Process Protection
Acoustic sensors for pump monitoring
SITRANS DA400 acoustic diagnostic unit

Overview

The SITRANS DA400 acoustic diagnostic unit acoustically measures the structure-borne noise:
- In the version for pump monitoring; on oscillating displacement pumps
- In the version for material flow monitoring; on pipes, conveying equipment or channels.

It comprises an electric diagnostic unit and up to four acoustic sensors.

Benefits

Benefits when pump monitoring
- Increased availability of the system through:
  - Advanced maintenance planning thanks to early recognition of defective components
  - Reduced downtimes (no fault locating necessary)
  - Increased maintenance intervals
  - Greater pump reliability
- Prevention of expensive consequential damage
- Increased safety of critical applications
- Early recognition of a reduction in power
- Increased productivity

Benefits when material flow monitoring
- Detection of insufficient or excessive inflow of material in a liquid or gas flow
- Detection of blockages or clogging
- Reduction of down times
- Increased product quality
- Increased availability
- Guaranteed operational safety
- Increased productivity

Application

In the version for pump monitoring, the SITRANS DA400 allows continuous, simultaneous and independent monitoring of up to four flow control valves in a pump for leaks. In addition, another four inputs are available for monitoring standard signals (e.g. diaphragm and temperature monitoring). This means that the condition of an oscillating displacement pump is monitored in every phase of its operation.

The SITRANS DA400 is used in all industries where an oscillating displacement pump is used.

The version for material flow monitoring monitors the material flow in liquids or gases that is usually as a result of impact or friction, e.g. against the pipe or channel wall.

If the acoustic diagnostic unit is used in potentially explosive areas, the sensors as well as the acoustic diagnostic unit can be installed in the Ex-zone.

If using the unit in potentially explosive areas, you have two options:
- Operation of the sensors over the safety barriers or
- Operation of the sensors over the SITRANS DA400 with explosion protection

Function

Product features
Continuous and independent status monitoring:
- Of the flow control valves, for leaks
- Of the membranes, for material fatigue
- Of the temperature loading of the hydraulic oil
- Of flowing bulk solids in pipes, conveying equipment or channels

Communication of the status to superordinate control systems:
- Via digital outputs
- Digitally, via PROFIBUS DP or PROFIBUS PA

Simple to operate and parameterize:
- Locally, via digital display and keys
- PROFIBUS DP and PROFIBUS PA

Mode of operation

Principle of measurement

Leaks in the flow control valves of oscillating displacement pumps are flows in which cavitation occurs. This results in sound waves that are transmitted to the valve housing, where they are recorded by the structure-borne sound sensor in the SITRANS DA400 on the outside.

The SITRANS DA400 utilizes the fact that with both an open valve and a closed intact valve, no cavitation occurs and the measured sound level thus corresponds to the operating noise of the pump. By contrast, with a closed defective valve cavitation does occur, which can be identified by a period increase in the sound level (see figures). The measured value from the SITRANS DA400 corresponds exactly to this increase in the sound level.

In the version for material flow monitoring, SITRANS DA400 continuously detects high-frequency acoustic oscillations by means of structure-born noise sensors.
These oscillations are created by:

- Friction and impact of bulk solids in: 
  - pipes, raceways or channels 
  - chutes 
  - conveyors 
- Friction and impact of mechanical parts 
- Bursting of bubbles 
- Cavitation 
- Turbulence in gas and liquid flows

The following shows an example of signal levels at an oscillating displacement pump

Sensor operation

The structure-borne sound sensor works on the piezoelectric principle. The structure-borne sound is injected into the sensor via the sensor base (mounting surface) and inside it is converted into an electrical voltage by a piezo-ceramic element. This is amplified in the sensor and transmitted via the cable.

The sensor frequency range lies in the ultrasonic range (> 20 kHz). The sensor is non-directional, i.e. the angle at which the sound wave impacts on the sensor base is not important.

Mode of operation of the safety barrier

The safety barrier comprises intrinsically-safe circuits. These circuits serve to operate intrinsically-safe components such as sensors and to isolate safety from the non-hazardous area with the SITRANS DA400 diagnostic unit.

For connection with an intrinsically safe switching amplifier to DIN 19234 with:

- Max. supply voltage $U_i$ ≤ 15.5 V
- Max. short-circuit current $I_i$ ≤ 25 mA
- Max. power $P_i$ ≤ 64 mW
- Internal capacitance $C_i$ ≤ 5.2 nF
- Internal inductance $L_i$ Negligible

#### Conditions of use

**Installation conditions**
- Vertical wall mounting, cables fed in from below

**Climatic class**
- Class 4K4 according to EN 60721-3-4

**Mounting location**
- Zone 1 or zone 2

**Permissible ambient temperature**
- -20 ... +60 °C (-4 ... +140 °F)
- -20 ... +60 °C (-4 ... +140 °F)
- -20 ... +60 °C (-4 ... +140 °F)
- -20 ... +60 °C (-4 ... +122 °F)

**Temperature class T5 ... T1**
- Class 4M3 according to EN 60721-3-4

**Temperature class T6**
- IP65

**Electromagnetic Compatibility**
- To EN 61326 and NAMUR NE 21

**Usage limits for water**
- ≥ 10 bar a
- Min. 4 min⁻¹, max. 10 ... 500 min⁻¹

**Design**

| Weight (without options) | Approx. 2.5 kg |
| Dimensions (W x H x D) in mm (inch) | 172 x 320 x 80 (6.8 x 12.6 x 3.2) |
| Enclosure material | Macrolon (polycarbonate + 20 % glass fiber) |
| Makrolon (Polycarbonate + 20 % glass fibers), surface attenuated with CrNi layer and painted |
| Electrical connection via screw terminals | • Rigid 2.5 mm (0.984 inch) |
| • Flexible 1.5 mm (0.59 inch) |
| • Flexible with connector sleeves 1.5 mm (0.59 inch) |
| Cable inlet via plastic cable joints | • 2 x Pg 13.5 |
| • 5 x Pg 11 |

For connection with approved intrinsically safe circuits with:

- Max. supply voltage $U_i$ ≤ 17.4 V
- Max. short-circuit current $I_i$ ≤ 191 mA
- Max. power $P_i$ ≤ 1.35 W
- Internal capacitance $C_i$ ≤ 33 nF
- Internal inductance $L_i$ ≤ 28 μH

#### Certificates and approvals

- Explosion protection to EN 50014, EN 50020 and EN 50021
- Intrinsic safety "i" - TÜV (German Technical Inspectorate) 06 ATEX 2952
- Marking - II 2(1) G Ex is [ia] IIC T6

### Communication

- PROFIBUS DP - RS 485, switchable terminating resistor
- Protocol - Cyclic with Master C1 and acyclic with Master C2
- Power supply - Bus-supplied
- Bus voltage - 9 ... 24 V
- Current consumption - 10.5 mA ± 10 %
- Bus connection with FISCO supply unit, ia/ib group IIC or IIB - Yes
- Layer 1 and 2 from PROFIBUS PA, transfer technology from IEC 1158-2
  - 4 connections are supported in master class 2
- Device profile - PROFIBUS PA Profile V3.0 Rev. 1, Class B
- Device address - 1 ... 126 (126 factory-set)
- PC parameterization software - SIMATIC PDM (not included in the scope of delivery)
Acoustic sensors for pump monitoring

SITRANS DA400 acoustic diagnostic unit

Sensor for SITRANS DA400

Setup
- Piezoceramic sensor with pre-amplifier
- Encapsulated electronics
- 4-wire cable with anti-kink sleeve

Conditions of use
Permissible ambient temperature: -40 °C ... +110 °C (-40 °F ... +230 °F)
Degree of protection to EN 60529: IP66/IP68
Mechanical load: Class 4M7 according to EN 60721-3-4
Climatic class: Class 4K4 according to EN 60721-3-4

Design
Housing material: Stainless steel 1.4571 (316Ti SST)
Cable: Ends with wire protectors and cable shoe for connection to the SITRANS DA400
Weight: 125 g (0.276 lb)
Mounting location: Zone 0/1 or zone 20/21/22
Dimensions (W x H x D): 26 x 29 x 40 (1.02 x 1.14 x 1.57)

Power Supply
Power fed from device

Certificates and approvals
Explosion protection: TÜV 2005 ATEX 2876 X
Marking: I I G EEx ia IIC T6/T5/T4 or I I D EEx ia D 20/21/22 T160

Permissible ambient temperature
Category 1G
- Temperature class T4, T5: -20 °C ... +60 °C (-4 °C ... +140 °F)
- Temperature class T6: -20 °C ... +50 °C (-4 °C ... +122 °F)
Category 2G
- Temperature class T4: -40 °C ... +110 °C (-40 °C ... +230 °F)
- Temperature class T5: -40 °C ... +80 °C (-40 °C ... +176 °F)
- Temperature class T6: -20 °C ... +65 °C (-4 °C ... +149 °F)
Category 1D or 2D
- Temperature class T160: -40 °C ... +110 °C (-40 °C ... +230 °F)

Ex barriers for sensors

Application area
For the intrinsically safe supply of the acoustic sensors in zone 1; the safety barriers must be installed between the SITRANS DA400 acoustic diagnostic unit and the sensor if only the sensors are being operated in the Ex zone.

Input
A maximum of two sensors can be connected.

Conditions of use
Degree of protection to EN 60529: IP20
Permissible Ambient Temperature: -20 °C ... +60 °C (-4 °C ... +140 °F)

Design
Weight: 115 g (0.254 lb)
Housing material: Plastic, polyamide
Type of installation: Installation on mounting rail NS 32 or NS 35/7.5.

Dimensions (W x H x D): 68 x 77 x 42 (2.68 x 3.03 x 1.65)

Certificates and Approvals
Explosion protection: TÜV 05 ATEX 2917 X
Marking: II (2) G [EEx ib] IIC

Selection and Ordering data
