How to order

### The DP-V2-Testkit can be used for:

- DP-Master for slave development which supports the Isochronous Mode
- Function test of slave devices with a standard master
- Pretest of the majority of the Isochronous Mode tests for slaves in order to prepare the PROFIBUS Certification Test.
- Reconstruction of problems out of the Certification Test or field problems

### The DP-V2-Testkit is not suitable for:

- Substitute for a Certification Test
- Substitute for a PLC or other control and automation masters
