red up t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6791
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	5000 [ms]	4 [ms]
Description:	Sets the smoothing time for the flux setpoint for the flux build-up due to flux reduction (p1581 < 100 %).		
Dependency:	Refer to: p1578		
Note:	An excessively long smoothing time extends the time until the maximum torque is reached from the no-load phase.		

p1580[0...n]	Efficiency optimization / Efficiency opt		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, SESM, REL, RESM	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: -	Access level: 2 Func. diagram: 6722 Unit selection: - Expert list: 1
	Min 0 [%]	Max 100 [%]	Factory setting 0 [%]
Description:	Sets the efficiency optimization. When optimizing the efficiency, the flux setpoint of the closed-loop control is adapted as a function of the load. For p1580 = 100 %, under no-load operating conditions, the flux setpoint is reduced to 50 % of the rated motor flux.		
Note:	It only makes sense to activate this function if the dynamic response requirements of the speed controller are low. In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase Tn, reduce Kp). Further, the smoothing time of the flux setpoint filter (p1582) should be increased.		
p1581[0...n]	Flux reduction factor / Flux red factor		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, SESM, REL	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: -	Access level: 2 Func. diagram: 5722 Unit selection: - Expert list: 1
	Min 20 [%]	Max 100 [%]	Factory setting 100 [%]
Description:	Sets the factor to which the flux is reduced under no-load conditions. For a value of 100%, the flux reduction is deactivated. This parameter refers to the flux saved in the field weakening characteristic. By reducing the flux, the losses in induction motors can be reduced under no-load conditions or at low torques. However, the time it takes to reach the maximum torque is extended.		
Recommendation:	For induction motors with closed rotor slots, we recommend that the integral time of the current controller (p1717) is increased to three times the value, for example. For stable operation, the maximum field-weakening factor in operation with an encoder must be less than 16 and in operation without an encoder must be less than 4. Lower field weakening factors are recommended. The field weakening factor is calculated as follows: $(p1082 * 100 \% * 600 \text{ V}) / (p0348 * p1581 * p0070)$ In order to reduce losses due to magnetizing and de-magnetizing, we recommend that the smoothing times are adapted for flux decrease (p1578) and flux build-up (p1579). In order to reduce the losses as a result of building-up and reducing the torque, we recommend that the torque setpoint is smoothed (current setpoint filter (p1656 ...) or speed actual value filter (p1441)).		
Dependency:	Refer to: p1578, p1579		
Note:	It only makes sense to activate this function if there are low dynamic requirements placed on the speed controller and there are frequent phases with a low load. In order to avoid oscillations, if required, the speed controller parameters should be adapted (decrease Kp (p1460, p1470), increase Tn (p1462, p1472)). When used without an encoder, flux reduction is not possible for induction motors with closed rotor slots.		

p1581[0...n]	Flux reduction factor / Flux red factor		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	100 [%]	100 [%]
Description:	Sets the factor to which the flux is reduced under no-load conditions. For a value of 100%, the flux reduction is deactivated. This parameter refers to the flux saved in the field weakening characteristic. By reducing the flux, the losses in induction motors can be reduced under no-load conditions or at low torques. However, the time it takes to reach the maximum torque is extended.		
Recommendation:	For induction motors with closed rotor slots, we recommend that the integral time of the current controller (p1717) is increased to three times the value, for example. For stable operation, the maximum field-weakening factor in operation with an encoder must be less than 16 and in operation without an encoder must be less than 4. Lower field weakening factors are recommended. The field weakening factor is calculated as follows: $(p1082 * 100 \% * 600 \text{ V}) / (p0348 * p1581 * p0070)$ In order to reduce losses due to magnetizing and de-magnetizing, we recommend that the smoothing times are adapted for flux decrease (p1578) and flux build-up (p1579). In order to reduce the losses as a result of building-up and reducing the torque, we recommend that the torque setpoint is smoothed (current setpoint filter (p1656 ...) or speed actual value filter (p1441)).		
Note:	It only makes sense to activate this function if there are low dynamic requirements placed on the speed controller and there are frequent phases with a low load. In order to avoid oscillations, if required, the speed controller parameters should be adapted (decrease Kp (p1460, p1470), increase Tn (p1462, p1472)). When used without an encoder, flux reduction is not possible for induction motors with closed rotor slots.		
p1582[0...n]	Flux setpoint smoothing time / Flux set t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722, 6724, 6725
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4 [ms]	5000 [ms]	15 [ms]
Description:	Sets the smoothing time for the flux setpoint.		
r1583	Flux setpoint smoothed / Flux set smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6722, 6723, 6724
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the smoothed flux setpoint. The value is referred to the rated motor flux.		

2 Parameters

2.2 List of parameters

p1584[0...n]	Field weakening operation flux setpoint smoothing time / Field weak t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	20000 [ms]	0 [ms]
Description:	Sets the smoothing time for the flux setpoint in the field-weakening range		
Recommendation:	Smoothing should be especially used if there is no regenerative feedback into the line supply. This means that the DC link voltage can quickly increase in regenerative operation		
Note:	Only the flux setpoint rise is smoothed		
p1585[0...n]	Flux actual value smoothing time / Flux ActV t_smth		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the smoothing time for the flux actual value.		
p1585[0...n]	Flux actual value smoothing time / Flux ActV t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the smoothing time for the flux actual value.		
p1586[0...n]	Field weakening characteristic scaling / Field weak scal		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	80.0 [%]	120.0 [%]	100.0 [%]
Description:	Sets the scaling of the precontrol characteristic for the start of field weakening. For values above 100 % and for partial load situations, the field weakening starts at higher speeds.		
Note:	If the start of field weakening is shifted to lower speeds, then the voltage reserve is increased for partial load situations. If the start of field weakening is shifted to higher speeds, the voltage reserve is appropriately reduced so that for fast load changes, it can be expected that this will have a negative impact on the dynamic performance.		

r1589	Field-weakening current precontrol value / I_FieldWeak prectr		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, SESM, REL, RESM Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 4 Func. diagram: 6724 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the precontrol value for the field weakening current.		

p1590[0...n]	Flux controller P gain / Flux controller Kp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, REL, RESM Min 0.0 [A/Vs]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 999999.0 [A/Vs]	Access level: 3 Func. diagram: 5722 Unit selection: - Expert list: 1 Factory setting 10.0 [A/Vs]
Description:	Sets the proportional gain for the flux controller.		
Note:	For synchronous motors, this parameters has no effect. The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		

p1590[0...n]	Flux controller P gain / Flux controller Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, REL, RESM Min 0.0	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 999999.0	Access level: 4 Func. diagram: 6723 Unit selection: - Expert list: 1 Factory setting 10.0
Description:	Sets the proportional gain for the flux controller.		
Note:	The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		

p1592[0...n]	Flux controller integral time / Flux controller Tn		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, REL, RESM Min 0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [ms]	Access level: 3 Func. diagram: 5722 Unit selection: - Expert list: 1 Factory setting 30 [ms]
Description:	Sets the integral time for the flux controller.		
Note:	For synchronous motors, this parameters has no effect. The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		

2 Parameters

2.2 List of parameters

p1592[0...n]	Flux controller integral time / Flux controller Tn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, REL, RESM Min 0 [ms]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [ms]	Access level: 4 Func. diagram: 6723 Unit selection: - Expert list: 1 Factory setting 30 [ms]
Description:	Sets the integral time for the flux controller.		
Note:	The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		
r1593	Field weakening controller output / Field_ctrl outp		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL, RESM Min - [Arms]	Calculated: - Dyn. index: - Unit group: - Scaling: p2002 Max - [Arms]	Access level: 4 Func. diagram: 6723, 6724, 6726 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the output of the field weakening controller.		
r1593[0...1]	CO: Field weakening controller / flux controller output / Field/FI_ctrl outp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL, RESM Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 4 Func. diagram: 6723, 6724, 6726 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the output of the field weakening controller (synchronous motor) or the output of the flux controller (separately excited synchronous motor, induction motor).		
Index:	[0] = PI output [1] = I output		
p1594[0...n]	Field-weakening controller P gain / Field_ctrl Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, SESM, REL, RESM Min 0.00	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000.00	Access level: 4 Func. diagram: 6724 Unit selection: - Expert list: 1 Factory setting 0.00
Description:	Sets the P gain of the field-weakening controller.		

p1595[0...n]	Field weakening controller additional setpoint / Field_ctrl add_set		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6726
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-80.00 [%]	50.00 [%]	0.00 [%]
Description:	Sets an additional setpoint for the field weakening controller. The value refers to the dynamic voltage reserve (p1574).		
Note:	For a value equal to zero, the field weakening controller is activated when the maximum voltage, calculated with the average value of the DC link voltage - and limited using p1575 - is reached. Positive values mean that the field weakening controller intervenes later. Negative values cause the field weakening controller to intervene earlier, so that the voltage can move away from the modulation depth limit.		
p1596[0...n]	Field weakening controller integral-action time / Field_ctrl Tn		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3

	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the effective flux setpoint. The value is referred to the rated motor flux.		

2 Parameters

2.2 List of parameters

p1599[0...n]	Flux controller excitation current difference / Flux ctr I_exc_dif		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	3.0 [%]
Description:	Sets the permissible difference between the actual excitation current and the excitation current setpoint. The excitation current flux controller is active within this difference. If the difference lies outside the specified limit value, then the I component of the excitation current flux controller is kept. Instead of this, for the flux controller of the field-generating current, an additional I controller is switched in (integral time according to p1592). If the difference again lies within the bandwidth, the I component of the excitation current flux controller is re-activated and the I component of the flux controller of the field-generating current is reduced as an exponential function with respect to time. The reduction of the I component over time depends on the rotor time constant (r0384).		
p1600[0...n]	P flux controller P gain / P flux ctrl Kp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	999999.0	10.0
Description:	Sets the proportional gain of the P flux controller for separately excited synchronous motors (SESM).		
Note:	The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		
p1601[0...n]	Current injection ramp time / I_inject t_ramp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6790
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [ms]	10000 [ms]	20 [ms]
Description:	Synchronous-reluctance motor: Sets the ramp-up time of the current setpoint (p1610, p1611) when switching over from closed-loop controlled to open-loop controlled operation. Synchronous motor: Sets the ramp-down time of the current setpoint when switching over from open-loop controlled to closed-loop controlled operation.		
r1602	CO: P flux controller output / P flux ctrl outp		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6726, 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the output of the P flux controller for separately excited synchronous motors (SESM).		

p1603[0...n]	Field-generating current maximum / Id max		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	0.0 [%]
Description:	Sets the maximum component of the field-generating current to the permissible maximum current (r0067).		
Note:	If value = 0.0%: For synchronous motors, 90 % is effective and for induction motors, 60 %.		
p1604[0...n]	Pulse technique current limit / Pulse current lim		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the effective current limit within the pulse technique.		
Note:	The saturation characteristic of the motor defines the available operating range for the pulse technique. This operating range can be adjusted using the current limit. When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used. Otherwise, the rated motor current is used as pre-assigned value.		
p1605[0...n]	Pulse technique pattern configuration / Pulse pat config		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	5	2
Description:	Sets the applied test signal and evaluation technique for estimating the continuous rotor position. Remark: See p1750 to activate the test signal technique.		
Value:	1: 2p_dpm 2: 4p_dppmm 3: 2p_dpm_model 4: 2p_dpm_qpm 5: 2p_apm_bpm		
Dependency:	Refer to: p1750		
Note:	When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.		

2 Parameters

2.2 List of parameters

r1606	CO: Pulse technique pattern actual / Pulse pat act		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -

	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	5	-
Description:	Display and connector output of the currently applied test signal for estimating the continuous rotor position.		
Value:	0: None 1: 2p_dpm 2: 4p_dpmm 3: 2p_dpm_model 4: 2p_dpm_qpm 5: 2p_apm_bpm		
Dependency:	Refer to: p1605, p1750		
p1607[0...n]	Pulse technique excitation / Pulse excitation		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mVs]	20000.000 [mVs]	32.000 [mVs]
Description:	Sets the excitation amplitude (voltage-time pulse) for the pulse technique for estimating the continuous rotor position. For load current-dependent adaptation (p3371 ... p3373), this amplitude applies at operating point 1.		
Dependency:	Refer to: p1605, p1750, p3371, p3372, p3373		
r1608[0...8]	CO: Pulse technique response / Pulse response		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 6_5	Unit selection: p0505
	Not for motor type: ASM, SESM, REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Display and connector output for the components of the signal response to the excitation of the pulse technique.		
Index:	[0] = Total x [1] = Total y [2] = Total abs [3] = Total x smooth [4] = Total y smooth [5] = Reflection x [6] = Reflection y [7] = Reflection abs [8] = Offset abs		
Dependency:	Refer to: p1605, p1607, p1750		
Note:	For index [0...8]: The reference system of components x and y depends on the actual pattern (r1606). For fixed stator excitation, the following applies: x = alpha, y = beta For fixed rotor excitation, the following applies: x = d, y = q For index [3, 4]: Displays the smoothed values from indices 0 and 1 (smoothing time p0045).		

p1609[0...n]	I/f operation current setpoint / I/f op I_set		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the stator current setpoint for operation of a separately excited synchronous motor (SESM) in operating mode I/f (p1300 = 18).		

p1610[0...n]	Torque setpoint static (sensorless) / M_set static		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6700, 6721, 6722, 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-200.0 [%]	200.0 [%]	50.0 [%]
Description:	Sets the static torque setpoint for sensorless vector control in the low speed range. This parameter is entered as a percentage referred to the rated motor torque (r0333). For sensorless vector control, in the speed-controlled operating range (open loop), an absolute current is impressed. p1610 represents the maximum load that occurs at a constant setpoint speed. For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed (see function diagram, 6726).		
Caution:			
Notice:	p1610 should always be set to at least 10 % higher than the maximum steady-state load that can occur.		
Note:	For p1610 = 0%, a current setpoint is calculated that corresponds to the no-load case (ASM: rated magnetizing current, RESM: no-load magnetizing current). For p1610 = 100 %, a current setpoint is calculated that corresponds to the rated motor torque. Negative values are converted into positive setpoints in the case of induction and permanent-magnet synchronous motors as well as closed-loop controlled reluctance motors.		

p1611[0...n]	Additional acceleration torque (sensorless) / M_suppl_a		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6700, 6721, 6722, 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	30.0 [%]
Description:	Setting the dynamic torque setpoint for small speed ranges with sensorless vector control. This parameter is entered as a percentage referred to the rated motor torque (r0333). For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed during the acceleration phase (r1199.2 = 1, see function diagram, 6726).		
Caution:			
Note:	When accelerating and braking p1611 is added to p1610 and the resulting total torque is converted into an appropriate current setpoint and controlled. For pure accelerating torques, it is always favorable to use the torque precontrol of the speed controller (p1496).		

2 Parameters

2.2 List of parameters

p1612[0...n]	Current setpoint open-loop control, encoderless / I_setCtrEncoderI		
SERVO, SERVO_AC, SERVO_I_AC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [Arms]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: 6_2 Scaling: - Max 10000.00 [Arms]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Arms]
Description:	Sets the current setpoint for controlled (open-loop) encoderless operation.		
Note:	The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.		
p1612[0...n]	Current setpoint magnetizing open-loop controlled / Id_set ctrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min 0.00 [Arms]	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180 Unit group: 6_2 Scaling: - Max 10000.00 [Arms]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Arms]
Description:	Sets the magnetizing current setpoint in the open-loop controlled encoderless operation. The value is only valid during the current model orientation.		
Dependency:	Refer to: p1610, p1611		
Note:	The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.		
r1614	EMF maximum / EMF max		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: ASM, PMSM, REL, RESM Min - [Vrms]	Calculated: - Dyn. index: - Unit group: 5_1 Scaling: p2001 Max - [Vrms]	Access level: 4 Func. diagram: 6725 Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]
Description:	Displays the actual maximum possible electromotive force (EMF) of the separately excited synchronous motor.		
Dependency:	The value is the basis for the flux setpoint. The maximum possible EMF depends on the following factors: - Actual DC link voltage (r0070). - Maximum modulation depth (p1803). - Field-generating and torque-generating current setpoint.		
p1616[0...n]	Current setpoint smoothing time / I_set t_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 4 [ms]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 10000 [ms]	Access level: 3 Func. diagram: 6721, 6722, 6726 Unit selection: - Expert list: 1 Factory setting 40 [ms]
Description:	Sets the smoothing time for the current/torque setpoint in the open-loop-controlled operating range in the case of sensorless vector control.		

Note: This parameter is only effective in the range where current is injected for sensorless vector control.
For permanent magnet synchronous motors, the parameter is effective over the complete speed range.
For induction motors, the current setpoint is calculated from p1610 and p1611 and for separately excited synchronous motors the torque setpoint is calculated from p1610 and p1611.

r1617	CO: Torque setpoint (controlled) / M_set ctrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Torque setpoint for sensorless control of the separately excited synchronous motor in the open-loop-controlled operating range (under p1755 * p1756).		

r1618	Current model controller precontrol / I_mod_ctrl prectrl		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the precontrol value of the current model controller. It involves a magnetizing current in the d-direction.		

p1619[0...n]	Setpoint/actual value tracking threshold / SetAct track thr		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Threshold for setpoint/actual value tracking of the stator current in the q axis of the current model.		

p1620[0...n]	Stator current minimum / I_stator min		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10000.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the minimum stator current for separately excited synchronous motors (SESM). A negative value means that the field-generating stator current (d-axis) has a negative sign. The valid value is internally limited to 50% of the rated motor current (p0305).		

2 Parameters

2.2 List of parameters

p1621[0...n]	Changeover speed inner cos phi = 1 / n_chgov cos phi=1		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the speed where a change is made from the inner to the outer cos phi = 1. If the value that is entered exceeds the rated speed, then a change is made to the inner cos phi = 1 over the complete speed range.		
p1622[0...n]	Field-generating current setpoint smoothing time constant / Id_set Tc_smth		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [ms]	200.0 [ms]	20.0 [ms]
Description:	Sets the smoothing time constant for the setpoint of the field-generating current components. The current filtered in this way is included in the calculation of the cos phi.		
r1623[0...1]	Field-generating current setpoint (steady-state) / Id_set stationary		
VECTOR (n/M), VECTOR_AC (n/M), VECTOR_I_AC (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6723, 6726, 6727
	P-Group: Displays, signals	Unit group: 6_2	Unit selection: p0505
	Not for motor type: PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the steady-state field generating current setpoint (Id_set).
